Considerable diamond drilling has been done, largely in 1909, south from the Evergreen bed into the horizon traversed by the so-called Adventure lodes, cut by diamond drills on the Adventure property, and also north of the Knowlton bed. Diamond drilling was done, 1910, in the N. E. $\frac{1}{4}$ of Sec. 5, to test amygdaloidal and conglomerate strata outcropping at that point, which is quite a distance under the hypothetical horizon of the so-called Adventure lodes, with distance to the eastern sandstone undetermined.

The shaft rock house at "B" is equipped with a steam hammer, Blake crusher and a 12x24" Nordberg engine. "C" shaft has a new steel shaft rock house. Both rock houses have been equipped with devices permitting automatic handling of rock.

The central power house, 48x150', has a 24x48" Allis-Chalmers duplex hoist with 10' 6" drums having 11' faces, grooved for $1\frac{1}{2}$ " cable, good for one-half mile depth. The power plant includes a 50-drill Rand 2-stage cross-compound air compressor, a 75-kw. dynamo for electric light, and two 250-h. p. Stirling water-tube boilers.

In addition to the usual mine buildings, there are about 60 good dwellings. The company also has a town site, Mass City, which is the terminus of the Mineral Range railroad, and a station on the C. M. & St. P. railway, the village having a considerable population, with a number of hotels and business houses.

The Mass mill is at Keweenaw bay, on an arm of Lake Superior, at the junction on the Mineral Range and Duluth, South Shore & Atlantic railways, 16 miles south of Houghton and 34 miles northeast of the mine, with ample sand room, deep water, and immunity from heavy seas. The 90x232' mill, built by the Wisconsin Bridge & Iron Co., is of steel frame on stone foundations. Equipment includes 2 Nordberg stamps, having vertical mortar grates supplied with automatic hydraulic cleaning devices. Each head has a nominal stamping capacity of about 525 tons daily, increased to 700 tons daily by the addition of rolls.

The 30x60' mill boiler house contains one 350-h. p. and two 200-h. p. Stirling water-tube boilers. Ashes and cinders are washed into the lake through a launder.

The 40x70' pump house has a 16,000,000-gal. Nordberg vertical pump, fed from a 12x30' well, with bottom 6' 6" below mean water level, connected with a tunnel running 300' under the bed of the bay to the intake.

A 1,000' wharf, serving also as a breakwater, has 18' of clear water at its end, and is equipped with 3 towers and derricks, capable of unloading coal vessels at the rate of 900 tons daily. Coal is taken from the wharf, in 3-ton cars, by a 14x20" hoist, to a 1,500' storage trestle of 20,000 tons capacity.

In his report the consulting engineer, F. W. Sperr, recommends doubling the rate of production, estimating that the production cost per pound of copper would then be: mining, 4.534 cts.; surface expense, 1.384 cts.; general expense, 0.074 cts.; taxes and insurance, 0.19 cts.; freight, 1.15 cts.;

stamp-milling, 1.61 cts.; development, 1 ct.; a total of 9.934 cts. per pound. The development work during the year was highly satisfactory, 352,100 tons having been added to the reserves, making the net total, Dec. 31, 1912, 727,000 tons.

Production was begun 1899, with an output of 42,800 lbs. fine copper, gradually increased to the high-water mark of 2,576,447 lbs. in 1903, decreasing thereafter, through loss of the Evergreen bed. Recent production has been as follows: 2,007,950 lbs. fine copper in 1905; 2,106,677 lbs. in 1906; 2,078,677 lbs. in 1907; 1,766,930 lbs. in 1908; 1,723,436 lbs. in 1909; 1,321,885 lbs. in 1910; 1,326,898 lbs. in 1911; 2,045,006 lbs. in 1912.

The Mass Consolidated has had to cope with almost every sort of misfortune that befalls mines, but, through the acquisition of the Evergreen Bluff property, has been placed in better mining position than ever before and the experience of 14 years has given a very thorough knowledge of the vagaries and possibilities of the 7 cupriferous beds of the Evergreen belt. All of these are somewhat buncchy, but 2 of the number are of real promise, these being the Evergreen and Butler. It is probable that several of the 5 other beds can be worked occasionally, owing to their contiguity to the 2 beds named, but the future of the mine rests upon results to be secured from the Evergreen and Butler beds. Given extensive openings, which the mine never has had, permitting a large production, combined with judicious selection of rock, such as is now being made, the Mass has very fair prospects of making a payable, though not a rich mine. There also is the possibility of locating and developing other and richer beds to the southward of the main workings, in the horizon of the Lake and Adventure beds. The management is thoroughly progressive and experienced.

MASSACHUSETTS CONSOLIDATED COPPER CO. CALIFORNIA

N. E. Guyot, superintendent, Red Bluff, Tehama Co., Cal. Property, the Tom Head mine, shows a deposit of copper ore developed by shaft. Equipped with steam power.

MASSEY STATION MINING CO., LTD.

ONTARIO

Office: 57 Home Life Bldg., Toronto, Ont. Mine near Massey, Ont. Wallace Nesbitt, pres.; S. H. P. Pell, vice-pres.; Britton Osler, sec.; preceding officers, Robt. Means Thompson and Miss I. M. Innes, directors. Organized April 24, 1901, under laws of Ontario, capitalization \$300,000, shares \$100 par, nonassessable; fully issued. Company is said to have expended about \$300,000 on development and equipment.

Property, 840 acres, crown granted, including 480 acres timber land, in Salter township, Sudbury district, about 3 miles from a railway. Lands show schist and quartzite carrying lenticular orebodies in east-west zones with 75° dip. There are 3 parallel lenses, 2 developed averaging 10' in width in an ore zone traceable about a mile. Ore carries finely disseminated chalcocite and gray copper ores in quartzose gangue changing in depth to bornite and that in turn to chalcopyrite, estimated by management to average 3 to 5% copper and \$1 to \$2 gold per ton, with about 50,000 tons in sight.

Development is by a 600' shaft with levels at 100' intervals, opened for lengths of 50 to 150'. There is also a 150' tunnel about a mile from the main shaft.

Equipment includes a 200-h. p. steam and electric plant, with 6x8" and 10x12" Lidgerwood hoists, and a 6-drill Ingersoll-Rand air compressor. There are 15 buildings, including shops, warehouse and office.

The ore not being adapted to wet concentration, owing to excessive sliming, a 50-ton experimental mill has been built, using the Elmore vacuum oil flotation process, with Blake and centrifugal crushers and 3 Jenckes and

Wilfley tables. Property closed down in 1909 owing to failure of mill to make expenses.

MATEHUALA SMELTER.

MEXICO

Owned by American Smelting & Refining Co., at Matchuala, S. L. P., Mex.

MAVERICK COPPER CO.

ARIZONA

Mine office: Florence, Pinal Co., Ariz. Geo. Lobb and Eugene Woodbury, managers. Property, known as the Iron Spring mine. Claims show a strong outcrop, carrying finely disseminated chalcocite, with some oxides, carbonates and a little native copper, estimated to average 3% copper. Development is by a shallow shaft and a number of prospect pits and shafts. Annual assessment work only has been done since 1910, when the Copper Queen Co. relinquished its \$100,000 bond on the group.

MAY COPPER CO.

ARIZONA

Mine address: Goddards, via Bumble Bee P. O., Yavapai Co., Ariz. Property in Tip Top district at mouth of Black Canyon creek, 50 miles north of Phoenix. Claims show a copper deposit near the Harris Copper Co.'s holdings. Developing by a 100' shaft in 1913.

MAY MINING CO.

ARIZONA

Idle. Office: Sidney, Ohio. Mine office: Mayer, Yavapai Co., Ariz. M. L. Heffelman, pres. and gen. mgr.; J. D. Barnes, sec.-treas., at last accounts. Organized 1902, under laws of Arizona, capitalization \$200,000, shares \$1 par, nonassessable. Bonds, \$50,000 authorized, partly issued.

Property, the May and Malcolm claims, 40 acres, patented, 3 miles south of Mayer, in the Big Bug district. Lands show a 13' fissure vein in schist and a bedded deposit between sericitic and quartz schists of 150' estimated width, carrying sulphide ore, estimated by company to average 3% copper. Development is by shafts of 237' and 205', equipment including a 50-h. p. steam hoist, with 3 buildings.

MAYER CONSOLIDATED MINING CO.

ARIZONA

Mine office: Mayer, Yavapai Co., Ariz. E. F. Miller, sec.-treas.; Louis D. Hall, gen. mgr., at last accounts. Organized 1910, as successor of Pittsburg-Mayer Mining Co. Lands, 5 claims, 3½ miles east of Mayer, in the Big Bug district, show fissure veins in schist carrying auriferous copper ore, developed by a vertical shaft of 175' depth. Equipment includes gasoline power. Presumably idle.

MAYER MINING & MILLING CO.

ARIZONA

Office: Mayer, Yavapai Co., Ariz. John Malm, superintendent. Organized June 1, 1910, as successor of Rigby Mining & Reduction Co. Company owns a custom smelter, on a 70-acre site, near Mayer, connected with the Prescott & Eastern railway by a 3,000' spur. The smelter, planned to operate on the Poehle & Croasland volatilization process, was fully described Vol. VIII, under title of Rigby Mining & Reduction Co. Several smelter tests were made and pronounced satisfactory, but neither this company nor its predecessor has done any commercial smelting. Idle several years and presumably out of business.

MAYFLOWER MINING CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Chas. J. Paine, Jr., pres.; Harry F. Fay, Geo. E. Clarkson, A. L. Dickerman, F. W. Nichols and Geo. P. Gardner, directors; Arthur E. Coe, sec.-treas.; Geo. S. Goodale, supt. Organized 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; \$9 paid. St. Mary's Mineral Land Co. owns 25,000 shares of the capital stock. Company had \$58,259.67 cash on hand, Jan. 1, 1913. Expenses were \$41,966.22 in 1912. Annual meeting, third Wednesday in March.

Property, 840 acres in the heart of the copper range, between the Kearsarge and Old Colony mines and east of the South Kearsarge and Wolverine mines. Lands comprise Secs. 7 and 8, T. 56 N., R. 32 W. Prospecting, begun in 1899, was continued 5 years. No. 1, or Fault shaft, 400' deep, has considerable drifting on the 1st and 2nd levels and a crosscut opens 2 parallel cupriferous amygdaloids, showing occasional patches of copper, but nothing of promise.

No. 2, or Isle Royale shaft, 160' deep, has several hundred feet of drifting and shows a buncchy amygdaloid, 10 to 12' wide, carrying more or less copper in a 2' streak next to the hanging wall.

No. 3, or Sandstone shaft, is 60' deep, in a soft and badly broken amygdaloid, all of the strata near the eastern sandstone being much disturbed.

No. 4 shaft, 580' deep, starts from surface on an unnamed amygdaloid, lying approximately 2,000' east of the Kearsarge bed and at a depth of 425' runs into a parallel amygdaloid lying 90' to the eastward of the first bed. The copper showing is poor.

A fairly complete geological cross-section was obtained by diamond-drill borings and exploratory work was resumed July, 1909, after 3 years' idleness. Up to date, 33 holes have been put down which, together with the holes on the Old Colony tract, prove up a big and well mineralized amygdaloid bed, called the Mayflower lode, for a distance of 2,000' and a depth of 1,500'. The lode lies on the extreme eastern side of the copper range, near the Eastern sandstone.

Thirteen holes on the Mayflower and 10 on the Old Colony ground showed commercial ore; hole No. 20 showed 101' of 1.65% rock; hole No. 22, nearby, showed 100' of 1.2% copper ore, 60' of which carried 1.9%; holes Nos. 16 and 17, in this locality, showed 87' and 95' widths. A new shaft is to be started 500' west of hole No. 20, near the Old Colony boundary line.

MAYO MINING CO.

MEXICO

Idle. Mine near Jesús Maria, Chihuahua, Mex. John E. Carnahan, mgr.; Carlos Smythe, supt., at last accounts. Capitalization \$1,000,000. Is a twin of the Mary Mining Co. Lands, said to be 3 mines, carrying argentiferous and auriferous copper ore. Shut down several years, but taxes said to be paid.

MAZAPIL COPPER CO., LTD.

MEXICO

Office: 47 Peter St., Manchester, England. Mine address: Aptdo. 64, Saltillo, Coahuila, Mex. Percy E. O. Carr, gen. mgr.; Alfred Crewdson, chairman; Wm. Andrew Aitchison, John Seacome Burrows, W. A. R. Heaven, Jacob Higson, Chas. Hopkinson, Wm. Jones and Jas. Wm. Purcell, directors; W. Hickie, gen. mine supt.; C. R. H. Blythe, engr. Organized Feb. 18, 1891, and reorganized April 21, 1896, under laws of Great Britain, capitalization increased, 1903, to £300,000, shares £10 par, and again increased, 1912, to £500,000, shares £1 par; issued, £422,490. Debentures, £120,000, at 6%. Has paid several dividends: 20% in 1910; 20% and a 5% bonus in 1911; 10% (interim) Sept. 28, 1912; also a bonus of 5 shares of stock for every £10 original share.

Accounts for 1911 show a net profit of £110,294 with £28,504 surplus from previous year, making total of £138,798. Dividends absorbed £70,145, mines purchase, £2,465, and directors fees, £1,500, leaving a balance of £64,419. Reserve fund, £196,660. The company is a private concern and does not care to give details concerning its mining operations. Company owns and operates the Coahuila and Zacatecas railway, running from Saltillo to Concepción del Oro, 2 smelters and various mines, employing be-

tween 3,000 and 4,000 men. Operations were suspended June, 1913, by the Mexican revolution.

Property, about 2,000 hectares of mineral land in 4 principal groups. The Aranzazú and Cabrestante mines, carrying copper ores, are the most important; the San Elijo, Naranja, Cajón, San Francisco and Protrero mines, carrying silver-lead ores, and the Promontorio group, producing mainly fluxing ores, with some ore of 25 to 45% copper tenor, with good gold values. There also are other groups, known as the Salaverna and San Pedro mines. Copper ores occur in irregular masses, in limestone, near granite-porphry contacts.

The various mines of the company have 83 different shafts and tunnels, many of which are small and worthless, remaining from old operations, with upwards of 25 miles of workings. The Aranzazú mine is developed by a 1,600-meter tunnel, starting from Concepción del Oro and tapping the vein at depth of 500 meters, 200 meters below the old workings, serving the triple purpose of developing new ore reserves, draining the mines, and furnishing water needed for the mill.

The smelters are at Concepción del Oro and Saltillo. The first named, of about 500 tons daily capacity, has 4 copper furnaces. The Saltillo smelter, built 1906, has a lead plant of 300 tons daily capacity and does a general custom business, as well as treating ores of the company. There are 4 blast furnaces, 1 reverberatory furnace and a converter department with 4 stands. Equipment includes electric power, with a. c. generators direct-connected to 2 Harrison-Fleming Corliss tandem-compound condensing air compressors.

Transportation is by 4 aerial trams, 1 connecting the Aranzazú mine with the smelter, being of 7 kilometers length with 23 metric tons hourly capacity, built by Ropeways, Ltd. The San Pedro group ships silver-lead ore by rail.

The concentrator, at the mines, is of 150 tons rated daily capacity, but the district is arid and operations have been hampered frequently by shortage of water, though the water supply has been supplemented by the driving of the Aranzazú tunnel. A Minerals Separation plant to treat the complex lead, zinc, silver, pyrite ore was installed in 1912.

The Ferrocarril Coahuila y Zacatecas has 75 miles of main line. Production, 1912, was 13,556,208 lbs. copper, 15,024,485 lbs. lead, 8,463,536 lbs. zinc, 1,572,012 oz. silver and 15,560 oz. gold.

MAZATAN COPPER & GOLD MINING CO.

MEXICO

Office: 60 State St., Boston, Mass. Mine office: La Colorada, Sonora, Mex. R. C. Jacobs, sec.; Dudley M. Bell, gen. mgr. Capitalization \$2,000,000, shares \$5 par. Title to property is held through the Mazatan Mining Co., S. A.

Lands, 100 hectares, 246 acres, 17 miles west of Soyopa, on the west side of the Yaqui river valley and western slope of Rodríguez mountain, district of Hermosillo. The property shows 4 distinct veins in granite, surface ores being mainly azurite and malachite with occasional masses of chalcocite occurring in seams and kidneys in the vein matter. Orebodies vary from 3 to 12' in width. Values are mainly in gold and are said to average \$4 to \$5 per ton.

Development is by 4 shallow shafts, 3 tunnels and numerous open cuts, all openings with one exception, being in the oxidized zone.

The property was fully reported on by S. H. Parsons, E. M., Jan. 1911.

MAZATZAL COPPER CO.

ARIZONA

Idle. Office: Jerome, Ariz. Jos. J. Shaw, pres. and gen. mgr.; E. A.

Macpherson, sec.-treas., at last accounts. Organized Jan. 6, 1907, under laws of Arizona, capitalization \$1,500,000, shares \$5 par.

Lands, 24 claims, 420 acres, and a 5-acre mill site, about 12 miles east of Fossil creek, and 9 miles from Payson, in the Tonto basin, in a district very difficult of access, about midway between Jerome and the Roosevelt dam, and 80 miles northwest of Globe, from which point the property is best reached, at present.

The property shows a shear zone of about 35' average width, said to be traceable 3,000' by outcrops carrying copper carbonates and occasional sulphides. This ore zone has a porphyry footwall and slate hanging, carrying a series of lenses with cuprite, azurite and malachite, succeeded by sulphide copper ores, with a small stringer of argentiferous galena. Development is by a 40' shaft and 3 tunnels, each over 400' long, said to show a 22' pay-streak of sulphide ore, assaying 16 to 21% copper. Ores as a whole have been estimated to average 5.5% copper, 3% lead, 2 oz. silver and 40 cts. gold per ton.

Equipment includes a 50-h. p. steam plant with a double-drum hoist and a 2-drill Ingersoll air compressor. There are 5 buildings. Property considered promising but too remote to be worked profitably at present.

McCaffrey Mining & Smelting Co.

MONTANA

Office: Basin, Jefferson Co., Mont. Roger and Frank McCaffrey, Basin, Mont.; J. B. McCaffrey, Jos. K. Mueller, F. B. McGreevey, T. F. Stall and J. T. Twomey, of Chicago, directors. Organized Jan., 1913, under laws of Montana, capitalization \$500,000, presumably to take over the Basin Reduction Works, sold for debt, but formerly owned by the La France Copper Co. and operated until 1912 under lease by the Butte & Superior Copper Co.

McConnell Mines Co.

NEVADA

Office: Yerington, Nev. Mine office: Mason, Lyon Co., Nev. O. H. Sonne, pres.; S. B. Elbert, sec. and mg. engr.; preceding, Mrs. O. H. Sonne and Mrs. S. B. Elbert, directors. Organized Sept. 14, 1912, capitalization \$500,000, shares \$5 par; issued, 40,002 shares.

Property, 10 claims, partly fractional, 160 acres, patented, adjoining the Yerington Malachite mine on the west. Claims show limestone, shale and granite with argentiferous contact deposits in the contact zone near the granodiorite. Property has 4 orebodies, the 2 under development averaging 25' in width and carrying about 3.5% copper.

Development is by a 400' shaft and 3 tunnels of 330', 300' and 325'. Recent work on the 200 level of shaft opens up 4' of 3 to 12% sulphide ore.

Equipment includes a 25-h. p. hoist, 7-drill air compressor, and 8 buildings. Company has been shipping 50 tons daily throughout 1913.

Production, 1912, was 1,074,289 lbs. fine copper, secured from 16,284 tons of ore smelted and at a total cost of about 14 cts. per pound. Property regarded as good and management capable.

McCoy Creek Mines Co.

WASHINGTON

Office: Chehalis, Wash. Mine office: Vance, Lewis Co., Wash. C. L. Sticklin, trustee, at last accounts.

Lands, 26 claims, on McCoy creek, in 2 groups, 12 miles south of Vance, are developed by several tunnels, showing high-grade copper ore, with small gold and silver values.

Equipment includes a small saw mill and a stamp mill. Presumably idle.

McDonald-Ely Copper Co.

NEVADA

Office: Boyd Park Bldg., Salt Lake City, Utah. Mine address: J. P. Turner, supt., Ely, White Pine Co., Nev. D. C. McDonald, pres. and gen. mgr.; Col. Enos A. Wall, vice-pres.; Geo. W. Parks, sec.; Frank Knox,

treas.; preceding officers, Frank J. Westcott, Geo. W. Lamb and Hon. Thos. Kearns, directors; E. P. Jennings, cons. engr. and mgr. Organized Nov., 1906, under laws of Utah, capitalization \$1,000,000, shares \$5 par, nonassessable; issued, \$790,000. Debentures, \$100,000, at 6%, maturing Nov. 15, 1915. Shares are listed on the Salt Lake Stock Exchange.

Lands, 28 claims, patented, 325 acres, with a ranch nearby that has a good spring. Apparently 19 claims are held under bond lease. Property, on the lime belt, in the northeastern part of the Ely district, carries 4 contact deposits, between porphyry and limestone, showing prominent iron outcrops. Management estimates veins as 20' wide carrying oxidized ores, the sulphide zone not having been reached, assaying 1 to 40% copper, and about 80 cts. gold per ton. Development is by the 250' Mill shaft; 405' Golden Gate shaft, caved 1912, but reopened 1913; 165' Robust shaft; 80' No. 2 shaft; 65' No. 3 shaft; 80' No. 4 shaft, and the 415' Wall tunnel, showing 21' of heavy iron. A 218' crosscut in the Robust shaft shows copper ore of fair grade. The mine as a whole has about 3,000' of workings.

Development work was resumed in 1913 on the 320' level of the Golden Gate shaft, drifting on the Robust vein to get beneath the gossan showing on the Maceo claim. A 70' winze proved ore said to assay 13 to 40% copper as bornite, chalcopyrite and glance carrying up to \$2.20 in gold and silver.

Equipment includes a 25-h. p. gasoline hoist, 40-h. p. steam hoist, and a 6-drill Ingersoll-Sergeant air compressor. There are 6 buildings, including necessary shops. A pumping plant and pipe line supply water from a spring at the ranch.

An old 50-ton mill, with rolls and cyanide plant, remains from a former ownership. The 100-ton concentrator has a gyratory crusher and 3 trains of rolls. Property considered promising and management good.

McGILL SMELTER.

NEVADA

Owned by Steptoe Valley Mining & Smelting Co. at McGill, White Pine Co., Nev.

McKINLEY MINES, LTD.

BRITISH COLUMBIA

Office: Rossland, B. C. Mine near Franklin, Boundary district, B. C. B. Lequime, pres.; H. W. Warrington, vice-pres.; A. M. McKenzie, sec.; C. L. Hammond, managing director. Property, 4 claims, on the North fork of Kettle river, about 34 miles north of Grand Forks and 18 miles from the Kettle Valley railway terminus. The claims were under bond and lease to the British Columbia Copper Co., 1912, and a long tunnel driven. James Breen, of Spokane, owns 75% of the stock. The company was promoted by P. A. O'Farrell, who spent \$30,000 supplied by F. A. Heinze, in diamond drilling, before Heinze abandoned the proposition and it was taken up by Mr. Breen.

McKINLEY MINING CO.

UTAH

Office and mine: Eureka, Juab Co., Utah. W. D. Myers, president. Mine, west of the Centennial-Eureka, is developed to depth of 500', and an east-west dike of 35' estimated width on the 500' level is said to show ore worth about \$6 per ton. The stock is assessable and the company has had some difficulty in obtaining funds to carry on its development campaign.

McKINLEY MINING CO.

WASHINGTON

Office: 1723 Cincinnati St., Spokane, Wash. Mine at Orient, Ferry Co., Wash. H. M. Gibson, pres.; A. O. Stuber, vice-pres.; T. Larsen, treas.; W. Hausken, sec.; preceding officers and J. D. Grimes, directors. Organized 1909, capitalization \$1,000,000, shares \$1 par.

Property, 9 claims, with 5 contiguous claims owned by the company's officials, lies on the eastern side of McKinley mountain at 2,850' elevation

and 4 miles northeast of Rock Cut. Claims show 3 north-west veins with gold-copper ores.

Development on No. 1, a gold-silver vein, includes a 143' shaft, with 42' crosscut not yet in vein, and a 53' shaft with 40' drifting on vein. A 570' tunnel is intended to cut this vein at 640' and 300' below the surface. No. 2 vein of copper ore is 6' wide and is developed by 4 prospect shafts, a 37' tunnel and a 100' incline. The third vein, 18 to 30' wide, is opened by a 75' shaft.

McKINLEY MINING & DEVELOPMENT CO.

ARIZONA

Office: Prescott, Ariz. Chas. E. McKinley, pres. and gen. mgr. Organized 1906, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 38 claims, 760 acres, are in the Copper Basin district, 11 miles south of Prescott. The Dixie group of 6 claims has veins of 5 to 15' width, carrying auriferous and argentiferous copper ore. The Peacock group has a vein of 60' claimed width, carrying surface ores said to average 3.7% copper, with good gold values, developed by the Peacock shaft, planned to be sunk to 700', showing sulphide ore giving assays up to 15% copper, 5 oz. silver and \$6 gold per ton.

Equipment, according to company's report, includes steam, electric, water, gasoline and air power, with 2 hoists, 1 good for 1,000' depth. No returns securable, 1913.

McKITTRICK MINE.

ARIZONA

Property, a group of claims adjoining the Tejon mining and Leonard copper properties at Gleeson, Cochise Co., Ariz., in the Turquoise, or Courtland district. Claims show limestones intruded by porphyry dikes and carrying replacement deposits of oxidized copper ores with limonite in limestone. Development by extensive tunnels. Idle in 1912, but work resumed in 1913.

McMAHON GROUP.

ARIZONA

Office: Zonia, via Kirkland, Yavapai Co., Ariz. Property, the Zonia mine and a group of claims, south of Zonia, shows irregular bedded veins in micaceous schists, carrying small and bunched shoots of high-grade oxidized ore. Small shipments of 5 to 6% ore were made in 1912. The property was under option to the Mines Development Co. (Shannon Copper Co. interests) in 1911, but churn-drill results were unsatisfactory and option was relinquished. See Mines Development Co.

McMILLEN-STONEWALL MINING CO.

ARIZONA

Office and mine: Globe, Gila Co., Ariz. V. Y. Smith, pres. and gen. mgr.; C. N. Lightle, sec.-treas. Organized March 27, 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 34 claims, in the Richmond basin, 16 miles northeast of Globe, carrying 3 miles of the strike of the Stonewall Jackson vein, of 25 to 35' average width. Property includes the Stonewall Jackson mine, worked 1876-83, with an estimated production of about \$500,000 of silver ore, of high average grade. Development is by the 300' three-compartment McMillen shaft and the old 600' Stonewall Jackson shaft, latter showing no stoping done below 230'. The mine is said to have considerable reserves of ore carrying 5 to 50 oz. silver per ton, and is said to have about 40,000 tons of discarded silver ore on the old dumps on which cyanide tests were made, 1910. Equipment includes an old stamp mill and a small cyanide plant. A full and favorable report on the property was made, May, 1912, by R. B. Wagner.

MEADOW CREEK COPPER & MOLYBDENITE CO. WASHINGTON

Idle. Letter unclaimed at Bellingham, Wash. Mine office: Keller, Ferry Co., Wash. J. E. Jennot, manager, at last accounts. Lands, on

Meadow creek, about 5 miles northwest of Keller, show 4 veins, 1 claimed to be 45' wide. Tunnels on the vein are said to show fair mineralization with copper, lead, molybdenum, silver and gold, ore estimated to average \$20 per ton in gross values.

MEADOW MINING CO. MICHIGAN

Idle. Office: 62 Devonshire St., Boston, Mass. Mine near Copper Falls, Keweenaw Co., Mich. Francis L. Maguire, pres.; John Brooks, sec-treas. Organized 1898, under laws of Michigan, capitalization \$1,500,000, shares \$25 par. Is a reorganization of a corporation of same name organized 1863, under special Michigan charter. Lands, 364 acres, adjoining the Humboldt and Phoenix mines, carrying the Ashbed lode, which was first opened 1851, with a little mining previous to 1860. Where the Ashbed is crossed by transverse fissures, bunches of ore occur and such places usually show pits of prehistoric miners. Fully described Vol. II.

MEDICINE BOW'S MINES CO. WYOMING

Office and mine: Albany, Albany Co., Wyo. Jas. Christensen, pres.; G. S. Simmons, vice-pres. and supt.; Wm. Benton, sec-treas. and gen. mgr. Organized Sept. 19, 1903, under laws of Wyoming, capitalization \$100,000, shares \$10 par.

Lands, 10 claims, unpatented, 200 acres, in the Holmes district. Claims are said to show syenite, granite, diorite and limestone, with fissure veins in syenite and granite, and deposits between gabbro and serpentine. The Cuprite vein, formerly under development, is of 15' average width, traceable a mile, carrying chalcocite, bornite and chalcopyrite ore, estimated by company to average 5% copper, 3 oz. silver and \$4 gold per ton. Test shipments have returned 7 to 15% copper, 2 to 12 oz. silver and \$3 to \$18 gold per ton. Development is by 10 pits and shafts of 10 to 80' depth, and a 960' tunnel. The company estimated, 1911, 40,000 tons of ore in sight, with 16,000 tons blocked out for stoping. Company appears to have kept up assessment work and was still in existence in 1912.

MEDORA MINE. MICHIGAN

Owner by Keweenaw Copper Co., at Mandan, Keweenaw Co., Mich.

MELCHER MINING & MILLING CO. IDAHO

Office: 409 Hooper Blk., Salt Lake City, Utah. Mine office: Albion, Cassia Co., Idaho. Samuel McIntyre, Sr., pres., gen. mgr. and treas.; R. M. Wilkinson, sec. and purch. agt.; P. McIntyre, supt. Organized under laws of Utah, capitalization \$1,000,000, shares \$2 par; issued, 410,000 shares.

Property, 37 claims including former holdings of the Cumora Mining Co., bought 1912, is in the Stokes district, 38 miles from a railroad. Country rock is schist, granite and quartzite, orebodies occurring as fissure veins in both schist and granite. The vein developed runs N. 10° E. and dips 68° west.

Development is by the Cumora and Melchor shafts of 210' and 75' and the 650' Cumora, 850' Giant and 3,290' Melcher tunnels, showing a 3' vein of chalcopyrite and galena and lead carbonates said to average about 1% copper, 10% lead, 5 oz. silver and \$5 gold per ton.

Equipment includes 200-h. p. steam and water power plant, 5-drill air compressor and 6 small buildings.

Company now developing vein in Giant tunnel and driving the Melcher crosscut tunnel to crosscut the 3 veins.

MELCZER MINING CO. MEXICO

Is the operating company of the Copete Consolidated Copper Co., which see.

MEMPHIS & IDAHO SPRINGS GOLD M. & M. CO. COLORADO

Idle. Mine near Idaho Springs, Clear Creek Co., Colo. J. J. Williams, pres.; Wm. M. Slack, sec.-treas., at last accounts. Organized under laws of Colorado, capitalization \$1,500,000, shares \$1 par, nonassessable. Lands, 14 claims, patented, carry auriferous and argentiferous lead, copper and zinc sulphides. Mine is developed by shafts of 125', 250' and 460' and is tapped at depth of 2,350' by the Newhouse tunnel. Equipment includes a 22-h. p. electric hoist and an air compressor.

MEMPHIS MINING CO. NEW MEXICO

Mine office: Organ, Dona Ana Co., N. M. C. E. Head, pres.; J. I. McCullough, sec.-treas.; J. F. McCullough, gen. mgr. Organized 1911, capitalization \$1,000,000.

Property is the old Torpedo, or Memphis copper mine. Development is by 2 shafts and a 400' tunnel, showing an 8' vein with a 3' paystreak, said to carry argentiferous copper ore worth up to \$60 per ton in combined values. Idle in 1912, but expected to operate this winter.

MEMPHREMAGOG MINING CO. QUEBEC

Office: Sherbrooke, Quebec. Mine office: Bolton Center, Brome Co., Quebec. Geo. E. Smith, pres. and mgr. Organized under laws of Quebec, capitalization \$50,000, shares \$100 par. Owns the Smith mine with 150 acres, freehold, near Lake Memphremagog. Lands show a lenticular deposit between schist and a diabase dike of 50' estimated average width, traceable 1,000', carrying complex sulphide ore estimated, by the management to average 3% copper, 2% lead, 2% zinc, 1 to 4 oz. silver and \$1 to \$9 gold per ton. Developing only in 1912.

MENDHA-NEVADA MINING CO. NEVADA

Office: Commercial Bldg., Salt Lake City, Utah. Mine office: Pioche, Lincoln Co., Nev. T. J. Osborne, pres.; M. C. Godbe, sec., at last accounts. Capitalization \$1,000,000, shares \$1 par. Property, the Melessa mine, is said to have produced \$500,000 under its former ownership. The mine is reported to have a vein 3 to 15' thick averaging 6', practically vertical and showing on the 700', or bottom level, silver and gold-bearing lead and copper ores assaying up to \$100 per ton. Net smelter shipments have given returns of about \$30 per ton. Development is by a 900' incline shaft.

MERCER-SAN RAFAEL MINING CO. MEXICO

Office: Mercer, Pa. Mine near Tapalpa, Jalisco, Mex. J. W. Tyrrell, pres.; J. M. Thorne, sec.; Jas. M. Young, gen. mgr.; Geo. J. Graham, supt., at last accounts. Organized 1906, under laws of New York, capitalization \$3,000,000, shares \$1 par.

Lands, 112 hectares, known as the San Rafael group, on the eastern slope of the Sierra Cacomá, in a very rugged district, about 20 miles west of Ayutla. The property is an ancient mine whose workings show a wide belt of quartzite and diorite cut by veins carrying auriferous and argentiferous chalcopryrite ores with occasional lead and zinc sulphides occurring in shoots up to 40' in width. The mine has about 12,000' of workings.

Equipment includes a hydraulic power installation. The 50-ton concentrator has 5 stamps, a Samson crusher, Elspass mill, Pierce amalgamator and 3 Bartlett tables, with a small cyanide plant and patio. Idle on account of revolution.

MERRIMAC MINING CO. ARIZONA

Address: Globe, Gila Co., Ariz. Guy M. Smith, supt. Property, 22 claims at Powers gulch, developed by 150' tunnel and 65' shaft, with 350' of workings, showing 15' of black sulphide ore reported to carry 9% copper, \$4 gold and 80 oz. silver per ton.

MESCAL MINING CO.**ARIZONA**

Mine office: Jerome, Yavapai Co., Ariz. Capt. Samuel B. Adams, pres. and gen. mgr.; J. Prather, sec., at last accounts. Organized under laws of Arizona, capitalization \$1,500,000, shares \$1 par.

Property, the Mescal copper mine, 7 claims, 3 patented, known as the Owen & Allison group, near Mescal gulch, on Mingus mountain. Claims show fissure veins in slate and contact deposits between slate and diorite. The vein worked is of 3' average width, traceable 1,600' and opened by an 85' shaft and tunnels of 220' and 900', with a blind shaft from the 700' tunnel level. The mine had about 1,200' of workings at last accounts showing chalcoppyrite assaying 1 to 2% copper, with a trace of gold.

Equipment includes electric power and an air compressor, and there are 5 buildings. Idle for some time but operations resumed 1913, when shaft was unwatered, retimbered and machinery installed.

METAL DE COBRE; COMPANIA MINERA.**MEXICO**

Mine near San Antonio de la Huerta, Ures, Sonora, Mex. Organized under laws of Mexico, and is the holding company of the Rio Yaqui Copper Co.

METALINE ORIOLE MINING CO.**WASHINGTON**

Office: 223 Mohawk Blk., Spokane, Wash. Mine office: Metaline, Pend Oreille Co., Wash. Fred. N. Davis, pres. and gen. mgr.; E. E. Doan, vice-pres.; Thos. R. L. Harris, sec.; H. F. Snamiska, treas.; Joseph Lancaster, mg. engr. Organized Dec. 30, 1910, under laws of Washington, capitalization \$1,500,000, shares \$1 par, assessable. Total calls to end of 1912, \$30,000.

Lands, 5 claims, 100 acres, and a 5-acre mill site, unpatented. Property has 2 fissure veins in quartzite, the one under development showing a width of 6 to 8', and carrying about 1% copper, 12% lead, 25% zinc, 40 to 80 oz. silver and \$5 gold per ton. Development is by a 200' shaft and 3 tunnels of 50', 400' and 750'. A 100' shaft sunk at 60° on the vein from the lower tunnel shows ore throughout a 70' drift. Company has 1,500 tons of ore on the dump. Equipment includes steam power, with small hoist and 3-drill air compressor. Company was planning, 1913, to erect a 50-ton mill.

METALLURGICAL CO. OF AMERICA.**UNITED STATES**

Office: 52 Broadway, New York. Richard Merton, pres. and gen. mgr.; J. Langeloth, vice-pres.; Theo Sternfeld, treas.; preceding officers, B. Hochschild, Edward Balbach, Jr., and Otto Sussman, directors; Julius Goldman, sec. Organized May 19, 1904, under laws of New Jersey, capitalization \$2,000,000, shares \$100 par; 15,000 shares issued for the purpose of exploiting mining and smelting enterprises. Annual meeting second Tuesday in April, at Jersey City, N. J.

METHOW GOLD & COPPER MINING CO.**WASHINGTON**

Mine office: Winthrop, Okanogan Co., Wash. W. D. Scott, pres.; J. N. Tewinkel, sec.-treas. Organized 1889, under laws of Washington, capitalization \$90,000, shares 5 cts. par. Lands, 8 claims, 150 acres, show fissure veins in Algonkian rocks. The sulphide ores assay 9% copper, 2 oz. silver and \$5.50 gold per ton. Development includes 3 tunnels, longest 564', and a 52' shaft. Has available water power and timber. Idle except for annual assessment work.

MEXICAN-AMERICAN SMELTING & REFINING CO.**MEXICO**

Owns the Guaymas smelter. The smelting plant is at Batuecas, a suburb of Guaymas, Sonora, Mex., on tide water, lying between the Bay of Guaymas and the S. P. R. R. of Mexico. The smelter was originally erected by William C. Greene, founder of the Greene-Cananea Copper

Co. and not having been operated for some years, will need extensive alterations. Guaymas is well located for a large smelting plant and company has a 250-acre site in a splendid situation for operating.

This smelting company also owns a smelter concession from the Government covering the mining districts of Hermosillo and Guaymas, in the state of Sonora, for a period of 20 years. This concession is one of the most valuable ever granted in Mexico, by reason of its privileges and exemptions.

MEXICAN EXPLORATION & MINING CO.

MEXICO

Is controlled by the Pacific Smelting & Mining Co., through ownership of practically entire share capital. Described Vol. X.

MEXICAN METALS CO.

MEXICO

Office: 35 Congress St., Boston, Mass. Mine office: Cananea, Sonora, Mex. Geo. E. Keith, pres.; Geo. H. Woodman, vice-pres.; Sumner M. Teele, sec.; Harold C. Keith, treas.; other directors: William Brocken and Eldon B. Keith; August Fritsche, gen. mgr.; Henry Beckman, mine supt.; J. W. Baker, mill supt.; S. B. McCluskey, metallurgical and mg. engr.; Chas. Ahnell, purch. agt.; Albert M. Jackson, chemist-assayer.

Organized August 16, under laws of Arizona, capitalization \$5,000,000, shares \$5 par, assessable; \$2.25 paid. Company succeeded the Arizpe Mines Co. and operates and holds title to property through the Moctezuma-Arizpe Development Co., legalized in Mexico. Old Colony Trust Co., registrar; Federal Trust Co., transfer agent. Annual meeting, second Monday in September. Shares are listed on the Boston curb. An assessment of 15 cts. per share was levied September, 1913. Operations, 1912-13, have been much hampered by chronic warfare about the mine, causing a small deficit in operations.

Property, a compact tract of 6,500 acres in several groups, also a one-half acre mill site, in the Manzanal mountain range, about 15 miles south-east of Cananea.

Lands show porphyry and diabase, the orebodies occurring in shear zones of brecciated diabase, silicified and cemented with sulphides, having a generally N.-S. strike and dipping about 75°. There are 5 ore bodies under development, ranging in width from 3 to 40'. Ores are mainly tetrahedrite, bornite and chalcopyrite, high-grade ore carrying up to 5% copper, 20% lead, 200 oz. silver and \$1 gold per ton, and milling ores averaging 1% copper, 12 oz. silver and about \$1 gold per ton.

The principal mines are the Alacran and Palo Seco, former having a main working shaft 300' deep and a 150' prospect shaft. The Palo Seco shaft is 400' deep and there is also a 150' shaft and a tunnel. There are a number of prospects on the property, the most important being the Manhattan with 4 shafts 100 to 200' deep and 2 tunnels of 400' and 600', the Rey de Cobre having a 250' shaft, the Victoria 75' shaft and the Sevilla tunnel of 250'. Total length of underground openings is about 6,000'. Ore reserves are estimated at 50,000 tons. The Manhattan property, 4,000 acres, shows surface indications markedly similar to those noted on the Greene-Cananea property and is to be developed by churn drilling.

Equipment includes a small steam plant, 2 Bessemer 165-h. p. oil engines, 4 hoists, 2 with capacity good for depth of 800', and a 1,400-cu. ft. air compressor. The concentrator will treat 110 tons daily making \$54 concentrates. Mill has a 7x10" Blake crusher, a Hartz jig, 5 Wilfley tables, 2 Deister slime tables, 4 Callow tanks, hydraulic classifier and canvas tables. Buildings are an office structure and 2 warehouses in Cananea, a 20x40' machine shop, a 14x20' smithy, store building, office, laboratory, boarding house, 3 cottages and 35 miners' dwellings at the mines.

Transportation facilities consist of a 5-ton Pierce-Arrow motor truck, and a Ford touring car.

Production is small but the company's holdings include some properties of promise and are being systematically and intelligently developed under the able supervision of Mr. Fritsche. A preliminary report on the property was made, 1908, for the Arizpe Mining Co., by Arthur Houle, E. M.

MEXICAN MINES CORPORATION.

MEXICO

Letters unclaimed at Lincoln Trust Co. Bldg., Jersey City, N. J. Mine near Baca, Hidalgo, Chihuahua, Mex. C. L. Graves, sec.; E. J. Ernest, gen. mgr., at last accounts. Organized under laws of Maine, capitalization \$3,500,000, and is protocolized in Mexico. Lands are 5 groups, including former holdings of the Janie Mining Co. The Ventura mine, about one-half mile from the Mina Cigarrero, has a 230' three-compartment shaft, showing fissure veins carrying streaks of auriferous and argentiferous copper ore below commercial tenor. A little commercial ore is said to have been developed. Equipment includes a machinery plant. Presumably idle.

MEXICAN MINES-PROSPECTS DEV. CO., S. A.

MEXICO

Office: Cinco de Mayo 32, Mexico, D. F. Mine office: Hostotipaquillo, Jalisco, Mex. J. L. Requena, pres.; Percy A. Babb, gen. mgr. Organized 1907, under laws of Mexico, and is said to hold a controlling interest in the Compania Esplotadora de Jalisco.

Lands include the San Luis del Oro and Juanquiniquilla mines. The San Luis del Oro mine, 82 hectares, carries mainly silver and gold values having some rich ore. The Juanquiniquilla mine, 131 hectares, 31 miles southwest of San Marcos, has auriferous copper ore. The property is said to include a porphyry ore deposit. Presumably idle.

MEXICAN MINING CO.

MEXICO

Idle. Office: Long Beach, Cal. Mine office: Alamos, Sonora, Mex. C. C. Clute, pres.; J. B. Randall, vice-pres.; J. T. Newell, sec.-treas.; Wm. Hitchcock, mgr., at last accounts. Organized under laws of California, capitalization \$300,000. Lands, 10 hectares, known as the Veta Grande mine, developed by shafts, said to show a considerable body of copper ore and company claims to have 50,000 tons of low to medium-grade ore on the dump. Equipment includes steam power.

MEXICAN SMELTER CO.

MEXICO

Office: Pedricena, Durango, Mex. Property is a 50-ton furnace, built on the patents of Jas. E. Anderson, to use petroleum for fuel, which did not prove successful. Idle several years.

MEXICAN SMELTING CORPORATION, LTD.

MEXICO

Office: 671 Salisbury House, London, E. C., England. Works office: Monclova, Coahuila, Mex. A. F. Roberts, secretary. Organized Aug. 29, 1908, under laws of Great Britain, capitalization £150,000, in 100,000 ordinary shares of £1 par and 1,000,000 shares of 1s. par. All ordinary and 169,200 1s. shares issued. Bonds £200,000 first-mortgage profit-sharing debentures at 6½% authorized; £15,600 issued. Lands about 3,000 acres. No returns securable. Company was organized to acquire for £55,000 a tract of 3,000 acres of land at Tapada, near Monclova, Coahuila, Mex., and to erect a smelter and do a general custom smelting business.

MEXICAN SMELTING & REFINING CO.

MEXICO

Idle. Works office: Taxco, Alarcon, Guerrero, Mex. Lawrence Tatum, pres. and gen. mgr.; Fredk. M. Perkins, supt., at last accounts. Lands, 200 hectares, including several antiguas, principal being the San Jose mine, carrying copper ores with values mainly in silver. Has gas power and a 60-ton smelter with water-jacket blast furnace and a small refining furnace.

MEXICANA; COMPANIA METALURGICA.**MEXICO**

Office: 82 Beaver St., New York. Mine offices: Sierra Mojada, Coahuila, Mex., and Concepcion del Oro, Zacatecas, Mex. Works office: San Luis Potosi, S. L. P., Mex. Robt. S. Towne, pres. and gen. mgr.; R. E. Safford, sec.; Geo. H. Carnahan, gen. mine supt.

Organized 1890, under laws of New Jersey, capitalization \$4,000,000, shares \$100 par, fully issued, in \$1,000,000 cumulative 8% preferred stock, \$1,250,000 guaranteed 6% second preferred stock, and \$1,750,000 common stock. Debentures, \$3,000,000 first-mortgage 5% bonds authorized, due July 31, 1931, with a 2% annual sinking fund, bonds being subject to call at 110 and accrued interest; issued, \$2,265,700. Company is not a dividend payer. Morton Trust Co., New York, registrar. Annual meeting, first Monday in June.

The company's interests are extensive, including control of numerous subsidiary mining, transportation and land companies, among the more important being the Sombrerete Mining Co. and the Mexican Lead Co., at Sombrerete, Zacatecas, Mex., the Montezuma Lead Co., Alvarez Lead & Timber Co., Mexican Mineral Railway Co., and Potosi & Rio Verde Railway Co.

The Veta Rica mine, at Sierra Mojada, produces silver-lead and copper ores, latter averaging 3% copper, 5% zinc and 20 oz. silver per ton. Development is by a 600' main shaft and values are mainly in lead and silver.

The Cerro Prieto and adjoining mines, at Concepcion del Oro, developed by tunnels, contain veins producing gold copper ores. The San Pedro and San Pablo mines also are important producers.

The Minas Flojonales, in the state of Hidalgo, carrying veins with auriferous and argentiferous lead and copper ores, are under development. The company is said also to have property in the vicinity of Taxco, in the state of Guerrero, Mex.

The smelter, treating about 750 tons daily, has a modern equipment, including 12 furnaces for the reduction of gold, silver and lead ores, and a special copper department of 100 tons daily capacity. The works have steam and electric power, and employ about 1,000 men. The company is a large producer of lead and silver, with considerable outputs of copper and gold, secured mainly as byproducts, and is active and enterprising in the rejuvenation of old properties and the development of new mines.

MEXICANA MINING CO.**MEXICO**

Address: W. H. Childs, general manager, Shamokin, Pa. Company is the operating subsidiary of the Keystone Mining Co., formerly the Keystone Copper Smelter Co., of Philadelphia, Pa. Operating office: Aptdo. 22, Guadalajara, Jalisco, Mex. Mine at Tapalpa, Jalisco, Mex. Property, the Keystone mine, has silver and gold-bearing copper ore developed by shaft. Equipment includes steam power and an air compressor. The reduction plant includes a 40-ton mill and 50-ton smelter. Property resumed operations January, 1912.

MEXICO GRANDE MINING CO.**MEXICO**

Address: Chas. L. Montague, treas., Cananea, Sonora, Mex. W. A. Johnson, pres.; Pete Lepash, vice-pres.; R. P. Safford, sec.; M. Bernstein, commissario. Incorporated in Mexico, capitalization 10,000 pesos.

Property consists of the Mexico Grande, Morena, Aldasora and General Lafayette claims, lying north of the main working shaft of the Calumet-Sonora Mining Co. These claims contain the continuation of the vein worked by that company and while no large orebody has been found the slight development on the property has shown good ore. The property shows pale-colored, well-bedded volcanic tuffs and breccias cut by fissure

veins, but has no large outcrop such as characterized other parts of the foothill ore belt of Cananea.

MEXICO MINE.**MEXICO**

See Mina Mexico Co.

MEXICO MINING, REFINING & EXPLORATION CO. MEXICO

Office: 501 I. W. Hellman Bldg., Los Angeles, Cal. Letters unclaimed at Hermosillo, Sonora, Mex. Wm. T. Calderwood, pres. and gen. mgr.; Dr. Chas. B. Nichols, vice-pres.; F. C. Lamb, sec.-treas.; preceding officers, E. B. Lovie, C. A. Neil, L. A. Davis and A. A. Snodgrass, directors; B. A. Ogden, supt.; A. Wainwright, engr. Organized 1905, under laws of Arizona, capitalization \$5,000,000, shares \$1 par, nonassessable. Annual meeting, second Monday in April, at Nogales, Ariz.

Lands, 104 hectares, 260 acres. El Creston de Cobre mine, 100 hectares, about 35 miles west of Hermosillo, shows dolomite and granite and is an antiqua dating from the eighteenth century. The property carries 4 orebodies, of which 2, under development, reported by the company as of 30' average width, and traceable 1,400', carry copper ores averaging 4% copper, 8 oz. silver and \$1 gold per ton. Development is by 8 shafts, deepest 300', and tunnels of 400', 250' and 80' with 1,000' of workings, estimated by the company to show 100,000 tons of ore.

La Cobriza mine, at Soyopa, 4 hectares, is said to show a 16' vein with a 7' paystreak carrying ore formerly claimed to be of 10 to 20% copper tenor, with silver values.

Equipment includes a 235-h. p. steam plant, with 2 hoists and a 6-drill air compressor, and there are 9 buildings. There is also a 20-ton mill. Company employs 15 men, and was planning, 1913, to erect a 100-ton smelter.

MIAMI ARIZONA DEVELOPMENT CO.**ARIZONA**

Mine office: Globe, Gila Co., Ariz. W. L. Lincoln, manager. Property, 13 claims, adjoining the Gibson Copper Co. on the southwest, is developed by about 1,500' of tunnel, showing chalcopryite ore of good milling grade.

MIAMI COPPER CO.**ARIZONA**

Office: 42 Broadway, New York. Mine office: Miami, Gila Co., Ariz. Adolph Lewisohn, pres.; J. Parke Channing, vice-pres.; Sam A. Lewisohn, treas.; preceding officers, Hermann Sielcken, Jacob Langeloth, Wm. H. Nichols, Walter T. Rosen, F. W. Estabrook, Ralph C. Lupton, Theo. L. Herrmann and Julius A. Lewisohn, directors; Herman Cook, sec.; B. Britton Gottsberger, gen. mgr.; F. W. MacLennan, asst. mgr.; I. W. Solomon, mill supt.; W. F. Williams, chief clerk; Arthur Stonham, auditor.

Organized Nov. 30, 1907, under laws of Delaware, capitalization \$3,000,000, shares \$5 par, increased Nov., 1909, to \$3,500,000, and again increased Aug., 1910, to \$4,000,000; issued, \$3,727,705. Of the last increase in capitalization, 60,000 shares were offered to stockholders at \$18 per share. Of the issued stock, 300,000 shares were given, Nov., 1907, in payment for lands; 200,000 shares were issued April, 1908, at \$5 per share; 100,000 shares were issued Aug., 1908, at \$10 per share; 60,000 shares were issued Aug., 1910, at \$18 per share, and of the balance, 88,236 shares were set

aside for conversion of bonds, and 51,764 shares remain unissued. Debentures, \$1,500,000 first-mortgage 10-year 6% gold bonds, convertible into stock at \$17, and redeemable at the option of the company, on any semi-annual interest date, on or before Jan. 1, 1915, at 105, plus accrued interest, upon 4 months prior published notice and after Jan. 1, 1915, upon like notice, at par and accrued interest. Of the bond issue, \$25,000 was outstanding Sept., 1913. The company is controlled, through stock ownership, by the General Development Co. Mechanics & Metals National Bank, New York, and Old Colony Trust Co., Boston, registrars; Bankers Trust Co., New York, and American Trust Co., Boston, transfer agents. Shares are listed on the New York and Boston Stock Exchanges. Annual meeting, third Wednesday in April. Dividend payments were begun May 15, 1912, at the rate of 50 cts. per share quarterly, and to end of 1913 totalled \$2,591,678. Net profits for 1912 were \$2,094,804.

Property, 222 acres, mining claims, patented, 555 acres held for the mill and power plant and 345 acres for water rights, all in the Red Springs or Miami district, 6 to 8 miles west of Globe. Claims show an area of silicified schist at and near a contact with a great intrusive body of granite, known as Schultze granite. The altered schist belt averages about 1,200' in width and has a generally E.-W. direction. The granite merges into granite porphyry at its borders, and this and offshoots, or dikes of the granite in the schist, are mineralized along the ore belt. This is seen in a dike with E.-W. strike, of 40 to 60' width, mineralized in the same manner as the schist.

The schistose area is netted with contraction fractures and later fissuring due to metasomatic changes of volume, accompanying mineralization and alteration. The ore belt is marked by silicification and intense alteration of the schist, a change that fades out into natural gray schist a few hundred yards north of the Miami and Inspiration mines. The ore zone is oxidized and leached to an average depth of 210', this part containing small seams and veinlets of oxidized ore. Below this leached belt a few feet of mixed ore is succeeded by the zone of disseminated glance, a rather soft, much altered rock specked with tiny glance grains and films.

Development of the mine has been by extensive underground operations, supplemented after the mine was opened up, by churn drilling. Up to the end of 1912 drill holes of 600' average depth had been drilled to the number of 62. Drill holes were put down at the corners of 200' squares and practically all of them cut ore, carrying from 110 to 210' in thickness and ranging from 2 to 2.5% in copper tenor. Drill borings in the vicinity of the mine have shown commercial ore to at least 115' additional depth below the 720' level of the mine.

The mine is worked by a very large main shaft with 3 others sunk during prospecting operations and development. The latter are known as the Captain, Red Springs and Red Rock shafts. The Red Rock shaft with 3 compartments was 720' deep at the end of 1912 and is sunk in about the center of the mineral deposit. The Red Springs shaft, 2,150 north-west of the Red Rock, has 3 compartments and is 422' in depth, sunk through surface capping into ore. The Captain shaft, the first shaft put down on the property, was stopped at 210', but in 1913 was deepened to 420' and a tramming level prepared for stoping and ore extraction; 1,894' completed Nov., 1913.

The Miami, or main working shaft, equipped for ultimate production of 5,000 tons of ore daily, is sunk outside the proven mineral zone in order to be immune from caving and is bottomed in granite at depth of 720', the first 450' being through conglomerate. It is 12x16' inside of timbers with

15x19' outside dimensions and framed with Louisiana long-leaf yellow pine, preserved by the use of 12 lbs. of creosote per cubic foot. The timber was creosoted after framing by the International Creosoting & Construction Co. of Galveston, Texas, at a charge of \$20 per 1,000', board measure. The shaft has 5 compartments, two 5x6' hoisting compartments, a 6x12' cage compartment, a 3x6' ladder compartment, and a 3x6' pipe compartment. No. 4 has a 110' steel headgear, with sheave journals 90' above the collar of the shaft, and has 1,000-ton steel ore bins.

As the mine has a solid orebody, the upper levels are opened in the ore zone at only 50' intervals. The first level is at 220' below the collar of the Red Rock, or development shaft, and levels are opened mainly thereafter at 50' intervals, with sub-levels between each, giving ore developed in slices of only 25' vertical depth. Ore is blocked out horizontally by 5x7' drifts, with centers spaced 100' apart, while on the upper levels there are drifts with centers spaced at 50' intervals, blocking out ore in cubes of various sizes, but with all dimensions that are multiples of 25'. Eleven levels have been opened. The 420' and 570' levels handle the bulk of the ore and have 1,000-ton loading pockets. Ore is hauled in trains of twenty 2½-ton ore cars by 6½-ton electric locomotives.

There being practically no waste in the mine, within the limits of the ore zone, the most serious problem was to devise a method by which the greatest amount of ore could be extracted with the least waste. The system used is an adaptation by N. O. Lawton of the auxiliary raise and sub-level stoping method, by which about 60% of the ore will be mined in rooms and the remainder extracted by top-slicing and sub-level caving methods. This gives minimum timbering and the compactness and uniformity of the orebody make it well adapted to this plan of extraction.

At the end of 1912 the company had developed, or explored, 58 acres of the ground classed as mineral-bearing, and of this area 15 acres carried copper sulphides formerly considered too low in grade to be termed ore. It was conservatively estimated by the management that the 43 acres of proven ground carried 20,800,000 tons of ore, averaging 2.48% copper. Besides the amount stated, the property also has about 17,000,000 tons of 1.25% ore which will eventually be worked at a profit. These figures are reliable, because of the unusually thorough manner in which the ore has been developed and blocked out underground and the well known conservatism of the management. A very large part of this ore is actually blocked out underground, and the estimated average percentage is based upon thousands of careful assays, made of samples taken at 5' intervals, throughout the workings. There remain 164 acres of mineral ground yet to be tested, of which a large aggregate area should have ore. New underground openings, 1912, were 54,929', and the mine had 166,252' of workings at the end of the year; It is probable that further development of the mine will develop more or less additional ore, possibly above what is considered the present payable limits, probably below, and almost certainly in the lateral extensions.

The 70x264' power house is on the flat below the mine and reached by side-tracks from the main line of the Gila Valley, Globe & Northern railway. Power generates compressed air at 90 lbs. initial pressure, and a 25-cycle alternating current at 6,600 volts. There are three 4-cylinder triple-expansion engines taking steam at 185 lbs. pressure, with 100' superheat, direct-connected to three 1,000-kw. 3-phase 25-cycle generators. There are two 4-cylinder triple-expansion air compressors with capacity of 4,000 cu. ft. of air per minute, at 90 lbs. initial pressure. Electric current is used for the mill, shops, pumps and underground traction, and com-

pressed air will be used for power drills and hoists. A transmission line has been built to the Roosevelt dam, 70 miles from Miami, and power will be supplied by the U. S. Government from the plant at that point.

The boiler house has four 600-h. p. Edgmore water-tube boilers, generating steam at 200 lbs. pressure, equipped with Green fuel economizers and Foster superheaters, burning petroleum, and a 500,000-gal. storage tank is to be built for oil storage. The boiler plant is so designed that if coal can be obtained later and used with economy automatic stokers can be installed. The boiler house has a reinforced concrete chimney built by the Weber-Duller Co. of Los Angeles, 200' high with tapering walls, having an outside diameter of 23' 4" and inside diameter of 18' 4" at the base and 12' internal diameter at the top, lined for one-third of the height with a 22" course of firebrick covered with 18" of concrete at the base, and reinforced by 2 sets of steel rods on the inside.

The plant at the main shaft, one-half mile from the central power station, consists of 2 Nordberg hoists, the larger for raising ore having 2 drums of 10' diameter with 55" face, capable of handling 1,000' of 1 $\frac{3}{8}$ " rope. An auxiliary hoist has 16x16" cylinders with a drum of 8' diameter and 6' face for hoisting the man cage. Both hoists are operated by compressed air, reheated. The ore hoist raises two 7 $\frac{1}{2}$ -ton skips which are dumped directly into the pockets of the crusher building. No. 4 shaft is planned and equipped to handle 2,000 tons of ore in 8 hours, giving a maximum productive capacity of 6,000 tons per diem.

The crusher building, at No. 4 shaft, of 6,000 tons daily capacity, has Chalmers-Williams crushers, breaking ore to 1 $\frac{1}{4}$ " size, the product being fed through two 4x10' trommels to four 62x18" rolls that crush oversize to half-inch cubes. Ore then goes by belt conveyor, Miami type, heavy duty Traylor, to the mill bins. The stock pile at No. 4 shaft contained 108,213 tons of ore at the end of 1912.

The concentrator was planned and built by H. Kenyon Burch, the builder of the Nacozari and Morenci mills, and like all his work is a complete success. The plant is located on a hillside, south of the ore deposit, permitting the use of gravity in handling material and with a large acreage in the valley nearby, available for many millions of tons of tailings, besides a gulch in front of the mill which provides dumping ground for a number of years to come and also will serve as a reservoir for clarifying the mill water for re-use. The 3,000-ton mill is of steel and stands on a foundation of about 15,000 cu. yds. of concrete. Ore is delivered from the crusher house, at the main shaft, by 300' belt conveyors leading to six 1,000-ton ore bins, 1 at the head of each section of the mill. At the head of each of the 6 sections is a 1,000-ton steel cylindrical ore bin of 30' diameter and 30' height, set 24' above the ground on concrete foundations, each bin having automatic weighing and sampling devices. The sections being similar, a description of one answers for all save the sixth unit.

From the bin ore goes by conveyor to a set of rolls, reducing pulp to $\frac{3}{8}$ " size, after which it is classified by 22-mesh screens, oversize going to Hardinge conical mills replacing the Chilean mills used at first, mill having 30-mesh. The product, with the undersize from the 22-mesh screens, goes to classifiers, the coarse product from which goes to sand concentrating tables and the finer material to slime tables, there being 22 sand tables and 30 Deister tables to each section. One section of the mill has Burch fine crushing rolls in place of Chilean mills. Concentrates go through a tunnel having 6 concrete settling tanks, in which they are dried by vacuum pumps and then taken by belt conveyors to storage tanks above the railway. Concentrates leave one side of the mill, and tailings the other.

In Oct., 1913, the company decided to alter the first 5 units to conform to the sixth unit because the latter secures a 2 lb. per ton better extraction. A 20-ton experimental plant has also been installed to treat mixed sulphide and oxide ores by a new process consisting of: (a) coarse crushing and removal of fine dust; (b) rough water concentration to take out coarse sulphide matter; (c) roasting of tailings from above; (d) leaching with sulphuric acid solution; (e) precipitation of copper by electrolysis and regeneration of solution with sulphurous acid gas, solution then being used again for leaching.

The first unit of the mill started March, 1911, and the sixth and last in Feb., 1913. As a result of several years of continued painstaking experimental work, the mill is fully meeting the predictions made by Mr. Channing. Early experiments indicated a concentration of 15 into 1, but later work showed that as good a recovery could be secured with the higher ratio of concentration of 20 into 1, and the mill is running on this basis, yielding a 40% copper product, with an extraction in the neighborhood of 70% of the assay value. Concentrates are shipped under a 10-year contract, beginning July 1, 1913, to the Greene Cananea Copper Co., at Cananea, Sonora, Mex., where they are smelted.

The water supply of the mill comes from Pinal creek, and from 3 wells, each producing 500,000 gals. daily at the lower end of the Miami wash. Water is taken from Pinal creek by a 25,000' pipe line of 14" diameter. In addition the company buys from the Old Dominion Copper Mining & Smelting Co. 2,000,000 gals. of water daily. Water from the Old Dominion flows to McLean's ranch, near Pinal creek, whence it is pumped by a Nordberg electric pump of 1,500 gals. capacity per minute, to a 50,000-gal. storage tank at the concentrator, and thence distributed through the works in 12" cast-iron mains.

Buildings include a machine shop, warehouses, steel change house, store, boarding house, bunkhouse and upwards of 150 frame dwellings, of 2 to 6 rooms each, for employes, all lighted by electricity. There is a substantial office building, erected at a cost of \$15,000, a club house and recreation hall, on the summit overlooking Miami flat, provided with reading matter, pool tables and games, and a hospital owned jointly with the Inspiration Consolidated Copper Co.

The mine is served by the Gila Valley, Globe & Northern railway, with standard gauge, having an excellent average grade and light curves, so that favorable freight rates are given the mine and mill.

Production was begun March, 1911, and at end of the year a total of 445,036 tons of ore was milled, yielding 20,065 tons of concentrates from which 15,385,783 lbs. fine copper was secured. The output in 1912 was 32,832,609 lbs. fine copper secured from 1,040,744 tons of ore milled and at a cost of 9,588 cts. per lb. Production has been as follows:

	1913.	1912.
	lbs.	lbs.
Six months.....	15,727,369	15,543,783
July	2,890,000	3,014,996
August	3,097,500	2,931,948
September	2,688,600	2,727,022
October	2,862,050	2,897,755
Total	27,265,519	27,115,504

The Miami is a very large and very fine mine and is in worthy hands.

MIAMI INSPIRATION MINING CO.

ARIZONA

Mine address: Care F. W. Ham, sec.-treas., Globe, Ariz. Dan R.

Williamson, pres. Organized under laws of Arizona, capitalization \$500,000, shares \$5 par. Property, about $2\frac{1}{4}$ miles west of Miami, adjoins the Miami Needles Copper Co. on the south and east. Claims are reported to show considerable evidence of mineralization, ore occurring in silicified schist and adjoining Schultze granite. Company developing in a leisurely fashion, 1913.

MIAMI NEEDLES COPPER CO.

ARIZONA

Office: Globe, Ariz. D. R. Williamson, pres.; F. W. Ham, sec.-treas. Organized 1912, capitalization \$500,000, shares \$5 par.

Property, 11 claims on Needle mountain, about 5 miles west of Miami. Claims, slightly developed, show altered schist and Schultze granite, the former with evidences of mineralization along narrow belts. Much of the group is covered by barren Gila conglomerate. Company has made no serious attempt to further develop the property since organization, and apparently is idle through lack of funds.

MICHIGAN-ARIZONA COPPER CO.

ARIZONA

Idle. Office: 2 Ingersoll Blk., Lansing, Mich. Emory W. Olds, pres.; Dr. Ely F. Allen, sec., at last accounts. Organized June 17, 1907, under laws of Arizona, capitalization \$2,000,000, shares \$1 par. Lands, 80 acres, in the Sulphur Springs valley, at the foot of Graham mountain, show two 8" parallel veins of ore assaying up to 29% copper, with traces of gold and silver, opened by a 42' shaft.

MICHIGAN & ARIZONA DEVELOPMENT CO.

ARIZONA

Office: 905 Metropolitan Life Bldg., Minneapolis, Minn. Mine near Helvetia, Pima Co., Ariz. C. C. Prindle, pres.; R. M. Bennett, vice-pres.; Chas. W. Sexton, sec.-treas. This company reorganized the Helvetia Copper Co., under a plan explained Vol. V. Property formerly was a considerable share interest in the Helvetia, and about 40 undeveloped claims adjoining the Helvetia. Reported idle by company in 1913.

MICHIGAN-ARIZONA MINING CO.

ARIZONA

Idle. Office: 17 First St., Muskegon, Mich. Mine near Mammoth, Pinal Co., Ariz. S. H. Hamilton, pres.; Theo. P. Swift, sec.-treas. and engr. Organized Aug. 22, 1904, under laws of Arizona, capitalization \$5,000,000, shares \$1 par.

Lands, 7 claims, 140 acres, in the Bunker Hill or Copper Creek district, 22 miles from a railway, carrying fissure veins and impregnations in brecciated masses of country rock, with porphyritic intrusions. The mine has a 50' shaft and tunnels of 93' and 150', showing cuprite, melaconite, malachite, chalcocite and occasional chrysocolla.

MICHIGAN COPPER & GOLD MINING CO.

UTAH

Office: 502 Newhouse Bldg., Salt Lake City, Utah. Mine office: Frisco, Beaver Co., Utah. Lawrence Green, pres.; Sam S. Porter, vice-pres.; Geo. Winsness, sec.; Rodney T. Badger, treas.; preceding officers, H. M. Dinwoody, H. G. Williams and R. P. Morris; directors; E. Rummelmeyer, cons. engr. Organized Dec., 1902, under laws of Utah, capitalization \$300,000, increased, 1911, to \$1,000,000, shares \$1 par.

Lands, 6 claims, patented, including the New York group, near the Horn Silver mine, 1 mile east of Newhouse, in the San Francisco district, three-fourths mile from the railway. Claims are said to show 12 parallel veins intersecting the main contact. Development is by shafts of 80', 100' and 200' and a 50' tunnel. The mine has a paystreak carrying ore giving assays of 13.3% copper, 2.1% lead and 7.5 oz. silver per ton. Was developing with contract labor, at last accounts.

MICHIGAN COPPER MINING CO.

MICHIGAN

Office: 15 William St., New York. Mine office: Rockland, Ontonagon

Co., Mich. Jos. E. Gay, pres.; John R. Stanton, vice-pres. and treas.; J. Wheeler Hardley, sec.; preceding officers, Geo. W. Drucker and Alfred M. Low, directors; Samuel Brady, supt.; Henry Stubensky, clerk.

Organized Jan. 5, 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; fully issued, \$20 paid in. Last assessment was levied 1909. The company ended 1912 with quick assets of \$16,420 and liabilities \$117,772. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Tuesday in May.

Lands 4,870 acres of mineral territory, 1,466 acres of timber and miscellaneous lands and a 150-acre mill site, giving total holdings of 6,686 acres, mineral lands being in Secs. 1, 2, 3, 9, 10, 11, 13, 14, 15, 16, 17, 21, 22, 23, 24, 25, 26 and 27, T. 50 N., R. 30 W.

The main tract is 3 miles east and west by $4\frac{1}{2}$ miles north and south, in addition to which there are 4 scattering tracts to the westward, 1 of 40 acres, 2 of 80 acres each and 1 of 160 acres, all carrying the outcrop of the Calico amygdaloid. The Michigan lands include the old Minnesota, Rockland and Superior mines. The Superior mine produced 567,331 lbs. fine copper, 1856-69 and 1876-79. The Rockland, lying next east of the Minnesota, was operated 1853-70, making 6,210,309 lbs. fine copper from the Minnesota contact vein which averaged about 2' width and carried considerable silver in that mine. The old Minnesota mine, opened 1847, closed 1870, made 34,704,668 lbs. fine copper and paid dividends of \$1,820,000. The Minnesota mine is fully described Vol. II.

The Michigan tracts carry the following known copper-bearing beds of the Evergreen belt: Calico, Contact, Minnesota, Branch, North Contact, Knowlton, Mass, Butler, Ogima, North Amygdaloid and South Amygdaloid, and presumably the other parallel beds, in addition to various other unidentified copper-bearing beds of the Keweenaw series. The Knowlton, or northernmost of the Evergreen belt of parallel beds, lies about 1,000' south of the old Minnesota shafts and the 7' amygdaloidal bed supposed to be the Butler, opened to some extent in Penninsula bluff, 2,000' south of "B" shaft, shows some heavy copper and stamp rock. There are 3 old shafts on the Butler bed and a tunnel cutting several parallel copper-bearing strata. There also are cupriferous amygdaloidal outcrops north of the Calico bed on which no work has been done.

The Michigan mine has 3 shafts on the Calico bed and about 10 miles of workings. "A" shaft is 2,133' deep; "B" is bottomed at the 14th level, and "C" at the 11th level. The lode grew steadily poorer with depth and showed a tendency to pinch, being only about 5' wide on the 16th level of "A" shaft, though well charged with copper. The mine was closed down Oct., 1909, continuing about 25 men in exploratory work until the end of 1910, when the property was turned over to tributors, who continued to scam the mine with some profit to themselves and the company until May, 1913, when all work was stopped.

Buildings include a 30x60' machine shop, a stone smithy, carpenter shop, warehouse, office and 22x50' changing house.

The mill, construction of which was begun April, 1906, is about 1 mile north of the Mass mill, on Keweenaw bay, with ample water frontage. Construction was suspended, 1907, though perhaps no more than \$10,000 would be required to complete the mill, on which about \$175,000 has been expended.

Recent production has been as follows: 2,875,341 lbs. fine copper in 1906; 2,665,404 lbs. in 1907; 3,000,206 lbs. in 1908; 1,979,305 lbs. in 1909; 36,682 lbs. in 1910; 327,773 lbs. in 1911; 162,590 lbs. in 1912. The mine has proven a disappointment, and untoward financial conditions have re-

stricted the exploratory and development work that are clearly called for, and which probably will be taken in hand vigorously, when the times warrant. The property is very fully described in Vol X.

MICHIGAN SMELTING CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Works office: Houghton, Houghton Co., Mich. Wm. A. Paine, pres.; John R. Stanton, vice-pres.; Frederic Stanwood, sec.-treas.; Frederick I. Cairns, supt., and Chas. A. Snow, directors; John Mugford, asst. supt.

Organized 1903, under laws of Michigan, capitalization \$500,000, shares \$25 par. The entire stock issue is owned by 6 mining companies, the Copper Range group holding 12,000 shares and the Stanton companies 8,000 shares, holdings in shares being as follows: Champion, 4,400 shares; Trimountain, 4,400; Baltic, 3,200; Mohawk, 3,200; Wolverine, 3,200; Atlantic, 1,600. No dividends have been paid, profits having been turned back into improvements. Annual meeting, second Monday in January.

Company owns and operates the Michigan smelter, 3 miles west of Houghton, near the old Atlantic stamp mill, with frontage on Portage lake. It was designed by Frank Klepetko and is the largest and most modern smelter in the Lake Superior district, with a capacity of 90,000,000 lbs. fine copper yearly.

The plant is terraced throughout, permitting automatic handling of material. The copper ore (locally mineral) is delivered in 40-ton bottom-dumping steel cars by the Copper Range railroad, which also hauls away the refined copper for shipment from the Copper Range wharves in Houghton.

The 3,000-ton storage bins hold 10 days supply for the works. Mineral is dehydrated in rotary dryers by water gases from the furnaces, taken to the furnaces in tram cars and dumped into hoppers on the charging floor. Coal trestles, on an upper level, hold 15,000 tons of hard and soft coal, with tunnels underneath through which fuel is taken in tram cars, descending by gravity to the furnaces and boiler rooms. There also are separate storage bins for charcoal, sand and limestone.

The 160x205' reverberatory furnace building has three 5-ton traveling cranes. There are 6 furnaces, 2 being 16x36' each, two 14x23' each, one 15x18' and one 16x40' of 100 tons daily capacity. The two 16x36' furnaces were built 18x50', over all, but gave so much trouble that they were cut down to 40' length.

Alternating with the larger reverberatories are one 300-h. p. and two 200-h. p. Stirling water-tube boilers, heated by waste gases from the furnaces. After leaving the boilers the gases are drawn through a 6x8' subterranean flue, with arched roof, up the hill to a 150' smokestack, with base 100' above the furnace building.

The 40x70' blast-furnace building, of steel and brick, has 2 blast furnaces. Blister copper is cast, mechanically, in moulds upon a circular casting table, cooled in water, and carried by a link elevator to the loading platform. Slags are carried mechanically to the sampling mill and reduced in a 30-ton crusher of 1,000 tons daily capacity for resmelting. The slag from the final fusion is granulated by water and discharged through launders to low ground northward for grading.

The combination machine shop and power house, of steel and brick, has a complete equipment driven by an independent engine, and a 300-h. p. Nordberg horizontal tandem-compound engine, driving a 200-kw. generator, actuates the rotary blowers for the blast furnaces. Electric power is used for operating the drying plant, cranes, casting machinery and lighting. There are 3 specially designed Jeffrey electric locomotives, of

100-tons drawbar pull, taking current from the overhead trolleys, hauling 8 pressed steel Sheffield mineral and coal cars, the tracks reaching all parts of the works.

Miscellaneous buildings include a two-story and basement office and laboratory, of brick, heated by exhaust steam, a 40x60' iron-sheathed frame warehouse, barn, etc. The plant has two 50' track scales of 150 tons capacity each, 1 for mineral and 1 for coal and flux, with smaller scales at other points. Water is obtained from the old Atlantic dam, on Cole's creek, through a 4,300' flume with capacity of 5,000 gals. per minute, leading to a 50,000-gal. storage tank, 100' above the works, giving good pressure at all points. The plant is well planned and well handled.

MICHIGAN-UTAH MINING CO.

UTAH

Office: 611 Dooly Bldg., Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. Norman W. Haire, pres. and managing director; Jas. B. Edwards, vice-pres.; Edwin G. Wooly, Jr., sec.; L. H. Farnsworth, treas.; other directors, Duncan MacVichie, Jas. A. Pollock, R. H. Strickland, Wilbur S. Zehring and D. O. Hastings; Wm. B. Fisher, gen. mgr.; F. D. Brown, purch. agt.

Organized March 4, 1912, under laws of Delaware, capitalization \$2,500,000, shares \$2.50 par, nonassessable; issued, 500,625 shares. Debentures, \$625,000 at 6% authorized; issued, \$597,400. Boston Safe Deposit & Trust Co., transfer agent; American Trust Co., Boston, registrar. Annual meeting, second Tuesday in September. Shares are listed on the Boston curb.

Lands, 79 claims, 1,000 acres, and a 5-acre mill site, patented, in the Alta district, 18 miles from the Denver & Rio Grande railway.

Property shows Paleozoic sediments cut by granite, the ore occurring in fissure veins in limestone, and as contact metamorphic deposits between limestone and granite, having a general strike of N. 65° E., and a dip of 32°. There are 5 distinct and parallel veins, 3 under development, showing average widths of 2½' and traceable 5,000', are reported to carry about 5% copper, 20% lead, 1% zinc, 34 oz. silver, and \$1 gold per ton. Ores are carbonates at and near surface, succeeded below by sulphides.

Development is principally by tunnels, all workings being in the oxide and carbonate zones, but sulphides are proven to occur in depth by workings of the Columbus Consolidated Mining Co., near by. Total underground openings, 1913, aggregated nearly 50,000', about one-half being represented by tunnels, drifts and crosscuts that are all in ore, raises and winzes aggregating 10,500' additional. Ore is transported by aerial tramway to Tanners flat, 5 miles from the mine, and thence by wagon road and railway to the Midvale smelter. The tram has a maximum capacity of 200 tons daily.

Output, 1912, was 1,500 tons of about 5.5% copper ore. Average cost of mining and smelting per ton of ore was \$14.65 and \$4.77 respectively.

Equipment includes two 90-h. p. hoists, and a 12-drill Ingersoll Rand air compressor. A small concentrator is run by a 200-h. p. steam plant but mine uses electric power throughout.

Buildings include a 20x50' machine shop, a carpenter shop, several dwellings and a 20x30' smithy, located underground as a measure of protection from snow slides, which are of frequent occurrence in this region.

Property considered promising and management good.

MICHOCAN RAILWAY & MINING CO., LTD.

MEXICO

Address: G. A. Mitchell & Co., secretaries, 2 Suffolk Lane, Cannon St., London, E. C., England. Mine office: Anganguero, Michoacan, Mex. Works office: Ocampo, Zitacuaro, Michoacan, Mex. Henry W. Forster, chairman; G. A. Mitchell and C. H. Potter, directors; J. M. Pircher, representative.

Organized Jan. 29, 1889, under laws of Great Britain, capitalization £105,364, shares £1 par, in £21,015 "A" noncumulative 7% preference shares, £12,190 "B" noncumulative 7% preference shares, £70,745 ordinary shares, and £1,414 founders' shares; issued, £99,370. Debentures, £27,090 of 5% prior lien bonds, and £103,000 of 4% mortgage bonds. Is in arrears of interest on mortgage bonds. The railway rights originally held have been disposed of to the Michoacan & Pacific Railway Co., in which the company has a £60,000 share interest in addition to £18,600 bonds held.

Lands 537 hectares known as the Anganguao silver mines, opened by tunnels and variously reported to have 14 to 30 kilometers of workings.

The smelter, known as Los Trojes, of 250 tons rated daily capacity, has a 44x163" water-jacket blast furnace, and 8 blowers. Coke and charcoal are burned in equal quantities, latter being made from the company's own timber. Equipment includes two 4' Pelton water wheels, operated under a 450' head, a small electric plant, and a 150-h. p. auxiliary steam plant. The property was leased, 1909, for 10 years, to the American Smelting & Refining Co.

MIDAS COPPER CO.

ALASKA

Mine office: Valdez, Alaska. George Baldwin, Wm. Wilson, Geo. C. Trent, A. E. Grigsby, T. J. Devinney, G. H. Plant and John Feinbloom, directors. Organized 1912, capitalization \$1,000,000, shares \$1 par. Mine bonded to Granby Consolidated Mining, Smelting & Power Co., Ltd., 1913.

Property, 12 claims, 9 in 1 group and 3 in another, in Solomon basin, 790' above tide water and 6 miles from Valdez bay. Claims show an ore deposit from 25 to 200' wide, stripped in 8 places and traceable 1,500', running N. 70° W. and dipping 45° S. W. Ore carries chalcopyrite mixed with pyrite in a slaty gangue, and 100 tons shipped, 1911, carried 8.9% copper and \$2 gold with 10% silica and 34% iron.

Development is by a 2,000' crosscut tunnel with 400' upper level and 700' lower level, all in 7% ore. Recent development made under a \$540,000 bond by the Alaska Syndicate, Sept., 1912, to June, 1913, consists of 1,700' of workings said to block out 200,000 tons of 7% ore. Ore as a whole is said to average about 6% copper and \$2.40 gold.

MIDDLE SWANSEA MINING CO.

UTAH

Office: 408 South State St., Salt Lake City, Utah. Mine office: Robinson, Juab Co., Utah. Richard B. Shepard, pres. and gen. mgr.; Emma C. Shepard, sec.-treas., at last accounts. Organized 1899, under laws of Utah, capitalization \$5,000, shares 1 ct. par; issued, \$4,800. Assessments were \$3,500 to end of 1910. Annual meeting, first Monday in January.

Lands, 4 claims, unpatented, 70 acres, adjoining the Eureka-Swansea Extension mine, showing quartzite and limestone, with development by shafts of 155' and 60'. Idle, except for annual assessment work.

MIDDLEMARCH COPPER CO.

ARIZONA

Office: 212 Henne Bldg., Los Angeles, Cal. Mine office: Middlemarch, Cochise Co., Ariz. H. Bert Ellis, pres.; F. C. Austin, vice-pres.; Wm. King Gird, sec.; Wm. LeMoyné Wills, treas.; preceding officers, Mrs. M. M. O'Gorman and Mrs. Richard Gird, directors; Edw. J. Kelly, supt. Organized April 26, 1907, under laws of California, capitalization \$1,000,000, increased March 28, 1906, to \$3,000,000, shares \$100 par. Absorbed the Cobreloma Consolidated Copper Co., about 1907. Annual meeting, first Monday in April.

Lands, 68 claims, 1,360 acres, in the Dragoon mountains, showing several contact deposits between limestone and granite-porphry, having a generally northwest strike, with dip of 42 to 54°. The 2 orebodies under

development, said to be 30 to 80' wide, show oxidized ores succeeded by chalcopyrite, with some chalcocite.

Development is by 9 shafts, deepest 210', and by tunnels of 625', 450' and 390', with 3 others, the total workings being about 2 miles, estimated by management to show 200,000 tons of ore, with 100,000 tons blocked out for stoping in the Missouri mine, with ore in other properties, though not extensively developed.

Equipment includes a 300-h. p. steam plant, 50-h. p. hoist and 4-drill Laidlaw air compressor. There are 12 buildings, including a 30x38' engine house, 32x38' boiler house, 30x38' machine shop and 20x30' smithy.

The reduction plant includes a concentrator and smelter in a 40x100' building. The mill of 50 tons daily capacity, receiving ore by a 300' ground tram from the portal of the Missouri tunnel, has an 8x12" Blake crusher, 2 Huntington mills, 2 rolls, 2 Bartlett tables, 1 slime table and 3 sizers. The smelter, when operated, made matte averaging 55 to 70% copper, 20 to 100 oz. silver and 0.25 to 2 oz. gold per ton. Work, 1912, was confined to the Cobreloma claim, about 200' of new openings showing mainly bornite of about 5% copper tenor. Property considered promising.

MIDNIGHT MINE.

ARIZONA

Office: care St. Charles Bros., owners, Kingman, Ariz. Mine near Chloride, Mohave Co., Ariz. Daniel S. Richards, superintendent, at last accounts. Mine has a deposit of gold-copper ore developed by a 200' shaft. Equipment includes a 10-stamp mill and concentrator turning out about 50 tons of concentrate a month in the summer of 1913, shipped to the Copper Queen smelter at Douglas, Ariz.

MIDWAY COPPER MINING CO.

UTAH

Presumably dead, as Utah corporation tax has not been paid for several years.

MILAN MINING & MILLING CO.

NEW HAMPSHIRE

Office: P. O. Box 666, Portland, Me. Mine office: Milan, Coos Co., N. H. F. H. Bradford, pres.; R. C. Bradford, treas., and J. B. Carper, directors; D. R. Andrews, supt. Organized Aug., 1907, under laws of Maine, capitalization \$100,000, shares \$100 par, nonassessable.

Lands, 400 acres, freehold, including 240 acres of mineral lands, 140 acres of timber land and a 20-acre mill site. The property, first operated 1875-80, shows pre-Cambrian slates, schist and serpentine, carrying 2 overlapping lenses, of 3 to 10' width, in an ore channel, in mica-schist, having a generally N. W. strike, with average dip of 70°. One lens, under development, of 4' minimum and 20' maximum width, is reported by the company as traceable 8,000', and to average 2% copper, 4% zinc, 25% sulphur, 1 oz. silver and \$1 gold per ton. Development is by 4 short tunnels, and 2 shallow shafts.

Equipment includes a 150-h. p. steam plant, with a 35-h. p. hoist and a 20-drill air compressor. There are 10 frame buildings, including machine shop, smithy and carpenter shop.

The mill is equipped with two 10x20" Dodge crushers, 2 sets of rolls, 5 Wilfley tables, 1 slime table and a Richards classifier, making concentrates carrying about 1.25 to 1.75% copper, and 42 to 45% sulphur.

The property is served by the Grand Trunk railway with a siding to the mine and mill. An automobile has been transformed into a locomotive, by replacing the rubber-tired wheels with flanged iron wheels.

The company plans manufacturing sulphurous gas, from lump pyrites and second-grade pyritic concentrates, pumping the gas 8 miles in a 2" pipeline to sulphite manufacturers and selling the cinder to smelters for

copper values. Management estimates costs at 75 cts. per ton for mining and 50 cts. for concentrating.

MILITARY MINING & MILLING CO., LTD.

IDAHO

Office and mine: Burke, Shoshone Co., Idaho. Fred Bergen, pres.; L. H. Hays, sec. Capitalization \$1,000,000, shares \$1 par. Lands, 2 claims near Burke showing a 5' vein said to be traceable 2,000', carrying copper with quartz and quartzite gangue, developed by a 57' shaft. Dormant several years.

MILLER HILL MINING CO.

UTAH

Idle. Office: Knight Block, care Knight Bros., Provo, Utah. Mine office: American Fork, Utah Co., Utah. Jesse Knight, pres.; J. C. Jensen, vice-pres.; R. E. Allen, sec.-treas. Capitalization \$100,000, shares 10 cts. par. Shares are listed on the Salt Lake Stock Exchange. Lands, 23 claims, adjoining the Mineral Flat mine, developed by shaft, with about 400' of workings.

MILLER MINING & SMELTING CO.

UTAH

Office: P. O. Box 7, Salt Lake City, Utah. W. A. Wilson, general manager. Lands, 10 claims, patented, 56 acres, in American Fork canyon. Ore carries a little copper, with mainly gold, silver and lead values. Management reports production of \$1,600,000 to end of 1912. Company inactive at present and property shut down.

MILLS & CO., CHAS. S.

MEXICO

Idle. Office and mine: Sierra de Oro, Horcasitas, Sonora, Mex. Chas. S. Mills, managing partner. Property, the Sierra de Oro mine, 81 hectares, 28 miles from Pesqueira, adjoining the Sultana and San Jose mines of the Giroux Consolidated Mines Co. Lands carry extensions of the Giroux veins and other contact deposits, in limestone, adjoining porphyry intrusions and rhyolite flows. Claims have 5 veins of 2 to 100' width, carrying copper, silver and gold, with a little nickel, cobalt and platinum. Development is by a 100' shaft and a 440' tunnel.

Equipment includes steam power, and a 20-ton stamp mill and concentrator. Mine closed down.

MINA MEXICO CO.

MEXICO

Is the operating and Mexican company of the Chicago Exploration & Development Co., operating the Mexico mine, 45 miles from Tonichi, Sonora, Mex. W. E. Pomeroy, mgr.; Geo. B. Squire, supt. of smelter; Chas. Gercken, mine supt. Has 85-ton charcoal burning smelter. Was working up to Sept., 1913, and reported to have 500 tons of copper concentrate carrying 100 oz. silver per ton ready for treatment.

MINERAL FARM DEVELOPMENT CO.

ARIZONA

Office: 64 W. Randolph St., Chicago. Property, the Mineral Farm group of 21 claims, 2 miles northeast of Globe, under bond and lease from Globe Mining Co.

Lands show altered sedimentary and igneous rocks, with iron dikes and a complex fissure system. There are 2 veins of 4' and 20' width, carrying gold and silver-bearing copper ore of good grade. Development is by a 400' shaft.

Equipment includes a 60-h. p. boiler, 8x10" hoist and an air compressor. Company had 3 men engaged in development work at last accounts.

MINERAL FLAT EXTENSION MINING & MILLING CO.

UTAH

Letters unclaimed at Provo, Utah. Mine office: Carbonate, Juab Co., Utah. Jos. I. Bullock, pres.; F. E. Brown, sec.; Wm. H. Horner, supt. Organized March, 1909, under laws of Utah, capitalization \$50,000, shares 5 cts. par, assessable. Property, 2 miles south of Alta, in Little Cottonwood district, White Pine canyon. Claims show a 3' vein of auriferous and argen-

tiferous copper ore, giving assays up to 50% copper, also silver-lead ores, developed by tunnel and shaft, with drifting on vein. Company has kept up assessment work on its unpatented claims.

MINERAL FLAT MINING CO.**UTAH**

Office: Provo, Utah. Mine office: American Fork, Utah Co., Utah. Jesse Knight, pres.; J. C. Jensen, mgr. Organized under laws of Utah, capitalization \$100,000, shares 10 cts. par, assessable. Shares are listed on the Salt Lake Stock Exchange. Company's statement of Sept. 1, 1911, showed receipts of \$3,292 for the preceding year with balance on hand of \$657. Company's only source of revenue is the rental of \$50 a month received for the use of its power plant. Lands, 22 claims, partly patented, 25 miles from a railway, carrying lead and copper ores. The mine, developed rather poorly, has a 100' shaft and tunnels of about 1,500' aggregate length, upper levels showing occasional bunches of good ore, but without continuity of payable mineral. Equipment includes a hydro-electric plant, with a 9,000' pipe line and several buildings. Idle since June, 1910, except for annual assessment work.

MINERAL HILL CONSOLIDATED COPPER CO.**ARIZONA**

Office: 331 Fourth Ave., Pittsburg, Pa. Mine office: Tucson, Pima Co., Ariz. M. S. Isherwood, pres.; Boon Ingells, vice-pres.; E. B. Reeser, sec-treas. and gen. mgr. Organized March, 1904, under laws of Arizona, as successor of Azurite Copper & Gold Mining Co., capitalization \$3,000,000, shares \$1 par.

Property, the Azurite mine with 26 claims, 12 patented, 520 acres, in the San Xavier district, 18 miles southwest of Tucson. The Azurite group of 13 claims is said to have produced \$550,000 worth of ore under former ownership. Company's lands also include the American group of 8 claims and the Mineral Hill group of 5 claims. The mine is claimed to have a large body of sulphide ore averaging about 3.5% copper.

Development is by 74 pits and open cuts, 8 tunnels, mostly short, longest being 250', and 48 shafts, mostly shallow, deepest being 345', mine having a total of about 1 mile of workings. The company operated in 1912 but closed down in Sept., 1913. An Edison electric concentrator has been ordered for the mine according to the press.

MINERAL HILL TUNNEL & COPPER MINING CO. WASHINGTON

Address: F. E. Houghton, Room 1140 Old South Bldg., Boston, Mass. Mine office: Danville, Ferry Co., Wash. Lewis A. Crosby, pres.; A. L. Bradley, gen. mgr. Organized 1906, as successor of Minnehaha Copper & Gold Mining Co., capitalization \$2,000,000, shares \$1 par.

Lands, 700 acres, in 8 groups, about 5 miles from the Granby smelter, lying at an average distance of 2 miles south of the international boundary line, in the Curlew district, Ferry county, Wash. The Minnehaha group, 4 claims, 80 acres, has several shafts, deepest 500', and a 3,000' tunnel, the upper workings showing a vein of low-grade auriferous copper ore, with a 12" paystreak of ore of good average assay tenor. Idle and in process of reorganization.

MINERAL LANDS COMPANY.**UTAH**

Idle. Office: 36 Exchange St., Portland, Me. Mine address: Bingham Canyon, Utah. J. A. Waterman, treas. Organized, 1913, under laws of Maine, capitalization \$500,000, shares \$5 par. Company owns entire capital stock of the Markham Gulch Mining & Milling Co.

Property, the Red Wing and Butler-Liberal mines, with about 300 acres in Markham gulch, formerly owned by the North Utah Co. of Bingham, Utah. The claims carry the Florence and Erie fissures, latter having been a good producer in the upper levels. Development is mainly by tunnels,

with about 5 miles of workings, showing ores carrying lead, silver, copper and gold values, in about the order named.

Equipment includes a good machinery plant, with a 200-h. p. electric hoist, and a 12-drill Franklin air compressor.

MINERAL MINING CO.

ARIZONA

Address: Kingman, Mohave Co., Ariz. Company said to be drilling a group of claims south of Kingman held under lease and bond, Oct., 1913.

MINERAL MOUNTAIN MINING CO.

UTAH

Mine address: Lucin, Box Elder Co., Utah. C. F. Whipple, managing director. Organized March, 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par.

Property, 7 claims, patented, developed by tunnel, showing a contact deposit between limestone and porphyry. Ore occurs principally as replacements in the limestone, carrying mainly silver and lead, with a little malachite at and near surface. Was developing with small force, at last accounts.

MINERAL POINT MINING CO.

ARIZONA

Idle. Property, 15 claims, in the Black Hills range, 8 miles from Junction, Yavapai Co., Ariz. Mine has a 225' shaft said to show a 2' vein of sulphide ore, carrying good values in copper, silver and gold.

MINES DEVELOPMENT CO. OF NEVADA.

NEVADA

Office and mine: Lovelock, Humboldt Co., Nev. John T. Reid, pres., treas. and gen. mgr.; Paul G. Reid, sec. and supt.; preceding officers, R. C. Moore, J. Thies, Peter Ancher and E. T. Loring, directors. Organized Sept. 1, 1904, under laws of Arizona, capitalization \$750,000, shares \$1 par; issued, \$447,996.

Lands, 5 claims, 100 acres, in the Juniper Mountain district, showing various fissure veins, alongside of quartz porphyry dikes, intrusive in monzonite. Veins run north 10° west and are nearly vertical. The vein developed averages 5' wide, is traceable for 2,000' and proven to 170' depth. Small seams of ore found at or near surface show chalcocite, bornite and tetrahedrite, giving average assays of 2% copper, 11 oz. silver and \$3.50 gold per ton. Development is by a 30' shaft and 365' tunnel. Company plans resumption of work, 1913, and 1,000' of new development.

MINGUS MOUNTAIN COPPER CO., LTD.

ARIZONA

Office: 516 Grant Bldg., Los Angeles, Cal. Mine near Jerome, Yavapai Co., Ariz. W. W. Thomas, pres.; A. Gleason, sec., at last accounts. Organized March, 1900, under laws of Arizona, capitalization \$3,000,000, shares \$1 par; issued, \$2,400,000.

Lands, 5 claims, 100 acres, in the Black Hills district, 12 miles south of Jerome, the nearest railroad point. Claims show 3 fissure veins carrying oxide and sulphide ores. 1 vein having a claimed extreme width of 40' and said to be traceable 4,000', giving good surface showings of carbonate ores, assaying up to 16% copper. Development is by shafts of 120', 430', 250' and 370', with several tunnels, giving a total of 4,240' of workings.

Equipment includes a 50-h. p. steam plant, with 2 hoists, good for 1,000' each, and several mine buildings. Out of cash and idle some years.

MINING ISSUES CO.

NEW YORK

Was organized to finance the Inspiration Copper Co. Paid a single dividend of 218%, and was dissolved, 1911.

MINNEAPOLIS COPPER CO.

MEXICO

Office: 550 Security Bldg., Minneapolis, Minn. Mine address: Cumpas, via Nacozari, Sonora, Mex. Geo. H. Heising, pres.; M. K. Emery, sec.; Wm. Kemp, gen. mgr. Organized June, 1906, under laws of South Dakota, capitalization \$1,000,000, shares \$10 par, nonassessable, and is organized

under laws of Mexico as Minneapolis Copper Co., S. A., the South Dakota corporation being a holding company. Is operated in the United States under the title of Minneapolis Copper Development Co., the reason for which has not been explained.

Lands, 277 hectares, about 30 miles southeast of Cumpas. Property carries several fissure veins, in andesite, with northeast strike, of which 4, under development, are of 5 to 8' estimated average width, carrying tetrahedrite, estimated by company to average 10% copper, with traces of lead and zinc, 5 to 40 oz. silver, and \$1 and upwards in gold, with occasional very high assays. The property has been under development continuously with a small force, since the company took it in 1906. The 155' Fryer shaft develops a 4' vein carrying ore said to average about 9% copper and 20 oz. silver per ton.

The Archipelago mine, the principal property, has a 250' incline shaft, and the mine as a whole has about 8,000' of workings, mostly in ore.

Equipment includes a 35-h. p. gasoline hoist and there are 5 buildings of stone, including a 40x120' general quarters building, housing the office, store, etc. There is also a 75-ton smelter, built in 1912, and company, early 1913, was making 8 to 10 tons matte daily, which was being shipped to the Copper Queen smelter.

Transportation is by wagon-road to Cumpas, freight being carried in two 90-h. p. gaso-electric trucks.

Mine was reopened in the summer of 1913 and the smelter reported to be working, but in September property was closed down and creditors were trying to get a satisfactory settlement without taking over the property.

MINNEAPOLIS-CORBIN COPPER CO.

MONTANA

Office: 10 South Fourth St., Minneapolis, Minn. Mine address: Corbin, Jefferson Co., Mont. Philip B. Winston, pres.; Albert H. Hall, sec.; Thos. F. McCue, treas.; Patrick Meany, gen. mgr., at last accounts. Organized April 23, 1909, under laws of Minnesota, capitalization \$500,000, shares \$5 par, assessable.

Lands, 7 claims, 140 acres, in process of patenting, near the Alta and Boston & Corbin mines. Property is said to carry 9 large fissure veins, principal being the Moonlight, estimated at more than 100' in width, with 2 veins on the Anaconda claim said to be 15' and 50' in width, respectively. Development is by No. 1 incline shaft, of 176' depth, and No. 2 vertical shaft, of 240', with 380' of workings. Stringers of rich ore have been encountered in the vertical shaft from a depth of 30' to the bottom, which shows streaks of chalcocite, and the entire vein at the bottom is estimated to average about 4% copper, 8 to 10 oz. silver and 80 cts. to \$1.40 gold per ton. Property idle and company dormant.

MINNESOTA-ARIZONA COPPER CO.

ARIZONA

Office: Willmar, Minn. Mine office: Copper Creek, Graham Co., Ariz. Col. Frank J. Sibley, pres.; Martin E. Tew, vice-pres.; Walter De La Hunt, sec.-treas.; preceding officers, E. Osterholz, R. W. Stanford and J. Emil Nelson, directors; R. Roy Sibley, gen. mgr.; C. S. Gesler, supt. Organized April 29, 1908, under laws of Arizona, capitalization \$3,000,000, shares \$1 par, nonassessable; issued, about \$2,000,000. Annual meeting, second Tuesday in April. Company is closely affiliated in management and ownership with Calumet & Copper Creek Mining Co., and apparently is a subsidiary of that concern.

Lands, 9 claims, 190 acres, in the Bunker Hill district, adjoining the Calumet & Copper Creek holdings, in 2 groups, southern of 4 claims. The Silver Reef claim, in the southern group, is claimed to show a rich vein of cuprite at surface and has a 40' shaft. The Kimbro claim has a 100' shaft

with a 25-h. p. electric hoist, and the Lead Carbonate claim has a 100' tunnel showing lead and copper sulphides. Company reports country rock as granodiorite, with porphyry intrusions, ore being carried in the original magma, with 7 known orebodies, of which 3, under development, are reported to show oxidized ores near surface, succeeded by bornite and chalcocite, with chalcopryrite below 200' depth. The Lead Carbonate claim is said to carry a 10' vein of auriferous and argentiferous galena. Company reports 2,000' of workings, with 1 body of disseminated copper ore of 72' width, and estimates ore to average 3.25% copper. Electric power is taken from the Calumet & Copper Creek Mining Co. Unfavorably regarded.

MINNESOTA NEVADA INVESTMENT CO.

NEVADA

Office: 436 Endicott Bldg., St. Paul, Minn. Mine near Fairview, Churchill Co., Nev. Alf. Patterson, pres.; O. S. Deringer, sec.; M. P. Ryan, treas.; A. A. Day, gen. mgr.; Chas. A. Peet, mg. engr. Organized Aug. 6, 1906, under laws of Oklahoma, capitalization \$1,000,000, shares \$1 par; issued, \$690,000. Annual meeting, Aug. 6.

Property, 28 claims, 160 acres placer ground, total about 750 acres, on Chalk mountain, 3½ miles north of Fairview. Claims said to show several orebodies, of which 3, under development, are 6' average width and proven to depth of 126', showing 2% copper, 32% lead, 26 oz. silver and \$8 to \$20 gold per ton.

Development consists of 3 shafts, deepest being 126'. Company reports a shipment of 2 tons to the Hazen smelter, 40 miles distant, which netted \$82 per ton, values being mostly in lead and silver.

Company succeeded to the property of the Corinthian Mining Co. and Chalk Mountain Copper Co.

MINONG COPPER CO.

MICHIGAN

Office: 122 Winder St., Detroit, Mich. Louis O. Broadwell, pres.; Hugh A. McPherson, sec. Organized Dec. 16, 1874, capitalization \$1,000,000, shares \$25 par.

Lands, 1,455 acres in Secs. 22, 23, 26, 27, 34 and 35, T. 66 N., R. 35 W., lying at the head of McCargo's Cove on Isle Royale. Property shows a line of ancient pits, largest 400' and about 1½ miles long, showing very extensive ancient operations. Idle since about 1881.

MISER'S CHEST MINE.

NEW MEXICO

In the Lordsburg district, Grant Co., N. M. Reported to be shipping silicious copper-gold ores to the El Paso smelter.

MISSABE-MORENCI DEVELOPMENT CO.

ARIZONA

Idle. Office: 21 Fourth Ave. West, Duluth, Minn. Mine near Morenci, Graham Co., Ariz. Richard Lakenan, pres.; I. H. Knapp, sec.-treas., at last reports. Organized under laws of Arizona, capitalization \$600,000, shares \$2 par.

Lands, 15 claims, 300 acres, the Stevens, Campbell and Dell Potter claims being owned outright, with the Dick Lakenan group of 12 claims, 8 patented, held under bond and lease. Property, in Gold gulch, is 2 miles southwest of Morenci. Company has side-line agreements with the Arizona Copper Co., Ltd., and Detroit Copper Mining Co. The Campbell claim is said to have produced \$45,000 worth of very rich ore. The mine has a 300' shaft, with steam power and hoist.

MISSOULA COPPER MINING CO.

IDAHO

Office and mine: Mullan, Shoshone Co., Idaho. Henry Billberg, pres.; C. A. Barnes, vice-pres.; Thos. G. Kennedy, sec.-treas.; R. J. McLeod, gen. mgr.; preceding officers, Harry Cheney, J. N. Thennes and John Brown, directors. Organized 1901, under laws of Idaho, capitalization \$100,000, increased, 1907, to \$1,500,000, shares \$1 par, assessable; issued, \$1,350,000.

Shares are listed on the Spokane and Vancouver stock exchanges. Annual meeting, first Tuesday in November.

Lands, 10 claims, about 175 acres, at the head of Deadman gulch, adjoining the Lucky Calumet, and about 1½ miles northwest of the Snowstorm, in the Hunter district. Property has a strong fissure vein, of 85' maximum width, in Revett quartzite, carrying native copper, cuprite, azurite, malachite, bornite and chalcopyrite, with values mainly in sulphides, ranging in tenor from about 1%, on the hanging wall, to 8% on the foot-wall, with high-grade streaks, ore averaging about one-half oz. silver per unit of copper. The property also carries some argentiferous galena.

Development consists of a 1,400' upper tunnel and a 2,800' lower tunnel, with a connecting shaft and nearly 1 mile of workings. The main tunnel runs N. 30° E. for 1,900', then N. 70° E. for 700', passing from purple St. Regis slates at the portal into Revett quartzite. (Geology described U. S. G. S. Bull. 540, E, p 48, 1913.)

Equipment includes a 100-h. p. electric plant, with an 8-drill air compressor and necessary mine buildings.

The management plans driving a third tunnel of 5,500', as the National Copper Co. has recently opened up very large amounts of copper ore on what is supposedly the same orebody at 1,000' greater depth. The company will probably start development on this level during the winter. Property considered promising.

MISSOURI COPPER MOUNTAIN MINING CO.

MISSOURI

Office: 323 West Seventh St., Sedalia, Mo. Works office: Sullivan, Franklin Co., Mo. L. M. Barnard, pres.; W. D. Scoble, vice-pres.; Wm. H. H. Myers, sec. Organized Jan., 1903, under laws of Arizona, capitalization \$1,500,000, shares \$1 par; issued, \$1,396,000.

Lands, about 7,000 acres in Crawford and Washington counties, Missouri, this including some farm lands. The Copper Hill mine, 32 acres, worked in a small way before 1850, shows an orebody with a good gossan in magnesian limestone. Development is by a 140' shaft and about 1,200' of tunnels. In 1913 company was making an open-cut, 40' wide and 200' long at base of hill, showing 30' of ore running as high as 36.3% copper. Ore deposit shows carbonate and sulphide ores, with a hematite gangue claimed by the company to average about 12% copper. The lands are also claimed to carry iron ore, lead, nickel, zinc and coal.

Equipment includes a 60-h. p. steam plant, with 2 hoists good for depth of 300'.

The reduction plant includes a mill and smelter, former having a Blake crusher, 18" and 22" rolls, 4 New Century jigs, a Card table and hydraulic classifiers. The smelter has a 30-ton Allis-Chalmers blast furnace and a Connersville blower.

Company plans to work its large iron deposits open cast, to do which it will be necessary to first remove an overburden of 70 to 120' thickness. This work was expected to be in progress some time in 1913.

MIZPAH CONS. COPPER & GOLD MINING CO.

NEVADA

Office: East Ely, Nev. Eastern office: 913 Crozier Bldg., Philadelphia, Pa. Mine office: Mizpah, Elko Co., Nev. Robt. T. Seagrave, pres.; Harry Darlington, sec. and gen. mgr.; H. P. Cryst, treas.; John F. Crow, supt. Organized April 7, 1907, under laws of South Dakota, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$751,250. Annual meeting, third Monday in January.

Lands, 23 claims, unpatented, 460 acres in the Dolly Varden district, 20 miles east of Mizpah, on Nevada Northern railroad, and 5 miles from its tracks. Claims show several orebodies occurring as fissure veins in

granite and as contact deposits between granite and rhyolite, of which 1, under development, is estimated by the management at 200' width, carrying mainly bornite and chalcopryite ore. Development is by a 70' two-partment shaft showing a 3' orebody, giving maximum assays of about 15% copper, 8 oz. silver and \$18 gold per ton, which are not to be considered as average ore values. Company is now driving a tunnel 1,260' long in August, expected to cut ore at about 1,400'. Property considered promising.

MIZPAH COPPER MINING CO., LTD.

IDAHO

Address W. R. Belvail, Palouse, Wash. Mine office: Harvard, Latah Co., Idaho. C. E. Frederick, pres.; J. C. Northrup, vice-pres. and gen. mgr.; W. F. Chalenor, sec.-treas.; preceding officers, E. R. Northrup and F. P. Miller, directors; J. J. Stanford, engr. Organized Sept. 4, 1906, under laws of Washington, capitalization \$1,500,000, shares \$1 par, nonassessable. A \$50,000 bond authorization is unissued.

Lands, 18 claims, 318 acres, sometimes known as the Hoodoo mine, well watered and timbered, on Copper mountain, near the Palouse river, in the Hoodoo district, Latah county, about 40 miles from Palouse, with a 20-mile wagon-road to Harvard, and 10 miles from the Puget Sound railway. The property shows quartzite and schist, with 8 fissure veins in quartzite, serpentine and schist, having a northeast strike, and dip of about 40°. The 2 being developed are estimated by the management at 40' average width, carrying cuprite, malachite, chalcocite and chalcopryite, latter associated with pyrrhotite, with quartz and limestone gangue, said by management to average 6% copper, 2 oz. silver and \$2 gold per ton. The veins are traceable 2,000' on the company's lands by outcrops showing carbonates, and there are intrusive porphyry dikes.

Recent development consists of No. 5 crosscut tunnel, 700' long to cut vein 250' below old workings. Other work includes the 50' Baby Grand shaft, sunk in gossan and leached ore, connected with No. 3 tunnel by a 175' winze. There are 5 tunnels, No. 1, the Hecla tunnel, being a crosscut, tapping the vein at 81', with a little drifting thereon. No. 2 tunnel is a 150' crosscut showing good ore. No. 3 tunnel, above Nos. 1 and 2, is 500', in a vein carrying chalcopryite ore. No. 4 tunnel, known as the Chalenor, cuts at 70' from the portal a 50' vein with drifts thereon showing chalcopryite ore. The mine as a whole has 2,000' of workings, estimated by the management to show 100,000 tons of ore.

Equipment includes 60- h. p. gasoline power, with a 3-drill air compressor, and there are 16 buildings with accommodations for about 50 men.

A 50-ton concentrator is planned. Property shut down March and reopened Aug., 1913, employing 9 men.

MOCTEZUMA-ARIZPE DEVELOPMENT CO., S. A.

MEXICO

See Mexican Metals Co.; also Vol. VI.

MOCTEZUMA COPPER CO.

MEXICO

Office: 99 John St., New York. Mine office: Nacozari, Moctezuma, Sonora, Mex. Dr. Jas. Douglas, pres.; Arthur Curtis James, vice-pres.; Geo. Notman, sec.-treas.; J. S. Williams, Jr., gen. mgr.

Organized 1896, under laws of West Virginia, capitaliaztion \$3,000,000; issued, \$2,600,000. Is controlled through entire stock ownership by Phelps, Dodge & Co., Inc., and holds direct title to lands through Moctezuma Copper Co., S. A., organized Feb. 4, 1896, under laws of Mexico, with capitalization 500,000 pesos. Dividends were 77%, or \$2,262,000, 1902-07, with no dividend in 1908, \$988,000 in 1909, and \$2,118,569 in 1912. Surplus, Dec. 31, 1912, after writing off \$427,645.92 for depreciation, was \$2,968,631.52.

Property, about 2,000 acres of mineral land in the Moctezuma and Arizpe districts of Sonora, including the Pilaes de Nacozari mine 6 miles

east of Nacozari, and the company also owns the Juarez and Nicolas ranches of about 35,000 acres, which carry considerable valuable timber.

The Pilares mine lies in a high and precipitous country near the divide of the Yaqui and Oposura rivers. The ore deposit is a large pipe, or chimney, of rock breccia cemented by ore. The rock fragments are angular, of all sizes up to masses over a ton in weight and consist of creamy-tinted, hard but altered fine-grained felsitic, rhyolitic porphyry. The orebody has an elliptical cross section 2,000' long and 600' wide. The ore carries chalcopyrite with pyrite and some bornite, the ore being mostly of concentrating grade, averaging 2.3% copper as mined. The deposit has no clearly-defined footwall and the hanging dips at an angle of about 80°. There is a small outcrop of rich carbonate ore, but croppings are mainly red-stained porphyry, carrying considerable low-grade hematite. The leached zone is about 20' in depth only, with payable ore coming in at depth of about 60'.

In addition to the Pilares mine, the company owns a number of other properties that have been operated for several years past by lessees, these mines including the Churunibabi, Bella Union, Fortuna, San Francisco, El Vaquero and San Pedro. The Bella Union has high-grade ore, including oxides and native copper, shipments assaying up to 39% in copper tenor, with small gold and silver values. The Churunibabi property, operated by Col. Norton Hand for several years, yielding \$100,000 worth of silver ore, will hereafter be operated by the company, a rich gold-silver-copper orebody having been struck July, 1913.

The mine is worked by 3 shafts, 1 at each end of the orebody, and by the Porvenir adit-tunnel, a mile long, which taps the deposit 600' below the surface, the 25-ton narrow-gauge railway cars running from Nacozari into the tunnel direct to the mine ore chutes. The mine has three 3-compartment main working shafts, the Guadalupe 1,100', the Pilares 1,000' deep and the Esperanza shaft, 700' deep. The Porvenir tunnel has storage bins in a 25x100' chamber to which ore is milled down from the upper workings, no ore being hoisted, all ore as broken being sent in chutes to the tunnel. Ore is hauled by 6-ton General Electric locomotives in 25-ton Ingoldsby steel side-dumping cars, in trains of 7, to the portal where steam locomotives take the cars.

The mine is opened by levels 100' apart, every alternate level being used as a stoping base, the others for ventilation, waste and supply distribution and development. Up to the present most of the output comes from above the tunnel level known as the 700.

The mine employs 2 methods of ore extraction, the room-and-pillar with waste filling as work progresses, and the newer method of shrinkage stoping with waste filling after all of the ore has been extracted.

The mine has some enormous stopes, No. 4 stope, on the 3d level, having been 85' high, 125' wide and 150' long. The ground stands very well and the systems of extraction used give minimum timber requirements at a cost of only a few cents per ton of ore mined. Costs are about 3 pesos per metric ton for ore loaded on the tram cars. No water is hoisted above the Porvenir tunnel level and very little water is raised from the workings below. The mine is well ventilated and is equipped with electric lights.

The Pilares orebody is one of the largest in the world and is comparable, in many respects with that of the Rio Tinto. Ore reserves developed are estimated as sufficient for 5 years' continuous production, at 2,000 tons daily, and only about 60% of the ground above the 7th level has been opened, leaving 40% for later development. Company is reported, 1913, to plan deepening the 3 shafts from 1,000 to 1,500', connecting on that level by

drifts as the orebody shows no decrease in value at 110' depth. The Guadalupe is to be the main working shaft.

Mining equipment includes new electric hoists and a 25-drill air compressor. There is an emergency steam plant at the mine having 2 boilers held in reserve in case of accident, but electricity is used throughout.

The power plant, at Nacozari, includes a plant, built 1908, having four 435-h. p. Stirling water-tube boilers, equipped with Green fuel economizers, Foster superheaters and Rooney stokers, burning New Mexican coal, having a 196' reinforced concrete stack. The plant has three 1,000-kw. Curtis turbo-generators giving a 6,600-volt current, and an auxiliary 50-kw. steam turbine generator set is used as an exciter. Current is transmitted at 6,600 volts to the mine and mill and at the mine is stepped down to 230 volts for the pumps, while the hoists and electric locomotives use a 250-volt direct current. An old gas engine plant is described Vol. X.

The mine is connected with the mill by a 6-mile 20"-gauge railway, making a considerable detour to avoid bad grades. Rolling stock includes four 60-ton locomotives and twenty 30-ton Ingolsby steel side-dumping cars.

The 2,000-ton concentrator, designed and built by H. Kenyon Burch, at a cost of about \$1,000,000, is one of the most complete and efficient in existence. The mill is in 2 sections, both of steel frame, on concrete foundations. All elevators and tanks in the mill are of reinforced concrete and all launders for concentrates and tailings are below the floor.

The crushing plant receives ore from the mine in 6,000-ton bins, whence it is fed by 2 automatic ore feeders, of special design, to grizzlies, with bars set $2\frac{1}{2}$ " apart, oversize going to a No. 8 gyratory crusher, and undersize to a belt-conveyor, meeting material from the crusher, and going by belt conveyor to two 4x10" manganese trommels, with $1\frac{1}{8}$ " perforations. Undersize from the trommels goes to belt conveyors and oversize from the trommels goes to No. 5 gyratory crushers, breaking the material to 1" cubes, which joins the material from the trommels and is sent by belt conveyors to 4,000-ton storage bins.

Each unit of the mill is equipped with 6 coarse and 12 fine jigs, 3 sets of rolls, Swain classifiers, Callow screens, 44 Wilfley tables and 72 Johnson vanners. From the storage bins the ore is fed by a portable ore feeder to a belt conveyor, passing over an automatic weighing machine and sampler delivering it to an 18-mm. trommel. This trommel screens the ore, the coarse pieces going to bull jigs and undersize to 11-mm. trommels; the latter feed oversize to coarse jigs and undersize to 7-mm. trommels. These trommels in turn feed oversize to intermediate jigs and undersize to 4-mm. trommels, whose oversize goes in its turn to 2-mm. trommels; oversize from latter goes to fine jigs. The undersize from the 2-mm. trommels goes to 22-mesh Callow screens and thence to Wilfley tables handling oversize and undersize.

Slimes from the Wilfleys go to the vanner settling tanks and mid-llings from the Wilfleys go to Chilean mills by elevators. Tailings from the bull jigs, coarse jigs and intermediate jigs go to either of 3 sets of 42x16" rolls, then by elevator to the mixing-box at the head of the trommels. Tailings from the fine jigs go to dewatering machines, and overflow from dewatering machines goes to vanner settling tanks, dewatered material going to the jig tailings bin and thence to Chilean mills, crushing to pass a $2\frac{1}{2}$ -mm. screen and thence to Callow screens of 22-mesh. Product is a concentrate of about 12% copper tenor, about 85% of the assay value being saved.

An aerial tramway carries tailings from the concentrator to a dump on the hillside, far above the river level.

Water is pumped from a well sunk at the side of the river by 1-triplex and 3 Worthington pumps, of 500 gals. capacity per minute, to 500,000-gal. tanks at the mill. Wash water from the concentrates is settled and re-used. A large dam 3 miles east of Nacozari, 90' in height, stores water sufficient for 2 years steady operation of the mill.

The old 600-ton concentrator, in 2 sections, fully described Vol. IX, is out of commission, but is by no means antiquated or inefficient, being available for use on immediate notice.

The smelter, described Vol. IX, has been cold since Sept., 1904, concentrates and ore being shipped to the Copper Queen smelter, at Douglas.

Equipment includes a complete plant of shops and warehouses, including a good brick machine shop. The company built and owns the entire town of Nacozari, and a town at the Pílares mine, with a considerable number of comfortable houses, and a school. At Nacozari the company maintains both English and Spanish schools for the children of employes, a well-equipped hospital and a free library, and amusement hall. The company maintains large stores and conducts a profitable mercantile business, both at Nacozari and Pílares. At Nacozari 2 saloons are permitted, 1 for Mexicans and 1 for other races. The company also owns and manages a hotel, water works, an electric light plant and a 10-ton ice plant.

Forces normally are 1,300 men at the mine and mill, of which the great majority are Mexicans, with a few Japanese, no American labor being employed at the mine aside from shift-bosses and timbermen. Mining is performed under contract at 7 to 11 pesos per foot, and the larger part of the tramming is done by contract also, the mine proper employing about 200 miners, 80 carmen and 75 contractors.

Recent production has been as follows: 10,160,016 lbs. fine copper in 1905; 12,714,726 lbs. in 1906; 9,640,390 lbs. in 1907; 15,522,580 lbs. in 1908; 25,011,838 lbs. in 1909; 22,681,472 lbs. in 1910; 25,512,658 lbs. in 1911 and 32,080,099 lbs. in 1912. The Moctezuma is one of the world's really great copper mines and the management is of the best.

MOCTEZUMA MINE.

ARIZONA

Property near Globe, Ariz. Mrs. L. C. Woods and Mrs. Ike Elliott, owners. Mine is opened by a 75' shaft, showing a 2' vein of black sulphides of about 3.5% copper tenor.

MOCTEZUMA MINING CO.

MEXICO

Office: San Antonio, Tex. Mine address: Charcas, San Luis Potosi, Mex. Otto Wahrmund, pres.; A. L. Tuttle, supt. Property shows chalcoppyrite ore, estimated to average 4 to 5% copper, with small silver values. Mine idle since 1907 and company dormant.

MODERN COPPER MINING CO.

ARIZONA

Office: 1 Waverly Place, Utica, N. Y. Mine office: Bisbee, Cochise Co., Ariz. Jeremiah C. Breen, pres.; Milton Harlan, sec. and mgr.

Lands, 28 claims, unpatented, about 500 acres, at the northwestern end of Tombstone canyon, in the Warren district, showing 5 fissure veins carrying carbonate and sulphide ores, of which 1 vein, slightly developed, is claimed to give ore with average assay values of 7% copper, 10% lead, 14 oz. silver and 1 oz. gold per ton. Development includes shafts of 30' and 100' and a short tunnel, latter planned to strike a vein showing a gossan outcrop. Equipment includes a hoist and 6-drill air compressor. Closed down since 1910. Property considered of very speculative value.

MODERN SMELTING REFINING CO.**COLORADO**

Idle several years. Works at Denver, Colo. W. H. Powell, pres. and gen. mgr., at last reports. Capitalization \$1,000,000, shares \$1 par.

Lands are at Utah Junction, 4 miles northeast of Denver, having a spur track connecting with several railways. The property is a custom smelter, including a sampling mill operated by a 100-h. p. motor. The smelter has 4,000-ton steel ore bins and a 300-ton Colorado Iron Works blast furnace, making matte. Equipment includes a 450-h. p. Burns-Kennicut boiler, with automatic stokers, a 150-kw. electric dynamo and Piqua blowers.

MOGOLLON GOLD & COPPER CO.**NEW MEXICO**

Office and mine: Cooney, Socorro Co., N. M. Thos. J. Curran, pres.; J. H. Seaman, vice-pres.; W. I. Cox, sec.-treas.; preceding officers, R. Brownell and R. P. Barnes, directors; C. H. Putman, mgr.; Geo. Millan, supt., and A. M. Howat mg. engr. Organized Sept. 12, 1901, under laws of New Mexico, capitalization \$1,250,000, increased, 1910, to \$3,000,000, shares \$1 par. Bonds, \$350,000 authorized; \$305,000 issued. The property is operating under bond and lease to C. H. Putman Engineering Co., California.

Lands, 26 claims, partly patented, 480 acres, including the Cooney, Peacock, Little Charlie, Independence and Fluoride groups, sometimes known as the Silver Bar mine, in the Cooney district of the Mogollon mountains, 85 miles northeast of Silver City, the nearest rail point. The property shows porphyry and andesite, carrying the Little Fanny fissure vein of 5 to 10' average width, with a paystreak of about 3' average and 30' claimed maximum width, having numerous narrow feeders, some of which carry high gold values. This company and the Socorro Mining & Milling Co. are operating on this vein, and with a lateral development of 3,000' are said to be producing \$3,000 per day, 1913. Ores include slightly auriferous and strongly argentiferous chalcopryrite, bornite and chalcocite, claimed to carry increasing silver values at depth, and the east vein has been said to show native copper at depth of 600'. The Cooney and Peacock mines are said to have produced \$1,250,000 worth of ore in the past. The Cooney group of 9 claims has a 780' two-compartment main shaft. The Peacock mine, 1,500' from the Cooney, has a 400' shaft and is connected with the Cooney by drifts on several levels. The Little Charlie mine has shafts of 350', 225' and 200', the main shaft being 250' below the tunnel. There are also various tunnels on the several groups.

Equipment includes a 30-h. p. crude oil engine, an electric hoist, air compressor and necessary mine buildings. The mine shipped 20 to 30 tons daily in the summer of 1913.

The new management has shown ability and made creditable progress in development and, considering the 85-mile haul to a railway, deserves credit for its efficient operations.

MOHAWK MINING CO.**MICHIGAN**

Office: 15 William St., New York. Mine office: Mohawk, Keweenaw Co., Mich. Mill office: Gay, Keweenaw Co., Mich. Jos. E. Gay, pres.; J. Wheeler Hardley, sec.; John R. Stanton, treas.; preceding officers, Wm. A. Paine and Fred Smith, directors; Theo. Dengler, supt.; John Trevarrow, Jr., mg. capt.; F. Wm. Hartmann, engr.

Organized Nov., 1898, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; paid in, \$18.50. Dividends were \$5 in 1906; \$9 in 1907; \$2.50 in 1908; \$3 in 1909; \$2 in 1910; \$1.75 in 1911; \$3.50 in 1912; \$5 in 1913, a total of \$3,175,000. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Annual meeting, last Tuesday in March.

Lands, 800 acres, in an irregular tract having its axis on the strike of the Kearsarge amygdaloidal bed, in Secs. 27, 28, 33 and 34, T. 57 N., R.

32 W., about 4 miles northeast of Calumet, with the Ahmeek and Seneca mines on the north and Ahmeek to the west.

The property carries the Kearsarge amygdaloidal bed. This formation ranges from 15 to 18' in average width, or about the same as at the Wolverine, and the upper workings carry about the same percentage of copper as in the Wolverine mine, but the lower workings are by no means so rich. The Kearsarge bed is crossed at approximately right angles by a number of narrow fissure veins, with nearly vertical dip, that are yielding a considerable amount of mass copper and in addition there are 3 cross-fissures carrying copper arsenides, including mohawkite, keweenawite, mohawk-whitneyite, and stibio-domeykite, the 2 former being peculiar to this district and first found in this mine. The fissures carrying mohawkite range 3" to 3' in width, well mineralized where crossing the amygdaloidal bed and for an indefinite but usually short distance on either side, the mohawkite and allied arsenides occasionally occurring massive, but commonly being disseminated in an arenaceous gangue. Values in the arsenides decrease with depth and production latterly has been small. There also are other cupriferous amygdaloidal beds in the stratified series that may be given attention later.

The mine is developed by 6 shafts, numbered from north to south, of uniform size, 8x18' inside of timbering, with solid cribbing through the overburden and with identical equipment. The skipways are laid with concrete stringers, which prove very satisfactory. The mine is equipped with Richmond electric signals and operates about 65 power drills. About 15,000' of new openings are made annually.

No. 1 shaft, about 1,500' south of the northern boundary, is bottomed at the 22nd level and is 2,250' deep. This shaft gave a good showing near surface, becoming poor with depth, but improving in the lower levels. No. 1 hoist, in the central power plant at No. 2 shaft, operates two 4-ton skips in counterbalance. No. 1 shaft has a combination shaft rock house, equipped with a 12x24" Nordberg engine and crushers.

No. 2 shaft is 2,000' deep. Like No. 1, it had a good showing near surface with impoverishment at depth, followed by improvement below the 12th level. The combination shaft rock house is similar to No. 1 in design and equipment. The power plant at No. 2 shaft, serving both Nos. 1 and 2, includes an engine house and boiler house of mine rock with redstone trimmings. Hoists are Nordberg double-conical-drum duplex-cylinder engines, good for 6,000' depth, each handling two 4-ton skips in counterbalance. The boiler house has 2 locomotive firebox boilers, with foundations for 3 additional boilers, and the engine house has 2 Ingersoll-Sergeant air compressors, of 40 drills aggregate capacity.

No. 3 shaft, 1,100' southwest of No. 2, is 1,600' deep, and is to be abandoned, as the ground tributary to No. 3 can be reached to better advantage through shafts Nos. 2 and 4. Equipment includes a shaft rock house similar to Nos. 1 and 2, and a Fraser & Chalmers geared hoist, good for 3,000' depth, operating 2-ton skips in balance.

No. 4 shaft, 1,300' southwest of No. 3, is 1,900' deep, developing good average ground from surface. Equipment includes a steel shaft rock house with 3 crushers and a steam hammer. The engine house has a Nordberg double-conical-drum hoist, good for 6,000' depth. The central compressor plant, at No. 4, has a 60-drill Nordberg air compressor and a 60-drill Ingersoll-Sergeant cross-compound 2-stage air compressor, with steam cylinders of 22" and 46" diameter, and air cylinders of 27¼" and 42¼" diam., with stroke of 48", having a piston efficiency of 5,260 cu. ft. of free air per minute, compressed to 70 lbs. pressure per square inch. The boiler house at

No. 4 has 5 locomotive firebox boilers and a 160' self-supporting brick-lined steel smokestack.

No. 5 shaft, 1,800' south of No. 4, is 1,400' deep and like the northern shafts gave an excellent showing near surface with impoverishment at depth, but is again improving in the lower workings. Equipment includes a standard shaft rock house and a Bullock hoist good for 2,000' depth.

No. 6 shaft, the southernmost and newest, is about 2,600' south of No. 5 and 2,600' from the Ahineek boundary, commanding about three-fourths of a mile of the strike of the Kearsarge bed under an area of about 160 acres, or approximately as much ground as the entire Wolverine mine. This shaft is located about 60' in the foot, is 1,100' deep, and can be sunk to a maximum of 4,000'. The shaft is concreted for a depth of 90' from the collar, and the first level opened at 213' corresponding with the 4th level in the older workings of the mine, is known as the 4th level, there being no first, second or third levels in this shaft. The bed in No. 6 shows an average width of about 17', and owing to the sharper pitch of the bed levels are only about 90' apart. Equipment of No. 6 includes a 45x86' steel-frame power house, a steel shaft rock house, Nordberg hoist, with 24x60" duplex cylinders, good for depth of 4,000', and a 20-drill Ingersoll-Sergeant air compressor.

Buildings include a commodious 2-story office, a well equipped hospital, machine shop, smithy, combination carpenter shop and warehouse, 2 changing houses and numerous dwellings for employes. A complete telephone system connects the principal underground stations and surface works.

The mine and mill are served by the Mineral Range railway.

The mill, near the mouth of the Tobacco river, on Traverse bay, Lake Superior, opposite the mill of the Wolverine, is 178x206' in size, of steel frame sheathed with iron, on foundations of sandstone quarried from the company's own land. A steel trestle, 350' long and 50' high, leads into the mill, loaded cars being pulled up the incline by a winding engine. The mill has 4 stamps, all compounded, giving a daily capacity of 2,800 to 3,000 tons. The mill has a Chilean mill and 3 sets of auxiliary crushing rolls, with fixed bearings, to reduce oversize material from the mortar boxes of the heads, this averaging 20 to 25% of rock stamped. Mineral from the wash discharges automatically and is sluiced into the basement, where shoveled into 1½-ton mineral cars, having 14-mesh perforated steel bottoms that allow the draining out of water, after which the cars are weighed, then lifted by a cage elevator and dumped into bins. The bin house has 4 compartments, each with cement floor and steam-pipes underneath, for drying the remaining moisture from the wash. The mineral is taken from the bin house, in self-dumping steel mineral cars to the Michigan smelter at Houghton for reduction. Tailings from the mill are de-watered, then raised by bucket elevator, and stacked by belt conveyor, some distance from the mill.

The boiler house has four 250-h. p. Stirling water-tube boilers. Water for both the Mohawk and Wolverine mills is furnished from a joint pump house, standing near the Tobacco river, from which water is taken. The pump house has a 20,000,000-gal. triple expansion Snow pump, supplemented by a 9,000,000-gal. Nordberg pump, giving an ample water supply for both mills.

A 30x300' wharf, on Traverse bay, a short distance from the mill, with 14' of clear water alongside, is fitted with coal hoists and storage sheds, ample for the needs of both mills.

Yield of fine copper, per ton of rock stamped, averaged 15.79 lbs. for the decade ended 1912, and for the first half of 1913 was about 16 lbs.

Costs, plus construction, per ton of rock stamped, were \$1.92 per ton in 1903; \$1.44 per ton in 1908, and \$1.47 in 1912. Cost of finished copper, marketed, including construction, was 11.75 cts. per pound in 1907; 10.75 cts. in 1908; 11.20 cts. in 1909; 11.44 cts. in 1910; 10.39 cts. in 1911; 10.61 in 1912.

Production has been as follows: 160,897 lbs. fine copper in 1901; 226,824 lbs. in 1902; 6,284,327 lbs. in 1903; 8,149,515 lbs. in 1904; 9,387,614 lbs. in 1905; 9,352,252 lbs. in 1906; 10,107,266 lbs. in 1907; 10,295,881 lbs. in 1908; 11,248,474 lbs. in 1909; 11,412,066 lbs. in 1910; 12,091,056 lbs. in 1911; 11,995,598 lbs. in 1912. The Mohawk, while a much lower grade mine than was anticipated at the beginning, is a fine property with an assured future and has the benefit of a strong, honest and thoroughly economical and competent management.

MOLINA & SANGINETTI MINING CO.

ARIZONA

Address: J. M. Molina, Yuma, Ariz. Mine near Wenden, Yuma Co., Ariz. Lands, 5 claims, known as the Torres mine, about 7 miles northwest of Wenden, in the Harcivar mountains. The mine has shafts of 75', 100' and 125', and a 125' tunnel, all workings showing slightly auriferous copper ore of good average assay tenor. Property idle several years.

MOLLIE GROVES MINING & MILLING CO.

COLORADO

Office: 328 New York Life Bldg., Kansas City, Mo. Operating office: 420 Ernest & Cranmer Bldg., Denver, Colo. Mine office: Parshall, Grand Co., Colo. L. F. Fue, pres.; Chas. F. Dehner, vice-pres.; J. F. Johnson, sec.; P. B. Austin, treas.; O. M. Groves, gen. mgr., at last accounts. Organized March 4, 1909, under laws of Colorado, capitalization \$2,000,000, shares \$1 par.

Lands, 11 claims, unpatented, 114 acres, about 6 miles northwest of Parshall. Property shows granite and schist, carrying 5 orebodies of 3 to 16' reported average width, of which the main vein of 16' average and 30' maximum width is reported to have a 6' central paystreak carrying gray copper ore with copper stains and copper sulphides on either side. Ores are mainly chalcocopyrite and chalcocite, assays averaging 12% copper and \$7.50 gold per ton. Development is by 11 pits and shafts, of 10 to 55' depth, and 5 tunnels of 125', 170', 200', 80' and 40', with 703' of workings. Two mill tests from surface ore returned 7.8 and 7.9% copper. Property was not regarded favorably by the late Horace J. Stevens, owing to its alleged preposterous claims.

MONARCA COPPER CO.

MEXICO

Address: Hermosillo, Sonora, Mex. Property, 50 miles northwest of Carbo, shows copper deposits in limestone near porphyry intrusions. Idle since 1910.

MONARCH MINE.

MONTANA

Property, near Elliston, Powell Co., Mont., shows fissure veins in andesite intruded by quartz-monzonite carrying galena, blende, pyrite and arsenopyrite. A 3 to 5' vein of copper sulphide ore yielded considerable copper in the past, but has not been worked recently and present efforts are directed toward the exploration of other veins.

MONARCH MINING & SMELTING CO.

ARIZONA

Office: P. O. Box 13, Macon, Ga. Mine office: Wickenburg, Maricopa Co., Ariz. Dr. Jas. T. Ross, pres.; H. G. Leak, vice-pres.; C. E. Kernoghan, sec.; preceding officers, H. L. Abbott, J. C. Edwards, Hon. Rhodes Brown, Jos. H. Napier and W. A. Chapman, directors. J. C. Carlisle, supt.; A. D. Akin, mgr. and cons. engr.; D. S. Jones, purch. agt. Organized Aug., 1904, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$736,840 In Oct., 1913, the company authorized an issue of \$100,000

first-mortgage bonds, \$50,000 issued for cash to be used for mine development.

Lands, 6 claims, patented, 100 acres, known as the Ryland or Three, Black Butes group, in the Black Rock or White Picacho district, 9 miles southeast of Wickenburg, show diorite and schist carrying oxidized ores changing at shallow depth to chalcopyrite and occasional bornite, assaying 2 to 20% copper and estimated by management to average 1 to 3 oz. silver and \$3 to \$15 gold per ton. Development is by several shallow shafts and tunnels of 600' and 360', with about 1,500' of underground workings and several thousand feet of surface trenching.

Equipment includes a 50-h. p. distillate engine, 5x8" Rumsey triplex pump, and a 4-drill Sullivan air compressor. There are about 26 buildings, all owned by the company. Water is taken from the Hassayampa river through 7 miles of 4" pipe. The mill, of 100 tons rated capacity, has a 11x15" Dodge crusher, Hartz jigs, rolls, 2 concentrating tables, 2 vanners, slime table and 3 buddles. The mill was burned and mine shut down in summer of 1913, but operations resumed in October.

MOND NICKEL CO., LTD.

ONTARIO

Secretary's address: Hugh Hughes, 39 Victoria St., London, S. W., England. Mine office: Victoria Mines, Algoma, Ont. Works office: Clydach, Glamorganshire, Wales. Sir Alfred Mond, M. P., chairman; Dr. Bernhard Mohr, gen. mgr.; Sir Andrew Noble, Bart., K. C. B., F. R. S., Saxton W. A. Noble, Emile S. Mond, Robt. L. Mond, Dr. Carl Langer, Robt. Mathias and Sir Edmund Walker, C. V. O., directors. Oliver Hall, supt.; A. Sharp, supt. Garson mine.

Organized Sept. 20, 1900, under laws of Great Britain, capitalization £600,000, increased, July, 1908, to £850,000, in £500,000 cumulative 7% preferred shares, £5 par; £300,000 ordinary shares, £1 par, and £50,000 deferred shares, £1 par; total issued capital, £750,000. For fiscal year 1913, profits were £201,102. Dividends of 7% have been paid regularly, on the preferred shares, and dividends on ordinary shares have been as follows: 6% in 1905; 10% in 1906; 12½% in 1907; 15% in 1908, 1909 and 1910; 16¼% in 1911 and 1912; 21¼% in 1913. Reserve fund, £220,000. Cash balance, Sept., 1913, £49,525. Net profits were £111,320 in 1909; £114,107 in 1910; £140,803 in 1911 and £232,429 in 1912. Dividends on deferred shares were 18% in 1906; 33% in 1907; 48% in 1908, 1909 and 1910; 52¼% in 1911 and 1912; 80½% in 1913.

Lands, 7,050 acres, freehold, and about 1,550 acres leasehold, in the Sudbury district, including the Worthington, Garson, Victoria and Cochran-McVittu mines, and a smelter site at Coniston, 10 miles east of Sudbury, alongside the Garson mine. The properties carry nickeliferous and cupriferous pyrite, in norite gabbro, averaging about 1.75% copper and 2.25% nickel.

The Garson mine from which the company obtains most of its ore has 2 lenses of ore about 100' apart known as the north and south deposits, developed by a shaft, worked to the 700' level and proven by diamond drilling to 1,300'. The ore encloses great masses of greenstone and it dips southeast under the norite mass, supposedly as a result of faulting.

The Victoria mine, opened 1899, the principal property, carries 2 columnar bodies of pyrrhotite and chalcopyrite, about 169' apart, with E.-W. strike and dip of about 70° E., connected by stringers in schistose diorite near a granite contact. The orebody has been proven for 1,600' in depth. The mine has a 1,600' three-compartment vertical shaft, 4x12' inside of timbers, with 18 levels opened, the orebodies maintaining their size and grade in the bottom workings.

The Cochrane-McVittu mine has a fraction of the great Frood deposit, the world's greatest nickel copper orebody. This property, already drilled, will be developed by an 800' shaft in 1914.

Equipment at the Garson and Victoria mines is complete and up-to-date.

The power plant on the Wahnapiatae river furnishes power to both mines and the smelter.

The old smelter, near the mines, has been abandoned, and a new and larger smelter, erected 1912, was blown in May 15, 1913. The new smelter, of 1,000 tons maximum daily capacity, makes a high-grade nickel-copper matte which is sent to the refinery at Clydach, Wales.

At the Clydach refining works, in the Swansea valley, the copper-nickel matte from the smelter is dead-roasted and treated with dilute sulphuric acid, which permits the extraction of about 65% of the copper and 2% of the contained nickel. The residue, after drying, assays 45 to 60% nickel, and is treated in charges of 500 kgs. with water-gas, in a reduction tower, at a temperature of about 300° C. This tower has shelves and the ore is moved from shelf to shelf by automatic rakes, the lower shelves being cooled. After treatment in the reduction tower the charge is transferred to a volatilizing tower and treated with carbon monoxide at a temperature of about 100° C. The residue therefrom is returned to the reducing tower and the charge goes forward and back between the 2 towers for 10 to 15 days, and when 60% of the nickel has been volatilized, as nickel carbonyl, the residue of the charge is returned to the roasting furnace. The nickel carbonyl is treated in a decomposing apparatus, wherein the metal is recovered in granules, assaying 99.4 to 99.8% nickel, and the copper is turned out as bluestone. The mine output for 1911 was 163,352 tons and 117,658 tons in 1912.

Production is not reported by the company, but unofficial estimates place the annual output at about 4,000,000 lbs. fine copper and 5,000,000 lbs. nickel, with a possible maximum production of 10,000,000 lbs. copper and 15,000,000 lbs. nickel.

MONITOR CONSOLIDATED COPPER MINING CO.

IDAHO

Office: 1325 Dean Ave., Spokane, Wash. Mine office: Saltese, Missoula Co., Mont. Otis Hill, pres. and mgr.; L. B. Hill, H. M. Casey, H. F. Samuels and E. P. Spaulding, directors. Capitalization \$1,000,000, shares \$1 par. Paid a dividend, 1907, of \$9,500. Supposedly is controlled through ownership of 51% of stock issue by Monitor Development Mining Co.

Lands, 10 claims, patented, 6 miles west of Saltese, being the first copper location in the eastern Cœur d'Alenes. A fissure vein of 10 to 30' width, with N.-E. strike and nearly vertical dip, has a paystreak carrying mainly massive chalcopryrite ore, balance of vein carrying disseminated chalcopryrite, mainly of concentrating grade. Occasional native copper is found. Shipments of selected ore returned 17 to 22% copper, 7 oz. silver and \$1.50 to \$2 gold per ton. The bottom levels of the mine, which is quite wet, show good ore. Development is by a 700' two-compartment vertical shaft and survey was made, 1913, for a 5,000' crosscut tunnel, starting from the Puget Sound Railway track, to develop this, the St. Lawrence and the Richmond properties, which show high-grade copper ores.

Equipment includes a steam plant with 50-h. p. and 60-h. p. boilers, a good hoist and a 3-drill air compressor. Property idle since equipment was destroyed in big forest fires of 1910-11. Work will be resumed in Nov., 1913.

MONO-BALTIC MINING & SMELTING CO.

COLORADO

Idle. Office: Red Mountain, Ouray Co., Colo. Works office: Ironton, Ouray Co., Colo. E. W. Averill, pres. and treas.; Frank Woodbury, vice-

pres.; D. W. Jackson, sec. Organized 1907, under laws of Colorado, capitalization \$5,000,000, increased, 1909, to \$7,500,000, shares \$10 par.

Lands, about 180 acres, known as the Saratoga group, in the Red Mountain district, showing fissure veins and contact deposits having large bodies of oxidized silicious ores of low copper tenor, but carrying high silver values, with some gold, also bornite and chalcopryrite associated with pyrite. A complete sampling of the mine, with 500 assays, is reported to have given an average of 3.5% copper and 12 oz. silver per ton, with small gold values.

Development is by 4 shafts, deepest 140', and by tunnels of 120', 700', 1,000' and 1,100', with about 2 miles of workings. There are necessary mine buildings.

A smelter, planned to have been blown in July, 1909, was not in blast early 1913.

MONROE COPPER MINE.

ARIZONA

Address: John Curran, owner, Prescott, Yavapai Co., Ariz. Mine, once owned by the Monroe Consolidated Mines Co., long dead, is near the junction of Knapp gulch and Lynx creek, near Prescott. Property, formerly worked as a gold mine, has a gold vein and a 50' dike carrying copper ore on the 300' level.

Development work consists of various tunnels. Two car loads of ore carrying oxides and bornite are reported shipped in Oct., 1913.

MONTANA-ARIZONA COPPER CO.

ARIZONA

Address: W. D. Greenough, manager, Greenough Bros., Spokane, Wash. Mine address: Bouse, Yuma Co., Ariz. Lands, 26 claims, 520 acres, 30 miles north of Wenden, the nearest railroad station. Property is said to show 5 veins of 3 to 100' width, traceable 7,000', including a 3' vein carrying good gold values. Development is by a 300' two-compartment shaft and a considerable number of trenches. Equipment includes a 60-h. p. gasoline hoist. Idle several years.

MONTANA-BINGHAM CONSOLIDATED MINING CO.

UTAH

Office: 66 West Broadway, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. W. E. Hubbard, pres. and gen. mgr.; G. G. Schliep, vice-pres.; H. A. Kornick, sec.; E. O. Howard, treas.; M. T. Miller, supt. Organized July, 1910, as successor of Bingham-Butte Consolidated Mining Co., capitalization \$1,500,000, shares \$1 par; issued, 783,764 shares. Debentures, \$200,000 at 6%, \$32,000 outstanding. Total assessments to date, \$18,164.

Property, 4 claims, patented, 60 acres, including the Puritan and Eddie groups, carrying the Quinn fissure, near the Starlus mine. Company was organized mainly for the purpose of driving a long tunnel known as the Montana Bingham, or Miller tunnel, which will be the main transportation and drainage tunnel and eventually develop the eastern section of the camp, including the Fortuna, Keystone, Conger and other groups. The tunnel, planned to be driven 3,500', was 2,020' in length Sept. 15, 1913. This and several prospect tunnels disclose porphyry and quartzite, characteristics of the Bingham camp and the Upper tunnel exposes the Quinn fissure, samples from the first 50' of a 500' crosscut assaying 1.29% copper, the balance going much lower. The big tunnel intersects several fissures, including the Front vein, about 25' wide, carrying an 18" paystreak said to assay 9% copper, 3 oz. silver and \$1 gold per ton.

MONTANA-CLINTON COPPER CO.

MONTANA

Office: Helena, Mont. Mine office: Ellington, Powell Co., Mont. E. H. Brandegee, pres.; W. K. Armstrong, vice-pres.; C. L. Friederichs, sec.-treas. and gen. mgr.; preceding officers, Wm. Pope, and C. O. Price, direc-

tors; John A. Friedrich, supt.; Arthur Ireland, mg. engr.; Fred Halroyd, purch. agt.; Goodall Bros., assayers.

Organized April 16, 1909, under laws of Montana, capitalization \$1,500,000, shares \$5 par, assessable; issued, 142,874; 55,000 shares outstanding, \$1.55 paid, last call being 15 cts., Nov., 1912. First National Bank, Laurium, registrar and transfer agent.

Lands, 7 claims, unpatented, 140 acres, known as the Julia group, on Telegraph creek, 8 miles south of Elliston. Country rock is granite. There are numerous veins, the 1 under development being 14' wide with a pay-streak ranging from 6" to a maximum of 4', developed for 500'. Ores are mainly galena, sphalerite and tetrahedrite, with a high silver content. Surface ores carried considerable gold, decreasing with depth, while the silver content has increased. Development is by a 210' shaft and a 600' tunnel, with ore for 500' in length of 600' of workings. Ore reserves estimated at 2,000 tons, said to average 4% copper, 4% lead, 8% zinc, 35 oz. silver and \$10 gold per ton.

Equipment includes a new 80-h. p. boiler, a 30-h. p. steam hoist and 3-drill Rand air compressor, and there are about 10 buildings. Continuous development is planned. Company planned 300' new drifting, west, and 300' crosscutting south, also sinking shaft to 300' level.

Production from June 1, 1911, to June 1, 1912, was 1,258 tons of copper-lead ore carrying gold and silver, yielding \$17,870 net smelter returns and for 8 months ending Feb. 1, 1913, was 969 tons, shipped to Washoe smelter, returning \$31,335.

MONTANA CONSOLIDATED COPPER CO.

MONTANA

Office: 46 Wall St., New York. Capitalization \$1,000,000. Property includes the Comet and the Grey Eagle mines, about 7 miles northwest of Boulder, Jefferson Co., Mont., both idle several years, except for work done by leasers. Ores are mainly galena and sphalerite with associated pyrite and chalcopryrite, and the Comet is popularly credited with having yielded a gross output of \$10,000,000. See Vol. IX.

MONTANA CONSOLIDATED MINING CO.

UTAH

Office: 531 Atlas Blk., Salt Lake City, Utah. Mine office: Ophir, Tooele Co., Utah. Thos. F. Kelly, pres.; Edw. McGurrian, sec., at last accounts. Organized 1902, under laws of Utah, capitalization \$400,000, shares \$1 par, assessable; fully issued. Lands, 12 claims, patented, showing argentiferous copper and lead ores, developed by a 300' shaft, with about 2,200' of workings. Presumably idle.

MONTANA COPPER & GOLD MINING CO.

MONTANA

Is controlled through ownership of practically entire stock issue, by Sonora Central Mines Co., which see.

MONTANA COPPER SILVER CO.

MONTANA

Address: E. R. Purnell, superintendent, Helena, Mont. Mine in Scratch Gravel hills, Lewis & Clark Co., Mont., 8 miles from Helena. Property shows quartz veins in quartz-monzonite, carrying ores with pyrite and chalcopryrite with gold-silver values. Development consists of a 370' shaft, sinking to 500' in July. Equipment includes hoist and company plans buying compressor.

MONTANA COPPER & SILVER MINING CO.

MONTANA

Letters unanswered at Clancey, Jefferson Co., Mont. Capitalization \$2,000,000, shares \$10 par. Lands, 4 claims, in Lump gulch, 2 miles from Clancey, opened by the 275' Clara Bell shaft, lower drift of which shows tetrahedrite assaying 60 to 400 oz. silver per ton. Shut down several years and company presumably dead.

MONTANA CORBIN COPPER CO.**MONTANA**

Reorganized as Corbin-Copper King Mining Co., which see.

MONTANA-ILLINOIS COPPER MINING CO.**MONTANA**

Office: 450 Phoenix Blk., Butte, Mont. Mine address: Jefferson Island, Madison Co., Mont. J. W. Brown, pres.; Benj. W. Wilson, sec. and gen. mgr.; W. Y. McCormack, treas.; preceding officers, L. H. Stanhope, Alex. Mackel and J. C. Oberon, directors. Joseph Pyle and Hugh McLeod, cons. engr. s.; Arthur Goff, mine supt. Organized 1907, under laws of Montana, capitalization \$2,000,000, shares \$1 par, nonassessable; issued, \$1,954,000. Bonds, \$30,000 authorized, at 12%; issued, \$21,000. Annual meeting, first Thursday in July.

Property, the Bismark mine, is 20 miles south of Jefferson Island, in the Ruby mountains. Holdings comprise 11 quartz claims, 2 patented, three 5-acre mill sites, a water right and 320 acres of placer ground, contested by the forest reserve, giving total holdings of 550 acres, including part of the former holdings of the Bismark Copper Mining Co. Claims show granite and gneiss carrying 3 fissure veins, under development, with N.-W. strike of about 4' average width. Veins carry chalcopyrite and bornite estimated by management to average about 5% copper, 2 oz. silver and \$1 gold per ton. Mine has tunnels of 400', 200', 500' and 1,900', with about 3,000' of workings.

Equipment includes a 5' Pelton wheel and a 10x12" two-drill air compressor. There are 12 mine buildings. A concentrator, under construction, 1913, is to have a Blake crusher, Chilean mill, rolls, 6 Wilfley tables, 4 vanners and a slime table.

MONTANA ORE PURCHASING CO.**MONTANA**

Address: F. Aug. Heinze, 74 Broadway, New York. The mining property of the company was sold, 1906, to Butte Coalition Mining Co., and apparently the company now owns nothing but sundry share interests. Fully described Vol. V.

MONTANA OREWAY MINING CO.**MONTANA**

Office: 501 Postal Telegraph Bldg., Chicago. Mine office: Briston, Beaverhead Co., Mont. W. P. Jahnke, pres. and gen. mgr.; Fred W. Scott, sec.; J. D. Rankin, treas. Organized 1898, under laws of Arizona, capitalization \$1,000,000, shares \$1 par; issued, \$900,000.

Property, 5 claims, patented, 100 acres, and a 25-acre mill site, known as the Straight Tip group, in the Big Hole basin. Claims show several fissure veins averaging 10' thick in quartzite and contact deposits between quartzite and serpentine. Opened by a 2,350' tunnel driven to cut a mineralized diorite dike carrying copper oxide ores, with lead and small silver and gold values.

Equipment includes a 35-h. p. steam plant, with 1-drill air compressor, and there are 6 small buildings.

MONTANA SCOTCH BONNET COP. & GOLD MG. CO.**MONTANA**

Idle. Office: 603 Jamieson Blk., Spokane, Wash. Mine office: Cooke, Park Co., Mont. S. A. Gibson, pres. and gen. mgr.; C. E. Mallette, sec.-treas. Organized March, 1902, under laws of Washington, capitalization \$300,000, shares 10 cts. par, nonassessable; fully issued.

Lands, 17 claims, partly fractional, 200 acres, in the New World district, 65 miles from a railway. Development is by tunnel with about 1,500' of workings developing oxidized and sulphide ores of lead and copper, giving small copper assays, an average of 3.7% lead, 4 to 5 oz. silver and \$3.10 gold per ton. Mine closed, awaiting transportation facilities. Company reported to have refused an offer of \$180,000 for 60% of its stock, made by the American Smelting & Refining Co., 1911.

MONTANA SMELTING CO.**CALIFORNIA**

Address: Room 613, Oakland Bank Bldg., Oakland, Cal. Incorporated Jan., 1912, under laws of California, by Geo. B. Merrell, True Van Sickle and Geo. E. De Golia, all of Oakland, and corporate articles filed at Helena, Mont. Capitalization \$100,000. California franchise forfeited Nov., 1912, for non-payment of license tax.

MONTANA-STATES MINING CORPORATION.**MONTANA**

Office: Bailey Blk., Helena, Mont. Mine office: Alhambra, Jefferson Co., Mont. R. A. Bell, pres. and gen. mgr.; Edward Horsky, sec.-treas.; E. H. Wilson, engr. Organized May, 1911, under laws of Montana, capitalization \$5,000,000, shares \$5 par; issued, 80,000 shares.

Lands, 38 claims, partly patented, 700 acres, including the Fairview group of 30 claims, in the Warm Springs district, 6 miles from a railroad. Country rock is a quartz monzonite of the Boulder batholith, cut by rhyolite dikes and showing quartz veins with mineralization along the walls.

Development is by numerous shallow shafts, and short tunnels, with about 1,600' of openings, opening a number of small veins. Ores are mainly galena, sphalerite and tetrahedrite, with a chalcedonic quartz gangue reported by the management to carry up to 22% copper, 10% lead, 8% zinc, 16 oz. silver and \$16 gold per ton.

Mine has no equipment but electric power is planned. Property considered promising.

MONTANA YERINGTON CO.**NEVADA**

Geo. Wingfield, Goldfield, Nev.; H. S. Brady and C. W. Geddes, mgr., chief owners. Fred Siebert, cons. engr. Mine address: Yerington, Lyons Co., Nev. Property, a group of claims said to show orebodies in porphyry, unlike other Yerington deposits.

Development consists of a 300' shaft sinking to 500' with levels at 160' and each 100' interval. The 160' level east was run 500' to daylight, making a main working tunnel. The 2nd level opened has 200' crosscut to vein, showing a wide contact with much low-grade and streaks of high-grade ore. A face 25' wide is said to show commercial ore from which 100-ton shipments have returned 7% copper.

MONTE RICO MINING & MILLING CO.**NEW MEXICO**

Office: 428 Washington Trust Bldg., Washington, Pa. Mine office: Lordsburg, Grant Co., N. M. Lawrence R. Boyd, pres.; F. B. Theakson, vice-pres.; Jas. V. Boyd, sec.-treas. Organized under laws of Arizona, capitalization \$500,000, shares \$1 par, nonassessable.

Lands, 9 claims, 120 acres, on Lee's peak, in the Pyramid mountains, Virginia district, 4 miles southwest of Lordsburg.

Property shows diorite cut by andesite, and there is said to be a dike 100 to 200' wide mineralized throughout and forming the center of a network of veins. Ores at and near surface carry azurite and malachite succeeded at depth by chalcopryite and there are also silver, lead and copper ores with small gold values.

The mine is reported to have upwards of 2,000' of workings, including shafts, tunnels and trenches, with ore in sight estimated by the company at 500,000 to 1,000,000 tons, which is doubted. The company's statement that its ores can be mined and milled at an expense of \$1.50 to \$2 per ton is also considered doubtful.

The prospectus of the company is replete with misinformation and untruths, and among other things states that "this formation, as well as the character of the ore, is identical with that found in the great copper mines of Bisbee, Globe, Jerome and Cananea," but as is well known, the orebodies of those localities differ greatly in occurrence. In view of the

many questionable statements made, and the unreasonably large profits promised in the prospectus, the company must be regarded with much suspicion.

MONTEREY MINING, SMELTING & REFINING CO., S. A. MEXICO

(Compania Minera, Fundidora y Afinadora, S. A.) Office and works: Monterey, Nuevo León, Mex. Juan M. Weber, general manager. Capitalization \$8,000,000, shares \$100 par.

Lands include the Ocampo and Santa Elena mines, at Mineral de la Mula, carrying gold, copper and lead ores; La Cruz y Anexas mines, at Pánuco de Coronado, carrying silver-lead and copper ores; the Cinco de Mayo group at Lampazos, Nuevo León, producing iron fluxing ores; and a mine at Naica, Chihuahua, Mex.

Company operates a lead smelter and silver-lead refinery, in direct competition with the American Smelting & Refining Co., at Monterey. The smelter also handles small quantities of copper, which is disposed of in the form of matte. Production during fiscal year, 1912, was 13,919,107 kgs. lead, 238,555 kgs. silver and 3,158 kgs. gold.

MONTEREY SMELTER.

MEXICO

See Monterey Mining, Smelting & Refining Co., S. A.

MONTEREY SMELTING & REFINING CO.

MEXICO

Works office: Monterey, Nuevo León, Mex. Is controlled by American Smelting & Refining Co., which see.

MONTEZUMA COPPER MINING CO.

ARIZONA

Property, 17 claims, a mile west of Miami, Gila Co., Ariz., sold, June, 1912, to the Southwestern Miami Development Co. Company paid dividend out of first payment of purchase money and is doing no mining work. See Vol. VII and IX.

MONTEZUMA MINING CO.

MICHIGAN

Address: Care Shelden-Douglass Estate, Houghton, Mich. Property consists of a number of building lots in the village of Houghton, covering the old Montezuma tract, the mineral rights in which were sold, 1912, for \$100,000, to the Isle Royale Copper Co.

MONTREAL SMG. & REDN. CO. OF CANADA, LTD.

ONTARIO

Office: 26 St. James St., Montreal, Quebec. Works near North Bay, Nipissing, Ont. R. J. Forget, pres.; L. J. Cartier, sec. Capitalization \$2,000,000, shares \$5 par.

Owens the North Bay smelter at Trout lake, 3½ miles from North Bay, said to have cost \$700,000, and designed primarily to reduce the argentiferous ores of the Cobalt district, but also planned to smelt copper ores. The plant includes a concentrator with ore bins and amalgamating mill, furnace and converter departments, power house, boiler house, machine shop, carpenter shop, laboratory and office, all principal buildings being of steel frame, sheathed with galvanized iron, on concrete foundations. The smelter was blown in Jan. 7, 1908, but did not prove successful and was soon blown out. Idle several years and property for sale.

MOON CREEK MINING CO.

IDAH0

Office: Wallace, Idaho. J. Peeper, president and general manager, at last accounts. Lands, 9 claims, 180 acres, about 2 miles up Moon creek from Osburn, with a good wagon road. The property has a 30" vein carrying ore assaying up to 9% copper and 20% lead, with small gold values, developed by a 165' shaft and a 675' tunnel. Equipment includes a 4' Pelton water wheel, working under a 185' head, with an auxiliary boiler, hoist, 4-drill Ingersol air compressor, and a small electric light plant. There are necessary buildings. Presumably idle.

MOONLIGHT MINE.**MONTANA**

Mine address: Copperopolis via Delphine, Meagher Co., Mont. John Weston, superintendent. Property, about 15 miles east of White Sulphur Springs, is developed by a 700' tunnel, showing a vein of silver-copper ore.

MOORE COPPER MINE.**IDAHO**

M. E. Mopre, owner, Edwardsburg, Idaho Co., Idaho. Property, the Moscow mine, or Moore Bonanza, has a big ledge said to be 150' wide of gold ore carrying small copper values.

MOOSE MINE.**COLORADO**

Henry M. Scott, owner, 111 Broadway, New York, N. Y. H. C. Bishop, supt., Alma, Park Co., Colo. Property has silver-lead-gold-copper ore in veins, opened by tunnels. Employs about 15 men when working.

MOQUI COPPER CO.**VIRGINIA**

Office: 20 Broad St., New York. Letter unclaimed at Reager, Rappahannock Co., Va. Geo. B. Wright, pres.; Josiah C. Pumpelly, vice-pres.; Morris F. Wood, sec.; Powhatan Weisiger, treas., at last accounts. Organized Feb. 12, 1907, as a reconstruction of Manassas-Gap Copper-Mines, Inc., capitalization \$1,500,000, shares \$1 par.

Lands, 700 acres, freehold, including about 400 acres of timber land, in Fauquier county, Virginia, 3 and 6 miles from 2 railroads, carrying 2 contact veins between Cambrian sandstone and Silurian slates, claimed to range 3 to 11' in width and to carry malachite, bornite and chalcopryrite, associated with a little native copper. Idle several years, and not regarded seriously.

MORAJESKI MINES.**ARIZONA**

A. and V. Morajeski, owners. Red Rock, Pinal Co., Ariz. Property, the Apache mine, 9 miles northeast of Red Rock, in the Owl Head district, is an old silver property, carrying a large andesite dike cutting granite and carrying zone impregnated with oxidized and sulphide ores of copper.

MORESBY ISLAND MINES, LTD.**BRITISH COLUMBIA**

Office: Vancouver, B. C. Mine address: Jedway, Queen Charlotte Islands, B. C. W. H. Leckie, pres.; A. Liddle, sec.-treas. Capitalization, \$500,000, shares \$1 par. Property is the Collison group of 3 claims, on Moresby island, also known as the Meal Ticket, Cash Box and Treasure Vault claims. Development is by tunnels and open cuts, showing assay values of 3.8% copper and \$5.60 gold per ton. Idle except for annual assessment work.

MORNING GLORY MINE.**ARIZONA**

Office and mine: Patagonia, Santa Cruz Co., Ariz. Chas. B. Wilson, owner and manager. Lands, 11 claims, 220 acres, 12 miles from a railway, in the Harshaw district of the Patagonia mountains, showing a 6' fissure vein in limestone and porphyry, carrying sulphide ore, estimated by owner to average 3% copper, 40% zinc, 3 oz. silver and \$2 gold per ton. Development is by 2 shafts of 80' and 200', with about 400' of workings, estimated by owner to give 50,000 tons of 3½% copper ore blocked out for stoping. Ore is hand-sorted. Equipment includes a small hoist. Production, 1912, was about 240,000 lbs. copper. Shipments planned to resume as soon as the Pioneer smelter resumes in 1913.

MORNING STAR MINE.**CALIFORNIA**

At Markleville, Alpine Co., Cal. Owned by Curtz Consolidated Mines Co.

MORRIN GROUP.**BRITISH COLUMBIA**

Is a gold-copper prospect on Valdez island, Comox district, about 120 miles north of Vancouver. Property embraces 5 claims on Granite bay, principal claims being the Grand Prix and Gold Thread, former having several open cuts, said to show a contact deposit between limestone and

diorite. Ore is mainly chalcopyrite. The Gold Thread claim, examined by Percy Williams, M. E., 1913, shows an irregular fissure of white quartz in diorite, carrying high values in gold.

MORSE CONSOLIDATED COPPER CO.

ARIZONA

Mine address: Box Canyon via Wickenburg, Maricopa Co., Ariz. F. J. Weber, superintendent. Lands, 6 miles from Wickenburg on the Hassayampa river, developed by tunnel, show copper ore said to average 3% copper, 10 oz. silver and \$5 gold per ton.

MOSCOW EXTENSION MINING CO.

UTAH

Office: Salt Lake, Utah. No trace of operations securable; Presumably defunct.

MOTHER LODE COPPER CO.

ARIZONA

Mine office: Prescott, Yavapai Co., Ariz. Organized 1907. Lands, 7 claims, 140 acres, in the Copper basin, 10 miles west of Prescott, showing an orebody between limestone and porphyry, said to give average assays of 12% copper and \$6 gold per ton. Idle.

MOTHER LODE COPPER MINES CO. OF ALASKA.

ALASKA

Office: 902 Lowman Bldg., Seattle, Wash. Mine office: Kennecott, Copper River district, Alaska. Jas. J. Godfrey, pres.; J. W. Robinson, vice-pres.; C. L. Warner, sec.-treas.; preceding officers, O. J. Hosford and B. L. Engelke, directors; Geo. E. Baldwin, gen. mgr. Organized under laws of Washington, with capitalization \$5,000,000, shares \$1 par.

Lands, 70 lode and placer claims, about 1,300 acres, including the Smith-Haglund-Sall group, on unsurveyed ground, adjoining the Bonanza mine, and 13 miles from the Copper River & Northwestern railroad.

The geological conditions at this property, according to Herman Keller, are similar to those of the Bonanza mine. The base of the mountain is formed of amygdaloidal basalt, highly altered and called the Nicolai greenstone. This is covered by thick beds of Chitina limestone, dipping north. The ore shoots occur in the limestone, and exploration has shown that contrary to general belief, the ore does not occur along the greenstone contact, but in a favorable bed 90' above it and then only in connection with the Bonanza fault, or shear zone. This shear zone, 20 to 24' wide, cuts both greenstone and limestone and the ore is found in chimneys and as irregular bunchy masses along the zone and as impregnations in the limestone walls. The ore consists of nearly pure glance with minor and unimportant amounts of covellite and of very little malachite, etc. Like the Bonanza ore it carries gold and silver.

Development is by 4 short tunnels, known as the South, Marvelous, North and Regal. Work for some time has been confined to drifting and crosscutting on the Marvelous claim, which with the Hero and Leviathan claims is considered the most important of the several groups.

The mine has no power equipment, but there is a 7,300' aerial tramway, connecting the Marvelous tunnel with the so-called Lower camp. Buildings include an office, boarding house, and several other log structures.

New work planned for 1914 includes a long working tunnel, 1,100' below the present workings on the Marvelous claim, and a small steam plant with air compressor will be erected. These improvements will cost \$150,000. Company has 500 tons of ore sacked for shipment, said to assay 74.68% copper and 15.4 oz. silver, being mostly copper glance.

Property has been fully and favorably reported on by Herman A. Keller, E. M., and by Arthur W. Jenks, and is a prospect of considerable merit.

MOTHERLODE COPPER MINING CO.

VIRGINIA

Idle. Office: 623-18 Broadway, New York. Joseph H. Morong, pres.

and gen. mgr., at last accounts. Organized Sept., 1902, under laws of New York, capitalization \$1,500,000. Property is the old Morong mine, at Virgilia, Halifax Co., Va.

MOTHER LODE MINES.**BRITISH COLUMBIA**

Owned by British Columbia Copper Co., Ltd.

MOUNT AETNA GOLD & COPPER MINING CO.**UTAH**

Idle several years. Address care S. M. Levy, Salt Lake City, Utah.

Property, 12 claims, partly patented, adjoining the Utah Metal Mining Co., in Oquirrh range, Bingham district. Developed by 3 tunnels, No. 1 of 950', No. 2 of 2,600', and No. 3 of 370', carrying ore assaying up to 15% lead, 3.4 oz. silver and \$10.40 gold per ton, with occasional copper values. No. 1 tunnel has a Fairbanks & Morse engine and an air compressor.

MOUNT ANDREW IRON & COPPER CO.**ALASKA**

Office: Empire Bldg., Seattle, Wash. Letter unclaimed at Ketchikan, Alaska. Harry Bellam, superintendent, at last accounts.

Lands, held under lease from the Mount Andrew Mining Co., on Kasaan peninsula, Prince of Wales island, Alaska, carries chalcopyrite disseminated in magnetite, with hornblende gangue, and ore is practically unaltered from surface, except for a few inches of occasional oxidation, masses of sulphide ore even showing glacial striations, though occasional thin sheets of native copper are found. Ore averages about 3.75% copper and \$1 to \$1.60 per ton in combined gold and silver values. The orebody has been stripped for about 2 acres and is developed by tunnels of 300' and 700', with a 70' blind shaft from the lower tunnel, and 10 small glory-holes, opened upwards to surface from the tunnels.

A 4,600' aerial tram of 40 tons hourly capacity leads from a 50-ton loading bin at the mine to a shipping bunker 500' from tide water. Equipment includes two 50-h. p. boilers, with 5-drill and 7-drill Ingersoll-Sergeant air compressors. Buildings include an office, boarding house, bunk house and smithy. About 125 men are employed.

Property idle for most of the year 1912, but company plans systematic development of mine in near future.

MOUNT ANDREW MINING CO.**ALASKA**

Office: 1105-165 Broadway, New York. Property is the Mt. Andrew copper and iron mine, on Kasaan peninsula, Prince of Wales island, Alaska, under lease and bond to the Mount Andrew Iron & Copper Co.

MOUNT BAKER & SHUKSAN MINING CO.**WASHINGTON**

Idle. Office: 18 Post-Intelligencer Bldg., Seattle, Wash. Letter unclaimed at mine address, Maple Falls, Whatcom Co., Wash. J. Conaway, pres.; C. M. Welch, sec., at last accounts. Lands, 320 acres, said to carry 7,000,000' of good standing timber, with an available water right. Property is said to have several veins, varying from 25 to 100' in width. Development is by 4 tunnels, longest 1,100', with about 3,000' of workings showing gold-copper ore. Equipment includes an air compressor.

MOUNT GLINES GOLD & SILVER MINING CO.**MAINE**

Mine office: Bryant Pond, Oxford Co., Me. Property, slightly developed, shows copper and lead ores. Has steam power and a small mill. Inactive for several years.

MOUNT ROYAL MINING & REDUCTION CO.**MONTANA**

Mine office: Princeton, Granite Co., Mont. L. N. Loomis, president. Property, the Bonner group, 4 claims, a tunnel site and water rights, on Royal mountain, 8 miles from Philipsburg. Claims cover 6,000' of the course of 2 fissure veins carrying gold-copper ore. Development consists of tunnels opening up a body of commercial ore. Reduction works have copper leaching plant designed by J. D. Fields.

MOUNT ST. HELENS CONS. MINING CO.**WASHINGTON**

Office: 516 Selling Bldg., Portland, Ore. Mine office: Spirit Lake, Skamania Co., Wash. Thos. Prince, pres.; H. P. Christiansen, vice-pres.; E. L. Harmon, sec.; Dr. Henry Waldo Coe, treas. and managing director; Andrew Olson, sup.; Geo. W. Lilly, engr. Organized 1902, under laws of Oregon, capitalization \$1,800,000, shares \$1 par.

Lands, 65 claims, patented, 1,300 acres, estimated to carry 45,000,000' of standing timber, on the North fork of the Toutle river and on the shores of Spirit Lake, 50 miles from Portland. It includes the former holdings of the Sweden Copper Co., Calumet Copper Mining Co., Bronze Monarch Mining Co., Chicago Mining Co., Yellow Metal Mining Co., Earl Mining Co. and Cascade Copper Mining Co. The company also owns a three-fourths interest in the United mines. In addition to copper ores the tract contains gold veins, an ochre bed, a granite quarry and a deposit of pumice stone.

The property is said to show syenite, diorite and slate with fissure veins carrying about 20 orebodies ranging from 5 to 100' in estimated width. The ores carry chalcocite, bornite and chalcopryite and vary from 2 to 25% copper, some lead, 2 to 50 oz. silver and \$1 to \$40 gold per ton.

Development consists of a 2,300' tunnel, besides others of 250', 400', 600' and a 50' shaft. The workings total about 5,500' and are estimated by the management to show 125,000 tons of medium and high-grade ores, with a greater tonnage of milling ore.

The Sweden-Norway-Denmark group is reported to have a 30 to 40' vein between diorite and syenite, the footwall streak carrying occasional shoots of rich ore assaying 3 to 20% copper, 4 oz. silver and \$1.50 to \$7 gold per ton. There is said to be 10,000 tons of ore on the dump at this tunnel.

The Earl group shows a strong gossan, carrying small gold values, with occasional bunches of high-grade copper ore.

The Bronze Monarch group, adjoining the Sweden, opened by a 300' tunnel, has produced about 1,000 tons of auriferous and argentiferous copper sulphides.

The Index mine, about 2½ miles from the main group, shows a vein said to be 44' wide, carrying ore with 1.5% copper, 8 oz. silver and \$4 gold per ton.

Equipment includes an 80-h. p. Pelton water wheel and a 6-drill Sullivan air compressor. There is a sawmill, and about 25 shops and cabins at the various camps.

Lands are owned outright and the company has no bonds or debts, but the property has been practically idle for some years awaiting the construction of a much-needed railway.

MOUNT SICKER & B. C. DEV. CO., LTD.**BRITISH COLUMBIA**

Office: 764 Bullitt Bldg., Philadelphia, Pa. Letter unclaimed at Mt. Sicker, Vancouver Island, B. C. Dr. T. J. Jones, pres.; Jas. A. Cameron, sec.-treas. and managing director, at last accounts. Capitalization \$1,000,000.

Lands, 9 claims, 352 acres, 49 miles north of Victoria, in 2 groups, known as the Copper Canyon group of 5 claims, on Mount Sicker and a group of 4 claims on Mount Brenton. Property is in the same geological horizon as the Tyee and Lenora mines and supposedly carries a continuation of the schistose ore belt of those mines. Workings consist of a two-compartment shaft, sunk at an angle of 76°, variously reported as 80' to 144' deep, showing a little good ore in the bottom. Development work on various claims has given encouragement but the company has not yet secured a workable orebody. Equipment is said to include necessary mine buildings. Mine shut down several years and company apparently dormant.

MOUNT SICKER & B. C. DEV. CO., LTD. BRITISH COLUMBIA

Idle. Office: 30 George Square, Glasgow, Scotland. Fred I. Smith, chairman; John D. Steel, sec. Organized Oct. 20, 1898, under laws of Great Britain, capitalization £125,000, shares £1 par. Lands are on Mt. Sicker, Vancouver Island, B. C.

MOUNTAIN COPPER CO. ARIZONA

Letters unclaimed at 42 Broadway, New York, and Safford, Graham Co., Ariz. M. W. Ferris, treasurer, as last accounts. Company was organized as successor of the Gila Valley Copper Co., which in turn succeeded the Federal Mining Co., of odious fame.

Lands are sundry claims in the Lone Star district, Gila mountains, developed by several shallow shafts. There is a 50-ton concentrator and a small pumping plant at Walnut Springs.

Apparently no work has been done by the present company, and the outfit is viewed with much suspicion.

MOUNTAIN COPPER CO., LTD. CALIFORNIA

Secretary's address: A. N. Frewer, 3 Lombard St., London, E. C., England. Operating office: 150 Pine St., San Francisco, Cal. Mine office: Keswick, Shasta Co., Cal. Works office: Martinez, Contra Costa Co., Cal. Capt. F. B. Lawson, chairman; Sir Andrew Noble, Bart., K. C. B., Henry J. Wenham, J. T. Middleton, E. T. McCarthy and N. M. Macdonald, directors; Wm. F. Kett, gen. mgr.; W. L. Cole, mine supt. Jardine, Matheson & Co., Ltd., 74 Wall St., New York, American sales agents.

Organized Dec. 1, 1896, under laws of Great Britain and reorganized May 10, 1902, capitalization £250,000, shares £1 par. In 1899 the company changed its capitalization of £1,250,000 into £250,000 in shares and £1,000,000 in 6% debenture stock, shares £4 par, on which a first payment of £1 per share was made Jan. 16, 1905, leaving £750,000 of stock outstanding. The change in 1899 was practically a complete amortization. Dividends before reconstruction, 1897-1901, aggregated 58½%. Profits were £150,255 in 1907; £28,112 5d. in 1908; £24,557 12s. 4d. in 1909; a deficit of £3,042 in 1910; profit of £50,438 in 1911.

Holdings are extensive, including the Iron Mountain and Hornet mines, 10 miles northwest of Redding. The Iron Mountain mine was opened, 1880, for silver, and was given a 20-stamp mill, 1884, working the gossan in a small way for some years.

The Iron Mountain mine had a gossan of 100 to 300' width, covering a lens of ore, 100 to 400' wide, 800' long and 500' deep, in a shear zone of meta-rhyolite. The ore carries chalcopyrite associated with pyrrhotite averaging about 5% copper, 2 oz. silver and slightly under \$1 gold per ton. The orebody was worked pillar-and-stall, and stopes filled with waste, but pillars have been robbed and the mine now shows little high-grade sulphide ore, though there are reserves of 500,000 tons of silicious ore averaging 4 to 5% copper. The old orebody being pyritic, there was trouble from fires, but the application of the plenum system of ventilation, by Mr. Wright, restored normal conditions. Considerable cement copper was secured from the charged waters coming from the fire zone.

The Hornet mine, lying to the north of the Iron Mountain, developed about 5,000,000 tons of pyritic ore, averaging only about 1% in copper tenor, with patches up to 2.5% copper, and carrying 47 to 50% sulphur. Gold and silver values are very small but the ore is valuable for the manufacture of sulphuric acid, saving the small copper and precious metal values as by-products.

The mines are connected with Keswick by an 11-mile narrow-gauge

steam railway, traversing a rugged country, with an average grade of nearly 4%, the elevation gained being 2,000'.

In Oct., 1913, the company was said to be shipping about 12,500 tons of ore a month from its mines to the Martinez smelter. Employs about 100 men at the mines.

The Keswick smelter, in the canyon of Spring creek, less than a mile from the Sacramento river, had 11 Wright circular calcining furnaces and five 300-ton water-jacket blast furnaces. This plant, fully described Vol. VIII, has been dismantled.

The 350-ton Martinez smelter, on San Francisco bay, includes the old works of the San Francisco Chemical Co., which formed the nucleus of the plant. The Martinez works have one of the most extensive and best planned acid works in existence, built at a cost of approximately \$1,000,000. The Hornet ores, low in copper but rich in sulphur, are burned, the sulphur fumes collected in lead-lined chambers and transformed into sulphuric acid by the Meyer chamber process, the cinder remaining after the roasting is smelted for its copper contents. The acid is sold crude and also is used as the basis of commercial fertilizers for which there is a considerable demand in the rich fruit and agricultural districts of California and the other Pacific coast states. The Martinez works also do a general custom business and are fully equipped with steam, electric and pneumatic power.

Production of ore, April, 1913, was at the rate of about 200 tons daily from the Iron Mountain mine, and 100 tons daily from the Hornet. At one time, only a decade ago, this company was among the largest copper producers of the world, but has since greatly declined in output, production having been 29,727,040 lbs. fine copper in 1901; 19,116,160 lbs. in 1903; 6,814,000 lbs. in 1907; 3,638,619 lbs. in 1908; 2,775,197 lbs. in 1909; 2,987,815 lbs. in 1910; 5,400,000 lbs. in 1911. The company has been managed with great prudence and marked success, both financially and technically and notwithstanding the depletion of an originally rich mine has been able to make a successful change of base by which low-grade pyritic ores are utilized for the manufacture of acid.

MOUNTAIN DELL CONSOLIDATED MINING CO.

UTAH

Office: National Copper Bank, Salt Lake City, Utah. Mine office: American Fork, Utah Co., Utah. John H. Wootton, pres. and supt.; Henry Lewis, vice-pres.; Benjamin B. Hall, sec.; A. W. Raybould, treas.; preceding officers and H. W. Griffith, directors; R. N. Baskin, mine supt. Organized June, 1906, under laws of Utah, capitalization \$100,000, shares 25 cts. par, assessable, with 11 assessments levied to end of 1911; fully issued.

Lands, 9 claims, patented, 180 acres, 18 miles from the San Pedro railway, having a 4' interbedded vein, between limestone and quartzite, with E.-W. strike, traceable 3,000', carrying lead and copper ores, estimated by management to average 5% copper, 37% lead, 60 oz. silver and \$1 gold per ton. Mine is developed by a 300' incline shaft and an 800' tunnel, with 1,200' of workings. There is a small gasoline power plant, and 3 buildings.

MOUNTAIN LAKE MINING CO.

UTAH

Office: Knight Bldg., Provo, Utah. Mine office: Heber, Wasatch Co., Utah. Jesse Knight, pres.; Jas. H. Moyle, vice-pres.; R. E. Allen, sec.-treas.; J. W. Knight, gen. mgr. Organized 1896, under laws of Utah, capitalization \$50,000, shares 10 cts. par, increased, 1900, to \$1,000,000, shares \$1 par, assessable. Shares are listed on the Salt Lake Stock Exchange.

Lands, 7 claims, patented, in the Big Cottonwood and Snake Creek districts, in Wasatch and Salt Lake counties. The property has 2 contact deposits, between diorite and limestone, carrying bornite and chalcopyrite, ore giving assays up to 55% copper and \$210 gold per ton, with estimated

average assay values of 2.5% copper, 2 oz. silver and \$1 gold per ton. Development consists of a tunnel driving from the Snake Creek side, over 5,400' long, with other lesser workings.

MOUNTAIN MEADOWS COPPER CO.

CALIFORNIA

Idle. Office: Security Bldg., Sioux City, Ia. Mine office: Quincy, Plumas Co., Cal. W. G. Lummis, manager, at last accounts. Property, in Lights canyon, has a 950' tunnel, showing auriferous and argentiferous copper ore and a little native copper. Equipment includes steam power and an air compressor. Company comatose and mine shut down several years.

MOUNTAIN MEADOW GROUP.

MONTANA

Address: P. H. McDermott, owner, Helena, Mont. Mine, 4 miles from Pony, Madison Co., Mont., on Willow creek, now operated by leasers. Property shows a fissure vein in granite carrying pyrite and chalcopryite with gold values in quartz gangue. A small log concentration mill handles the output and concentrate is shipped to the East Helena smelter.

MOUNTAIN MINING CO.

COLORADO

Is controlled through stock ownership by the Salida Copper Co., which see. Property is the Griffith mine.

MOUNTAIN MONARCH GOLD MINING CO.

CALIFORNIA

Office: 319 Yuba St., Redding, Cal. Mine office: Shasta, Shasta Co., Cal. W. F. Aram, pres. and gen. mgr.; J. H. Hunter, sec.; C. E. Armstrong, treas., at last accounts. Organized Nov. 25, 1905, under laws of California, capitalization \$75,000, shares \$1 par, in \$25,000 preferred and \$50,000 common stock.

Lands, 11 claims, unpatented, 220 acres, in the Whiskeytown district, north of Redding, 10 miles from the Southern Pacific railway, showing fissure veins in rhyolite, the main one said to be 140' wide, traceable 2,500'. The ore carries malachite, bornite and chalcopryite associated with pyrite, and averages 7% copper, 1.5 oz. silver and \$3.40 gold per ton. Development is by tunnels of 200' and 750', with 1,200' of workings. Equipment includes steam and gasoline power with a 6,000' sawmill and 5 mine buildings. Idle.

MOUNTAIN VIEW DEVELOPMENT CO.

ARIZONA

Letters unclaimed at Bisbee, Cochise Co., Ariz. Geo. Bennett, pres.; W. D. Kinsey, sec., at last accounts. Organized 1903, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 9 claims, at the head of the Dixie canyon, 4 miles northwest of Bisbee. The mine has 2 shallow shafts and a tunnel at last accounts developing copper ore, with occasional lead, and a small test shipment gave returns of 16.74% copper and 100 oz. silver per ton. Property was being worked by leaser at last reports.

MUDERSBACH MINE.

ARIZONA

Near Bouse, Yuma Co., Ariz. See Record Mines Co.

MULBERRY MINING CO.

NEW MEXICO

Office: care H. M. Gray, Tyrone, Pa. Mine address: Lordsburg, Grant Co., N. M. Property, about 400 acres, in the Virginia district, showing 7 fissure veins.

Development consists of a 500' shaft and numerous shallow shafts and pits, with an aggregate of about 3,000' of workings, showing gold-copper and lead ores.

Equipment includes steam power, with air compressor, and there is a 50-ton concentrator. Was developing with small force at last accounts.

MULOCK MINE.

MICHIGAN

Idle. Office: care R. P. Mulock, owner, Colfax, Ia. Mine near Matchwood, Ontonagon Co., Mich. Lands, 240 acres, being the N. W. $\frac{1}{4}$ of Sec. 9 and the N. W. $\frac{1}{4}$ of N. W. $\frac{1}{4}$ and S. W. $\frac{1}{4}$ of S. W. $\frac{1}{4}$ of Sec. 15,

T. 49 N., R. 41 W., one-half mile northwest of the Norwich mine. Exploratory work, 1903-05, showed 4 cupriferous amygdaloidal beds, of which two, that were about 400' apart, averaging 6' and 15' in width, were opened by several pits, showing copper.

MULTNOMAH MINING, MILLING & DEV. CO. WASHINGTON

Office: 346 Broadway, New York. Mine office: Nespelem, Okanogan Co., Wash. J. M. Hudnut, pres.; M. J. Hills, vice-pres. and sec.; Dr. F. O. Hudnutt, asst. sec. and gen. mgr.; Geo. S. Wickman, treas., at last accounts. Organized 1901, under laws of Washington, capitalization \$2,000,000, shares \$1 par.

Lands, about 600 acres, in 4 groups, including the River group of 260 acres, patented, carrying placer gold; the Mineral Hill group of 100 acres, 3 miles west of Nespelem; the Multnomah group of 180 acres, 4 miles west of Nespelem, and the Ramsey group of 60 acres, adjoining the Nespelem Central Mining Co., 5 miles west of Nespelem. The Ramsey group is said to show high-grade gold-copper ore. The Multnomah group has a tunnel of about 1,100', said to cut a 15' vein, showing mainly auriferous and argentiferous lead ore. Mine as a whole is said to have about one-half mile of workings. There are 5 buildings, and a dam built across the Nespelem river. Presumably idle and no returns securable, 1913.

MUMME MINING CO.

ARIZONA

Office: 1502 S. Flores St., San Antonio, Tex. Mine office: Patagonia, Santa Cruz Co., Ariz. T. E. Mumme, pres. and gen. mgr.; E. J. Mockert, vice-pres.; H. P. Mockert, sec.; Geo. F. Wieland, supt. Organized Sept. 20, 1910, under laws of Arizona, capitalization \$100,000, shares \$1 par; issued, 61,000 shares. Also has \$10,000 debentures authorized, but unissued.

Lands, 7 claims, patented, in the Harshaw district, 6 miles from Patagonia, showing 2 veins of about 7' average width, carrying gold and silver-bearing copper ore, said to average about 9% copper, 22 oz. silver and \$4 gold per ton.

Development is by a 50' shaft and 3 tunnels, longest 320'. The mine has no power equipment.

MURPHY COPPER MINE.

BRITISH COLUMBIA

Address: A. Beamer and A. E. Raab, operators, Hope, B. C. Property, a group of 8 claims, situated on the northern side of the Fraser river, a mile above Hope station on the C. P. R. R. The mine, located and worked about 1865, shows gold-copper ore in a netted vein in igneous rocks. Development consists of an 800' adit and numerous old pits and trenches. Property now under bond and lease to firm named above.

MURRAY-ISABEL MINES CO.

COLORADO

Idle. Office: Parkdale, Fremont Co., Colo. W. H. Murray, Jr., and J. F. Murray, owners. Lands, 7 miles from a railway, have a vein of 7 to 10' width, carrying ore giving average assays of 7% copper, 6 oz. silver and \$2 gold per ton, opened by a 300' shaft and a 220' tunnel. Closed down for several years.

NACIONAL; COMPANIA MINERA LA.

MEXICO

Idle. Mine office: El Salado, Catorce, San Luis Potosi, Mex. Miguel Ferrara, pres.; José M. Parga, mgr., at last accounts. Property is the Saltillito mines, producing silver, gold, copper and iron ore.

NACO CONSOLIDATED COPPER CO.

ARIZONA

Idle. Last address: 228 West Fourth St., Los Angeles, Cal. Letter unclaimed at Turkey, Yavapai Co., Ariz. A. J. Paden, pres.; Wm. Theising, vice-pres.; Chas. W. Stewart, sec.-treas.; preceding officers, J. Ross Campbell and J. W. McBride, directors, at last report. Organized Oct. 26, 1906, under laws of Arizona, capitalization \$2,000,000, shares \$1 par. Lands,

20 claims, 400 acres, including the Yankee Chief and Comet groups, in the Black Canyon district, 3 miles from Turkey. Development is by 2 shafts, with about 700' of workings, showing sulphide ores. Company advertised a few years ago that it had one of the "biggest, richest, surest things, and quickest money-makers ever offered to date," each statement being absolutely untrue. Closed down several years, and deservedly dormant.

NACO SMELTING & REFINING CO.

ARIZONA

Probably dead. Letter unclaimed at Naco, Cochise Co., Ariz., and Los Angeles, Cal. Fully described Vol. VIII.

NACAZARI CONSOLIDATED COPPER CO.

MEXICO

Address: P. O. Box 64, Douglas, Ariz. Mine address: Pilares de Nacazari, Sonora, Mex. John G. Alexander, pres. and gen. mgr.; R. R. Humphrey, vice-pres.; George Motz, sec.; John Gaughran, treas.; preceding officers, Geo. S. Howard, J. Cota Leon, J. A. Finney and N. Cohen, directors. B. R. Russell, mine supt. and purch. agt.; S. A. Gardainer, chemist-assayer. Organized July, 1907, under laws of Arizona, capitalization \$3,000,000, shares \$5 par, fully paid and nonassessable; issued, 420,000; 25,000 shares sold for \$1 each in Sept., 1913. Annual meeting, second Tuesday in July.

Property consists of various claims, 245 acres, lying in 2 groups near the Pilares mine of the Moctezuma Copper Co. The Galera group shows andesite and brecciated rhyolite cut by several veins carrying complex sulphide ores with gold and silver values. The other group which adjoins the Pilares mine, shows a big red reef, 300' wide, of brecciated, silicious vein matter outcropping on the Copper King claim and supposedly an extension of the Pilares deposit.

The Galera group is opened by a long tunnel driven on the vein developing narrow streaks of high-grade shipping ore. Company has spent much of its money on the main, or No. 1, tunnel (1,800' long in Oct., 1913), driven towards the Red Hill to undercut the Copper King outcrop. This tunnel cuts several 2 to 6' veins on which drifts are now being run and complex sulphide ores developed. This ore runs high in lead, carries considerable zinc, 3 to 4% copper, 60 to 70 oz. silver and a few dollars in gold. At 1,400' from the portal, and 300' beneath the surface, the tunnel entered a vein a foot wide which has been followed up for 300', widening to 2' of ore said to average 2.25% copper, 30% lead, 15% zinc, 64 oz. silver and 60 cts. gold. Total development to date is 2,948', including 3 shallow shafts and a number of prospect tunnels. Management estimates 29,900 tons of ore blocked out with an average content of 1½% copper, 10% lead, 7% zinc, 15 oz. silver and 50 cts. gold per ton.

In Oct., 1913, company ordered and paid for the machinery of a 100-ton concentration mill and has graded foundation site. The plant is expected to be complete in Jan., 1914.

Property is in an excellent location, has promising ground and a chance to find a large ore deposit of milling ore. Veins thus far discovered show a good grade of ore, but the future of the company depends upon the results of further exploration work.

NANAIMO JUBILEE MG. & DEV. CO., LTD.

BRITISH COLUMBIA

Idle. Mine near Dunsmuir, Vancouver Island, B. C. Described Vol. X.

NAPOLEON MINE.

CALIFORNIA

Idle many years. Mine near Copperopolis, Calaveras Co., Cal. Josephine H. Sullivan, owner; Lewis and Benj. Williams, lessees, at last accounts. This is the oldest copper mine in California and was a considerable producer in early days, 1865. The property shows a 100' ore channel, ranging from diabase to talcose schist, having lenticular orebodies up to 20' in

width, carrying mainly copper sulphides. Development is by a 430' new main shaft and a 325' old shaft, to the eastward.

NAPOLEON MINE.

WASHINGTON

See British Columbia Copper Co.; at Marcus, Stevens Co., Wash.

NATICK COPPER CO.

MICHIGAN

Office: Leopold Bldg., Houghton, Mich. Mine near Copper Falls, Keweenaw Co., Mich. Frederick W. Nichols, resident manager. Lands, 180 acres, being the N.E. $\frac{1}{4}$ and E. diagonal $\frac{1}{2}$ of E. $\frac{1}{2}$ of N.W. $\frac{1}{4}$ of Sec. 28, T. 58 N., R. 31 W., surrounded by holdings of the Frontenac Copper Co. Property slightly explored in early days, has been idle many years.

NATIONAL CONSOLIDATED MINING CO.

ARIZONA

Office: 420 Milwaukee Ave., Chicago, Ill. Operating office: Nogales, Ariz. Letter returned unclaimed from former mine office, Patagonia, Santa Cruz Co., Ariz. Oscar E. Porter, pres.; Geo. D. Gross, vice-pres., and gen. mgr.; D. F. Orange, sec.; Alfred Thurtell, treas., and S. F. Johnson, directors. Organized Dec. 9, 1905, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable. Annual meeting, first Monday after first Tuesday in January.

Lands, 21 claims, about 400 acres, and 40 acres in mill sites, property including the Silver Glance group, about 12 miles northwest of Nogales. Lands show decomposed granite, diorite and occasional limestone, carrying about 20 fissure veins and contact deposits, of which 6 are partly developed. Principal vein, of 12' average width, carrying chalcocite and galena, estimated to average 3% copper, 10% lead, 12 oz. silver and \$9.75 gold per ton. Development by shafts of 60', 200', 80' and 75', and tunnels of 193' and 120'.

Equipment includes a 12-h. p. Fairbanks & Morse gasoline hoist and there are 5 mine buildings.

NATIONAL COPPER CO.

CALIFORNIA

Idle. Letters to 202 Bullard Blk., Los Angeles, Cal., unanswered. Mine near Needles, San Bernardino Co., Cal. Fredk. H. Newton, pres. and gen. mgr.; Jas. H. Newton, vice-pres. and treas.; A. E. Miller, sec., at last accounts. Organized under laws of California, capitalization \$5,000,000, shares \$1 par, of which \$2,500,000 was given for property. Authorized, 1907, a \$100,000 issue of \$1,000 ten-year 8% bonds.

Lands, 29 claims, 4 fractional, about 40 miles south of Needles and 22 miles north of Parker, Ariz., in the Whipple Mountain district, said to show strong veins, developed by shafts of 75' and 100', with a gasoline hoist. There are several mine buildings, including a 20x30' office.

NATIONAL COPPER CO.

NEW MEXICO

Chas. P. Laughlin, secretary, Tyrone, Grant Co., N. M. Organized Feb., 1902, capitalization \$1,200,000, shares \$100 par.

Lands, 22 claims, 10 patented, 4 miles from the Chemung Copper Co., in Whitewater canyon, Burro Mountain district. The property has a fissure vein, in granite, of 60' estimated average width, carrying mainly chalcocite, opened by a 200' shaft and a 360' tunnel having a 214' blind shaft. The mine shows considerable bodies of copper ore, mainly in disseminated sulphides of 2 to 3% copper tenor, with some ore carrying up to 15 and 20% copper. Equipment includes steam power and a Norwalk air compressor. Presumably idle.

NATIONAL COPPER MINING CO., LTD.

IDAHO

Address: August Paulsen, pres., Spokane, Wash. Mine at Mullan, Shoshone Co., Idaho. A. P. McCrae, vice-pres., Mullan, Idaho; Chas. McKinnis, sec.-treas. and mgr.; foregoing with Harry White, Jas. F. McCarthy, H. H. Stambaugh and R. C. Steese, directors. Organized Sept. 22, 1906, under laws of Washington, capitalization 2,000,000 shares, \$1 par,

increased from 1,250,000 shares in July, 1913; 1,200,000 issued; 800,000 shares treasury stock were sold at 50 cts. Assessment of 1 ct. per share levied March, 1913. Had \$300,000 in treasury Aug. 15, 1913.

Property lies in Deadman gulch between Mullan and Larsen, on the north side of the Coeur d'Alene valley. It is about $1\frac{1}{2}$ miles west of and in the same belt as the Snowstorm copper property, which it closely resembles in character. Ore occurs in a fault vein in thickly-bedded white Revette quartzite with talcose slips bordering the ore. The vein runs nearly east and west and dips steeply to south. The surface gives no indications of the great orebody 1,700' beneath it and in fact the ore-bearing quartzite does not show in the upper workings.

During the "boom" days of 1906-07, the company sank a 400' shaft and drove an adit tunnel developing a fissure vein and a strong fault, but found no ore in commercial quantity and no especially favorable indications of a large orebody. Since that period the management has been driving a crosscut tunnel as rapidly as funds permitted, getting little encouragement, endeavoring for a year past to open a lead-silver fissure until Dec., 1912, when a large body of silver-bearing copper ore was cut at a distance of 4,380' from the portal, about 1,000' lower than the old tunnel and shaft. The crosscut tunnel is driven about 4,000' through very hard and tight Wallace slates and St. Regis quartzites to a fault separating the St. Regis from the more favorable Revette quartzite. This fault showed scattering lead and copper mineralization, but no commercial ore. Beyond this fault the beds of white Revette quartzite run northwest and southeast, dipping steeply, 80° , to the southeast. About 200' from the big fault zone just noted, there is a nearly vertical quartz vein, filling a fault in Revette quartzite, the beds north of this vein running slightly north of west and dipping at but 45° south. This vein carries copper ore and a drift east disclosed the great orebody which has given the mine its present prominence. The extent of the ore shoot is not yet known, but it is 50 to 100' wide, over 500' long and proven downward for several hundred feet by drilling. A sample cut across the orebody where it was 85' wide showed an average value of $2\frac{1}{2}\%$ copper, 5 oz. silver and 80 cts. in gold.

Development consists of a 1,200' upper tunnel, 4,800' lower crosscut tunnel with about 1,000' of drifting on the vein and a 400' shaft with 400' drifting.

An examination and report made by Fred T. Greene in June, 1913, is said to give the total value of developed, probable, and possible ore, as \$8,417,890. His estimates of tonnage, as given in the press, are as follows: Above tunnel level 247,890 tons partly developed and 207,520 tons possible ore; below tunnel level, 883,990 tons partly developed, 875,400 probable ore and 1,830,260 possible ore.

This great orebody is now being prepared for stoping and \$300,000 will be spent in constructing a 500-ton concentrator, flotation plant, 2-mile trolley line and other works nearly completed Nov. 1, 1913. The concentrator is designed by the General Engineering Co. of Salt Lake City and the construction work is under the direction of Karl Bernson. Production is expected to begin early in 1914.

NATIONAL COPPER MNG. & DEVEL. CO. PENNSYLVANIA

Main office: Belvidere, Warren Co., N. J. Mine in Adams Co., Pa. Chas. O. Lane, pres.; Henry D. Deshler, sec.-treas. and gen. mgr.; Edw. March, Harry Bossard and John Paul, directors. Organized Dec. 16, 1905, under laws of New Jersey, capitalization \$500,000, shares \$1 par, fully paid and non-assessable; issued, 118,985. Annual meeting, third Monday in March.

Property, 2 claims, 155 acres, in Adams county, Pennsylvania. Ore occurs in veins in a schist formed from porphyry and marked by epidote; strike northeast and southwest with average dip of 85°. One vein under development said to average 16' wide carrying 5% copper, 1.40 oz. silver and \$6.80 gold per ton. Development to date by open cut and shallow shafts.

NATIONAL COPPER TEMPERING CO.

COLORADO

Office: Cincinnati, Ohio. Has a so-called copper tempering process. Stock believed to be without value. See Vol. X.

NATIONAL GOLD & SILVER MINING CO.

NEW MEXICO

Idle. Mine near Steins, Grant Co., N. M. M. H. Sherman, pres.; B. L. Berkey, supt., at last accounts. Has steam power and a 50-ton concentrator.

NATIONAL METALLURGICAL CO.

MEXICO

Office: 165 Broadway, New York. Mine and smelter at Matehuala, San Luis Potosi, Mex. Geo. C. Kaufman, mgr. mining department of American Smelters Securities Co.; Samuel James, mgr. Matehuala plant. Is controlled, since 1910, by American Smelters Securities Co., itself owned by the American Smelting & Refining Co.

Organized Aug., 1901, under laws of Colorado, capitalization \$1,000,000, shares \$25 par. Debentures, \$500,000 authorized, at 6%; issued \$472,000. Annual meeting, last Tuesday in July. Holds title to property through the Compania Metalurgica Nacional, organized in Mexico.

The Dolores mine is situated a few miles from Matehuala, in the state of San Luis Potosi, Mex., in an isolated diminutive mountain range known as the Sierra del Fraile. The range runs north and south, is less than 3 miles long and 1 mile wide and consists of Mesozoic blue limestone, which has been intruded by quartz-monzonite and the metamorphism and ore deposition in the range is connected with these intrusions. In the Dolores property the intrusive rock occupies a belt about 1,000 m. long, and 300 to 400 m. wide. Surrounding it, and lying between it and the limestone, is a practically continuous band of lime-silicate rock, plainly of metamorphic origin. Nowhere does this rock pass into the limestone far from the intrusion.

The ore deposits consist mainly of cupriferous pyrite, are intimately associated with the lime-silicate rock and occur largely at the very contact, frequently with limestone as one wall. This cupriferous pyrite has usually a gangue made up largely of pyroxene and garnet. There are 2 intrusions, the Dolores on the south and the Cobriva on the north, the latter being irregular.

The company owns the ground about both of these intrusive masses and works the gold-copper ore in the Tiro General, Dolores, Trinidad, Azul, La Luz and El Angel mines. The copper ores as shipped average 5% copper, 50 to 80 grams silver and about \$2 gold per ton. The geology of the district is well described by Spurr, Garry and Fenner in *Journal of Geology*, Vol. VII, p. 444, 1912.

The principal mines are connected with the smelter by the 7-mile Matehuala narrow-gauge railway.

The smelter, connected by a spur with the Mexican Central railway, receiving ore by rail and burros, has 150-ton and 200-ton water-jacket blast furnaces for lead and copper, with a calcining furnace and a 30-ton reverberatory furnace used for flue dust. There also is a small sampling mill. Product formerly was matte, averaging 45% copper, 50 to 200 oz. silver and 1 oz. gold per ton, shipped to the Aguascalientes smelter for conversion.

The smelter power plant formerly included three 125-h. p. boilers and

a 275-h. p. Corliss tandem-compound engine direct-connected to a 150-h. p. generator, with a number of smaller generators and motors.

Is a splendid property, well managed, with an adaptation of Mexican methods and labor to modern conditions. Mine development has utilized geological work to great advantage.

NATIONAL MINES & SMELTERS CO.

MEXICO

Office: Magee Bldg., Pittsburgh, Pa. Mine office: Magistral, Durango, Mex. S. H. McKee, pres.; Wm. L. Curry, vice-pres.; John S. Eberman, sec.-treas.; Renald Ailes, financial agt.; E. A. Kennedy, supt. Organized 1911, capital \$2,500,000; issued, 1,700,000 shares. Authorized, \$400,000 collateral income bond issue; issued, \$375,000. Company owns all the stock of the Santa Maria del Oro Mines Co., which company purchased property of the Lustre Mining & Smelting Co. from old stockholders, paying for same in stock and bonds of the National Mines & Smelters Co.

Property, 32 claims, 441 hectares, 1,089 acres of mineral lands, 397 hectares of mill and smelter sites, besides miscellaneous lands and leasehold timber lands.

The Magistral mine is developed by 3 tunnels and 9 shafts and has a large body of slightly cupriferous pyrite with quartz and limestone gangue, carrying 0.5 to 5% copper, probably averaging under 1% copper, 1 oz. silver and 15 to 20 grams gold per metric ton.

The Cocinera mine has been developed by the new company since July 1, 1911, opening up an ore shoot 1,000' long, 15' wide and said to average \$10 in gold and copper with a little silver. Company is now sinking from the 7th to 8th level, the depth being 647'. Ore reserves in this and the Azurite mines are estimated by the management at 190,000 tons, developed in new ground since 1911. The old company claimed reserves of 185,000 tons in other and entirely distinct orebodies, in 1910.

The new company has thus far confined itself entirely to the development of the known and most accessible orebodies, as the Mexican revolution has interfered with work and prevented resumption of operations on a large scale.

The equipment is very complete in all departments, including a central power plant having two 360-h. p. Koerting and two 350-h. p. Crossley gas engines, one 200-h. p. and three 400-h. p. gas producers, a 2,300-volt 3-phase generator, two 6-drill Ingersoll-Rand air compressors and 10 hoists of 100 to 300-h. p.

The 40-stamp mill, 750-lb. heads, has Huntington mills, 1 Ball mill and 10 Frue vanners.

The present concentrator has 2 Huntington mills, a chlorination plant and a cyanide plant.

The smelter has 6 blast furnaces, including two 150-ton hot-blast furnaces and three 200-ton 42x126" furnaces, air for blast being heated by waste gases in a specially-designed MacDonald hot-blast heater.

The stamp mill and concentration plant have been idle for some time and the lack of development in the mine resulted in a shortage of fluxing ore and as the smelter could not operate successfully on the highly silicious material mined it had to close down. The old company apparently spent a million dollars or so for installation before the mines were sufficiently developed to provide the ores necessary to keep the various plants running and in 1907-08 became financially embarrassed. The mines are not yet on a profitable basis, but with the installation of a new concentration plant, planned for 1914, as the result of tests made by Henry E. Wood & Co., of Denver, it is expected that the property will yield a satisfactory return on the investment.

NATIONAL MINING CO.**MICHIGAN**

Idle many years. Office: 6 Beacon St., Boston, Mass. Mine office: Rockland, Ontonagon Co., Mich. B. T. Morrison, pres.; Harry Highley, sec.-treas.; Chas. M. Baker, Harry M. Howard and W. S. Warn, directors. Organized 1848, under laws of Michigan, rechartered 1878, capitalization increased later to \$2,500,000, shares \$25 par; issued, \$1,875,000, and rechartered 1908. Paid dividends, 1861-72, of \$320,000, and levied a 40-ct. assessment 1909. The company has no debts.

Lands, 1,852 acres, having the Michigan on the north and east and the Victoria on the south and west. The company explored various other tracts for several years before beginning work, 1852, on the present mine, which carries the western continuation of the contact vein of the old Minnesota mine, now owned by the Michigan Copper Mining Co. The property showed, when work was begun, remains of ancient mining operations, including a shaft of 50' depth, timbered and scaffolded, with a nearly continuous sheet of copper extending down 1 side of the shaft. The company had considerable litigation with the old Minnesota company over title to 115 acres of land, the National finally winning. The mine was let on tribute, 1873-80 and excellent profits were secured by the tributors, but the mine was badly used up. The company resumed work, on its own account, 1880, but was unable to bring the mine to the point of profitable production and stopped work 1893. The mine is connected with the old Minnesota mine of the Michigan, between the 50 and 70 fathom levels, but the connection has been dammed. The machinery plant, entirely obsolete, was sold for scrap iron, 1908.

NATIONAL NATIVIDAD COPPER CO.**MEXICO**

Office: 251 Main St., Dallas, Tex. Mine office: Oaxaca, Mex. Isaac B. Walker, pres.; D. Head, vice-pres.; A. M. Walker, sec.; F. Wiebens, mgr.; H. J. Hazzard, supt. Owns 7 properties, including the Natividad, Dallas, Banco, San Diego, San Diego Annex, San Diego No. 2 and Durant mines, carrying auriferous and argentiferous copper and lead ores. Principal development is on the San Diego group, in which the ores are said to average \$19 per ton, though very high-grade ore occurs. The Natividad mine has a 120' two-compartment shaft, showing a 4' vein carrying mainly copper values, with a hanging-wall paystreak carrying ore claimed by the company to average \$50 to \$100 in combined values. The Santiago mine is reported to have 4 parallel veins carrying outcrops claimed to assay \$290 to \$1,800 gold per ton, planned to be opened by a 400' tunnel. El Banco mine has a 40' shaft said to show gold and silver values. The Dallas mine has several prospect pits, and the Durant mine is apparently undeveloped. Equipment includes steam power. The revolution in Mexico caused the company to close the mines down until their peaceful operation can be assured.

NATIONAL SMELTING CO.**MEXICO**

Idle. Office: 2030 Land Title Bldg., Philadelphia, Pa. Mine office: Chalchihuites, Zacatecas, Mex. L. H. Taylor, Jr., pres.; Richard G. Park, vice-pres.; Paul W. Meyers, sec.; John J. Little, treas., and Wm. C. Haddock, directors. Organized March 27, 1906, under laws of Maine, capitalization \$1,000,000, shares \$5 par; issued, \$389,375, in 1908. A former \$150,000 issue of 6% bonds was converted into stock, at par. Dividends were \$14,000, in 1907, none since. Company holds property through the Compañía Benificiadora de Chalchihuites, S. A., organized under laws of Mexico. Annual meeting, first Monday in June.

Company owns 178 hectares, besides 38 acres of mill and smelter sites, and sundry water rights. Mineral lands, in 8 groups, showing limestone, with several intrusions of eruptive rocks, carry fissure veins in the erup-

tives, and contact deposits in limestone, with values mainly in copper and silver-lead ores. Lands include La Colorada silver-lead mine, La Anaconda mine of iron fluxing ore, La Espléndida silver-gold mine, El Manto and El Tigre silver-gold mines, La Estufa and La Constancia silver-lead mines, La Santa Rita de Los Bobos mine, and a stock control of the Núngano mine, which has argentiferous lead and copper ores.

The Anaconda mine shows a 36' vein carrying ore averaging 2.5 to 3% copper. The Núngano has an orebody of 6 to 15' width, developed for 120' in length and 160' in depth, giving 2.5 to 3% copper ore, opened by shafts of 30', 60' and 160', and by tunnels of 250' and 300'. The other mines carry silver-lead ores, ranging from 20 to 45% lead, 10 to 50 oz. silver and \$2 to \$5 gold per ton.

Equipment small but sufficient for working the property on present scale. The concentrator of 60 tons daily capacity has a 14x17" Dodge crusher, 2 pairs of rolls, 3 New Century jigs, 2 Standard tables and settling tanks. The smelter, now idle, has 2 small blast furnaces and a reverberatory with accessory roasters and necessary machinery.

The company became involved in litigation, 1906, which was settled, 1908, leaving the property in the company's possession and free from debt. The corporation has, however, been without working capital for some years and the revolutionary conditions in Mexico have made a refinancing of the company impracticable. The Durango Canitas railroad is now built to the district, materially improving the economic conditions and lowering the working costs.

NATIVE COPPER CO.

MICHIGAN

Idle since 1855. Office: 60 Congress St., Boston, Mass. Mine at Delaware Mine, Keweenaw Co., Mich. John C. Watson, pres.; Arthur C. Paine, sec.-treas.; Ashley Watson, M. Augustus O'Neil and Frank L. Van Orden, directors. Organized 1849, and reorganized March 29, 1880, under laws of Michigan, capitalization \$1,000,000, shares \$25 par; fully issued. Annual meeting, first Wednesday in March.

Lands, 480 acres, being the S. $\frac{1}{2}$ of Sec. 3 and N. W. $\frac{1}{4}$ of Sec. 10, T. 58 N., R. 30 W., all on the Keweenawan trap belt. A little work was done, 1852-55, on a fissure vein crossing the ashbed, the company levying assessments of about \$39,000.

NATIVE COPPER MINING CO.

CALIFORNIA

Incorporated in 1911 to develop the Copper King, Native Copper and other claims on Table mountain, Monterey county, Cal. W. H. Kerr, Coal-
ing, Cal., president.

NATIVE COPPER MINING CO.

NEVADA

Idle. Letters to Reno, Nev., and Yerington, Lyon Co., Nev., unanswered. Benj. Curler, pres.; H. Pennington, vice-pres. and mgr.; W. T. Wilson, sec.-treas., at last accounts. Organized under laws of Nevada, capitalization \$500,000, shares \$1 par. Lands, 4 claims, unpatented, near the Bluestone mine, about 3 miles west of Yerington, said to have an 8' vein carrying copper ore and free gold, assaying up to 20% copper and \$871.76 gold per ton, opened by 3 short tunnels, longest 185'. Shipped 20 tons of ore to Thompson smelter in 1912.

NAUMKEAG COPPER CO.

MICHIGAN

Office: 42 Broadway, New York. Mine office: Houghton, Mich. J. Parke Channing, pres.; Sam A. Lewisohn, vice-pres.; J. H. Susmann, sec.-treas.; preceding officers, Adolph Lewisohn, I. J. Sturgis, F. L. Van Orden, Theo. L. Hermann and Chas. J. Paine, Jr., directors. Sidney S. Lang, supt. Organized March 21, 1912, under laws of Michigan, capitalization \$5,000,000, shares, \$25 par, \$10 paid in; issued, 102,000 shares. Company ended 1912

with a cash balance of \$232,152. U. S. Mortgage & Trust Co., registrar. Annual meeting, third Wednesday in March.

Lands, 1,200 acres, in Secs. 34 and 35, T. 55 N., R. 34 W., and Sec. 3, T. 54 N., R. 34 W., just west of the village of Houghton, on the south shore of Portage lake. The property carries practically all of the Ashbed amygdaloidal beds, including the Atlantic and the Quincy-Pewabic lodes.

Property was slightly explored under former owners, but efforts were sporadic and altogether unimportant. Operations by present owners were begun July 10, 1912, in the horizon of the Hancock lodes. Drill borings yielded good showings of copper at depth of 513' in what is presumed to be an extension of Hancock No. 3 lode, and again at a depth of 1,301' where a 6" streak of coarse copper was encountered. Hole "B" went to a depth of 1,378', passing through the Atlantic lode at 250' and through the Pewabic lode at 1,295'. The first showed practically no copper and the latter only about 6" of copper, finely distributed. This hole, however, did cut 3' of heavy copper ground at a depth of 535' in an unidentified lode. Hole "C" showed slight traces of copper at depth of 261' in the Atlantic lode, trace of copper at 650', a little fine copper at 720' and about 3" of copper at a depth of 970'. Hole "D" revealed traces of copper at various depths between 198' and 1,044'. Hole "E" made showings similar to those noted in "D." Hole "F" encountered 21' of copper at a depth of 483 to 504', and lesser amounts at 904' and 1,134'. Hole "H" yielded good copper showings at 330', 401' and 665'. Other work is centered in the sinking of an exploratory shaft in the approximate horizon of the Pewabic lode, and the extension of an exploratory crosscut from the end of an old adit opened many years ago on this lode, in the South Side tract. This adit, 200' in length, reveals traces of copper for about 100'.

The property is decidedly promising and the management is excellent in every respect.

NE PLUS ULTRA MINES.

CALIFORNIA

Formerly owned by California-Nevada Copper Co., now bankrupt.

NEBRASKA & ARIZONA COPPER CO.

ARIZONA

Address: Paradise, Cochise Co., Ariz. W. K. Morrow, superintendent at last report. Was organized Jan., 1910, and was merged June 25, 1910, with the California & Paradise Mining Co., in the California & Paradise Consolidated Mining Co. Lands, 13 claims, known as the Morrow & Chamberlain group, developed by a shaft on the Malachite claim.

Company resumed operations in June, 1912, after several years of idleness, sinking the old 200' Malachite shaft with 2 shifts and crosscutting in November on the 600' level.

NEEDLES MG. & SM. CO.

ARIZONA AND CALIFORNIA

Office: 400-55 Congress St., Boston, Mass. Mine office: Chloride, Mohave Co., Ariz. Works office: Needles, San Bernardino Co., Cal. Wm. G. Sharp, pres.; C. G. Rice, vice-pres.; F. W. Batchelder, sec.-treas.; preceding officers, B. Preston Clark, Albert F. Holden, S. W. Winslow and Jas. J. Storrow, directors; D. R. Muir, mgr. Organized under laws of Maine, capitalization \$5,000,000, as successor of Arizona-Mexican Mining & Smelting Co., and is owned through entire stock issue by United States Smelting, Refining & Mining Co.

Property consists of various mines and claims in California and Arizona, a limestone quarry in San Bernardino county, California, and a smelter on the bank of the Colorado river, 1 mile northwest of Needles. The predecessor of the company also held mining lands at Siam, Cal., and 16 idle claims near Florence, Pinal Co., Ariz. The mining properties, in the

Chloride, Stockton Hill and Cerbat districts of Mohave county, Arizona, carry values mainly in silver, lead and zinc.

The Tennessee mine, at Chloride, has a vein up to 10' in width, carrying argentiferous lead, zinc and iron sulphides, opened by an 800' shaft. The mine produces 200 tons per day. The Stockton Hill or Banner mine, 12 miles north of Kingman, has argentiferous and slightly auriferous lead ore, of good average tenor, opened by a tunnel of 1,300'.

This company also operates the Gold Roads mine, between Kingman and Needles, producing 200 tons of \$15 gold ore daily.

The Needles smelter of 300 tons capacity is not now operating. Equipment includes 2 McDougal roasters, a 46x120" lead stack, and a small copper stack, with a 100' steel smokestack, 65-h. p. engine and No. 6 Connersville blower. There is a 35x37' sampling mill, and a 250-ton concentrator handling lead and zinc ore on the same method as is used in the Midvale plant of the United States Smelting Co.

NELLIE MINE.

IDAHO

Owned by Jack Alger and Capt. A. P. Horton of Osburn and O. R. Young of Wallace, Shoshone Co., Idaho. Property, 1½ miles from Osborn, on O. W. R. & N. R. R., has a fissure vein with gray copper ore (tetrahedrite) in quartz, the ore being said to carry 100 to 240 oz. silver per ton. Shipped 25 tons in Oct., 1912. Has water-power plant for pumping and hoisting work.

NELSON MINING CO.

ARIZONA

Office: 609 Land Title Bldg., Philadelphia, Pa. Mine near Crown King, Yavapai Co., Ariz. Geo. P. Harrington, superintendent. Property is half way between town of Crown King and mine of that name. Has fissure vein carrying gold-copper ore, developed by 900' tunnel and 300' incline shaft on vein.

Equipment includes 25-h. p. gasoline hoist, air compressor, and company is reported to employ an average force of 15 men.

NEST EGG GOLD & COPPER MINING CO.

NEVADA

Office: 402 Majestic Bldg., Denver, Colo. Mine near Kimberly, White Pine Co., Nev. David J. Reed, pres.; E. B. Henderson, vice-pres.; Albert L. Hiller, sec.-treas., at last accounts. Organized Feb. 9, 1907, under laws of Arizona, capitalization \$1,500,000, shares \$1 par.

Property consists of the Portland group of claims near Kimberly, adjoining the Giroux holdings in the Ely district, Nevada. The ground is 4 miles from the railway line and is practically undeveloped, but may be regarded as a promising prospect. The company is also reported to own 2 claims in the Bullfrog district and claims near Searchlight.

No record of recent operations can be secured and it looks as if the company had been organized to work the public and not the mine.

NESTOR MINING CO.

ALASKA

John Wick, manager, Hadley, Alaska. Owns the Nestor, Pelaska and other claims, about 1¼ miles from the Mamie and Stevenstown mines near Hadley, Ketchikan district, in southeastern Alaska. Property shows a copper-bearing contact between a diabase dike and limestone, whose garnet-epidote rock carries chalcopyrite. Property has 2 tunnels at 110' and 180' above tidewater, with an aggregate of 600' of work on Nestor claim.

NEVADA ARIZONA MINES CO.

ARIZONA

Near Hackberry, Mohave Co., Ariz. Is a silver-lead mine in the Music mountains, whose orebodies are said to show a little copper. Development includes the 200' Lucknow shaft and 700' Roosevelt tunnel, latter in milling ore for 200'. Company has erected a small concentrator expected to start work in Oct., 1913.

NEVADA BONANZA COPPER CO.**NEVADA**

Main office: 159 S. Main St., Salt Lake City, Utah. Mine at Morningstar City, Lyon Co., Nev. Freeman Morningstar, pres. and gen. mgr.; Sereno B. Tuttle, vice-pres.; Robt. J. Deighton, sec.; Walter C. Tuttle, asst. sec.-treas.; preceding officers, H. P. Clark, W. D. Mathis, Thos. J. N. Nippur, M. S. Woolley and P. L. Williams, directors. Organized 1906, capitalization \$2,100,000, shares \$1 par; issued, 1,448,000 shares in April, 1913.

Property, 12 claims, 7 patented, 250 acres, adjoining the Nevada Douglas ground, about a third of a mile from Ludwig station on Nevada Copper Belt railroad, in the Yerington district. J. C. Dick, E. M. of Salt Lake City, reports 3 fissure veins crossing property; 1 on the Green Dutchman about 5' wide and assaying \$38 in gold and 5% copper. The vein on the Copper King claim has been developed by a 3-compartment, 115' shaft, said to show copper ore its entire depth.

Property is still in the prospect stage, but management plans further development for 1913-14.

NEVADA BRITISH MINING CO., LTD.**NEVADA**

Idle. Mine address: Cherry Creek, White Pine Co., Nev. Alfred Fletcher, pres. and treas.; A. F. Dotterer, vice-pres.; Wm. F. Fletcher, sec.; J. W. Walker, gen. mgr. Organized 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable. Shares are listed on the Salt Lake Stock Exchange. Lands, 6 claims, 3 patented, near Cherry on the Ely railroad, known as the Chief of the Hills group, west of the Adelaide Star Mine, Ltd., carrying lead and copper ores. Mine has shafts and tunnels aggregating 500'. In 1911 an upraise from 800 to 600' level, 1,000' from the shaft, cut a 7' vein of commercial ore. Company had lease with the Adelaide Star Mine Ltd., expiring June 18, 1913. Mine reported to contain \$200,000 worth of ore blocked out for stoping. As the Adelaide Star mine is leased to the Glasgow Western Exploration Co., the Nevada British lease is probably now held by that company.

Equipment includes a 40-h. p. gasoline hoist, 50-h. p. boiler and a small air compressor.

NEVADA-BULLION MINES CO.**NEVADA**

Address: Moe & Dougherty, San Francisco, Cal. Mine near Bullion, Elko Co., Nev. Company often called the Bullion-Nevada Mines Co., owns a group of claims adjoining the Nevada-Bunker Hill Mining Co. holdings and a half interest in the Kerr & Peterson lease on that company's ground.

Development consists of a tunnel now 1,970' long and being extended 200' further to cut the vein opened in old mine workings. Company has been shipping ore during Oct., 1913.

NEVADA BUNKER HILL MINING CO.**NEVADA**

Office: Elko, Nev. Mine at Bullion, Elko Co., Nev. J. A. McBride, pres.; Frederick Davis, vice-pres. and gen. mgr.; R. H. Mallett, sec.; John Henderson, treas.; preceding officers, John Zelch, L. H. Johnson and W. W. Booker, directors; Fred Diggs, supt. Organized April 28, 1905, under laws of Nevada, capitalization \$2,000,000, shares \$1 par; fully paid and nonassessable; 900,000 shares reserved in treasury for development, of which 16,180 have been issued. Annual meeting, first Wednesday in May.

Property consists of 21 lode claims, 9 patented, in Railroad mining district, 1 mile from Bullion P. O. and 14 miles from railway. Eight of the patented claims are held under bond and lease for \$109,000 until July 1, 1915, with 20% royalty. The country rock is limestone cut by porphyry dikes and with granite on either side. Ore occurs in the porphyry dikes and also in limestone and along contacts. There are 7 known orebodies, 2 being worked by leasers. Veins run north and south, are nearly vertical

and vary from 3 to 30' in thickness, are proven from 50 to 500' in length and to a depth of 600'. Ores are said to average 3% copper, 15% lead. 30 oz. silver per ton and a little zinc. Mine is an old one, having been discovered in 1869 and worked until 1893.

Development is by a 700' shaft and a 2,028' tunnel driven to open the old workings of the Blue Bird mine with other tunnels of 350', 250', 1,200', 2,000' and 1,000'. There is also a 200' and a 300' shaft on the property. Total development is reported as 13,800'.

Production for 1912 was 300 tons of 3% copper ore. The Nevada Bullion Mine Co. and the Sweepstakes property adjoin the mine. Manager states main working tunnel will be carried on to the 3,000' point which will be 500' below the 300' Tripoli shaft, an incline sunk on ore. In September last, the long tunnel cut and followed an iron seam that opened after 50' into a 1 to 4' streak of 35% lead ore with copper values. Leasers are mining ore at several points on this property.

NEVADA-BUTTE MINING CO.

NEVADA

Martin Benson, president. Organized 1913, capitalization \$1,000,000 shares 25 cts. par. Property, 15 claims in Dolly Varden and Mizpah districts, Elko Co., Nev. Claims are 75 miles from Ely and said to be on the northern end of a great belt of mineralized porphyry and to carry fissure and contact deposits. Development, by several shallow shafts, shows mineralization, but property still in prospect stage. Drilling on neighboring areas has shown commercially mineralized porphyry.

NEVADA-CALUMET COPPER CO.

NEVADA

Address: W. H. Bray, mgr., Battle Mountain, Elko Co., Nev. F. D. Nowell, pres.; J. A. Beck, vice-pres. and sec. Organized 1913. Property, the Boyd-Martin group, 30 claims, in heart of the monzonite-porphyry belt of Battle mountain, shows copper-stained patches thought to represent the outcrop of a big disseminated glance deposit. Company plans drilling property in winter of 1913-14.

NEVADA-CALUMET COPPER CO.

NEVADA

Office: 157 State St., Bridgeport, Conn. Mine office: Wabuska, Lyon Co., Nev. Thos. Malcolm, pres.; John L. Washing, vice-pres.; Arnold Schaer, John D. Kazar, William E. Blanchard, Chas. E. Hayes, Everett C. Elwood, Geo. E. Crawford, Thomas Malcolm, John L. Washing, J. Frank Cox, Francis E. Higgins and J. O. Brigham, directors; Philip J. Stacey, supt. Organized May 4, 1907, under laws of Arizona, capitalization \$2,000,000, shares \$5 par.

Lands, 17 claims, patented, 340 acres, 6 miles northeast of Buckskin and about 10 miles northwest of Yerrington. Property shows diorite, porphyry and silicious limestone, and has 3 contact deposits, estimated at 12', 30' and 40' average width, traceable 500 to 1,200', showing cuprite, malachite, azurite, chalcocite and chalcopyrite, giving assays of from a trace to 18% copper, and low average gold values. Development is by 2 main shafts, 1,200' apart, to be connected on the 500' level. About 225' of laterals, on the 500' level, show small bunches and stringers of ore, in a leached zone, with fair indications of workable values at greater depth. Equipment includes two 25-h. p. Witte gasoline hoists, and there is a 20-room boarding house, with 4 other buildings.

NEVADA CENTRAL COPPER CO.

NEVADA

Office: Room 1012, 122 So. Michigan Blvd., Chicago. Mine office: Cedar, via Palisade, Eureka Co., Nev. Robert L. Benson, pres. and treas.; Geo. Leighton, vice-pres.; A. F. Bordwell, sec.; preceding officers, Jos. D. Wright, E. L. Wilson, S. E. Oberlin, Wm. R. Andrews and Charles Lay, directors; Harold A. Linke, M. E., mine mgr. Organized Dec. 20, 1904,

under laws of District of Columbia, capitalization \$1,000,000, shares \$10 par, in \$250,000 non-cumulative 7% preferred stock and \$750,000 common stock. Issued, \$750,000 common. Annual meeting, second Tuesday in January at Washington, D. C.

Lands, 32 claims, about 700 acres, near Cedar, in the Antelope district. Litigation over titles was settled in the federal court of appeals, San Francisco, the Nevada Central securing clear title to the former property of the Whalen Consolidated Copper Co. Development is by a 500' incline shaft, with 1,000' drifts on Prince of Wales mine, cutting an 8' vein on the 100' level, showing copper of good average assay tenor. Two carloads of ore gave returns of 11% copper. There is also a 470' (June, 1913) vertical double-compartment shaft being sunk on the Henry mine. Equipment includes one 60 and one 12-h.p. gasoline hoist, air compressor and electric drill. Engine house was burned in July and work shut down, but operations were resumed Oct., 1913.

NEVADA CHAMPION COPPER CO.

NEVADA

Idle. Letters unclaimed at Goldfield, Nev., and Mina, Mineral Co., Nev. Wilson H. Scott, pres.; W. F. Miller, vice-pres.; C. M. Miller, sec-treas., at last accounts. Organized 1907, under laws of Arizona, capitalization \$7,500,000, shares \$5 par.

NEVADA CONSOLIDATED COPPER CO.

NEVADA

Office: 165 Broadway, New York. Operating office: McGill, White Pine Co., Nev. Mine near Ruth, White Pine Co., Nev. Silas W. Eccles, pres.; Col. Daniel C. Jackling, vice-pres.; W. E. Bennett, sec.; preceding officers, S. R. Guggenheim, Judd Stewart, Murry Guggenheim, J. N. Steele, Col. Chas. Hayden, Wm. B. Thompson, Chas. M. MacNeill and W. Hinckle Smith, directors; C. K. Lipman, treas.; C. B. Lakenan, gen. mgr.; E. E. Vanderhoef, mine supt.; G. F. Waddell, mill supt.; S. S. Sörensen, smelter supt.; Pope Yeatman, cons. engr.

Organized Nov. 17, 1904, under laws of Maine, as a merger of the Boston & Nevada Copper Co. and White Pine Copper Co., capitalization \$5,000,000, shares \$5 par; increased Feb. 5, 1908, to \$8,000,000, shares \$5 par, and again increased Nov., 1909, to \$10,000,000, shares \$5 par, non-assessable. A former issue of \$3,000,000 first-mortgage 6% convertible gold bonds, due April, 1918, has been retired.

Statement of Dec. 31, 1912, gave cash on hand \$739,951, and metals on hand and in transit \$2,886,660, with accounts receivable \$437,562 and accounts payable of \$577,998. Dividend rate is 37½ cts. per share quarterly, begun Oct., 1909, and dividends, 1910 and 1911, were \$1.50 per share, \$2 in 1912 and \$1.50 in 1913. Old Colony Trust Co., Boston & Guaranty Trust Co., New York, registrars; Boston Safe Deposit & Trust Co., Boston, and C. E. Beach, New York, transfer agents. Shares listed on the New York and Boston stock exchanges. Annual meeting, third Friday in April.

Earnings for 9 months in 1913 were but half those of 1912 and if allowance is made for depreciation, the balance of \$95,159 is a debit one after dividends are paid. Undivided profits are \$2,953,325, but quick assets are actually \$3,582,852, or nearly \$2 a share.

Company absorbed the Cumberland-Ely Copper Co., paying \$7,554,084 cash therefor, and took possession Aug. 30, 1910. Shareholders of the Cumberland-Ely were given the opportunity of exchanging stock on the basis of 3¼ shares for 1 share Nevada Consolidated. The Nevada Consolidated is controlled through stock ownership, amounting to 1,000,500 shares by the Utah Copper Co. The Nevada Consolidated Copper Co. controls through stock ownership the Nevada Northern Railway Co., having a line 168 miles long, running from the mines to the smelter and concentrator and from,

Ely to Cobre station on the Southern Pacific railway, and controls, through stock ownership, the Steptoe Valley Smelting & Mining Co. The company had 7,300 shareholders Feb., 1913.

Lands, 111 claims, patented, 1,379 acres, including the former holdings of the Cumberland-Ely, 48 claims, of 523 acres area. Property includes the Copper Flat or Eureka group of 355 acres; the Ruth group of 455 acres; the Lane group of 46 acres; the Veteran group of 14 claims; the Jupiter group of 22 claims, and a group of 12 claims near the Giroux Consolidated. Mineral lands include properties formerly held by the White Pine Copper Co., Cumberland-Ely Copper Co., and sundry other corporations and individuals.

The geologic features of the property are somewhat similar to those of Morenci, Ariz., and Bingham, Utah. An area of Paleozoic limestone is intruded by a great mass of monzonite porphyry tilting the sedimentary rocks and forcing its way into them in dikes and sills, heaving them up in great irregular lacoliths. At the surface the monzonite porphyry, which is the principal ore-bearing rock, is sparingly stained with small quantities of copper carbonates, not exceeding 0.5% in copper tenor and 25 cts. in gold, hence is worthless. Below the thoroughly oxidized zone, varying from 20 to 162' in thickness, the rock is no longer leached, but carries specks of copper glance in white altered porphyry. This disseminated chalcocite also occurs in tiny seams in partially brecciated material and as patches disseminated through the rock mass.

The zone of payable ore extends 200 to 300' below surface and below that depth the chalcocite impregnations become too lean for commercial use, the bottom limits of payable ore depending somewhat upon commercial factors, mainly the market price of the metal, as there is a gradual shading out of ore values with depth. The altered limestone also carries occasional impregnations of chalcocite, of commercial tenor. One portion of the property shows an extreme width of about 2,000' of ore.

A considerable part of the property is covered by a rhyolite capping, part of a lava flow that poured out over the district long after the monzonite intrusion and subsequent faulting and erosion. Two orebodies are mined by steam shovels, at Liberty and Copper Flat pits. The capping between these two orebodies has been removed and in time they will be mined as one.

The Copper Flat orebody covers an area of 3,600' long, 1,200' wide and averages 220' thick; the ore averages 1.67% copper, 3.5% iron, 0.5% lime and 80% silica. The actual yield from 1.53% ore was 19.47 lbs. copper in Aug., 1913.

Mining is mainly by steam shovels, working in open pits, and principally from the Copper Flat and Liberty mines, which have mammoth pits. The company has 6 dumping sites for material stripped from the Copper Flat and other pits, these sites having room for the deposition of about 11,000,000 cu. yds. of capping, giving sufficient room for all capping.

The Copper Flat mine, formerly called the Eureka mine, was proven by underground workings and by drilling before mining by steam shovels began, but extraction is practically all opencast. The mammoth pit of the Copper Flat mine is about 2,500' long, 1,500' wide and 350' deep, with ore removed in 7 benches of about 50' each. The ore is soft and friable, but requires blasting, holes being put down by churn drills to average depth of about 50', drilled at intervals of about 20' and fired in series, each blast breaking tremendous quantities of ground. The Copper Flat pit was working 8 Bucyrus steam shovels, Feb., 1913, partly on overburden and partly on ore, these having dippers of 3½ cu. yds. capacity, loading 14,200 tons of ore in a

single day. The Copper Flat mine lies on a low rounded hill, with summit only about 150' above the flat through which the railroad enters the mine, and the rail line reaches the bottom of the pit by 4 spirals along the benches, having a length of about 5 miles. The railway track in the pit has a grade of 3 to 4%, and as depth is gained transportation becomes more difficult. The Copper Flat has four 60-ton and eight 45-ton locomotives, one 30-ton crane with 50-ton and 60-ton ore cars.

Carbonate ores from cappings of the Copper Flat pit are produced far in excess of the requirements of the Steptoe smelter, though a considerable tonnage is used for converter flux and a small amount is employed in the reverberatory furnaces, but the greater part of the carbonate ore is stored in a ravine northeast of the works, where a railroad fill of considerable size has been built entirely of ore to be leached at some future time. Water from the Copper Flat pit has been raised by a small electric pump.

The Liberty mine or pit near the Copper Flat is now stripped and open-cast mining began, 1913. Churn-drill borings indicated about 9,000,000 tons of ore in the Liberty that may be extracted opencast. One steam shovel is removing overburden at the Liberty and 1 in ore, Feb., 1913.

The Ruth mine includes the Ruth and Star Pointer mines, operated as one property and connected by a 2,700' tunnel, with an extensive electric haulage system hoisting through the Star Pointer shaft. The Ruth shaft, $1\frac{1}{4}$ mile from the Copper Flat pit, is 610' deep, sunk at an angle of 45°, with 2 compartments, 200' of its depth being in limestone, with levels opened at 120', 310', 520' and 610', and is equipped with a small steam hoist. This shaft, now used for ventilation, has been replaced by the Star Pointer shaft, 459' deep, which corresponds with the 520' level of the Ruth shaft with which it is connected on this level. Water is cared for by a 300-gal. pump. The average grade of ore in the Ruth mine is somewhat above that of the Copper Flat and the mine has developed about 8,000,000 tons of ore of 2.5% average grade, with small gold and silver values. The ore is soft and the mine is to be operated on the caving plan.

The Star Pointer, or the main working vertical shaft of the Ruth mine, is located about 250' west of the lime-porphyry contact, is 7' 6"x25' 6" in the clear and has 4 compartments, there being two 6x6' skipways, a 5x6' ladderway for pipes also and 7x9' timberway, handling loaded cars on cages. The shaft has a 140' steel headgear on concrete foundations. The main hoist is geared to a 300-h.p. General Electric induction motor, and has drums with 72" face running independently or in balance, raising 5-ton ore skips, working in guides, and there is a 75-h.p. 11x16" duplex hoist for the timber cage.

The Veteran mine, taken over from the Cumberland-Ely, was tested extensively by churn drilling and has an orebody of about 500x1,000' in section, of about 200' average depth, with indications that it is an isolated bunch of sulphide ore, lying on a shelf of limestone, in a trough that has protected the sulphide ores from oxidation and leaching. Development includes a tunnel, but is mainly by the 475' Veteran shaft, sunk in limestone. This has outside dimensions of 7' 6"x27' 6", being practically a duplicate of the Star Pointer shaft. The mine has its bottom level at 400' and is worked by top-slicing and caving, to which the blanket formation is excellently adapted. Equipment includes a 300-h.p. Denver Engineering Works electric hoist, with 6' drums, raising two 5-ton Kimberley skips, singly or in balance, good for 600' depth, and is operated by a 550-volt 3-phase current, with a steam hoisting plant in reserve, for emergencies.

Miscellaneous properties include a number of small mines and groups, on which more or less work has been done. The Kimberley group shows a promising area of mineralized porphyry, but is not extensively developed

and the capping is too thick for opencast work. The Wedge mine has a shaft showing some ore of about 3.5% copper average assay tenor. The Jupiter mine has 4 shallow shafts showing ore assaying up to 9% copper, but with an average of probably about 3%. The Turkey shows a comparatively thin bed of cupriferous porphyry, apparently of no particular promise, and the August and Boss of Nevada groups have not given indications of much value.

Electric power is used throughout, current being brought from the Steptoe smelter, at 40,000 volts, and stepped down to 550 volts by four 200-kw. transformers in a concrete station.

Buildings include a machine shop and warehouse at the Copper Flat mine, engine houses at the various shafts and an office, boarding house and bunkhouse and numerous dwellings at the Ruth mine.

Ore is shipped to the Steptoe smelter, at McGill, separately described under title of the Steptoe Valley Smelting & Mining Co., over a 27-mile standard-gauge railway, equipment including 275 self-dumping ore cars. This line is a part of the Nevada Northern railway having a standard-gauge line of 168 miles in length, running from the mines and Ely to a junction with the Southern Pacific railway at Cobre station, 3 miles east of Toano. The Nevada Northern Railway Co., controlled through stock ownership by the Nevada Consolidated, is capitalized at \$2,000,000, with a \$1,000,000 bond issue, at 5%, the line doing a general business in addition to handling the traffic of the Nevada Consolidated Copper Co. and the Steptoe Valley Smelting & Mining Co.

Reserves: Extensive churn-drill borings on the Copper Flat, Liberty, Veteran, Ruth and other properties, have proven a tonnage estimated Dec. 31, 1912, to be 38,853,351 tons of ore, averaging 1.66% copper and representing an ore supply of about 14 years, of which the major portion is in the Copper Flat and Liberty groups.

The cost of stripping overburden was given at 33.64 cts. per cu. yd. for the fiscal year ending Dec. 31, 1912, with actual mining costs for ore of 17.35 cts. per dry ton, with an additional charge of 15 cts. per ton made to cover stripping redemption at the Eureka pit, 22 cts. at Liberty pit and 30 cts. at the Hecla pit. Ore mined and treated during the fiscal year 1912 averaged 1.692% copper, by assay, with an average extraction of 68.25%. The ore mined and milled for the 3 months ending Sept. 30, 1913, was 813,153 tons, of which but 7% came from underground workings. This ore averaged 1.53% copper as compared with 1.76 for the previous quarter year and 1.67 for the mine average. The cost of production for the fiscal year 1912 was given as 8.33 cts. per lb. of copper and for the three-quarters of 1913, 10.09 cts., covering all charges, including depreciation charges on Steptoe plant. It is not probable, however, although the Nevada Consolidated Copper Co. is one of the largest and best mines in the world, that the mine can continue to produce copper, for any great length of time, at much less than 8 cts. per lb., and, when all factors are taken into consideration and due allowance is made for the cost of improvements, that ultimately must be charged against costs, a net cost of 9 cts. per lb. for finished copper laid down at the seaboard, would be a fair estimate. Production is marketed through the American Smelting & Refining Co., on a 1% commission basis.

Production was 33,283,348 lbs. fine copper in the fiscal year ending Sept. 30, 1909; 62,772,340 lbs. in the fiscal year 1910; 78,541,270 lbs. for the 15 months ending Dec. 31, 1911; 63,063,261 lbs. for the year ended Dec. 31, 1912, and 48,287,774 lbs. for the 9 months ending Sept. 30, 1913. The Nevada Consolidated is a mine of the first magnitude and is capable, with mill improve-

ments, to recover values in slimes, of making cheaper costs and larger production than was secured in the fiscal year 1912. The property has been splendidly developed and is being managed with ability and success.

NEVADA CONSOLIDATED MINES & SELLING CO. NEVADA

Office: 625 Market St., San Francisco, Cal. Mine office: Hawthorne, Mineral Co., Nev. Alex. Brown, pres.; Chas. L. Newton, vice-pres.; C. C. Matthews, sec.; F. G. Carey, treas. Lands, about 1,000 acres, including a gold property formerly owned by the Huntoon Valley Mining Co., 45 miles south of Hawthorne, and copper claims 10 to 20 miles southwest of Hawthorne. The copper property is being developed by a 650' tunnel said by the company to have a 17' vein carrying copper sulphides, with some galena. The company claims to have nearly 6,000' of workings. A 100-ton concentrator and a smelter, planned for 1909, were not built. Officers are said to stand well but the company's past advertising is not liked.

NEVADA CONTACT COPPER CO. NEVADA

Operated 1913, according to press reports. Letter unclaimed at Salt Lake City, Utah. Mine near Contact, Elko Co., Nev. Organized 1907, under laws of Arizona, capitalization \$1,000,000, by Chas. A. Berter, J. H. Roberts, A. G. Hudson and A. Naylor. Lands, 100 acres, showing 3 veins, said to be traceable 4,000', having a 40' shaft, from which picked samples give assays up to 28% copper, with an estimated average of 12 to 14% copper.

NEVADA COPPER CO. NEVADA

Mine near Yerington, Lyon Co., Nev. Lands are claimed to show a vein of 60 to 100' width, opened by a 330' main shaft. Company is said to hold the old Boston & Nevada smelter, across the river from Yerington. Idle some years and reported probably dead, 1913.

NEVADA COPPER CO. NEVADA

Office: 572 Bullitt Bldg., Philadelphia, Pa. Operating office: Tonopah, Nev. Mine office: Mina, Mineral Co., Nev. Jas. S. Austin, pres.; J. H. Whiteman, vice-pres.; C. A. Higbe, sec.-treas. Company is controlled by the owners of the Tonopah Mining Co. Owns the Dunlap mines near the Blue Light mine, 12 miles east of Mina. Claims show a great outcrop said to be 600 to 700' wide and much longer, carrying bornite and copper oxide in a lime-iron gangue. The property can be worked by open cuts. Property has very little development, but has a good plant with air compressor, etc.

Company is not the one of same name merged with Nevada Bell Copper M. & R. Co., 1904.

NEVADA COPPER CO. UTAH

Idle. Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Smyths, Beaver Co., Utah. A. J. McMullen, vice-pres.; A. D. McMullen, sec.-treas. Organized April, 1907, under laws of Utah, capitalization \$1,000,000, shares \$1 par, assessable; issued, \$650,000. Lands, 14 claims, 4 patented, 12 miles from the S. P. L. A. & S. L. R. R., in the Beaver Lake district, show Paleozoic limestone cut by monzonite, with disseminated ore and replacements. The claims have several pits and shafts, deepest 175' with about 200' of laterals, said to show a vein assaying 8.5% copper and 111 oz. silver per ton. No returns secured.

NEVADA COPPER HILLS MINING CO. NEVADA

Office: 18 South Mulberry St., Mansfield, Ohio. Mine office: Luning, Mineral Co., Nev. A. H. McCullough, pres.; F. W. Lenhart, vice-pres.; T. J. Foster, sec.; Chas. Ritter, treas.; Rowland Lea, gen. mgr.; preceding officers, Geo. Lowery and W. J. Whillis, directors. Organized Oct. 24, 1907, under laws of Nevada, capitalization \$1,500,000, shares \$1 par, non-assessable;

issued, \$745,000. Farmers Saving & Trust Co., Mansfield, Ohio, registrars. Annual meeting, first Monday in December.

Lands, 10 claims, 200 acres, in the Fitting district, 9 miles north of Luning. The property is reported, by Mr. Lea, to have numerous replacement orebodies in limestone forming a series of parallel bedded veins over a width of about 600', these having a generally north-south strike, with a dip of 6°, carrying oxidized ores with occasional native copper; some bornite with chalcopyrite shows in the bottom workings. Veins average 2' thick and 28 of them are opened up for a length of 400' and a depth of 100', according to the company's secretary. Ore is stated to assay 1 to 70% copper, from a trace to 8 oz. silver and from a trace to \$3 gold per ton.

Development is by a 225' shaft and a 330' tunnel. Equipment includes a 25-h.p. hoist, and there are 6 buildings. Management plans extending the tunnel, deepening the shaft to 500', and crosscutting, also installing compressor.

NEVADA COPPER MINING, MILLING & POWER CO. NEVADA

Office: Tacoma, Wash. Mine at Contact, Elko Co., Nev. E. F. Mesinger, pres., Tacoma, Wash.; Henry Smith, vice-pres. and gen. mgr., Contact, Nev.; E. S. Price, sec.-treas.; M. K. Price and C. Smith, all of Tacoma, directors. Organized May 5, 1905, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, nonassessable; issued, \$1,500,000.

Property, 52 claims, 16 patented, in Salmon River district, better known as Contact district, Nev. Claims show Paleozoic sediments cut by granite with orebodies along the contact. Company is now preparing for extensive development and several hundred tons of high-grade ore is at the Alice mine awaiting shipment by auto truck to Rogerson, Idaho, 40 miles away. Property and geology fully described Bull. 497, U. S. Geol. Survey.

NEVADA COPPER, PLATINUM & NICKEL CO. NEVADA

Office and mine: Bunkerville, Clark Co., Nev. Property is the Key West mine, or Great Western group, in the Bunkerville (Copper King) district, 38 miles northeast of Moapa, on the Salt Lake railroad. District shows limestone cut by volcanic lavas, with fissure veins. The working shaft is 300' deep and there are over 5,000' of underground development in tunnels and crosscuts. Made shipments in 1908 of ore said to average about 4% copper, 2.5% nickel and $\frac{1}{3}$ oz. platinum per ton. Idle several years.

NEVADA COPPER QUEEN MINE. NEVADA

A. C. James, supt., Luning, Mineral Co., Nev.; A. L. Van Tyne, Syracuse, N. Y., and associates, owners; John C. Skuse, cons. engr. Property, the Spanish Woman's group of 53 claims, 8 miles from Luning. Development work shallow, but leasers are now taking out ore at 6 places. Present owners bought property in Oct., 1913, and plan active development.

NEVADA DELAWARE MINING & MILLING CO. NEVADA

Idle. Mine office: Carson City, Ormsby Co., Nev. E. B. Sollenberger, pres.; A. M. Duncan, vice-pres.; J. E. Sollenberger, sec.-treas. and gen. mgr.; preceding officers, O. B. Taylor and F. B. Sharp, directors, at last report.

Organized under laws of Nevada, capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, unpatented, 60 acres, 7 miles northeast of Carson City, the nearest rail point. Mine, developed by a crosscut tunnel, with about 2,000' of workings, has oxidized silver-copper ores, with some free gold, a test shipment to a Salt Lake smelter assaying \$32 per ton giving net returns of \$7 per ton. No returns secured.

NEVADA DELKER COPPER MINING CO. NEVADA

Idle. Office: Cherry Creek, Nev. Walter F. Rock, pres.; J. W. Walker, vice-pres., treas. and gen. mgr.; A. C. Krez, sec.; W. D. Clements, supt., at last accounts. Organized July, 1910, capitalization \$1,000,000, shares \$1 par.

Lands, 23 claims, 460 acres, 20 miles west of Currie, having an ore zone of 400' claimed width, developed by a shallow 2-compartment shaft planned to be sunk 400' to the sulphide zone. A test shipment of surface ore gave returns of 14% copper and \$3 gold per ton.

NEVADA-DENVER COPPER CO.

NEVADA

Address: Yerington, Nev. C. C. Warrell, pres.; Geo. D. Suter, Denver, vice-pres. and gen. supt.; O. L. Stiles, Denver, sec.-treas.; Paul Esch, Milwaukee, Wis., C. C. Werts and C. A. Hilton, Denver, and A. W. Gardiner, directors. Organized Sept., 1912, under laws of Nevada, capitalization \$250,000. Property, the Juanita group, 4 claims adjoining the Honest Endeavor mine in the Yerington district, Nev., which belongs to same owners and is a few miles northeast of the Nevada-Douglas mines. Claims said to show veins with 4 to 16% ore in granodiorite. Development is slight, consisting of shallow tunnels, cuts and pits. Property idle, Sept., 1913, on account of liens filed by former employee and title said to be still in the name of Suter and Hilton.

NEVADA DEVELOPMENT CO.

NEVADA

Idle. No response from office: 201 Walnut Place, Philadelphia, Pa. Mine at Lovelock, Humboldt Co., Nev. Theo. H. Lowe, supt., at last accounts. Lands are the Copper Glance group and adjoining claims.

NEVADA DOUGLAS COPPER CO.

NEVADA

General office: 79 Milk St., Boston, Mass. Main office: Newhouse Bldg., Salt Lake City, Utah. Mine office: Ludwig, Lyon Co.; Nev. A. J. Orem, pres.; James G. Berryhill and L. H. Curtis, vice-presidents; F. M. Orem, sec.-treas.; W. C. Orem, gen. mgr.; preceding officers, J. J. Corum, Jos. T. Herrick, directors; Archie J. Orem, supt.; H. L. Burbridge, mine supt.; Llew Humphreys, mg. engr.; E. R. Marble, assayer; R. M. Mitchell, Salt Lake City, Utah, purch. agt. Organized Sept. 1, 1906, under laws of Utah, capitalization \$5,000,000, shares \$5 par, fully paid, nonassessable; 930,000 shares issued. Bonds, \$600,000, 6%; \$500,000 outstanding. Dividends, 1913, \$125,000. Federal Trust Co., Boston, registrar; Paul Revere Trust Co., Boston, transfer agent. Stock listed on Boston curb. Annual meeting, second Tuesday in May.

The report for the year ending Dec. 3, 1912, shows a gross operating revenue of \$824,891, while operating expenses were \$390,077, leaving a gross operating profit of \$434,814. Deducting \$164,657 for fixed charges of mine depreciation, there is a net profit of \$270,157 for the year.

The company has decided to dispose of its half interest in the Nevada Copper Belt Railroad Co. and has sold for \$100,000 the railroad company's note and surrendered 5,000 shares of railroad stock for 50,000 shares of its own stock, which are returned to the company's treasury, this action being due to recent laws enacted in the state.

Lands, 30 claims, 550 acres, with 2 mill sites aggregating 80 acres, and miscellaneous lands, including water rights, giving total holdings of about 700 acres on the western slope of the Mason mountains. Lands include former holdings of both the Ludwig Copper Mining Co. and the Douglas Copper Mining Co., which succeeded the Douglas Mining & Smelting Co. Holdings consist of 4 separate and distinct mines, the old Douglas mine, the Amalgamated group and the Casting Copper mine, being the original holdings of the company, and the Ludwig mine, which was more recently purchased. Country rock consists of limestone intruded by grano-diorite, with large contact orebodies and fissure veins. There also is one claim carrying fluxing ore at Buckskin, 7 miles distant.

The Ludwig mine, about 1 mile northwest of the Douglas, includes 2 claims, on which the mine is opened, and a 40-acre tract in Smith Valley,

on which there is a well and pumping station. The Ludwig was opened 1865, and work by the former owners was badly planned, but the property was a shipper for some years of small quantities of high-grade ore, production including some very handsome malachite and azurite, a portion of which was sold to lapidaries, and considerable bluestone was produced also for the mines of the Comstock Lode.

The ore occurs in a fissure vein with a white limestone footwall and a silicious limestone hanging wall, which changes to a garnetiferous limestone, heavily impregnated with sulphides in places. Where crushing has permitted surface waters to work downward, large bodies of carbonates and copper glance ores are found as replacements in the footwall limestone. The vein proper has an average width of about 30' and has been developed along its course for 1,300' and to a depth of 910' by levels, along hanging wall, every 100'. The orebody on the 700' level is 50' wide and 300' long and runs 6% copper. The shoots, or pipes, of high-grade secondary ore, running from 16 to 30% in copper, form chamber deposits in the limestone near the porphyry contact, proven down to 800' level. Ore reserves are estimated at 400,000 tons of 5% copper ore.

In addition to copper ore, the Ludwig has a very large deposit of gypsum, on the footwall, said to be 3,000' long, 500' wide and 400' deep, which figures seem high. This deposit of gypsum is already of commercial value, and was being mined and shipped at the rate of 50 tons a day in 1913.

The Douglas mine is working a typical contact metamorphic deposit in which garnetized limestone carrying copper sulphides and their resultant oxidized ores occur in very irregular orebodies in limestone which have a tendency towards a horizontal rather than a vertical extension. The mineralized area is about 700' wide and 2,000' long with numerous parallel fissures which seem to control the mineralization. This mine has been developed by a main working tunnel and a deeper haulage tunnel with numerous crosscuts and drifts netting the property. The working tunnel, 4,290', has an average depth of 120' beneath the surface and the ore is in places continuous to the surface. Four 50' winzes show the downward extension of the ore.

The Casting Copper mine shows a large area of garnet-epidote limestone constituting low-grade carbonate ore, which will be extensively mined. This mine has a 350' vertical shaft and a 500' tunnel. In 1913 three levels, 100', 200' and 350', were being developed but little work was being done on the latter. The 100' level shows an orebody 50' wide and 175' long and shipments average 5% copper as compared with 3% in the Douglas mine.

At the Amalgamated mine very little development work has been done, but the surface exposures indicate the existence of similar large contact metamorphic deposits.

Property as a whole has 21,362' of workings. Equipment includes four 100-h.p. hoists, good for 1,000' depth each, with a 52-drill Imperial air compressor. Electric current is taken from the Truckee River General Electric Co. Water is secured from artesian wells in Smith valley, brought to the mine by a 17,000' pipe line.

Company has canceled its smelting contract with the Mason Valley smelter, having been discontented for some time with the smelting rates, which made it necessary to mine only the richer ores of Douglas hill. At the present time it has built an experimental leaching plant at Denver, Colo., of 20 tons capacity, using the Greenewalt wet process, ore being crushed to 16 mesh, leached with a 12% solution of sulphuric acid and precipitated by electrolysis. A 90% extraction has been made by W. L. Austin,

who is in charge of this plant. A 1,000-ton leaching plant will be erected at the Ludwig mine.

Company employs about 243 men, whose daily wage averaged \$3.41, and has a school house, store, club, etc.

Ore mined in 1912 from the Ludwig and Douglas Hill mines amounted to 331 tons per day, or 120,908 tons, averaging 4.25% copper, yielding 9,020,640 lbs. fine copper. Output for 1913 estimated by management at 12,000,000 lbs. Latest production, Aug., 1913, was 3,839 tons of 4.62% ore and in Sept., 1913, 3,491 tons of 6.1% ore.

NEVADA ELY COPPER CO.

NEVADA

Idle many years and probably dead. Office: Exchange Bldg., Colorado Springs, Colo. Letter unclaimed at Ely, White Pine Co., Nev. J. W. Yates, pres.; J. O. McClain, vice-pres.; O. P. Grimes, sec.-treas. Organized 1907, under laws of Arizona, capitalization \$3,000,000 shares \$1 par, nonassessable. Lands, 7 claims, including the Timberline group of 3 claims and the Copper Bottom group of 4 claims, on which some diamond drilling was done in 1907.

NEVADA EXPLORATION & MINING CO.

UTAH

Idle. Office and mine: Bingham Canyon, Salt Lake Co., Utah. Organized 1907. Lands, 15 claims, near the Eagle Bird Mining & Milling Co., in Barney canyon, in the northern part of the Bingham district. Development is by a tunnel being driven jointly with the Utah Mining & Milling Co. No returns secured.

NEVADA MINES CO.

NEVADA

Address: Geo. E. Stone, 74 De Long Bldg., Philadelphia, Pa. W. G. Hay, pres.; Hayden Whitney, vice-pres. Mine address: Imlay, Humboldt Co., Nev. Is a reorganization of the U. S. Gold & Copper Corporation and Par Value Consolidated Mining Co., both stock-selling propositions that drained Wheeling and Moundville, W. Va., investors.

New company organized 1911 under laws of Arizona, capitalization \$2,500,000, shares \$1 par, nonassessable; 1,000,000 shares and \$4,000 cash paid for properties. Stock was sold at 5 cts. a share to stockholders of old companies.

Property, 8 claims, 160 acres, in the Humboldt range, 4 miles from Humboldt, Nev., developed by 700' tunnel and drift work, showing lead and copper ore. Not regarded favorably.

NEVADA MINING CO.

CALIFORNIA

Probably closed down. Mine near Auburn, Placer Co., Cal. L. G. Schuster, mgr., at last accounts. Lands, 150 acres in Placer county and 30 acres in Nevada county, former 8 miles from nearest railroad, at Auburn, with a good wagon road connecting. Development by 2 shallow 2-compartment incline shafts, in a vein reported as diorite in slate, carrying malachite and chalcopryrite, associated with pyrite and hematite.

NEVADA ORE COPPER CO.

NEVADA

C. Greeman, supt., Acme, via Mina, Mineral Co., Nev. Property, a group of claims in the Fitting district, said to show copper ore in replacement deposits. Developed by 1,000' shaft and extensive workings, opening up lead ores. Shaft to be deepened to 1,500' in 1914.

NEVADA PACIFIC MINES CO.

NEVADA

L. P. Patrick, pres., Goldfield, Nev. Mine office: Mina, Mineral Co., Nev. Property, the Mayflower group in New York canyon, northeast of Mina, shows copper ore 150' wide, exposed by surface work, from which 15 tons daily are shipped to the Wabuska smelter. Development work is in progress to prove up the property, which is regarded by observers as a steam-shovel proposition.

NEVADA PHCENIX MINING CO.**NEVADA**

Idle. Letters sent to Beowawe, Eureka Co., Nev., unclaimed. Lands, 22 claims, south of Beowawe, are opened by a shallow 2-compartment shaft and a 300' crosscut tunnel, showing a 3' vein said to give average assays of 7.2% copper, 55 oz. silver and \$16 gold per ton.

NEVADA QUEEN COPPER CO.**NEVADA**

Idle. Office: 405 Mining Exchange Bldg., Colorado Springs, Colo. Mine near Yerington, Lyon Co., Nev. Duncan Chisholm, pres.; John Matthew, vice-pres. and treas.; R. G. Riddett, sec.; preceding officers, H. Hieronemus and D. P. Randall, directors. Organized Oct. 5, 1906, under laws of Colorado, capitalization \$1,500,000, shares \$1 par, nonassessable; issued, \$1,107,350. Is operated as a close corporation. Annual meeting, second Monday in October. Lands, 28 claims, patented, 467 acres, lying immediately north of the Nevada Douglas and Yerington Central Copper companies, developed by shafts of 186' and 210', showing copper ore giving assays of 1.5 to 28%. Management planned operating in 1913.

NEVADA SM. & MINES CORPORATION. CALIFORNIA & NEVADA

Office: Room 515 E, 30 Church St., New York. Mines near Tybo, Nye Co., Nev. Max E. Bernheimer, pres.; L. A. Dessar, vice-pres.; Werner Mueller, sec.; A. W. Joseph, treas.; preceding officers, M. Eisenberg, Chas. Lee, L. E. Marsden, N. P. Payne, H. Rawitzer, C. J. Roberts, directors. Organized May, 1906, under laws of South Dakota, capitalization \$5,000,000, shares \$5 par. Stock listed on the New York curb. Empire Trust Co., New York, registrar. Company has abandoned its copper claims at Greenwater, Cal., and now owns a controlling interest in the Tybo Consolidated Mining Co., owning silver-lead properties at Tybo, Hot Creek district, Nev.

NEVADA STANDARD COPPER CO.**NEVADA**

C. Wilbert E. Marsh, pres., Mina, Nev. Organized under laws of Nevada, capitalization 100,000 shares; 55,000 issued for property and 9,220 sold for development funds.

Property, 12 claims and a mill site located in the Santa Fé or Luning district, Mineral Co., Nev. Claims cover low rounded hills at about 6,000' elevation, lying 6 miles east of Luning with good wagon road. The rocks are leached porphyries showing traces of copper and underlain at 20' depth by low-grade oxidized copper ores.

Development consists of 104' shaft on the Green Mystery claim and various location pits and tunnels. A level at 104' cuts a 24' shear zone carrying low-grade ore. Owner considers it a typical porphyry, or disseminated copper deposit. Equipment includes a 4-h. p. gasoline hoist, blacksmith shop and buildings for men. There are 3 springs, 2½ to 5 miles distant.

NEVADA UNITED MINING CO.**NEVADA**

Main office: Lovelocks, Humboldt Co., Nev. Oliver G. Jennings, pres. and treas.; David R. Fowler, sec., both of 51 Wall St., New York; Wm. J. Griffiths, vice-pres.; John T. Reid, gen. mgr. and mg. engr.; preceding officers, Louis C. Naisawald, Louis J. Mukel and Ed. M. Burghard, directors; Chas. Sauberg, mine supt. Organized 1906, under laws of Arizona, capitalization \$200,000, increased later to \$300,000, shares \$1 par, fully paid and nonassessable; 240,000 shares issued. Annual meeting, first Thursday in February.

Lands, 33 claims, 10 patented, 550 acres, and a 60-acre mill site, 35 miles southeast of Lovelocks, 16 miles from Boyer, the nearest post office, and in the White Cloud district of Churchill county, Nev. The district shows Triassic sediments cut by granite-porphyry and covered in part by volcanic rocks. The ore deposits occur as replacements in limestone and as contact

metamorphic orebodies. The claims show limestone, with 4 orebodies, having gossans of cupriferous, specular hematite, carrying oxidized ores in the gossan and sulphides at depth. The vein runs E.-W. and has a dip of 70°. The copper deposit is said to average 4½% copper. The zinc vein is 20' wide, where cut in a 1,300' tunnel, and averages 5½% zinc.

The mine has shafts of 40', 60', 70' and 120', and 5 tunnels, the longest a crosscut of 3,050', with back of about 1,000', and 1,050 of crosscuts; the final 250' of tunnel is in an ore zone of iron oxide, 100' wide, with irregular bunches of copper ore assaying 2.5%. Workings estimated by manager to show 10,000 tons of ore, with 1,000 tons blocked out for stoping. The mine, which was worked 1871-73, and again 1889-95, was reopened, 1906, by the present management, and is quite wet, about 700,000 gals. of water daily flowing from the tunnel.

Equipment includes a 160-h.p. steam plant, with a hoist good for 750' and a 3-drill Ingersoll-Rand air compressor. There are 10 mine buildings.

NEVADA-UTAH MINES & SMELTERS CORP. NEVADA & UTAH

Reorganized and entire assets taken over by Consolidated Nevada-Utah Corporation of Virginia and properties described under that title. The old companies affairs are fully described and criticised in Vol. X. The schedule in bankruptcy, filed Feb., 1912, showed liabilities of \$185,033, with \$21,500 secured by a Salt Lake bank and \$40,000 by the Bristol Consolidated Mining Co. The assets included \$222,341 due from the Nevada-Utah Mining Co.; \$17,434 from the Imperial Gold & Copper Mining Co., and \$10,831 from the Consolidated Pioche Mining Co. On June 11, 1912, the entire assets were bought for \$102,000 at a judgment sale by a reorganization committee for a new company called the Consolidated Nevada-Utah Corporation, organized under the laws of Nevada.

The secretary states "About 50% of the old company's shares, totaling 1,500,000, paid the 50-ct. assessment, thereby making available for carrying out reorganization approximately \$350,000. The properties were bid in at receiver's sale for \$102,000, while approximately \$100,000 additional was spent in corraling other collateral, including shares of subsidiary companies. This left available for reorganization and development work about \$150,000. The new company has 2,000,000 shares, par \$3, and \$900,000 income bonds. The new management has pledged itself to carry forward an extensive program of development work and has retained as consulting engineer Allen H. Rogers, who some months ago made an examination of the property.

"None of the executive officials will draw salaries until the property has demonstrated that it can pay them from earnings. Some of the upper levels of the property at Pioche have been leased since last July and between 20 and 30 cars of ore monthly have been shipped on a royalty basis.

"The new management has been practically assured that concentrates running 1½ into 1 should yield a value of over 40% zinc, thereby netting a substantial profit per ton, after an \$8 freight charge to smelter.

"A period of fully 8 months will elapse before the program mapped out for the development work will be completed."

The Last Chance group of 14 claims at Bingham, Utah, said to have produced \$1,500,000 and developed by a 3,200' tunnel, is reported sold Oct., 1913, for \$100,000 to the U. S. Smelting, Refining & Mining Co.

NEW ARCADIAN COPPER CO. MICHIGAN

Office and mine: Houghton, Houghton Co., Mich. Robt. H. Shields, pres. and gen. mgr.; Col. Sylvester T. Everett, vice-pres.; Wm. F. Miller, sec.-treas.; preceding officers, Wm. B. Anderson, John Merton, John C. Shields, L. W. Killmar, Jas. W. Shields and Allen F. Rees, directors; Herman W. Fesing, engr.; Otto Lieber, mg. capt. Organized April 27, 1909,

under laws of Michigan, capitalization \$3,750,000, shares \$25 par, assessable; paid in, \$11.50. Last assessment, 50 cts., was paid July, 1913. This company succeeded the Arcadian Copper Co., a corporation organized under the laws of New Jersey that had nonassessable stock, and exchanged shares, *pari passu*, levying an assessment of \$1 per share, 1909. Property was transferred, by deed, from the old company to the new, May 30, 1909. Company owns 10,000 shares of stock of the New Baltic Copper Co. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Tuesday in May.

Lands, 3,500 acres, including 3,200 acres of mineral lands, all freehold. Property includes 5 old mines worked in a small way at various periods in the past. The Arcadian Copper Co., predecessor of present company, operated the property with great vigor, 1898-1901, and equipped it with magnificent buildings and machinery, including a 3-stamp mill at Grosse Point. Operations on the Isle Royale bed proving unsatisfactory all work was suspended June 15, 1903, the hoist, machinery and shaft houses were sold to the Trimountain Mining Co., the stamp mill was sold to the Centennial Copper Mining Co. and the mine buildings disposed of to various purchasers, the property being almost completely dismantled. The floating debt of the old company was liquidated by the sale of 800 acres of land, for \$750,000, to the Quincy Mining Co. The old mine and equipment were fully described in Vols. I and II.

Exploratory work was resumed Oct., 1905, by the old company, on an amygdaloidal bed about one-fourth mile east of the Isle Royale amygdaloid previously worked, and crosscutting from the 200' level of the exploratory shaft disclosed 5 cupriferous beds in a distance of 110'. Work was suspended March, 1908, until organization, and was resumed Aug., 1909, by diamond-drill boring from the bottom of the 200' exploratory shaft, which is in the S.W. $\frac{1}{4}$ of Sec. 29. Exploratory work, 1910-12, included considerable trenching and test pitting, but was devoted mainly to securing 3 cross-sections, nearly 1 mile apart, by diamond drilling, and 26 holes, aggregating over 26,000', had been drilled to end of 1913. Drill hole No. 22 cut a promising amygdaloid lode, in the north area. A shaft started June, 1912, on this lode, was 750' deep Sept., 1913, is to be sunk to a depth of 1,500 to 2,000'. Crosscutting was being done in October, after 3 months' idleness due to the strike, on the 700' level to explore the 2 copper-bearing amygdaloid beds disclosed by diamond drilling, one 300' east, the other 150' west of the shaft.

Equipment includes a steam plant, with boilers, a hoist good for 1,500' and a 15-drill air compressor, and there are necessary mine buildings. Owing to its immense acreage on the mineral belt, the property is considered promising, notwithstanding its lack of success under the old company, and management is good.

NEW ATLAS MINING CO.

YUKON TERRITORY

Wilbur D. Greenough, care Greenough Bros., Spokane, Wash., chief owner and gen. mgr.; J. F. Berger, supt., White Horse, Yukon Territory, Can. Property, the Yukon-Pueblo group, shows deposits of silver-bearing copper ore, developed by shaft work, with a force of 85 men at last accounts. Has steam plant.

NEW BALTIC COPPER CO.

MICHIGAN

Office: Houghton, Mich. R. H. Shields, pres. and gen. mgr.; Jas. P. Edwards, vice-pres.; John Edwards, sec.-treas.; other directors, S. J. Beahan, J. C. Shields and John Merton; Herman Fesing, engr. Organized Dec. 14, 1909, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, assessable; issued, \$1,750,000; \$8 paid. Company succeeded the New Baltic

Exploration, giving stockholders therein share for share, giving 30,000 shares to the Edwards estate and 10,000 shares to the New Arcadian Copper Co., for lands, and selling 20,000 shares to the public, at \$8. Company began operations with \$120,000 cash, and ended 1912 with a cash balance of \$23,576. All officers with exception of general manager serve without pay. Annual meeting, third Wednesday in April.

Lands, 640 acres, being Sec. 16, T. 55 N., R. 33 W., with mineral rights to the N.W. $\frac{1}{4}$ of the N.W. $\frac{1}{4}$ reserved by the New Arcadian Copper Co. Exploratory work, begun June 10, 1909, included extensive trenching in the horizon of No. 3 conglomerate, supplemented by boreholes put down by a Calyx shot drill, cutting a $3\frac{1}{2}$ " core, considerable trouble having been experienced in getting down stand pipes. No. 3 borehole, at depth of 330', cut 2' of exceptionally good copper-bearing rock, with 6" of heavy copper, and a drill core fairly charged with copper was taken, Sept., 1909, from what was thought to be the western Baltic bed, at depth of 300'. In Nov., 1909, a drill hole pitched at an angle of 60° cut an amygdaloidal bed estimated to pitch at 60° in opposition, giving cores of 105' aggregate length, showing copper at various points, the final 7' being well charged with fine stamp copper and a considerable amount of very coarse stamp copper. The drilling also disclosed an unidentified amygdaloidal bed of about 75' width, carrying considerable copper in masses approaching barrel-work size. Deepest hole bored was 1,200'.

Ground was broken June, 1910, for an exploratory shaft, which was started about 35' in the footwall trap, and this shaft was 500' deep, Sept., 1913. Although the shaft was started in the foot, the formation rolls so that the bed was cut at 3 points in the depth of 310'. At 200' the shaft cut the footwall of the amygdaloidal bed, of kindly appearance, carrying much calcite but devoid of copper. At depth of 310' the bed was cut again, carrying extremely heavy copper of a grade materially better than the average of the payable mines of the district. Drifts on the 350' and 500' levels disclose exceedingly bunchy ground, with occasional pockets of rich copper, and a crosscut on the 500' level shows further copper ground in an unidentified amygdaloidal bed underlying No. 4 conglomerate bed, distant about 1,500' from the shaft.

Equipment includes a temporary frame shaft house. The steam plant has a Cleaves hoist, good for 1,500', and a 6-drill Ingersoll-Sergeant air compressor. Property considered promising and management good.

NEW BINGHAM CONSOLIDATED MINING CO.

UTAH

Idle. Mine near Bingham Canyon, Salt Lake Co., Utah. Jesse Knight, pres., Provo, Utah; Wm. W. Mathews, vice-pres.; W. Lester Mangum, sec-treas.; Wm. Christopherson and J. Wm. Knight, directors; J. Knox, mgr., at last accounts. Organized Jan., 1907, under laws of Utah, capitalization \$100,000, shares \$1 par. Lands, 6 claims, in the northern part of the Bingham district.

NEW BOSTON MINING CO.

MONTANA

Office: 117 North Montana St., Butte, Mont. Mine office: Corbin, Jefferson Co., Mont. Jas. A. Davidson, pres. and gen. mgr.; Hugo Traylor, sec-treas., at last accounts. Capitalization 600,000 shares, \$1 par. Company owns 6 full and 2 fractional claims adjoining the Boston & Corbin, said to carry upwards of 20 different veins. The Daphne claim, patented for 30 years, carries a 5' vein with a 16" paystreak assaying 10.5% copper, 42 oz. silver and \$3 gold per ton, balance of vein being claimed to assay about 3% copper.

NEW CHICAGO MINING CO., LTD.

IDAHO

Letters neither answered or returned from Wallace, Idaho. Mine near

Murray, Shoshone Co., Idaho. Mrs. Elise Heller, pres. and treas.; N. E. Hanson, vice-pres.; Geo. H. Heller, sec. and gen. mgr.; preceding officers, Walter H. Hanson and Frank A. Heller, directors. Organized, 1907, under laws of Idaho, capitalization \$1,500,000, shares \$1 par, assessable.

Lands, 4 claims, 80 acres, 40 acres of placer ground, a 5-acre mill site and 20 acres of timber land, 1½ miles west of Pritchard creek and about 7 miles west of Murray. Property shows porphyry and slate, with 2 veins of 4 to 6' estimated average width, carrying lead and copper sulphides with some silver, estimated by management to average 10% copper, 25% lead, 25 oz. silver and \$4 gold per ton. Development includes a 45' shaft and 4 tunnels with 675' of workings. Mine has water power and 3 small buildings. Management planned driving a new 800' tunnel in 1911, but no recent returns secured.

NEW COLUMBIA MINING CO.

IDAHO

Mine office: Salmon, Lehmi Co., Idaho. H. Armstead, superintendent. Ores carry copper and gold. Has steam power and a 10-stamp mill. Idle several years and presumably waiting for a "boom" to raise money for new development work.

NEW CORNELIA COPPER CO.

ARIZONA

Office: 611 Wright Bldg., St. Louis, Mo. Operating office: Gila Bend, Maricopa Co., Ariz. Mine office: Ajo, Pima Co., Ariz. Geo. H. Augustine, pres.; C. E. Neeley, vice-pres.; John R. Boddie, sec.; C. A. Bowman, treas.; preceding officers, C. W. Chamberlain, T. C. Ratcliffe, H. B. Salls, Stuart E. Pierson, Ralph C. Lupton, and H. W. Mann, directors. Organized Sept. 28, 1909, under laws of Delaware, as a reconstruction of the Cornelia Copper Co., capitalization \$6,000,000, shares \$5 par, nonassessable; issued, \$2,650,000. Debentures, \$50,000, at 8%, called in and paid July, 1912, two years before maturity. Bankers Trust Co., St. Louis, registrar and transfer agent. Annual meeting, second Tuesday in December.

The Calumet & Arizona Mining Co. was given a year's option on all of the treasury stock and about 65% of issued stock at \$2.50 per share in Sept., 1911, which option was taken up in Oct., 1913. This company has had possession of the property since Oct., 1911, and has spent from \$5,000 to \$20,000 per month since that date.

Drilling and other work on the property by the Calumet & Arizona Co. has, it is said, proven the existence of 29,000,000 tons of ore carrying 2% copper, mostly available for steam-shovel mining. Much of this ore carries too much oxidized material to be concentrated, but will be treated by leaching.

Property, 14 claims, all patented, area 243 acres, 45 miles from the Southern Pacific railroad at Gila Bend, Ariz. Claims show monzonite, porphyry and granite, carrying disseminated copper ore. Mine has about 1,100' of workings.

Ores include cuprite, malachite, chalcocite, bornite and chalcopyrite. From the surface down to a depth of about 150' it is principally carbonate ore; below the oxidized zone the rock carries sulphides, which continue downward to the greatest depth explored, but are of low grade.

The average value of both the carbonates and sulphide ore is something less than 2% for the entire property and, so far as exploration has extended, no barren ground has been encountered. The ores carry about 2 oz. of silver and \$1 in gold per ton beside copper values.

Equipment includes a 40-h. p. and 60-h. p. steam plant, with hoists and a 1-drill compressor. There are 5 buildings, including a machine shop and smithy. A 10-stamp mill has 10 gravity stamps, a 75-ton Gates crusher, 4 Wilfley tables and 3 sizers.

The company's early history and its experiments with new processes are fully described in Vols. VI, VIII and X. In 1910, the General Development Co. bought 20,000 shares of stock for \$20,000, spending the money under an option for a stock control, putting down 5 diamond-drill holes, deepest 188', which showed the ground to be oxidized to a depth of about 30', followed by sulphides, estimated by the company to average 2 to 2.75% copper. The option was forfeited 1910 and property was leased to H. C. Chamberlain who shipped concentrates from 800 tons of 4% ore to the Copper Queen smelter.

NEW DOMINION COPPER CO., LTD.

BRITISH COLUMBIA

Office: 42 Broadway, New York, N. Y. General office: Greenwood, B. C. Works office: Boundary Falls, Boundary district, B. C. Lucius W. Mayer pres.; Newman Erb and C. A. Starbuck, vice-presidents; preceding officers, C. B. Mears, Hon. Warren W. Foster, John A. Sleicher and Chas. H. Burke, directors; H. B. Blanchard, sec.; R. H. Eggeleston, treas.; Oscar Lachmund, gen. mgr.

Organized June 9, 1909, under laws of British Columbia, capitalization \$1,750,000, shares \$5 par; issued, \$1,178,320; treasury holds \$499,800 in stock for conversion of like amount of bonds. Debentures, \$500,000 ten-year 6% gold income bonds, convertible into stock at par; outstanding March 31, 1912, \$483,650. Empire Trust Co., New York, transfer agent. Annual meeting, first Monday in June.

The annual report for the year ending March 31, 1913, shows a net profit of \$116,949. Cash in bank amounted to \$164,516, accounts receivable \$128,288 and accounts payable \$14,492. The figures for 1912 were as follows: Operating loss, \$11,811; cash in bank, \$114,578; accounts receivable, \$91,125; accounts payable, \$15,778. Company made payment of coupon No. 4 of its bonds in Oct., 1913, holders releasing company from payment of coupons Nos. 1, 2 and 3, as income was not earned.

This company is a drastic reconstruction of the Dominion Copper Co., Ltd., originally the Montreal & Boston Mining Co. The property was acquired at foreclosure sale for \$347,999.85. Is controlled, through ownership of about 155,000 shares, or 64% of the issued stock and one-third of the bond issue by the British Columbia Copper Co., Ltd.

The mines are operated by the British Columbia Copper Co. and the ore is smelted by that company under a contract providing for the payment of actual smelting charges plus 50 cts. a ton for interest and depreciation. A recent change has been made which provides for a fixed profit of 15 cts. a ton guaranteed by the British Columbia Copper Co., regardless as to whether such amount be realized from the ore or not.

Lands, 15 claims, 500 acres, fractional interests in 94 claims additional, also a 32-acre mill site, an 80-acre town site, a water-power plant at Boundary falls and a 1,000-ton smelter. Mining lands are in 4 groups, in the Phoenix, Deadwood, Wellington and Summit camps. Country rocks are limestone and greenstone, orebodies occurring largely as replacements in greenstone. These deposits are all more or less developed, of about 25' average width, a generally north-south strike and average dip of about 40°. The ores are low in average grade and the mines, though showing large orebodies, have a comparatively small amount of ground blocked out. For the fiscal year ending July 31, 1907, the mines made 8,519' of new openings. From June 17, 1909 to March 31, 1910, the mines were not operated. The Rawhide and Athelstan mines were reopened in 1910.

The mines at Phoenix, comprising 366 acres, include the Brooklyn, Idaho, Rawhide, Stemwinder, Montezuma and Standard mines. The Brook-

lyn and Idaho are adjoining properties and the Rawhide is about one-half mile distant.

The Brooklyn mine, which was for years the principal producer of the company, has a 430' main shaft, with a steam hoist and about 8,000' of workings, showing a 40' vein, estimated to average 1.43% copper, 25 cts. silver and \$1.32 gold per ton. The orebody was relatively high grade, but is faulted or cut off by a cross fracture and not recovered beyond it.

The Idaho mine, connected with the Brooklyn on the 250' level, is developed by tunnel and shaft, latter having an electric hoist, but the mine is worked open cast.

The Stemwinder mine, opened on a vein parallel with and about 1,000' east of the Brooklyn, has a 400' shaft, with about one-half mile of workings, yielding ore averaging about 1.4% copper, 25 cts. silver and \$1 gold per ton.

The Rawhide mine, now the principal producer, shipping about 600 tons of ore daily, adjoins the Gold Drop mine of the Granby. The property, thoroughly prospected by diamond drilling, has ore averaging about 1.4% copper, 25 cts. silver and 90 cts. gold per ton. Development is by a 180' shaft, 6 tunnels and various open cuts; work aggregating 1,229' of drift and crosscut work with 1,208' of raise and winze work, besides enlargement of former openings, was done in 1910-11 and 950' of diamond-drill exploration in 1912. Ore is sent through chutes to the main level and trammed through the tunnel and over a trestle to ore bins at the crusher plant. Production 1912, 172,856 tons.

The Montezuma and Standard claims, but slightly developed, show low-grade ores similar to those of the other mines of the Phoenix camp.

The Deadwood group, 110 acres, includes the Sunset, Morrison, Crown Silver, Little Buffalo and C. O. D. mines.

The Sunset mine, now idle, has shafts of 200' and 412', and large open-cast workings. The orebody is valuable chiefly for flux as it carries excess of iron, silica and lime, with only small copper, silver and gold values. A trestle from the Sunset mine runs to a 2,000-ton ore bin on the railroad siding. Equipment includes a 14x20" Jenckes duplex link-motion hoist, 14x20" Lidgerwood double-cylinder hoist, and a 10-drill Ingersoll-Sergeant duplex air compressor. Production of the Sunset mine, 1907, was 31,258 tons of ore.

The Crown Silver mine adjoins and is practically a part of the Sunset. Development is by a 265' shaft and an 880' tunnel.

The Morrison mine has a 364' shaft with 4,300' of tunnels, showing ore averaging about 0.6% copper, 1.5 oz. silver and up to \$4 gold per ton. Equipment includes a 110-h. p. steam plant with a 7x9" hoist and 5-drill Canadian-Rand air compressor.

The Athelstan or Wellington group includes the Athelstan and Jackpot mines, with combined area of 34 acres. These show a large outcrop of oxidized ore carrying very low values in copper, about 1 oz. silver and up to \$7.50 gold per ton, but expected to carry somewhat better copper values below the oxidized zone. The Jackpot was a considerable producer 1910 and the new company ran a 200' tunnel and did 1,000' of diamond drilling in 1910-11. The Athelstan mine produced 6,388 tons in the year ending March 31, 1912, but mine was shut down Dec., 1911, as vein is narrow and prospects for more ore are unpromising.

The Summit group includes a one-half interest in the Lancashire mine, having a vein carrying silver ore, and a three-fourths interest in the Mountain Rose mine. The Mountain Rose, developed by 2 tunnels, has a vein

about 15' wide, carrying pyritic ore, low in silica, with small gold and silver values for fluxing purposes.

Equipment at the Brooklyn mine at Phoenix includes electric hoist and a 25-drill Canadian-Rand air compressor, driven by a 450-h. p. Canadian Westinghouse electric motor.

Electric power is taken from the Bonnington Falls plant of the West Kootenay Power & Light Co., transmitted 87 miles at 60,000 volts, entering the works at 2,000 volts and then being stepped down again to 550 volts for use.

Ore is transported 4 to 25 miles by rail from the various mines to the smelter, at a freight rate of 17 cts. for Deadwood ore and 30 cts. per ton on ore from the mines of the Phoenix and Summit camps.

The 1,500-ton smelter, 4 miles from Greenwood, is now idle. Described Vol. X.

Production of the old company, for year ending July 31, 1907, was 187,981 tons of ore, yielding 2,910,695 lbs. fine copper, 42,606 oz. silver and 10,321 oz. gold, giving an average recovery of about 15.5 lbs. fine copper, 0.5 oz. silver and \$1.10 gold per ton.

Production for the year ending March 31, 1913, was 294,300 tons of ore yielding 7,304,713 lbs. copper, 10,862 oz. gold and 79,450 oz. silver. The treatment cost was \$1.85 per ton and the company received 16.655 cts. per pound for its copper and 61.743 cts. an ounce for its silver.

NEW DOMINION GOLD MINING CO.

COLORADO

Letter unclaimed at Denver, Colo. Mine near Ophir, San Miguel Co., Colo. Samuel Morris, pres.; J. V. Butler, vice-pres.; J. H. Frank Smokey, sec.-treas. and gen. mgr., at last accounts. Organized 1906, under laws of Arizona, capitalization \$1,800,000, shares \$1 par. Has tunnels of 940' and 1,100', showing auriferous and argentiferous copper, zinc and lead sulphides. Probably dead, as it had no funds on hand in 1910.

NEW DOMINION MINES CO.

ARIZONA

Office and mine; Globe, Gila Co., Ariz. Organized 1905, capitalization \$1,000,000. Lands, about a half mile north of the Gibson mine, are said to show a 12" vein in schist, opened by 240' shaft. After 2 years of work, this vein, carrying chalcopryrite ore averaging 23% copper, was struck in a cross-cut from the tunnel face.

NEW ELY CENTRAL COPPER CO.

NEVADA

Main office: 907 Market St., Wilmington, Del. Business office: 16 State St., Boston, Mass. Mine office: Ruth, White Pine Co., Nev. James Milne, pres.; John G. Gray, vice-pres.; Jonathan H. Brown, sec.; H. E. Lodge, treas.; J. Pearce Cann, local mgr. directors; Frank J. Gallagher, supt. Organized Feb. 19, 1912, under laws of Delaware, capitalization \$8,000,000, shares \$5 par, fully paid, nonassessable; issued, 500,000 shares. Bonds authorized, \$500,000, 6%; \$175,000 issued. American Trust Co., registrar; Federal Trust Co., transfer agent. Annual meeting, second Monday in February. This corporation was reorganized from the wreck of the Ely Central Copper Co. by about 1,600 of its stockholders. All the stock and bonds that have been issued are to the stockholders of the corporation which participated in the reorganization plan, except stock of the par value of \$5,550,000 which was issued in trust for treasury purposes. The management proposes a careful but comprehensive plan of exploration for the purpose of developing a mining enterprise. Balance sheet for year ending Dec. 31, 1912, showed gross earnings \$18,607 and net earnings of \$11,893.

The development of the property is to be done by the Mines Development Co. under an agreement by which a deed to the property is placed in escrow to be delivered to the Mines Development Co. on or before

Jan. 1, 1915. The latter company was to immediately commence drilling the ground, agreeing to sink at least one 2,000' hole and such other holes as will convince them of the value of the property. If the deed is taken up the new Ely Central stockholders will be paid \$1 per share for their stock. An alternative offer is that the stock or bonds may be turned in for exchange for stock of the new company of similar capitalization at the underwriting price.

Property, 32 claims, patented, except 1 fraction, 479.66 acres, in the Robinson district, White Pine Co., Nev. Claims join the property of the Nevada Consolidated Copper Co., lying immediately east and north of the Copper Flat and the Liberty steam-shovel pits of that company. They cover an area of altered limestone and rhyolite with small exposures of monzonite. This rhyolite is a flow underlain by volcanic tuffs resting on mineralized monzonite, in a small tract immediately east of the Copper Flat steam-shovel pit where faulting along a nearly north and south line has thrown rhyolite against limestone and monzonite. The greater part of the rhyolite area is however underlain by altered limestone. The value of the property rests upon the determination of the presence of disseminated copper ore beneath the rhyolite and of the finding of commercial orebodies in the limestone.

Development up to the present time has been small. A limited amount of churn drilling done in former years failed to disclose commercial ore and in fact most of the holes are believed to have been in altered limestone, or in barren rhyolite. A drill hole in the southeast section of the property is said to show disseminated porphyry ore beneath the rhyolite flow, but sufficient drilling has not yet been done to prove its extent, or commercial worth. Workings from the Zack shaft on Ely Consolidated ground, driven to within a few feet of the east boundary of the Ely Central claims, show oxidized copper ore dipping into the New Ely Central from the east on the 600' level.

A comparatively shallow drill hole on the north contact gave encouraging indications late in 1912. The former company sank the Eureka shaft 627' deep with 375' of drifting on the 455' level and 151' on the 600' level, and the workings are said by former engineers to prove theory of faulting to be correct, but the workings were too deep for commercial ore. The Clipper shaft, 235' deep, has 295' of drifting and 92' of crosscutting on the 220' level. This shaft is in the jasperoid area and the limited workings demonstrated the presence of low-grade copper ore carrying small gold and silver values. These workings are now flooded. Two shallow shafts near the center of the ground and north of the Copper Flat pit show malachite ore of commercial grade in a fissure in limestone. Other workings near the north contact, on 1 of the westerly claims, show small bunches of high-grade ore.

Despite all that has been said and done, this property is still a prospect and its value remains to be determined. The Nevada Consolidated has made a contract with the company to prospect the Stewart claim by a 600' drill hole with a view of purchasing the surface rights for dumping waste, or carbonate ore from the steam shovel pits, in case the drill hole fails to develop steam-shovel ore 200' from the surface.

On Oct. 23, 1913, the Consolidated Coppermines Co. offered to take the New Ely Central bonds at par, payable 25% in convertible 7% bonds and 75% in stock of the Consolidated Coppermines Co. at par and to exchange stock at rate of 20 shares New Ely Central for 1 of Consolidated Coppermines. The offer is to be binding if accepted by a majority of the stock and bondholders without delay.

NEW ENGLAND & ARIZONA GOLD & COPPER MG. CO. ARIZONA

Idle. Letters to 250 Devonshire St., Boston, Mass., and Humboldt, Yavapai Co., Ariz., unanswered. Geo. A. Wooden, pres.; Louis Harlow, treas.; John H. Farrell, supt., at last accounts. Organized Jan. 19, 1901, under laws of Arizona, capitalization \$750,000, shares \$1 par.

Lands, 6 claims, 3 patented, 120 acres, including the Red Star group and Calumet groups, near McCabe, Ariz. The property is said to show 2 parallel veins, 30' apart, having paystreaks of 2' width, carrying ore assaying about 10% copper, with gold and silver values. The mine has a 600' two-compartment main shaft, a power house with a 70-h. p. boiler, 35-h. p. hoist and a small air compressor. Mine shut down many years.

NEW ENGLAND & CLIFTON COPPER CO. ARIZONA

Property near Clifton, Greenlee Co., Ariz., sold to the Detroit Copper Co. in 1912. By this purchase the Detroit Copper Co. acquired all the New England properties and also control of the Standard Consolidated Copper Co., which owns a majority of the stock of the Standard Copper Mines, the Clifton Copper Mines, Ltd., and a 26% interest in the Coronado Mining Co. The New England & Clifton is largely owned abroad and about \$2,000,000 was expended upon the property, but accumulated debts bankrupted the company and property was acquired at sheriff's sale by John K. Erskine. He in turn transferred it to the Phelps-Dodge interests. Fully described Vol. X.

NEW ENGLAND GOLD & COPPER MINING CO. UTAH

Office: 67 Milk St., Boston, Mass. Mine office: Bingham Canyon, Salt Lake Co., Utah. Jas. S. Williams, pres.; E. E. Abercrombie, vice-pres. and managing director; Geo. F. Bradstreet, sec.-treas.; preceding officers, Woodford Yerxa, Thos. Kellough, Francis H. Dowse and Geo. Bancroft, directors; David J. Cook, gen. mgr. Organized June, 1899, under laws of Colorado, capitalization \$2,000,000, shares \$10 par; issued, \$1,294,467. Bonds, \$500,000 authorized, at 6%; issued, \$119,800. Paid a 10% stock dividend, Oct., 1908. Federal Trust Co., Boston, registrar; Geo. F. Bradstreet & Co., transfer agents. Annual meeting, first Monday in June. Company owns the Bingham group of 9 fractional claims, 18 acres, in the Bingham, or West Mountain district, Utah, lying south of the Boston Consolidated, next to the Last Chance group and near the Utah Metals property.

The old Nast mine of the Bingham group shows porphyritic country rock carrying 3 fissure veins, of 30" average width, opened by the 1,600' Nast tunnel and the 1,670' Benton tunnel, both in ore, and 2 shafts, 1 of 159', with a total of about 6,000' of workings. Veins are said to widen at depth and ores are said to give average assays of 30% lead, 10% zinc, 15 oz. silver and \$4.50 gold per ton, with small and variable percentages of copper, some of the monzonite country rock carrying copper values that may prove workable at some later date. The mine produced milling silver-lead ore, handled in a 50-ton concentrator, running 1 shift, yielding 150 tons high-grade concentrates per month in 1911.

Equipment includes a steam plant with 2 hoists, 1 of 30 h. p., good for 800' depth.

The concentrator has a 4x12" Sturtevant crusher, 2 rolls, 2 Hartz jigs and 1 Wilfley table, operated by commercial electric current. Production was 2,108 tons of lead concentrates and 165 tons of copper ore, 1907, but property was closed down, late 1907, and mine was worked on only a small-scale, 1910, securing 936 tons of ore, giving net smelter returns of \$29,013, an average of \$30.98 per ton. In Feb., 1910, the Utah Metal Mining Co. sued this corporation for \$700,000 damages, alleging trespass and illegal

ore-extraction. The company also owns a group of 4 claims at Goldfield, Nev.

NEW ENGLAND MINING CO.

MASSACHUSETTS

Idle. Office: 35 School St., Greenfield, Mass. Mine office: Charlemont, Franklin Co., Mass. Othello A. Fay, pres.; E. Forrest Sweet, sec.; Capt. Geo. H. Davenport, treas. and gen. mgr., at last accounts. Organized 1902, capitalization \$500,000, shares \$5 par.

Owens about 1,000 acres 2 miles west of the Davis pyrite mine. Vein, traceable 700', is approximately vertical, conforming closely in dip and strike with the Savoy schist in which it occurs. Deposit apparently is a fahlband, lacking well-defined walls, ore occurring scattered through 15 to 20' of the schist, with 6 to 12" of quartz, well mineralized, on the south wall, and a heavy impregnation of chalcopryrite, $\frac{1}{2}$ to 2' wide, on the north wall. Property has been partly stripped, and vein trenched across.

NEW GOLD KING MINES.

COLORADO

Office: Care L. E. G. Green, secretary, 53 State St., Boston, Mass. Mine office: Silverton, San Juan Co., Colo. Property, the Gold King and Sampson mines, developed by a 625' shaft and a 2,800' tunnel, showing copper ores with values mainly in gold. Equipment includes steam and electric power. The 350-ton concentrator has 80 stamps and 4 tube mills.

The property has been conveyed to a committee of 3 to hold in trust for stockholders, bondholders and creditors, and leased by committee to Otto Mears, Denver, Colo., on shares, with option to purchase.

NEW HAVEN COPPER CO.

CONNECTICUT

Property at Seymour, Conn., is developing a copper-bearing band of hornblende schist, carrying chalcopryrite with some bornite. Operations have been carried on intermittently for several years, the last work being done in Oct., 1911. Company has power plant on the border of the Naugatuck river, flooded in 1911.

NEW ISSUE GOLD MINING & MILLING CO.

ARIZONA

Probably dead. Formerly at Mayer, Yavapai Co., Ariz.

NEW JERSEY METAL REFINING WORKS, LTD.

NEW JERSEY

Works office: Elizabeth, Union Co., N. J. Is controlled by Mountain Copper Co., Ltd.

NEW KEYSTONE COPPER CO.

ARIZONA

Office: 42 Broadway, New York, N. Y. Mine office: Miami, Gila Co., Ariz. Employs 50 men. Samuel A. Lewisohn, pres.; J. Parke Channing, vice-pres. and cons. engr.; preceding officers, Adolph Lewisohn, Walter T. Rosen, Jacob Langeloth, Theo. L. Herrmann, Ralph C. Lupton, J. S. Dunston and J. H. Susmann, directors; E. H. Westlake, sec.-treas.; B. Britton Gottsberger, gen. mgr.

Organized July 16, 1909, under laws of Delaware, capitalization \$3,000,000, shares \$5 par, nonassessable; issued, \$1,790,870. Was a reconstruction of the Keystone Copper Co., shareholders of the old company taking stock in the new in exchange for the property. Is controlled through stock ownership by the General Development Co. On June 18, 1912, company had \$111,790 cash on hand with development expenditures to date of \$215,414, general and administrative expenses of \$24,358, and insignificant current bills. Expenditures at the mine for the calendar year 1912 were \$25,229. Farmers Loan & Trust Co., New York, registrar. Annual meeting, third Wednesday in June.

Property consists of 16 patented claims, 243 acres, forming a tract separating the Live Oak and Inspiration mines of the Inspiration Consolidated Copper Co. About 60 acres of this land is underlain by Pinal schist, covered in part by a sheet of granite porphyry, 25 to 200' thick.

A strong fissure vein crosses the property and was mined by the old Keystone Copper Co., the vein being 12' thick with a paystreak averaging 15" from which shipments of 19 to 22% copper and 2 to 5 oz. silver per ton were made for some years, the mine yielding according to report about \$1,000,000. The present company has explored and opened up a deposit of disseminated glance ore similar to that of the Miami mine and the value of the property rests primarily on the amount of this ore.

Development by the new company has consisted in blocking out this orebody by underground workings and by churn drilling. The Keystone shaft is 330' deep and has 4,436' of work on the 150' level, 7,081' on the 250' level and 2,163' of raises and 156' of winzes, a total of 14,886'. Churn drilling along 200' squares was discontinued June, 1912, after company had put down a number of holes with an aggregate of 21,947' of work. These holes and the underground development together blocked out 2,516,000 tons of ore, which recent sampling shows to have an average value of 2.25% copper.

A lawsuit between the Inspiration Consolidated and this company was decided in its favor and prevents the Inspiration from carrying its main haulage tunnel through the Keystone ground.

The surface indications on the property are excellent but development has been disappointing in the amount of ore disclosed. Consolidation with another property seems necessary, though management is good and is aided by the best of expert advice.

The large amount of oxidized ore in the property makes treatment by the usual methods uncertain, only about 30% of the oxidized material being saved. Experiments by flotation and leaching methods are expected to materially increase the percentage of extraction and Mr. R. C. Canby, now engaged in experimental work in a testing mill on this ore, is understood to have evolved a cheap and very satisfactory method of treatment for the mixed oxidized and sulphide ore of the Keystone and Miami mines.

NEW MEXICO LEAD & COPPER CO.

ARIZONA

Address: E. E. Breed, Walker, Yavapai Co., Ariz. E. S. Osburn, superintendent. Property, the Breed group of mines near the Senator mine and about 2 miles from Walker P. O., taken over in 1912. The Effie claim shows a fissure vein reported to have 4' of chalcopryite and galena at 40' in depth. Machinery and electric drills were to be installed and 2 shafts sunk on the vein in summer of 1913, company receiving electric power from Walker.

NEW MONARCH MINING CO.

COLORADO

Office: Care J. Langeloth, 52 Broadway, New York City. Mine office: Leadville, Lake Co., Colo. Jas. B. McDonald, pres.; Frank Fuller, supt., at last accounts. Company is controlled by the American Metal Co., Ltd., a close corporation, through the Ohio & Colorado Smelting & Refining Co., owning the Salida, Colo., smelter. Owns the New Monarch and Cleveland mines, carrying copper, lead and zinc sulphides. Equipment includes a steam plant, air compressor, etc.

NEW PLANET COPPER MINING CO.

ARIZONA

Office: 42 Broadway, New York. Mine office: Planet, Yuma Co., Ariz. Chas. S. Barton, pres.; Wm. G. Nickerson, vice-pres.; Alexander Rae, sec.; Julius H. Susmann, treas.; preceding officers, S. S. Rosenstamm, Geo. Crompton, Jas. M. Satterfield and O. J. Ashman, directors; Samuel Untermyer, gen. counsel; J. Parke Channing, cons. engr. Organized July 13, 1909, under laws of Delaware, capitalization \$4,000,000, shares \$5 par, non-assessable; issued, \$1,714,525. Is a reconstruction of the Planet Copper Mining Co., stock of which was retired by exchange for 240,000 shares of New Planet stock. The General Development Co. owns 100,000 shares and had an option on 460,000 shares additional, but forfeited same after the

company expended about \$150,000 on exploratory and development work. Farmers Loan & Trust Co., New York, registrar. Annual meeting, third Wednesday in June.

A financial report for the calendar year 1911, issued in Oct., 1912, showed \$4,804 spent in 1911, about \$1,300 being used for mining development and \$3,000 for salaries. Cash on hand amounted to \$1,000, a poor showing for a company whose property is credited as costing \$4,041,715.

Property, the Planet mine with 31 patented claims and 3 unpatented placer claims, 750 acres, in the Harcuar district, on the southern bank of the Bill Williams Fork river, $21\frac{1}{2}$ miles from Bouse on the Santa Fe cut-off and about 6 miles from Swansea. The copper occurs mainly as oxidized ore, though nucleal particles of sulphides mixed with specular hematite are seen in the deeper workings. The orebodies are replacements in limestone, the ore bed developed at the Plant shaft lying on the contact between this rock and underlying gneiss. This deposit is 3 to 20' thick and dips 15° south. Much high-grade ore has been shipped from other parts of the property in past years; it was found as crusts, or shells, about impure hematite in limestone, especially near bodies of amphibolic rock now altered to black gneiss. A deep-seated mass of granite is the not improbable source of mineralization, although later igneous activity is shown in a volcanic plug not far distant and in the basalt flows which cover the surrounding country. The geology is very fully discussed in U. S. G. S. Bul. 451, p. 47, written by Howland Bancroft.

The ore deposits show a heavy iron gossan, mainly of hematite, apparently of workable grade, and it has been estimated that the property shows about 500,000 tons of 60% iron ore. The main orebody developed in the Planet shaft is about 300' in width, has a thickness of 4' 3" and an average copper content of 5.9%, according to a report by A. H. Kellar.

The main development, aside from open cut and tunnels, is at the Planet shaft, an incline sunk on the ore bed at an average angle of 15° to a depth of 733'. There are drifts, crosscuts, etc., amounting to 2,500'. A vertical 350' shaft connects with these workings and gives ventilation.

The old workings include 8 tunnels, longest 225' and 12 vertical pits and shafts, of 25 to 325' depth. About \$150,000 was expended under the management of the General Development Co. in sinking the vertical shaft and putting down a number of churn-drill holes, 3 holes showing low-grade sulphide ore below the old workings.

The Planet mine is probably the oldest copper mine in Arizona. It was opened in 1864, worked in a small way until 1874, and reopened in 1884 when a 36" circular blast furnace was erected. The property was taken over 1902, by the predecessor of the present company. The mine produced, 1864-74, upwards of \$500,000 worth of high-grade ore, ranging from 15 to 40% in copper, which was shipped down the Colorado river to a port on the Gulf of California, presumably Guaymas, and thence to Swansea, for reduction. A little ore was also shipped to San Francisco, and is said to have given fair profits, notwithstanding the heavy cost of freight and smelting and harassments by Indians.

Equipment includes a 75-h. p. gasoline plant, with two 15x25" hoists and a 5-drill air compressor. Buildings include a 15x40' frame carpenter shop, 10x10' smithy, 2 shaft houses and 3 dwellings. Property considered as still unproven, as churn drilling was too limited to determine existence, or nonexistence of large ore bodies, and the greater part of the area is unexplored.

NEW STATE COPPER MINING CO.

ARIZONA

Idle. Office and mine: Tucson, Pima Co., Ariz. James W. Bogan,

pres.; Chas. Bent, vice-pres.; Lyman W. Wakefield, treas.; Ralph K. Shelton, sec., at last accounts. Capitalization, \$2,000,000, shares \$1 par. Lands, 9 claims, in the Tucson mountains, 14 miles west of Tucson, show a prominent gossan, carrying oxidized ores and a little chalcocite, with small gold and silver values. Has a 40' shaft, showing a little chalcopyrite, and a short tunnel, with 400' of workings. Has shipped about 300 tons of ore.

NEW STATE COPPER MINING & SMELTING CO. ARIZONA

Address: Care Harry Sultan, Globe, Ariz. Organized 1911, under laws of Arizona. J. N. McDonough, pres.; Harry Sultan, vice-pres.; Wade Sotel, sec.-treas.; John F. Shaw, Frank Hubel and Chas. Miller, directors. Thos. P. Kelly, mgr. Annual meeting first Saturday in September. Property, 33 claims adjoining the Continental mine, at head of Webster gulch, about 10 miles from Miami. Claims cover an area of faulted quartzite, limestone and diabase, with quartz porphyry to the west of a strong fault. The Republic claim is crossed by the Duquesne vein in limestone, which is 5' thick and shows 1 to 3' of shipping ore carrying high values in copper and lead with vanadium. A 50' shaft sunk on this vein proved to be on patented ground belonging to the Continental mine of the Old Dominion Smelting Co. The vein has, however, been cut at a depth of 500' by a new 1,000' crosscut tunnel. Property regarded as promising and management honest and competent.

NEW STATE MINING & REDUCTION CO. ARIZONA

Office: 316 New England Bldg., Topeka, Kan. Mine near Amadoville, Santa Cruz Co., Ariz. Thos. M. Park, superintendent.

Property, 26 claims, showing veins carrying lead-zinc-copper ores, with gold and silver values.

Development is by 150' shaft with 950' tunnel developing ore. Equipment includes gasoline hoist and Ingersoll air compressor. In 1913 was planning to erect a 100-ton dry concentrator to treat low-grade ores.

NEW STATE SMELTING CO. NEW MEXICO

W. H. Case, mgr.; Herman L. Schneider, supt., Socorro, Socorro Co., N. M. Has a 200-ton copper-smelting plant, employing 50 men when operating and is equipped with steam power.

NEW UTAH BINGHAM MINING CO. UTAH

Office: 168 Bridge St., Springfield, Mass. Mine office: Bingham Canyon, Utah. W. W. Bellows, pres. and gen. mgr.; J. M. Donahue, sec.; G. H. Wing, treas.; preceding officers, J. E. Stanton and H. K. Bellows, directors; P. M. McCree, supt.

Organized April, 1912, under laws of Maine, capitalization \$1,375,000; shares \$2.50 par, \$2.30 paid; 397,532 shares outstanding. Authorized bonds, \$100,000, 5 year, 7%, issued Sept. 23, 1911, and payable Sept. 23, 1916; \$17,000 outstanding, \$23,000 cancelled. Security Transfer & Registrar Co., New York, and W. W. Eaton & Co., Springfield, Mass., transfer agents. Stock is listed on New York curb. Annual meeting, June 18. Company acquired property and assets of the Utah Bingham Mining Co. for \$1,182,550, giving the shareholders 1 new share, \$2.15 paid, for each \$5.00 share held.

Property, consists of 19 patented and 1 unpatented-claims, adjoining the Telegraph mine of the United States Mining Co., in Bingham Canyon, Utah. Claims cover about 3,000' along the footwall portion of the Jordan limestone ore-bearing zone of Bingham. The large orebodies of this district are found in fissures within the limestone, or along limestone contacts, and the Jordan belt is the most productive of the 3 belts known in the camp.

Development, before the company acquired the property, exposed a number of promising veins carrying ore in the porphyry, but too narrow to

be valuable. These veins pass into the limestone and are expected to have large orebodies at the contact.

In the Turngren tunnel, now over 1,200' long, 8 veins from 1 to 4' thick have been cut, 7 showing ore and 2 of them worked. These 2 veins run north and south, are parallel and contain high-grade ore in the Spanish mine and along the outcrop in the company's ground. The Harrison tunnel, 600' long, is in quartzite and will crosscut the Rough and Ready veins, which are opened by 3 other tunnels higher up the mountain, all showing ore. The Giant Chief vein is a fault fissure containing an orebody now worked out. It has a 200' shaft from which further exploration of the fissure will be done. Mine is equipped with compressor, 180-h. p. electric plant, taking current from the Utah Power & Light Co., hoist and all necessary buildings. Property is well adapted for tunnel work, has large blocks of virgin ground and is considered promising.

NEW YERINGTON COPPER CO.

NEVADA

Office: 1511 Walker Bank Bldg., Salt Lake City, Utah. Mine address: Yerington, Lyon Co., Nev. Chas. N. Strevell, pres.; Joseph E. Caine, vice-pres.; W. B. Outcalt, sec.; J. H. Paterson, treas.; S. V. Derragh, H. P. Clark, H. C. Edwards and Duncan MacVichie, directors; V. A. Gilles, supt. Organized Aug., 1911, under laws of Utah, capitalization \$1,000,000, shares \$1 par, assessable, at rate not to exceed 1 ct. for each 90 days. Listed on Salt Lake Stock Exchange. Is a reorganization of the Yerington Copper Co., whose stockholders received 1 share of new for 2 shares of old stock, leaving 570,000 shares in treasury.

Property, 12 claims, 4 miles due east of Yerington, shows porphyritic granite cut by diorite dikes. There are 3 distinct, nearly parallel veins, 50 to 300' apart, following the dike contacts. The oxidized ores extend downward about 100' and are underlain by enriched glance changing in depth to shoots of chalcopyrite and pyrite.

Chief development is on the middle, or Yerington vein by a 450' incline shaft having levels at 250' and 400' below the surface. The 250' level exposes an ore shoot 1 to 3' thick from which shipments have been made intermittently for past year. The 400' east drift, 424' long in June, shows a soft vein carrying a narrow shoot 3 to 5' thick of chalcopyrite ore in an altered gangue. The west drift is 210' long and shows another shoot of 8% ore. The Marsal 520' tunnel on the same vein encounters another ore shoot at 340', that is 1½ to 3' wide and has 3% ore extending to top of 90' raise. Shipments thus far have not quite covered expenses.

Equipment includes a 40-h. p. gasoline hoist, 320-cu. ft. compressor run by a 60-h. p. gasoline engine and a pumping plant jointly owned with the Blue Jay Co. Property regarded as promising.

NEW YORK-ARIZONA GOLD & COPPER CO.

ARIZONA

Office and mine: Morenci, Graham Co., Ariz. A. L. York, pres.; J. F. Cleaveland, vice-pres.; C. E. Tyler, sec.-treas.; preceding officers, R. E. Moore, W. C. Crawford and D. M. Causler, directors; John C. Molder, gen. mgr.; J. R. Wester, supt., at last accounts. Organized April 15, 1907, under laws of Arizona, capitalization \$900,000, shares \$1 par.

Lands, 30 claims, unpatented, 600 acres, and a 150-acre mill site, 4 miles west of Morenci, in the Copper Mountain district. Property includes the Buzzard Shadow and adjacent groups, showing quartzite, shale and limestone cut by porphyry. The claims show contact deposits having a generally east-west strike, with vertical dip. Four orebodies, more or less developed, ranging from 10" to 4' in width, with a claimed extreme width of 50', carry copper sulphides, said to assay about 15% copper, 10 oz. silver and \$10 gold per ton, which must be from selected ores.

There are 3 tunnels, formerly reported as of 100', 450' and 600' length, and the Lillian tunnel, 1,800', claimed to show a 6" to 6' vein carrying several ore shoots. There are 5 shafts, including the 260' Argentine shaft, showing copper sulphides, the 80' Louise shaft cutting an 8" vein showing ore assaying up to 15% copper, 180 oz. silver and \$20 gold per ton, and the 72' Jensen shaft near the Louise. The Buzzard Shadow group, at the eastern end of the property, shows a 2 to 4' vein carrying auriferous and argentiferous copper ore. Values, as developed in the mine as a whole, are mainly in gold. The mine is wet.

Equipment includes a 15-h. p. Fairbanks-Morse gasoline hoist at the Louise shaft, 4 Nissen stamps and a tube mill. Property leased until June, 1913, and reported to have shipped ore averaging \$1.35 per ton. Company expects to resume work with money received from royalties on expiration of present lease.

NEW YORK BONANZA MINING CO.

UTAH

Letters neither answered or returned from Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. Accounts for year ending Sept., 1912, showed \$3,334 liabilities over assets, despite assessments of 13 cts. per share to that date. M. J. McGill, manager. Property, 7 patented claims in Ontario canyon, 3 miles from Park City, showing lead and copper sulphides all silicious; has shipped considerable ore from the 400' and 500' levels, averaging about 2% copper, 10% lead, 100 oz. silver and \$2.50 gold per ton.

NEW YORK CONSOLIDATED MINING CO.

MICHIGAN

Idle. Office: Leopold Bldg., Houghton, Mich. Mine near Phoenix, Keweenaw Co., Mich. Frederick W. Nichols, resident manager. Lands, 720 acres, being the S. $\frac{1}{2}$ of the S. $\frac{1}{2}$, Sec. 3, N. $\frac{1}{2}$ of Sec. 10, S. E. $\frac{1}{4}$ of Sec. 10, E. $\frac{1}{2}$ of the N. E. $\frac{1}{4}$ of Sec. 15, T. 57 N., R. 32 W., adjoining the holdings of the Ojibway, and just east of the old Manhattan mine.

NEW YORK COPPER MINING & SMELTING CO.

ARIZONA

Office: 46 North Stone Ave., Tucson, Ariz. Mines near Helvetia, Pima Co., Ariz. Frank H. Lee, pres.; Samuel Seinsheimer, vice-pres.; H. E. Heighton, sec.; Harry A. Drachman, treas.; Henry Buehman, gen. mgr. Organized Nov. 4, 1901, under laws of Arizona, capitalization \$500,000, shares \$1 par.

Property, 8 claims, 110 acres, about 8 miles from Vail station, on the Southern Pacific railway, in the foothills of the Santa Rita mountains, southeast of Tucson. Property has contact deposits between limestone and porphyry, developed by several hundred feet of trenching and stripping, showing carbonate and sulphide ores at surface, with 3 shafts, aggregating 175' in depth, and 3 tunnels, showing ore averaging about 4% copper, with gold and silver values. Assessment work only was done in 1912.

NEW YORK & MONTANA COPPER MINING CO.

MONTANA

Mine near Corbin, Jefferson Co., Mont. J. H. McCabe, general manager. Organized 1903, under laws of Delaware, capitalization \$1,000,000, shares \$1 par. Lands about 250 acres, including the Erickson, Scioto and Copper Gulch groups, opened by 3 two-compartment shafts, said to make a good showing of medium-grade ore. Idle many years, but pays taxes and is presumably waiting until a sale can be made.

NEW YORK-NEVADA GOLD-COPPER MINING CO.

NEVADA

Idle. Office: Chicago. Mine near Goldfield, Esmeralda Co., Nev. Jas. Rice, pres.; W. B. McConnell, vice-pres. and treas.; Geo. S. Webb, sec.; Harry F. Parker, gen. mgr., at last accounts. Organized Aug., 1907, under laws of Arizona, capitalization \$5,000,000, shares \$1 par.

Lands said to be 31 claims, include 12 claims, 3 miles from Copperfield, Esmeralda Co., Nev., 50 miles northwest of Tonopah, reported to

show veins of 7 to 12' width, carrying high-grade copper ores; 19 claims 12 miles northeast of Goldfield, near Red mountain, and a 5-acre mill site near Acme, Nev. The company claims to have 1 mile of workings, with 20,000 tons of ore blocked out carrying values in copper, lead, silver and gold, but this seems open to question. Letters to office and mine, 1913, unanswered, but not returned.

NEW YORK & SALTESE COPPER MINING CO. MONTANA

Organized 1906, capitalization \$5,000,000, shares \$10 par, as a reconstruction of the National Mining & Smelting Co. No trace of recent operations securable and company probably bankrupt.

NEW YORK-SEATTLE COPPER MINING CO. WASHINGTON

Idle. Mine near Index railway station, Snohomish Co., Wash. Harry D. Cowden, pres.; R. H. Hingston, sec.; Philip Hingston, treas. and supt., at last accounts. Organized Aug. 17, 1901, capitalization \$1,000,000, shares \$1 par.

Property, 8 claims, 160 acres in the Mineral City and Creek districts, about 13 miles by a good wagon road from the Great Northern railroad. Claims show 4 veins varying from 4 to 20' in thickness and carrying copper ore said to give an average return of \$14.42 per ton as determined by mill tests. Development consists of 212' shaft and about 1,250' of tunnel work.

Equipment includes an air compressor and saw mill, both run by water power. A concentrator of 60 tons capacity was operating some years ago, making concentrate shipped to the Everett smelter. Property closed down.

NEWBURY MINING CO. ARIZONA

Idle. Office: 49 Federal St., Boston, Mass. Mine office: Florence, Pinal Co., Ariz. W. V. Lander, vice-pres. and gen. mgr.; C. M. Schofield, supt., at last accounts. Organized 1901, capitalization \$2,000,000, shares \$10 par. Lands 22 claims, 440 acres, and a smelter site, on the Gila river. Mine, about 4 miles from Cochran station, on Arizona Eastern railroad was formerly worked for silver, and has 4 practically parallel veins, with silver values changing to copper at depth. Development includes a 300' tunnel and 4 shafts of 285' to 350', the mine said to have several miles of workings, with reserves estimated at 175,000 tons, claimed to average about 4% copper and \$6 gold per ton, with silver values. Equipment includes 300-h. p. steam and electric power, and a 15-drill air compressor. Shut down several years.

NEWFOUNDLAND SYNDICATE. NEWFOUNDLAND

Organized by Ricketts & Banks and associates, 80 Maiden Lane, New York. Incorporated under laws of New Jersey, Nov., 1904, capitalization \$300,000. Owned control of Pilley's Island Pyrites Co. and Terra Nova Co. both having cupriferous pyrite mines in Newfoundland. The National Metallurgic Co., another subsidiary, had a plant at Newark, N. J., for the extraction of copper from roasted pyrite and the nodularization of the residue to fit it for sale to iron furnaces.

NIAGARA COPPER CO. ARIZONA

Office: Prescott, Ariz. Mine office: Bagdad, Yavapai Co., Ariz. Herman Voge, pres.; Geo. H. Schuerman, vice-pres.; J. P. Bauder, sec. and gen. mgr.; preceding officers, J. K. Miller, F. L. Wright, W. H. Bauder and D. Levy, directors. Capitalization \$1,000,000, shares \$1 par, nonassessable.

Lands, 8 claims, unpatented, 160 acres, and a 5-acre mill site, adjoining the Arizona-Nevada Copper Co., in the Copper Creek district, 25 miles from Hillside, the nearest railway station. The property covers an area of mineralized schist, underlaid by disseminated glance ore similar to that of the Bagdad Co., and of undetermined extent, thickness and grade. There are also narrow seams and veinlets of high-grade ore. Most of the devel-

opment work has been on such rich, but erratic ore occurrences. The mine has 3 shafts and 6 tunnels, with about 2,500' of workings, showing ore bunches estimated to average 3 to 6% copper, 2 to 7 oz. silver and \$1 to \$10 gold per ton.

NIAGARA MINING & SMELTING CO.

UTAH

Is controlled, through ownership of a majority of issued stock by the United States Smelting, Refining & Mining Co., and property described under that title.

NIBLACK MINE.

ALASKA

Address: Niblack anchorage, Prince of Wales island, Alaska. A. A. Wakefield, agent. Property at one time worked by the Niblack Copper Development Co., afterwards the Niblack Copper Co., is reported to have reverted to the Geo. M. Wakefield Mineral Land Co. Fully described Vol. VIII. No work was done on the property in 1912 and 1913 save annual representation, but new development was reported to be underway in Oct., 1913, and the Niblack Copper Co. is said to still have a corporate existence.

NICHOLS COPPER CO.

NEW YORK & QUEBEC

Office: 25 Broad St., New York. Works office: Laurel Hill, Queens Co., N. Y. Employs about 1,500 men. W. H. Nichols, pres.; J. B. F. Herreshoff, vice-pres.; Geo. Martin Luther, sec. and gen. mgr.; Edw. R. Nichols, treas.; W. H. Nichols, Jr., auditor. Organized May, 1905, under laws of New York, capitalization \$10,000,000, reduced 1912 to \$7,000,000, shares \$100 par; bonds \$3,000,000, as successor of Nichols Chemical Co.

The Laurel Hill Works include a smelter and electrolytic refinery, with steam and electric power. Material treated in the smelter is mainly ore and matte and blister copper in the electrolytic plant.

The Laurel Hill smelter has 20 reverberatory furnaces, taking 40 to 250-ton charges, each furnace heating a tubular boiler with waste gases. There is 1 Herreshoff water-jacket blast furnace of 500 tons rated daily capacity. Matte and slag flow, in an uninterrupted stream, to a large settler, whence slag skims into pots and matte is tapped into an iron bed. Waste gases pass into a 1,000' main flue, of iron and brick, leading to a 300' chimney.

The Laurel Hill electrolytic plant is operated on the series system, and plant has 550 tanks. Anodes are cast. The final product is cast mainly into wire bars. This company enjoys a deservedly high reputation for the purity of its product and the efficiency of its metallurgical practice. Is the largest electrolytic refining plant in the world; capacity about 40,000,000 lbs. of copper per month.

The works do a very extensive custom refining business, treating mainly ores and matte from outside producers in the smelter, and western blister copper in the electrolytic plant. The works handle all the bessemer copper from the Phelps-Dodge properties, and from the Old Dominion, Calumet & Arizona, Shannon, East Butte, Granby and Ducktown companies, and others.

The company is a subsidiary of the General Chemical Co.

NINETY-NINE COPPER CO.

NEVADA

Office: Salt Lake City, Utah. Mine near Goodsprings, Clark Co., Nev. Jas. T. Hammond, pres.; J. B. Jenson, vice-pres.; L. N. Stohle, sec.-treas., at last accounts. Organized May 20, 1908, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable.

Lands, 14 claims, unpatented, 8 miles north of Goodsprings. Developed by shaft 400' deep in Dec., 1912, with levels at 50' intervals. The mine carries high-grade oxidized ore occurring as fissure veins in limestone. A

number of small shipments to the Salt Lake and Needles smelters have returned 20 to 30% copper.

Equipment includes a 15-h. p. gasoline hoist, and a 3-drill air compressor. Company plans erecting a mill at Jean, Clark county, Nev. Property considered promising.

NIPISSING COPPER & SILVER CO., LTD.

ONTARIO

Idle. Office: Toronto, Ont. Letter unclaimed at Cobalt, Nipissing, Ont. A. Aubin, pres.; Duncan Donald, vice-pres.; F. Asa Hall, sec.; T. Baycroft, mine mgr., at last accounts. Organized under laws of Ontario, capitalization \$3,500,000, shares \$1 par. Lands are claimed to be 2,200 acres, said to show a 19' vein of sulphide ore assaying 11% copper and 41 oz. silver per ton, which figures are their own refutation. Idle several years and presumably past resuscitation.

NONESUCH MINE.

MICHIGAN

Office: care M. P. O'Brien, 1705 Fisher Bldg., Chicago. Mine address: Ontonagon, Mich. A. K. Camp and M. P. O'Brien, owners.

Lands, 640 acres, in the Porcupine mountains, next west of the White Pine mine, being the S. $\frac{1}{2}$ of Sec. 1, and N. $\frac{1}{2}$ of Sec. 12, T. 50 N., R. 43 W. Property shows 2 parallel beds of sandstone ranging from 4 to 8' in width and separated by a bed of slate about 5' thick. Formation dips to the south and east at from 8 to 35°. The whole formation is badly faulted and of the 2 beds the upper appears to be the richer. Copper occurs in fine grains and flakes.

The property was tested, 1907-08, by the Calumet & Hecla Mining Co., drill borings showing copper in very fine particles, but in considerable quantities, and a mill test of selected rock yielded 12 to 15% copper. This mine was the first to be opened on the Nonesuch conglomerate and is developed by incline shafts of 650', 450' and 300', with about 2,000' of laterals.

An experimental mill with 3 gravity stamps, built by the Calumet & Hecla, is said to have given surprising results, although the Nonesuch rock has been believed, for 40 years, to offer almost unsolvable difficulties in milling, owing to the exceedingly flaky nature of its copper.

The underground work done by the Calumet & Hecla Co. yielded rich copper showings until cut off by a fault, beyond which the ground turned poor. Having no knowledge of the true geological conditions, the company allowed its option on the property to lapse. Following the abandonment of operations at Nonesuch, a thorough diamond-drill exploratory campaign was conducted by the Calumet & Hecla Co., on adjoining lands and it was here that the true situation was first learned. Drill borings disclosed the existence of 2 beds, so very similar in appearance and size that a deceptive shift of the lodes remained unproven until exposed in crosscutting. Faulting had brought the upper and richer lode on the one side in direct line with the lower and poorer lode of the other side.

The property has lain idle since Sept., 1908, save for a little work in 1912-13, when the workings were unwatered to get out a few tons of ore to treat in the new Lovett grinding apparatus, designed to roll the flake copper into pellets, recoverable by ordinary concentration methods.

NONPAREIL CONSOLIDATED COPPER CO.

WASHINGTON

Office: Mansfield, Ohio. Mine office: Index, Snohomish Co., Wash. Dr. S. P. Ecki, pres.; Monroe Harmon, vice-pres.; F. G. Mahlman, sec.; R. S. McCreery, treas. Lands, adjoining the Sunset, said to be extensive, well watered and timbered and show 3 veins. Development is by a tunnel, cutting a vein of 20' estimated width carrying a 7' paystreak of chalcopryite ore of good average assay tenor. No returns secured. Claims are being patented according to last reports.

NONPAREIL CONSOLIDATED MINING & MILLING CO. UTAH

Probably closed down. Letter unclaimed at Grouse Creek, Box Elder Co., Utah. Clayton C. Herrington, pres.; Thomas Sherry, sec.-treas. Organized June, 1905, under laws of Utah, capitalization \$400,000, shares \$1 par, assessable, and has levied assessments of \$12,000. Lands, 25 claims, unpatented, 20 miles from railroad, having a 100' shaft and about 1,300' of tunnels, showing auriferous and argentiferous copper ore.

NONPAREIL COPPER MINING CO.**IDAHO**

Idle. Office: Wallace, Idaho. Mine near Mullan, Shoshone Co., Idaho. Amos M. Stroud, pres. and gen. mgr.; Jas. A. Wayne, sec., at last report. Lands, 8 claims, patented, on the west fork of Willow creek, across from the Carney mine, 3 miles southeast of Mullan. Development is by 4 tunnels, No. 1 being 74' and No. 4, the lowest, being 114'. Surface ores have given assays up to 1.5% copper, and 8 to 19 oz. silver per ton. Property is regarded as worthy of further development, judging from the reports received.

NORFOLK SMELTER.**VIRGINIA**

See Virginia Smelting Co., West Norfolk, Va.

NORSEMEN EXPLORATION CO.**BRITISH COLUMBIA**

Office: 424 Second Ave. So., Minneapolis, Minn. Mine office: Capsheaf, Van Anda, Texada island, B. C. E. E. Rorem, pres.; W. H. Curtis, vice-pres.; C. A. McKenzie, sec.; Allen T. Rorem, treas.; P. G. Adland, E. F. Laffin, A. E. Barker and Eden Schmidt, directors. Incorporated under laws of Arizona, capitalization \$500,000, shares \$1 par; issued, \$325,000.

Property, 26 claims, 1,200 acres, 730 patented, on Texada island, B. C. Land is heavily timbered and shows contact deposits between limestone, granite and diorite. Copper occurs as chalcopyrite and bornite, with gold and silver values. The Capsheaf claim has an 80' vertical shaft, showing 10' of ore, carrying 14% copper and \$11 in gold in the samples reported as taken from surface down to 59'. Ore expected by manager to average 4% copper and \$6 gold and silver. The Cameron claim adjoining the Texada Iron mine has an iron capping of magnetite with irregular streaks and patches of chalcopyrite thought by management to average 4% copper. The Aladdin claim carries silver-lead ore.

Company's property is about 3 miles long, convenient to tide water and only 20 miles from a smelter. Corporation is a land-holding company and will develop claims and dispose of them to other parties. Property regarded as promising.

NORTH AMERICAN COPPER CO.**NEW MEXICO**

Idle. Mine near Lordsburg, Grant Co., N. M. C. E. Woodnutt, pres. and gen. mgr. Wm. M. Gilland, supt. Organized April 30, 1906, under laws of Arizona, as successor of North American Mining Co., capitalization \$750,000, increased later to \$1,000,000, shares \$1 par, nonassessable; issued, \$800,000. Annual meeting, last Tuesday in April.

Lands, 14 claims, unpatented, in the Pyramid and Virginia districts, including the Nellie Bly and Cobre Negra groups. Property shows andesite, diorite and trachite, having 8 orebodies, reported by the management as fissures running parallel with porphyry dikes.

The Nellie Bly mine, in the Pyramid district, 8 miles southwest of Lordsburg, has shafts of 450', 125', 65', 33' and 40', with about 6,000' of workings. The 400' level shows a vein of 12' estimated width, with bornite-chalcopyrite ore said to average 5.8% copper and 5.5 oz. silver per ton.

The Cobre Negra mine, in the Virginia district, 6 miles southwest of Lordsburg, idle since 1906, is reported to carry melaconite, malachite, azurite and chalcopyrite, and is developed by shafts of 332', 180', 60', 85' and 85'.

Equipment includes a 40-h. p. hoist, good for 600', at the Nellie Bly

mine, and several mine buildings and 4 dwellings. Company said to have a 50-ton concentrator, known as the Lena, but this is not in commission.

The company shipped, 1907, to the Douglas and El Paso smelters, 98 carloads of ore, netting \$43,333.36, when copper was selling at 19 cts. per pound.

NORTH AMERICAN MINE.

MISSOURI

D. P. Shuler, manager, P. O. Box 67, Frederickstown, Madison Co., Mo. Held by Wm. F. Carter, Mercantile Trust Co., St. Louis, Mo., in trust for owners. Property formerly owned by North American Lead Co., was bid in at foreclosure sale Nov., 1910. Mine has copper as well as lead and was a notable producer in 1908-09. Idle since 1909, but expected to be reopened in 1913. Described Vol. VIII.

NORTH AMERICAN SMELTER & MINES CO.

COLORADO

Office: Boston Bldg., Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo. Works office: Golden, Jefferson Co., Colo. Organized 1909, under laws of Colorado, capitalization \$2,000,000, shares \$1 par. Has \$500,000 issue of 5% convertible bonds, on which interest being in default a receiver was appointed Oct., 1912. Property was sold at receiver's sale and bid in for \$215,000 for a reorganization committee. A new company is said to be formed to provide \$500,000 cash to improve the Golden smelter and to build a 300-ton concentration mill to handle low-grade ores.

The Donaldson group includes about 400 acres, patented, the former holdings of the Banner Consolidated Mines Co., International Gold Mining Co., Centurion Mining Co., Donaldson Mines Co., Champion Comstock Mining Co. and Prosperity Mining Co. The mines, carrying 2 main veins, for a length of about 6,000', have about 12,000' of workings, deepest nearly 1,600', ore being extracted through the Rockford tunnel. Equipment includes steam power, but properties are equipped with electric current.

The Donaldson mine, operated under lease by the Rockford Leasing Co., with John Larson as manager, has a well-defined vein exposed for a mile across the property. A "strike" of \$500 ore, carrying free gold as well as copper was made in Feb., 1913, but the ore streak where mined at a depth of 800' is said to average \$40 per ton.

The Golden smelter is an excellent plant with a Vivian sintering furnace and 2 blast furnaces of 500 tons rated capacity, making matte and doing a custom business. The equipment is electric throughout and the plant capable of doing cheap work. There are several old slag dumps, some of which may be worth resmelting. There is an 80-acre limestone quarry, 4 miles from the works.

NORTH BINGHAM CONSOLIDATED MINING CO.

UTAH

Office: Provo, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Jesse Knight, pres.; Wm. W. Mathews, vice-pres.; W. Lester Mangum, sec.-treas., and J. Wm. Knight, directors. Organized June, 1907, under laws of Utah, capitalization \$100,000, shares 10 cts. par, assessable; levied a one-half ct. assessment, 1910. Is controlled, through stock ownership, by the Knight Investment Co.

Lands, 6 claims, in Barney canyon, having a very wide ore zone, showing leached ore carrying traces of copper and up to \$2.80 gold per ton. Mining work, begun 1909, includes a tunnel of about 1,000', and a 2-compartment shaft. Property is considered a good development proposition.

NORTH BUTTE EXTENSION DEVELOPMENT CO.

MONTANA

Office: 25 Broad St., New York. Mine office: O'Rourke Estate Bldg., Butte, Mont. C. W. Peters, pres.; N. Bruce MacKelvie, vice-pres.; A. B. Wolvin, treas.; A. J. Ronaghan, sec.; preceding officers, Elbridge L. Adams, David Angus and Keith Stewart, directors. Organized Oct. 10, 1908, capi-

talization \$1,500,000, shares \$1 par; issued, \$1,349,036. Company owes (Oct., 1913) \$19,994 to the Butte & Superior Copper Co. for funds advanced. Is a reconstruction of the North Butte Extension Copper Mining Co., which was a reorganization of the North Butte Extension Mining Co. A controlling stock interest of \$800,000 was sold, March, 1910, to the Butte & Superior Copper Co. Annual meeting in September.

Suit was instituted by the Butte & Superior interests against the promoters of the North Butte Extension Development Co. to recover shares of stock claimed to have been illegally issued and a proposal to return 50,000 shares was made and accepted by the company, though the final details of the settlement have not yet been made public.

Apparently the company's only present property is the Overman claim, now owned outright, the Black Crow fractional claim of $2\frac{1}{2}$ acres and the Clipper and Assay mill sites. Development is by a 700' shaft, planned to be deepened to 1,000'.

Most of the ground on which the various North Butte Extension companies were organized was held only under options which were forfeited. The Occidental claim was developed by a long crosscut from the Butte & Superior shaft, but nothing of importance was found and after payments of \$90,000 the claim was abandoned. Much of the original ground held by the company is now owned by the Rainbow Development and Butte & Superior companies.

According to the contract with the Butte & Superior Co. the latter company has to drive a heading from the 1,200' level of its Black Rock shaft to the east end line of the Black Rock claim, then through the entire length of the Four Johns claim and then through the entire length of the Overman claim belonging to the North Butte Extension Co. Up to Sept. 1, 1913, this heading has been extended 1,260', approaching the easterly line of the Four Johns claim, and it is expected that it will be extended into the Overman claim in the early part of the coming year. The management states that as soon as development work has advanced sufficiently to warrant it, a report will be made to stockholders.

NORTH BUTTE MINING CO.

MONTANA

Office: 1400 Alworth Bldg., Duluth, Minn. Mine office: Butte, Mont. Thomas F. Cole, pres.; Charles A. Duncan, vice-pres.; Joseph B. Cotton, vice-pres. and gen. solicitor; Frederic R. Kennedy, sec.; Daniel R. Smith, asst. sec.; Edward J. Maney, treas.; Henry B. Paull, auditor; preceding officers, Daniel M. Clemson, W. J. Olcott, J. U. Sebenius and C. A. Congdon, directors. American Trust Co., Boston, Mass., transfer agent; Old Colony Trust Co., Boston, registrar. Stock listed on Boston Stock Exchange. John D. Pope, gen. mgr. Organized April 5, 1905, under laws of Minnesota, capitalization \$9,000,000, shares \$15 par; issued, \$6,150,000. The annual report for year ending Dec. 31, 1912, showed total receipts, \$5,120,221; operating expenses and improvements, \$3,449,503; net profits, \$1,670,912; dividends paid, \$697,000; surplus for year, \$973,718. Assets—mining property, \$7,876,171; cash, copper, and accounts receivable, \$1,617,210; bills payable, \$600,506; total surplus, \$2,800,779.

Gross earnings have been as follows: \$5,005,788 with net profits of \$2,720,670 in 1906; gross \$6,694,844 and net \$3,623,162 for 1907; gross \$2,703,971 and net \$857,880 for 1908; gross \$4,876,603 and net \$2,016,749 for calendar year 1908; gross \$4,082,880 and net \$1,086,421, 1909; gross \$3,790,991 and net \$560,888, 1910; gross \$3,752,160 and net \$641,857, 1911; gross \$5,120,322 and net profit \$1,670,719, in 1912. For year ending March, 1907, ore produced returned about 7% fine copper, shrinking in 1908 to 5% and in 1909 to an average of 3.77% copper. This increased to 6% in 1912.

Dividends are paid quarterly and have been as follows: \$1.25 in 1905; \$7.25 in 1906; \$6 in 1907; \$3 in 1908; \$4 in 1909; \$1.10 in 1910; \$1.20 in 1911; \$1.70 in 1912. A regular quarterly of 50 cts. was declared Sept., 1913, making total dividends, \$10,850,000.

To give holdings more regular outline exchanges have been made between the North Butte and Anaconda companies, the Anaconda securing fractional interests in the Emily claim, adjoining the Berlin claim on the west, for cash, and concessions regarding the Edith May vein, preventing future controversy over the western extension of that vein. The North Butte secured a five-sixths interest in the Sioux Chief claim, giving up a small portion of the western end of the Gem and a part of the Adirondack claim.

Litigation with the Tuolumne Copper Mining Co. was settled Nov., 1910, the North Butte obtaining absolute ownership of the disputed part of the Jessie vein, and the Tuolumne obtaining absolute ownership of the ground formerly owned jointly on which the North Tuolumne vein apexed. The Tuolumne thus gained the eastern 412' of the Jessie vein, below the 400' level, while the North Butte secured title to the vein in the eastern 412' above the 400' level, as well as confirmation of its title to all of the Jessie vein lying west of the 412' tract, through the remainder of the Jessie claim, a distance of about 1,100'.

Property comprises a solid block consisting of the following claims: Edith May, Copper Dream, Miners Union, Jessie, Hancock, Ground Hog, Paul, Croesus, Snowball, Lynchburg, John Emmit, Henry, Berlin, Leaf, Gustavus, Eva, Margaretha, with fractional portions and undivided interests in the following claims: Speculator, Adirondack, Sioux Chief, East Gem, West Gem, Carlile, Protection, Granite Mountain, Sunset. The last named was acquired in 1912, during which year options and partial payments were made on a number of additional mining claims in the Butte district. A one-half interest in the Granite Mountain claim was acquired from the Lewisohns, the company to sink at its own cost the existing 500' shaft to a depth of 2,000' with connection on the 200' level. Title to the shaft remains with the North Butte.

Property is traversed by a number of fault veins, mostly belonging to the Blue fissure series. These veins carry high-grade ores in shoots, which have thus far been remarkably persistent in depth. The ores carry much primary chalcocite, frequently massive, with considerable quantities of enargite and smaller proportions of other sulphides. All ores carry silver and lesser gold values. The veins are "heavy," requiring close attention and timbering with square sets, monthly timber used being about 1,000,000' board measure. No waste is hoisted, all being used for dry-filling. Waste is largely low-grade ore, a portion of which may be available for smelting at some future date and which can be extracted easily.

The exploration of the vein system has shown the necessity of thorough drifting along the veins at considerable depth and development on the 2,200 to 2,800' levels has opened up large orebodies, dispelling the fear felt by many men that the rich ores found on the 1,600 to 1,800' levels would be succeeded by impoverishment below.

The principal ore supply of the company comes from 8 northwest veins, known as the Adirondack, Edith May, Jessie, Gem, South Gem, North Croesus, South Croesus and Snowball. The Edith May and the Jessie vein were the principal ore producers of the North Butte at the inception of the company.

The Edith May is 18 to 42' in width, opened at 200' intervals from the 800' level downwards. The vein was of little value until the 1,200' level was

reached, after which there was a marked improvement culminating in the 1,800' level, which developed a vein up to 42' wide, carrying phenomenally high-grade ore, many of its stopes being practically all first-class ore for a distance of about 1,000' along the floor. The 2,000' level showed a slight decrease in average value as well as in the length of the ore shoot, while the 2,200' level showed a truly alarming falling off, the ore being of much lower grade than before and payable for only 300' in length as against a length of 1,000' on the 1,800' level, where the ore was mainly chalcocite and bornite, with considerable enargite. In 1912-13, new work disclosed a foot-wall 7' band of 5% ore for 300' on the 2,400' level, comparable with that first mined. Besides this the vein has a fine hanging-wall orebody, which, on the 2,600' level, shows 4' of 5% ore opened for but 50' in July. These orebodies have largely restored the prestige of this vein. The Edith May vein divides, east of the shaft, showing no commercial ore in the south branch, but these branches unite some distance west of the shaft. On the 2,000' and 2,200' levels, there are 2 fault planes, defining the limits of the better grade of ore, these faults diverging in their downward course.

The Jessie vein ranks next to the Edith May in production and promise. Where opened on the 700' level in the Gem crosscut, the Jessie showed a vein of about 10' width with bunches of 6% ore. The ore shoot found on the 1,200' and 2,200' levels was high grade, 8' wide and nearly 1,000' long, changing in character below this depth and showing considerable sphalerite in the drifts to the west. On the 2,200' level, the vein is about 12' wide, showing some ore up to 5% in copper tenor, but averaging materially lower than the ore in the workings above. The west drift on the 2,000' level opened a 150' ore shoot, 6' wide, carrying 6% copper and 7.5 oz. silver. The 2,200' level shows low-grade ore only. The 2,600' drift showed 4' of 3.5% ore displaced by a fault 15' from the crosscut and not yet recovered (July, 1913). On the 2,800' level, vein where cut is broken by a fault, and the value is undetermined.

The Croesus vein, now called the North Croesus, is opened by drifts on the 1,800', 2,000', 2,200' and 2,400' levels, developing a large and important orebody between the 1,600' and 2,000' levels. On the 1,800' level, the ore shoot is 8½' wide and averages 8 oz. silver per ton; on the 2,000' level, the shoot is 300' long averaging 10' thick of 3% copper and 6 oz. silver; the shoot is not yet cut on the 2,200' level, but on the 2,400' another ore shoot, 300' east of the one just noted, shows 2' of 3% ore with 7 oz. silver per ton.

The South Croesus vein has been opened on the 1,600', 1,800', 2,000' and 2,200' levels, with ore on each level; giving the best showing on the bottom level, 2,200'. It has carried from 3 to 4' of ore in shoots, the longest being 270', averaging 5.5% copper and 5.5 oz. silver.

The Gem vein shows no ore of commercial importance above the 1,600' level, but carries ore on that level, and the 1,800' level has about 6' of 4.5% ore. It is developed to a small extent on the 18th, 20th, 26th and 28th levels, both value and width increasing with depth, the 2,800' level showing 12' of 5.3% ore carrying 2.2 oz. silver per ton. The vein is irregular in size and grade and where developed has been broken by cross faults.

The Adirondack vein, like the Gem, shows no commercial ore above the 1,600' level, but shows an ore shoot 60' long on the 1,800', 160' on the 2,200' and 300' long on the 2,400' level, widening proportionately. On the 2,400' level the orebody is 12' wide, 300' long and assays 5.25% copper and 3 oz. silver; on the 2,600' level the crosscut shows 7' of 3.5% ore and the drift shows 4' of 3% ore.

The Snowball vein has characteristically high silver values. It was first cut on the 18th level in 1910 and has been proven to carry several splendid

orebodies by the development work of 1912-13. On the 1,800' level it has $1\frac{1}{4}$ ' of 4% ore with 4 oz. silver, for 100'; 4' of 3% ore with $5\frac{1}{2}$ oz. silver for 250' on the 2,000' level; 5' of 8% cu. and 8 oz. silver ore for 200' on the 2,200' level with both faces in ore (June 30, 1913), and $6\frac{1}{2}$ ' of 4% cu. and $7\frac{1}{2}$ oz. silver ore for 150' on the 2,400' level. Same shoot shows on 2,800' level.

Development on the property is very extensive, aggregating many miles of workings. New development for 1912 amounted to 18,140' compared with 17,000' in 1911 and comprising 15,391' of drifting and crosscutting. On the completion of the Granite shaft to the 2,800' level in Dec., 1913, this will be made the working shaft and equipped with a hoist good for 5,000', permitting greatly increased development.

The Speculator shaft from which all ore is hoisted was enlarged to 4 compartments when the mine was bought and has since been deepened to 2,800' with levels at 200' intervals, from and below the 1,400' point, developing all the veins worked in the mine. The Speculator shaft has a 128' steel headgear standing on a 41x60' concrete foundation, equipped with self-dumping skips and pockets, with daily capacity of 1,500 tons of ore, no waste being hoisted, as it is used for underground filling.

The 500' Jessie, 700' Gem and 500' Adirondack shafts are idle and of no present value. The Granite Mountain shaft, 2,600' deep, Aug., 1913, is connected with the main workings on the 700', 1,000', 1,200', 1,600', 1,800', 2,000' and 2,200' levels.

The different veins of the extensive system possessed by the North Butte are opened mainly from the Speculator shaft, regardless of old shafts and boundary lines of the claims, the work having been done as seemed most advantageous.

Underground haulage is done with electric motors on the 1,800 to 2,800' levels.

The main machinery plant and buildings are at the Speculator shaft. The engine house has a 20-ton traveling crane, and a 32x72" Nordberg Corliss duplex-cylinder hoist, operating 2 cages in counterbalance, with two 8-ton Kimberly skips swung under, each hoisting with $1\frac{1}{2}$ " round cable, and good for depth of 3,500'. An 18x36" duplex cylinder auxiliary hoist operates a double-deck cage, in a third compartment, for handling men, material and timber, and the shaft has a fourth compartment for ladders and pipes.

The 24x70' compressor house has an air compressor with piston efficiency of 3,482' of free air per minute, reduced to a pressure of 70 lbs. per sq. inch, capable of operating 40 to 50 rock drills. A new 4,000 cu. ft. compressor was installed in 1912. The boiler house, enlarged 1909, has two 500-h. p. and five 100-h. p. boilers. Miscellaneous buildings include a machine shop, smithy, carpenter shop, planing mill and a plate shop for repairing skips.

The North Butte ore is smelted by the Washoe works of the Anaconda under a new contract by which the company pays the smelter charges to the Anaconda Co. and the copper is turned over to the North Butte Co. and sold by its own agents, effecting a saving of \$150,000 or more a year.

Costs per pound of copper produced in 1912 were as follows: Mining and development, \$0.06977; freight, \$0.00197; concentration, smelting, transportation of metal, refining and selling, \$0.05689; construction, \$0.0008; a total of \$0.12943, compared with \$0.1236 in 1911, \$0.1242 in 1910 and \$0.8961 in 1909. Deducting value of gold and silver, cost per pound of copper in 1912 was \$0.09652.

Ore reserves, Dec. 31, 1912: 710,920 tons of 4.5% copper and $4\frac{1}{4}$ oz. silver; Speculator vein, 4,100 tons; Adirondack, 4,400; Edith May, 337,150; Croesus, 20,310; South Gem, 39,530; Snowball, 159,850; Jessie, 145,580 tons.

Reserves increased largely in 1912 and in July, 1913, were higher than at any previous time in the company's history, with high silver values due to the Snowball vein.

Output in 1912 was 434,854 tons of ore, or 425,248 tons of dry ore and 49 tons dry precipitate, of which 45,349 tons were first-class ore and the balance, or 89.3%, concentrating ore. Production has been as follows: 30,954,788 lbs. fine copper in 1905; 32,895,907 in 1906; 16,479,062 in 1907; 36,929,028 lbs. copper, 1,283,761 oz. silver and 1,593 oz. gold in 1908; 33,102,153 lbs. copper, 1,048,272 oz. silver and 1,302 oz. gold in 1909; 25,267,092 lbs. copper, 998,190 oz. silver and 1,195 oz. gold in 1910; 24,816,669 lbs. copper, 1,280,947 lbs. of silver, 1,280 oz. gold in 1911; 26,480,123 lbs. copper, 1,377,468 oz. silver and 1,367 oz. gold in 1912. Present production is at the rate of 2,225,000 lbs. copper a month, which cannot be exceeded until the new shaft is in commission.

The North Butte had a spectacular rise as a heavy copper producer and a dividend-paying mine of the first rank, and had an almost equally spectacular drop, due partially to the blighting effects of the 1907 panic, and also to the decrease in values in the Edith May vein, shortly after the panic.

NORTH CAROLINA MINING CO.

NORTH CAROLINA

Idle. Operating office: Webster, N. C. Mine near Medlin, Swain Co., N. C. Winfield Scott Adams, general manager, at last accounts. Lands, 200 acres, known as the Everett mine, including a good smelter site, and lands available for water power development, on Hazel creek, in the Smoky mountains. Developed by tunnel, showing mainly chalcopryite, with some melaconite, and native copper, ores being said to average about 6% copper. Equipment includes a steam plant and a 4-drill Rand air compressor. Company in litigation over titles from 1899 until 1910, when they won the suit.

NORTH DOUGLAS COPPER CO.

NEVADA

Address: H. D. McMasters, owner and manager, Ludwig, Lyon Co., Nev. Property north of the Nevada-Douglas and just south of the Kaufman-Randall group. Development consists of a 350' tunnel that has encountered commercial ore, according to press reports.

NORTH FORK GOLD & COPPER MINING CO.

IDAHO

Office: 520 Cedar St., Wallace, Shoshone Co., Idaho. Mine at Nelson Siding, Shoshone Co., Idaho. Curtis Lightner, pres. and mgr.; Victor E. Waltman, vice-pres.; John Dolan, sec.-treas.; preceding officers, Jesse Freeman, Wm. Sites and J. E. Lightner, directors; Myron Lightner, supt. Organized Dec., 1908, under laws of Idaho, capitalization \$1,000,000, shares \$1 par, assessable; issued, \$50,000. Annual meeting, third Saturday in April.

Property, 9 claims, unpatented, and a 7-acre mill site, on the North fork of the Cœur d'Alene river, 13 miles from Enaville, shows two 4' fissure veins, in Revette quartzite, carrying lead and copper ores, latter being in the form of chalcocite, estimated to average 7% copper, 10 oz. silver and \$4 gold per ton. Development is being carried on at the Silver Creek tunnel, which follows the vein and has encountered stringers of copper ore in the hanging wall at 290', though not yet beneath the ore chimney found above. The older workings comprise a 40' upper and 65' middle tunnel estimated by management to show 25,000 tons of ore. Equipment includes a hoist and 3 mine buildings.

NORTH LAKE MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Operating office: Sheldon Bldg., Houghton, Mich. R. M. Edwards, pres. and gen. mgr.; Henry Tolman, treas.; preceding officers, S. L. Powers, Arthur C. Paine, I. J. Sturgis; sec., A. L. Wyman, directors. Organized Aug. 26, 1908, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; fully issued, \$9 paid in. Company

paid \$144,000 for 360 acres of land, bought of St. Mary's Mineral Land Co., one-half in cash and one-half in 9,000 shares of stock at \$8. Company began business with full title to lands and \$300,000 cash in the treasury. The company suffered heavily by the failure of S. R. Dow & Co., Sept., 1912, losing \$160,188 in cash and interest unlawfully borrowed by its former president, S. R. Dow, and at the end of 1912 was \$19,000 in debt. This indebtedness was wiped out by an assessment of \$1 per share, levied April 18, 1913, and company was again in comfortable financial condition Sept., 1913. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston stock exchange. Annual meeting, third Thursday in April.

Lands 1,120 acres, in Secs. 28, 29, 32 and 33, T. 51 N., R. 37 W., lying immediately north and east of the Lake Copper Co. Property was supposed to carry about 7,000' of the strike of the Lake amygdaloidal bed, but apparently the Lake bed curves to the westward, rather than to the east. Property also carries the copper-bearing series of the Evergreen belt of amygdaloidal beds, and various other unidentified cupriferous strata. The company's lands are crossed by the Fire Steel river, and are traversed by both the Mineral Range and Copper Range railways.

Exploratory work has been planned thoroughly and systematically, the preliminary work consisting of diamond drilling to give 2 complete cross-sections, of about 8,500' and 9,500' respectively, to determine the strike and dip of all the strata on the property. These sections are about 1,000' apart, and the contact of the Keweenaw series with the eastern sandstone has been definitely located by drilling. Numerous drill holes have been bored, with depths ranging from 200' to more than 2,000'.

Diamond drilling was begun 1909, and ended 1911, with the No. 15 hole. Several cupriferous amygdaloidal beds were disclosed, and 2, underlying Nos. 6 and 8 conglomerates, have been correlated as extensions of Nos. 1 and 2 of the Adventure series of lodes. No. 1 bed, of about 33' width, showed 10' fairly charged with copper and No. 2 bed was lean. The formations above No. 8 conglomerate bed are practically unexplored, and excepting the work done in holes Nos. 3 and 7 remain entirely untouched. The results obtained from holes 3, 7 and 13, below this conglomerate bed, were very promising and a vertical shaft was therefore started July, 1913, in the vicinity of No. 3, and is 300' deep with a drive into the hanging-wall country 100' long, Sept., 1913.

Equipment includes a Nordberg hoist good for depth of 1,200' and a small air compressor. There is also a boarding house and other necessary mine buildings.

The North Lake is an exploration company, but in view of the encouraging results secured by diamond-drill borings on this and adjoining properties, is considered promising and the present management is good.

NORTH LARAMIE PEAK COPPER MINING CO. WYOMING

Office: Douglas, Wyo. Mine office: Saul's Camp, Esterbrook, Converse Co., Wyo. H. C. Saul, pres.; L. V. Saul, sec.; W. C. Saul, treas. Organized 1908, under laws of Wyoming, capitalization \$2,000,000, shares \$1 par, fully paid and nonassessable. Property, 22 claims, 440 acres, in the North Laramie Peak district. Claims show pre-Cambrian schists bordering granite contacts, on which 1,000' of diamond drill work has proven existence of a flat body of disseminated chalcopryite ore 40' wide. A shaft has been sunk 90' on a chimney of chalcopryite ore said to assay 10% copper, 6 oz. silver and \$2 gold, for a total width of 5'. A second 80' shaft, also in ore, will be deepened to 300'. Two diamond drills are at work on the property and an 800' hole was started in May.

Equipment includes 50-h. p. boiler with 8x10" hoist and a 3-drill compressor. Is a close corporation, entirely owned and financed by Messrs. Saul.

NORTH ONTARIO REDUCTION & REF. CO., LTD. ONTARIO

Idle. Office: 88 Yonge St., Toronto, Ont. Works office: Sturgeon Falls, Nipissing, Ont. Lieut.-Col. J. I. Davidson, pres.; A. Ansley, vice-pres.; J. J. Wright, sec.; O. L. Young, supt., at last accounts. Organized 1906, under laws of Ontario, capitalization \$500,000. Company owns a smelter, between Sudbury and North Bay, built to treat the silver-cobalt ores of the Cobalt district and the copper ores of the Nipissing and Algoma districts. No returns secured.

NORTH POLE MINING CO. COLORADO

Idle. Office: Aspen, Colo. Mine near Crystal, Gunnison Co., Colo. Jas. T. Stewart, chairman and gen. mgr.; Geo. N. Smalley, vice-pres.; W. Porter Nelson, sec.; Frank Meyer, treas.; preceding officers, James R. O'Hara, Geo. H. Poor and A. T. Ferris, directors, at last accounts. Organized 1902, under laws of Colorado, capitalization \$500,000, shares \$5 par.

Lands, 37 claims, 640 acres, in the Rock Creek district, showing fissure veins, three of 3' average width, with tunnels of 340', 680', 450', 300' and 600', a total of 3,000' of openings, estimated to show 50,000 tons blocked out, ore being chalcopryite in quartz, claimed to average 8% copper, 1.5% lead, 2% zinc, 8.75 oz. silver and \$1 gold per ton. Equipment includes a 50-h. p. steam plant, a 7-drill air compressor and several buildings, including a 15x30' machine shop.

NORTH STAR MINING CO. WASHINGTON

Idle. Controlled by Chelan Consolidated Copper Co. See Vol. X.

NORTH UTAH MINING CO. OF BINGHAM. UTAH

In liquidation. Property sold to Hon. Judge Dyer, Portland, Me., for bondholders and transferred to the Mineral Lands Co. See Vol. X.

NORTHERN BELL MINING CO. MONTANA

Mine address: Princeton, Granite Co., Mont. J. D. Fields, manager, in 1912. Owns Northern Bell group of claims developed by 100' shaft showing a vein with sulphides carrying copper and gold. A raise connects with the tunnel above.

NORTHERN LIGHT COPPER CO. NEVADA

Address: Yerington, Lyon Co., Nev. D. W. McKenzie, lessee. Property, 6 claims, 20 miles east of Yerington. Operators said to have shipped 16.4% copper ore in May.

NORTHERN LIGHT DEVELOPMENT MINING CO. ALASKA

Idle. Mine address: Latouche, Latouche island, Alaska. Organized about 1909, under laws of Washington, capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, on an island in Prince William sound, opposite Latouche island, slightly developed by tunnels, with about 250' of workings. A blind shaft, sunk from a crosscut, shows 6' of auriferous and argentiferous chalcopryite. Property has necessary mine buildings. No returns secured.

NORTHERN ONTARIO CONS. COPPER CO., LTD. ONTARIO

Idle. Mine near Dean Lake, Algoma, Ont. Dr. John H. Gimby, president. Organized Oct. 17, 1906, under laws of Ontario, as a reconstruction of the Northern Ontario Copper Co., Ltd., capitalization \$1,500,000, shares \$5 par; issued, \$750,000.

Property, the Lizert and Bronson mines, 768 acres, partly owned, partly leased, in Thompson and Cobden townships, showing 2 contact veins of about 9' width. One vein occurs between slate and trap dike with granite, quartzite, slate and trap impregnated with chalcopryite. No. 1 shaft, 9x16', with 3 compartments, on the south vein, 130' deep, shows ore giving assays

up to 4.6% copper, 2.5 oz. silver and \$1 gold per ton. Several small shipments of ore, selected, carried 13.83% copper.

NORTHERN SIERRA MADRE MINING CO.**MEXICO**

Address: D. E. Alexander, 845 Pacific Bldg., San Francisco, Cal. Mine near Soyopa, Sonora, Mex. Chas. K. Blender, pres.; Carlo Giovannetti, vice-pres.; John O'Donnell, sec.; Fred Townsend, treas.; preceding officers, D. E. Alexander, Fred Trevarrow and E. C. Curtis, directors; F. R. Luckhardt, gen. mgr. Organized Aug. 2, 1901, under laws of California, capitalization \$300,000, shares \$1 par.

Lands, 167 acres, in 4 groups, including La Reina de Cobre and Providencia copper mines and El Colosus silver-lead mine, 25 miles west of Suaqui de Batuc. Property shows diabase, shale and limestone, reported by the management to have 5 orebodies, with 3 under development, of 2' average width, carrying oxidized and sulphide ores, with quartz gangue, estimated to average 15.5% copper, 20% lead, a trace of zinc, 73 oz. silver and \$8 gold per ton. Development is by a 37' crosscut tunnel and by drift tunnels of 100', 418' and 115', with 633' of workings, and management estimates 4,854 tons of ore in sight, with 3,214 tons blocked out for stoping. Closed down owing to Mexican revolution.

NORTHLAND COPPER-GOLD GROUP.**ALASKA**

Office: Ernst & Buddenborg, 518 Hinckley Bldg., Seattle, Wash. Property consists of 8 claims, in Ketchikan district, west coast of Prince of Wales island, southeast Alaska. Property said to show a 600 to 800' mineral zone containing numerous veins, traceable for 3 miles. Claims show limestone and greenstone porphyry intrusions, with flat dipping veins alongside, that run northeast and southwest. The veins are from 1 to 8' thick and contain lenses of ore with chalcopyrite mixed with pyrite, lying beneath the green stone hanging wall.

Development consists of a 70' crosscut tunnel showing low-grade ore and a 50' shaft, 3,000' distant, showing 3' of ore the entire depth. A 112' tunnel taps this shaft and shows 18" solid 20% ore, according to owners. Shipments of 153 tons are said to have returned 10.05% copper, 26.3% iron, 14.2% silica, \$1.38 in silver and gold, or a total value of \$19.84 per ton. Smelting rate to Tacoma is \$1.50 per ton for this ore; 44 tons shipped Dec., 1912, averaged 7.85% copper and 55 tons shipped May 27, 1913, averaged 7.39% copper, according to owners.

NORTHLAND DEVELOPMENT CO.**ALASKA**

Idle. 205 Colman Bldg., Seattle, Wash. Mine address: Dolomi, Prince of Wales Island, Alaska. A. B. Hill, pres.; C. D. Calhoun, vice-pres.; P. A. Tucker, sec.-treas. and gen. mgr. Organized March 18, 1908, under laws of Washington, capitalization \$100,000, shares \$1 par, nonassessable.

Lands, 11 claims, in the Ketchikan district, showing 3 contact deposits between limestone and greenstone, of which 1, under development, of 4' estimated average width, traceable 3,000', carries chalcopyrite, with schistose gangue, estimated by the management to average 10% copper, 3 oz. silver and \$1 to \$6 gold per ton. Development is by two 70' shafts and 3 drift tunnels, with 2,000' of workings.

Equipment includes steam power and an air compressor and the management planned a 1,800' ground tram to tidewater. A test shipment of 3 tons sampled 10% copper. Company probably reorganized as Northland Copper Gold Group.

NORTHPORT SMELTING & REF. CO., LTD.**WASHINGTON**

Office: Northport, Stevens Co., Wash. Anthony J. McMillan, president. Company is controlled through stock ownership by the Consolidated

Mining & Smelting Co. of Canada. Company owns the Northport smelter, idle for several years. Described Vol. X.

NORTHWEST CŒUR D'ALENE ITALIC COPPER MINING & DEVELOPMENT CO.

IDAHO

Idle. Mine in Priest River district, Bonner Co., Idaho. Thos. Golden, pres. and gen. mgr.; Wm. K. Glenn, sec.-treas. Lands, 3 claims, showing a 20' iron gossan carrying considerable hematite and magnetite, assaying \$2.50 per ton in copper, gold and silver. Development by a tunnel, planned to be driven 300', to give a back of 150'. Property has river and rail transportation to the Panhandle smelter.

NORTHWEST SMELTING & REFINING CO.

OREGON

Idle. Letters to 786 Broad St., Newark, N. J., and Sumpter, Baker Co., Ore., unanswered. Scott German, pres.; G. N. Whittle, sec.; F. W. Scofield, gen. mgr. Organized Jan. 26, 1910, under laws of New Jersey, capitalization \$700,000, shares \$10 par, nonassessable, in \$350,000 preferred and \$350,000 common stock; issued, \$400,000. Is operated as a close corporation.

Owens the Sumpter smelter, built by the Oregon Smelting & Refining Co., bought, under execution, Dec., 1909, for \$17,050. The company also owns 40 acres of mining claims, a limestone quarry, 640 acres of timber land, and the 200-acre smelter site.

The reduction plant includes a 33x37" sampling mill with 16x86' ore bins. The smelter, of 150 tons rated daily capacity, has a 38x144" Allis-Chalmers power-jacket blast furnace and a 100-ton Chisholm, Boyd & White briquetting press. The power house has a 16x36" Corliss engine with belt-driven blower and a 2-unit generator plant, supplying current for pumps and light.

NORTHWESTERN GOLD & COPPER CO.

OREGON

Idle. Office: City Bank Bldg., Wheeling, W. Va. Mine office: Susanville, Grant Co., Ore. C. A. McFadden, Jr., pres.; C. A. Kalbitzer, vice-pres.; Thos. W. Norton, sec.-treas.; John F. Slinger, gen. mgr.; preceding officers, G. L. Giesey, August Trabert, A. P. Brinkmier, Alexander Ogle, Sr., and Wm. Broadwing, directors. Organized May 3, 1907, under laws of Oregon, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$670,785. Annual meeting, second Monday in January. Lands, 3 claims, known as the Chattanooga mine, developed by shafts of 100', 210' and 90', with 533' of drifting, estimated by management to show 25,000 tons of ore. Property is reported to have an 18" vein of high-grade galena. Equipment includes a 60-h. p. plant, with hoist good for 500'. Management plans continuing work, 1913.

NORTHWESTERN METALS CO.

MONTANA

Eastern office: 1016 Real Estate Trust Bldg., Philadelphia, Pa. Reduction plant at Helena, Mont. Marcus L. Hewitt, pres.; R. G. LeConte, vice-pres.; C. M. Markoe, sec.-treas.; preceding officers, Chas. W. Prescott, Erie, Pa., Burrows Sloan, Archibald G. Thompson, Felton Bent and Arthur B. Huey of Philadelphia and John H. Henry and C. C. Titus of Helena, Mont., directors; C. C. Titus, mgr. Organized Sept. 8, 1909, under laws of Montana, capitalization \$3,000,000, shares \$10 par, nonassessable.

Company owns a two-thirds interest in the Bullion mine, with 6 claims, carrying copper ore, also 150 acres of placer ground, with water rights on Jack mountain, 10 miles from Basin, in Jefferson county, Mont.

The mine shows a vein in quartz monzonite cut by tourmaline bearing aplite. The vein has clay walls, is very wet and carries bunches of ore.

The ore is a mixture of pyrite, tetrahedrite, galena, zinc-blende, chalcopyrite and arsenopyrite in a gangue of white quartz. Development includes a 300' shaft and several thousand feet of level and tunnel work. Improve-

ments at the Bullion mine include a boarding house, bunkhouse, warehouse, smithy, office, laboratory and stables. The Bullion also has a 125-ton concentrator.

The smelter plant, located on the site of the old Peck concentrator, midway between Helena and East Helena, includes 3 stone buildings. The company controls the patent rights for the northwestern states, of the Baker-Burwell method of treating zinc ores, and after 3 years' experimental work is building a commercial plant expected to be in operation in Sept., 1913. This plant and previous work are said to have cost a total of \$275,000. Is a very speculative venture.

NORTHWESTERN MINING CO.

IDAHO

Idle. Prof. W. B. Clark, Johns Hopkins University, Baltimore, Md., pres. Mine near Lucile, Idaho Co., Idaho. Francis T. Homer, vice-pres.; Chas. G. Helm, sec.-treas. Organized May, 1905, under laws of New Jersey, capitalization \$200,000, shares \$1 par. Is a close corporation, temporarily not operating.

Property is the Blue Jacket mine, with 4 full and 6 other claims nearby, on west slope of mountains, between Salmon and Snake rivers, about 8 miles west of Lucile, Idaho. Claims show diabase, diorite and altered schist with a vein having an ore shoot estimated at 40 to 70' width, carrying oxidized ores followed by chalcocite and chalcopyrite, estimated to average 4 to 5% copper, 5.5 to 7 oz. silver and \$2.80 to \$4 gold per ton. Development is by shafts of 100' and 650' and an 868' tunnel, with 4,100' of workings, estimated by the management to show 60,000 tons of ore, with 25,000 tons blocked out for stoping. Equipment includes gasoline power. Is valuable if railway transportation were given.

NORTON; A. O.

QUEBEC

Office: 286 Congress St., Boston, Mass. Mine office: Suffield, Sherbrooke Co., Quebec. A. O. Norton, owner and mgr.; W. Jenkin, mine supt. Lands, 600 acres, freehold, except 150 acres, title to which covers only mining rights. Property includes the Suffield, King, Silver Star and Marrington mines, in Ascot township, 7 miles from Sherbrooke, with railroads within 2 miles on either side.

The property shows 3 lenses, of 3 to 20' width, 1 proven to depth of 400', estimated by owner to average 4 to 5% copper, from a trace to 10% zinc, 5 to 25 oz. silver, and \$1.50 gold per ton. The King mine, reopened 1900, has a 165' incline shaft with about 500' of workings. The Suffield mine, reopened 1906, has a 245' shaft with about 1,200' of workings, showing ore with an average of about 4%, and combined gold and silver values of \$2 to \$12 per ton, with about 25% sulphur. The Marrington mine, 100 acres, 1½ miles from the Suffield, and about 1 mile from Capelton, is opened by a 260' shaft with about 400' of drifts, developing a lens about 75' wide at surface, carrying at depth 5 to 7' of good ore. Steadily developing in 1912-13, with small force, but not yet shipping.

Equipment includes a steam plant, 100-h. p. boiler, a 25-h. p. double cylinder steam hoist and a straight-line air compressor. Property considered promising.

NOTRE DAME COPPER CO.

NEWFOUNDLAND

Mine office: Twillingate, Newfoundland. Merged, 1912, with the Great Northern Copper Co.

NUMBER ONE MINING CO.

WASHINGTON

Idle. Mine office: Nighthawk, Okanogan Co., Wash. A. B. Lee, manager, at last accounts. Mine is said to have a 33' vein carrying a 9' pay-streak of ore of concentrating grade, containing lead and copper values,

developed by tunnel and shaft. Company presumably bankrupt and property closed down indefinitely.

OAK CONSOLIDATED MINING & MILLING CO.

OREGON

Idle. Mine near Grants Pass, Josephine Co., Ore. Chas. W. Birum, manager, at last report. Property includes the Oak and Hidden Fortune mines, carrying gold-copper ores, in Josephine and Jackson counties, Oregon. Has gasoline engine and an air compressor.

OAK SPRINGS COPPER CO.

NEVADA

Caliente, Nye Co., Nev., nearest railway point. E. B. K. Ferguson, pres., Provo, Utah; B. H. Brown, vice-pres.; A. B. Rockhill, Salt Lake City, sec. Organized May 20, 1911, under laws of Utah, capitalization \$50,000, shares 5 cts. par. Owns claims in Oak Springs district, Nye county, known as Washoe No. 1 to No. 7 inclusive. The district is 80 miles S. W. of Caliente on the Salt Lake railroad and shows veins in limestone cut by granite.

OAKESDALE COPPER CO.

MONTANA

Idle. Mine near Java, Dawson Co., Mont. R. H. Hutchinson, pres. and gen. mgr. Organized Aug., 1907, under laws of Washington, capitalization \$100,000, shares 10 cts. par, nonassessable; issued, about \$80,000.

Lands, 19 claims, unpatented, in the unorganized Java district. Property shows quartzite and limestone, having an orebody reported by company to carry 12% copper, 7 to 8 oz. silver and \$6 gold per ton, developed by tunnels of 106', 475' and 560'. Equipment includes a 25-h. p. gasoline engine, and there are 7 buildings. No report received and company understood to be dormant.

OAKLAND COPPER BELL MINE.

NEVADA

At Yerington, Lyon Co., Nev. Owns group of claims in the Pumpkin Hollow section of Yerington district, developed by a 40' shaft showing 3' of ore, carrying 7% copper with 5 oz. silver and \$2 gold. Was making small shipments in summer of 1913.

OAKS CO.

NEW MEXICO

Address: Alma, Socorro Co., N. M., about 80 miles by daily stage from Silver City, the nearest railway point. W. J. Weatherby, pres.; H. A. Hoover, sec. Owns the Johnson group with 500 acres in the Cooney, or Mogollon district, showing the Fanny, Johnson, Trilby and other veins, now being developed. Company's principal work is the driving of a long cross-cut tunnel to be 9,000' long and intended as a main drainage and haulage tunnel for the district. This tunnel will intersect 2 veins said to be now producing at the rate of \$1,750,000 per year. The company is steadily developing its mines and shipping ore. It has leased part of its ground at tunnels, A, B and C.

The district is described in Mines of Mexico, U. S. Geol. Survey, Prof. Paper, 68, p. 191.

OASIS MINING & DEVELOPMENT CO.

UTAH

Idle. Office: Coalville, Utah. Mine office: Erekson, Tooele Co., Utah. Frank Evans, pres.; J. N. Dunn, vice-pres.; W. G. Fisher, sec.-treas. Organized Aug. 1, 1906, under laws of Utah, capitalization \$55,000, shares 10 cts. par, assessable, with assessments limited to 3%. Lands, 12 claims, unpatented, 42 miles from a railroad, having shallow shafts and short tunnels aggregating about 350' of openings, showing lead and copper ores.

OAXACA CONSOLIDATED COPPER CO.

MEXICO

Office and mine: Ap. 49, Oaxaca, Oaxaca, Mex. C. C. Lastinger, manager, at last accounts. Property includes the Magistral and Predilecta mines, near Oaxaca, carrying copper ores. Has water power. Shut down and presumably dead.

OAXACA MINING, MILLING & INVESTMENT CO. MEXICO

Mine near Ixtlan de Juarez, Ixtlan, Oaxaca, Mex. C. Arthur, mgr.; Robert McCormick, supt., at last accounts. Property includes La Esperanza mine, having auriferous and argentiferous lead, copper and zinc sulphides, with water power and 10-stamp mill. Probably closed down owing to Mexican disturbances.

OCEAN MINING CO. UTAH

Idle. Office: Salt Lake City, Utah. Mine address: Ibapah, Tooele Co., Utah. R. A. Kimball, pres.; Robert Palmer, vice-pres.; Brigham Clegg, sec.; C. C. Crapo, treas.; O. A. Smith, Sandy, Utah, supt., at last report, Organized 1907, under laws of Utah, capitalization \$60,000, shares 10 cts. par, assessable. Lands, 10 claims, unpatented, in Dugway district, 60 miles from a railroad, with a very rugged and arid country intervening. Property shown bedded veins carrying mainly copper, with some silver-lead, opened by shafts of 200' and 300'. Made a test shipment returning 23% copper. Property is being developed by a crosscut tunnel in limestone and quartzite, on Ocean claim.

OCTO MINING CO. NEW MEXICO

Office: 112 East State St., Redlands, Cal. Mine at Lordsburg, Grant Co., N. M. N. W. Hale, pres.; G. S. Turrill, vice-pres., and sec.; C. S. McWhorter, treas.; A. G. Hubbard, F. L. Winsor and C. C. Reasoner, directors; E. K. Davis, gen. mgr.; Chas. Pickenbeck, mine supt. Organized Nov. 15, 1912, under laws of California, capitalization \$500,000, shares \$1 par; issued, 300,000. Annual meeting, third Thursday in December.

Property developed by two 3-compartment shafts, about 175' deep, showing a deposit of ore said to average 15% copper. Equipment includes 2 small hoists, air compressor and 50-h. p. boilers. Company reported to be spending about \$1,000 a month for development work in 1913.

OEST; ALFREDO. MEXICO

Idle. Office: Apartado 65, Oaxaca, Oaxaca, Mex. Alfredo Oest, owner and general manager. Formerly owned by Oest & Enriquez. Lands, 363 hectares, well watered and timbered, 23 leagues from Acatlan, Puebla, including El Alfrez, La Morena, La Soledad and El Fresno mines.

La Soledad mine near Flapancingo, district of Silacayoapam, Oaxaca, is still idle. This mine carries copper ores which the owner intends to utilize in combination with the lead ore from the El Alfrez and La Vega mines in the same neighborhood, and as a flux for the silicious silver ores from his Realito group of mines at the old Spanish mining camp of El Realito, near the town of Silacayoapam.

OHIO & COLORADO SMELTING & REFINING CO. COLORADO

Office: A. C. Foster Bldg., Denver, Colo. Works: Salida, Chaffee Co., Colo. J. C. Kortz, pres.; B. Hochschild, vice-pres.; Max Schott, secretary and gen. mgr.; C. M. Loeb, treas.; F. D. Weeks, supt. Capitalization \$3,000,000. Is controlled, through stock ownership, by American Metal Co., Ltd. Company owns no mines, but owns and operates the Salida smelter of 1,000 tons rated daily capacity, doing a general custom business. The plant has a 150-ton sintering plant, a sampling mill, 3 furnaces and handles mainly silver-lead ores, the only copper treated being that bought with lead ores, which is concentrated to about 40% tenor and sold.

OHIO COPPER CO. UTAH

Liquidated and properties and assets transferred to the Ohio Copper Mining Co. Organized Nov. 1, 1903, under laws of Nebraska, capitalization \$1,000,000, and reorganized Aug. 8, 1907, under laws of Maine, capitalization \$10,000,000, increased Feb., 1908, to \$15,000,000, shares \$10 par; issued, \$12,292,700. Has authorized \$2,000,000 ten-year 6% gold bonds, convertible

into stock at par, at any time prior to Sept. 1, 1917; outstanding, \$1,326,000. Borrowed \$600,000 on notes, April, 1910, reduced, April, 1911, to \$500,000. Company planned a sinking fund, calling for \$100,000, beginning Sept. 1, 1910, but date for beginning the sinking fund was postponed and has not been heard of since. Company was formerly controlled, through ownership of about two-thirds of issued stock, by F. Augustus Heinze and the United Copper Co. The company having a floating debt of \$850,000 in June, 1912, with its unsold bonds given as collateral security, was reorganized as the Ohio Copper Mining Co., each share of the old company being exchangeable for 1 in the new on payment of \$1, the new shares being marked \$3 paid. In lieu of this, stockholders were offered a final liquidation dividend of 25 cts. per share. Balance sheet dated March 31, 1912, showed cash and accounts receivable, \$120,042; mill buildings, supplies, etc., \$1,508,848; mine development, \$681,329 and mining properties at par value of securities issued therefor, \$12,543,794. Liabilities include \$12,608,700 capital stock; \$1,246,000 first mortgage bonds outstanding; accounts payable, \$839,489 and surplus, \$159,826. Gross receipts, Oct. 31, 1911 to March 31, 1912 were \$434,903 and profit on operations, \$184,346, less fixed charges of \$74,869, leaving net profit of \$109,476.

Production for 6 months ending March 31, 1912, was 311,067 tons averaging 1.176% copper, yielding 9,219 tons concentrates of 22.2% copper, returning 3,754,866 lbs. copper. Costs per ton of ore are given as 26.7 cts. for mining, 16.03 cts. for transportation and 37.02 cts. for milling, a total of 79.78 cts. equal to 6.61 cts. per lb., which of course does not represent the real cost of the copper as sold, which was nearer 12 cts.

Company has been a most unfortunate investment to its stockholders from the start. The public has been misled throughout the entire life of the company, by unwarranted and highly-colored statements of the mining development, ore reserves, average values, mill recoveries and profit from operations. The new company is under the same control and management at date of writing.

OHIO COPPER MINING CO.

UTAH

Office: 74 Broadway, New York City. Operating office: Salt Lake City, Utah. Mine and works office: Lark, Salt Lake Co., Utah. W. O. Allison, pres.; M. Levy, treas.; F. Augustus Heinze, J. W. McKinnon, J. W. Pierson, Jr., W. C. Lewis and Walter I. Badger, directors; Chas. W. Saacke, sec.; Frederick Eckstein, asst. sec.; Alfred Frank, gen. mgr.; S. A. Dedrick, mill supt.

Organized July 8, 1912, under laws of Maine, capitalization \$8,000,000, shares \$5 par, \$3 paid; issued, 1,300,000. Funded debt \$2,000,000, first mortgage convertible 6% bonds; \$1,246,000 outstanding, due Sept. 1, 1917, interest payable March and Sept. 1, with proviso for \$120,000 sinking fund each year, met July, 1913, by the novel, questionable, but apparently only available method, of cancellation of that amount of treasury bonds. J. L. Williams, 74 Broadway, New York city, and David Fullam, Boston, transfer agents; Empire Trust Co., New York and International Trust, Boston, registrars. Annual meeting, first Wednesday in June at Portland, Me.

Balance sheet as of May 31, 1913, shows: Assets—mine and mill properties, \$4,745,789; treasury stock, \$250,000; furniture and fixtures, \$2,335; unexpired fire insurance, \$792; mill and mine supplies, \$65,090; cash, \$192,403; accounts receivable, \$278,603; total, \$5,535,014. Liabilities—capital stock, \$4,150,000; bonds, \$1,246,000; accounts payable, \$130,632; profit and loss surplus, \$8,381; total, \$5,535,014. No income account is presented but it appears from the 1913 balance sheet that a profit of \$93,177 resulted in the period from Aug. 1, 1912, up to May 31, 1913, or \$9,317 per month. Other

expenses consumed \$22,495, and bond interest \$62,300 more, leaving a net profit for the 10 months period of \$8,382. Current assets, consisting of \$192,404 cash and \$278,604 accounts receivable, compared with current liabilities of \$130,632.

Lands, 14 claims, patented, 120 acres, bounded on the north and west by holdings of the Utah Copper Co., on the east by the Fortuna Mining & Milling Co., on the south by United States Mining Co., and on the S. W. by the Boston Consolidated. The Mascotte tunnel, said to be controlled by Mr. F. Augustus Heinze, through the Bingham Central railway, exacts a toll of 15 cts. per ton on all ore extracted through that avenue, yielding a very considerable revenue to the owners. The mineral property was bought by the old company from the Columbia Copper Mining Co., for \$245,000.

Property carries some ore in veins along a mineralized zone with an E.-W. strike and dip of 45° N., consisting of a belt of quartzite of 500' width carrying 2 parallel veins, known as the What Cheer and All's Well. These veins are more than 500' apart, and separated by mineralized quartzite which constitutes the main orebody of the property, that carries ore said to average 1.6 to 1.8% copper, but actually averaging 1.015% copper. The quartzite, which adjoins the laccolithic mass of monzonite-porphry of the neighboring Utah Copper and Boston Consolidated properties, is much shattered and broken, with ore disseminations and impregnations along shatter and cleavage planes, in the brecciated material, ore being chiefly chalcocite and chalcopyrite, associated with pyrite, readily amenable to concentration, and lying above the level of the Mascotte tunnel.

The mine is developed by tunnels, and a shaft, with other shallow shafts of no importance. The main shaft, 6x12', is sunk at an angle of 45°, to depth of 1,100', where it connects with the Mascotte tunnel. The 800' Main crosscut tunnel intercepts the What Cheer and All's Well veins, the former being said to show 11' of rich sulphide ore, and the latter said to show a 6' vein assaying up to 5% copper, with small gold values. A seam of rich ore, cut in the Elvina vein, on the 500' level, shows a shoot of about 4' width, averaging 4% copper and \$1.80 gold per ton, with excess of iron.

Estimates of ore developed vary greatly, the former management claiming that ore had been developed under about 5 acres, the porphyritic orebody being estimated as 400' wide, 1,000' long and 600' deep. A 1910 estimate gave 3,746,165 tons of ore developed with 9,738,690 tons of probable ore and the average tenor probably about that of the ore milled, or 1.01% copper.

The 14,000' Mascotte tunnel, connecting with the shaft at depth of 1,100', cares for the large volume of water coming from the workings. Ore is blocked out in 100' squares, with extensive development on the 3rd, 5th and 7th levels, and the caving system is used in extraction. Ore is sent from the upper workings, through chutes, to a 4,000-ton ore-bin, 20' wide and 200' long, extending over both tracks, loaded in about 4 minutes from the bins into trains of 18 to 20 five-ton double-bottom steel cars, and hauled, by electric locomotives to the concentrator at Lark, a distance of 3,200'. The tunnel has double tracks.

Electric power is used exclusively, commercial current being taken from the Telluride Power Co., over long transmission lines, 1 of 170 miles length, at 40,000 volts, stepped down to 440 volts for use at the mine, mill and pumping plant. Equipment includes an electric hoist and 3 air compressors.

The mill, at Lark, 3,200' from the mouth of the Mascotte tunnel, is 317' long and 391' deep, in 4 units, built in 6 terraces. The frame is of steel, covered with heavy corrugated iron sheathing, lined with building paper,

over which there is a lining of asbestos, the lining being held in place by poultry netting. Floors are of concrete and the building is heated by hot water. Ore trains enter the mill over a 50' steel trestle above the bins. The structure was built, 1907, by the Minneapolis Steel Co., at a cost of \$200,000, for buildings alone. Three of the 4 units were in commission at the beginning of 1913, handling 2,500 tons, daily. The unusual feature of this mill is the absence of water classification, the only hydraulic classification being by the jigs, and concentration is entirely by jigs and tables, with a few buddles that treat the very finest feed, there being no vanners. Equipment of the 2 units in full commission includes 2 coarse and 4 fine Blake crushers, elevators, trommels, conveyors, 4 roughing and 8 finishing rolls, of Allis-Chalmers make, 16 Monadnock Chilean mills, 144 jigs, 288 Wilfley and James tables, and Callow classifying tanks. The installation includes 51 motors, ranging from 15 to 150 h. p.

Three systems of milling have been tried since the mill went into operation. Originally the ore, coarsely broken by Blake crushers, was ground in Chilean mills. The Wall rolls were tried in 1912, only to be removed in order to obtain better results.

Mr. Atwater's report strongly criticizes the present flow sheet of the mill and the changes recommended will it is hoped raise the present extraction of 45%, or 9,135 lbs. of copper recovered per ton of ore milled, to 60%.

Production from Aug. 1, 1912, to Dec. 31, 1912, was 2,343,439 lbs. copper. The company was milling about 2,500 tons of ore daily, Oct., 1913. Mining costs averaged about 25 cts. per ton, transportation 15 cts. per ton, with milling costs reported as 45 cts. per ton, and total mining and milling costs were said to be about 85 cts. per ton in 1913, compared with 84 cts. in 1911. The ratio of concentration is very high, being about 33 into 1, with a consequent heavy loss in tailings, of probably 55%, or upwards. The ore was running about 1.015% copper in 1913. Concentrates are sent to the Garfield smelter, 27 miles, at a freight rate of less than \$1 per ton. Operating profits were about \$20,000 a month in the autumn of 1913. It is obvious that the average grade of the porphyry ores of the Ohio is exceedingly low, even dangerously so, but the mine is well developed, with very large bodies of ore that can be mined and milled at low average cost.

OHIO KEATING GOLD MINING CO.

MONTANA

Office: B. M. Calkins, president, Butte, Mont. Mine at Radersburg, Broadwater Co., Mont. Capitalization \$800,000, increased Dec., 1910, from \$500,000. Controlled through stock ownership by Radersburg Consolidated Mining Co. Is a promising, though small gold mine producing some copper from pyritic ores found as shoots in strong fissure veins in igneous rocks.

OHIO LEAD MINING & SMELTING CO.

NEVADA

Probably idle. Mine near Wells, Elko Co., Nev. Property, 8 claims, 160 acres, showing 7 fissure veins, said to give average assay values of 7% copper and 7 oz. silver per ton, also a silver-lead vein opened by a 400' shaft and tunnels of 700' and 900', with 3,000' of workings. Has a 50-ton concentrator and a smelter with 3 small water-jacket blast-furnaces. No returns secured.

OHIO-MEXICAN MINING CO.

MEXICO

Letters to 1703 First National Bank Bldg., Cincinnati, Ohio, unanswered. Mine near Caborca, Altar, Sonora, Mex. J. H. McKibben, pres.; John Henderson, vice-pres. and gen. mgr.; W. K. McKibben, sec.-treas.; preceding officers directors; I. R. Henderson, mine supt., at last accounts. Or-

ganized Aug., 1904, under laws of Arizona, capitalization \$3,000,000, shares \$10 par.

Lands, 47 acres, with mill site and 6,500 acres of ranch lands, show limestone and granite, with porphyry intrusions. Claims show several orebodies, of which 3, partly developed, have estimated average widths of 16', 20' and 40', and are opened by 5 shafts and a tunnel of 380'. Mine workings are optimistically reported to show 30,000 to 60,000 tons of ore, with 20,000 tons blocked out for stoping, averaging 9.3% copper, 4 to 10 oz. silver and \$2. to \$5 gold per ton, from carbonate ores and chalcocite. Property has a 125-h. p. steam plant at the mine, and a 100-h. p. steam plant at smelter. Equipment includes 3 hoists, good for 400 to 600' depth, a 2-drill Rand air compressor, and 15 shops and mine buildings.

The smelter, at La Calera, receiving ore by wagon from the mine, has a 60-ton water-jacket blast furnace, turning out black copper of 90 to 95% tenor, which included gold and silver values, shipped to the Nichols Copper Co. for electrolytic refining.

OHIO MINES CO.

ARIZONA

Office: 314 Outlook Bldg., Columbus, Ohio. Mine office: Chaparal, Yavapai Co., Ariz. H. W. Whitaker, pres.; T. D. Brown, vice-pres.; J. F. Rogers, sec.-treas.; preceding officers, R. S. Barbee, J. M. Rittenour, Jacob Sebastian, Thos. M. Murphy, E. C. Paine and J. S. Jones, directors. Organized Jan., 1909, under laws of Arizona, capitalization \$2,500,000, shares \$1 par, in \$200,000 preferred and \$2,300,000 common stock; issued 1,482,908 shares; \$40,760 first 7% mortgage notes, \$38,160 issued. Annual meeting, third Monday in January.

Lands, 14 claims, partly patented, 420 acres, with a 5-acre mill site, and water-rights on the Agua Fria river, 6 miles from the mine, in the Big Bug district. Property was bought of the Jessie Mines Co., whose promoters managed to escape jail. Development is by 3 shafts, 659', 206' and 200' deep, with 7,000' of workings, and the mine is said to have produced upwards of \$750,000 in gold, under an ownership previous to that of the Jessie Mines Co. Management plans extensive operations for 1913, and the installation of an electrical power plant.

OHIO & TENNESSEE MINING CO.

ARIZONA

Probably dead. W. D. Clymer of Delaware, Ohio, pres. and supt., at last accounts. Mine, 10 miles south of Wickenburg, Maricopa Co., Ariz., has a 115' shaft, showing a 2' vein.

OHIO-YAQUI MINING CO.

MEXICO

Idle. Office: Columbus, Ohio. Mine office: San Javier, Hermosillo, Sonora, Mex. John J. Joyce, pres. and mgr.; Lovett W. Jones, vice-pres.; John J. Joyce, Jr., sec. and asst. mgr.; Wm. M. Maize, treas.; Jas. S. Lawrence, supt., at last report.

Owns La Sierra mine, an old Spanish mine, carrying argentiferous copper ore, with excess of iron. Development is by a 1,400' tunnel, cutting a 2' vein carrying ore assaying up to 2% copper and 75 oz. silver per ton, and an ore zone of 150' estimated width is said to give assays of 2.5% copper and 50 oz. silver per ton, presumably from selected ores. The mine is said to have considerable ore blocked out for stoping in the upper workings.

Equipment includes a steam plant with an 80-h. p. boiler and hoist, and there is a 10-stamp mill.

OJIBWAY MINING CO.

MICHIGAN

Office: 1400 Alworth Bldg., Duluth, Minn. Operating office: Houghton, Mich. Mine office: Ojibway, Keweenaw Co., Mich. Dr. Lucius L. Hubbard, pres.; Chas. A. Duncan, vice-pres. and treas.; preceding officers, Thos. F. Cole, Chester A. Congdon, Chas. d'Autremont, Jr., Oscar J. Lar-

son, Capt. Jas. Hoatson, Capt. Thos. Hoatson and John D. Ryan, directors; Frederic R. Kennedy, sec.; Daniel R. Smith, asst. sec.; Wm. G. Hegardt, asst. treas.; Henry B. Paull, auditor; Andre Formis, supt.

Organized June 8, 1907, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, assessable; issued, \$2,100,000, \$15 paid. Levied a \$2 assessment Jan., 1910, payable \$1 March and \$1 Oct., 1910, and a \$1 assessment Dec. 10, 1912. Company began business with \$500,000 cash, and, on April 30, 1912, had cash and accounts receivable of \$84,747.58, with \$8,173.16 accounts payable. Property was bought for \$459,919.29. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Tuesday in June.

Lands, about 1,600 acres, bounded on the north by the Cliff and on the south by the Seneca. Property includes the old Manhattan tract, Bacon & Jacobs lands, bought of the Union Copper Land & Mining Co., and the Miskwabik tract of 1,224 acres, in Sec. 5, T. 57, and Secs. 32 and 33, T. 58 N., R. 31 W.

The Kearsarge bed was located, 1904, on the Miskwabik tract, about 4 miles N. E. of Mohawk No. 1 shaft, and was proven by 5 bore holes drilled across the formation at intervals of 1,200'. Four of these holes gave good cores, being especially rich well toward the northern limits of the tract. The drill holes showed the Kearsarge amygdaloidal bed to be divided into 7 alterations of amygdaloid and trap, immediately above the geological horizon of the Wolverine sandstone, the different cores each showing copper from either 1 or more of 4 horizons. Drilling indicates that copper values alternate from bed to bed, or layer to layer, if the cupriferous zone of the Ojibway be considered a single strata, only 2 of the amygdaloidal layers being well mineralized in a given cross-section, as a rule.

Development, begun in July, 1907, consists of 2 shafts, 1,116' apart, both sunk in the footwall, which shows some heavy copper. Shafts are duplicates, each 8x20' in size, with 3 compartments. The shafts can be sunk to a depth of 8,000' on the company's lands. They have concrete collars and roadbeds, and are connected by a drift on the 800' level. The 1st level is at depth of 350' from surface, with others below, 150' apart in the upper part of the mine, and 100' apart from the 1,500 to 2,000' levels. No. 1 shaft is sunk at an angle of 33° in the footwall of the lode, but since the lode flattens 5 to 8° below a bar of barren ground, the shaft passes through it into the footwall at depth.

No. 1, or north shaft, 1,500' from the northern boundary of the property, was 2,051' deep in 1913, disclosing copper ground from grass roots, making a much better showing in this respect than No. 2 shaft, due, however, to its being sunk so near the copper-bearing bed. Developments in this shaft show that the Kearsarge stratum is split in two, having distinct beds of 20' and 13' respectively, separated by 13 to 15' of trap. The 1,600' and 1,700' levels show good ore.

No. 2 shaft, 1,116' S. W. of No. 1, is sunk about 90' in the footwall, and was 1,954' deep Aug., 1913, disclosing very little copper ground above 800', though a material betterment is noted below that depth, and a very marked improvement is noted below 1,500' depth. This shaft is sunk in unusually firm ground, requiring very little timbering. Work was suspended early 1913, for lack of working capital, and generally discouraging results shown in development.

The power plant has duplicate Nordberg duplex-cylinder hoists, cables passing to each shaft. These hoists raise 2½-ton skips, and are good for 2,000' depth each. A 7-drill 2-stage air compressor, driven by a

100-kw. generator is belt-connected to a 140-h. p. Russell high-speed engine. Buildings use the Webster reheating system, charged by exhaust from the air compressor, which also heats water for boiler feed. The plant has 150-h. p. Burt locomotive-firebox boilers, and a 100-h. p. condenser. The shops have individual motors, and the mine has an electric pump, with a capacity of 85 gal. per minute, working against a 500' head.

Mine has carpenter shop, smithy and machine shop, each 24x48' in size, a warehouse with an office connected, bunk house, and 24 dwellings for employees, at a town site about one-half mile from the mine. The town site and mine have a complete water system, with hydrants and ample fire protection. The Keweenaw Central railway has a spur to the mine.

The mine is thoroughly equipped for development to a depth of 2,000', but has spent the bulk of its money underground, the management having done much work for the comparatively short time and small amount of money expended. Development has been systematic, the management having planned making a mine upon 5-drill cores, too few a number to be sure of results, and which, as later development has proven, gave rather too favorable an idea of the richness of the lode, though developments have shown much to the contrary.

OJO VERDE COPPER CO.

MEXICO

Idle. Letter unclaimed at Autlan, Jalisco, Mex. Thos. Kelly, pres.; Stanislaus F. Ossolinski, mgr., at last accounts. Lands include El Refugio mine near Autlan, showing a strong vein outcrop for nearly a mile. Property is said to have an extensive orebody, carrying mainly copper values. The management planned building a wagon road to Chamela, on the Pacific, and erecting a mill. Shut down and presumably out of business.

O. K. EXTENSION MINING & REDUCTION CO.

UTAH

Idle. Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. A. J. McMullen, pres. and gen. mgr.; T. M. Farrell, vice-pres.; Chas. A. Weaver, sec.-treas.; preceding officers, R. H. Greenhalgh and H. T. Harrison, directors; D. P. Rohlfing, mg. engr. Organized Nov., 1899, under laws of Utah, capitalization \$150,000, shares 50 cts. par, assessable; issued 159,859; total assessments to date, \$15,363. Annual meeting, second Tuesday in October.

Lands, 6 claims, 3 patented, 120 acres, near the Majestic mine, in the Beaver Lake district, show monzonite and quartz-porphyry, carrying 2 fissure veins, of 5 to 24' estimated average width, traceable 150'. Opened by 7 pits and shafts of 15 to 510' depth, and a 150' tunnel, with 1,045' of workings, showing chalcopryite estimated to average 2% copper. Inactive except for annual assessment work.

O. K. OLSEN COPPER MINE.

IDAHO

Address: Troy, Latah Co., Idaho. Property, situated east of Troy, shows disseminated copper-bearing sulphides in gneiss and schist in which a 60' shaft has been sunk, following a band of enriched ore carrying gold and silver values. The district surrounding this property is covered by the Columbia basalt flow and the copper-bearing rocks show only in the water courses, but form a belt over a mile long and half mile wide in which contact rocks with bornite and other sulphides are exposed. So-called "porphyry ore" probably also occurs beneath a leached capping in this vicinity.

OKLAHOMA COPPER CO.

ARIZONA

Mine near Florence, Pinal Co., Ariz. Company is apparently bankrupt and property in hands of H. G. Beard, manager, who paid former judgment and expected to transfer it to a new organization at last accounts.

OLALLA COPPER MINING & SMELTING CO. BRITISH COLUMBIA

Office: Second National Bank Bldg., Paterson, N. J. Mine office: Olalla,

Yale district, B. C. Robt. Gaede, pres.; Jos. Bamford, Jr., vice-pres.; John E. Tylee, sec.-treas.; preceding officers, Frank A. Blauvelt, Warren N. Conant, Robt. Swinley, H. Chas. Royce and Frank E. Morrison, directors. Organized Oct. 19, 1901, under laws of Maine, capitalization \$8,000,000, shares \$25 par. Annual meeting, first Monday in August.

Lands, 32 claims, crown-granted, 1,183 acres, and a 92-acre mill, smelter and the Olalla town site, in the lower Similkameen and Keremeos camps, Osoyoos division, Yale district, 4 miles from a railway. Lands said to show contact deposits between diorite and felsite, with orebodies in both, but mainly in the felsite. Twelve claims adjoin the town site of Olalla, and the Dividend group, of 7 claims, is 17 miles distant. Veins, about a dozen in number, 1 vein, under development, claimed by management, to carry bunchy replacement deposits of chalcopyrite, with garnetite and magnetite gangue, in limestone, near intrusive contacts, assaying 1.5 to 5% copper, a little silver and \$1 to \$7 gold per ton. Development is by a 70' shaft, and tunnels of 642', 600', 150' and 112', with 1,504' of workings. There is no power equipment. Property now idle, is leased, for 25 years, to the Yale Development & Construction Co., organized among the stockholders of this company.

OLD BALDY MINE.

ARIZONA

B. F. Daniels, owner, Nogales, Ariz. Property in Old Baldy district, 10 miles south of Helvetia and 45 miles south of Tucson, shows veins in pre-Cambrian granite and schist carrying high-grade chalcopyrite ore. Mine has 60' shaft from which crosscutting will be prosecuted in the autumn of 1913.

OLD COLONY COPPER CO.

MICHIGAN

Office: 70 State St., Boston, Mass. Mine office: Houghton, Mich. H. F. Fay, pres.; C. J. Morrissey, sec.-treas.; preceding officers, W. F. Fitzgerald, Irvin J. Sturgis, Rogers L. Barstow, F. L. Maguire, and John G. Stone, directors; Geo. S. Goodale, supt.; A. L. Dickerman, cons. engr.

Organized 1898, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; \$12 paid in. Balance of assets Oct. 1, 1912, \$69,641. American Trust Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Stock listed on Boston Stock Exchange. Annual meeting, second Wednesday in December.

Lands, about 1,200 acres, in Sec. 17 and 18, T. 56 N., R. 32 W., adjoining the Calumet & Hecla on the west, and the Mayflower on the north.

A complete geological, cross-section was secured, 1899-1901, by a tunnel driven from the Eastern sandstone, 57° W. of N., for about 3,000', at right angles to the strike of the formation, N. 33° E., and by diamond-drill borings, from the Kearsarge amygdaloid eastward to the western end of the tunnel. This cross-section shows upwards of 75 amygdaloidal and conglomerate beds, a number of which carried a little copper in the drill cores, and were cut in the tunnel.

There are 5 shafts, deepest, 700', aggregating 2,200' in depth, with about 6,000' of drifts and crosscuts driven on various beds. A little shoot of copper was found in the crosscut west from No. 1 shaft, on the 700' level, the rock carrying calcite and epidote in considerable quantities, but results generally were indifferent, the various beds opened in this work proving both narrow and bunchy. Work was discontinued in 1909 and was resumed in 1911 by diamond drilling. This work, confined to the southeastern corner of the tract, was completed April, 1912, without securing important results, and was followed by work in the area immediately south of the Mayflower boundary line along which the Mayflower company had previously obtained rich showings of copper.

Six holes drilled to the end of 1912, definitely located the extension of the big amygdaloidal bed, originally disclosed by the Mayflower, and an equal number drilled to Nov. 1, 1913, proved its extension to a point fully 1,000' from the boundary line. The 12 drill borings average about 1,500' in depth and, as a whole, yielded exceptional showings of copper in a bed of unusual width and high degree of mineralization. Net results to date are decidedly promising.

OLD DOMINION CO.

ARIZONA

Office: 99 John St., New York. Mine office: Globe, Gila Co., Ariz. Jas. Douglas, pres.; Chas. Sumner Smith vice-pres.; Wm. M. Bradley, clerk; Chas. H. Altmiller, asst. clerk and treas.; preceding officers, Cleveland H. Dodge, Jas. McLean, Arthur C. James, Chas. S. Smith, and J. Waldo Smith, directors. Organized Jan. 15, 1904, under laws of Maine, capitalization \$8,750,000, shares \$25 par; 7,333,825 issued and fully paid. Annual meeting, last Wednesday in January. Stock listed on Boston Stock Exchange. First dividend, 50 cts. per share, was paid Dec. 15, 1905, and dividends have been as follows: 50 cts. in 1905; 50 cts. in 1906; \$1 in 1907; 50 cts. in 1908; \$1.50 in 1909; \$1.25 in 1910, a total of \$5.25 per share, to end of 1910; \$1.50 in 1911; \$4 in 1912; total, 19 dividends, to Dec. 31, 1912, \$3,213,536. Dividends for 1913 aggregate \$5 to Oct. 8.

The company is a securities-holding corporation only, organized to promote the operation of the mines of the Old Dominion Copper Mining & Smelting Co. and United Globe Mines. These two companies are operated individually, but with a free exchange, upon an equitable basis, of ores for smelting and fluxing. On Jan. 1, 1913, the Old Dominion Co. owned \$3,883,825 out of \$4,050,000 stock issued by the Old Dominion Copper Mining & Smelting Co. and the entire stock, \$2,300,000, of the United Globe Mines. Income account shows net income for 1912 of \$1,187,347, and a surplus of \$169,081, compared with \$485,989 and \$162,069 in 1911.

OLD DOMINION COPPER MINING & SMELTING CO.

ARIZONA

Office: 50 Congress St., Boston, Mass. Mine and works office: Globe, Gila Co., Ariz. Chas. Sumner Smith, pres.; Chas. T. Lund, vice-pres.; Chas. H. Altmiller, sec.-treas.; J. T. Herrick, E. P. Ricker, W. F. Crane, and J. Waldo Smith, directors; G. H. Dowell, gen. supt.; I. H. Barkdall, supt.; L. O. Howard, smelter supt.; Dr. L. D. Ricketts, cons. engr. Organized July, 1895, under laws of New Jersey, capitalization \$5,000,000, shares \$25 par; issued, \$4,050,000. Is controlled, through ownership of 155,353 shares of the 162,000 shares of issued stock, by the Old Dominion Co. Resumed dividends July, 1907, after an intermission of 12 years and paid dividends of \$1.25 per share in 1907, \$1 in 1908, \$3 in 1909, \$2.75 in 1910, \$3 in 1911, \$4.50 in 1912, total to Dec. 31, 1912, (17 dividends) \$2,551,500. The company formerly had a large floating debt which was cared for by the Old Dominion Co. and the last of this debt, amounting to \$100,000, was paid Oct., 1908. For 4 years, ending 1907, improvements cost \$1,875,647. Annual meeting, first Wednesday in April. Gross earnings for 1912 were \$2,888,204; net profit, \$1,004,186. Surplus July 31, 1913, was \$4,535,778. A balance submitted to the court Sept., 1913, is as follows:

Assets:		Liabilities:	
Mines	\$3,384,305	Capital stock.....	\$4,050,000
Plant	3,044,305	Debts	758,861
Floating assets.....	2,916,028		

Total\$9,344,639

Total debt liability....\$4,808,861

The surplus account consists of: Reserve against "special" fund voted for dividend, \$1,956,483; reserve for plant renewals, (neither asset or lia-

bility) \$759,344; mine renewals, \$867,074; profit and loss, \$952,876; total surplus, \$4,535,778.

The company was engaged for years in litigation with A. S. Bigelow and the estate of Leonard Lewisohn, suing for recovery of secret promotion profits. This has been settled by a judgment for \$2,223,722 against A. S. Bigelow rendered by the Supreme Court, and cash and securities to the value of \$1,900,000 are held for distribution as soon as a decision is given as to whether this money goes to the company treasury or is to be distributed to the holders of trust certificates. The suit for \$900,000 on the same grounds against the Leonard Lewisohn estate was adversely decided in the lower court, but is on appeal in the U. S. Supreme Court.

The company owns the Old Dominion mine having 9 claims, 3 fractional, and a 10-acre mill site, at Globe; the Old Dominion and Keystone claims, $3\frac{1}{2}$ miles north of Globe and the Continental mine at the head of Webster gulch, about 18 miles west of Globe; also the Chicago & New York group of 60 acres and the Geneva mine.

At the Old Dominion mine, the principal ore zone occurs along a big fault vein having a N.-E. strike with sharp easterly dip. The hanging wall is limestone and quartzite, with footwall of diabase of more recent age, faulting evidently occurring both before and after the intrusion of the diabase. The ore favors the hanging wall, but also occurs in lenses along the bedding planes of the limestone and in shattered quartzite, the largest lens yet developed being 60x100x200' in size. The oxidized ores are mainly cuprite, associated with a little malachite and chrysocolla, in a gangue of iron oxides and quartz.

Sulphide ores first appear at a depth of about 350', as chalcocite, with gangue of pyrite and quartz, the lower workings also showing chalcopyrite. All ores are more or less argentiferous, and, as a rule, are highly silicious, requiring heavy lime and iron fluxes in smelting. The mine shows large sulphide ore shoots on the 14th level and below, and has improved wonderfully in the deeper workings opened up in the past 3 years.

The orebody under Pinal creek shows oxidized ores up to 20% in copper tenor, on the 8th, 9th and 10th levels, with chalcocite of even better tenor on the 11th level.

The mine was handicapped for years by a lack of sulphide ores, which were bought from adjoining mines in the Globe district, and also from California and Mexico, but both the O. D. and United Globe have now developed an adequate supply of sulphide ore. Principal mining developments of the past few years have been at the western end of the mine.

Development in 1912 comprised 10,964' of drifting, 4,092' of raises, 203' sinking, a total of 15,259', as compared with 10,477' in 1911 and 18,468' in 1910. Mining costs were \$4.55 per ton in 1912. Production for year was 166,870 dry tons of ore, yielding 27,353,243 lbs. fine copper.

Mine is now developed down to the 1,600' level, where the workings show a wider orebody both east and west than was found on the 1,400', with no sign of diminishing values or size below the bottom workings of the mine.

No important changes have been made in mining methods and the heavy wet ground on the west side is still worked by square sets and filling, while the more solid ground on the east side of the mine is stoped by cut and fill without timber.

The mine is wet, but the excess of water, a sore grievance in the past, has become a source of revenue, water being sold to the city of Globe and to the Miami Copper Co. The maximum is 5,000,000 and the average is 3,500,000 gals. daily.

The mine is equipped with pumps of about 10,000,000 gals. capacity daily, these including a 1,500-gal. Prescott pump on the 10th level, having a 12" water column, discharging 30' above the collar of the shaft, into a launder on a trestle leading to a storage tank, whence water is drawn for use of the mill and smelter. There are 4 Nordberg steam pumps on the 12th level, having a rated capacity of 8,000,000 gals. per day, with 4 Gould electric pumps, 2 on the 10th and 2 on the 14th level.

Owing to the old shafts of the mine suffering severely from crushes and creeps, new shafts have been sunk in the footwall.

During 1912, 854,340,000 gals. of water was discharged through the drainage adit and 587,140,000 gals. was pumped to the surface. The Miami Copper Co. bought 732,000,000 gals. for use in its concentrator.

The "A" shaft, or main working shaft, on the eastern side of Pinal creek, in the west section of the mine, is equipped with skips. This shaft is connected with the principal workings of the mine by underground trolley lines, including a line to handle the ore of the Gladiator mine, which has yielded a notable quantity of smelting ore, and large quantities of concentrating ore. Ore extraction is mainly from the 800', 1,200' and 1,600' levels, where large ore pockets have been cut in preparation for the new concentrator. "A" shaft has 5 compartments, 2 equipped with 3-deck cages, and 1 with a 2-deck cage. Equipment includes a steel engine house, built 1910, having a 17x31x48" Nordberg compound hoist, good for 2,000' depth.

"B" shaft, on the eastern side of Pinal creek, bottomed on the 14th level, has 4 compartments and a 100,000 cu. ft. fan for ventilation. "C" shaft is bottomed on the 12th level. "D" shaft, 1,000' deep at the 14th level, is located on the western side of Pinal creek, about 2,000' west of the most westerly previous workings. The "K" shaft, 1,400' deep, is now ready for ore hoisting. The Transit shaft, about one-half mile east of "A," was crosscutting in both directions, at approximately the 2d level of the main mine, at the end of 1910. The Kingdon shaft, 1,400' deep, is one of the 2 main working shafts, 1913. The Grey shaft, now connected with the 1,200' level, has a 75-h. p. Wellman-Seaver-Morgan electric hoist, and is to be developed. The property has a number of smaller shafts and several tunnels, not in present use.

The mine, mill and smelter are connected by a private railway, equipped with a 14x20" Porter locomotive, and 50-ton ore cars.

A new crusher plant and sampling mill were erected in 1913.

The old 300-ton concentration mill, erected 1909, is of structural steel, on concrete foundations, with iron siding and roof. Equipment includes 18 Frue vanners and 9 Wilfley tables. The plant is entirely automatic and of excellent design and practice. The average of all ores treated in the concentrator is about 3.6% copper, and, owing to the large amount of iron, the ratio of concentration is very low. In connection with the mill is a sampler of about 125 tons daily capacity, for custom ores.

A new mill now under construction will be ready for operation in the winter of 1913-14.

The smelter does custom work, and was formerly an extensive purchaser of sulphide ores for fluxing the oxidized ores of the Old Dominion and United Globe mines, but latterly these mines have developed such quantities of sulphides, in the lower workings, that the amount of custom ore handled has been materially reduced.

The smelter has 8 double storage bins, holding 1,000 tons of coke, limestone and ore. Mixing, weighing and charging are done automatically, requiring a force of only 4 men. There are 6 blast furnaces, 44x180" set tandem, with settlers between, charged automatically from side-dumping

cars. The furnaces have a nominal capacity of about 2,400 tons daily, but one furnace is held in reserve. The dust-flue chamber is 20x20x250', connecting with a 200' smokestack, of 23' diameter at the bottom and 14' at the top, set on a base 25' above the tuyeres. Flue dust is briquetted for re-smelting, and is treated at the Copper Queen plant at Douglas. Fuel is New Mexican coke, from the Dawson Coke Co. The smelter is served by an electric locomotive and three 3,000-lb. tilting cars for charging, with a steam locomotive and dump-cars for slags.

The converter department has 3 stands, with Great Falls type, basic lined, 7.75x12' shells. Shells are handled by a 40-ton electric traveling crane. The converters take 50% matte, and turn out blister copper of 99.5% copper with small silver values. The converter slag yard is 18x70', with a floor of 2" iron plates, laid on brick bedded in concrete.

The slags of the old oxide smelting days have been resmelted, gradually, with an average recovery of about 2% copper.

The power plant at the smelter includes a 2,300-kw. generator and two 750-kw. generators, direct-connected to General Electric horizontal low-pressure steam turbines, utilizing exhaust steam. All machinery, except hoists and compressors, is actuated electrically. There is a 30-drill Nordberg compound air compressor, with intercooler and water-jacketed air cylinders, and a complete electric light plant. Furnace blast is supplied by Connersville blowers of 45,000 cu. ft. per minute aggregate capacity, and an 18,000 cu. ft. Nordberg air compressor furnishes converter blast. Fuel oil is used for the boilers.

The smelter production is larger than the mine production, because the smelter treats ores of the United Globe and a considerable amount of custom ore. Production has been: 28,919,217 lbs. fine copper in 1905; 16,602,186 lbs. copper, 74,123 oz. silver and 1,798 oz. gold in 1906; 23,294,496 lbs. copper, 69,067 oz. silver and 2,407 oz. gold in 1907; 30,308,223 lbs. copper; 65,486 oz. silver, and 2,313 oz. gold in 1908:

Recent production is as follows:

	1913.	1912.	1911.	1910.	1909.
January	2,727,000	2,044,000	2,095,000	2,130,000	3,668,000
February	2,381,000	2,039,000	2,378,000	2,035,000	2,924,000
March	2,853,000	2,432,000	2,563,805	2,674,000	2,970,000
April	3,040,000	2,167,000	2,535,000	2,325,000	2,840,000
May	2,749,000	2,161,000	2,363,000	2,174,000	3,088,000
June	2,511,000	2,130,000	1,907,000	2,092,000	2,300,000
July	2,526,000	2,212,000	2,114,000	2,092,000	2,300,000
August		2,620,000	1,982,000	2,693,000	3,260,000
September		2,223,000	2,032,000	2,262,000	2,672,000
October		2,523,000	2,014,000	2,345,000	2,660,000
November		2,758,000	2,082,000	2,750,000	2,300,000
December		2,262,000	2,610,000	2,287,000	2,400,000
Total		27,571,000	26,675,805	27,974,000	33,882,000

Costs, per ton of ore treated, were \$8.82 in 1909, and \$8.67 in 1910. Cost of finished copper was 9.72 cts. at the mine, with eastern costs of 1.54 cts., giving a total cost of 11.76 cts. per lb., in 1909, reduced to 10.16 cts. per lb. in 1910, and 9¾ cts. in 1913. The mine and smelter are in better shape than ever before and very much credit is due Dr. Ricketts for the rehabilitation of the property.

There has never been a time in the history of the property when there has been as much high-grade ore in sight as at present, particularly in the

lowest levels and the property is assured of a successful future, being in exceptionally able hands.

OLD GLORY MINE.

ARIZONA

See Oro Mine, Santa Cruz Co., Ariz.

OLD GLORY MINE.

OREGON

Arthur H. Gruber, Milwaukee, Wis., chief owner. Mine on Silver creek in western Josephine county, Ore., shows a very large lode of low-grade copper ore carrying gold and silver values. Property was to be equipped with machinery in Oct., 1913, and development pushed.

OLD HUNDRED MINING CO.

COLORADO

Office: Room 706, Electric Bldg., Cleveland, Ohio. Mine near Silverton, San Juan Co., Colo. Howell Hinds, pres.; W. S. Briggs, sec.-treas.; preceding officers, H. H. Burgess, E. P. Price and Frank S. Whitcomb, directors; J. M. Elmer, supt. Organized June, 1906, under laws of Maine, capitalization \$5,000,000, shares \$5 par.

The company has authorized \$400,000 of series "A" first mortgage 6% bonds, none issued. Is said to have had a floating indebtedness, 1910, of \$150,000 and to be heavily in debt to President Hinds. The mine was floated by Thos. Nevins & Sons, of New York, who advanced the money for its equipment and development, and despite stock sales, lost \$20,000 in the undertaking, when they relinquished their interests.

Lands, 26 claims, patented, 500 acres, in Cunningham gulch, on Galena mountain, San Juan district, 5 miles north of Silverton. The Silverton & Northern railway runs to the mine. The property shows a quartz vein said to be 5 to 12' wide, carrying values in gold, silver, lead and copper, with increasing copper at depth, ore being claimed to carry average values of \$8 to \$12 per ton. Development is mainly by tunnel, and mine is claimed to have upwards of 4 miles of workings.

Equipment includes steam and electric power with a central power station of steel and concrete. There are numerous buildings, including a store, and the mine has a tramline.

The 200-ton mill has 40 stamps, crushers, rolls, jigs, Frue vanners, concentrating and slime tables.

The property was promoted in New York upon representation by engineers that the mine contained bodies of low-grade ore which could be profitably mined if a larger output and lower milling cost could be secured. Despite the new machinery furnished and development done, the mine failed to redeem the promises made and is still awaiting some one who can make it pay by right management and proper ore treatment. Stock regarded as of little value, but property likely to be reopened.

OLD PUEBLO MINING & MILLING CO.

ARIZONA

Is controlled by the Tucson Consolidated Copper Co. and described under that title.

OLD SPORT GROUP.

BRITISH COLUMBIA

Also known as Elk Lake group, 27 miles from S. E. arm of Quatsino sound, B. C. Wm. Halliday, Alert bay, B. C., owner. Property, 14 claims, showing 2 veins, uppermost 30' wide, traceable 3,000', opened for 14' in depth and assaying \$6.60 to \$54. The lower vein, 13' wide, traceable 2,700', consists of chalcopryrite with gold values, ore varying from \$37 to \$60 in value.

OLD TOWN MINING, MILLING & TRANS. CO.

COLORADO

Geo. K. Kimball, mgr., Idaho Springs, Clear Creek Co.; J. A. Redding, supt., Russell Gulch, Gilpin Co., Colo. Company succeeds the Old Town Consolidated Mining Co., which itself was the successor of the Old Town Mining & Milling Co., both defunct.

Property holds the Wautauga vein, carrying a paystreak of a foot or less average width, with gold and silver-bearing copper ore. Development by 900' shaft with 2,205' of workings. Equipment includes steam and electric power and Leyner air compressor.

Property has not been profitable save to the employees and was sold for a debt of \$60,000 at sheriff's sale, June 15, 1910.

OMAR MINING CO.

ALASKA

Idle. Mine near Kiam, at head of McKenzie inlet, 20 miles south of Hadley, Prince of Wales island, Alaska. Chas. E. Ladd, pres.; W. A. Howe, vice-pres.; C. E. S. Wood, sec.-treas.; W. W. Catlin, gen. mgr.; H. W. Turner, supt., at last accounts. Organized 1904, under laws of Oregon.

Property, the Khayyam mine with 6 claims, unpatented, 80 acres, showing schistose diorite carrying 4 parallel ore zones with 5 elongated lenses of 4 to 40' estimated width, carrying chalcopryrite, associated with pyrite, marcasite, some pyrrhotite and occasional sphalerite, giving average assays of about 3% copper, with small gold and silver values, latter being mainly from marcasite. Development is by tunnels of 140', 240' and 650', with about a quarter mile of workings, the main lens being estimated, by the management, to carry 400,000 tons of ore. A full geological description, with sections, is given in U. S. Geol. Surv. Bull. 347, p. 135.

Equipment includes a 4,186' aerial tram and a 12,160' ground tram, ending at ore bunkers built on a wharf on McKenzie inlet. The old management was overenthusiastic, and built a tramway and wharf before a mine was opened. Production, 1907, is reported by the president as 3,800 tons of ore averaging 2.1% copper, equal to 79,800 lbs. fine copper. Idle some years and property for sale, at last accounts.

ONECO COPPER MINING CO.

MICHIGAN

Office: 62 Devonshire St., Boston, Mass. Mine office: Hancock, Mich. John D. Cuddihy, pres.; John Brooks, sec.-treas.; John L. Harris, gen. mgr.; preceding officers, Wm. F. Fitzgerald, Geo. Napier Towle and John C. Watson, directors. Organized Dec., 1898, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, \$5.50 paid in; issued, \$1,750,000 June 9, 1913. Levied a 50-ct. assessment Jan. 15, 1906, a \$1 assessment Feb. 21, 1910, and a \$1 assessment Oct. 10, 1912.

Treasurer's report, Jan. 1, 1913, showed cash and loans, \$31,068, with \$28,500 still to be paid on last assesment. Annual meeting, third Thursday in March. Stock traded on Boston curb. Company its own transfer agent; Federal Trust Co., Boston, registrar.

Property, 800 acres in Houghton county, all on the Keweenaw copper formation, in Secs. 2, 10 and 11, T. 56 N., R. 33 W., forming a main tract of 640 acres, and a smaller tract of 160 acres, adjoining, diagonally, on the N. E. corner. The property lies east of the Franklin Junior and Rhode Island mines, but is separated therefrom by a quarter mile of intervening lands.

The mine, originally called the Hungarian, was opened by a shaft, sunk 1862 to depth of less than 100', that gave a good showing. A little exploring was done, 1890, by Capt. Wm. A. Dunn, and again in 1898, previous to the formation of this company, when a rich outcrop of conglomerate was found to be a drift boulder of large size, and not rock in place. Work was begun by the company June 26, 1899, on a 2-compartment shaft that was sunk 500'. A little drifting was done on the upper levels, showing a bed of fair width, carrying a little copper, and the shaft cut a narrow fissure, rich in copper, this being of interest because 1 of the few productive cross-veins found in the Portage Lake district. The bed on which the shaft was

sunk has been variously identified as the Isle Royale, Grand Portage and Kearsarge amygdaloids, but is now termed the Oneco amygdaloid.

Work was suspended 1900, and the property was idle, except for a little work, 1906-07, until resumption Aug., 1909, when a campaign of diamond drilling was begun and continued 1910, 10 drill holes being bored, cutting the Oneco bed, on which the shaft is sunk, and an unidentified amygdaloidal bed, called the Torch Lake or Tomahawk lode, lying about 1,200' west of the Oneco, both beds giving cores showing more or less copper. Drill holes were bored to depth of 1,000 to 1,700', locating the eastern sandstone and giving 2 complete cross-sections, 2,700' apart.

The mine was reopened Nov., 1910, and drifting resumed on the 4th level. Since then the shaft has been sunk to a depth of 1,250' and extensive drifting on the 9th, 10th, 11th and 12th levels, both north and south of the shaft, has shown the vein to be 10 to 20' wide and well mineralized. At the present time development is confined to the 11th and 12th levels.

ONN COPPER MINING CO.

CALIFORNIA

Idle. Mine near Coram, Shasta Co., Cal. Alfréd Onn, pres.; W. C. Onn, sec.-treas.; Arthur E. Onn, Frederick S. Lanyon and J. C. Isaacs, directors, at last report. Organized 1909, under laws of Arizona, capitalization \$2,000,000, shares \$2 par. Lands, 22 claims, 440 acres, known as the Spread Eagle group, showing a gossan giving assays of \$3 to \$8 per ton in gold, with some silver and copper. Mine is claimed to have 4,000' of workings, showing ore carrying copper and a little gold. Was under lease to the Shasta Copper Exploration Co. to Oct. 1, 1912, for \$125,000.

ONONDAGA COPPER CO.

MICHIGAN

Office: Houghton, Mich. Reginald C. Pryor, pres., treas. and gen. mgr.; J. H. Rice, vice-pres.; Wm. Duffney, sec.; Ward B. Smith, mg. engr., and D. L. Robinson, directors. Organized April 22, 1912, under laws of Michigan, capitalization \$3,750,000, shares \$25 par, \$4 paid; issued, 99,955. Annual meeting, second Thursday in May.

Property, 10,230 acres in Ontonagon county, Mich., near the White Pine mine of the Calumet & Hecla Co. The formation, a fine-grained sandstone, has been exposed by surface trenching at several points and found to carry flake copper in considerable quantity. The values appear to be patchy, but as the ore frequently averages 10% where cross-faults occur, a commercial average may reasonably be expected.

Development is confined to diamond drill work intended to give a geological cross-section and from which the manager can formulate a plan of underground development. The first hole completed in Jan., 1913, has a depth of 1,912' and is apparently in the horizon of the Isle Royale-Arcadian lode. Hole No. 2 was 1,500' deep in March, 1913.

ONYX GROUP.

COLORADO

Address: John Rahrer, Leadville, Colo. Property in Half Moon gulch, on French mountain, shows a vein with high-grade gold-copper ore.

OPEX CONSOLIDATED MINES CO.

UTAH

Address: care Jesse Knight, Provo, Utah. Mine near Robinson, Juab Co., Utah, leased to Emerald Mining Co. See Vol. X.

OPHIR GOLD & COPPER MINING CO.

MONTANA

Mine office: Blackfoot City, Powell Co., Mont. M. A. Mitchell, pres. and gen. mgr.; W. Y. Clark, vice-pres.; W. F. McCarthy, sec.; F. E. Elmen-dorf, treas. Capitalization \$1,000,000. Lands, 5 claims, patented, near Ophir, having a fissure vein carrying gold-copper ore of fair assay tenor. Development includes 200' shaft with levels at 100' intervals, disclosing stoping ore. Equipment includes steam power and hoist. Mine was worked in 1912.

OPHIR GROUP.**ARIZONA**

J. A. Kent, Wickenburg, Yavapai Co., Ariz., owner. Property, $4\frac{1}{2}$ miles west of Hot Springs junction, shows a fissure vein carrying ore said to average 10% copper and 26 oz. silver per ton. Mine under development, 1913.

OPHIR HILL CONSOLIDATED MINING CO.**UTAH**

Office: Miner Bldg., Butte, Mont. Mine office: Ophir, Tooele Co., Utah. Hon. Wm. A. Clarke, pres.; W. C. Siderfin, sec.; E. W. Clark, treas. and gen. mgr.; preceding officers and Chas. W. Clark, directors; Jos. W. Pyle, cons. engr; A. G. Swanson, mine supt.; John Franks, mill supt.; Haines Gridley, engr. Company is managed as a close corporation.

Property, about one-half mile north of Ophir, carries the Tot vein averaging about 5', the Big vein about 20', the Middle vein about 10', the Copper vein about 8', and the Blue vein about 6' in width. Ore is mainly argentiferous galena, associated with pyrite, averaging about 8% lead and 10 oz. silver per ton, but also includes some copper and zinc ores, with occasional gold values, a little copper being produced as a byproduct. Ores occur as replacements in argillaceous limestone and shale, in 3 clearly-defined shoots, known as the Delirium, Miner's Delight and Western Stope. The mine is opened by an 1,800' incline shaft, stopes standing well without timbering, but is somewhat wet on the bottom levels, and has a 250-gallon electric pump.

Equipment includes a steam plant, with hoist, and there is a gravity tramway from the mine to the mill, of 150 tons daily capacity. Production has averaged about 50,000 tons of ore yearly, for some years past, and the property is an excellent one. A branch line of the S. P., L. A. & S. L. R. R. was built to the property in 1912.

OPHIR KING GOLD MINING CO.**UTAH**

Office: 60 East South Temple St., Salt Lake City, Utah. Mine office: Ophir, Tooele Co., Utah. Martin S. Lindsay, pres. and treas.; R. Lovendahl, sec. Organized Nov., 1907, under laws of Utah, capitalization \$10,000, shares 2 cts. par, assessable. Lands, 30 acres, patented, 9 miles from railroad, adjoining the Ophir Hill and Cliff Mining Co.'s properties and carry auriferous and argentiferous copper and lead ores. Mine has 400' tunnel, with some crosscutting, and several shallow shafts. Property worked under lease in 1913.

OPHIR QUEEN MINING CO.**UTAH**

S. Crawford, former president, Cedar River, Mich., controls property. Fully described Vol. VIII.

OPHIR-UTAH MINING CO.**UTAH**

Idle. Office: Salt Lake City, Utah. Mine near Ophir, Tooele Co., Utah. G. G. Schliep, pres.; C. L. Olson, sec.-treas. Organized Feb. 13, 1909, under laws of Utah, capitalization \$250,000, shares 25 cts. par, nonassessable. Lands, 7 claims, 9 miles from railroad, show copper and lead ores. Has several buildings and a hoist.

OPOHONGO MINING CO.**UTAH**

Office: Provo, Utah. Mine address: Samuel Cox, supt., Eureka, Juab Co., Utah. Wm. Hatfield, pres. and mgr.; J. H. Hatfield, vice-pres.; J. W. Hatfield, sec.-treas. Organized 1908, under laws of Utah, capitalization \$250,000, shares 25 cts. par, assessable. Shares are listed on the Salt Lake Stock Exchange. Dividends, three 1-ct. and two 2-ct. declarations in 1911-12 and one of 1 ct. on Jan. 30, 1913.

Lands, 3 claims, patented, in the vicinity of the Black Jack and Ajax mines. The mine is opened by shafts and tunnels, with about 2,000' of workings, to depth of 1,000', with principal development on the 500' and 700'

foot levels. The mine is operated jointly with the Gold Chain, with which it is connected on the 300' level, and hoisting is through the Black Jack shaft. The 450' level shows an 18' orebody, said to give assays up to 10% copper and \$90 to \$650 gold per ton. The 700' level shows this same ore shoot. Present development is mainly in the main tunnel of Gold Chain mine, now being driven to cut the main vein. The 1,000' level shows the fissure in the east drift, but no ore, as the ore shoot has not been reached. Three sets of leasers are at work in the upper levels and are getting high-grade copper ore on the 450' level.

Machinery equipment, owned jointly with the Gold Chain, includes an air compressor. Production has been intermittent since it began in 1909. In 1913, it averaged 150 tons of smelting ore a week, most of it from the 500' level.

ORANGE MINE.

VERMONT

Mine address: Strafford, Orange Co., Vt. J. B. Reynolds, mgr. and principal owner; Lovat Fraser, engr. Lands, 900 acres, held under deed of mining rights, are near the Elizabeth mine, 13 miles from the Boston & Maine railway. Property carries a lenticular orebody, conforming to dip of the country rocks, which include gneiss, under garnetiferous mica-schist and above hornblende-schist, with strike of west of north, and average dip of about 45°. The lens, of 40' extreme width, but not mineralized for the full width, is traceable 4,000' on the property. Ore carries chalcopryrite, disseminated in massive pyrrhotite, averaging 2% copper. The mine has a 110' incline shaft, with about 70' of laterals on the 100' level. Equipment includes steam boilers, a 3-drill air compressor and several mine buildings. Geology is described, Bull. 455, U. S. Geol. Survey.

ORE CHIMNEY MINING CO., LTD.

ONTARIO

Office: 74 Tisdale St., Hamilton, Ont. Mine office: Northbrook, Frontenac Co., Ont. Anson E. Fletcher, pres.; J. D. Misener, vice-pres.; Chas. Narraway, sec.-treas.; preceding officers, Richard Haggerty, Chas. Zinn, S. A. Edick, J. M. Slater and John M. Fletcher, directors. Organized Oct. 11, 1909, under laws of Ontario, capitalization \$600,000, shares 40 cts. par, non-assessable. Annual meeting, last Tuesday in October. The property was bought of the president for 850,000 shares of stock.

Lands, 6 claims, 300 acres, in the Eastern mining district, about 11 miles from Kaladar, the nearest C. P. R. R. station. Property shows limestone, conglomerate and schist, and is reported by the management to have a 20' vertical quartz vein traceable 4,000' and carrying galena and chalcopryrite, the ore averaging 1.5% copper, 17% lead, 2% zinc, 68 oz. silver and \$6.60 gold. Development is by 4 pits of 12 to 175' depth.

The property has 120-h. p. plant, 6-drill compressor and hoist good for 500' depth. Property is 60 miles from Kingston. Company plans sinking shaft 200' deeper and doing 2,000' of drifting in 1913, and will erect a 500-ton concentrator, 2,000-h. p. electric plant and numerous buildings. Company's prospectus has been subjected to criticism on account of its inaccuracy and misstatements, but company is developing and apparently successfully.

ORE FINDER MINING CO.

MONTANA

Address: John Hickey, manager, Victor, Mont. Property, 3 miles south of Victor, Ravalli county, has been developed by 200' shaft, with 700' drifting on the vein, showing an oreshoot carrying copper with gold and silver values. Mine has steam hoist.

ORE GULCH MINING CO.

CALIFORNIA

John Chambers, superintendent, Tecopa, Inyo Co., Cal. Property shows silver-bearing lead-copper ores, in a vein that is developed by several short tunnels.

OREGON-ARIZONA COPPER CO.**ARIZONA**

Mine near Superior, Pinal Co., Ariz. Has steam power. Is under bond and lease, and now said to be controlled by Jack Newman and associates.

OREGON & BRITISH COLUMBIA MINING**& DEVELOPING CO., LTD.****BRITISH COLUMBIA**

Office: 304 Lewis Bldg., Portland, Ore. Mine at Copper mountain, near Princeton, B. C. W. J. Peddicord, pres.; G. B. Tucker, vice-pres.; G. Evert Baker, sec.-treas. and gen. mgr. Organized Jan. 6, 1906, under laws of Oregon, capitalization \$150,000, shares 10 cts. par, nonassessable; issued, 1,026,059.

Lands, 8 claims, crown-granted, 379 acres, well timbered, in the Yale district, B. C. Claims show diorite cut by diabase carrying patches, stringers and disseminations of chalcopyrite, bornite and magnetite, without quartz. The ore carries from $1\frac{1}{2}$ to $3\frac{1}{2}\%$ copper and is said to show as high as \$4.50 gold per ton. Development consists of a 176' tunnel, reported by the management to show 40' of mineralized ground, carrying auriferous and argentiferous chalcopyrite and bornite, the last 8' of the tunnel being said to show an 8' vein of solid ore, with 18" to 2' of talc gangue. Property also has shafts of 33' and 35'. Claims adjoin the Sunset mine and other properties of the British Columbia Copper Co.

OREGON-IDAHO INVESTMENT CO.**OREGON**

Idle. Mine office: Baker City, Baker Co., Ore. Jas. A. Howard, pres.; John Arthur, vice-pres.; Fred R. Mellis, sec.-treas. Capitalization \$50,000; surplus \$15,000 Sept. 10, 1913. Is a small, close corporation organized as a developing and holding company, but whose chief business since 1909 has been the operation of the Baker City, Ore., ore-sampling plant, burned April, 1911, but rebuilt later in the year.

Property includes the Poorman group, 8 claims, 160 acres, surveyed for patent, on Balm creek, 25 miles N. E. of Baker. The group shows a copper-bearing vein for 2,000' that has a gossan cap 200' wide in places.

Development consists of an 800' tunnel with 30', 40' and 50' crosscuts at depth of 100' showing 2.5 to 3.5% copper, present as chalcopyrite.

O'REILLY GOLD MINING CO.**COLORADO**

Mine near Breckenridge, Summit Co., Colo. A. C. Howard, superintendent, at last accounts. Owns the Bay State mine, developed by a 300' tunnel, showing auriferous and argentiferous copper ore.

ORFORD NICKEL-COPPER REFINERY.**NEW JERSEY**

Property of International Nickel Co., 43 Exchange Place, New York. Plant at Bayonne, N. J., treats nickel-copper matte from Sudbury smelter. Robt. R. Maffet, gen. supt., Robt. C. Stanley, asst. supt. of plant.

ORGAN MOUNTAIN MINING CO.**NEW MEXICO**

Office: Las Cruces, Dona Ana Co., N. M. Mine office: Organ, N. M. F. M. Hayner, pres. and gen. mgr.; N. B. May, vice-pres.; F. W. Campbell, sec.; C. Gill, treas.; L. A. Hurley, supt. Organized 1912, under laws of New Mexico, capitalization \$2,000,000, shares \$1 par, fully paid and nonassessable; issued, about 1,100,000.

Property, 17 claims, partly patented, showing limestone and granite contacts, having several orebodies, 3 of which have been developed. Company reports orebody to have average width of 10', length of 1,000' and a proven depth of 400', and to carry ores assaying 11% copper, 2% lead and 20 oz. silver per ton.

Development amounts to 7,800' with a 2,800' working and a 600' exploration tunnel and working shafts, 400' and 300' deep respectively. Mine said to be an old one discovered 1850, worked in 1880 and closed 1911.

Equipment includes 200-h. p. plant at mine and 250-h. p. plant at mill.

together with 2 hoists and 2 air compressors of 10-drill capacity combined. Mill includes 2 Joplin jigs, 3 Wilfley tables, 1 vanner and 2 slimers. Mine is 12 miles from A. T. & S. F. R. R.

Property formerly belonged to the Bennett-Stephenson Mining & Milling Co. Present company plans sinking 3-compartment shaft from 600' to 1,000' level and repairing the mill.

ORIENT GOLD MINES, LTD.

WASHINGTON

Office: 511 Hyde Block, Spokane, Wash. Mine at Orient, Ferry Co., Wash. Frank Ansley, pres. and mgr.; E. E. Doan, vice-pres.; Thos. R. L. Harris, sec.-treas.; L. F. Hachess and Geo. Burness, directors; R. Strawhun, supt. Capitalization \$1,500,000.

Property, the White Elephant mine with 6 claims, located 3 miles south of the Canadian border, and an equal distance from Rock Cut. The mine is a gold producer but contains gray copper ore. The mineral zone, 75' wide, lies between diorite and andesite.

Development consists of a 225' incline shaft sunk on the vein with a dip of 70° E. Workings on the 100' level show disseminated pyrite ore carrying from \$3 to \$6 per ton, with occasional shoots of copper ore. Equipment includes steam plant, compressor, sawmill, etc.

Company also owns claim in Pend Oreille district, Idaho. Property promising.

ORIENTAL COPPER CO.

ARIZONA

Idle. Office: St. Louis, Mo. Mine near Cave Creek, Maricopa Co., Ariz. W. F. McDonald, pres.; John B. Cabanne, vice-pres.; F. W. Irland, sec.-treas., at last accounts. Organized 1904, under laws of Arizona, capitalization \$2,000,000, shares \$1 par.

Lands, 19 claims and a 5-acre mill site, 385 acres, having a 475' tunnel in schist, said to crosscut veins showing ores that have given assays of 8.9% copper and 6.8 oz. silver per ton, with occasional small gold values. Poorly developed, and not regarded favorably.

ORIGINAL BLUE BIRD COPPER MINING CO.

CALIFORNIA

Mine office: Oasis, Mono Co., Cal. Capitalization \$1,500,000, shares \$1 par. Mine, 2 miles south of Oasis, having shafts of 80' and 130', made shipments, 1865, of high-grade ore, ranging up to 250 oz. silver per ton, and is claimed to have, on an old dump, several hundred tons of ore averaging 10% copper, 35 oz. silver and \$2 to \$12 gold per ton. Formerly had a mill. Shut down several years and company probably bankrupt.

ORIOLE COPPER MINING CO.

WYOMING

Office: Douglas, Wyo. Mine office: Clarence, Converse Co., Wyo. Hon. C. D. Clark, pres.; T. H. Howard, vice-pres.; E. J. Wells, sec.-treas. and gen. mgr.; Chas. J. Wells, supt., at last accounts. Organized 1902, under laws of Wyoming, capitalization \$750,000, shares \$1 par.

Lands, 4 claims, 80 acres, in the War Bonnet district, carrying an 8' fissure vein in granite, opened by shafts of 75' and 255', showing carbonate ore assaying about 6% copper, with traces of gold and silver. Had a 40-h. p. steam plant, with a hoist and 2-drill Leyner air compressor. No returns secured.

ORMUS MINE.

MEXICO

J. A. McGimsey, manager, Cumpas, Sonora, Mex. Property shows a vein carrying a narrow streak of tetrahedrite ore developed by a 300' shaft with drifts on 2 levels. Shipments to Douglas smelter are said to have run 3% copper and 355 oz. silver per ton. Company plans sinking shaft to 400' level.

ORO COBRE MINING CO.

ARIZONA

Address: Thos. Wilkinson, pres. and gen. mgr., 715 High St., Burlington,

Iowa. Operating office: Prescott, Ariz. Mine office: Wenden, Yuma Co., Ariz. Judge John J. Hawkins, vice-pres.; S. M. Wilkinson, sec.-treas.; R. R. MacDonald, supt. Organized Oct., 1901, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, nonassessable; fully issued. Annual meeting, second Tuesday in February.

Lands, 14 claims, 280 acres, in the Tank Pass section of the Harcuvar mountains, Ellsworth district, 12 miles west of Wenden. The claims show diorite, schist, granite and porphyry, carrying several fissure veins, ranging from a few inches to 20' in estimated average width, carrying oxidized ores near surface, giving assays of 12 to 15% copper, and \$1.50 to \$80 per ton in combined silver and gold values, with chalcopryrite, at shallow depth. Mine is opened by shafts of 240', 150' and 40', and a tunnel of 175' with 700' of workings. Management reports 2' of high-grade auriferous and argentiferous chalcopryrite at bottom of the 110' shaft. The neighboring mines are said to show bornite at depths of 300 to 500' and to be shipping ore in 1913, from similar orebodies in this contact zone.

ORO GRANDE MINES CO.

ARIZONA

Office: Clinton, Ia. Mine office: Wickenburg, Maricopa Co., Ariz. G. E. Lamb, pres. and treas.; Geo. B. Upton, vice-pres. and gen. mgr.; F. W. Ellis, sec.; and T. G. Norris, directors. Organized 1901, under laws of Arizona, capitalization \$3,000,000, shares \$10 par, nonassessable; issued, \$2,500,000. Is a close corporation, controlled by 6 shareholders. Annual meeting, second Tuesday in January.

Is a gold-mining company, but the ores carry considerable copper and if transportation by rail were available, mine might be worked for copper, if reports are correct.

Lands, 9 claims, patented, area 161 acres, in the Black Rock district of Yavapai county, Ariz. The property shows 3 contact deposits, between diorite and hornblende-schist. The 1 under development, with strikes of N. 27° E. and vertical dip, is estimated by management as 170' wide, traceable 4,400' carries oxidized ores, bornite and chalcocite, with gold values estimated to average \$5.40 per ton. The mine is developed by shafts of 320', 100' and 100', with about 8,000' of workings and is reported to have blocked out 980,000 tons of ore.

Equipment includes a 55-h. p. gasoline plant at the mine, with a 15-h. p. hoist and 5-drill Sullivan air compressor. There are 14 buildings, including necessary shops.

The 50-ton mill has ten 1,050-lb. stamps with a 40-h. p. gasoline engine; water is pumped, for milling, from Box canyon on the Hassayampa river.

The manager reports a saving by straight amalgamation of 99% of assay values and having made 60-day mill-runs with a total cost of \$1.87 per ton, for mining, milling, pumping and all expenses, which is interesting, if true. Management plans deepening the main shaft to 1,000'. Property promising.

ORO MINE.

ARIZONA

G. B. Williams, owner, Rochester, N. Y. Property, the Old Glory, or Oro mine, in the Oro Blanco district, 30 miles west of Nogales, Santa Cruz Co., Ariz. Mine shows a 16' fissure vein with a 5' paystreak of silicious sulphide ore carrying copper and lead with gold and silver values.

Development carried on since 1911 consists of a 350' shaft with 2 levels and ground opened for stoping.

ORO-PLATA MINE.

ARIZONA

Address: O. B. Stanton, superintendent, Kingham, Mohave Co., Ariz. Property is a gold mine, producing lead-copper ore, with gold and silver values. Development is by shaft, equipped with gasoline hoist. Mine has mill with 2 Nissen stamps.

ORO QUAY GOLD MINING & REDUCTION CO. COLORADO

Idle. Mine, 12 miles south of Ortiz, Conejos Co., Colo., shows considerable bodies of magnetic iron ore, some of which carry good assay values in copper, silver and gold. Was leased, 1908, to Colorado Fuel & Iron Co., which did a little development work.

OROVILLE CONSOLIDATED MINING CO. WASHINGTON

Letter unclaimed at Oroville, Okanogan Co., Wash. E. Macammon, pres.; W. C. Hancock, vice-pres.; A. Signs, sec.; R. Coil, treas., at last accounts. Lands, known as the Sunset group, have a vein of 6' reported average width, carrying copper ore of good average grade, developed by a shaft that was planned to be sunk 400'.

ORPHAN BOY MINING CO. UTAH

Office: Milford, Utah, James R. Craig, pres.; W. D. Williams, vice-pres. and mgr.; Chas. A. Doe, sec.-treas.; foregoing with M. R. Williams and Geo. H. Williams, directors.

Property in Star district, 20 miles S. W. of Milford, in Beaver county, Utah. District shows limestone, cut by quartz monzonite, with ore in veins and replacements. There are 11 claims, adjoining the Red Warrior and Mowitza mines, developed by 500' shaft with 1,200' of tunnels and workings from which considerable high-grade ore has been shipped. Vein, though narrow, has bodies of lead-carbonate ore carrying a little copper.

ORPHAN COPPER CO. ARIZONA

Mine address: Miami, Gila Co., Ariz. Chas. M. Clark, vice-pres. and gen. mgr. Organized May 15, 1908, under laws of Arizona, capitalization \$3,000,000, shares \$5 par, nonassessable; fully issued. Stock was relisted, 1910, on the New York curb.

Lands, 10 claims, unpatented, 190 acres, southeast of the New Keystone and near the Miami mine. Property is located on the outskirts of the schist belt, showing a contact between schist and granite-porphyry. The company formerly claimed to have 9 vein systems, with a prominent fault, the principal vein under development occurring at the contact of schist with granite-porphyry, being estimated, by the company, to average 30" to 3' in width, traceable 1,000', and to average 5 to 9% copper. This narrow vein is developed to 500' depth, but has shown only thin and small lenses of high-grade chalcopryite ore. Good assays were secured, from a few small stringers, and the company claimed, 1909, to have opened 4 commercial veins, which, unfortunately, was untrue.

Development is by a 560' two-compartment shaft with over 600' of work on the 500' level, cutting several small, commercially valueless veins. There also are pits and shallow shafts of 10 to 40' depth, with 720' of laterals. The main shaft shows a 30" vein carrying chalcopryite, assaying up to 20% copper, with gangue of altered granite and carbonates.

The career of this company on the New York curb was a scandal, the stock exchange house promoting the company manipulating the market until shares sold as high as \$3. After the bubble burst, 161,000 shares were sold at auction in New York, May, 1911, for 1 ct. per share. Property is of doubtful value, but Mr. Clark, the original owner of the ground and the company's manager, is an able miner and still has hopes of developing a disseminated orebody by churn drilling.

OSBORN CONSOLIDATED MINING & MILLING CO. UTAH

Office and mine: American Fork, Utah. S. Osborn, pres. and gen. mgr.; W. D. Loveless, vice-pres.; Alfred J. Osborn, sec.-treas.; preceding officers, J. L. Dunkley and J. W. Storrs, directors. Organized July 17, 1907, under laws of Utah, capitalization \$125,000, shares 25 cts. par.

Property, 9 claims, in American Fork canyon, about 4 miles from Park

City, shows veins of 5 to 8' width, carrying lead values near surface, developed by a number of shallow shafts and short tunnels. The 200' main shaft is sunk at an incline of 42°. Copper ores occur in depth in many of the adjacent mines and are expected here. Development meagre, but sufficient to show that property has promise.

OSCEOLA CONSOLIDATED MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Mine office: Osceola, Houghton Co., Mich. Rodolphe L. Agassiz, pres.; Quincy A. Shaw, vice-pres.; Jas. MacNaughton, gen. mgr.; preceding officers, Francis L. Higginson, Thos. N. Perkins, Wm. H. Dwelly, Jr., and Guy W. Currier, directors; Geo. A. Flagg, sec.-treas.; Frank H. Haller, supt.; A. Lincoln Burgan, mill supt.; Chas. D. Hohl, chief engr.; Jas. Rowe, mg. capt. Osceola branch; Jos. Biscombe, mg. capt. North Kearsarge branch; Frank Landers, mg. capt., South Kearsarge branch; John T. Reeder, purch. agt.; Wm. Veale, chief clerk. Organized 1873, under laws of Michigan, and reincorporated, 1903, for a term of 30 years, capitalization \$2,500,000, shares \$25 par; issued, \$2,403,750. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, second Thursday in March.

This company is controlled by the Calumet & Hecla Mining Co., through ownership of 32,781 shares. Company paid 71 dividends, beginning 1878, to end of 1913, aggregating \$11,891,225. Recent dividends have been \$2 in 1904; \$4 in 1905; \$10 in 1906; \$13 in 1907; \$2 in 1908; \$8 in 1909; \$10 in 1910; \$7.50 in 1911; \$12.50 in 1912 and \$10.50 in 1913. Net earnings were \$677,105.39 in 1908; \$1,070,645.14 in 1909; \$758,585.87 in 1910; \$664,627.91 in 1911; \$1,163,288.27 in 1912, equivalent to \$12.09 per share, and company began 1913 with balance of assets \$1,888,458.05, or \$19.64 per share.

Lands, 2,120 acres, in 4 separate tracts, also an extensive mill site, in Houghton county, and in addition there are considerable holdings of timber and miscellaneous lands in Houghton and Keweenaw counties, Michigan. Company's property includes 4 mines, known as the Osceola, North Kearsarge, South Kearsarge and Tamarack Junior, the latter being idle. The various mines employ about 150 power drills, when operated to full capacity.

The Osceola mine proper, 720 acres, lying next south of the Calumet & Hecla, was opened, 1873, on the southern extension of the Calumet conglomerate, upon which 6 shallow shafts were sunk, but this bed proving unremunerative, except under a few acres, work was abandoned thereon, and development begun on the Osceola amygdaloidal bed, lying parallel with and 730' east of the Calumet conglomerate, at surface. The Osceola mine proper has 6 shafts on the Osceola amygdaloid, which has a strike of approximately N. 39° E., shafts being numbered from north to south. Cross-cuts have been sent from the Osceola workings to the Calumet conglomerate, at various depths, without encouragement, and diamond drilling was done, 1904, to locate and test the Kearsarge amygdaloid on the old Osceola tract, but the results presumably were not encouraging. It has been rumored that the company has ceded the right to mine the Kearsarge bed on its property to the Laurium Mining Co., in exchange for certain surface rights.

The 4 northernmost shafts of the Osceola mine proper are abandoned. Nos. 1 and 2 have been abandoned for many years, owing to exhaustion of mineral ground tributary thereto. No. 3, a 3-compartment shaft, of about 3,000' depth, has been idle since 1905, but is used for ventilation and pumping and was given new electric pumps, 1910. No. 4, located 600' S. W. of No. 3, with 3 compartments, is about 3,700' deep, and has been idle since 1906. No. 5 Osceola shaft, 700' S. E. of No. 3, is 4,623' deep. No. 6 Osceola

shaft, formerly known as the Opechee, 1,300' S. W. of No. 5, is 4,592' deep. This shaft shows some good stopes, especially on the lower levels in the southern drifts, toward the Tecumseh mine.

The Osceola branch was thoroughly overhauled and repaired, 1910, to permit more economical work, improvements including electric power for operating the crushers in the shaft rock houses at Nos. 5 and 6.

The shops of the Osceola are centered between shafts Nos. 5 and 6. The plant at No. 6 has 5 Burt locomotive firebox boilers, with a coal trestle and bin, and a 125' brick-lined self-supporting steel smokestack, of 7' inside diameter. The compressor house is equipped with a 50-drill Nordberg 2-stage cross-compound air compressor having 26" and 40" air cylinders, and steam cylinders of 22" and 42", with 48" stroke.

An electric plant, in the compressor house, has a 100-kw. 220-volt d. c. generator, furnishing electric light for the Osceola mine and location, using enclosed arc lamps.

The company owns, at the Osceola location, a large number of dwellings for workmen. Water is secured from Lake Superior through a 1½-mile line of 6" pipe, connecting with a stand pipe at the Tamarack mine, leading to a 130,000-gal. concrete reservoir between Osceola shafts Nos. 5 and 6.

The Kearsarge or North Kearsarge mine, 1,120 acres, lies north of the Wolverine, with which it has underground connections. Extensive diamond drilling, 1905-07, showed considerable good stamp rock in the foot and hanging walls, at points where the main bed was impoverished. Diamond-drill boring costs were \$2 to \$3 per foot, as against \$6 to \$8 per foot for drifting. The Kearsarge amygdaloidal bed ranges 16 to 20' in width, in this mine, and has proven very buncy, though with very good average values. The southern workings, approaching the Wolverine, have shown improvement, but the mine is richest near the Ahmeek, to the north. About 60 power drills are used in this branch.

No. 1 North Kearsarge shaft is 3,873' deep, and has not been deepened for several years. Cavities under the shaft, resulting from old workings, were filled with waste rock, and capped with cement, and the skipway has concrete stringers. No. 1 shaft has a Nordberg hoist good for 6,500' depth, operating two 6-ton skips in balance. No. 2 North Kearsarge shaft was abandoned at depth of 2,400', some years ago. No. 3 North Kearsarge shaft, 1,825' northeast of No. 1, is 3,251' in depth. This shaft develops a large area of good ground, especially in the northern drifts. No. 4 North Kearsarge shaft, begun 1907, sunk 75' in the footwall, is 1,449' deep. The shaft is lined with concrete for depth of 185' from surface, and has large loading bins just below the 10th and 13th levels, to which rock is milled through chutes, from the levels above. The shaft house is of steel, 22x40' on the ground and 105' high, connected with the steel rock house, which is 127' high, built on a 14' concrete foundation, divided in the center by a single railway track. Resting on the concrete foundation is a cylindrical steel rock bin of 40' diameter, 48' high. Equipment of the rock house includes two 40-ton crushers, driven by a special Nordberg rock-house engine.

No. 4 North Kearsarge engine house is 58x84', of brick with steel roof, housing both the hoist and air compressor. The steel frame boiler house has three 84" Pratt boilers, with room for 2 additional. The self-supporting steel smokestack is 150' high, on a sandstone foundation, 7' 10" in diameter at the bottom and 6' 10" at the top, lined with a double layer of brick to height of 50', and above with a single layer.

The North Kearsarge surface plant includes a stone compressor house and a 30-drill compressor at No. 1 shaft, where are located also the combination machine and carpenter shops, warehouse and office, all of wood.

At No. 3 shaft there is a 45-drill compressor, with 2-stage air-end and compound steam-end, having 22x48" and 42x48" steam cylinders, with 40x48" and 36x48" water-jacketed air cylinders, and vertical intercooler, housed in a 25x55' stone and brick building having a steel truss roof. There is a 75-h. p. electric plant, providing electric energy for both the North and South Kearsarge mines.

The South Kearsarge mine, 160 acres, lying south of the Wolverine and east of the Centennial, was known formerly as the Iroquois. Development was begun Sept., 1899, and the best stopes are toward the Centennial line, the Kearsarge bed averaging about the same width as in the North Kearsarge and Wolverine mines, and being remarkably uniform in copper values. This mine is completely developed, both shafts and all but a few of the drifts having reached the boundaries of the property, and the mine is officially stated to have a life of but 4 or 5 years, at the present rate of extraction.

No. 1 South Kearsarge shaft, the northernmost, is 2,820' deep, and practically at the boundary. The shaft rock house is large, but not thoroughly modern in equipment, and may be remodeled; this rock house cares also for rock from No. 2 shaft, with which it is connected by an 1,100' trestle. Two skips are operated in balance. No. 2 South Kearsarge shaft is 1,992' deep.

Surface equipment of the South Kearsarge is mainly second-hand, taken from other branches of the mine, but is sufficient for present requirements, including air compressors of 55 drills aggregate capacity, and 40 rock drills.

The Tamarack Junior mine, 120 acres, lying between the Centennial and Calumet & Hecla, has 2 vertical shafts, on the Calumet conglomerate, No. 2 being 3,360' deep, with 12 levels opened. The Tamarack Junior has been idle since 1903, and apparently is dead for all time to come, so far at least as the conglomerate is concerned, with indifferent prospects of finding other workable cupriferous beds on the tract.

Rock is transported from the various mines to the mills by the Hancock & Calumet railway, a branch of the Duluth, South Shore & Atlantic system.

The mill is built in 2 sections, the main section being 176x213', of steel frame, with 4 Nordberg steeple-compound stamps. These stamps, which are now in very general use in the Lake Superior district, were invented by Mr. Nordberg as the result of some years of experimentation. The stamps have circular mortars, with five-eighths-inch screens, and hydraulic separators, about 20% of the copper secured in milling coming from the mortar discharges and separators. The older section has 3 stamps with circular screens having three-eighths-inch openings, and is otherwise a duplicate of No. 2 mill.

The wash departments of the 2 mills are equipped with Woodbury classifiers and jigs with 6 round tables and 1 Wilfley table for each stamp, the Wilfleys taking headings from the round tables. An Allis-Chalmers Chilean mill reduces over-size material from the stamp mortars and there are crushing rolls and Hardinge mills. Stamping costs were 16.95 cts. per short ton in 1905, and only 11.71 cts. in 1907, the latter figure being the lowest ever reported by any mill, for this work, and milling costs were 13.36 cts. per ton in 1908. No figures of stamping costs have been made public since the change in management.

The steel boiler house, adjoining the mills and furnishing power for both, has three 250-h. p. 72" boilers, delivering steam at 150-lbs. pressure, and nine 250-h. p. 84" boilers operated under 105-lbs. pressure, all of the locomotive-firebox type. Coal is brought to a 500-ton bin, over a trestle, in,

railway cars. An automatic ash discharge washes the ashes through a launder by water flushed from a stand pipe at 3-minute intervals. The boiler house has a 150' brick-lined self-supporting steel smokestack. The power plant has an Allis-Chalmers Corliss engine, operating a 100-kw. Morgan-Gardner d. c. generator, furnishing current for 220-volt incandescent enclosed arc lamps.

The joint pump house of the Osceola and Tamarack mines has two 40,000,000-gal. triple-expansion Nordberg pumps having 22", 40" and 60" cylinders, with three 30" horizontal plungers of 52" stroke and 42" discharge. Water is taken through an 8' tunnel, running 1,275' under Torch lake, with 3" intake holes, guarding against clogging by ice.

Production since 1902 has been:—

Year.	Lbs. fine copper.	Year.	Lbs. fine copper.
1903.....	16,059,638	1908.....	21,250,794
1904.....	20,472,429	1909.....	25,296,657
1905.....	18,938,965	1910.....	19,346,566
1906.....	18,588,451	1911.....	18,388,193
1907.....	14,134,753	1912.....	18,413,387

The cost of copper delivered was 10.29 cts. in 1903; 9.96 cts. in 1904; 10.68 cts. in 1905; 10.89 cts. in 1906; 12.44 cts. in 1907; 10.25 cts. in 1908; 9.47 cts. in 1909; 9.37 cts. in 1910; 9.28 cts. in 1911; 10.36 cts. in 1912.

OSHKOSH-WYOMING MINING CO.

WYOMING

Address: 55 High St., Oshkosh, Wis. Mine near Dillon, Carbon Co., Wyo. O. A. Koch, pres.; E. E. Meeleus, vice-pres.; H. O. Granberg, sec-treas. and gen. mgr. Organized June 20, 1904, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par.

Lands, 11 claims, 220 acres, in the Battle Lake district, carrying 4 fissure veins in gabbro, of 22' estimated average width, opened by shafts of 32' and 72' and a 22' tunnel, showing malachite, azurite and chalcopryrite, estimated to carry average values of 18% copper. Idle some years, but company still pays its taxes and the salary of a watchman at the mine.

OTERO COPPER CO.

NEW MEXICO

Norval J. Welsh, F. W. Houghton and D. Bruce Smith, managers. Office: Brice, via Oro Grande, Otero Co., N. M. Wm. T. Sevoyer, supt. Property, the Garnet mine group, showing deposits of copper-gold ore in fissures, replacements and contact deposits near monzonite porphyry.

Development by 500' shaft with an ore shoot on the 230' level said to run 5% copper and \$6 gold. The mine is equipped with a gasoline hoist.

Property reported, Sept., 1913, under bond and lease to an English syndicate, represented by L. Maurice Cockerill, with J. W. Camphouse in charge as manager. Shipments of 100 tons daily were made in 1913.

OVERLAND GROUP.

NEW MEXICO

Owned by Nick Iyone and John Campbell, Alma, Socorro Co., N. M. Claims show gossan carrying a few dollars in gold. Developed by 120' tunnel with 100' back, cutting an ore shoot carrying chalcopryrite, bornite and copper glance.

OVERLAND MINING CO.

ARIZONA

Mine near Winkelman, Gila Co., Ariz. P. F. Walsh, superintendent, at last accounts. Property adjoins the London Range mine of the London Arizona Copper Co. and "79" mine on the south and west. Claims carry an extension of the main dike system of the London range, showing metamorphic contact orebodies.

Company has new hoist, boilers, etc., installed 1913, and employs 30 men. Hayden Junction is the nearest railway point.

OVERSIGHT MINING & MILLING CO.**WASHINGTON**

Mine office: Republic, Ferry Co., Wash. Harold Preston, pres.; Chas. E. Murphy, vice-pres.; S. E. Dewsnap, sec.; C. A. Wallace, treas.; E. J. Delbridge, gen. mgr., at last accounts. Capitalization \$1,500,000, shares \$1 par.

Lands, 11 claims, adjoining the Copper Key, in the Lambert Creek or Eureka district, north and west of the Turtle river, 10 miles N. E. of Republic, show 4 veins. Mine has about a quarter mile of workings, with a 60' shaft, but principal development is by the Pinmoney tunnel. The wide Pinmoney vein is mainly gold-bearing, arsenical pyrite, carrying small silver and copper values. Has gasoline power, an air compressor and 300-ton shipping bins, and planned an aerial tram. No returns secured.

OWEN LAKE MINE.**BRITISH COLUMBIA**

Frank A. Brown, operator, Hazelton, B. C. Property, 14 miles from the Grand Trunk railroad, in the Hazelton district, shows 5 veins of 4½ to 10' width, carrying complex ores with copper-lead-zinc and silver contents. Mine is reported to be bonded for \$50,000 to the present operator.

OWL COPPER MINING CO.**CALIFORNIA**

Idle. Mine near Indian Gulch, Mariposa Co., Cal. A. A. Leonard, president. Organized June 17, 1907, under laws of Arizona, capitalization \$1,250,000, shares \$1 par.

Lands are the John Diaz copper claim and 2 gold claims; latter near Shingle Springs, El Dorado county, Cal. The John Diaz mine, in Sec. 12, T. 6 S., R. 16 E., near Indian Gulch, has a 168' shaft, developing a 3' vein in schistose diabase, carrying cuprite, azurite, chrysocolla and chalcophyrite, from which ore has been smelted returning 2 to 30% copper and 26 cts. to \$1.78 combined gold and silver values per ton. Equipment includes gasoline power. No recent returns secured.

OWL HEAD COPPER CO.**ARIZONA**

Letter unclaimed at Tucson, Ariz. Mine near Red Rock, Pinal Co., Ariz. Hon. Nott E. Guild, pres.; John B. Wright, sec. Lands, 24 claims, the Apache Princess group, in the Owl Head mountains, 13 miles N. E. of Red Rock. Property shows a zone of reddened schist with eruptives, the conditions resembling those of the schist deposits at Miami and Ray. The workings show copper impregnations in the schist, and to some extent in adjoining granite, giving assays of 0.5 to 3% copper, and 1 to 3 oz. silver per ton. Development is by a shaft, but churn drilling is planned. Property considered promising.

OXFORD CONSOLIDATED MINING CO.**UTAH**

Probably idle. Office: Eureka, Utah. Letter unclaimed at former mine office, Bingham Canyon, Salt Lake Co., Utah. James Crook, pres.; Geo. Owens, vice-pres. and sec.; C. H. Spriggs, treas. Organized June, 1909, under laws of Utah, capitalization \$25,000, shares 5 cts. par, assessable. Lands, 9 claims, unpatented, show copper and lead ores. Levied an assessment of one-half cent, early 1911, to pay indebtedness incurred through litigation. No returns secured.

OXFORD COPPER MINING CO.**IDAHO**

Idle. Office: Moscow, Idaho. Mine address: Pierce, Clearwater Co., Idaho. E. N. Brown, pres.; H. K. Moore, sec. and supt. Organized Jan. 5, 1907, under laws of Idaho, capitalization \$1,000,000, shares \$1 par. Annual meeting, first Monday in January.

Lands, 11 claims, unpatented, with 200 acres of timber lands, 42 miles from a railway, in the Pierce City district. Property shows porphyritic, igneous rocks carrying 4 veins. The 1 under development, estimated by management as 12' in width, carries oxidized ores to depth of 90', succeeded

by chalcopyrite and bornite, estimated to average 10% copper, 21 oz. silver and \$2 to \$12 gold per ton. Development is by shafts of 27' and 100', with tunnels of 98' and 75'. Equipment includes a 30-h. p. steam plant, with a 20-h. p. hoist, also several mine buildings. No returns for 1913 secured.

OXIDE COPPER CO.**ARIZONA**

Office: 85 Ames Bldg., Boston, Mass. Mine office: Red Rock, Pinal Co., Ariz. Frank H. Higgins, superintendent.

Lands, 31 claims, patented, known as the Copper Prince group, in the Silver Bell district, 7 miles south of the Imperial mine. Property shows contact metamorphic deposits carrying argentiferous copper sulphides in limestone gangue. Development is by a 500' shaft and a 350' tunnel, with about one-half mile of workings. Equipment includes gasoline power and an air compressor. Churn drilling was done, 1910, in the effort to locate disseminated ores, but apparently results were not especially encouraging. Production was 49,676 lbs. copper and 103 oz. silver in 1908, and less than \$3,750 worth of ore in 1910. No recent production secured.

OZARK SMELTING & MINING CO.**KANSAS & NEW MEXICO**

Office: 601 Canal Road, Cleveland, Ohio. Mine office: Magdalena, Socorro Co., N. M. Philip Argall & Sons, of Denver, Colo., cons. engrs. Works office: Coffeyville, Montgomery Co., Kans. Geo. A. Martin, gen. mgr.; Jos. C. Brown, supt.; C. H. Brown, mill supt.; R. V. Brown, smelter supt.; R. P. Pressler, engr. The company is a subsidiary of the Sherwin-Williams Paint Co.

Company owns the Graphic mine, a zinc-lead-copper property comprising 30 claims, 227 acres, with total holdings of 800 acres, in the Magdalena district, showing limestone, shale and quartz, carrying contact ore deposits between limestone and schist, of about 50' proven width, 500' length, and known depth of 500'. An average of 280,000 lbs. is said to show 2% copper, 12.8% lead and 23% zinc, with small gold and silver values. The upper workings show large quantities of lead and zinc carbonates, ores being mainly smithsonite and sphalerite, with some cerussite and argentiferous galena, and occasional cuprite and native copper. Ores are mainly low in grade, with principal values in zinc. The ore shoot, of about 500' length on the 7th, 8th and 9th levels, is about 100' wide on the 9th level. Development is by a 300' shaft, and two 1,500' cross-cut tunnels, with about 8 miles of workings, the lower levels showing a slightly argentiferous sulphide complex of zinc, lead and copper. Property regarded as one of the largest zinc deposits of America.

A new mill was erected, 1912, to treat the large tonnage of low-grade complex zinc-lead-iron sulphide ore already developed, by the froth flotation process, using it as an adjunct to older methods of concentration. Equipment includes electric power and an air compressor. A 50-ton mill, completed 1910, does dry concentration on ores above 20-mesh, and wet concentration on ores below that size. Production, mainly zinc ore, is shipped to the works at Coffeyville, for the manufacture of lead and zinc oxides, as the base for pigments, of which the Sherwin-Williams Co., in control of this corporation, is one of the largest American manufacturers.

PACIFIC COPPER CO.**MICHIGAN**

Office: 701 Sears Bldg., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. Geo. P. Gardner, pres.; Chas. J. Paine, Jr., sec.-treas.; preceding officers, Samuel N. Brown, N. H. Stone, J. Henry Brooks, Walter Hunnewell and R. R. Goodell, directors; Frederick W. Nichols, agt. Organized Aug., 1890, under laws of Michigan, capitalization \$1,250,000, shares \$25 par; issued, \$1,000,000, \$2 paid. Is controlled, through ownership of about one-half of the total stock issue by St. Mary's Mineral Land Co. Paid a

\$1 dividend Nov. 18, 1910. Ended 1912 with \$25,615.24 cash on hand. Company also holds 4,155 shares of stock of the Naumkeag Copper Co., received in part payment for lands sold to that company in 1912.

Lands, 820 acres, being the N. W. $\frac{1}{4}$ and the S. W. diagonal half of the S. W. $\frac{1}{4}$ of the N. E. $\frac{1}{4}$ of Sec. 4, and Sec. 5, T. 54 N., R. 34 W. Property lies just N. W. of the Atlantic mine, and supposedly carries the northern extension of the Atlantic ashbed, on which a little exploratory work was done previous to organization, and the company expended \$19,390 on development work shortly after organization. Has done no mining work since 1890.

PACIFIC COPPER CO., LTD.

MEXICO

Office: Primera San Francisco No. 1, Mexico, D. F. Mine office: Petatlán, Galena, Guerrero, Mex. Dr. W. S. Cockrell, pres.; Thos. Milan, vice-pres.; Carlos Eisenmann, second vice-pres.; J. P. Taylor, sec.; H. J. Morden, treas.; F. C. Stephens, gen. mgr.; Arthur H. Bromly, supt. Organized May 16, 1906, under laws of Mexico, capitalization 10,000,000 pesos, shares 100 pesos par, nonassessable; fully issued. Company holds direct title to its property through the Compañía de Cobre del Pacifico, and is in turn controlled through stock ownership by the Pacific Copper & Pyrites Co.

Lands, 1,000 pertenencias, 2,471 acres, known as El Rey del Cobre group, near the Rio Murga, in La Unión district, 10 miles north of Petatlán and about 28 miles N. E. of Zihuatanejo, the nearest port. The property shows fissure deposits in metamorphic schist, the main lode having a N.-E. strike, traceable 3 miles, and reported by management to be of 197' average width and to hold lenses of cupriferous pyrite. The vein has a gossan, covered mainly by soil, and is proven to depth of 60', at 2 points 900' below the highest outcrop, by stream erosions. Ore is estimated by the management to average 2.5 to 3% copper, 3 to 5 oz. silver and \$1.50 to \$2 gold per ton, with 48 to 50% sulphur and 42% iron.

Development is by "A" shaft of 109', "B" shaft of 70', the "102" shaft of 104' and by El Socavón drift tunnel of 400', No. 3 crosscut tunnel of 404', No. 4 crosscut tunnel of 486', No. 5 tunnel of 243', and No. 1 tunnel of 407', with a total of 2,800' of workings. The management reports that all working faces are in solid ore.

Equipment includes a hoist, not installed, good for 1,000' depth, and a small air compressor. There are about 35 buildings. Property lies in a very rugged country and is reached only by trails.

The property has been under development several years and is said to have employed about 350 men, 1907, but was idle from May until Nov. 20, 1910, when work was resumed with a force of about 65 men. Development work continues without interruption from the warring factions in the present revolution, and the company was planning to begin production, late 1913. The mine, though of low grade, apparently contains large orebodies and is considered promising.

PACIFIC COPPER MINING CO.

ARIZONA

Office: 415 Board of Trade, Kansas City, Mo. Mine office: Crown King, Yavapai Co., Ariz. John Kelley, pres.; W. J. Morse, sec., at last accounts; W. V. DeCamp, gen. mgr. Organized Feb. 8, 1907, under laws of Arizona, capitalization \$3,000,000, shares \$1 par, nonassessable; issued, \$2,397,616.67.

Lands 30 claims, 10 patented, 600 acres, including a mill and smelter site, 4 miles from Harrington and 9 miles from a railway, in the Silver Mountain district of the Bradshaw mountains. The property shows a hornblende phase of Yavapai schist, with an intrusive porphyry dike of 50 to 150' width, carrying 3 contact deposits, No. 1 of 9', No. 2 of 14' and No. 3

of 25' estimated average width, traceable 3,000', with N.-E. strike. Gossans of 100 to 500' estimated width are much leached, carrying honeycombed hematite and limonite, with occasional copper carbonates. Ores are malachite and azurite at and near surface, succeeded at depth of about 50' by a secondary sulphide zone carrying chalcocite, bornite and chalcopyrite. The management estimates ore to range 3 to 15%, and occasionally up to 30%, in copper tenor, up to 240 oz. silver, and 0.2 to 2 oz. gold per ton. Development is by shafts of 450', 40', 60' and 40', and tunnels of 25' and 100', with about 1,500' of workings.

Equipment includes a 120-h. p. plant, with an 80-h. p. 3-cycle vertical engine, connected to a 4-drill Sullivan air compressor, a 20-kw. triplex pump, and a 40-h. p. gasoline hoist. Buildings include a machine shop, smithy and carpenter shop, with boarding house and bunkhouse for 60 men.

PACIFIC COPPER MINING & MILLING CO. WASHINGTON

Office: Chewelah, Stevens Co., Wash. J. G. Olson, pres.; J. A. Hosea, sec.-treas.; Millard S. Hosea, mgr.

Lands, 12 claims, in the Chewelah district, 4 miles west of Blue creek, show Paleozoic sediments cut by diorite and other basic intrusives.

Development is by a 50' shaft and a tunnel, showing silver copper ore, said to run about \$33 per ton.

Equipment includes a 25-h. p. gasoline engine, and 2-drill air compressor. Was developing with small force at last accounts.

PACIFIC COPPER PYRITES CO. MEXICO

Office: 1430 Monadnock Blk., Chicago. John Howard McElroy, pres.; C. B. Greenleaf, sec.; Eugene Atkins, treas. Organized 1912, under laws of Maine, capitalization \$7,500,000, shares \$50 par. Is a securities-holding company, controlling the Pacific Copper Co. through ownership of about one-half of that company's outstanding share capital.

PACIFIC MINES CORPORATION. CALIFORNIA

Office: 1219 Hollingsworth Bldg., Los Angeles, Cal. Mine office: Stagg, San Bernardino Co., Cal. Frank A. Keith, pres. and gen. mgr.; J. N. Beckley, vice-pres.; R. I. Rogers, sec.-treas.; preceding officers, Josiah Austin, Benj. E. Chase, J. H. Hobbs, and S. W. Mudd, directors; E. C. Small, supt.; Geo. Nordenhall, engr.; E. C. Bierce, chemist-assayer.

Organized Oct. 7, 1910, under laws of New York, capitalization \$1,000,000, shares \$5 par; issued, 128,400 shares. Has paid total dividends of \$205,440, of which amount \$154,080 was paid in 1912. Annual meeting, first Tuesday in October. The company is a consolidation of the Bagdad Chase Gold Mining Co. and the Roosevelt Mining & Milling Co.

Lands, 37 claims, patented, 683 acres, in the Bullion Mountain district. Country rock is trachyte-porphry and quartz-monzonite. Orebodies occur in a silicified breccia along an E.-W. fault line, and have an average dip of about 35° N.

There are several known orebodies, the one now under development showing an average width of 10', with a proven length of 800' and developed to 450' depth. Ores carry malachite and oxides with a little chalcocite, and average 1% copper and \$6 gold per ton.

Development is by 10 shafts, ranging from 67 to 465' in depth, and 5 tunnels, longest 950', with about 8,660' of workings, blocking out 50,000 tons for stoping.

Power equipment amounting to 200 h. p. includes an 85-h. p. Union gas engine, 3 hoists and a 10-drill air compressor. Company also owns the Ludlow and Southern standard-gauge railroad, 7½ miles in length, with 2 locomotives.

Buildings include a 40x50' machine shop, a 20x20' smithy, both built of

corrugated iron, an 18x20' carpenter shop, a store building and about 25 other structures.

Production for 1912 was 1,833,626 lbs. fine copper from 39,605 tons dry ore, averaging 2.16% copper. Total production of mine to end of 1912 is 2,455,445 lbs. fine copper.

PACIFIC SMELTING & MINING CO.

MEXICO

Office: 42 Broadway, New York. Mine and smelter office: Fundicion, Sonora, Mex. Melbert B. Cary, pres.; Geo. M. Ryall, vice-pres.; Nelson S. Haughwout, sec.-treas.; preceding officers, Ronald E. Curtis, Howard McWilliams and Charles E. Wetmore, directors; Thornton C. Kirkland, asst. gen. mgr.; Edw. Sweeney, mine supt.; Walter Harvey Weed, cons. geologist.

Organized Oct. 6, 1909, under laws of Maine, capitalization \$8,000,000, shares \$5 par, in \$2,000,000 cumulative 7% preferred stock and \$6,000,000 common stock; all issued. United States Corporation Co., New York, registrar. Annual meeting, third Monday in January, at Augusta, Maine.

General balance sheet of Dec. 31, 1912, shows property and securities, \$8,409,848; furniture, etc., \$1,976, and cash and accounts receivable, \$161,279, last items showing \$29,000 reduction, the others identical with 1911 statement. Liabilities are given as \$8,000,000 for stock, \$222,052 accounts payable, compared with \$188,684 in 1911, and \$351,051 surplus compared with \$413,933 in 1911.

Company controls the Douglas Copper Co. and Mexican Exploration & Mining Co. by ownership of 98% of the capital of each company. These constituent companies hold practically the whole of the capital of 3 other Mexican companies. The subsidiary Mexican corporations are the Anita Mines Co., Yaqui Mining Co. and the following smelting companies: Compania Metalurgica y Refinadora del Pacifico, S. A., owning the Fundicion smelter; the Mexican American Smelting & Refining Co., S. A., owning the Guaymas smelter and the Sinaloa Smelting Co., holding the Mazatlan, or Sinaloa, smelter concession.

The Anita Copper Mines Co., S. A., owns the Anita, Consolidated, Baroyeca, London, Julia and Maria claims, 330 acres, belonging to the Anita mine, 25 miles north of the Fundicion smelter and the station of that name on the Southern Pacific Railroad of Mexico. This mine has been developed to a depth of 900' on the dip of the vein and shows ore reserves above the 7th level, amounting to 55,000 tons, that average \$2.58 gold, \$1.17 in silver and 3.99% copper.

The Anita (or El Cobre mine), has a shear zone of 115' width, with a diorite foot and trachyte, or rhyolite hanging wall. The shear zone, traceable for several thousand feet, with N.-S. strike and dip of about 45° W., carries ore in 5 lenses, or chimneys, the principal one being opened from the surface down to the 8th level, branching into 2 parts at the 6th level. Faulting, cross-faulting and brecciation occur with displacements up to 200'. The ore is partly metasomatic replacement of diorite, and partly a contact metamorphic deposit. It contains the usual oxide minerals succeeded in depth by chalcopyrite. The former management claimed average assays of 6.2% copper, 3.4 oz. silver and \$4.60 gold per ton, which later sampling proved to be too high.

Development consists of a 900' inclined main shaft, No. 1, equal to 500' vertical depth, with 9 levels opened; it had 7,415' of workings in 1907, with little later work. There are also 4 other shafts. The management plans further work as soon as enough basic custom ore is available to supply a suitable furnace mixture. Courtenay de Kalb reported that his examination showed about 55,000 tons of ore blocked out, with good indications for development of further orebodies.

The surface equipment consists of 2 cross-compound 2-stage Rand compressors of 3,000-cu. ft. combined capacity; a Risdon second-motion duplex hoist 14x21"; three 150-h. p. boilers; generator for light and power; rock-crushers, picking tables, shops, assay office, office buildings, warehouses, dwellings, supplies, etc.

El Cobre ranch owned by the company has approximately 10,000 acres of wood and timber land.

The Pirita mine, of the Anita Copper Mines Co., embraces Pirita No. 2 and Pirita No. 3 claims, 81 acres, located 5 to 7 miles from Victoria station on the Southern Pacific Railroad of Mexico. The mines contain a considerable tonnage of pyritic ore having small values in gold, silver and copper, but the deposit has not been extensively developed on account of poor transportation, though in time it will become of value to the company for fluxing purposes.

The Yaqui Mining Co., S. A., owns 10 mining properties in Mexico, which are as yet but partly developed. The Rosamond and Aurora mines each have about 800' of development work, exposing a fair tonnage of commercial copper-silver ore. The company also owns a number of slightly-developed prospects and some old mines nearby.

The Compania Metalurgica y Refinadora del Pacifico, S. A., owns the Fundicion smelter and other properties. The smelter was built originally to treat the ores of the Anita mine and to do general custom business. The smelting plant has a capacity of 350 tons a day, but was designed and in part equipped for 3 times that amount. The plant has one 42x160" blast furnace, sampling mill, power house, shops, administration buildings, etc. A railway connects all departments. The flue and stack equipment are adequate for 2 more furnaces. Electric plant furnishes current for both lighting and power purposes, and all machinery excepting yard locomotives is motor driven. The plant is of modern design and in excellent condition.

The mine is 23 miles from a railway, hence ore is hauled to the smelter by Saurer motor trucks. The road is good for 18 miles and bad for 5 miles, frequently muddy, with grades up to 12%.

The sampling mill is provided with crusher, 2 sets of rolls, 2 Vezin automatic samplers, finishing grinders, electric dryer, etc. The sample, consisting of one-eighth of a shipment received, is brought to the mill in 4-ton steel hopper-bottomed cars and is dumped into crusher bin.

Ore is dumped into a hopper, forming the boot of 2 inclined Jeffrey roller-bearing conveyors, having a capacity of 30 tons hourly, discharging into steel bins on either side of the furnace, and from the bins the charge is run in buggies to the furnace.

A steel dowlake from the blast furnace connects with a balloon dust flue 11x14x172' in size, leading to a 177' self-supporting steel smokestack, 14' in diameter at the base and 8' at the top, standing on a 27' stone foundation. Cars running underneath the flue collect flue dust, which, with fines, go to a pug-mill, which mixes flue dust and concentrates with quicklime and water, pugging them to a stiff sludge, which is fed direct to the furnaces without drying or briquetting. The former management planned installing a converter when required.

The smelter power plant has three 150-h. p. Morrison boilers, a 13x20x12" Bates high-speed compound engine, direct-connected to a 75-kw. Western Electric generator of 500 volts for power purposes; there is also a 25-kw. Western Electric generator direct-connected to a 9x12" engine furnishing current for lighting purposes at 110 volts. Blast is furnished by a Connersville blower direct-connected to a 12x24x36" Bates-Corliss tandem-compound condensing engine. There are 3 electric and 1 steam centrifugal

pumps so connected as to work singly or in series for any purpose, also a condenser, cooling tower, etc.

The smelter plant includes a smithy, machine shop, and an iron foundry with a 30" cupola. The works are served by a 36" gauge railway, equipped with 2 Davenport engines, about 50 four-ton steel ore cars, three 10-ton coke cars and six 40-cu. ft. slag cars, track scales, etc. Water is secured from an artesian well.

Costs have been estimated at \$3.99 per ton for mining, \$2.21 for transportation, \$2.48 for smelting, with indirect costs of \$2.88 per ton, giving a total of \$9.65 per ton with refining, marketing and taxes of \$6.08, or a total cost of \$15.73 per ton.

The town and smelter site consists of 71 acres on which there are 59 American-type dwelling cottages, besides a 2-story hotel, store, school house, electric lighting and water service.

The L'Aime lime quarry, located 2 miles from the railway near Victoria station, has 75 acres of limestone forming a hill 250' high, 300' wide and approximately 3,000' long. The rock is an excellent smelting flux, averaging but 1.2% silica, with about \$1 in gold; it was because of this gold content, determined by a special Government commission, that the company secured it as mineral land.

The Fundición smelter was in blast for 9½ days in May, 1908, treating 300-tons charge daily, but owing to tap jacket troubles, about 15% of the value of the tonnage smelted was tied up in cleaning. As a result of this run, 3 carloads of matte, amounting to 73.5 tons, were shipped to the Nichols Copper Co. for refining. The shipment contained, as per report, 27,868 oz. silver, 172.2 oz. gold and 67,993 lbs. of copper and returned a net value of \$26,869.12. The prices realized were 52⅞ cts. per oz. for silver, \$20.50 per oz. for gold and 12⅞ cts. per lb. for copper. Mr. W. B. Budrow, who was the smelter superintendent at the time, and who had been connected in a similar capacity with several of the Guggenheim smelters, referring to the operation of the furnace, stated. "The performance of the furnace during this operation was very satisfactory, both from a metallurgical and economical point of view. The matte produced was clean and averaged over 46% copper, and notwithstanding the fact that it carried high values in both silver and gold, the slag losses in those metals were quite low."

The Mexican-American Smelting & Refining Co., S. A., owns the Guaymas smelter with 250 acres, at Batuecas, a suburb of Guaymas, on tide water, lying between the Bay of Guaymas and the Southern Pacific Railroad of Mexico. The plant was originally erected by William C. Greene, founder of the Greene-Cananea Copper Co., and not having been operated for some years will need extensive alterations.

This smelting company also owns a concession from the Government covering the smelting rights in the Hermosillo and Guaymas districts of Sonora for a period of 20 years. This concession is a valuable one by reason of its privileges and exemptions.

The Sinaloa Smelting & Refining Co., S. A., owns a concession from the Government for a smelter at Mazatlan, or elsewhere in the state, for a period of 20 years from the 27th day of April, 1906, and is particularly exclusive in its terms.

**PACIFICO, S. A.; CIA METALLURGICA y
REFINADORA DEL.**

MEXICO

Office and works: Fundición, Sonora, Mex. Organized 1907. Is controlled through ownership of 99% of stock by the Douglas Copper Co., which is to be liquidated and assets taken over by the Pacific Smelting & Mining Co., which see.

PAHAQUARRY COPPER CO.**NEW JERSEY**

Geo. P. Young, receiver, Belvidere, Warren Co., N. J. O. R. Deshler, pres.; H. D. Deshler, sec.; Geo. O. Deshler, supt. Organized under laws of New Jersey, capitalization \$500,000, shares \$1 par.

The company has been operating the Pahaquarry mine since 1909 or 1910. The returns have been small and a floating debt of about \$110,000 was accumulated. In Oct., 1913, on application of some of the creditors, I. N. Beavers, of Reading Penn., and George P. Young, of Belvidere, N. J., were appointed receivers for the company. At a meeting of the stockholders a proposal to assess the stock 20% was voted down. The stock is owned in Northampton and Lehigh counties, Pennsylvania, and in Warren county, New Jersey. The mine has been worked at intervals for many years by different companies.

Lands, 1,642 acres, freehold, well timbered, in Pahaquarry township, on the northwestern slope of the Blue Ridge mountains, include a stone quarry, at Calno, N. J. The mine is said to have been worked by the Dutch as early as A. D. 1660, and was worked, 1847-62, by the Allegheny Mining Co., which secured an average copper extraction of better than 3%. The ore deposit of 287' claimed width, is traceable about 3½ miles on company's lands, by strong outcrops. It consists of white and gray well-bedded sandstones, speckled with grains of copper glance, or its decomposition products, and carries shoots and local enrichments of high-grade ore. The mine is developed by a 1,000' tunnel.

A 200-ton concentrator, completed 1910, after several years construction, is said to have 2 sets of 16x30" Standard rolls, 4 sets of 10x30" Standard rolls and 32 impact screens, and is operated by electric power.

The property, though low in grade, has an orebody of large size and is by no means devoid of promise, but will require large capital and skilled technical handling to be successful.

PAHREAH CONSOLIDATED COPPER CO.**UTAH**

Idle. Mine address: Pahreah, Kane Co., Utah. Heber W. Hartley, pres.; J. L. Perkes, sec.-treas., at last accounts.

Property, 12 claims, 150 miles from a railroad, shows a sandstone reef, dipping at an angle of 40°, underlaid by porphyry and limestone. The ore occurs mainly in the sandstone. Mine is developed by several open cuts and a short tunnel with considerable work done in the way of drifts and winzes, showing silver and gold-bearing copper ore of good grade. The vein is about 12' wide.

PALO VERDE COPPER CO.**ARIZONA**

Property is a copper prospect about 40 miles west of Phoenix, in the Saddleback mountains, between White Tanks and Eagle Tails districts. C. H. Howland, Cuyahoga Falls, Ohio, manager.

Mine is opened by shafts of 50', 112' and 120', and a 130' tunnel, said to show an orebody 600' wide, carrying copper-cobalt ores, assaying up to 20.92% copper and a 4.5% cobalt.

PAN-AMERICAN MG. & SM. CO.**ARIZONA & MEXICO**

Letter unclaimed at former office: 11 Broadway, New York. Mine office: Prescott, Yavapai Co., Ariz. A. Howard Skinner, pres.; Harry F. Lindsley, sec.-treas., at last accounts. Organized under laws of Arizona, capitalization \$15,000,000, shares \$5 par, in 3,000,000 preferred 7% stock and \$12,000,000 common stock. For further details, see Vol. X.

PANDORA COPPER MINING CO., LTD.**IDAHO**

Office: Wallace, Idaho. Mine office: Larson, Shoshone Co., Idaho. Walter H. Hanson, pres.; Martin Dunn, vice-pres.; John C. Weatherhead, sec.-treas. and gen. mgr.; preceding officers, John P. Gray and C. M. Baillie,

directors. Organized Oct., 1906, under laws of Idaho, capitalization \$1,000,000, shares \$1 par, fully paid; issued, \$737,000. Annual meeting, fourth Wednesday in October.

Lands, 10 claims, 150 acres, adjoining the Snowstorm mine on the east, and supposed to carry about 3,000' of the Snowstorm ore zone. Property shows St. Regis and Revett quartzites, with copper impregnations in the latter. Development is by the 1,400' main, or working tunnel, which has not yet crosscut the vein, and by other workings.

PAPOGO CHIEF MINE.

ARIZONA

Grigalvo & Amado, owners, Amadoville, Santa Cruz Co., Ariz. Property, in the Baboquivari mountains, has developed a copper deposit by 100' shaft and tunnels. Equipment includes steam hoist. Small shipments were being made Sept., 1913, of very high-grade gold-copper ore.

PARADISE MINING CO.

ARIZONA

At Paradise, Cochise Co., Ariz. Is controlled through ownership of 60% of stock, by Bisbee-Sonora Development Co., and property is described under that title.

PARADOX MINING & MILLING CO.

COLORADO

Office: Grand Junction, Colo. Mine office: Paradox, Montrose Co., Colo. J. A. McCulloch, pres.; T. W. James, vice-pres.; A. A. Miller, sec. and gen. mgr.; D. T. Stone, treas. Organized Jan. 25, 1905, under laws of Colorado, capitalization \$1,500,000, shares \$1 par.

Lands, 12 claims, 110 acres, and a 5-acre mill site, in the La Sal and Paradox districts, 65 miles from a railroad, showing limestone, sandstone, shales and quartzite, cut by intrusive porphyry. The claims show 3 contact veins of 2 to 7' width, opened by tunnels of 85', 100', 200' and 400', exposing melaconite and argentite ores, giving assay values of 3 to 75% copper and 1 to 1,000 oz. silver per ton, with a trace of gold. Idle several years.

PARCIONERA CONSOLIDATED MINING CO.

MEXICO

Address: Jos. S. Qualey, pres., 25 Pine St., New York city. Mine office: Santa Eulalia, Chihuahua, Mex. Ernest Henderson, sec. Is a close corporation, shares \$100 par. Property, a silver-lead mine, was said, at last accounts, to give an encouraging showing of copper.

PARIS BOULDER MINING CO.

IDAHO

Office and mine: Paris, Bear Lake Co., Idaho. Andrew Madsen, pres.; J. H. Eversoll, sec.-treas.; L. W. Johnson, supt., at last accounts. Organized May, 1908, under laws of Idaho, capitalization \$50,000, shares 5 cts. par. Lands, 30 claims, 6 miles west of Paris, developed by a 200' tunnel, showing silver-lead and copper ores, with values principally in lead.

PARK COPPER & GOLD MINING CO., LTD.

IDAHO

Idle. Office: 616 Cedar St., Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. T. N. Barnard, pres. and mgr.; Nellie J. Stockbridge, sec. Capitalization \$1,500,000, shares \$1 par. Lands, 7 claims, on the southern side of Stevens peak, 5 miles from a railway. The property is said to have a fissure vein in quartzite, of about 60' in average width, capped by a 40' gossan of mixed hematite and siderite, carrying kidneys of high-grade copper carbonates and chalcopryrite, with occasional native copper. Development is by two 25' shafts and 3 tunnels, the two upper tunnels showing ore, while No. 3, the lower tunnel, of 1,680' length, with a back of about 1,000', shows no ore. The mine has about one-half mile of workings. Inactive for several years.

PARRAL; CIA. ESPLORADORA DE.

MEXICO

Property is the Lentisco mine, near San Bartolo, Durango, Mex. Idle several years.

PARROT SILVER & COPPER CO.**MONTANA**

Is controlled by Anaconda Copper Mining Co., 42 Broadway, New York. A. H. Melin, pres.; D. B. Hennessy, vice-pres.; H. I. Meehan, sec.-treas.; preceding officers, John D. Ryan, Sidney Chase, B. B. Thayer and C. F. Kelley, directors. Organized, 1880, under laws of Montana, capitalization \$2,300,000, shares \$10 par; issued \$2,298,500. Pays a regular quarterly dividend of 15 cts. a share.

The entire property of the company was sold, 1910, to the Anaconda Copper Mining Co., for 90,000 shares of Anaconda stock, which now constitutes the company's sole asset.

In Jan., 1911, a suit was brought by Wm. E. Wall and other minority stockholders of Boston, Mass., representing 1,210 shares, to set aside this sale, as due to an unlawful conspiracy whereby true values were concealed, no appraisals made and the rights and interests of the minority violated.

The testimony at Boston and Butte, Oct., 1912, disclosed that the deal was carried through without an outside appraisal, but whether price paid was adequate or not is for the court to determine, and the allegations concerning violation of the Sherman act appear to be introduced merely to strengthen the appearance of illegal action. When this litigation is settled the company is to be wound up and assets distributed, pro rata, to shareholders.

PARRY SOUND COPPER MINING CO., LTD.**ONTARIO**

Office: 500 Germania Life Bldg., St. Paul, Minn. Mine office: Parry Sound, Parry Sound district, Ont. Frank Johnson, pres.; Otto Monson, sec.-treas.; preceding officers, John Ogren, A. Linderholm, and F. X. Benning, directors; Chas. Anderson, supt. Organized March 23, 1899, under laws of Ontario, capitalization \$5,000,000, shares \$1 par; issued, \$4,500,000. Liabilities are given at \$45,000 floating indebtedness, and a \$3,000 mortgage at 6% on 200 acres of land. Annual meeting, second Tuesday in August.

Lands, 10 claims, 1,000 acres, one-half freehold and one-fifth held subject to a \$3,000 mortgage, on the eastern shore of Georgian bay, property including the McGowan and Wilcox mines.

The Wilcox mine has outcroppings of 4 parallel veins in a width of about a quarter mile, with a 145' shaft on a 20' vein in granite-gneiss, traceable 1,000', carrying auriferous and argentiferous bornite, assaying 2.8 to 11% copper. There also is an open-cut of 20x150' area, 18' deep, showing 3% chalcopryite.

The McGowan mine has shafts of 100', 100' and 250', and a 150' crosscut tunnel, showing bornite and occasional chalcopryite, with quartz gangue. A smelter shipment of 240 tons of selected ore returned 17% copper and \$5 per ton in combined gold and silver values.

Equipment includes a 10-stamp mill, hoisting machinery and several buildings. Idle at end of year, but management plans further work.

PATAGONIA MINES & DEVELOPMENT CO.**ARIZONA**

Office: Patagonia, Santa Cruz Co., Ariz. Thos. Ewing, pres. and gen. mgr.; John A. Campbell, sec.-treas.; D. W. R. Davis and Charles Wighard, directors. Capitalization \$1,000,000, shares \$1 par.

Lands, sundry claims, including the Wolf-ton and Producer in Josephine canyon, Patagonia, the Oklahoma group of 8 claims and the Blue Rock claims, about 2 miles S. W., and the San Antonio mine, in the Sierra Azul mountains, 30 miles S. W. of Cananea.

Development, on the Wolf-ton and Producer claims, consists of a 150' tunnel, showing silver-copper and lead ores.

PAWNEE MINING CO.**ARIZONA**

Office: Douglas, Ariz. Mine office: San Simon, Cochise Co., Ariz.

Byron W. Claire, pres.; Henry D. Tinker, vice-pres.; Jas. A. Combs, sec.-treas. Organized, 1909, capitalization \$1,000,000, shares \$1 par.

Lands, 5 claims, 100 acres, known as the Claire or Empire State mine, 3 miles from the King of Lead mine and 17 miles from San Simon. Property was worked 1879, and later by the Lone Butte Mining Co., ore being treated in an arrastre, but the ore became base at shallow depth. Development is by shafts of 60' and 100', latter connected with an 80' tunnel. Presumably idle.

PAY CAR MINES CO.

ARIZONA

Office and mine: Bouse, Yuma Co., Ariz. J. C. Denton, pres. and gen. mgr.; Geo. D. Christy, vice-pres.; H. P. Ward, sec.; E. L. Short, treas., and Russ Avery, directors. Organized, 1909.

Lands, 53 claims about 1,000 acres, 3 to 5 miles west of Bouse, in the northern end of the Plomosa district. Property includes the Pay Car, Free Gold, Sunshine and Midnight groups, latter having shipped a little high-grade gold ore and shows sedimentary schist, shale and limestone, invaded by intrusions of diorite and andesite, ore following the course of the eruptives. Orebodies, mainly hematite, carry stringers giving assays of 2 to 20% copper and \$2 to \$250 gold per ton. Development is by a 210' vertical main shaft. Equipment includes a 20-h. p. gasoline hoist. The Pay Car group was in the hands of leasers and a little high-grade ore was being shipped, at last accounts. Is not a promising property.

PAYMASTER MINE.

IDAHO

Idle. Property, 1 mile east of Wardner, Shoshone Co., Idaho, is said to have a 4' vein carrying lead and copper values. The mine has a 280' upper tunnel and a 100' lower tunnel, with a 100' blind shaft, from the lower tunnel, showing good lead and copper ore, former assaying up to 42% in tenor.

PEABODY COPPER MINING CO.

ARIZONA

Mine office: Johnson, Cochise Co., Ariz. Property, 12 claims, 230 acres, bought of the Bonanza Belt Copper Co., include the Peabody mine, located 1879, which has a 6' vein carrying ore giving assays up to 9% copper and 4 oz. silver, and is popularly credited with having produced about \$2,000,000 worth of ore, under former ownership. Work 1912-13 was confined to mining carbonate ores. The mine is about 300' deep.

PEACH MINE.

ARIZONA

Address: General Development Co., owner, 42 Broadway, New York. Fred Butts, superintendent. Shows replacement deposit of copper ore in limestone, developed by 200' shaft and 300' tunnel. Is equipped with gasoline hoist. Shipments made 1912.

PEACOCK COPPER CONSOLIDATED CO.

UTAH

Idle. Letter unclaimed at former mine office, Milford, Beaver Co., Utah. L. F. Block, pres., treas. and gen. mgr.; J. Block, sec., at last accounts. Organized 1906, under laws of Utah, capitalization \$60,000, reduced from \$600,000, Nov. 12, 1913, shares 10 cts. par, assessable.

Lands, 4 claims, patented, lie west of the Hornsilver mine and adjoin the King David and Cupric mines in the San Francisco district. Property has a good surface showing of argentiferous galena, disseminated in limestone. Mine, opened by a 150' shaft, with 500' of workings, developed a 2 to 5' fissure vein carrying silver-lead and copper ores, assaying up to 42% lead, 23 oz. silver, and \$1.60 gold per ton.

PEACOCK COPPER MINING CO.

ARIZONA

Office: 1 Buckler Bldg., El Paso, Tex. Mine office: Johnson, Cochise Co., Ariz. J. A. Bennett, pres. and gen. mgr.; F. M. Filler, vice-pres.; A. H. Anderson, sec. and treas.; H. L. Marmion, supt. Organized Sept. 4, 1908, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, nonassess-

able; issued, \$808,000. Annual meeting, first Tuesday after first Monday in October.

Lands, 17 claims, unpatented, 330 acres south of the Peacock mine and adjoining the Arizona United Mines Co., show limestone and porphyry, with an ore zone of N.-W. strike, of 40 to 200' width on the outcrop.

Mine is opened by shafts of 110' and 200', and a 160' tunnel, with about 1,030' of workings, showing a 5' vein, said to average 4% copper, 5 oz. silver and about \$1 gold per ton. Buildings include an office, smithy and bunkhouse. Mine made small ore shipments to El Paso, 1912. Management plans continuous development, and installation of a small hoist at No. 2 shaft.

PEACOCK COPPER MINING CO., LTD.

IDAHO

Office: Wallace, Idaho. John H. Nordquist, president. Organized 1907, under laws of Idaho. Lands, 5 claims, near the Eagle Mining Co., in the St. Joe district, Idaho county, Idaho. No returns secured.

PEACOCK MINE.

IDAHO

At Council, Washington Co., Idaho. Owned by American Mining Co., Ltd., S. T. Hauser and A. M. Holter. Described under title American Mining Co., Ltd.

PEARCE MINE.

CALIFORNIA

Mine address: Raymond, Madera Co., Cal. J. B. Pearce, owner. The mine, in the Green Mountain district, several miles from a railway, is developed by a 125' shaft and 400' tunnel, showing sulphide ores, underneath a 60 to 100' gossan; said to carry up to 20% copper. Ore is sacked and hauled by wagon to the railroad at Raymond, at a transportation cost of \$4 per ton.

PECOS COPPER CO.

NEW MEXICO

Idle. Office: The Arcade, Cleveland, Ohio. Mine office: Cowles, San Miguel Co., N. M. Alfred H. Cowles, pres.; I. C. Gifford, vice-pres.; Frederick W. Swan, sec. Organized 1904, under laws of Michigan, capitalization \$100,000, shares \$25 par; fully issued and fully paid. The company has a floating debt of \$65,000, owed to stockholders, of whom there are only 5, the company being a close corporation.

Lands, 15 claims, 268 acres, and 552 acres including valuable coal veins and placer ground, all patented, in the Hamilton district, 12 miles from Santa Fe. Holdings include water rights to the Pecos river for 2½ miles, with 2,000 h. p. available for development.

Lands show granite, slate and quartzite, underlying lower Carboniferous limestones in which the valley of the Pecos river is cut. The property carries a contact deposit, with ferruginous quartzite on the south, and granite to the north, the mineralized zone, ranging up to 225' in width, traced 1,000', carrying orebodies of 12 to 40' width. A brecciated-intrusive diorite follows the vein. Ores contain massive chalcopyrite, sphalerite and occasional galena, said to give average assays of 3.5% copper, 3.75 oz. silver and \$1.60 gold per ton. The ore, being complex, will be difficult of treatment.

Development amounting to 3,600' of work, includes the 60' Katydid shaft and 370' Evangeline shaft, with 450' of tunnels, estimated to show 210,380 tons of ore, blocked out for stoping, of an estimated value of \$3,560,000. The mine, discovered 1881, was worked for a short time only owing to the zinc ores near the surface proving unworkable, and was taken over 1905, by the present company.

Equipment includes a 165-h. p. steam plant, with 2 hoists, 1 good for 600' depth, and a 3-drill Rand air compressor. There are several mine buildings. The company plans building a 23-mile railway, from the mines to Pecos switch, on the Santa Fé line.

PECOS MINING CO.**TEXAS**

Address: Jesse Hittson, Van Horn, Culbertson Co., Texas. J. Hittson, J. Y. Canon, and James Dougherty, all of Van Horn, principal shareholders.

Property, the Pecos mine, 3 miles N. E. of the Hazel silver mine in El Paso county, 19 miles from Van Horn. Claims show a N.E.-S.W. vein in brown igneous tuffs, traceable 2 miles across the mountains to the Red Maverick mine.

Development consists of a 105' shaft with a level at 90', showing seams a few inches thick of copper-silver ore, assaying 70% copper; the seams in places aggregate 2' in thickness. The mine was first operated in 1888, abandoned after working and relocated 1903, by Geo. Briggs and T. R. Owen, forfeited by technicality of Land Commission and located by J. Y. Canon.

PEERLESS MINING & MILLING CO.**COLORADO**

Office and mine: Salida, Chaffee Co., Colo. H. F. Schnelker, pres. and gen. mgr.; I. W. Haight, sec.-treas.; at last accounts. Organized Nov., 1904, under laws of Colorado, capitalization \$500,000, shares \$1 par, nonassessable.

Lands, 6 claims, 70 acres, with 10 acres timbered, on Cyclone mountain, in the Monarch district, 16 miles west of Salida, showing several fissure veins in granite, carrying auriferous and argentiferous lead and copper sulphides, with lead values predominating. The mine has an 800' crosscut tunnel, with 1,350' of workings. There is a bunkhouse, and a 12x14' stampmill, presumably with 1 stamp. Company is slowly extending the tunnel, working summers and doing 150 to 300' of new work annually.

PELICAN MINING & MILLING CORPORATION.**COLORADO**

Office: 141 Milk St., Boston, Mass. Mine office: Lake City, Hinsdale Co., Colo. Chas. F. Willis, general manager, at last accounts. Mine is developed by tunnel and has electric power and air compressor. No returns secured.

PENN MINING CO.**CALIFORNIA**

Office: 901 Foster Bldg., Denver, Colo. Mine and works office: Campo Seco, Calaveras Co., Cal. Chas. Loughridge, pres. and gen. mgr.; Wm. D. McIlvaine, sec.-treas.; Alfred P. Busey, Jr., gen. supt.; D. C. Smith, metallurgist and smelter supt. Organized June 1, 1910, under laws of Wyoming, as successor of Penn Chemical Works, capitalization \$250,000, shares \$1 par. Is operated as a close corporation.

Property, the Campo Seco, Hecla and Satellite mines, near Campo Seco, in the Foothill copper belt, 4 claims, 80 acres, with a 20-acre smelter-site, 640 acres of timber lands and 450 acres miscellaneous lands, giving total holdings of 1,190 acres. The ore deposit, having a maximum width of 30', at depth of 400', lies between amphibolite schist and talcose shale, and north of the Campo Seco shaft splits into veins known as the East and West, which continue parallel. Ore is mainly chalcopyrite, associated with sphalerite, sometimes occurring in considerable quantities, and pyrite, and also includes occasional chalcocite, bornite and covellite. The ore has a maximum value of 7 to 11% copper, 8 to 10 oz. silver and \$3 to \$4.50 gold per ton, but the average is materially lower. The gangue ranges from talcose schist, through clay, to quartz.

Development includes the 1,550' working shaft and 5 tunnels; also 4 other shafts, 3 on the East vein at the Campo Seco and Hecla mines and 1 on the West vein at the Satellite mine. No. 1 shaft, 400' deep, is useful only for ventilation; No. 2 shaft, 750' deep, at the Campo Seco mine, is the main working shaft, with a steam hoist; No. 3 shaft, at the Satellite mine, about 1,300' from No. 2 is 1,150' deep, with levels at 100' intervals, and has a steam hoist; No. 4 shaft, at the Satellite mine, 400' deep, is used as an air shaft and manway; No. 5 shaft, at the Hecla mine, is 400' deep.

Equipment includes a 150-h. p. steam plant at the mine, with 44-h. p. and 100-h. p. hoists, good for 1,000' and 2,000' respectively, and there is a 14-drill Ingersoll-Sergeant air compressor and an electric light plant. The smelter has a 400-h. p. steam and electric plant; fuel is crude petroleum, which also is burned in the locomotives. The Southern Pacific railway is distant 6 miles, at Valley Springs, and transportation between that point and the mine is by wagons, making one round trip daily. A short private railway connects the mines and works.

The 300-ton smelter, a quarter of a mile from the mine, has a 75-ton 36x72" blast furnace and reverberatory furnaces of 50 and 100 tons, latter burning petroleum, and the smaller reverberatory is used to agglomerate partially desulphurized fines. There are eight 16-ton McDougal calciners. The blast furnace, using semi-pyritic smelting, makes mattes of 20%, 40% and 60% copper tenor, in 3 successive fusions, and matte of about the same tenor is made in 1 fusion in the large reverberatory furnace. Matte goes to the American Metal Co., Ltd., for conversion and refining. The smelter railway, for charging and slags, has electric locomotives. A considerable percentage of the pyritic ore is used for the manufacture of sulphuric acid, and a little cement copper is produced by leaching old waste dumps. The smelter has had considerable trouble with farmers over fumes, these difficulties having been adjusted 1908, by the payment of damages, but complaints were again filed early 1912, and after operating throughout 1912 and trying out a new process for the elimination of sulphur from the smelter fumes, the plant was forced to shut down.

PENN-WASH. CONSOLIDATED MINES CO.

WASHINGTON

Office: 409 Malley Bldg., New Haven, Conn. Mine near Conconully, Okanogan Co., Wash. Wm. Baines, pres.; F. J. May, sec.-treas.; David Gubser, gen. mgr., at last accounts. Organized as successor of Washington Consolidated Copper Co., which was a reconstruction of the Washington Tunnel & Copper Co., which was a reorganization of the Mineral Hill Mining Co.

Lands, 48 claims, about 960 acres, in the Mineral Hill district, including the Mineral Hill group of 20 claims, having an 1,800' tunnel, said to cut 3 veins, carrying silver and gold-bearing copper ores, mainly argentiferous tetrahedrite. The 400' main tunnel is planned to be continued to 12,000', to cut 8 known veins, and the mine also has several shallow shafts. There is an available water power, rated as capable of developing 4,000 h. p. Equipment includes a steam plant, crusher, ore bunkers and a sawmill. Idle.

PENN-WYOMING COPPER CO.

WYOMING

Bankrupt. Entire assets of the company consists of stock and mortgage bonds of the Battle Lake Tunnel Site Mining Co., the Haggerty Copper Mining Co., Encampment Smelting Co., Encampment Tramway Co., Encampment Pipe-Line Ditch Co., Encampment Land & Townsite Lot Co., Carbondale Coal Co., Emerson Electric Light Co., Saratoga & Encampment Railroad Co. and North American Mercantile Co. These were sold, March, 1913, by order of Judge John A. Riner of the U. S. district court of Wyoming, to satisfy a trust deed held by the Continental & Commercial Trust & Savings Bank of Chicago. See the United Smelters Railway & Copper Co. which supposedly owned the Penn-Wyoming. The company and its ramifications are very fully described Vol. X.

PENNFIELD MINING CO.

ARIZONA

Controlled by Chesterfield Copper Co. C. E. Horney, secretary, 507 Brown Bros. Bldg., Philadelphia, Pa. Mine near Twin Buttes, Pima Co., Ariz. Property adjoins that of the Chesterfield Copper Co. and ore deposit is similar.

PENNSYLVANIA MINING CO.**COLORADO**

Probably reorganized as Pennsylvania Mining, Power & Reduction Co. and property described thereunder.

PENNSYLVANIA MG., POWER & REDUCTION CO.**COLORADO**

Leopold Sternberger, business manager, Idaho Springs, Clear Creek Co., Colo. Is presumably a reorganization of the Pennsylvania Mining Co. Property, the Pennsylvania group, shows fissure veins with complex lead-zinc-copper ore, opened by shafts and tunnels. Equipment includes steam and water-power plants, air compressors, etc. Mine was operated by leasers at last accounts.

PENOBSCOT MINING CO.**MONTANA**

Mine address: Elkhorn, Beaverhead Co., Mont. J. Bowden, manager. Property is the old Elkhorn and Hecla mines, about 16 miles west of Melrose, showing fissure veins in granite.

Development is by 3 incline shafts, and company was planning 1912, to drive a 3,000' tunnel, at a low level and to install electrical equipment.

PENOLES MINING CO. (CIA. MINERA DE PENOLES).**MEXICO**

Smelting works and mines at Mapimi, Durango, Mex. Controlled by the Metallurgische Gesellschaft of Germany. Capitalization 4,000,000 pesos, increased 1910 from 250,000 pesos, shares 100 pesos par. Owns the Ojuela mine with silver-lead ores in limestone, the San Juan mine (Herman A. Kruger, superintendent, killed by revolutionists in 1913), the Paloma mines and has options on the Cabrillas and Mariposa mines. Company produces merely a little copper as a byproduct.

PEOPLES PARTY MINING CO.**ARIZONA**

Address: care Robt. MacKay, vice-pres. and mgr., Johnson, Cochise Co., Arizona. John Gleeson, pres. Property, adjoining the Bonanza Belt Copper Co. to the south, was operated in 1913, developing a deposit of fair-grade copper ore which is sorted for shipment to El Paso.

PERSON CONS. COPPER & GOLD MINES CO.**NORTH CAROLINA**

Letter unclaimed at former mine office, Virgilina, Halifax Co., Va. E. D. Beecher, pres. and gen. mgr., at last accounts. Organized under laws of New York, capitalization \$1,000,000, shares \$10 par.

Lands, 1,372 acres, in several neighboring tracts, including the Durgy mine, located in Person county, North Carolina, having a 330' main shaft, developing a quartz vein averaging 4' wide in porphyry and other igneous rocks, altered to metamorphic micaceous schists. The vein carries shoots of bornite and glance ore that vary from 4 to 20% copper. Has a 50-ton concentrator. When worked the mine shipped concentrates averaging 45% copper and 20 oz. silver per ton, with small gold values, sending a limited amount of high-grade ore, averaging 30% copper and 10 oz. silver per ton, direct to smelter. Idle several years and company is apparently moribund.

PERTH AMBOY SMELTER.**NEW JERSEY**

Property of American Smelting & Refining Co. at Perth Amboy. Has 600-ton copper-lead smelter, 200-ton lead refinery and a 300-ton electrolytic copper refinery, employing about 2,000 men. Described under American Smelting & Refining Co.

PEYTON CHEMICAL CO.**CALIFORNIA**

Formerly at El Dorado, El Dorado Co., Cal., and Martinez, Contra Costa Co., Cal. Property sold to General Chemical Co. of California, 1911. Described Vol. X.

PHELPS, DODGE & CO., INC.**UNITED STATES & MEXICO**

Office: 99 John St., New York. Dr. Jas. Douglas, pres.; Cleveland H. Dodge, Arthur Curtiss James and Jas. McLean, vice-presidents; Geo. Not-

man, sec.-treas.; preceding officers, Geo. B. Agnew, Francis L. Hine, Wm. Church Osborn and E. Hayward Ferry, directors; Walter Douglas, gen. mgr.; J. Millard Jones, British agent. Organized Dec. 14, 1908, under laws of New York, capitalization \$50,000,000, shares \$100 par; outstanding, Jan. 1, 1913, \$45,000,000. This company was organized as the successor of the firm of Phelps, Dodge & Co., which had a history of nearly a century, its founder, Wm. Earle Dodge, having been one of the great pioneer merchants of America and a noted philanthropist. Shares are listed on the New York Stock Exchange.

Capital stock: Authorized, \$50,000,000; outstanding, \$45,000,000. Shares, \$100. The capital stock was issued for the purchase of the entire stock of the Copper Queen Consolidated Mining Co., at \$135 for each \$10 share, \$27,-000,000; Moctezuma Copper Co., at \$307 9-13 for each \$100 share, \$8,000,000; Detroit Copper Mining Co. of Arizona, at \$150 for each \$25 share, \$6,000,000; Stag Canon Fuel Co., at \$800 for each \$100 share, \$4,000,000; held for future issue \$5,000,000; total, \$50,000,000. Stock listed on New York Stock Exchange. Annual meeting, first Tuesday after first Monday in April, at 99 John St., New York. Books close 10 days before and reopen day after annual meeting. Stock transferred at office of the company. Registrar of stock, Farmers' Loan & Trust Co., New York city.

The company pays a regular quarterly dividend of \$2.50 per share and in 1913, 2 extra dividends of \$2 each per share were paid up to Oct. 1, compared with \$5 extra in 1912 and \$2 extra in the 3 preceding years.

Comparative General Balance Sheet:

	Jan. 31, 1909.	Dec. 31, 1909.	Dec. 31, 1910.	Dec. 31, 1911.	Dec. 31, 1912.

This company also controls through personal holdings of its officers, the Old Dominion Co., Old Dominion Copper Mining & Smelting Co., United Globe Mines and Commercial Mining Co. Members of the old firm also control the El Paso & Southwestern railway, a road that, while built originally as an outlet for the Copper Queen mine, has expanded steadily and bids fair to develop eventually into a transcontinental trunk line. The same interests are very large shareholders in the Rock Island and Great Northern railways.

This company controls some of the richest and most productive copper mines in existence, all blessed with the ability to make copper at unusually low costs, as is evidenced by the great increase in dividends of subsidiaries in 1910 over 1909, in a year when decreased dividends were the rule with a great majority of the large copper producers of the world.

The company also controls the Burro Mountain Copper and Phelps Dodge Mercantile Co.

Comparative statement of total production from subsidiary companies mines. Years ending Dec. 31.

	1912	1911	1910
Total ore extracted, tons.....	1,893,244	1,841,210	1,644,541
Total ore milled, tons.....		1,017,352

Custom ore, tons.....	97,574	107,684	131,050
Copper, lbs.....	148,678,889	134,149,627	138,805,652
Silver, oz.....	1,689,152	1,794,895	1,395,504
Gold, oz.....	27,687	27,154	20,412

This company also took over the metals selling agency of the old firm, and in addition to marketing the product of its own mines, acts as sales agent for the Calumet & Arizona and other producers.

Comparative statement of copper sales, years ending Dec. 31.

	1912	1911	1910	1909
Total sales of copper, lbs.....	192,297,374	180,301,965	194,138,698	185,033,415
Subsidiary companies, lbs.....	139,759,515	131,327,002	139,297,409	
Outside product, on commission, lbs.....	52,537,859	48,974,963	54,841,289	
Sold to domestic trade, lbs.....	98,267,037	69,483,782	100,819,254	
Sold to foreign trade, lbs.....	94,030,337	110,818,183	93,319,444	
Average price per lb.....	15.51 cts.	12.36 cts.	12.826 cts.	

The total output of the Phelps-Dodge properties in October totalled 13,332,943 lbs., and there is little doubt that the company will this year reach the 150,000,000 lbs. mark. The production to date in 1913, compared with previous years has been as follows, in pounds:

	1913	1912	1911
Six months.....	74,216,137	70,735,473	66,545,246
July	12,611,837	12,994,253	10,303,823
August	13,971,674	11,270,263	11,349,904
September	13,561,742	11,757,373	10,523,273
October	13,332,943	13,165,070	11,592,485

Ten months.....127,694,333 119,922,432 110,314,731

The following figures include the copper actually produced by the Copper Queen, Moctezuma and Detroit mines for several years before the organization of this corporation, and excludes the copper obtained by smelting ores purchased:

Year	lbs. copper	Year	lbs. copper
1904.....	77,637,595	1909.....	132,890,629
1905.....	89,418,083	1910.....	116,888,070
1906.....	112,281,878	1911.....	123,653,978
1907.....	90,955,963	1912.....	140,628,798
1908.....	115,871,304		

This is one of the few new companies in the copper mining industry that is undercapitalized rather than overcapitalized, and this is but a detail in a general business policy that, while thoroughly progressive and abreast with the times, retains the fundamentally sound and conservative policies developed by the old firm in nearly a century of honorable and markedly successful business life.

PHILADELPHIA-SEARCHLIGHT GOLD & COPPER MG. CO.

NEVADA

Office: 810 Witherspoon Bldg., Philadelphia, Pa. Mine near Searchlight, Lincoln Co., Nev. John C. Groome, pres.; J. M. Stewart, sec.-treas., at last accounts. Organized under laws of Arizona, capitalization \$5,000,000, shares \$1 par.

Lands, 23 claims, 1 fractional, 450 acres, in the Sunrise district, 4 miles N. E. of Searchlight. The mine has a 356' vertical shaft, with crosscuts from bottom showing several veins of 3" to 4' width, carrying auriferous and argentiferous copper ore, of fair tenor, with quartz gangue. Has steam and gasoline power, with necessary mine buildings. Inactive several years.

PHOENIX-BURROUGHS MINE.

COLORADO

Address: Black Hawk, Gilpin Co., Colo. Property on Quartz hill, near Black Hawk, carries the Gunnell Fagan lode with zinc-copper-iron ore netting \$7 to \$14 per ton, developed on the 100' level.

PHOENIX CONSOLIDATED COPPER CO.

MICHIGAN

Office: Calumet, Mich. Mine near Phoenix, Keweenaw Co., Mich. Thos.

F. Cole, pres.; Spencer R. Hill, vice-pres.; Chas. A. Wright, Jr., sec.-treas.; preceding officers and Capt. Thos. Hoatson, directors. Organized April, 1899, in Michigan, capitalization \$2,500,000, shares \$25 par; \$14.50 paid in. Is controlled by the Keweenaw Copper Co., through ownership of about 90% of the share capital, acquired by an exchange of shares on the basis of 10 shares of Phoenix for 1 share of Keweenaw. Ended 1912, with cash \$486, and liabilities of \$42,933. Expenditures for 1912 were \$4,262. Last assessment was \$1 per share, payable Sept. 29, 1913.

Lands, 2,505 acres, carrying 5 different fissure veins, on which more or less mining has been done, at various times. The old Phoenix mine, included in the present consolidation, is famous for having produced the largest mass of native copper ever found, this weighing upwards of 500 short tons. The Phoenix fissure, on which work was begun 1846, was opened to a depth of only about 90', yielding considerable mass copper and silver, one mass of native silver weighing 8 lbs. 10 oz. There also are possibilities on the Ashbed lode, which has been slightly developed by an exploratory tunnel. The mine has extensive openings and a modern equipment, and was worked for 6 years without success, until closed down, June 15, 1905. Diamond drilling on the Ashbed, 1910, gave encouraging results in 6 holes, covering 2,700' along the lode, 1 drill hole giving upwards of 60' of copper cores. A continuation of this work was begun late 1913, after several years of idleness. This exploratory campaign calls for extensive diamond drilling on the Ashbed lode. An old 250' shaft sunk and abandoned 50 years ago has been re-timbered and equipped for sinking. This work, started in Nov., 1913, developed rich ore found where bedrock was exposed for the engine foundations.

PHOENIX GOLD & COPPER M. & M. CO.

WASHINGTON

Office: 702 Carlisle Ave., Spokane, Wash. Mine address: Curlew, Ferry Co., Wash. Geo. Ilse, pres. and gen. mgr.

Property, 18 claims, in 3 groups, 360 acres, in the Curlew district, shows Paleozoic sediments cut by quartz monzonite. Ores carry gold, silver and copper, associated with iron oxides and pyrite, giving assays of 1 to 8% copper, 2 to 10 oz. silver and about \$10 gold per ton.

Development is by 6 tunnels, aggregating 1,500' in length, and 8 shafts of 30 to 100' in depth. A new tunnel, on the Panama group, nearest Curlew, planned to give a back of about 600', was 260' long, Feb., 1913, and was expected to reach the main vein at about 800'. Property considered promising.

PHOENIX MINING, SM. & DEV. CO., LTD.

BRITISH COLUMBIA

Office and mine: Phoenix, Boundary district, B. C. Julius Carson, pres.; N. J. Carson, sec., at last accounts. Organized June, 1908, under laws of British Columbia, capitalization \$1,000,000, shares \$1 par.

Lands, 2 claims, 1 fractional, in the Wellington camp about 3 miles from Phoenix, developed by a 60' shaft, on the Lucky Shot claim, and the Woodburn tunnel, showing silver-copper ore. Was developing with a small force, 1912.

PICACHO MINING CO. (CIA. MINERA DE PICACHO).

MEXICO

Wm. Leaming, superintendent, Bacoachi, Sonora, Mex. J. S. Douglas and associates, owners. Property, 35 miles south of Cananea, has a deposit of cupriferous silver ore that has been under development since about 1909 and is now shipping ore to the Copper Queen smelter at Douglas.

PICKET CREEK DEVELOPMENT CO.

OREGON

Idle. Property, on Picket creek, near Merlin, Josephine Co., is said to show several veins of 3 to 7' width, carrying low to medium-grade gold-copper ore, developed by shaft and tunnels. Equipment includes an air compressor.

PIEDRAS VERDES y ANEXAS; COMPANIA MINERA. MEXICO

Office and mine: Alamos, Sonora, Mex. Angel Almado, pres.; Joaquin A. Mange, supt. Lands, about 15 miles N. W. of Alamos, and 2 miles north of the Rio Mayo, include the Piedras Verdes, Union and Sonora mines, having a mineralized zone of about 1 mile width, and 4 miles length. Claims show red schists carrying copper carbonate stains at surface, with quartz dikes and numerous dioritic intrusions, the veins outcropping 10 to 40' in width and carrying considerable oxidized ore of good grade, with occasional native copper in masses of considerable size. Development is by a 350' shaft and a 375' tunnel. Some churn drilling was done by the General Development Co., 1910.

Equipment includes steam power, and a small matting furnace. Presumably idle.

PIKE HILL MINES, INC.**VERMONT**

Office: Room 709 No. 82 Beaver St., New York city. Mine office: Corinth, Orange Co., Vt. N. M. Macdonald, pres.; H. H. Knox, vice-pres.; John H. Allen, sec.-treas; and D. S. Conant, directors. Organized Jan. 9, 1906, under laws of Vermont, capitalization \$200,000, shares \$100 par.

Lands, 101 acres, freehold, in the Corinth district, 14 miles from the Boston & Maine railway, showing mica-schist carrying lenses of chalcopyrite disseminated in pyrrhotite, of 3.5% estimated average copper tenor. The mine was worked in a small way at intervals during the nineteenth century.

Equipment includes a 75-h. p. steam plant, held in reserve, and a power plant with 20-h. p. and 80-h. p. gas engines and a 25-kw. electric generator.

The wooden concentrator, of 6,600 sq. ft. area, has a 9x15" Blake crusher, 3 rolls and 2 magnetic separators, with roaster and dryer.

Production has been as follows: 131,911 lbs. fine copper in 1905; 304,377 lbs. copper and 1,698 oz. silver in 1906; 425,367 lbs. copper and 2,292 oz. silver in 1907. Product of latter year was secured from 5,951 tons of ore milled, yielding an average extraction of 3.21% copper, and from 624 tons of ore smelted, yielding an average extraction of 3.21% copper, and from 624 tons of ore smelted, yielding an average extraction of 3.21% copper, and from 624 tons of ore smelted, yielding an average extraction of 3.21% copper, and from 624 tons of ore smelted, yielding an average extraction of 3.21% copper. Company planned a 100-ton smelter. Inactive since Nov., 1907.

PILLEY'S ISLAND PYRITES CO.**NEWFOUNDLAND**

Last address: 43 Exchange Place, New York. Mine at Betts Cove, Newfoundland. Organized Dec. 30, 1901, under laws of New York, capitalization \$500,000, as a subsidiary of the Newfoundland Syndicate. Property was the Bets Cove mine, developed by tunnel, which was worked 1874-84, and reopened 1900, for a short time, but was again idle until taken over by this company about 1906. Mine shut down on account of depleted ore reserves and company is presumably dead.

PILOT BUTTE MINING CO.**MONTANA**

Office and mine: Butte, Silver Bow Co., Mont. Edw. Hickey, pres.; Wm. P. Jahn, vice-pres.; J. W. Pratt, treas.; J. J. Harrington, sec.; Patrick Sheehan, mgr.; preceding officers, N. J. Bielenberg, Judge J. J. McHatton, Chas. W. Leonard, L. Casserly and T. E. Murray, directors; L. A. Dunham, cons. engr.; Paul A. Gow, supt. Organized Sept., 1910, as successor of Pilot Butte Copper Mining Co., capitalization \$1,000,000, shares \$10 par; 88,308 shares issued (April, 1913). Listed on New York curb. Registrar and transfer Co., transfer agents; Empire Trust Co., registrar. The old company had a bonded debt of \$121,300, holders of which apparently took 25,000 shares of stock in the new company in payment and \$550,000 in stock was given for the property of the old company.

The company owns the Pilot Butte claim, 10.19 acres, having an average width of 320' and length of 1,405', lying between the Elm Orlu mine on the north, the North Butte mine on the east and south and 600' north of

the Badger State mine of the Anaconda. The property is supposed to carry the extension of 2 of the North Butte veins, and is traversed by the outcrops of several veins running N.-W. across the claim.

The mine is opened by a 2,070' three-compartment shaft, with levels at 500', 900', 1,300', 1,600', 1,800' and 2,000'. Development on the 500' level showed several fault veins without commercial ore and the 900' and 1,300' levels also opened up several veins, 1 with a fair-sized shoot of zinc ore. The only known orebody of commercial size and value is in a copper vein called the South, or Pilot vein, exposed on the 1,300' level, cut in the shaft below the 1,500' station and continued in the shaft to 1,700' in depth. This vein carries 3 to 4' in high-grade glance-bornite ore, on which stoping was begun. The vein has been opened up by a crosscut and 225' of drifting, two-thirds outside the Pilot-Butte and within the Emily claim of the Anaconda Co. on the 1,800' level, and for 121' on the 2,000' level, of which 60' is within the Pilot lines. This work shows the vein to vary from 1 to 15' in width and to carry 4 to 10% copper and 11 oz. silver per ton.

The Anaconda Co. allege trespass in that this vein has its apex on the Emily claim and suit was filed, Sept., 1913, and an injunction issued restraining the Pilot Butte Co. from mining the orebody in controversy. The issue involved is a question of apex. The Pilot Co. admits an apex in the Emily claim but contends that the vein unites with the Pilot vein at 1,600' in depth and that the Pilot Butte Co., having prior location, takes the vein below the junction. There is no doubt of the size and extent of the vein outcrops on the claim, but their downward course is as yet a matter largely of geological inference.

A second vein opened on the 1,800' and 2,000' levels shows 9' of 27% zinc ore on the 2,000' level and a third vein carries lead-zinc-silver ore.

Equipment is new, compact and complete, including a 2-stage 16x36" Nordberg hoist, 5-drill compressor and 125-h. p. boilers. A spur of the B. A. & P. R. R. runs to the mine.

The property, though small, is a valuable one and the mine and management excellent. Shipments were made from the orebody in controversy in the summer of 1913, but have ceased since the granting of the injunction to the Anaconda Co., there being no other veins carrying shipping ore on the property.

PILOT RANGE MINE.

NEVADA

Office and mine: Luning, Mineral Co., Nev. Mrs. Fermina Serrias, owner and mgr.; H. James, supt. Mine bonded 1913. Property, known as the Spanish Woman's mine, 40 claims, unpatented, 800 acres, in the Santa Fe district, 8 miles from the Southern Pacific railroad, shows syenite, andesite and limestone. Ores are azurite, malachite, bornite and chalcopryrite, reported to average 6% copper, 2 oz. silver and \$2 gold per ton.

Development is by shafts and tunnels with total of over 750' of workings. Equipment includes steam plant and several mine buildings.

Property was once under option to the Pilot Range Mining Co., which failed to pay for same. Shipments averaged 300 tons a month in summer of 1913 and with completion of new wagon road, now under construction, will be increased to 50 tons daily.

PINE HILL CONSOLIDATED MINING CO.

CALIFORNIA

Letter unclaimed at former office: 141 Broadway, New York. Mine office: Wolf, Nevada Co., Cal. J. Frank Mase, sec.-treas.; J. A. Robles, supt., at last accounts. Organized under laws of Delaware. Lands, 160 acres, show a vein of about 27' average and up to 100' claimed width, carrying free milling gold ore and a variety of copper ores ranging from native copper, in clay, through cuprite, malachite, chrysocolla and bornite, to chalcopryrite as-

sociated with pyrite, with quartz gangue. The gossan has been mined in a small way, for gold, and there is said to be a gold vein on the footwall. Development is by a 200' two-compartment vertical shaft with about 1,500' of workings.

Equipment includes an 85-h. p. steam plant, with an 8-h. p. hoist and a 2-drill air compressor. Buildings include a boarding house, bunkhouse, laboratory and smithy, and there is a 10-stamp mill. No recent returns secured.

PINTO COPPER MINING CO.

ARIZONA

Letter unclaimed at Globe, Ariz. Thos. P. Kelly, pres. Organized Nov. 21, 1906, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Lands, 9 claims, near the Arizona National and Globe Standard, on Pinto creek, has a 517' two-compartment shaft, sunk by the Cactus Copper Co., with about 1 mile of workings. Property was under option 1909-10, to the Cactus Development Co. and Cactus Copper Co., but the option presumably was surrendered 1910. The property shows low-grade disseminated copper sulphides, but not in commercial amount.

PIONEER SMELTING CO.

ARIZONA

Office: 50 Church St., New York. Works office: Corwin, Pima Co., Ariz. Wm. Clifford Moore, pres.; G. H. Corwin, vice-pres. and treas.; L. S. Wheeler, sec.; A. L. Waters, mgr.; preceding officers, G. C. Adams, Edw. Benedict and James P. Evans, directors.

Property of the company consists of a custom smelter, the Plumed Knight mine and the control of the Gould mine.

The Plumed Knight mine, in the San Xavier district, 18 miles from Tucson, is opened by shafts to a depth of 335', showing ore rich in iron, lime and silica at and above the 100' level, succeeded by bornite at depth. Ore is said to average 4.25% copper, with small gold and silver values.

The Gould mine, 12 miles west of Tucson, idle several years, is said to contain good fluxing ores carrying about 3% copper. Development is by 2 shallow shafts.

The smelter, 1½ miles west of Sahuarita, and 20 miles south of Tucson, on the Twin Buttes railroad, is of 150 tons daily capacity. The plant has a 106x42" blast furnace, built by the Colorado Iron Works Co. Crude oil is used as smelting fuel, except when the sulphur in the ore is sufficient to permit turning blast into the one set of tuyeres. A crude oil-burning chamber attached to and a part of the furnace, practically acts as a hot-blast tuyere. The blowers are driven by two 90-h. p. De La Vergne crude-oil engines, which also actuate a compressor, deep-well pump and a 55-kw. generator, latter supplying power to the sampling mill.

The sampling mill has a 7x11" Dodge crusher, a Vezin automatic sampler, 16x20" rolls and a Braun disc sample grinder.

Ore for the smelter is received by rail and motor trucks, the company hauling its own ores from the Gould mine to the smelter in a 6½ ton Saurer truck, the road being hard and the grade gentle. The smelter was in blast for a short time in 1912, but is again idle, and the company was in the throes of reorganization at last reports.

PITTSBURGH CONSOLIDATED MINING CO.

UTAH

Letters unclaimed at Salt Lake City, and at American Fork, Utah Co., Utah. S. M. Levy, pres.; J. H. Bigger, gen. mgr., at last accounts. Organized 1903, capitalization \$300,000, shares \$1 par. Lands, 19 claims, including the Pioneer group of 10 patented claims, and 6 claims that were in litigation with the Mountain Lake Extension Mining Co., property lying in Salt Lake and Utah counties, mainly on the American Fork side of the divide. The mine, developed by tunnels from American Fork canyon, has a 200' upper

tunnel showing 2 veins of 15' and 20' estimated average width, carrying silver-lead ore, and has about 1,500' of workings. Idle.

PITTSBURGH-ELY COPPER CO.

NEVADA

Idle. Office: 309 Chamber of Commerce, Denver, Colo. Mine office: Ely, White Pine Co., Nev. H. P. Harder, pres.; Louis H. Bock, vice-pres.; J. A. Varney, sec.; Frank Straub, treas., trustee and gen. mgr. Organized Dec., 1906, under laws of Arizona, capitalization \$5,000,000, shares \$5 par, nonassessable; 695,285 shares outstanding at last reports.

Lands, 11 claims, unpatented, 220 acres, including the Keyboard group of 6 claims, 120 acres, near the Keystone mine of the Nevada Consolidated, and a small group near the Cumberland-Ely mine of the same company. Property shows porphyry and limestone, and the company reports having copper oxides and sulphides, assaying 3 to 12% copper, with no lead, zinc, silver or gold values. Development is by the 60' Keyboard shaft, the 160' No. 2 shaft, and tunnels of 160' and 40'.

Equipment includes a 40-h. p. steam hoist, but there are no buildings. Inactive, except for annual assessment work, since 1907.

PITTSBURGH-IDAHO MINING & MILLING CO.

IDAHO

Office: Kamiah, Idaho. Mine office: Greer, Nez Perce Co., Idaho. Jas. F. Bridwell, pres.; Daniel Laverty, vice-pres. and gen. mgr.; Hugh Laverty, sec.-treas., at last accounts. Organized Jan., 1903, under laws of Idaho, as successor of Pittsburgh-Idaho Mining Co., capitalization \$1,000,000, shares \$1 par.

Lands, 19 claims, 380 acres, in the Lo Lo district, near the Montana line, said to show 6 contact veins, between gneiss and quartz-porphyry of which 2, of 50 to 100' width, slightly developed, carry cuprite, malachite, bornite and chalcopyrite, giving assays up to 12% copper, 14 oz. silver and \$20 gold per ton. Mine has about 1,700' of workings, including pits and shafts, deepest 180', with tunnels of 40', 290' and 600'. Equipment includes gasoline power, and there are 5 small buildings. Idle, and not favorably regarded.

PITTSBURGH-JEROME COPPER CO.

ARIZONA

Idle. Office: 331 Fourth Ave., Pittsburgh, Pa. Mine office: Jerome, Yavapai Co., Ariz. Jos. K. Aikins, pres.; Thos. Houlette, vice-pres.; E. F. Thompson, sec.-treas., at last accounts. Organized 1904, under laws of Arizona, capitalization increased, March 9, 1906, to \$3,000,000, shares \$1 par; issued, \$1,482,699, at last accounts, 1908.

Lands, 26 claims, 520 acres, lying 2 to 3 miles south of Jerome, nearly N. W. of the Black Hills property, and about midway between the United Verde and Equator mines. Development is by the Pittsburgh shaft, planned to have been sunk 1,000', and said to show at 358' depth argentiferous and auriferous sulphide ore of about 4% copper tenor.

Equipment includes a 50-h. p. Fairbanks & Morse hoist, and an Ingersoll-Rand 2-stage air compressor. Inactive since June, 1907.

PITTSBURGH MINE.

COLORADO

Office and mine: Central City, Gilpin Co., Colo. Has developed a vein of gold-silver-copper ore, said to have a gross value of about \$250 per ton. Was making small shipments early 1913.

PITTSBURGH & MONTANA COPPER CO.

MONTANA

Inactive. Office: 1126 Farmers Bank Bldg., Pittsburgh, Pa. Mine address: Butte, Mont. J. H. Reed, pres.; R. T. Rossell, sec.-treas., and receiver in Pittsburgh; preceding officers, T. H. Given, Hay Walker, Jr., and D. C. Noble, directors. Organized July 9, 1902, under laws of West Virginia, capitalization \$30,000,000, shares \$1 par. Bonds, \$3,000,000, at 6%, secured by a mortgage dated June 2, 1906, on which interest was in default, June, 1908, at which date the company also defaulted on the payment of an installment

of \$500,000 bonds due, and the Union Trust Co., of Pittsburgh, trustee under the bond mortgage, instituted foreclosure proceedings under which all properties were sold at public auction, July, 1909, and bought in by the Pittsmtont Copper Co., the owner of the entire bond issue.

The Pittsmtont Co. turned over the property to the East Butte Copper Mining Co., under an arrangement by which the East Butte agreed to advance all funds necessary for the development and operation of the property, and also agreed to care for the interest on the bonded debt. The company was placed in the hands of a receiver July, 1909, under friendly proceedings.

This company is controlled, through the ownership of 90% of the stock, and all of the bonds, by the Pittsmtont Copper Co., which in turn is controlled by the East Butte Copper Mining Co., and although the Pittsmtont Copper Co. bought the entire property of this company at foreclosure proceedings, this corporation is kept alive though for what purpose it is difficult to comprehend. See Pittsmtont Copper Co.

PITTSBURGH & MOUNT SHASTA GOLD M. & M. CO. CALIFORNIA

Office: 1406 Commonwealth Bldg., Pittsburgh, Pa. Mine office, Keswick, Shasta Co., Cal. B. H. Scott, pres.; Dr. J. H. Phillips, vice-pres.; J. S. Parish, sec.; T. V. Scott, treas. Organized 1903, under laws of West Virginia, capitalization \$500,000, increased later to \$1,000,000, shares \$1 par.

Lands, 9 claims, partly patented, 170 acres, known as the Bennington group, in the Flat Creek district, north of Redding, said to have been bought for \$18,000 cash and \$60,000 shares. Mine has a 280' crosscut tunnel and 2 other tunnels showing gold and silver-bearing copper ore of varying tenors. Has a carpenter shop, smithy, boarding house and 3 bunkhouses, with electric power. Shut down several years.

PITTSBURGH-NEW YORK COPPER MINING CO. MONTANA

Office: 33 West Granite St., Butte, Silver Bow Co., Mont. Mine near Marysville, Lewis & Clark county, Mont. Jerry Mullins, pres.; W. H. Lindsay, sec.-treas., and Capt. W. J. Dawson, Los Angeles, Cal., directors. Organized under laws of Montana, capitalization \$1,500,000, shares \$1 par.

The company owns the Umatilla gold mine, having a 5-stamp mill and 50-ton cyanide plant, near the Drumlummon mine, at Marysville, in the Marysville district, about 8 miles from Helena, and 7 claims, on Timber butte south of Butte. Company lost its option on 5 claims at Elkhorn, Mont., in 1910. In debt and idle.

PITTSBURGH-OAXACA MINING CO. MEXICO

Office: 119 Farmers Bank Bldg., Pittsburgh, Pa. Mine office: San Bárto Coyotepec, Centro, Oaxaca, Mex. W. J. Burke, pres.; P. J. Kane, vice-pres.; M. J. Gannon, sec.-treas. Organized 1904, under laws of Delaware, capitalization \$50,000, increased later to \$1,000,000, shares \$1 par.

Lands, 104 hectares, including the Solada mine at Nochixtlán, and the Zavaleta mine in the Zimatlán district, carrying copper ores with mainly gold values, but having some ore ranging up to 5 and 9% in copper tenor. Property is reached by the Mexican Southern railway. The mines, developed by shaft, are said to have about 7,000' of workings on a 5' vein.

The 50-ton Zavaleta mill, connected with the mine by a 1,500' ground tram, is equipped with 10 stamps, a 10' Lane slow-speed mill, and a Pinder concentrator. There also is an electric light plant. Idle.

PITTSMONT COPPER CO. MONTANA

Office: 1126 Farmers Bank Bldg., Pittsburgh, Pa. Mine office: Butte, Mont. J. H. Reed, pres.; R. H. Gross, F. H. Given, Hay Walker, Jr., and D. C. Noble, directors. R. T. Rossell, sec.-treas.

Organized April 21, 1906, under laws of West Virginia, as Pittsburg & Western Copper Co., and changed name, Jan. 21, 1908, to present title.

Capitalization \$11,000,000, par value \$5, divided into 2,000,000 shares common stock and 200,000 shares 6% cumulative preferred stock. Of the authorized common stock 1,000,000 shares are reserved for retirement of its 6% bonds, \$2,500,000 authorized and \$1,488,332 outstanding Sept. 1, 1913.

Company is practically the successor of the Pittsburgh & Montana Copper Co., having acquired the property of that company at judicial sale under foreclosure proceedings, July, 1909. This property was then turned over to the East Butte Copper Mining Co., under an arrangement by which the East Butte agreed to purchase a sufficient amount of the bonds of the Pittsmont Copper Co., to fund its floating debt, aggregating at that time \$2,300,000, and also agreed, until these bonds were fully paid for, to advance all funds necessary for the development and operation of the property and interest on the company's indebtedness. In consideration of this agreement the Pittsmont Copper Co. contributed \$4,000,000 of its common stock to the East Butte Copper Mining Co., the latter in further agreement purchasing \$1,000,000 of Pittsmont preferred stock and \$110,000 of demand notes, issuing its own stock therefor, and the East Butte thus becomes the owner of the entire outstanding indebtedness of the Pittsmont Copper Co., represented by bonds and common and preferred stock (see East Butte Copper Co.).

PITTSMONT SMELTER.

MONTANA

At Butte, Mont. Owned by East Butte Copper Mining Co.

PLATA-FINA MINING & DEVELOPMENT CO.

MEXICO

Office: 306 Long Bldg., Kansas City, Mo. Mine office: Alamos, Sonora, Mex. E. G. Swayze, pres.; Dr. L. R. King, vice-pres.; J. E. Wilson, sec.; F. A. May, treas.; T. P. Brinegar, mgr.; other directors, J. N. Nolan and C. N. Emery. Organized March, 1911, under laws of Arizona, capitalization \$500,000, shares \$2 par; issued, 91,890 shares.

Lands, 5 claims, 38½ acres, patented, 4½ miles from a railway, in the Alamos district, show several contact veins between granite and porphyry, in a zone 40' wide.

Development is by 4 shafts, deepest 115', with about 425' of workings. Ore is said to show native silver in copper carbonate and chalcocite and is reported to assay from 2 to 20% copper, 6 to 5,000 oz. silver and \$1 to \$70 gold per ton, which figures are misleading.

PLATANOS, S. A.; CIA. EXPLORADORA DE LOS.

MEXICO

Is the Mexican holding company of Los Platanos Development Co.

PLATINUM MINING & MILLING CO.

WYOMING

Address: 912 Main St., Merrill, Wis. Mine address: Holmes, Albany Co., Wyo., Julius Thielman, pres. and mgr.; David Finn, vice-pres.; Robert Thielman, sec., and W. A. Lee, directors. Leo von Rosenberg, cons. eng.; L. C. Wannemaker, supt. Organized Jan., 1912, under laws of Wyoming, capitalization \$200,000, shares \$1 par; issued, 25,000. Annual meeting, second Monday in January.

Property, the Rambler mine, held by 15-year lease, with 15 claims patented, 285 acres, in the Douglas district. Claims show a fissure vein reported as 20' wide in granite, running N. W.-S. E. and dipping at 45° E. Development includes a 200' vertical shaft with drifting on the vein on the 100' and 200' levels. Work was begun June, 1912, but neither mine nor mill were operated during 1913, as mill is being remodelled and a 50-ton Peck centrifugal concentrator installed. Operations are expected to begin Dec., 1913.

Mine was located in 1870 for gold, relocated 1900 for copper and worked 1906 by Rambler Mining & Smelting Co., consolidated 1908 with New Lincoln Copper Co., as Rambler Copper & Platinum Co. See Rambler mine.

PLUTO GOLD & COPPER MINING CO.**WYOMING**

Idle. Office: 55 High St., Oshkosh, Wis. Mine near Dillon, Carbon Co., Wyo. Ole Granberg, pres. and gen. mgr.; H. Thorsgaard, vice-pres.; H. O. Granberg, sec.-treas. Organized Dec. 15, 1902, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par.

Lands, 11 claims, patented, 220 acres, and a 40-acre mill site, in the Battle Lake district, near the Ferris-Haggerty mine, showing both fissure veins in quartzite and contact deposits between diorite and quartzite, ranging 2 to 30' in width, and carrying cuprite, melaconite and copper sulphide ores associated with manganese, giving average assays of 1% copper, a trace of silver and \$3 gold per ton. Developed by numerous pits of 10 to 20' depth, 5 shafts of 55 to 100' depth, and a tunnel of 1,004' with about 2,000' of underground workings. Equipment includes a 40-h. p. steam plant and 3-drill air compressor. Buildings are a 36x40' machine shop, 38x20' carpenter shop, and 6 other mine structures. Inactive, except for annual assessment work, since Oct., 1907.

PLUTO MINING CO.**ARIZONA**

A. E. Jenkins, superintendent, Amadoville, Santa Cruz Co., Ariz. Owns the Pluto mine, showing a copper deposit developed by tunnels. Is equipped with electric power. Operated 1912 with a force of about 25 men.

PLUTUS MINING CO.**UTAH**

Office: care Knight Investment Co., Provo, Utah. Mine office: Eureka, Juab Co., Utah. Jesse Knight, pres.; Jacob Evans, vice-pres.; R. Eugene Allen, sec.-treas. Organized 1907, under laws of Utah, capitalization \$100,000, shares 10 cts. par, assessable; fully issued. Absorbed the Tetro Mining Co., Jan., 1909. Shares are listed on the Salt Lake Stock Exchange.

Lands, 14 claims, patented, including the Tetro group of 3 claims, from which the Tetro Mining Co. paid \$18,000 in dividends. Property carries auriferous and argentiferous lead and copper ores, developed by a 600' shaft, about 3,700' of tunnels, and 1,250' of other workings. The Tetro group was under lease to W. L. Mangum and J. H. McChrystal, late 1912.

Equipment includes a 75-h. p. electric motor, hoist and air compressor. Buildings include necessary shops and an office.

POCAHONTAS COPPER MINING CO.**CALIFORNIA**

Office: 112 Market St., San Francisco, Cal. Mine office: Lewis, Mariposa Co., Cal. David Ross, general manager, at last accounts. Lands, 150 acres, supposedly held under bond and lease from Mrs. Abby Waller, including the Great Northern mine, in the White Rock district. The claims show several veins of cupriferous iron ore, between diorite, with altered diabase gangue. The main orebody, about 100' in width, occurs in a mineralized zone up to 1,000' across, having an oxidized zone of about 100' depth, from which a limited production of high-grade ores was made many years ago. Development is by a new 200' shaft and tunnel, these workings being said to show ore carrying 6 to 12% copper and about \$2.50 gold per ton.

Equipment includes steam power and a hoist, and buildings include an office, laboratory, smithy and bunkhouses. Was making small shipments to the Selby-smelter early 1913.

POCAHONTAS COPPER QUEEN MINING CO.**ARIZONA**

Office: Pocahtonat, Ark. Mine office: Mayer, Yavapai Co., Ariz. Jos. W. Voorhees, pres. and gen. mgr.; J. D. Hardwick, vice-pres.; D. A. Chapin, sec.; Benj. A. Brown, treas.; W. H. Skinner, supt.; preceding officers, T. P. Eastland, Wm. S. Shannon and L. C. Viles, directors. Organized 1906 as successor of Big Bug Gold & Copper Mining Co., capitalization \$1,000,000.

Lands, 14 claims, 4 miles N. W. of Mayer, in 2 groups, about 1,000' apart. The smaller group of 4 patented claims carries gold-copper ore. The

Spar group of 10 claims has a vein up to 14' in width, carrying mainly gold and silver-lead values, and the mine is said to have shipped 23 carloads of high-grade ore, under former ownership, that gave sufficient returns to pay the purchase price and the cost of development. The mine has a 200' two-compartment shaft and a 100' shaft.

Equipment includes steam power, and some grading was done for a new mill. Presumably shut down.

POCATELLO GOLD & COPPER MINING CO.

IDAHO

Office and mine: Pocatello, Bannock Co., Idaho. H. W. Lockhart, pres.; N. M. Eldredge, gen. mgr. Organized Dec. 1, 1902, under laws of Idaho, capitalization \$1,000,000, shares 50 cents par.

Lands, 7 claims, 140 acres, in the Fort Hall district, 12 miles east of Pocatello, show a vein of about 3' average width, reported to give assays of 30% copper, 13.8 oz. silver and \$1 gold per ton, from bornite and chalcopryrite ore. Ore is mainly of milling grade with a small paystreak of rich ore, from which shipments to the White Knob smelter gave returns of 17 to 30% copper and 15 to 18 oz. silver per ton. Development is mainly by short tunnels, with about 1,000' of workings. Was developing with small force at last accounts.

POLARIS MINING & MILLING CO.

ARIZONA

Office and mine: Clifton, Graham Co., Ariz. C. A. Van Dorn, pres.; Sam. Abraham, vice-pres.; J. H. Kerby, sec.; J. R. Hampton, treas.; G. A. Franz, gen. mgr.; at last accounts. Organized March 15, 1902, under laws of Arizona, capitalization \$2,500,000, shares \$1 par.

Lands, 40 claims, 700 acres, also a 70-acre mill-site and 400 acres miscellaneous lands, in the Greenlee district, on the San Francisco river, about 7 miles from Clifton, the nearest rail point. The claims lie N. W. of the Clifton Consolidated and New England mines and show granite, with porphyry dikes at acute and right angles to the vein system, carrying ore in contact deposits between limestone and igneous rocks, and as disseminated ores in porphyry. There are 4 orebodies, of which 2, under development, are of 8 to 100' estimated average width, traceable 6,000', carrying oxide, carbonate and sulphide ores, estimated to average 3% copper, 4 to 15 oz. silver and \$4 to \$15 gold per ton. The lower workings show mainly chalcopryrite. The mine is opened by the 105' Black Prince shaft, the 100' Nonesuch shaft, the 140' Golden Eagle shaft, the 560' Black Prince tunnel, the 320' Fraction tunnel, the 307' Golden Eagle tunnel and the 532' Phonolite tunnel, with about 2,500' of workings, at last accounts.

Improvements include 6 mine buildings. The property was under lease to the Southwestern Development & Improvement Co., 1912. Idle.

PONDERAY SMELTER.

IDAHO

At Sandpoint, Bonner Co., Idaho. Owned by Idaho Smelting & Refining Co.

PONTIAC MINING CO.

VIRGINIA & NORTH CAROLINA

Idle. Mine office: Virgilina, Halifax Co., Va. A. A. Sumner, pres.; Samuel Bryant, sec. Organized 1902, under laws of New York, capitalization \$1,600,000, shares \$10 par. Lands, 1,340 acres, in the Virgilina district of Halifax county, Va., and Person county, N. C., carrying a quartz vein in schist opened by the Tuck shaft of 125' and the Glasscock shaft of 203', showing oxidized copper ore to depth of 60', underlain by chalcocite, bornite and chalcopryrite ore, with quartz and epidote gangue, giving average assays of .4% copper, 1 to 2 oz. silver per ton, and traces of gold. Has gasoline power.

PONTOTOC MINING CO.

ARIZONA

Office and mine: Tucson, Pima Co., Ariz. F. F. Simms, pres.; T. H.

Bass, sec.-treas.; Duran Daily, gen. mgr. Lands, 28 claims and 4 mill sites, adjoining the Big Vein Copper Co., in the foothills of the Santa Catalina mountains, 8 miles N. E. of Tucson. The mine has a 105' shaft, showing ore assaying up to 10.3% copper, with an average of about 5%. Idle several years, but was preparing to resume development work early 1913.

PORTAGE LAKE & BISBEE MINING CO. ARIZONA

Office: care John Funkey, Hancock, Mich. Mine address: Bisbee, Ariz. Chas. Lewis, treasurer. Organized April, 1903, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, succeeding Portage Lake & Calumet Development Co.

Lands, 12 claims, 3 fractional, 191 acres, several patented, 3 miles S. E. of Bisbee, showing country rock of limestone, with a porphyry contact. The mine has a 302' shaft, with 2 compartments, well timbered, with a small air compressor, Worthington sinking pump, 75-h. p. hoist, boarding house, bunkhouse and smithy. Extensive diamond drilling was done 1903-04, when considerable leached ore was cut, the work being of an encouraging nature. Inactive many years, but not dead.

PORTLAND MINING CO.

BRITISH COLUMBIA

Office: 19 North Seventh St., Terre Haute, Ind. Mine near Aspen Grove, Yale district, B. C. Andrew J. Crawford, pres.; M. T. Hidden, sec., at last accounts. Organized 1901, under laws of British Columbia, capitalization \$15,000, shares 1 ct. par.

Lands, 4 claims patented, 200 acres, also 160 acres miscellaneous lands, in the Aspen Grove district, show 10 veins. Two veins slightly developed, gave assays of 15% copper, 3 oz. silver and 80 cts. gold per ton, from carbonate and sulphide ores, opened by a 155' shaft and a 32' tunnel, said to show a considerable body of low-grade ore. Idle many years.

POZO GILPIN MINING CO.

COLORADO

Halsted Lindsley, superintendent, Idaho Springs, Clear Creek Co., Colo. Mine has lead-copper ore mined for its gold-silver values, by shaft and tunnel work. Company employs about 30 men when operating and has steam power plant with Ingersoll-Rand compressor.

POZOS; NEGOCIACIÓN MINERA DE.

MEXICO

Mine office: Pozos, Ciudad Porfiro Diaz, Guanajuato, Mex. Company owns the Santa Brigida y Anexas, Santa Lucia and La Argentina mines, yielding gold, silver and copper, latter as a byproduct. The first named mine is largely worked out. Has steam power.

PRECIOUS METALS CORPORATION.

COLORADO

Office: 17 Battery Place, New York city. Mines in Mill gulch, San Juan Co., Colo. Chas. E. Force, pres.; Chalmers Dale, treas.; John S. Ferguson, sec., and Chas. Maxcy, directors. Organized Nov. 15, 1906, in Colorado, capitalization \$5,000,000, shares \$5 par; issued, \$4,250,000. Bonds \$200,000 authorized, none issued. Columbia Knickerbocker Trust Co, New York, registrar. Annual meeting, third Monday in November. Company owns the entire stock issue of the East Canada Smelting Co., Ltd., which owns and operates the McDonald copper-sulphur mine at Weedon, Quebec. Operations for 1911 showed gross earnings of \$6,947; expenses, \$15,230; deficit, \$8,283; cash on hand, \$10,607.

Company owns the Silver Crown group, 13 claims, 8 patented, and 4 mill sites, about 7 miles from Silverton; also the Forest and John mines, 9 miles distant, patented and freehold.

PRICE COPPER MINING CO.

COLORADO

Office and mine: Radium, Grand Co., Colo. Walter R. Price, superintendent. Property, though but slightly developed by a tunnel, shows considerable copper ore.

PRICKLY PEAR MINING CO.**MONTANA**

Office: care J. C. Murray, Helena, Mont. Mine address: Jefferson City, Jefferson Co., Mont. Company owns the Prickly Pear mine, 2 miles from Jefferson, opened by a 350' tunnel, showing gold and silver-bearing copper ore. Has no power equipment.

PRIEST LAKE COPPER MINING & MILLING CO.**IDAHO**

Office: 323 Lindelle Blk., Spokane, Wash. Mine office: Hillyard, Spokane Co., Wash. Lands, 2 claims in Bonner county, Idaho, between Granite and Reeder creeks, which empty into Priest lake. The Copper Age claim has a 90' shaft, and there is a 50' shaft on the Pearl claim, showing ore said to give combined assay values of \$12 to \$45 per ton in copper, silver and gold. No returns secured.

PRIEST LAKE MINING & SMELTING CO.**IDAHO**

Office and mine: Coolin, Bonner Co., Idaho. C. D. McLean, pres. and gen. mgr. Organized May 14, 1908, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, nonassessable; issued, \$1,200,000.

Lands, 30 claims, unpatented, 600 acres, and a 5-acre mill site, showing 3 contact deposits between schist and granite, of which 1, under development, carries chalcopryrite and galena, estimated by management to average 1% copper, 13% lead, 5 oz. silver and \$1 gold per ton. The mine has shafts of 68', 44', 48' and 20', with tunnels of 650', 440', 80', 128' and 100'. There is no power equipment.

PRINCESS COPPER CO.**NEVADA**

Office: Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. C. W. Freed, pres.; F. J. Austin, sec.; H. P. Clark, treas. Organized 1911, capitalization \$1,000,000, shares \$1 par.

Lands, 30 claims, about 550 acres, acquired of the Ely Resurrection Copper Co., in the Robinson district, lying a little north and east of Ely.

Mine has 2 short tunnels and a 140' shaft, showing 18' of ore assaying up to 5% copper, with gold and silver values. Also has some highgrade ore assaying up to 46% lead and 110 oz. silver per ton, with good gold values.

PRINCETON COPPER MINING & SMELTING CO.**ARIZONA**

Letter unclaimed at former office, 52 Broadway, New York. Mine office: Ft. Huachuca, Cochise Co., Ariz. Henry Hamburg, pres. and gen. mgr.; Herbert M. Karner, sec., at last accounts. Organized 1901, under laws of South Dakota, capitalization \$2,500,000, shares \$1 par.

Lands, 8 claims, known as the Texas group, formerly called the Exposed Reef and Citric, in Ramsey canyon, Hartford district of the Huachuca mountains. The mine is developed by 4 shallow shafts, deepest 80', and 4 tunnels, longest about 2,000', latter, at a distance of 750' from portal, cutting a vein of 18' reported width, carrying streaks of ore said to average 6% copper and 10 oz. silver per ton, and at 1,525' from the portal a 2' vein carrying chalcocite. The property shows considerable low-grade copper and lead ore, giving assays of 10% and upwards in copper, and 10 to 15 oz. silver per ton, with small gold values. The property was discovered 1880, worked 1901-05, and then intermittently until 1909.

Equipment includes a 40-h. p. boiler and a 4-drill Sullivan air compressor, fuel being wood cut from the tract. Buildings include a smithy, warehouse, and quarters for employees.

PROGRESSIVE MINING CO.**UTAH**

Office: 229 South West Temple St., Salt Lake City, Utah. Mine near Milford, Beaver Co., Utah. L. B. Bohn, pres.; I. Lessing, vice-pres. and mgr.; C. T. Mixer, sec.-treas. and cons. engr.; preceding officers, F. J. Nichols and C. C. Crismon, directors. Organized Aug. 20, 1906, under laws of

Utah, capitalization \$250,000, shares 50 cts. par, assessable; fully issued. Total assessments to date, \$10,000.

Lands, 5 claims, 130 acres, patented, in the Star district, 8 miles from a railway, carrying argentiferous copper and lead ores. The mine has a 150' incline shaft, with about 1,000' of workings, developing a 3' vein, carrying ore assaying up to 8% copper, 35 oz. silver and \$1 gold per ton. A few small shipments have been made.

PROMONTORIO CONSOLIDATED MINING CO.

MEXICO

Office: 99 John St., New York. Mine office: Lampazos, Moctezuma district, Sonora, Mex. R. S. Vickers, manager, at last accounts.

Lands, 11 groups, 1,410 acres, 3 miles from the forks of the Yaqui river; also a 12,000-acre ranch and the Marguerite and Inez claims, adjoining the mineral lands. Property includes the Promontorio mine, in the Promontorio mountains, 35 miles S. E. of Moctezuma, and about 30 miles from the nearest railway at Tonichi. The Promontorio is an antigua, or ancient mine, said to have produced the copper from which were cast the bells on the old church at Moctezuma, built A. D. 1640. During the American Civil War some bornite from this mine was packed, on mules, 40 miles to Guaymas and shipped to Swansea for smelting.

The Promontorio shows diorite, granite and limestone, carrying orebodies in a shear zone between granite and diorite, with high-grade bornite and low-grade disseminated chalcopyrite ore. The low-grade zone is upward of 200' in width, with a granite footwall, also carrying low-grade impregnations of copper.

The Inez mine shows a large gossan, mined for flux, underneath which is cupriferous pyrrhotite, carrying small gold and silver values, and the Inez is also said to have another orebody of promise, carrying auriferous and argentiferous copper ore.

The mine has been developed, without steam power, by tunnels, but the company plans utilizing a large available water power on the Yaqui river.

PROMONTORY MINING CO.

UTAH

Office: 54 Commercial Bldg., Salt Lake City, Utah. Mine office: Promontory, Box Elder Co., Utah. B. D. Siegfus, pres. and mgr. Capitalization \$600,000, shares \$1; issued, 450,000.

Lands, about 7 miles north of Promontory point, show a contact deposit between dolomite and porphyry.

Development is by a 105' shaft, sunk on an 8' vein, showing copper ore with a paystreak said to give assays of 5 to 18% copper, 1 to 40 oz. silver and about \$9 gold per ton.

PROTECTORA y ANEXAS; COMPAÑIA MINERA LA.

MEXICO

Mine office: San Salvador, Mazapil, Zacatecas, Mex. Percy A. Babb, pres. and gen. mgr.; J. L. Miranda, sec.; D. B. Andrews, supt., at last accounts. Organized 1907, under laws of Mexico, capitalization 100,000 pesos, fully paid. Lands, 68 hectares, including La Protectora y Anexas and San Francisco mines carrying oxide ores, with copper, lead and zinc occurring as replacements in limestone. Low-grade ores average 2.5 to 5% and high-grade ores 12 to 19% copper. Mine has a depth of 100 meters with about 1,500 meters of workings. Equipment includes a 15-h. p. gasoline hoist. Was working with about 200 men, early 1913, and shipping around 250 tons of high-grade ore monthly.

PROVIDENCE COPPER CO.

ARIZONA

Letters unclaimed at former offices: 401 White Bldg., Buffalo, N. Y., and Paradise, Cochise Co., Ariz. J. A. Lewandowski, pres. and gen. mgr.; Leo. F. Tucholka, sec.-treas., at last accounts. Organized Oct. 19, 1908, under laws of Arizona, capitalization \$1,250,000, shares \$5 par, nonassessable.

Lands, 8 claims, unpatented, 160 acres, known as the Rabbit group near Dunn springs, 16 miles S. W. of Paradise, and 12 miles from nearest rail station, at San Simon. The property shows limestone, quartzite and rhyolite, having contact deposits carrying oxidized copper ores. Development is by 24 trenches, pits and shafts, including No. 2 shaft of 40' and No. 5 shaft of 100', showing copper oxides and occasional native copper in small quantities. The mine has no power equipment or buildings. Idle, except for annual assessment work.

PROVIDENCIA MINING CO.

ARIZONA

Office: Nogales, Santa Cruz Co., Ariz. H. C. Greenwell, E. C. Hardy and L. C. Gasche, incorporators. Property is the Providencia mine, 12 miles N. W. of Nogales.

PRUDENTIAL COPPER MINING CO.

ARIZONA

Idle. Office: 322 Federal St., Chicago, Ill. Mine office: 35 Bank of Arizona Bldg., Prescott, Ariz. H. H. Linney, agt.; Geo. T. Clark, pres.; Geo. H. Jenkins, vice-pres. and treas.; Fletcher B. Gibbs, sec.; Ernest A. Haggott, cons. engr.; preceding officers, Lester Shea Smith, Geo. T. Aimer and Alice R. Woods, directors. Capitalization is 500,000 shares and company is controlled, through the ownership of 422,778 shares, by the Estate of Maj. Shea Smith. Lands, 12 claims, patented.

PTARMIGAN MINES, LTD.

BRITISH COLUMBIA

Office: care H. H. Johnson, Victoria, B. C. Property is the Big Interior group of 8 claims near the mouth of Bear river, on Bedwell sound, Vancouver island. See Big Interior mine.

PTARMIGAN MINES OF THE SELKIRKS.

BRITISH COLUMBIA

Mine office: Wilmer, Northeast Kootenay, B. C. Thos. Starbird, manager, at last accounts. Lands, at the head of McDonald creek, an affluent of Horse Thief creek, show highly auriferous and argentiferous copper ores, mainly tetrahedrite. Mine has a 134' shaft with about 3,000' of workings. Equipment includes water power and a small steam plant. Practically idle since 1903 awaiting completion of a projected railway.

PUEBLA SMELTING & REFINING CO.

MEXICO

Office: 35 Nassau St., New York. Mexican office: Isabella Catalica No. 33, Mexico City, Mex. Mine office: Cuyuaco, Puebla, Mex. Chas. Q. Davis, pres. and gen. mgr.; Harvey C. Garber, vice-pres.; H. H. Nieman, sec.; B. P. Thom, treas.; preceding officers, P. W. Luper, Wm. B. Reed, Jr., and I. W. Lofland, directors; G. Mouro, supt.; H. L. Swain, cons. engr.; C. I. McReynolds, purch. agt.

Organized Oct., 1912, under laws of Delaware, capitalization \$5,000,000, shares \$5 par, nonassessable. Debentures, \$1,000,000 at 6%. Guaranty Trust Co., New York, registrar. Property is a 72% stock interest in the Cia. Minera Explotadora El Magistral y Anexas, and also sundry lands acquired from the Bankers Mining & Development Co. for \$4,250,000 in stock and bonds of the Puebla Smelting & Refining Co.

Lands, 28 claims, 1,600 acres mineral lands, 120 acres timber lands, 800 acres coal lands, a 25-acre smelter site and 100 acres miscellaneous lands, in the Majistral district.

The property shows limestone porphyry and diorite, orebodies occurring as contact deposits between limestone and diorite, and as replacements in the limestone. Ores carry oxides and carbonates of copper with small quantities of silver bromides, sulphides and free gold in the oxidized zone. The deeper workings show chalcopyrite associated with hematite having a garnetiferous quartz gangue in the sulphide zone.

Development is by numerous tunnels of from 200 to 750', with about

6,700' of workings, showing ore said to average 3.5% copper, 70 grams silver and 1.5 grams gold per ton.

The company claims to have, in Mexico, a power plant for the mines and smelters, consisting of two 400-h. p. Babcock & Wilcox water-tube boilers, a 300-h. p. Allis-Corliss engine, a 200-h. p. Hughes-Philips Corliss engine, and a 225-kw. Westinghouse generator, and was preparing, early 1913, to erect a 500-ton smelter, designed primarily as a custom plant. The smelter is to have a 46x160" Traylor water-jacket blast furnace and a 250-ton reverberatory furnace, as a first unit.

PUEBLO SMELTER.

COLORADO

Is owned by the American Smelting & Refining Co., which see.

PUGET SOUND REDUCTION CO.

WASHINGTON

Works office: Everett, Snohomish Co., Wash. Is controlled, through stock ownership, by American Smelters Securities Co. The works have three 30x180" blast furnaces, 1 running on copper ores, making a 50% matte, which is blown up to blister copper in a reverberatory furnace and shipped east for electrolytic refining. The plant includes an arsenic plant, formerly making about 5 tons of arsenic daily from Monte Christo ores.

PUTNAM ENGINEERING CO., C. H.

NEW MEXICO

Address: Los Angeles, Cal. Mine near Alma, Socorro Co., N. M. Property, the Little Charley mine in the Mogollon district, operated under bond and lease expiring 1914, from the Mogollon Gold & Copper Co. Mine produced several thousand tons of gold-copper ore, shipped either to local mills or to smelters in 1913.

Equipment includes a 25-h. p. oil engine and an electric hoist. Production averaged 20 tons daily in Aug., 1913.

Q. S. MINING CO.

WASHINGTON

Office: S. 1424 Lincoln St., Spokane, Wash. Mine office: Loomis, Okanogan Co., Wash. Dr. E. H. Thatcher, pres. and gen. mgr.; W. E. Gamble, vice-pres.; Arthur Reed, acting sec.; E. J. Hyde, treas., and Milton N. Rogers, directors.

Organized March 13, 1909, under laws of Washington, capitalization \$2,000,000, shares \$1 par, as successor of Q. S. Gold Mining & Smelting Co., property of which was foreclosed March 4, 1908, on a mortgage, and bid in by trustees at mortgage sale, April, 1909, for the benefit of the new company. Stock of the old company was retired on the basis of actual cost to holders, ranging from 5 cts. to \$1 per share, and the old stockholders were practically assessed a portion of their holdings in order to provide a treasury fund. The stock issued to old shareholders was pooled for 5 years and the 250,000 shares of treasury stock is "guaranteed" by the Granite Securities Co., which promises to pay face value for the stock in case the company does not pay in dividends within 10 years as much as the stock cost the purchaser. This form of guarantee is regarded with suspicion.

New management in 1912 writes that assessment work was not done in 1911 and company had \$17,000 debts. No returns secured for 1912 and company evidently is in financial distress.

Lands, 23 claims, with 80 acres of mill sites, and water rights on Sinlahekin creek, about midway between Loomis and Conconully, along the flank and crest of Aeneas mountain, in the Salmon River district. The property shows massive veins in diorite carrying mainly low-grade copper ores. The company claims an orebody 300' wide at surface, which has been crosscut for 238' at a depth of 800' below the outcrop without reaching the wall, and traced by stripping for 6,000' on surface, showing a ledge of 212' width at the north, 300' in the middle and 285' at the southern end of the property.

Development, begun 1897, is by 2 open cuts at either end, a pit of 50x

156' in the middle, and a tunnel 1,063' long cutting the vein at depth of 800', with another tunnel, intended for the main avenue of extraction, 364' long, planned to cut the orebody at depth of 2,000'. One tunnel shows chalcopryrite ore giving assays of 11.4% copper and estimated to average 2 to 4% copper, with small and variable silver values and about \$1 gold per ton. The company claims an average ore value of \$14 per ton from several hundred assays.

Equipment includes a 220-h. p. hydro-electric plant, taking water from Sinlahekin creek, and there is an air compressor. Buildings include a saw-mill, carpenter shop, smithy, office, barn, 26-room bunkhouse, library, cold-storage plant, changing house and boarding house for 100 men. Development has been retarded by lack of transportation facilities, but the Great Northern railway has built to within about 18 miles and survey was made several years ago for the line of the Okanogan Electric railway, planned to run from Nighthawk to Brewster, Wash., crossing the property. The claims of the company as to tonnage and ore values are much greater than are warranted by present development, but the property is considered promising, and new management may succeed, in the face of repeated discouragements.

QUALEY MINE.

NEVADA

Frank D. Qualey, owner, Qualey, Mineral Co., Nev. The mine is on the S. E. slope of Whiskey flat, accessible by good road from Thorne. Property, 30 claims, covering a belt 20 to 100' wide, shows a contact metamorphic ore deposit whose outcrop is copper stained in numerous opencuts and traceable for nearly a mile north across a hill, 1,000' high.

Development consists of 2 working tunnels, the uppermost 500' below the vein outcrop, the other 250' lower. The first is a 1,000' crosscut tunnel showing the vein, where reached, to be 80' wide with dip of 40° and a reported value of \$12 per ton. The 1,600' lower tunnel opens a deposit said to be 200' wide with mixed oxides and sulphides of copper said to average 4% copper and \$3 to \$4 gold per ton, which is too high to be a reliable average for a deposit of this nature. The ore is reported to carry lime and iron and to be self fluxing.

QUANTOCK MINING & MILLING CO.

MONTANA

Mine office: Coloma, Powell Co., Mont. H. B. Salisbury, superintendent, at last accounts. Property has gold, silver and copper ores, and is equipped with steam power. Shut down for several years.

QUARTZ KING MINING CO.

ARIZONA

Idle. Office: 3118 South Grand Ave., Los Angeles, Cal. Mine office: Parker, Yuma Co., Ariz. Hon. Theo. A. Bell, pres.; Hon. J. G. Maguire, vice-pres.; Hon. Richard Melrose, sec.; Col. E. B. Atkinson, treas.; J. O. Royer, gen. mgr.; L. M. Simon, supt.; O. E. Clark, cons. engr. Organized July 27, 1904, under laws of Arizona, capitalization \$1,500,000, shares \$1 par. Annual meeting, first Tuesday in August. The company was financed mainly by Swedish capital, supplied largely by the late King Oscar, about 500,000 kroner, or \$134,500, having been expended up to 1910.

Property, about 100 claims, 2,000 acres, 7 miles by road N. E. of Parker and 1½ miles east of the Colorado river. The ore deposit occurs in a rather narrow shear zone, or fault plane, in amphibolic and chloritic schists, these rocks being covered by basalt and tuffs in the region nearby. The ore zone is vertical and consists of crushed country rock cemented by quartz carrying malachite, chrysocolla and hematite with fair gold values.

Development includes a 300' shaft with about 1,000' of workings on the eastern part of the property and 700' above the river. In 1911 the new King shaft was started in igneous tuffs at a point 300' lower than the old shaft and nearer the Colorado river.

Equipment includes gasoline engine, hoist, compressor, etc. Mine is temporarily closed down for lack of funds, 1913.

QUEEN BEE MINE.

COLORADO

W. O. Daniels, owner, Delta, Colo. Mine in Bowerman district, near Pitkin, Gunnison Co., Colo., not far from the Camp Bird mine. Claims show 5' vein of gold-bearing copper ore developed by 120' shaft with 90' drift at bottom. Property reported to be developing Oct., 1913, and preparing for ore shipments.

QUEEN BESS MINING CO.

UTAH

Idle. Letter unclaimed at 190 South West Temple St., Salt Lake City, Utah. Mine at Brighton, Salt Lake Co., Utah. Alexander Rogers, pres.; Edw. McGurrin, vice-pres.; W. W. Rogers, sec.-treas., at last accounts. Organized Oct. 3, 1905, under laws of Utah, capitalization \$500,000, shares \$1 par, assessable. Lands, 3 claims, patented, 20 miles from a railroad, having a 200' shaft and 600' of tunnels, show lead and copper ores.

QUEEN COPPER MINING CO.

ARIZONA

Mine office: Superior, Pinal Co., Ariz. A. M. Crawford, pres.; Richard Fleming, vice-pres.; E. F. Kellner, Jr., sec.-treas.; preceding officers, W. D. Fisk and Geo. Gausler, directors. Organized 1906, under laws of Arizona, capitalization \$5,000,000, shares \$1 par, nonassessable; issued, \$3,875,000. Annual meeting, first Thursday in September. The company owns the Queen, or Silver Queen mine, now under bond to the Magma Copper Co. and described under that title.

QUEEN MINING CO.

NEW MEXICO

Idle. Office: Galveston, Tex. Mine at Cooney, Socorro Co., N. M. Edw. Randall, pres.; Geo. Sealy, vice-pres.; Harry A. Griffin, sec.-treas.; preceding officers, B. Adone, John Sealy and Hampton Young, directors; Wm. J. Weatherby, agt. and engr. Organized Nov. 21, 1895, under laws of Texas, capitalization \$100,000, shares \$1 par, nonassessable.

Lands, 5 claims, 90 acres, 55 patented, known as the Copper Queen group, also a 5-acre mill site. Claims show fissure veins between rhyolite and andesite, having a generally N.-S. strike. The mine has about 3,000' of workings, developing a considerable tonnage of low-grade auriferous and argentiferous copper ore. Equipment includes steam power and a 15-stamp mill.

QUEEN REGENT MERGER MINES CO.

NEVADA

Office: Monadnock Bldg., San Francisco, Cal. Mine near Rawhide. Mineral Co., Nev. J. D. Brown, pres.; H. B. Wade, sec.; L. E. Foster, M. C. Roberts and A. M. Tridel, directors. Organized Feb., 1911, under laws of California, as successor of the Queen Regent Copper & Gold Co., capitalization \$2,000,000, shares \$1 par.

Owns 36 claims, about 5 miles S. W. of Rawhide and 18 miles east of Schurz, claimed to show a hematite gossan 50 to 300' wide, carrying copper values and said to show, in a trench, native copper of 12% tenor, with gold and silver values aggregating \$42 per ton.

The principal development is by the 400' main shaft which passed through 100' of hematite rock to 250' and thence down on a 40° granite contact. The 250' level is said to cut a 12' ledge which is 33' wide on the 300' level. On the 400' level, a 75' crosscut is said to be in ore. A raise from this level and drifting on the 300' are reported to have disclosed a large body of low-grade ore. Property regarded as promising.

QUEEN VICTORIA MINE.

BRITISH COLUMBIA

Owned by British Columbia Copper Co. Described Vol. VIII.

QUILILLA; CIA. EXPLOTADORA DE LA

MINA DE COBRE.

MEXICO

Letters unclaimed at former mine office: Ameca, Jalisco, Mex., and

Scranton, Pa. Chas. S. Weston, pres.; John W. Fowler, sec.-treas.; Independence Grove, gen. mgr.; Felix Orozco, supt., at last accounts.

Property, 50 hectares, shows fissure veins in porphyry, 1 of which, of 4 to 6' average width, is developed by 5 shafts of 40 to 190' depth, and 5 tunnels, longest 460'. Ores give average assays of 9% copper, 10 to 25 oz. silver and \$3 gold per ton.

QUINBY MINING CO.

CALIFORNIA

Mine office: Quinby, Trinity Co., Cal. Lands, 6 claims, on Quinby creek, carry a 4 to 6' vein, developed by 100' and 120' tunnels, with about 1,000' of workings. Claims show quartzose ore with chalcopyrite, associated with pyrite. The upper portion of the vein is oxidized, leached and copper is redeposited as chalcantite. Equipment includes a small gold mill. No returns secured.

QUINCY MINING CO.

MICHIGAN

Office: 32 Broadway, New York. Mine and works office: Hancock, Houghton Co., Mich. Wm. Rogers Todd, pres.; W. Parsons Todd, vice-pres.; Jas. L. Bishop, Chas. J. Devereaux, Isaac H. Meserve, Wm. B. Belcher, John M. Longyear and Otto Kirchner, directors; W. A. O. Paul, sec.-treas.; F. J. McLain, asst. sec.-treas.; Chas. L. Lawton, gen. mgr.; Jas. W. Shields, mill supt.; Alex. Laist, smelter supt. Organized March 30, 1848, under special charter from the state of Michigan. Present capitalization \$3,750,000, shares \$25 par; issued, \$2,750,000. Original capitalization \$500,000; reincorporated March 6, 1878, for 30 years more with capitalization \$1,000,000, increased, 1889, to \$1,250,000, again increased, 1896, to \$2,500,000, and once more increased, 1906, to \$3,750,000. Reincorporated 1908 for a third term of 30 years. Company ended 1912 with balance of assets of \$1,233,278. Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Wednesday in June.

The Quincy paid its first dividend in 1862, and profits have been disbursed to shareholders in every succeeding year except 1866 and 1867, giving the company a continuous dividend record of 45 years, from 1868 to date, rendering it the oldest dividend-paying American copper mine, and second only to the Tharsis Sulphur & Copper Co., Ltd., which has a record of continuous dividends since 1867, or 1 year longer than the Quincy's record. Recent dividends, by years, have been as follows: \$550,000 in 1903; \$500,000 in 1904; \$600,000 in 1905; \$1,250,000 in 1906; \$1,350,000 in 1907; \$495,000 in 1908; \$440,000 in 1909; \$550,000 in 1910; \$440,000 in 1911; \$550,000 in 1912, and \$412,500 to Oct. 1, 1913, a total of \$20,842,500. A table of statistics, production, costs, etc., 1864-1905, is given Vol. X.

Lands are very extensive, the management having adopted the policy, many years ago, of expansion of territory as opportunities offered. Recent landed acquisitions included a purchase of the Arcadian Copper Co., 1907, at a price of \$750,000; the purchase of the old Franklin mine, 1908, at a cost of \$170,000, and the acquisition, 1910, of Sec. 14 and the N. E. $\frac{1}{4}$ of Sec. 22, of 800 acres, from St. Mary's Mineral Land Co. bought for \$600,000. The holdings of the Quincy now include lands formerly held by the Pewabic, Franklin, Mesnard, Pontiac, Arcadian and St. Mary's, in order named, from south to north. The property carries the Pewabic bed and a number of parallel copper-bearing amygdaloids, from the Hancock mine, on the northern shore of Portage lake, to the boundary of the Franklin Junior mine, or about half-way from Hancock to Calumet. Through the acquisition of new territory, shafts Nos. 2, 6 and 8 can be sunk to practically unlimited depth and Mr. Lawton estimates that the property now includes, on the Pewabic bed alone, more than 3 times the quantity of copper rock that has been stoped during more than half a century of active mining in the past. The

mine was opened 1848, on the Quincy amygdaloid, a bed lying some distance west of the Pewabic, but the Quincy bed was abandoned 1856, when the Pewabic amygdaloid was opened. There is a footwall branch, known as the Pewabic East lode, underlying and parallel with the main bed, which occasionally yields good returns. The so-called West lode, about 300' west of the Pewabic bed, has been opened by shafts Nos. 4 and 7 through cross-cuts on the 30th, 39th, 40th, 44th and 49th levels, and considerable stamp rock has been stoped therefrom. About 150' west of the West lode is another amygdaloidal bed averaging about 40' in width and carrying more or less copper, which probably may prove workable at some future time. About 1,000' west of the Pewabic bed is the Hancock amygdaloid, which is narrow but fairly mineralized, and which yielded an average of 21 lbs. fine copper per ton, after reasonable selection, when worked in the old Hancock mine, this figure being materially above the present average return from the Pewabic bed.

The Pewabic amygdaloidal bed, on which all shafts are sunk, has a strike of about N. 30° E., with an average dip of 52 to 54° at surface, flattening in the lowest workings at depth of more than a mile to approximately 37° 30', the shafts following the dip of the bed on catenary curves. The Pewabic averages about 20' in width in the upper workings and has an extreme width of 40' at various points, but is materially narrower at the bottom and is only 10 to 15' wide in the upper workings of No. 8 shaft. The lower workings show decreased copper values with much less heavy copper than above, but the ore is more uniform in value. Part of the decrease in copper returns is due to mining rock that formerly would have been left as worthless and practically the entire Pewabic bed is now mined. There are copper courses, or shoots, that rake to the north with depth.

The Pewabic bed has good walls and the mine requires comparatively little timbering. Dry-walls are built of waste rock, in wide stopes, saving the expense of hoisting waste and also the cost of timber. Shafts are sunk mainly in the footwall, obviating the necessity of leaving large quantities of payable stamp rock in the pillars. The Pewabic rock now runs 15 to 17 lbs. fine copper per ton, with appreciable silver values. Previous to about 1890, about 40% of the copper was secured in masses. In 1912 the proportion of mass copper was about 15%. The southernmost drifts of the Quincy are under the city of Hancock and about 3,000' below mean water datum of Portage lake, while the northernmost workings at No. 9 shaft are fully 2 miles from the southern breasts. New openings, 1912, were 31,405' and average about 6 miles yearly, the mine having about 100 miles of workings. Fire doors have been installed and every precaution is taken against fire. Miners are carried to and from work in man cars holding 30 men each, and hoisting cables are inspected frequently, with every care taken to prevent accidents.

The electric underground traction plant was installed by the General Electric Co., tram lines averaging about 1,800' each in length with gradients of 1.5% towards the shafts. The equipment includes 20 electric locomotives, each weighing 5,500 lbs. standing 3' high by 43" wide and 9' long, with draw-bar pull of 700 lbs. on a level track, each hauling 4 or 5 three-ton rock cars at a speed of 6 to 8 miles per hour, 1 man caring for each train. The underground traction power plant, on the 57th level of No. 2 shaft, has a 100-kw. direct-current motor operating the haulage system. Tram cars are unloaded into 500-ton storage bins, built on the hanging-wall side of the shafts, there being such bins on 2 levels of No. 2 shaft, 4 levels of No. 6 shaft and 7 levels of No. 7 shaft. This system of storage obviates the loss of time by either the tram lines or skips, and adds about 25% to the hoisting

capacity of the mine, the property being equipped with hoisting and rock-house capacity for a production of fully 5,000 tons daily. About 160 rock drills are used in sinking, drifting and stoping, and extensive use is made of the diamond drill for exploratory and preliminary development work.

The Quincy has been much troubled by air blasts, these being violent disturbances brought about by the settling of superincumbent rock in the scores of miles of worked-out openings, causing violent compression of the air elsewhere throughout the mine. The most serious disturbances from air blasts, which practically are artificial earthquakes, of local scope, felt for only a few miles distance upon surface, were experienced in Feb., 1906, and there seems reason to fear that these troubles will prove intermittently continuous for the balance of the mine's life. The air blasts, while unpleasant, have caused more alarm than damage.

Owing to the absorption of adjoining mines, the Quincy shafts are numbered irregularly and are described hereinafter in order of occurrence, from south to north, rather than in order by number.

No. 7 shaft, the southernmost, planned and sunk by Mr. John L. Harris, leaves surface at an angle of 53° and is bottomed at an angle of 37° 30'. The shaft was sunk 4,000', in 18 months, through very refractory rock, this speed being rendered possible by sinking and raising in 5 sections simultaneously. The shaft is bottomed at the 71st level, at a depth of about 5,500'.

No. 7 shaft has a steel shaft rock house, 100' high, with large wings. There are 750-ton bins. The rock house has a steam hammer and two 24x36" crushers. In 1904 this rock house required 28 men for its operation, the force being reduced 1905, by remodeling, to 16 men, while since the changes of 1907, 5 men are able to handle 1,800 tons of rock daily, where 28 men were needed, 5 years previously, to handle less than half this tonnage. It is this sort of progress that keeps the Quincy vigorous and successful in its seventh decade of active production.

No. 7 shaft has an 8,000-h. p. Allis Chalmers Corliss hoist, with 52x84" cylinders and winding drums 28' in diameter by 11' 9" face, carrying 8,000' of 1½" steel cable, the main shaft weighing 120,000 lbs. This hoist can raise 6-ton skips from a depth of 1½ miles at a speed of 3,000' per minute, hoisting being limited to this rate by an automatic cutoff which also prevents overwinding. Starting a load of 6 tons from a depth of more than a mile, the hoist, if untouched, will check without damage after raising the skip only a few feet higher than the appointed place in the shaft house. There is a 1,300-gal. bailer in addition to skips. The engine house at No. 7 shaft is 58x94' with a 56x92' boiler house adjoining, both of stone, with steel truss roofs, and there is a second boiler house, each having eight 100-h. p. Roberts tubular return horizontal boilers.

No. 4 shaft, 860' next north of No. 7, is 4,186' deep, bottomed on the 51st level. The lower stretches of ground are reached from No. 7 shaft by electric tram. Previous to abandoning No. 4 a more systematic search was made of the West lode, which was successful to the point of opening several years reserves of stoping ground of fair tenor, though below the average grade of the Pewabic bed. Surface equipment at No. 4 shaft includes air compressors of 40 drills aggregate capacity.

No. 2 shaft, 585' next north of No. 4, is bottomed on the 71st level. Equipment includes a 1,300-gal. bailer for raising water and 30 to 40 power drills are operated normally.

No. 2 shaft has a shaft rock house 160' high, of steel and reinforced concrete, built 1908, by the American Bridge Co. Stamp rock from the shaft is dumped onto grizzlies, with wide bars, smaller material falling into circular bins, whence it passes by gravity to the crushers and thence into the

main rock-house bin, which is circular, built of steel plates. The smaller mass copper passes through the grizzly bars and is picked out by workmen and dropped into a chute carrying it to a steam hammer, there also being a chute for waste rock. The grizzlies allow large pieces of rock to fall into a bin of reinforced concrete in front of the steam hammer, where broken and sent to the main rock house bin through a chute, while mass copper from the steam hammer is dropped into a steel tube leading to a circular steel bin, with bottom of steel rails reinforced by concrete, which loads into railroad cars through chutes with pneumatic gates.

No. 2 shaft has a special crushing plant for waste rock, between the collar of the shaft and the rock house. Poor rock is dumped into a circular bin and drawn by gravity to a crusher, going thence to circular storage bins, from which it is drawn off into wagons or railroad cars for use in railroad ballasting, road building and concrete work. When required, larger masses of rock are selected and stored for masonry work. There are similar crushing plants at the other main shafts, except No. 7.

The surface equipment at No. 2 shaft is very heavy, being practically a duplicate of that at No. 7, including a powerful hoist. The 53x69' compressor building, of stone and steel, with fireproof truss roof, houses two 60-drill cross-compound 2-stage condensing right-and-left-hand Corliss air compressors, so connected that air therefrom is available in any part of the mine, the cross-connection eliminating danger of inadequate air supply through disabling of either section. Steam from the compressor plant exhausts into a dam. The boiler house has 5 Hawley down-draft furnaces. A new steam power plant, to be known as No. 5, is under construction at this point and will replace the old boiler plant at No. 4 shaft.

No. 6 shaft, 1,928' north of No. 2 and only 200' south of the Franklin line, was bottomed on the 68th level May, 1913. Production has been somewhat decreased by No. 8 shaft taking considerable ground under the Franklin mine, previously tributary to No. 6. Equipment includes an Allis-Chalmers duplex hoist, with a 22' 6" straight-face drum, raising 8-ton skips and a 1,300-gal. bailer, a centrifugal feed-water heater being attached to one cylinder of the hoist. Equipment includes a 100-drill 2-stage compound air compressor. The 56x75' boiler house has four 250-h. p. Wickes water-tube vertical boilers, nine 100-h. p. locomotive firebox boilers, and a powerful fire pump.

The Franklin mine lies next north of No. 6. The Quincy bought the old Franklin mine, 160 acres, for \$170,000, taking possession Dec., 1908, and closing the mine immediately. It is doubtful if the old shafts ever will be used by the Quincy. No. 3 Franklin shaft is 3,200' deep, bottomed at the former boundary line with the Quincy, and was a scam for some years before taken over. No. 5 Franklin shaft, 2,850' deep, also is bottomed at the former boundary line. Some fair stopes were opened, 1905, on the West lode, through crosscuts from this shaft. Idle since taken over by the Quincy.

The Mesnard shaft, No. 8, is 4,168' north of No. 6, and was bottomed at the 56th level May, 1913, at a depth of about 5,700'. Levels in this shaft have been opened uniformly at 135' intervals and former numbering made the 24th level of No. 8 correspond with the 42d level of No. 6. This lode was poor in the upper levels, but the lower workings, while by no means up to the Quincy average of some years ago in either quantity or quality of ore developed, show a bed wider and better mineralized than above, and the ground is of very satisfactory and profitable average, the improvement that began on the 10th level being very marked below the 20th level. The present average of the lode at the Mesnard shaft is nearly or quite up to the present average of the older workings, the 2,000' level showing a marked im-

provement above the general average for the Mesnard workings. This shaft is connected with the workings to the south on each level from the 42d, which was the first to pass under the old Franklin mine, to the 49th, inclusive. Regular production was begun 1907, and this is now the main shaft of the mine, with a normal output of 1,600 tons daily and a record production of 2,100 tons in a single day.

The shaft rock house at No. 8, of frame and structural steel, is 41x155' on the ground and 150' high. Stamp rock is dumped from the skips, as hoisted, upon grizzlies of 2" steel bars, spaced 2" apart, at an angle of 45° in an upper section, with a lower section at 20° only, in which bars are spaced 12" from center to center, this combination grizzly assorting rock automatically into 2 grades, fine stuff going to ore bins and the coarse material falling into 2 chutes, receiving equal portion, which feed direct to 2 rock crushers on the floor below, no shoveling being required. Rock too large to pass the 10" aperture in the lower section of the grizzly falls to the floor and is broken by a trip hammer. The grizzlies save one-half on rock-house labor, and greatly lighten the work of the remaining employees.

The power house at No. 8, of structural steel and brick, is 140x162' in size, with a 9' basement under the engine room. There is a Nordberg 32x72" duplex-cylinder engine, with double-conical drum, of 12' 6" minimum and 18' 6" maximum diameter, good for 6,000' depth. In a wing, on the southern side of the power house, is a 65-drill Nordberg 2-stage cross-compound air compressor. The boiler room has ten 250-h. p. Parker and Burt boilers, with steel and brick coal bins that have direct rail connection over a trestle, and a 140' reinforced concrete smokestack standing on a 16' base. A large changing house of reinforced concrete was built, 1910, at this shaft, and many well-built houses were constructed for employees.

No. 9 shaft, 2,600' north of No. 8, is the old 100' Pontiac shaft, given a concrete collar and cut down to 3-compartment size. The shaft was about 2,635' deep Dec. 31, 1912, and at 2,600' cuts a drift from No. 8, giving ventilation. No. 9 shaft gave a promising showing at a comparatively shallow depth. Equipment includes a temporary shaft house, with a hoist and boiler plant.

To the north of the Pontiac shaft there is a long stretch of ground, bought of the Arcadian Copper Co. and St. Mary's Mineral Land Co., carrying the extension of the Pewabic bed and available for later development.

The surface plant of the Quincy is very complete. The 62x145' fireproof machine shop, near No. 2 shaft, is built of stone, brick and steel, with truss roof, and has a traveling crane running the entire length of the shop. A plastered brick tunnel, connecting the machine shop, compressor plant and boiler house, serves as a conduit for steam and air pipes. The blacksmith shop is 50x154', with a 50x90' wing and fireproof steel truss roof having 3 large ventilators, and is equipped with 12 forges, steam hammer, fans, bolt cutters, drills, etc. There also is a well equipped carpenter shop. All shops have electric motors.

Miscellaneous buildings at the mine include a large warehouse. The general office is a handsome and substantial 2-story and basement building, of ashlar-finished redstone. The company owns several hundred dwellings at the mine location and a considerable number of houses at the mills. The new houses are of 7-room size, on solid stone foundations, and the mine and mill locations are exceptionally neat and attractive.

The Quincy has extensive holdings of valuable land, in and adjoining the city of Hancock, and portions of this land have been platted, from time to time, for residence purposes and sold at good prices.

Water for boilers and potable use at the mine location is taken from

Portage lake, the pumping station, on the margin of the lake, being of ashlar-finished redstone, the pumps forcing water for a mile against a static head of 640'. A large coal yard is located between shafts Nos. 2 and 4.

A private telephone exchange, with the central station in a 20x25' frame building, has a switchboard for 100 instruments, with telephones installed in the shops, mills, smelter and mine, there being about 60 underground stations.

The company's private rail line, known as the Quincy & Torch Lake, built 1890, is 6 miles long, touching at all shafts and shops at the mine and at the boiler house, wharves and coal sheds at the mill. This line is connected with the Mineral Range, Hancock & Calumet and Copper Range railways. The line has solid rock ballasting, and steel bridges, with a continuous down-grade haul between the mine and the mill. Equipment includes 6 locomotives, freight cars and nearly 150 hopper-cars for rock, the latter having automatic couplers and air brakes. The roundhouse, near No. 7 shaft, has a 36x40' addition containing a special machine shop, with electric power, for the use of the railway only.

The mills at Mason, on Torch lake, 6 miles from the mine, have 8 stamps, formerly with 20" cylinders, having a combined capacity of about 4,500 tons daily, but all have been given 24" cylinders, increasing the capacity of the mill to about 5,500 tons daily, the stamps giving an average duty of about 700 tons and occasionally reaching 800 tons. While under test, 1 head stamped 865 tons of rock in 24 hours, oversize being handled in another head, equivalent to handling the oversize in rolls, as is done generally in the case of compound stamps. The results secured at the Quincy mills reflect great credit upon Superintendent Shields.

No. 1 mill, of wood, has 5 Allis-Chalmers 2-way stamps, taking steam at 100 lbs. pressure. There is an Allis-Chalmers Huntington mill for regrinding raggings, and the dressing machinery includes 92 Hodge jigs, and 32 Wilfley tables.

No. 2 mill, standing 630' north of No. 1, is 132x216' in size, of steel on stone foundations, with 180 windows, each having 13½ sq. ft. of glass, flooding the interior with light. This mill has 3 Allis-Chalmers heads, each set on foundations of heavy timbers and concrete, surmounted by a bottom plate of 22 tons, a middle plate of 18 tons and a top plate of 18 tons, all of solid iron castings, above which are the mortar boxes of the stamps. One head was remodeled as a steeple-compound stamp in 1905, and was carefully tested, the water condensed from steam used being weighed, giving a close check on the duty of the engine. The result of the very careful tests made decided the management to stick to simple heads. The stamps have 1" revolving screens for the mortar boxes, with hydraulic discharges, as have the launders leading from the mortars, these yielding about 60% of the copper secured. Finishing jigs and slime tables have been replaced by 24 Wilfley tables, 8 for each stamp, assisted by 3 Standard concentrators. Each stamp has 12 rough jigs, and 6 Wilfleys for finishing and 2 Wilfleys and 1 Standard table for slimes. There is a settler from which slimes are taken to the Wilfley tables. Regrinding is done by a Trent Chilean mill, with 3 jigs and 3 Wilfleys as auxiliaries. By the adoption of hydraulic discharges and other improvements the capacity of the stamp-heads has been increased about 25%, while changes in the wash have given an increased capacity of 30%, with labor costs reduced 25% and loss in tailings cut down 40 to 50%. About 35% of the present product of the mill is No. 3 grade mineral, carrying very fine copper.

The mineral bins, of concrete and cement, are kept at a temperature of 80° F., to dry out water remaining from the wash, and gates are operated

by steam pistons. Mineral is received in buckets by overhead trolley from No. 1 mill, and in hopper cars drawn by an electric locomotive traversing a 650' track from No. 2 mill. There is a 54' platform scale, with a minimum of 10 lbs. and maximum of 220,000 lbs. weighing capacity.

The 56x90' mill power house, of steel frame, on stone foundations, at No. 2 mill, has four 250-h. p. Wickes vertical water-tube boilers, with a 100' smokestack on a 30' foundation. There is an electric light plant.

The 54x54' brick and steel mill and pump house has a 20,000,000-gal. centrifugal pump and a 20,000,000-gal. Allis-Chalmers vertical triple-expansion pump, and the old pumphouse has 3 pumps with combined capacity of 21,000,000 gal. daily. Water is taken from a 7x7' 6" tunnel, driven 100' under the bed of the lake. A 6x6' 6" tunnel 440' long, connecting the mills, boiler houses and pump houses, is bricked and plastered inside and carries both water and steam pipes.

Minor structures at the mill include a machine shop, warehouse and other buildings. A considerable village, tenanted solely by employees, has grown up about the mill.

The tailings at the mills are very extensive, including millions of tons of stamp sand, and various experiments on reconcentration have been conducted by different interests at intervals since 1902. The companies that have attacked this proposition have bankrupted themselves with monotonous regularity, notwithstanding which, the successful results being secured at the regrounding mills of the Calumet & Hecla offer promise that the Quincy sands also may be retreated profitably at some future time.

The Quincy has 3 docks, the one at Hancock having a 40x416' wharf, and a 64x124' warehouse, with deep water in front and railroad tracks behind. A second dock, at the Ripley smelter, has a 350' shipping wharf for copper and a 250' coal wharf. The third dock, at the Torch lake mills, has a 40x400' wharf, built of Washington fir, with 18' of water alongside, on it standing a 300x300' coal shed of steel with corrugated iron siding and roofing, having storage capacity for 80,000 tons of bituminous coal, this being about the annual consumption of the mine and mills. There are 3 steam coal hoists, each capable of unloading 100 tons per hour, these having 120' steel towers, traveling on a track 22' wide and 300' long that runs the entire length of the shed. The plant was built by the American Bridge Co. at a cost of about \$200,000 and effects a saving of about 12 cts. per ton on all coal used. The railroad reaches the coal shed by a 650' trestle, partly of timber and partly with steel bents, supported on 240 concrete piers.

The smelter, blown in Dec. 1, 1898, is at Ripley, on the shore of Portage lake, opposite Houghton, just east of Hancock and only a half mile from the mine, and does a custom business, treating the mineral of the Franklin and Mass mines, in addition to that of the Quincy. The principal buildings are of ashlar-finished redstone.

The 40x95' mineral house is reached by a 460' trestle, mineral arriving from the mills in hopper-bottom cars, and being dumped into storage bins, whence drawn off, as required for smelting, into steel trucks running on rails under the gates of the bins.

An 84x144' building has four 40-ton reverberatory furnaces, and a second building, erected 1904, has 60-ton and 120-ton reverberatories, latter installed 1910, this building having an automatic casting machine. On arriving at the reverberatory building the trucks carrying mineral are lifted by electric cranes and contents dumped into the furnaces, which are top-charged. An overhead trolley in the main building permits handling large bars and cakes, and a trolley dipping system is used for casting. Slags are trammed, in 3,000-lb. pots, to a 30' hydraulic elevator which raises the lodes and dumps

their contents over the end of a trestle. The cupola building has 1 blast furnace only, for reverberatory slags. A briquetting plant, of concrete blocks, built 1906, has 2 boiler-iron retorts, each 6x31', for briquetting low-grade mineral before smelting. Miscellaneous buildings at the smelter include an engine house, casting house, cooper shop, office, laboratory, machine shop, 50x100' warehouse, and a coal shed.

In 1912 the Quincy stamped 1,309,253 tons of rock, returning 30,040,360 lbs. of mineral that yielded 20,634,800 lbs. fine copper, giving the mineral an average tenor of 68.6% copper, with an average return of 15.76 lbs. fine copper per ton of rock stamped. As 15% of the copper production of 1912 was in mass copper, the actual returns per ton of rock stamped would appear to have been 13.3 lbs. per ton. Average cost per ton of rock stamped was \$1.51 per ton for the first 7 months of 1908, and was \$1.75 per ton in 1912, the cost per ton having been lower in 1912 than in 1905, when hoisting was done from shallower depth and the rock produced carried a higher percentage of copper. Costs were 11.2 cts. per lb. of copper, or 12.2 cts. per lb. including construction, in 1907, and were 11.3 cts., or 11.8 including construction, in 1912. Silver production averages about 100,000 oz. yearly.

Production has remained nearly constant for several years but was seriously lessened by the labor strike of 1913, output for September and October being but one-fifth the normal amount. Production was 16,924,618 lbs. fine copper in 1897; 16,354,061 lbs. in 1898; 14,301,182 lbs. in 1899; 14,116,551 lbs. in 1900; 20,540,720 lbs. in 1901; 18,988,491 lbs. in 1902; 18,498,288 lbs. in 1903; 18,343,160 lbs. in 1904; 18,827,557 lbs. in 1905; 16,194,838 lbs. in 1906; 19,799,973 lbs. in 1907; 20,600,361 lbs. in 1908; 22,511,984 lbs. in 1909; 22,517,014 lbs. in 1910; 22,252,943 lbs. in 1911, and 20,634,800 lbs. copper in 1912.

The policy of growth, begun with the purchase of the Pewabic mine 20 years ago, has been continued steadily and the management is entitled to credit for following unswervingly the policy of expansion that is necessary to the successful operation of any large industrial enterprise of the twentieth century. The Quincy, with the longest record of continuous annual dividend payments of any American copper mine, bids fair to continue disbursing large profits for at least another generation or two.

QUINTERA MINING CO., LTD.

MEXICO

London secretary and office: J. G. Mil's, 8 Crosby Square, London, E. C., Eng. Paris office: 11 rue Boudreau, Paris, IXe, France. Mine office: Aduana, Alamos, Sonora, Mex. Jacques F. Kulp, chairman; preceding officer, A. Dubois, S. Einhorn and Ernest May, directors; J. Hebert, gen. mgr.; Miguel Valenzuela, supt.; L. Le Bouticaud, mill supt.; Francisco A. Esquer, smelter supt. Organized May 4, 1888, under laws of Great Britain, capitalization £52,000, increased Nov. 18, 1901, from £40,000, shares £1 par, fully paid; all issued. Dividends were 25% in 1900; 22.5% in 1901; 17.5% in 1902; 17.5% in 1903; 7.5% in 1905; 11.25% in 1906, and 5%, or 2s. 3d. in 1907; none since. Annual meeting in June. Shares listed on the Paris coudisse. Accounts for calendar year 1911, submitted July 8, 1912, showed £966 loss; total deficit, Jan. 1, 1913, £17,559; reserve fund, £26,623. Operations suspended since 1911, owing to Mexican revolutions.

Property consists of 26 claims, 134 hectares, in the Alamos district, Sonora, and in the Fuerte district, state of Sinaloa, Mex., with ranches of about 7,400 acres. The mining property consists of 4 groups, the Quintera and Libertad forming the first, the Azulaques and Constancia the second, the Minas Nuevas, Cotera and Porvenir forming the third and the Rosario group the fourth. Only the Quintera has been worked by the present owners.

Some 40 or 50 years ago a Frenchman owned this and the Rosario, a lead-silver property on Rosario mountain, where the states of Sonora, Sinaloa and Chihuahua touch. He had worked the Rosario extensively, the ore being a lead carbonate containing much silver, and finally went to Paris, mortgaged both properties to the Egyptian-Paris Bank for \$250,000 and skipped out to South America. He has never been heard from since. After the bank acquired the properties, for many years they sent engineers out each year to examine and report. Finally, about 30 years ago, after several had reported favorably upon the Quintera, work was commenced.

The vein is strong on the surface, 18 to 20' wide, and has granite on the east and dark andesite on the west. It showed low silver values on the surface and 2 to 3% lead. With depth the value of the ore improved and under the efficient management of Tom Clark, a Cornishman, the mine paid \$50,000 to \$100,000 yearly in dividends, notwithstanding that the general mill management was expensive.

The ore is 20 to 30' wide in the deeper levels and assayed 40 to 50 oz. in silver, the lead being replaced by 8 to 9% copper ore as depth increased. This copper ore was sorted out and smelted on the ground, using mesquite charcoal at a cost of one-half cent per pound. The mine is on a hill 700' above the mill, and an aerial tram was put in to bring the ore to the mill. A new shaft 500' deep was sunk at the north end of the property, from which a drift was driven 1,300' south and a winze sunk, ultimately to a depth of 1,000' below the surface. All of the ore from the new shaft was hoisted twice and trammed 1,300', when an adit from the mill 2,000 to 2,500' long would have tapped the winze 200' below the long drift, and the ore could have been trammed in cars direct to the mill. Even when the new shaft was sunk from the surface, this was done near the old one, instead of raising from the winze on the 500' level. At the 1,500', the vein split. One branch was followed to the east in the granite; it contains no ore of value. A few hundred feet north of the shaft the main vein enters the granite on both sides and becomes barren. At the south end of the property the ore shoot appears to be dipping into the Promontorio. Property considered valuable, but in a remote section that is without even wagon roads, and mine is impossible to operate until peace is restored to the country.

RADIUM COPPER MINING CO.

COLORADO

Idle. Letter unclaimed at 428 Boston Blk., Minneapolis, Minn. Mine office: Radium, Grand Co., Colo. H. L. Hill, pres.; Walter H. Gould, vice-pres., treas. and gen. mgr.; L. J. Van Fossen, sec.; Antonio Cunha, supt., and Chas. F. Potter, directors, in 1911. Organized 1906, under laws of Colorado, capitalization \$1,500,000, shares \$1 par, nonassessable; issued, \$800,000.

Lands, 12 claims, in the Red Gorge district, show veins developed by 2 tunnels with about 700' of workings. The upper tunnel shows malachite and chalcocite, giving assays of 5.82 to 45.7% copper, from a trace to 5 oz. silver and from 20 cts. to \$5.90 gold per ton.

RADIUM MINES CO.

ARIZONA

Mine office: Globe, Gila Co., Ariz. Lands, 60 claims, 4 miles north of the Old Dominion, in a block of 1 to 2 miles width and nearly 4 miles length, running eastward from Pinal creek. Ten or more of these claims are said to have produced \$10,000 to \$20,000 each from surface ores raised by hand windlasses.

Property shows well-defined veins characterized by vanadinite, a lead-vanadium ore, and carrying a little copper in some parts of the property. The claims are expected to develop copper ore in depth, but as the rock

is diabase, disseminated ores can scarcely be expected and veins will probably carry mixed sulphides.

RAINBOW LODGE DEVELOPMENT CO.

MONTANA

Office: 1500 Alworth Bldg., Duluth, Minn. Mine office: 14 West Granite St., Butte, Mont. Edward C. Congdon, pres.; Chester A. Congdon, vice-pres.; Frederic R. Kennedy, sec.; Edward J. Maney, treas.; preceding officers, Thomas F. Cole, Joseph B. Colton, Ralph C. Lupton, directors. John D. Pope, gen. mgr.; N. B. Brady, supt. Organized Nov. 9, 1912, under laws of Delaware, capitalization \$800,000, shares \$10 par; issued, \$560,000 for purchase of properties. Annual meeting, first Tuesday in June.

Property, 7 claims, including the Third, Sphinx, Michigander, Morel, Valley Queen, Cornbrea and Wanda claims, with fractional interests in the Sarah claim and Glendale placer. The group lies east of the Butte & Superior property and is supposed to carry an extension of the Rainbow lode. Company is sinking a shaft on the Sphinx claim which was 750' deep in Oct., 1913. A 496' crosscut on the 600' level, showed 375' of leached lode matter. Company has also acquired control of the Butte & London property under an agreement to deepen the 1,130' shaft of that company 500', crosscutting on the 1,630' level the entire width of the property to develop the veins at that depth. In return for this it receives 51% of the Butte & London stock.

Company is in the hands of very strong and able mining people and local management is skillful and has made a great record in the North Butte mine.

RAINBOW MINING CO.

UTAH

Office: 1602 Walker Bldg., Salt Lake City, Utah. Mine near Alta, Salt Lake Co., Utah. A. F. Jacobson, vice-pres.; Ernest M. Fowler, sec.-treas.; preceding officers, Eb' Crouch and Wm. Wonnacott, directors. Organized Aug. 25, 1906, under laws of Utah, capitalization \$50,000, shares 10 cts. par, fully paid; issued \$35,021, with assessments of 1½ cts. per share, to Dec. 31, 1912. Annual meeting, second Monday in January.

Lands, 14 claims, 6 patented, 280 acres, in the Little Cottonwood district, show fissure and contact veins in granite and limestone, carrying ore assaying up to 25% lead and 500 oz. silver per ton, and a vein under development, of about 12' average width, is estimated by the management to carry ore averaging 2% copper, 25% lead, 17% molybdenum, 30 oz. silver and 60 cts. gold per ton. Development is by a 350' tunnel, expected to cut the main vein at about 450'.

RAINBOW MINING & MILLING CO., LTD.

IDAHO

Office and mine: Wallace, Shoshone Co., Idaho. Hon. Herman J. Rossi, pres.; Henry C. Adami, vice-pres.; Geo. Austin, sec.-treas. and gen. mgr.; preceding officers, John D. Caughell and A. H. Nourse, directors. Organized June, 1907, under laws of Idaho, capitalization \$300,000, shares 25 cts. par, assessable; issued, \$250,000. Annual meeting, June 1.

Lands, 11 claims, unpatented, 220 acres, in 2 groups. The original group of 7 claims, in the Evolution district, near the Grey Copper mine, has St. Regis and Burke quartzite similar to the Coeur d'Alene region, cut by a 1 to 12' fissure vein running north 15° E. and traceable 1,800'. This vein carries gray copper ore with iron and quartz gangue, with an average of about 2 to 3% copper and 8 to 10 oz. silver per ton. The mine is developed by 3 tunnels, No. 1 of 110', No. 2 of 80', and No. 3 of 1,250'.

The second group, of 4 claims, bought 1910, is about 3 miles from the Handspike mine, and 15 miles from a railway, at the mouth of Bootjack creek, a tributary of the North fork of the Coeur d'Alene river, in Secs. 23 and 24, T. 31 N., R. 1 W., in an unorganized district. This property shows

a vein of 12' estimated average width, traceable 6,000', carrying lead and copper ore, associated with iron carbonates, in a quartz gangue, developed by tunnels of 30', 30' and 100'.

Improvements include 5 buildings and an air compressor on No. 2 group.

Property is three-fourths mile from O. W. R. & N. R. R. Company is developing steadily.

RAINBOW MOUNTAIN MINING CO.

ARIZONA

Mine at Chloride, Mohave Co., Ariz. H. L. McCarn, gen. mgr. Property said to show a vertical vein developed by a 500' shaft in 1912, where much water was encountered. Shipped 1,000 tons of copper in 1913 to Needles smelter. Equipment includes an 80-h. p. hoist and a 2-mile aerial tram.

RAINY DAY GROUP.

ARIZONA

Address: Louis La Barr, Copper Basin district, via Harrington, Yavapai Co., Ariz. Property has a 4' vein in mineralized schist, carrying gold-copper ore. Development consists of a 300' tunnel with 225' back. Was under development in Sept., 1913.

RAINY HOLLOW COPPER MINES.

BRITISH COLUMBIA

Location, 50 miles by wagon road from Haines, Alaska, on headwaters of the Klehini river, tributary to the Chitina. The district is 10 miles west of the Alaskan border. Copper ores occur as bedded deposits in almost flat limestones and as veins accompanying igneous dikes at the Custer mine. The bedded deposits show bornite in a garnet-calcite gangue of contact metamorphic character.

A 30-ton shipment from the Maid of Erin mine to the Puget Sound smelter returned 32.17% copper with 55.67 oz. silver per ton. A 25-ton shipment from the Copper Butte mine returned 25.36% copper and 42.07 oz. silver per ton.

RAMBLER COPPER & PLATINUM CO.

WYOMING

Office: 710, 145 La Salle St., Chicago, Ill. Mine address: New Albany, Albany Co., Wyo. Frank M. Wootton, pres.; Edw. White, vice-pres.; Dorchester Mapes, sec. Organized Jan. 21, 1908, under laws of Wyoming, as a merger of the Rambler Mining & Smelting Co., and New Lincoln Copper Co., capitalization \$2,500,000, shares \$1 par; issued, \$2,029,463.

Property leased for 15 years, in 1912, to J. Thielman of Merrill, Wis., who transferred the lease to a new corporation called the Platinum Mining & Milling Co. (which see).

Lands, 12 claims, patented, at the head of Douglas creek, on the crest of Medicine Bow mountains. The mine shows gneiss and felsite, with a fracture zone in granodiorite, having a N.-S. strike and dip of 65° E., estimated by the management to average 70' in width, with length of 90', carrying a great variety of copper minerals, associated with sundry rare metals in commercial qualities, and comparatively free from bismuth, antimony, arsenic and other deleterious elements. Ores include chalcocite and covellite, with some chalcopyrite showing in the bottom workings. The mine is especially notable for containing large quantities of covellite carrying gold, iridium, osmium, palladium and platinum, latter in the form of sperrylite. The ores have a decomposed granite gangue, giving talcose alteration products, and carry more or less hematite, pyrite and marcasite, the iron minerals carrying small quantities of copper. Ores are estimated to average 4% copper, 1 oz. silver and \$2 gold per ton, with variable quantities of the rare metals.

Development is by vertical shafts of 95' and 166', with about 5,000' of workings. The 1911 management estimated 150,000 tons of ore in sight.

Smelter returns, from carefully-selected ore, have ranged 20 to 30% copper, and Rambler matte has given assays of 6.75 oz. silver, 2.25 oz. gold and platinum combined, and 6 oz. palladium, per ton. The cost of refining the matte and separating the various rare metals was estimated, by the old company as \$40 per ton of copper, or 2 cts. per lb.

Equipment includes a 200-h. p. steam and electric plant with 2 hoists.

RAMÓN CORONA; COMPAÑIA MINERA.

MEXICO

Office: San Pedro, Coahuila, Mex. Mine office: Naica, Camargo, Chihuahua, Mex. D. Francisco I. Madero, Sr., pres., at last accounts. Geo. Stenson, mgr. Property, adjoining the Naica mine, carries considerable bodies of silver-lead and copper ores, and production has been mainly silver-lead ore. Development is by shaft. Has gasoline power. Owing to complicated revolutionary activities in this district, it is impossible to get information or to say whether the Madero family still own the property or not.

RAMSHORN MINE.

IDAHO

At Bay Horse, Custer Co., Idaho. Presumably belonging to Idaho Mining & Smelting Co. Is the largest and most extensively developed dry-silver ore mine in Idaho. Shows well-defined fissure veins in black altered slate of igneous material. Vein varies from a few inches to several feet in width and carries quartz and spathic iron with ore shoots containing streaks and spots of tetrahedrite carrying 25% copper and 1,000 oz. silver.

RANSON COPPER MINING CO. OF ONTARIO, LTD.

ONTARIO

Idle. Office: Sault Ste. Marie, Mich. Mine office: Sault Ste. Marie, Algoma Ont. B. Frank, pres.; David Rustander, sec.; D. J. Ranson, supt., at last accounts; R. H. Taylor, cons. engr. Organized 1902, under laws of Ontario, capitalization \$3,000,000, shares \$1 par. Lands, 3,600 acres, in Chesley and Anderson townships, said to show 14 veins, of which 6 contact veins have been opened by 8 shafts of 23' to 75' depth, veins averaging 25' width and giving assay values up to 12% copper and 3 oz. silver per ton, from chalcopryite. Has steam power.

RARITAN COPPER WORKS.

NEW JERSEY

Owned by International Smelting & Refining Co., at Perth Amboy, N. J. A. C. Clark, supt.

RARUS GROUP.

ALASKA

Situated on the Kuskulana river near the end of Copper River railroad. Belongs individually to owners of the Alaska Consolidated Co. Alfred B. Iles, manager. Property shows an iron outcrop, 400' wide, lying between limestone and conglomerate. Is developed by 100' tunnel, driven in 1912.

RAVEN COPPER CO.

MONTANA

Office: Hartford, Conn. Mine office: 56 Silver Bow Blk., Butte, Mont. E. C. Frisbie, pres.; John Berkin, vice-pres. and gen. mgr.; J. A. Poore, sec., Butte, Mont.; Robt. A. Griffin, treas.; preceding officers, E. J. F. Rea, Ezra A. Stack, Donald Campbell and Albert B. Curtis, directors; Geo. A. Packard, supt. Organized July, 1909, under laws of Maine, as successor of the Raven Mining Co., capitalization \$1,000,000, shares \$1 par, assessable, 60 cts. paid; issued, \$630,000.

Company paid the old corporation \$50,000 for its property, in addition to assuming the bonded indebtedness, amounting to \$35,000, now retired, and shareholders of the old company were given the privilege of acquiring new stock share for share, on payment of 25 cts. per share, the new stock being issued as 50 cts. paid; a 15-ct. assessment was levied June 25, 1913, and stock at that time sold for 2 cts. a share. The stock of the old company was introduced to the Boston market by a stock exchange firm and went to \$8 per share, and from there back to 50 cts., when insiders unloaded on

the firm. On May 24, 1913, company is reported to have had \$9,200 cash, but operations for previous year had entailed a loss of \$62,000.

The Raven has had quite a varied history. The old company, known as the Raven Mining Co., owned the Raven claim at Centerville and a two-thirds interest in the Snoozer in the same locality, the 2 claims, however, being separated by another and independent piece of ground. The Butte Coalition owned the balance of the Snoozer, and sold its interest to the Anaconda. This company gave the Raven people permission to develop the Snoozer through the Buffalo shaft. Development work was done to the depth of about 800', and 2 fine veins were found. The taking of ore was begun on the 500' and 800' levels. Then the Anaconda claimed the veins that were being mined apexed on its own property, the La Platta, and stopped the use of the Buffalo shaft.

The Snoozer mine, to which the earlier development was confined, has 4 veins, the northernmost one in dispute as to ownership of the apex. The Snoozer had 2 shafts of 75' and 200', and 5,780' of workings. Ore produced prior to suspension, June, 1906, averaged about 30 tons daily, carrying about 4% copper, 8 oz. silver and \$1.25 gold per ton. The Snoozer has been opened on the 800', 1,200' and 1,500' levels by crosscuts from the 1,200' of the Anaconda, the 1,200' level being said to show a 4' vein carrying high-grade ore, with an increase in width of the orebody on the 1,500' level.

The Raven claim, said to carry 3 veins, has a 700' air shaft, and an incline shaft 1,700' deep in Aug., 1913., with upwards of a mile of workings. It is a silver-gold mine, yielding ore averaging about 16 oz. silver per ton, with fair-gold values. On the 900' level a crosscut shows a 25' vein, carrying a hanging-wall paystreak said to average 3.5% copper. The vein is about 30' wide on the 1,100' level, carrying ore below commercial tenor, averaging 2% copper, with small gold and silver values. Apparently the developments to Aug., 1913, are very disappointing, value in ore recently shipped being practically all silver. Equipment includes a 20x36" hoist, good for one-half mile depth and a 5-drill Ingersoll-Rand air compressor. The output for 1913 is reported to have returned \$40,000. As the pumps are pulled and the mine flooded, further working appears unlikely, as results of development do not justify levying another assessment for further exploration.

RAWLEY MINING CO.

COLORADO

Office: 55 Liberty St., New York. Mine office: Bonanza, Saguache Co., Colo. A. Fillmore Hyde, pres.; Eugene G. Foster, vice-pres.; E. V. Cox, sec.-treas.; preceding officers, John L. Cox, V. Hodges, Elmer Z. Burns and J. Hegeman Foster, directors; Will C. Russell, gen. mgr.; Chas. E. Beckwith, mine supt.; Simmons & Burns, cons. engrs. Organized 1901, under laws of Colorado, capitalization \$2,500,000, shares \$1 par, nonassessable. Annual meeting, third Monday in January.

Lands, 35 claims, 350 acres, show fissure veins in andesite. These veins run N.-S., are nearly vertical and of 5 to 6' width, carrying argentiferous galena, bornite and chalcopryrite, in a heavy sulphide smelting ore on the 12th level. The mine had 18,800' of workings, March, 1913, estimated to show 280,000 tons of ore blocked out and 500,000 tons probable ore.

Equipment includes steam power with 50 h. p. at the mine and 100 h. p. at the mill, fuel being wood; machinery includes an 8-drill Rand air compressor. There are 24 buildings and a 100-ton mill. Property is still in the development stage. The management has completed a 6,235' drainage and development tunnel said to intersect the vein on the 12th level.

RAY-ARIZONA COPPER CO.

ARIZONA

P. T. McGrath, president and manager, Kelvin, Ariz. Property, a group of 42 claims, is on the south side of the Gila river, opposite Kelvin.

Claims show schists cut by igneous rocks, with impregnations and veins carrying copper ore. Development is by a 50' shaft sunk 1912, and by churn drilling No. 1 hole 580' deep Oct. 25, 1913, showing 60' of concentrating ore. Company said to plan underground development. F. L. Underwood is reported to have financed the company under an option on 51% of the stock for \$250,000.

RAY CENTRAL COPPER MINING CO.

ARIZONA

Company conveyed by direct deed all assets to Ray Consolidated Copper Co. in June, 1912. June 1, 1913, there were still 6,040 shares of Ray Central stock unexchanged, but company will be dissolved as soon as it can be legally done.

RAY CONSOLIDATED COPPER CO.

ARIZONA

Office: 25 Broad St., New York. Mine office: Kelvin, Pinal Co., Ariz. Mill office: Hayden, Gila Co., Ariz. Sherwood Aldrich, pres.; D. C. Jackling, vice-pres. and gen. mgr.; Chas. Hayden, second vice-pres.; preceding officer, Chas. M. MacNeill, Seeley W. Mudd and A. Chester Beatty, executive committee; Eugene P. Shove, sec.-treas.; preceding officers, Spencer Penrose and W. Hinkle Smith, directors. Louis S. Cates, mine supt.; D. D. Moffatt, mill supt.; Ed. Hiatt, mg. engr.

Organized May 11, 1907, under laws of Maine, capitalization \$16,000,000, shares \$10 par; \$14,497,650 issued, June 30, 1913. Original capital \$6,000,000, increased to \$8,000,000 in 1908, increased 1909 to \$10,000,000, increased May, 1910, to \$14,000,000. The increase to \$16,000,000, March, 1912, was to provide shares for the absorption of the Ray Central Copper Mining Co., giving 1 share of Ray Cons. for 8 of Ray Central.

Reports for the half year ending June 30, 1913, show operating profits of \$1,404,634, compared with \$1,229,334 for the previous 6 months. When the mine and plant are operated at a rate of 10,000 tons per day, it is expected that the annual earnings will be about \$3,000,000 if copper averages 15½ cts.

A \$3,000,000 issue of 6% convertible bonds, due July 1, 1921, can be retired by conversion until Jan. 1, 1917, at \$20 per share, into stock. Company absorbed the Gila Copper Co., through exchange of stock, giving 1 share for 3. Company controls the Ray & Gila Valley Railroad Co., capitalized at \$2,500,000, of which \$779,000 stock is outstanding, and is held in the treasury of the Ray Consolidated Copper Co. Mercantile Trust Co., New York, and Boston Safe Deposit & Trust Co., registrars; Guaranty Trust Co., New York, and Old Colony Trust Co., Boston, transfer agents. Fiscal year, formerly ending June 30, has been changed to end with the calendar year. Shares are listed on the Boston Stock Exchange. Annual meeting, formerly held fourth Tuesday in September, has been changed to third Friday in April. Dividends of \$1.50 a year, payable in quarterly installments, began June 30, 1913.

The company having the right to retire its bonds at 110 and accrued interest, after Jan. 1, 1914, will save the dividends on the 150,000 shares for which the bonds are exchangeable if its surplus permits such retirement. It is evident therefore that a low price for stock, keeping bondholders from converting, benefits the company. A sinking fund of 10 cts. per ton of dry

COPPER SHARES

We have specialized in the shares of copper mining companies for many years.

CATLIN & POWELL CO.
STOCK BROKERS.

15 Broad Street,
New York.

Publishers of the *Investment News Bureau*. Send for free sample copy.

ore treated, will go into effect from 1914 to 1916, increased to 20 cts. a ton after 1916. It seems improbable it will ever be needed, as company's surplus on July 1, 1913, after deducting fixed charges and dividends, was nearly \$3,000,000.

The company owns a tract of 1,950 acres of mining claims near Ray, Pinal, Ariz., with additional holdings, including the town sites of Ray, Sonora and Kelvin, and a tract of 4,000 acres in Gila and Pinal counties, about 15 miles south of Hayden and 21 miles from the mines.

About 580 acres of the Ray property has been proven to be mineralized, and about 183 acres have been developed, with a certainty that more or less of the additional mineral ground will be found to carry workable values.

The property shows a flat orebody 150 to 400' thick, 1,000 to 3,000' wide and about 9,000' long, through the property. This zone consists essentially of a highly metamorphosed iron-stained granite, whose borders and tongues are also mineralized and cut by diabase dikes. A fault east of the orebody brings the orebody against quartzite and limestone, while unaltered schist is found to the west. The silicified and whitened rock is leached to a considerable depth, the oxidized zone being succeeded by impregnations and seams of chalcocite and pyrite. The ore deposit is almost identical with that of Miami, and genetically similar to those at Bingham, Ely and Morenci. Oxidized copper ores are found near surface, though in much of the ground the top of the belt is leached to depths varying from 30 to 400' and averaging 225', this leached zone being succeeded by ore carrying copper sulphides, greatly enriched by the secondary redeposition of chalcocite, latter constituting the main ore value. At the bottom of the orebody the transition from the ore to rock mineralized with primary sulphides takes place in a few feet. This primary mineralization averages about one-half of 1% copper, whereas an average sample of ore on the 50' level gave 2.4% copper, 3.4% iron, 2.6% sulphur and 90.3% insoluble matter.

The many drill holes bored have shown an average capping of 240' depth, succeeded by an average of 118' thickness of ore, on the Ray proper, with 315' of capping and 171' thickness of ore on the Gila ground. The Ray mine has been developed by both underground workings and extensive churn-drill borings. Six churn drills have been employed, averaging about 50' each daily, boring 340 holes to an average depth of nearly 400' each, with a total of 140,000' of drilling, holes being bored checkerboard fashion, in 200' squares.

The ore deposit is opened by the Globe and Ray, or Nos. 1 and 2 shafts, about 4,000' apart, and No. 3, the Ray Central shaft, near No. 1. There are many less important workings. The main ore supply comes from the Ray or No. 1 shaft, which is 400' deep and has 4 levels at 171' and each succeeding 100' in depth. The shafts are connected by a drift, on the second level, which is run for more than 1 mile, practically through commercial ore. By the side of each shaft is an incline shaft, with a series of stairs used by the men and a haulage way used for the handling of material, the main shafts being used solely for ore extraction. The greatest depth from which ore is to be hoisted will be about 300' for years to come, and the greater part of the tonnage will be taken from the 170' level and above for some years. The mine is operated on the Cates shrinkage-stoping system, the stopes being carried up 15' wide with 10' pillars. When the stoping is completed and ready for drawing the pillar will crush and come down with the broken ore. This method gives a 92% recovery of the ore blocked out. The ore is milled into 600-ton underground loading bins on each level of each shaft, and drawn therefrom into 12-ton skips through gates operated pneumatically. Ore is hauled underground in trains of 3-ton

cars, drawn by 10-ton electric locomotives through the 4,000' 8 x 14' double-track main haulage tunnel, with which all shafts and working levels are connected. Three cars will be dumped at a time into each ore pocket, by a revolving tripper.

The Ray mine, of which the Ray Central or Globe-Isabella mine is now an integral part, has been developed for a maximum width of 3,500' and length of 8,000'. Total underground workings, in 1913, amount to about 54 miles of underground workings, all driven in 2½ years, constituting a world's record of rapid mining development. On Aug. 20, 1913, the property had proven 77,314,470 tons of 2.17% ore in the original Ray Gila ground plus 5,589,898 tons of 2.51% Ray Central ore. This includes 446,000 tons of 5.3% Ray Central ore. The total ore developed to date is 82,904,368 tons, averaging 2.19% copper, from which about 3,372,477 tons of 1.72% ore has been mined.

Known reserves, Dec. 31, 1912, were therefore about 80,656,973 tons of 2.2% ore on 205.2 acres, or less than one-half of company's proven mineralized belt, about 10% of its total acreage. This tonnage ensures a life of about 82 years on basis of present production.

Equipment at the Ray shaft includes a 250-h. p. steam plant with a double-drum hoist and a 10-drill air compressor, and there are 4 hoists at the other shafts, with an additional air compressor, but the mine is to be operated electrically throughout, taking current over a transmission line already built from Hayden to Ray. There is a crushing plant at the mine, reducing ores to about 1" size, before shipping to the mill.

The company owns and operates its own railway, known as the Ray & Gila Valley, from Ray to Kelvin, the trains continuing over the tracks of the Arizona railway (S. P. R. R.) to Hayden Junction and thence over a branch line, belonging to the Ray & Gila Valley to the Hayden concentrator. The line between Ray and Kelvin is standard gauge and is operated as a common carrier. It has 80-lb. rails, Mogul locomotives and 60-ton steel ore cars. The company has a very favorable freight contract with the Phoenix & Eastern for the transportation of ores partially over that line.

The old concentrator at Kelvin, 6 miles from the mine, inherited from the English owners, was enlarged 1907, to 300 tons daily capacity and extensive experiments were made until Aug., 1909, these resulting in the concentration of ores 17 into 1, with a 70% recovery of assay values.

The concentration plant occupies a 4,000-acre site at Hayden, about 16 miles from the mine. In its essential features it is a duplicate of the Garfield mill of the Utah Copper Co.

The mill, of 8,000 tons daily capacity, has eight 1,000-ton sections, and is so designed that it may be enlarged, on the unit plan. The crushing department has 16 sets of 42x10" rolls, and 24 six-foot Garfield Chilean mills. Sizing is done by 48 impact screens, and concentration is effected by Garfield roughing tables, 72 Wilfley tables, Woodbury tables, Frue vanners and horizontal-motion suspended vanners. Water, derived from the Gila river and the adjoining hills, is sent to a 4,000,000-gal. reservoir at the mill site through 30" pipes, by pumps having a capacity of 7,000 gals. per minute.

The mill handled 1,125,082 tons of ore in the first 6 months of 1913, or an average of 6,460 tons per day with a concentration of 16.13 tons into 1. Ore treated averaged 1.7035% copper and the recovery was 66.915% for 35,937 dry tons of 18.647% concentrate for April, May and June, 1913, yielding 13,402,394 lbs. copper for the quarter. The mill started in March, 1911, treating an average of 850 tons of ore daily. The concentrates carry 18.94% copper and are well adapted to smelting, as regards sulphur and iron contents, only a small amount of limestone being required for fluxing. Con-

centrates are treated in the Hayden smelter, built and owned by the American Smelting & Refining Co., in 1912.

The power plant at the mill site, of 10,000-h. p. capacity, supplies electric current for the operation of the entire property. The plant has water-tube boilers, burning oil and running four 2,500-h. p. Allis-Chalmers triple-expansion engines, direct-connected to four 1,750-kw. electric generators.

Costs at present are as follows: Mining, 73.92 cts. per ton; milling, 45.25 cts. per ton; development charged up at 12½ cts. per ton. Actual costs of refined copper marketed 9.5 cts. per lb.

Production is now (Sept. 1, 1913) at the rate of 6,460 tons of ore per day, or a monthly production averaging 4,467,465 lbs. of copper for the second quarter of the year. Production was 15,721,520 lbs. copper in 1911 and 25,851,496 lbs. in 1912. For the first 9 months in 1913 production was 38,741,207 lbs. copper compared with 25,370,835 in 1912 for the same period.

The completion of the last unit of the concentrator in September enables the mill to handle its full capacity of 8,000 tons a day, which it is expected will be crowded to 10,000 tons per day, when everything is adjusted. This additional capacity and the better grade of ore that will be mined when the edges of the orebody now being mined are cleaned up, and the main portion of the orebody is worked, should greatly increase the annual production of copper. With the mine and works running at full capacity on the average grade of ore, the management expects an annual production of at least 80,000,000 lbs. fine copper yearly, but it is probable that the mine and works will not be running at their normal capacity until nearly, or quite, the end of 1914. The management expects to lay down finished copper, on the seaboard, at a cost under 9 cts. per lb., and the company's engineers estimate that a net profit of at least \$1.75 per ton of ore can be secured. The tonnage already developed places the Ray Consolidated among the very greatest copper mines of the world, with a certainty that the present enormous ore tonnage will be largely increased, and a possibility that it may be doubled. The management is practically the same as that of the Utah Copper Co., the pioneer among the so-called porphyry mines of the world, and is thoroughly experienced, strong and capable.

RAY EASTERN COPPER CO.

ARIZONA

Office: 202 Endicott Bldg., St. Paul, Minn. Mine at Mineral Creek, Gila Co., Ariz. Charles Danielson, pres.; Reiner Hoch, vice-pres.; O. Erickson, treas.; Charles Hogeboom, sec.; preceding officers, F. J. Voss, A. C. Osborn and Hon. F. B. Seager, directors. DeLestry Engineering Co., St. Paul, Minn., and Globe, Ariz., managing engrs. Organized Dec., 1909, capitalization \$5,000,000, shares \$1 par; issued, \$1,000,000; bonded for \$75,000, issued \$10,000. Guarantee Securities Co., St. Paul, Minn., transfer agent.

Property, 12 claims, on Mineral creek, about 5 miles east of the Ray Consolidated, said to show several veins carrying chalcopryite, bornite and covellite averaging 2% copper. Ore occurs in a crush zone paralleling the foliation of Pinal schist which at this locality is traversed by diabase dikes and shows quartzite reefs.

Development by 2 shafts, 175' and 100' respectively. No. 1 shaft has 2 levels, at 85' and 175'. Drilling is contemplated to prove existence of orebodies.

Equipment includes steam hoist, pump, saw mill, smithy and several office buildings.

RAYMOND-ILLINOIS MINING CO.

UTAH

Office: 506 Atlas Blk., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. J. C. Sullivan, pres. and gen. mgr.; J. M. Wheeler, vice-

pres.; J. C. Lynch, sec.-treas.; preceding officers, Hon. Thos. Kearns and Frank J. Hagenbarth, directors, at last accounts. Organized 1905, under laws of Utah, capitalization \$150,000, shares \$1 par, assessable. Assessments of one-half-cent a share fall due Oct. 11 and Nov. 28, 1913, and Jan. 15, 1914. Property is in the Tintic district and shows fissures and replacements in limestone. Developed by about 1 mile of tunnels and a 1,500' vertical shaft, which as yet have shown but little ore. The bottom workings are wet. Diamond drilling was done, 1909-10, from the bottom of the shaft.

REALITO MINING CO.**MEXICO**

Mine near Tapalpa, Jalisco, Mex. Shut down at last accounts. Lands, 25 pertenencias, near Chiquilistlán, 30 miles N. W. of Sayula, include the Cupriferá, Rinconada and Sin Nombre groups. Ore occurs in blanket veins, and in fissures, giving assays up to 60% copper, 2 kgs. silver and \$10 gold per ton.

REBEKAH MINING CO.**WASHINGTON**

The company owns 5 claims near Nespelem, Okanogan Co., Wash., with a vein carrying ore said to show chalcocite with copper, gold and silver values averaging about \$28 per ton. This vein is reported to be traceable for 3,000'. Development consists of 150' shaft with drifting and crosscutting. No recent returns secured.

RECORD MINES CO.**ARIZONA**

Address: Mudersbach mine, Bouse, Yuma Co., Ariz. Owns Mudersbach mine with 23 claims, 8 miles south of Bouse, on the main road to Quartzite, in the foothills of the Palomas mountains. The property covers the strike of a contact metamorphic zone showing gossans of specular hematite, underlain by oxidized ores to shallow depth, succeeded by auriferous and argentiferous copper sulphides, an average sampling, Sept., 1910, giving 4.5% copper.

Ore occurs as bornite, chalcopyrite, pyrite and hematite in a garnet-epidote gangue; it is an irregular bunchy replacement, a few inches to a few feet thick, of limestone resting on schist, and altered by quartz monzonite.

The mine, which is one of the oldest locations in the district, was taken over, 1910, from the Excelsior Gold & Copper Mining Co., for a price reported to have been \$250,000. The main orebody has been opened at several points by a number of pits and shafts, of 10 to 50' depth, showing ore, and a shaft, No. 1, 190' deep. The first level is at 100'. A carload of 10.4% ore was shipped, Aug., 1910, to the Clara smelter.

Equipment includes two 15-h. p. gasoline hoists, a gas engine and air compressor. The mine was developing, with a small force, at last accounts.

RED BIRD CONSOLIDATED MINING & SMELTING CO. ARIZONA

Address: Wenden, Yuma Co., Ariz. Geo. C. Wentworth, supt.; M. M. Briggs, sec. Claims carry copper and gold-silver ore developed by a shaft and a tunnel. Was being worked by leasers at last accounts.

RED CANYON MINING CO.**NEVADA**

Idle. Mine office: Gardnerville, Douglas Co., Nev. H. P. Chesley, pres.; B. F. MacKay, vice-pres.; A. F. Doyle, sec. and mgr.; C. L. Doyle, treas.; preceding officers, L. C. Hunter, W. L. Thompson and P. C. Wilder, directors; H. C. Jessen, supt., at last accounts. Organized Feb., 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 5 claims, 100 acres, in Yerington district, but mine office is in the adjoining county. Property is said to show 3 veins, with northeasterly and southwesterly strike, traceable 7,500'. The main vein is said to be 30 to 100' wide, with dip of 30 to 45°, showing cuprite, malachite, bornite and chalcopyrite, assaying 2 to 6% copper, with some lead. Company claims to

have exposed 13,000 tons of ore averaging 8% copper and \$1.30 per ton in combined gold and silver values. Development is by 6 shafts, of 30 to 75', and 6 tunnels, of 50 to 350'.

RED CLIFF EXTENSION MINING CO.

BRITISH COLUMBIA

Office: Vancouver, B. C. Mine office: Stewart, Skeena division, Cassiar district, B. C. F. B. Lewis, pres.; A. P. Maxwell, sec.; A. B. McFee, supt. Organized 1910, under laws of British Columbia. Lands, 4 claims, adjoining the Red Cliff Mining Co., and apparently carry the extension of the Red Cliff vein.

RED CLIFF MINING CO.

BRITISH COLUMBIA

Closed down. Office: Vancouver, B. C. Mine at Stewart, Skeena district, B. C. A. Erskine Smith, pres.; A. D. Tennant, vice-pres.; F. Wilcox, sec.; A. C. Ray, H. L. Lowndes, F. T. Chadwick and William Savage, directors. Organized June, 1909, capitalization \$1,500,000, shares \$1 par; issued, 1,291,200.

Lands on the Portland canal, said to be owned outright, show a main orebody claimed to be about 100' wide, carrying ore averaging 3 to 18% copper, 1 to 4 oz. silver and \$16 to \$24 gold per ton. Mine is developed by a 400' shaft with 1,240' of drifting and crosscutting on the 400' level and 800' on the 300' level. Superintendent reports the ore shoots aggregate 250' long and average 20' in width. Shipments to the smelter of 1,249 tons in 1912 averaged but \$14.50 gross value with freight and treatment costs of \$8.76, leaving but a narrow margin for profit after mining costs were deducted.

The company had a promising prospect on which \$308,654 has been expended. According to the present statement, all but 60,000 shares were sold at par or better. Office expenses for 1912 were \$12,252; assuming similar sums for 2 previous years and adding that to mine development, leaves a balance of \$885,889 unaccounted for. Did it go into the pockets of the promoters, or the vendors? The shares were boosted on optimistic statements up to \$2.05, or a valuation of \$3,000,000, a ridiculous figure for an undeveloped prospect. The people that invested in the company have lost their money and one investor, brooding over his loss, has gone to the insane asylum.

Mine is shut down, treasury empty, property mortgaged for \$70,000, and a report by J. L. Parker states that there are 20,000 tons of ore available with a net profit of \$1 per ton, which means that property is not worth the mortgage.

RED CLOUD MINE.

NEW MEXICO

Mine address: Corona, Lincoln Co., N. M. J. H. McCutcheon, operator. Property includes the Red Cloud, Crazy Horse, Rain-In-Face, Deadwood, Camp Bird and Louis claims, in the Red Cloud district of the Gallinas mountains, in the N. W. corner of Lincoln county. The two first-named mines show copper and silver-lead ores, and shipments were being made, 1913.

RED CONE MINING CO.

ARIZONA

Succeeded the Four Metals Co. and was itself reorganized 1912, as Red Mountain Copper Mining Co.

RED COPPER QUEEN MINING & MILLING CO.

UTAH

Mine near Ibapah, Tooele Co., Utah, adjoining the Western Utah Copper Co.'s property. C. P. Snell, manager, at last accounts. Incorporated with capitalization \$50,000, increased, 1909, to \$100,000, shares \$10 par. The mine has a short tunnel cutting a 16' vein, said to give average assays of 36% lead, 42 oz. silver and \$8.60 gold per ton. Was developing, with a force of 6 men at last accounts.

RED CROSS MINING CO.**WASHINGTON**

Idle. Mine near Index Snohomish Co., Wash. David Boyle, pres.; D. F. Scanlan, treas.; R. W. Emerson, sec. Organized 1906, under laws of Washington, capitalization \$1,000,000. Lands, 15 claims, on Bald mountain, Snohomish county, near the claims of the Bunker Hill Mining & Smelting Co., said to show 4 veins, 3 of 7' to 8' average width, and 1, in granite, of about 8' average width, opened by a 65' tunnel.

RED LEDGE MINE.**IDAHO**

Situated 10 miles north of Landore, Adams Co., Idaho, in Deep Creek canyon, 2 miles from Snake river. Claims cover a very large outcrop of quartz porphyry, about 1 mile long and 2,000' wide, which is permeated with a fine-grained cupriferous pyrite as well as stained with green carbonate of copper. Claims also show values in gold and silver at the surface. Development to date has consisted only of 2 tunnels, 95' and 150' long respectively, which have proven the existence of secondary enrichment and a second zone of leaching. The property appears to be a disseminated copper deposit which warrants development.

RED METAL MINING CO.**MONTANA**

Dissolved April 20, 1913. Assets, 500,000 shares of Anaconda Copper Mining Co. stock, transferred to parent company, the Butte Coalition Mining Co.

RED METALS CO.**NEVADA**

Mine office: 16 Washoe Bank Bldg., Reno, Washoe Co., Nev. A. W. Holmes, pres.; Geo. T. Milner, sec. and gen. mgr.; Jas. Howell, treas. Organized May 12, 1910, under laws of Nevada, capitalization \$1,000,000, shares \$1 par, nonassessable, in \$50,000 preferred and \$950,000 common stock; issued, \$1,500 preferred and \$786,200 common stock. Annual meeting, first Monday in June.

Lands, 16 claims, unpatented, 300 acres, on Peavine Mountain, Washoe Co. The property carries lenticular deposits, between diabase and diorite, 2 of which, under development, are 1 to 12' wide and show copper carbonate and bornite ore, said to average 9% copper, 15 oz. silver and \$4.80 gold per ton. Development by main working tunnel, 1,200' long, besides 2 prospect tunnels of 130' and 180' and 86' shaft, showing ores said to assay up to 60% copper and \$177 gold per ton. The 600' of drifts and stopes are estimated by the management to show 11,000 tons of ore. The mine was opened 1866, for silver, closed 1877, owing to the low price of that metal, and again reopened, 1908.

Improvements include several mine buildings. Shipments of 15 to 19% copper ore have been made intermittently for several years. In Oct., 1913, company is reported to have opened a vein of bornite ore 6" to 6' thick.

RED METALS MINE.**IDAHO**

In Big Creek district, Idaho Co., Idaho, on Profile creek, a tributary of the South Fork river. Claims are 2 miles south of Profile gap and show a body of silicious smelting ore along the wall of a 600' quartz deposit. The orebody contains gray copper, samples running 1,500 to 2,000 oz. in silver. There is a paystreak 2 to 6" wide of silver-gold ore and the property is evidently more valuable for its precious metals than for copper.

RED MOUNTAIN COPPER GROUP.**BRITISH COLUMBIA**

Property has been bonded for \$75,000 and is now operated by the Consolidated Mining & Smelting Co. of Canada. Property consists of the Red Mountain, Imperial and Majestic claims, situated on the east side of Howe sound, 26 miles from Vancouver and 4,000 to 6,000' above sea level. Ore has a silicious gangue carrying chalcopyrite, magnetite and pyrrhotite in a shear zone near an igneous contact. The developed ore shoot is 132' long, 75'

wide and shows 4.75% copper, 11 oz. silver, 50% silica, 14.5% iron, 16.16% sulphur and traces of lime.

RED MOUNTAIN COPPER MINING CO.

ARIZONA

Mine address: Mowry, Santa Cruz Co., Ariz. Oscar A. Turner, manager. Owns the Four Metals mine in which a large orebody has been cut in 2 tunnels, one 300' above the other. The upper tunnel 1,000' long cuts through 700' of concentrating ore. The lower tunnel 1,200' long is the main haulage and working level. Property reported to be working 50 men, all but 9 of them in ore. Shipments are made to Patagonia, 12 miles distant. A 1½-mile pipe line and new wagon road were built 1913.

Company plans erecting power plant and concentrator at Guajalote flats, near the mine and developing energetically through the winter of 1913-14.

Company is a reorganization of the Red Cone Mining Co., which itself succeeded the Four Metals Mining Co.

RED MOUNTAIN DEVELOPMENT CO.

ARIZONA

Office: P. O. Box 3007, Lowell, Ariz. Mine office: Dragoon, Cochise Co., Ariz. Frank Briggs, pres., treas. and gen. mgr.; Wm. Hawley, vice-pres.; E. J. Briggs, sec. Organized Oct. 5, 1908, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable. Annual meeting, second Tuesday in September.

Property, 17 claims, 340 acres, crossed by the main line of the Southern Pacific railway, show schist, porphyry and limestone. Claims have a vein claimed to be 130' wide and traceable 2 miles, carrying copper and lead ores, including copper oxides and chalcopryite, said by management to average 12% copper, 8 oz. silver and \$1 gold per ton. Development consists of a 100' shaft. Idle owing to lack of funds, but hoped to resume work in 1914.

RED MOUNTAIN RAILROAD, MG. & SM. CO.

COLORADO

Office: 1004 West End Trust Bldg., Philadelphia, Pa. Mine office: Red Mountain, Ouray Co., Colo. Geo. Crawford, gen. mgr.; David Forster, supt., at last accounts. Organized Oct. 6, 1902, under laws of Arizona, capitalization \$5,750,000 preferred stock. Lands, 54 claims, including the Yankee Girl, Genesee and Vanderbilt mines, carrying auriferous and argentiferous copper ores. Developed by tunnel, with about 3 miles of workings, the principal working being a long drainage tunnel which cuts through the mountain and has developed ore in "breaks" or fissures, known as No. 4 and No. 7½. Equipment includes steam and electric power.

A stockholders' investigating committee appointed July, 1911, submitted a printed report Jan. 25, 1912, covering the entire history of the company and its operations. This report states that in May, 1911, the receiver was authorized by the court to issue \$60,000 worth of 8% receiver certificates, constituting a first lien on all properties of the company and that about \$75,000 was needed to pay off these receivers' certificates and various small bills, besides nearly \$250,000 owing to 17 other creditors.

Company is reported to have spent nearly \$1,000,000 for the purchase and development of the property, including \$112,278 with \$65,000 preferred stock, for the construction of the Silverton railway, now the only asset of income value. In this report a reorganization was advised.

RED POINT & RACE HORSE GROUPS.

BRITISH COLUMBIA

Situated 22 miles from Alice Arm on Kitsault river, Portland Canal district. Said to show chalcopryite ore averaging from \$2.50 to \$11 per ton on the Red Point claim and up to \$53 in gold, silver and copper on the Race Horse. It is reported that these claims have been bonded for \$100,000 by T. F. Hopkins, of Seattle, Wash.

RED RAVEN MINING CO.**BRITISH COLUMBIA**

Idle in 1912. Mine address: Jedway, Queen Charlotte island, B. C. Property, on Moresby island of the Queen Charlotte group, near the Awaya-Ikeda mine.

RED ROVER COPPER MINING CO.**ARIZONA**

Office and miner: Phoenix, Maricopa Co., Ariz. Dr. R. N. Craig, pres.; J. Apfield, vice-pres.; R. M. de Gex, treas. and gen. mgr. Organized July, 1909, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Lands, 12 claims, known as the Red Rover Group, 15 miles north of Camp creek and 50 miles north of Phoenix, the nearest rail point. The mine has a 200' tunnel and a 370' incline shaft, with about 1 mile of workings, showing a 10 to 16' orebody between limestone and porphyry, carrying a 3' paystreak estimated to average 10% copper, 6 to 60 oz. silver and \$20 gold per ton. The Red Rover mine, discovered 1882, has shipped from shallow workings about \$200,000 worth of high-grade ore, running about 15 to 25% copper, with values mainly in silver chlorides, 1 carload of 20 tons netting \$41,000, with no allowance made for copper contents. The vein on the Reliance-Montana claims is 4 to 15' wide with an average of 7'. Production for 1912 was 300 tons of ore averaging 10% copper and 90 oz. silver and yielding nearly \$40,000. A carload shipped Aug., 1913, is said to have sampled 57.6% copper and 1,421 oz. silver.

RED WARRIOR MINING CO.**UTAH**

Office: Providence Bldg., Duluth, Minn. Mine office: Milford, Beaver Co., Utah. Leonidas Merritt, pres.; Jas. T. Hale, vice-pres.; W. H. Borgen, sec.; E. R. Ribenack, treas.; preceding officers, W. A. Kaake, John E. Merritt, Angus Buchanan and W. F. Acker, directors; Wilbur J. Merritt, supt. Organized Jan. 25, 1908, under laws of Minnesota, capitalization \$250,000, increased Jan., 1911, from \$150,000, shares \$1 par, nonassessable; issued, 210,000. Shares are listed on the Duluth Stock Exchange and New York curb. Annual meeting, second Tuesday in January.

Company owns a silver-lead mine comprising 8 claims, 1 patented, 95 acres, in the Star district, 8 miles from the S. P. L. A. & St. L. R. R. The claims show orebodies occurring along the bedding planes of limestone, the one under development having an average thickness of 6', an average width of 50' and proven depth of 600', and carries ore estimated by the management to average 21% lead, 1% zinc, 18 oz. silver and 25 cts. gold per ton. In the deeper levels the mine has shown ore assaying 12% copper, 1% lead and 3 oz. silver per ton.

Development consists of an 812' vertical shaft with levels at 500' and 675' and a 200' winze sunk on the vein from the 500' level. There are also numerous old shallow shafts and tunnels, the mine having about 3,000' of old and 4,000' of new workings. These workings were estimated to show 20,000 tons of ore, with about 10,000 tons blocked out for stoping by the former management. The mine was operated from 1870 until 1889 and was reopened 1907, by this company. The shaft is being deepened to 1,000'.

Equipment includes a new hoist good for 1,500', a 25-h. p. gasoline hoist and a 3-drill Fairbanks-Morse air compressor. Production was about 1,000 tons of silver-lead ore 1910, said to have given average returns of about 0.75% copper, 28% lead and 14 oz. silver per ton. It is understood that the mine has the same N.-S. ore channels mined in the Moscow mine, whose workings of equal depth are about 1,500' distant. The company employs only 15 men, but is opening up the orebody on the 600' level, finding ore in the fissure as well as the bedding plane on that level, reported to be 3' wide and to average 70% lead, 20 oz. silver and \$1.60 gold per ton. Property a promising venture, but not yet a mine.

RED WING MINE.**ALASKA**

Mine address: Ketchikan, Prince William Sound district, Alaska. Capt. and Mrs. E. E. Wyman, owners and managers. The mine, which is on Hetta inlet, Prince of Wales island, was under development, but no shipments made, 1912.

REDEMPTION COPPER MINING & MILLING CO.**ARIZONA**

Office: Kingman, Ariz. Mine office: Chloride, Mohave Co., Ariz. O. D. M. Gaddis, pres.; C. M. Stowe, vice-pres.; J. E. Perry, sec.; C. E. Dotterer, treas. Owns, or did own, the Clyde mine, with shafts of 104' and 114', and tunnels of 125' and 195', a total of about 1,000' of workings, developing a vein of 2' average width, having a paystreak carrying about 3% copper, 25 oz. silver and \$2 gold per ton, with oxidized ores near surface. Equipment includes gasoline power, and there is a 25-ton concentrator, putting about 5 into 1. The first carload of concentrates was shipped to the Humboldt smelter in 1910. No recent returns secured.

REDMAN MINING, MILLING & SMELTING CO.**ARIZONA**

Bankrupt. W. T. Wintemute, secretary-treasurer, was arrested for fraudulent use of the mails, and suit was brought against the company by John Derry, the superintendent. Property reported, 1912, to have been taken over by the Redman Stockholders Corporation. Formerly at McCabe, Yavapai county, Ariz.

REDOUBTABLE GOLD & COPPER M. & M. CO.**COLORADO**

Office: Salida, Colo. Mine near Turret, Chaffee Co., Colo. David Heaton, pres.; W. W. Roller, vice-pres.; J. W. Calhoun, treas.; J. H. Hunt, sec., and Geo. Sullivan, directors. Organized 1907, under laws of Colorado, capitalization \$1,000,000.

Property, formerly held by Par Value Gold & Copper Mining Co., included a 3-year bond and lease on the Gold Bug and Mandate claims. Lands show 4 fissure veins of about 3' average width, carrying oxidized and sulphide ores, former said to average 5% copper, 3 oz. silver and \$10 gold per ton, opened by shafts of 200' and 400', with about 3,000' of workings. No recent returns secured.

REDWOOD COPPER MINING CO.**WASHINGTON**

Secretary and office: W. E. Albee, 608 Phoenix Bldg., Minneapolis, Minn. Mine at Chewelah, Stevens Co., Wash. Organized under laws of Arizona, capitalization \$50,000. F. W. Philbrick, William Corpron, A. C. Burmeister, W. H. Sulflow, C. G. Bullis, G. G. Hysor, and T. F. James, directors.

Development includes a 400' tunnel with several hundred feet of raises and winzes which are expected to expose copper at greater depth. Operations ceased in April, 1912, but are to be resumed, 1914.

REDWOOD COPPER QUEEN MINING CO.**CALIFORNIA**

Idle. Mine is 35 miles S. E. of Ukiah, Mendocino Co., Cal. W. P. Ferguson, pres.; Thos. Mellersh, sec.-treas., at last reports. Lands, 840 acres, patented, developed by tunnels and winzes. Vein, much broken by faults prominent on surface, has a 2 to 4' gossan capping, traceable for a mile. Country rocks are brecciated porphyry and sandstone. Ores include cuprite, melaconite, malachite, azurite, chalcopyrite and tetrahedrite. No recent returns secured.

REFORMA MINING & MILLING CO.**MEXICO**

Mine address: Campo Morado, Guerrero, Mex. José M. Ortiz, chairman; Vicente Ortiz, gen. mgr. Lands, the Reforma mine with 1,000 hectares, showing 2 parallel ore zones, one of which is said to range up to 40 meters width. The lode carries lead ore with 750 to 5,000 grams silver and up to 50 grams gold per metric ton, succeeded, at depth, by a large

body of cupriferous pyrite, said to assay 3 to 8% copper, with fair silver values. Mine is developed by 14 tunnels, with about 6 miles of workings, has electric haulage, and a considerable amount of ore developed.

Transportation, to the nearest railway, at Rio Balsas, is by means of 1,800 mules, but a 20-mile aerial tram has been planned. The reduction plant includes a mill and a smelter, with two 25-ton lead stacks.

Property was under option, 1910, for 20,000,000 pesos, to the Exploration Co., Ltd., of London. The property is capable, if given better transportation facilities and a smelter, of becoming a large copper producer.

The mine is a big one with numerous orebodies, and large reserves of low-grade ore, which, however, require an expensive plant and an extension of the railway from the Balsas bridge to Campo Morado, to be profitable. Company has been a notable producer of gold, silver and copper, but the rich ore is now mostly extracted.

REGAL MINES CO.

ALASKA

Office: 2 Rector St., New York. Mine office: Kennecott, Alaska. Walter M. Briggs, pres.; H. I. Gaskill, sec.-treas.; James Phillips, Jr., C. Hartman Kuhn, Chas. S. Farnum, Mulford Martin, E. F. Gray, directors. E. F. Gray, gen. mgr. Organized 1912, under laws of Maine, capitalization \$250,000, shares \$5 par, fully paid and nonassessable; issued, 25,013. Annual meeting, first Tuesday in November. Company is a subsidiary of the Great Northern Development Co.

Property, near Kennecott, Copper River district, is developed by shaft, 115' deep at last accounts, sunk on a contact between limestone and greenstone and showing copper glance ore. See parent company.

REGUA-SAVAGE GOLD & SILVER M. & M. CO.

COLORADO

K. Macdermid, manager, Cripple Creek, Colo. Is a subsidiary of the United Gold Mines Co., and owns an extensive acreage in the Cripple Creek district, Colo., including the Blue Bird mine, carrying ore shoots of rich gray copper ore, now being mined by the Blue Bird Gold Mining & Milling Co., operated 1913.

REID-NEWFOUNDLAND CO.

NEWFOUNDLAND

Address: St. Johns, N. F. Owns a copper property at New Bay, N. F., which is now idle. Property was under development in 1907, but has never been a producer.

REINA DE COBRE; MINA.

MEXICO

Alamos, Sonora, Mex. Alfredo R. Cano y Ca., owners; Juan G. Cano, mgr. Property includes the Reina del Cobre and Porfirio Diaz mines, developed by shaft and tunnel, carrying auriferous and argentiferous copper ores. Mines employed about 50 men, when operated. Probably closed down owing to revolution.

REINDEER COPPER & GOLD M. & M. CO., LTD.

IDAHO

Office: 510 Bank St., Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. W. H. Herrick, pres. and mgr.; Lyman Wood, vice-pres.; I. R. Adams, sec.; F. C. Norbeck, treas., and Jas. A. Wayne, directors; Ernest G. Gnaedinger, engr. Capitalization \$100,000, shares 10 cts. par, assessable. In Oct., 1913, this company was consolidated with the Copper Queen Mining & Milling Co., Ltd., to form the Reindeer Queen Mining Co., and the property turned over to the new company. See Vol. X for particulars about old company.

REINDEER QUEEN MINING CO.

IDAHO

Office: Wallace, Idaho. Mine address: Mullan, Shoshone Co., Idaho. A. B. Crawford, pres. and mgr., Mullan; J. C. Glahe, vice-pres., Burke; J. H. Wixon, treas., Wallace; W. B. Heidfelt, sec., Wallace; preceding officers,

A. R. McRae, Mullan, P. P. Weber, Wardner, and S. D. Le Mieux of Blackbear, directors.

Organized Sept. 19, 1913, under laws of Idaho, capitalization \$200,000, shares 10 cts. par, assessable. Company is a consolidation of the Copper Queen and the Reindeer Queen companies, whose holdings are contiguous and cover extensive copper exposures. The new company assumes all obligations of the old corporation and exchanges stock, share for share. The consolidation makes possible the speedy development of the orebody already cut by the Reindeer tunnel which can now be extended as a drift along the vein into the ground heretofore owned by the Copper Queen.

Property consists of 15 claims in the Mullan copper belt, including the Stevens Peak (or Copper Queen) group and the Reindeer group of 6 claims, all at the head of Willow creek. The outcropping shows a big copper-stained fissure vein, 5 to 20' wide.

Development consists of a 3,000' crosscut tunnel which has cut the vein at a depth of 800', showing bornite and chalcopyrite ore opened by a drift on the vein. This can now be extended and will open up stoping ground. There are also several other openings, including a 500' tunnel on the Queen group.

REINS COPPER CO.

MONTANA

Formerly at Butte, Mont. Property sold by sheriff, 1911, to J. P. Reins for about \$25,000 and later redeemed by John F. Willard, a judgment holder, for \$130,000. Now held by the Anaconda Copper Mining Co. See Vol. X for description of property.

RELIANCE GOLD MINING CO.

NEW MEXICO

Probably dead. Letter unclaimed at Albuquerque, Bernalillo Co., N. M. Arthur S. Percy, pres.; Walter Haynes, sec.-treas.; preceding officers, J. E. Baker, Harry Owens, A. H. Drummond and Geo. F. Ropes, directors; W. S. Baker, fiscal agent, at last accounts. Capitalization \$250,000, shares \$1 par. The company claimed, 1910, to be paying monthly dividends, at the rate of 8% yearly, on the 25th day of each month. Lands are said to be 9 claims, 20 miles from Albuquerque, in the heart of the richest mineral zone of the continent, which is interesting if true. The company viewed with suspicion.

RELIANCE MINE.

MONTANA

D. M. Adams, owner, Divide, Mont. Property in the Moose Creek section, Silver Bow county, 17 miles south of Butte, shows a vein of copper-silver-lead ore, opened by a 95' shaft, on which work was in progress, Sept., 1913.

RENO YERINGTON COPPER CO.

NEVADA

E. L. Brown, sec., 944 West 6th St., Reno, Nev.; A. A. Marsal, supt. Mine at Yerington, Lyon Co., Nev. Property, north of the Bluestone mine, has an ore zone developed by 700' tunnel and an incline shaft sunk on the contact which has not yet reached the 200' level. Equipment includes hoist and buildings. Property was bonded, 1913, to Geo. Wingfield, who is operating the adjoining claims of the Montana Yerington Copper Co., but the bond was relinquished and property reverted to original company.

REORGANIZED BLUE BULL MINING CO.

NEVADA

Office: P. O. Box 565, Goldfield, Nev. Geo. Wingfield, pres.; F. A. Favier, vice-pres. and asst. sec.; A. H. Howe, sec.-treas.; preceding officers, J. S. Henderson and K. M. Simpson, directors. Organized 1912, under laws of Nevada, capitalization \$1,500,000, shares \$1 par. J. S. Cook & Co., Goldfield, Nev., registrar. Annual meeting, third Monday in December. Company was organized to acquire title to the property of the Blue Bull Mining Co., sold at sheriff's sale June 14, 1912. Latter company's stock was exchanged share for share for new stock on payment of 1 ct. per share.

Property consists of 8 claims, 148 acres, in the Goldfield district, Esmeralda county, Nev. Development is by a 730' shaft with workings on the 500 and 700' levels opening up the Victor and Blue Bull veins. The vein on the 500' level carries 14" of copper ore with gold-silver values, averaging \$30 per ton.

REPUBLIC MINES CO.

NEW MEXICO

Office: 526 Exchange Bldg., Denver, Colo. Mine office: Lucero, Mora Co., N. M. Felix J. Woodward, pres.; Walter Littlefield, vice-pres.; Marcus Finch, sec.-treas. and gen. mgr. Organized Dec. 8, 1903, under laws of Colorado, capitalization \$500,000, increased, 1909, to \$1,000,000, shares \$1 par.

Lands comprise about 7,500 acres, patented, half freehold and half under bond and lease. Claims are 30 miles from a railroad, stretching for 8 miles along Coyote creek, from Mora river to the adjacent mountains, showing a series of 3 parallel cupriferous beds of slate and arenaceous shale, alternating with limestone, having an approximately N.-S. strike. The lands are said to include coal, limestone and iron ore deposits.

The property has upwards of 120 openings, mainly shallow pits, with a 50' shaft and several tunnels, longest 650', and is said to have about 4,000' of workings. There are 3 main beds, of 3 to 8' claimed average thickness, with 3 minor beds, said to show considerable chalcocite, claimed to give average assays of 8 to 17% copper, with an estimated average tenor of 6%. The company's "expert," Prof. Tyler, is said to have estimated the value of its orebodies, to depth of 350', at \$45,000,000. Though the surface showings are said to be attractive, the geological character of the deposit does not warrant a belief that the property will ever support such a statement. Company has equipment for a smelter on the ground, ready to install, according to Mr. Finch, the secretary.

REPUBLIC MINING CO.

ARIZONA

Mine office: Johnson, Cochise Co., Ariz. Lands, 9 claims, include the old Republican mine, having a 350' shaft; the Republic Extension mine, with shafts of 50', 75' and 150', and the Mammoth mine, having incline shafts of 150' and 400'. Property shows auriferous and argentiferous sulphides up to 15% in copper tenor. The Republican mine was working in the summer of 1912, and it was reported that a large body of high-grade ore had been cut, but no confirmation of this report has been received.

REPUBLIC SMELTING CO.

COLORADO

Letter unclaimed at Leadville, Lake Co., Colo. Capitalization \$500,000. Owns the remodeled 500-ton smelter, with 3 furnaces, formerly owned by the Boston Gold-Copper Co.

REPUBLIC SMELTING CORPORATION.

CALIFORNIA

Idle. Office: Parker, Ariz. Mine in Riverside mountains, southern California. F. C. Fenner, pres.; R. G. Munn, sec. Capitalization \$7,500,000, shares \$10 par.

Property consists of various claims, mill sites and placer land in the East Riverside mountains, 8 miles from Calzona, Bendigo district, Cal. Claims said to show veins in limestone, cut by dikes and to carry copper-gold ores. The company had options on the Calzona, Jack Knife, Silver Dollar, Ox Bow, Gold Dollar and Jack Knife Extension mines, but failed to make the payments due. None of these properties have extensive development, but the surface indications are good and the shafts down to 100' and 150' give favorable results.

Secretary writes Sept., 1913, that company is "out of business," but independent reports indicate that corporation is still intact and owns a group of claims along the same contact zone as the Corem, Steece and Calzona properties. The former vice-president of the company, using the

name of John Chestnut, sold 40,000 shares of stock in a preceding corporation and is said to have kept the money and fled the country. This action effectually stopped all plans for financing the company, although it had been reported on by several able engineers and metallurgists.

RESTAURADORA DE BACA ORTIZ; COMPANIA. MEXICO

Mine office: Tepehuanes, Santiago Papasquiaro, Durango, Mex. Property is La Candelaria mine, carrying gold and silver bearing copper ore, developed by shaft. Equipment includes steam power.

REVANCHA; MINA LA. MEXICO

Mine at Ojocaliente, Zacatecas, Mex. J. Incarnacion Spina, owner, and R. Spina, mgr., at last accounts. Has silver-lead and copper ores, with a Chilean mill and steam power. No returns secured.

REVENUE MINING CO. NEW MEXICO

Home office: Chicago, W. A. Franklin, manager, Jicarilla, Lincoln Co., N. M. Property, a group of claims in the Juggler hills, near Ancho peak, Jicarilla mountains, shows veins of silver-copper ore. Development includes a 185' shaft with 200' of drifting, all on low-grade ore. The Sallie Dear group, 4 claims, located 1912, by the company's manager, shows a 12' vein of \$12 to \$15 ore, equipped with a new 25-ton mill and cyanide plant, completed Aug., 1913.

The Colorado-Denver group, owned by Col. W. J. Murphy, of El Paso, adjoins the Revenue. The nearest railway point is Ancho on the E. P. & S. W. R. R.

REVIAS CREEK MINING & POWER CO. MONTANA

Office: care Dr. N. Solvail, Union Bank & Trust Bldg., Helena, Mont. Mine at Camp Revias, near Dixon, Sanders Co., Mont. John B. Brown, gen. mgr. and purch. agt.; Clarence Rae, supt. and mg. engr.; W. Rae, mine supt.; Thos. Buggy, assayer. Organized May 15, 1910, capitalization \$3,000, shares \$500 par, fully paid and issued. Annual meeting, second of January.

Property, 6 claims, 2 fractions, unpatented, 5 acres, situated 6 miles from N. P. R. R., in Revias Creek district, adjoining the Dixon mine on the S. W.; also 150 acres timber land. Ore occurs in veins in altered granite and as contact veins between granite and altered quartzite, with strike of 45° and average dip of 43°.

Development, by a 500' tunnel and 3 prospect tunnels, with 95' of cross-cutting, said to expose mostly oxides down to 200' where ore changes to sulphides of copper. The 4 orebodies under development are said to show a 4' vein, traceable 6,000' and proven to 300' depth, carrying 11% copper, 8 oz. silver and \$6 gold per ton. Management estimates about 2,000 tons ore blocked out. The course and distance of the main fissure vein is reported to have been proven by the adjoining claims of the Spokane Development Co., lately taken over by the Revias Co. and the Dixon property, the latter being a regular shipper of ore netting \$28.50 per ton during the last 3 years.

REVIAS MINING CO. MONTANA

Address: care Gabe La Boeuf, owner, Dixon, Sanders Co., Mont. Chas. A. Allen, sec. Lands, on the Flathead reservation, well timbered, adjoin the Dixon mine, a regular shipper. The outcrop shows high-grade auriferous and argentiferous copper ore, developed by tunnel.

REWARD CONSOLIDATED MINE. CALIFORNIA

Office: Independence, Inyo Co., Cal. Property shows complex copper-lead ores with gold and silver values, developed by tunnels. Company has developed an orebody, mined to supply a 10-stamp mill with 50-ton cyanide plant. Mine and mill together employed 30 to 40 men at last report.

REX GOLD MINES & INVESTMENT CO. COLORADO

Mine office: Leadville, Lake Co., Colo. S. P. McDonald, sec.; Jesse F.

McDonald, mgr., at last accounts. Lands include the Rattler and Reconstruction mines, carrying lead and copper ores, opened by tunnel, and equipped with steam power. Property was being worked by lessees, 1911.

REXALL SILVER & COPPER MINING CO.

UTAH

Office: 333 Atlas Bldg., Salt Lake City, Utah. Mine near Alta, Salt Lake Co., Utah. Milton E. Price, pres.; John Gallacher, vice-pres.; Samuel S. Porter, sec.-treas.; preceding officers, A. Swenson and W. R. Butler, directors; Gust Malmborg, supt. Organized 1907, under laws of Utah, capitalization \$125,000, shares 25 cts. par, assessable, 1 ct. per year, with 6 assessments levied; issued, \$74,250. Annual meeting, first Monday in June.

Lands, 6 claims, patented, about 90 acres, adjoining the Cardiff mine, on the South fork of Big Cottonwood canyon, 17 miles from a railway. Development is by several pits and shafts, No. 1, a 65' incline, showing a 2' vein of carbonate ore, carrying up to 52 oz. silver per ton. No. 2 shaft, 250' deep, also shows silver ore, and a 700' tunnel shows silver-lead and copper ore. Mine has about 450' of crosscuts and drifts. Shipped several tons ore, 1912.

REY DEL ORO MINING CO.

MEXICO

Idle. Mine address: Mulatos, Sonora, Mex. Formerly controlled, through ownership of entire stock issue, by Greene Gold-Silver Co., now bankrupt. Lands, 6,400 acres of mineral property, with miscellaneous holdings, a total area of 24,700 acres. Wood and water are scarce. Owns the Mulatos mine, the principal property, and La Blanca and La Colorado mines. The Mulatos shows immense dikes, up to 500' in width, carrying gold on the cleavage faces of a fractured silicious material, which forms veins and veinlets in the dikes. Copper carbonates occur sparingly, in streaks, in the dikes, and there also are several narrow copper veins of some promise. The ore averages about 1 oz. silver and \$3 gold per ton, and is readily amenable to cyaniding. Production, claimed to have been upwards of \$18,000,000, has been made mainly from rich ores, extracted from and near surface by leasers, and treated in arrastres.

Equipment includes an old 60-ton mill, having 6 Bryan mills and a 25-ton cyanide plant. Closed down several years and property has probably reverted to former owners. No returns securable, owing to revolution.

REYMERT MINE.

ARIZONA

Jas. F. Tighe, superintendent, Superior, Pinal Co., Ariz. Is an old silver mine, 10 miles from Superior, that has been idle for 10 years but reopened 1913, by Gunn-Thompson interests. Shows strong vein 60' wide with shoots of silver-copper-lead ore in Tertiary intrusives. Recent development is by a new 170' shaft, being sunk in Sept., 1913, at rate of 100' a month. Equipment includes 20-h. p. gasoline hoist.

REYNOLDS-ALASKA DEVELOPMENT CO.

ALASKA

Office: 42 Broadway, New York. Mine office: Latouche, Latouche island, Alaska. Marvin F. Butler, pres.; Walter C. Gilbert, vice-pres.; J. Frank Birdsall, sec.-treas.; preceding officers, A. E. Austin, Hon. J. G. Brady, J. S. Conabeer, H. M. Coffin, John Yule, O. C. McGilvara and Edmund Smith, directors; G. M. Richards, supt.; A. F. Hancock, foreman. Organized 1903, under laws of Washington, capitalization \$3,000,000, shares \$1 par, in \$1,000,000 cumulative 6% preferred stock and \$2,000,000 common stock. Authorized March 3, 1908, a \$500,000 twenty-year 6% gold bond issue; issued, \$125,000. Annual meeting, first Tuesday in April.

Lands are 102 claims, about 3,000 acres, in Valdez district, Prince William sound, Alaska. Company was in receiver's hands until June, 1910, when discharged by court order. Company reported, 1913, to have sold its properties to the Galena Bay Mining Co. (which see). Former mismanagement fully described Vol. X.

The Boulder Bay group of 31 claims, 620 acres, is on the Kenai peninsula. Claims show a contact deposit between greenstone and slate, carrying chalcopyrite, assaying up to 11% copper and \$3 gold per ton, but averaging 2 to 4% copper, developed by 2 tunnels. Equipment includes a 60-h. p. boiler and a 5-drill Rand air compressor. The Copper Mountain group of 9 claims is on Landlock bay, near Boulder bay.

The Iron Mountain group of 62 claims includes the Duchess and Blue Fox properties, on Horseshoe bay, about 60 miles west of Boulder bay, La-touche island. The Blue Fox mine has a 4' vein of ore, formerly claimed to average 7% copper, slightly developed by a shaft, now filled with water.

The Duchess mine, last worked, is developed by 2 tunnels, the upper a 375' drift tunnel, and the lower having 105' of drifts on the orebody, which has an average width of 16'. This group shows massive sulphide ore, estimated by the management to average about 5% copper.

Equipment includes a 200-h. p. hydro-electric installation, with a flume and steel pipe leading from Big Falls creek to a Pelton wheel, direct-connected to two 40-kw. generators. There is a 50-h. p. hoist and 2 Rand air compressors, of 5 drills aggregate capacity, with 6 air drills and 10 Ingersoll-Temple electric drills.

RHODE ISLAND COPPER CO.

MICHIGAN

Office: 60 Congress St., Boston. Mine office: Demmon, Houghton Co., Mich. R. M. Edwards, pres.; Henry Tolman, treas.; Albert L. Wyman, sec.; Chas. G. Rice, Sidney J. Jennings, Irving J. Sturgis and Harry M. Howard, directors. Organized 1898, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; paid in, \$10.50. Assessment No. 2, of \$1, was payable Jan. 14, 1907, and assessment No. 3, of 50 cts., was payable June 15, 1910. Is controlled, through ownership of 99,030 shares, by the Franklin Mining Co. Annual meeting, second Wednesday in April.

Annual report for 1912 shows receipts from copper sold \$42,928; borrowed from Franklin Mining Co., \$43,096; rents and cash on hand, \$2,925; total receipts, \$88,949, compared with \$41,452 in 1911. Expenses amounted to \$79,412 at mine, \$5,147 taxes, balance being interest and incidentals.

Company owns 800 acres immediately north of the Franklin Junior mine. The ground has been explored by extensive diamond-drill work showing cores from the Mesnard epidote, Allouez conglomerate, Pewabic amygdaloid, Kearsarge amygdaloid, and other copper-bearing beds. All the formations lying between the Kearsarge amygdaloid and the Calumet conglomerate were drilled by a series of holes, the Calumet bed showing traces of copper. The first cores from the Kearsarge bed showed copper in somewhat encouraging quantities from a bed of about 19' width.

No. 1 shaft is 500' deep and sunk on the Pewabic amygdaloid. This lode is 8 to 10' thick, of which 2 to 3' near the hanging wall is well mineralized but spotty in the 4 levels opened. This shaft, abandoned 1902, is filled with water to the first level, on which it connects with No. 2.

No. 2 shaft, 1,227' deep, sunk a quarter of a mile north of No. 1, has 10 levels with a 125' winze, below the 10th. Most of the workings are north of the shaft, but there are drifts southward on the 8th, 9th and 10th levels, the latter 2,400' long. The 8th level south develops a fair stretch of copper ground toward the Franklin Junior, and a 1,400' drift on the 8th level north showed 25 to 75' stretches of payable ground. The Pewabic bed of the Rhode Island property is being developed by north drifts from No. 1 Pewabic shaft of the Franklin Mining Co., at a depth of about 2,000', where the bed averages 8 to 10' width.

In addition to exploration by diamond drilling, considerable underground work has been done to prove up various parallel copper-bearing

beds. The Albany & Boston, or Allouez conglomerate, has been opened by crosscuts on the 500' and 1,000' levels, but the showing secured was discouraging. A crosscut of about 250' length on the 10th level, about 1,100' south of No. 2 shaft, has disclosed an amygdaloidal bed of some promise. The east crosscut on the 8th level, at depth of 1,000', cut 2 apparently valueless beds, one being the Mesnard epidote. The East lode, about 5' wide, carries a little copper, but nothing of promise. The West lode, 96' from the Pewabic, is 7 to 9' wide, carrying occasional bunchy copper. The 4 amygdaloidal beds lying between the West lode and the Allouez conglomerate have been tested by N.-S. drifts, 3 proving barren.

No. 3 shaft is 1,800' north of No. 2, but work was discontinued at slight depth.

Equipment includes a frame shaft house at No. 2, with an engine house having a Nordberg hoist capable of raising 2-ton skips from a quarter mile depth, and a 12-drill Rand air compressor. Buildings include a 30x60' machine shop and smithy, a 30x50' frame warehouse and 15 dwellings.

The Rhode Island is idle and the plan of developing at greater depth through the north drifts of the Franklin is correct, as the Pewabic bed to the south of the Rhode Island has shown great improvement below a depth of 2,000' in both the Mesnard shaft of the Quincy and the main shaft of the Franklin.

RHODE ISLAND MINING CO., LTD.

IDAHO

Address: E. E. Clark, sec., Coeur d'Alene Hardware Co., Wallace, Idaho. A. G. Webb, pres.; Chas. Bolinger, vice-pres.; preceding officers, T. B. Lonergan and F. J. Martin, directors. Capitalization \$50,000, shares 5 cts. par. Assessment of one-half mill per share was levied Nov., 1911. Lands, 5 claims, 1 fractional, about 2 miles N. E. of Osborn, show a contact deposit of 15 to 25' surface width, between a quartzite foot and slate hanging. Development is by a shaft of about 100' and 2 crosscut tunnels, 1 of about 400' showing silver-lead ore, carrying gold-copper ore at slight depth, latter giving assays up to 8% copper and \$10 gold per ton. No recent returns secured. Probably idle.

RICHARD III MINING CO.

BRITISH COLUMBIA

Mine at Mt. Sicker, Vancouver island, B. C. C. H. Dickie, pres. and gen. mgr.; E. W. Molander, F. A. Wood, F. Haycroft, Geo. M. Perdue and Vernon Creed, directors; E. G. Miller, sec. Organized Feb. 24, 1904, under laws of British Columbia, as successor of Richard III Development Co., Ltd., capitalization \$650,000, shares \$1 par. Paid a 2½% dividend, 1907.

Property, 49 acres, lies next to the Tyee mine and carries the continuation of the ore zone of that property. The mine had a lenticular deposit of pyritic copper ore in basic schists, now worked out. Development consists of a 589' two-compartment shaft sunk in barren ground, with crosscuts to ore zone and 2,181' of work on 5 levels. Shipments of 3,200 tons, June, 1907, averaged about 4.5% copper, 3 oz. silver and 0.135 oz. gold per ton. Property practically idle. No returns secured.

RICHARDS-CLIFTON MINING CO.

UTAH

Idle. Office: Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. Richard W. Young, vice-pres.; Harold E. Young, sec.-treas. Organized Sept., 1909, under laws of Utah, capitalization \$50,000, shares \$1 par. Lands, in the Clifton district, apparently have little development.

RICHFIELD COPPER CO.

MEXICO

Office: 812 Mears Bldg., Scranton, Pa. Mine office: Querobabi, Sonora, Mex. Dr. J. K. Bentley, pres.; Maj. J. A. Cooper, vice-pres. and gen. mgr.; Dalbys L. Fickes, sec.; Otto Robinson, treas.; preceding officers, Harry Witter, R. H. Gay, Geo. Stark, John Hershberger and Jacob Huffer, direc-

tors. Organized 1908, under laws of Arizona, as successor of Richfield Mining Co., capitalization \$5,000,000, shares \$1 par; issued, 4,000,000. Bonds, \$250,000 authorized, at 6%; issued, \$230,000. Scranton Trust Co., registrar. Annual meeting, second Saturday in October.

Lands, 1,300 acres of mineral property, with timber and ranch lands, giving total holdings of 26,512 acres in the Ures district. The Dos Naciones group, 12 miles east of Tuape and 35 miles from a railway, is said to have 7 contact deposits between granite and limestone, of 10 to 60' estimated average width. Development includes about 10,000' of underground work, showing oxidized ores and chalcopyrite, reported by present management to average 4 to 15% copper, 7 to 40 oz. silver and \$2 to \$5 gold per ton. A body of good ore is reported at a depth of 350'.

Equipment includes two 25-h. p. hoists and a 5-drill air compressor. There are several mine buildings and an 80-ton water-jacket smelter.

Shipments to the American Smelting & Refining Co. and Phelps, Dodge & Co. ran 9 to 10% copper, 10 to 32 oz. silver and \$2 to \$5 gold per ton. Management has been prevented from operating during the last years owing to revolutionary disturbances in Mexico, but plans beginning work in the near future.

RICHMOND & ANACONDA CONSOLIDATED MINING CO. UTAH

Property passed to Uncle Sam Consolidated Mining Co., 1912. At Knightsville, Juab Co., Utah.

RICHMOND CONS. MINES CO., LTD.

BRITISH COLUMBIA

Office: 318 Hastings St., Vancouver, B. C. J. L. Warner, mgr., Rossland, B. C.; S. Coulter, supt. Property, the Richmond group, showing veins with gold-silver-copper-lead ores. Development by 200' shaft. Equipment includes electric power and air compressor.

RICHMOND MINING, MILLING & REDUCTION CO.

MONTANA

Address: C. J. Heidenreich, mgr., Saltese, Missoula Co., Mont. C. J. Heidenreich, pres.; Dr. E. Richter, vice-pres.; S. Silberman, sec. Property, 6 claims, 3 miles S. E. of Saltese, adjoining the Monitor mine, opened by a 270' shaft, on a vein parallel to the Monitor, showing frequent occurrences of native copper and gold-copper ores of good average assay values. The property was a small producer for some years and was reopened, Sept., 1913, after many years of idleness, and 30% copper ore shipped. Equipment includes a gasoline hoist and compressor, installed 1913.

RICO ARGENTINE MINING CO.

COLORADO

Office: 222 Judge Bldg., Salt Lake City. Mine address: Rico, Dolores Co., Colo. C. D. Ray, pres.; C. B. Smith, vice-pres.; S. A. Greenwood, sec-treas.; preceding officers, G. A. Black, J. Woodmansey, Chas. Read, S. A. King and L. O. Hoffman, directors; C. D. Ray, mgr.; C. B. Smith, supt. Organized, 1911; capitalization \$100,000; shares 10 cts. par, assessable; \$95,000 issued. Company acts as its own transfer agent and registrar.

Property, the Black Hawk and Argentine groups, 21 claims, 145 acres, part patented, in the Pioneer district. Claims show limestone and sandstone cut by N. W.-S. E. flat-dipping fissures. There are 10 orebodies so far discovered that average 7' thick, 100' wide and are of undetermined length. The ore is a complex mixture of sulphides reported to average 5% copper, 15% lead and 25% zinc with 8 oz. in silver and 40 cts. gold per ton.

Development amounts to 5,000' of work in tunnels, numbered 1 to 4, of 750', 800', 250' and 1,000', respectively, with drift and crosscut work, reported to open up 50,000 tons of ore.

The old vertical veins and mushroom-shaped orebody at the top are worked out and company is now mining low-grade copper ores found in a number of beds, one above the other, on the N. E. side of the Black Hawk

fault. Ore is a contact metamorphic deposit containing chalcopyrite with other metallic sulphides in a gangue of garnet, wollastonite and epidote formed from massive limestone by monzonite porphyry. The origin of the ore is probably responsible for its erratic distribution. Ore also occurs along the Black Hawk fault and is similar in character. It is said that the company has opened up 8 orebodies within the last year, 1 of them 27' thick, averaging 5% copper.

Equipment includes 3,000' aerial tramway, hoisting plant, 2 blowers, ore bins and buildings. Property is a mile from R. G. S. R. and was shipping 5 cars a week in Jan., 1913, to Garfield smelter, freight and treatment charges being \$6 per ton.

RICO MINING CO.

COLORADO

Office: 24 Broad St., New York. Mine office: Rico, Dolores Co., Colo. Carl M. Owen, pres.; Wm. R. Sainsbury, sec.; Martin Schwerin, cons. engr. A. C. Massey, supt.; Geo. E. Hicks, power plant supt. Organized Oct. 25, 1911, under laws of Colorado, capitalization \$3,500,000; outstanding, \$260,000 preferred, \$1,750,000 common stock and \$480,000 first mortgage bonds; shares \$10 par. Company owns properties of the Pro Patria Mining & Milling Co. and the United Rico Mines Co., both dead.

Property, 156 claims, 1,110 acres with 20 acres mill site and 320 acres coal land, in the Pioneer district of Colorado. Ore occurs in fissure veins as replacements of lime. Claims are reported to show many veins averaging from a few inches to 15' in width, 1 mile long and proven to a depth of 700'. Ores in 1 mine carry 4% copper, 10% lead, 10% zinc and 10 oz. silver, according to superintendent, the copper ore occurring as chalcopyrite associated with pyrite, sphalerite and galena in fluoritic gangue.

Mine is developed by tunnels, 1,000 to 3,000' long and equipped with 125 hydro-electric power at mine and 100-h. p. at mill. There are two 75-h. p. hoists, 2 compound air compressors, 10 air drills and 1 air electric drill; two 9x15 Blake crushers, 18 Wilfley tables, etc.

Production for 1913 estimated by management at 1,200,000 lbs. fine copper; 1,000 tons treated during 1912 averaged about 4% copper.

On May 28, 1913, the company's stockholders approved a 10-year lease and bond on the property to Ray & Greenwood, of Salt Lake City. The lease provides a royalty of 10% on net smelter returns, a division of all royalties from sublessees in excess of 20%, and 50% of profit exceeding \$200,000, or 75% of any profit above \$1,000,000. The lessees have an option to buy the entire property for \$1,000,000 and may take mill and power plant for an annual rental of \$5,000.

The lessees are interested in both the Rico Wellington and the Rico Argentine companies and their option, if taken up, will pay up the first mortgage bonds and preferred stock and give a dividend on the common stock.

RICO WELLINGTON MINING CO.

COLORADO

Address: Jesse Knight, pres., Provo, Utah. C. J. Jensen, mgr.; Rico, Colo.; H. R. Trenholm, supt.; E. B. Hayes, mill supt. Organized in Utah, Aug., 1911, capitalization \$1,000,000, shares \$1 par; 51% of stock owned by Knight Investment Co. Annual report for 1912 shows total receipts of \$155,284, of which \$11,523 came from ore sales. Company owes the Knight Investment Co. \$78,769 and has a cash overdraft of \$6,626.

Property is the Wellington mine, which is developing and mining ore beds formed by replacement and contact metamorphism in the limestone beds of the middle member of the Hermosa formation. During the last 20 months, a large flat deposit of zinc-lead ore has been cut that is 400' long on the dip, 50' wide along the strike and 7 to 8' thick and lies parallel to

the Black Hawk fault. To the north the orebody is cut off by a cross fault that is parallel to the Nellie Bly fault, but the orebody has been recovered 170' below and north of the fault. Across the Black Hawk fault a large copper deposit, replacing limestone and broken by several faults, has also been opened, the ore carrying 11% copper, with good silver values.

Development for 1912 amounted to 3,822', and production for that year was 4,596 tons copper ore, valued at \$79,657; 463 tons lead ore, valued at \$11,477, and 1,068 tons of zinc ore, valued at \$20,389.

Equipment includes a 2,500' tram to the Rio Grande railroad, handling 50 tons per hour at a cost of 23 cts. per ton. The 100-ton mill, formerly belonging to the Pro Patria Co. and leased for 5 years, has been remodelled at a cost of nearly \$30,000. A tube mill, 5 Deister tables, 6 Callow tanks, 2 Callow screens and electrical equipment have been installed. Company shipped 17 cars of copper ore, 37 of lead and 10 of zinc in July, 1913. Property is a good one and, being managed by Jesse Knight, the company is assured of skilful, economical and up-to-date operation.

RIDGE COPPER CO.

MICHIGAN

Company liquidated and property sold to Mass Consolidated Mining Co., Ontonagon county, Mich.

RIO DOLORES COPPER CO.

UTAH

Office: 818 Marion St., Denver, Colo. Mine near Castleton, Grand Co., Utah. John Chase, pres. and gen. mgr.; Col. Thos. B. Crawford, sec.-treas., and Victor Elliott, directors; John Jackson, gen. mgr. Organized Feb. 8, 1906, under laws of Arizona, capitalization \$2,000,000, shares \$1 par, non-assessable; issued, \$1,750,000. Is controlled, through ownership of 350,000 shares, by Intermountain Industrial Mining Association, under the same general management. Annual meeting, first Thursday in July.

Lands, 20 claims, part patented, 400 acres, including 200 acres of mill sites at the head of Castle creek, 6 miles above Castleton, on Mineral mountain, in the La Sal district. Lands show granite, with porphyry intrusions, with several veins, 3 of them reported under development, and of 5' average width. The shoots yield a sulphide ore estimated to average 2 to 5% copper, 10 to 40 oz. silver and 0.5 oz. gold per ton.

Development is reported by the management to include 2,000' of workings, and is reported, independently, to include an 80' shaft. The management estimates 10,000 tons of ore blocked out for stoping. Equipment includes a 20-h. p. gasoline engine and a 2-drill Sullivan air compressor. There are 6 log buildings. Management planned installation of a concentrator, 1912.

RIO DOLORES MINING CO.

COLORADO

Mine office: Rico, Dolores Co., Colo. W. K. Cowan, treasurer, at last accounts. Lands, 2 miles north of Rico, are said to show a 3' vein, carrying ore assaying up to 8% copper. Company was said, Dec., 1910, to plan reorganization and resumption of work. In March, 1912, company was planning the erection of a concentrator.

RIO GRANDE & DOLORES SILVER MINING CO., LTD.

MEXICO

Office: 37 Old Jewry, London, E. C., Eng. Mine office: Mineral de Guadalupe, La Union, Guerrero, Mex. Walter J. Cutbill, chairman; Lieut.-Col. A. B. Haig, C. M. G., J. S. Middleton, and Brooke Mockett, directors; A. Kitching, sec.; Arthur M. Bourne, agt. Organized Dec. 11, 1877, under laws of Great Britain, capitalization £10,000, increased, Aug., 1881, to £17,000, shares £10 par, in £10,000 ordinary shares and £7,000 cumulative preference shares, fully issued and fully paid. After the payment of a 10% dividend on preference shares, remaining profits are divided equally. Debentures, £10,000, at 10%.

Property is La Nava mine, at Guadalupe, carrying copper ore, with values mainly in silver, developed by shaft and tunnel. Equipment includes steam and water power, with a 20-ton mill and leaching plant. Property employs about 100 men, normally.

RIO TINTO; COMPANIA MINERA.

MEXICO

Mine office: Guadalupe, Zacatecas, Mex. Property said to carry gold, silver and copper ores. Presumably idle.

RIO TINTO, S. A.; COMPANIA MINERA.

MEXICO

Mine office: Ario de Rosales, Ario, Michoacan, Mex. Organized Jan. 7, 1896, under laws of Mexico, capitalization 480,000 pesos. Property includes El Nuevo Boleo, El Olvido and Las Cardenas y Guayabo mines. No returns secured.

RIO TINTO COPPER CO.

MEXICO

Office: Perry Payne Bldg., Cleveland, Ohio. Mine and works office: Terrazas, Chihuahua, Mex. James Corrigan, gen. mgr.; H. A. Eye, supt.; Capt. M. D. Murray, mine supt.; H. L. Schneider, smelter supt.; J. M. Baker, smelter foreman; F. W. Topken, master mechanic. Organized under laws of Ohio, holding property through a subsidiary Mexican company, and is operated as a close corporation under the control of Corrigan, McKinney & Co. The Rio Tinto Mexicano mine and works were bought 1908, for a price said to have been \$187,500, and this company also took over the property formerly held by the San Rafael Copper Mining Co.

Mineral lands, about 25 miles north of Chihuahua City, comprise a main tract of 153 hectares, and a smaller tract of 6 hectares, including nearly all the developed mineral property of the Terrazas camp, except a few lead mines. The larger tract includes the Rio Tinto mine, and properties formerly worked by the Rio Tinto Mexicano Mining Co., Boston & Mexican Mining Co., Dragoon Mining Co. and San Rafael Copper Mining Co. The principal properties are the Rio Tinto Mexicano, San Rafael, Promontorio, Verde and Colombia mines, all connected underground. The company also owns the Savanarola group, at Savanarola, about 50 miles south of Chihuahua and 35 miles west of Ortiz, carrying silver-copper and lead ores.

The Rio Tinto Mexicano mine was opened 1860, closed 1902, and reopened 1905, and has been owned and operated by a number of different mining companies, ownership having been vested mainly, until purchased by the present company from Messrs. Enrique and Juan A. Creel. The mine shows contact deposits between limestone and altered andesite, there being 5 known orebodies in a metamorphic zone traced 1,500 meters, the orebody, with a minimum of 2', maximum of 100', and average of about 20' width, being erratic but of very large extent. Ore also occurs between the bedding planes of limestone, near a large quartz ledge, and the orebodies, while erratic in size and occurrence, are connected and practically continuous. The limestone has an average dip of 45° N.-W., and the property has also some silver-lead ore. Ore near surface is mainly oxidized, but sulphides occur below. The oxidized ores range 2 to 5% in copper tenor, with traces of lead and zinc, with an average of about 3% copper, 2 to 4 oz. silver and 30 to 75 cts. gold per ton. The gangue is mainly limestone, somewhat garnetiferous. Extensive diamond-drill borings show good orebodies.

The property is developed by a number of shafts, but only to a depth of 440', and has about 3 miles of workings. The ground is firm, breaking well and requiring no timbering, pillars having been removed to give chambers up to 100' square.

The San Rafael mine has 2 shafts, the deeper being a 440' two-compartment shaft, known as the Verde. The Promontorio mine has 2 new shafts, nearly 1,000' apart, the main Promontorio shaft being 350' deep, with

a surface gravity tram to ore bins. The Promontorio also has 2 old shafts. The Colombia mine has a 275' shaft, with about one-half mile of workings. Miscellaneous shafts include the Bronce of 120', Pedernal of 180', San Martin of 100' and Vinagre of 100'.

Equipment includes steam and gas power. The San Rafael main shaft has two 100-h. p. boilers and a 100-h. p. hoist, with 4-drill and 14-drill air compressors. There are 5 gasoline hoists of 6 to 22 h. p. at various other shafts.

Transportation between the mines and smelter is by a 1 mile narrow-gauge railway, taking ore from bins at the San Rafael, Promontorio and Colombia shafts, equipped with a 6-ton Porter locomotive and 5-ton iron ore cars.

The reduction works, at Terrazas, 1 mile from the mine, are connected by a one-half mile spur with the main line of the Mexican Central railroad. The smelter has two 300-ton 42x192" blast furnaces. The converter department has 1 stand and 3 shells, with a 40-ton electric travelling crane and a relining plant. The power plant has a 250-h. p. compound engine, direct-connected to a No. 8 Connorsville blower, and a 100-kw. generator supplies current for the other machinery.

The production, including output under former ownerships, was about 1,000,000 lbs. fine copper in 1906; 1,430,000 lbs. in 1907; 2,250,000 lbs. in 1908; 2,500,000 lbs. in 1909, and 2,000,000 lbs. in 1910. The 27,000 metric tons smelted by former owners yielded 2.5% copper, secured at a mining cost of \$3.50 per ton, and smelted at a cost of about \$3.50 per ton, giving an average cost for finished copper of about 12.5 cts. per lb. The ore is low grade, but exists in large quantities, and as the mine is in strong hands and has been given an adequate smelting equipment, it bids fair to become a considerable producer, and apparently is capable, with further mining developments, of making nearly or quite 1,000,000 lbs. fine copper monthly.

The mine and smelter have been able to operate more or less continuously throughout 1912 and 1913, despite the revolutions which have stopped almost all mining operations in this part of Mexico, but the coke supply ran low and the smelter closed down in Oct., 1913.

RIO TINTO-TREADWELL MINING CO.

WASHINGTON

Idle. Office: Spokane, Wash. Mine office: Curlew, Ferry Co., Wash. G. B. Dennis, pres.; J. L. Martin, vice-pres. and mgr. Lands, 7 claims, 4 miles S. W. of Curlew and 24 miles from Phoenix, B. C., said to show 4 parallel veins, with N.-S. strike, from 50 to 100' wide, carrying chalcopryite and galena, said to give assays of \$18.50 per ton in copper, lead, silver and gold values. The mine, developed mainly by assessment work, has several shallow shafts and a tunnel. No recent returns secured.

RIO TONTO MINING & MILLING CO.

ARIZONA

Idle. Mine near Morristown (Hot Springs junction), Maricopa Co., Ariz. Chas. J. Fisher, pres. and treas., at last report. Organized 1910, as successor of Rio Tonto Copper Co. Lands, 10 claims, 200 acres, south of and adjoining the White Cloud mine in the Pichaco Blanco mining district, 14 miles east of Morristown, and about the same distance from Wickenburg, on the Santa Fe railroad. Property is claimed to show gossans 200 to 300' wide, traceable up to 700' in length, carrying ores assaying 2 to 25% copper. Development is by a 46' two-compartment shaft, planned to be sunk 500'. Equipment includes a 12-drill air compressor.

RIO VERDE COPPER CO.

MEXICO

Idle. Mine at Baborigame, Chihuahua, Mex. Oliver Krull, mgr., at last accounts. Capitalization, \$2,000,000. Lands are the San Carlos group, 20 miles from Baborigame and 50 miles from Choix, on the western slope of

the Sierra Madre near Agiabampo (Port Stillwell). The mine has 2 shafts, 1 showing a 2' vein of mixed copper and lead sulphides, and the other a 2' vein of copper sulphides assaying 12 to 15% in tenor.

RIO YAQUI COPPER CO.

MEXICO

Mine near San Antonio de la Huerta, Sonora, Mex. M. Newman, pres.; Dr. C. Bledsoe, vice-pres.; L. A. Brown, second vice-pres.; Jesse Yoakum, sec.; C. N. Henkle, treas. Organized 1909. Lands, 1,185 acres, including the San Antonio Segundo group, showing evidence of old workings, adjacent to the San Antonio Copper Co. A dispute over the Arizona denouncement was settled, in the company's favor, Dec., 1909, but this property was sold to J. E. Curry, Sept., 1910. Apparently very little work has been done. Probably idle owing to revolutionary disturbances.

RIP VAN WINKLE CONS. GOLD M. & M. CO.

WYOMING

Idle. Office: Laramie, Wyo. Mine office: Morgan, Carbon Co., Wyo. Dr. I. R. Swigart, sec.-treas., at last accounts.

RIVER COPPER CO.

MEXICO

Idle. Office: 517 John St., Appleton, Wis. Mine office: San Antonio de la Huerta, Sonora, Mex. Capt. John R. Wood, gen. mgr.; Frank X. Pellier, supt. Property, in the vicinity of the San Antonio and under the same general management, is but slightly developed.

ROB ROY MINING CO.

IDAHO

Idle. Office: Wallace, Idaho. Hugh Toole, pres.; Otto A. Olsson, sec. Capitalization \$1,500,000, shares \$1 par. Lands, 5 claims, on Sunset peak, north of Burke, show a vein in porphyry carrying azurite, malachite and galena, with quartzite gangue, developed by a 180' tunnel. No recent returns secured.

ROB ROY MINING CO.

UTAH

Probably dormant. Letter unclaimed at Bingham Canyon, Salt Lake Co., Utah. Emanuel Rauch, pres.; Angus McKellar, Jr., vice-pres.; Edward McGurrin, sec.-treas. Capitalization \$75,000. Lands, 4 claims, on Clipper hill.

ROBERT EMMET COPPER CO.

MONTANA

Office: 30 Church St., New York, N. Y. Mine office: Amazon, Jefferson Co., Mont. Wm. Q. Ranft, pres. and gen. mgr.; Samuel Pratt, vice-pres.; John J. Schmitt, sec.-treas.; E. L. Freeman, asst. sec.-treas.; preceding officers, Jas. W. Cunningham, Isaac E. Ditmars, John E. McArthur, Thos. C. Marshall and Thos. H. Burke, directors; Robt. A. MacArthur, cons. engr.; J. W. Johns, supt. Capitalization \$3,000,000, shares \$5 par.

Lands, 6 claims, patented, 90 acres, carrying 3 veins in granite, not far from the andesite contact. The main vein has a generally N.-E. strike, developed by a 500' shaft, showing a shoot of copper ore of good grade on the 350' level. A 1,200' tunnel having about 1,000' of laterals shows a main vein up to 12' width, carrying copper, silver and lead ores, assaying up to 15% copper, 15% lead, 5 oz. silver and \$2 gold per ton.

Equipment includes 10-drill air compressor and a good electric plant, with a station having 3 General Electric transformers, stepping down a 60,000-volt current, taken from the United Missouri River Power Co., the Robert Emmet Co. also furnishing power to adjoining operators. Employed 30 men during 1912.

ROBERT LEE MINE.

NEW MEXICO

Address: Pyramid Camp, via Lordsburg, Grant Co., N. M. Owned by Dan. Breil and Harry Small, of Lordsburg, N. M. Mine was operated in 1885 and was later purchased by Dr. Bartlett, inventor of the Bartlett concentrating table, who erected a mill and milled \$97,000 worth of ore. The claims show a well-defined quartz-calcite vein running N. E.-S. W. and dip-

ping S. E., lying in a zone of altered and chloritized diorite porphyry. Development includes the old shaft, 250' deep, which has been reopened and shows in the lower level a streak of ore 2' thick, carrying 30% copper and 500 oz. silver. During summer of 1913, shipments of 2,500 tons averaged 3 to 7% copper and 10 to 30 oz. silver.

ROBERTA MINING & MILLING CO.

IDAHO

Idle. Mine near Gem, Shoshone Co., Idaho. Wm. Dyer, pres.; Jos. Lutey, Jr., vice-pres.; H. L. Tanner, sec.; W. C. Orton, treas.; Thos. Roberts, mgr.; preceding officers, Curtis Lewis and Alex. Penaluna, directors. Lands, 12 claims, patented, well timbered, on Nine Mile creek, carry 4 known veins. Development is by 3 short tunnels, lower of 150', planned to be driven 2,000' to give a back of 800' to cut 4 veins, 1 of which shows at surface lead and copper carbonates, giving assays up to 6% copper, 10% lead, 16 oz. silver and \$3 gold per ton. Company's holdings are in the lead belt, not the copper section of the Coeur d'Alenes.

ROBERTS-ALLEN-MAVIS GROUP.

ARIZONA

Address: Parker, Yuma Co., Ariz. Property shows a strong vein outcrop having a shoot of copper-gold ore said to carry a 5' ore streak in the 100' incline shaft, half of it \$50 smelting ore. Mine under development, 1913.

ROCHELLE MINING & MILLING CO.

CALIFORNIA

Mine office: Bishop, Inyo Co., Cal. A. C. Ringwald, president, at last accounts. Ores are said to include native copper, bornite, chalcopryrite and tetrahedrite. No returns secured.

ROCHER DE BOULE COPPER CO.

BRITISH COLUMBIA

Office: 419 D. F. Walker Bldg., Salt Lake City, Utah, care John F. Cowan, sec.-treas. and gen. mgr. Mine at Hazelton, B. C. M. S. Browning, pres.; A. Fred Wey, vice-pres., and S. A. Douglass, directors. J. A. Cowan, supt. Organized Oct. 15, 1911, in Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable; fully issued, fully paid. Annual meeting, Oct. 20.

Property, 6½ claims, crown grant, 325 acres with 50 acres mill site and 100 acres other lands, in Hazelton district. Ore occurs in fissure veins in granite, veins having an E.-W. strike with dip of 60°. Five ore shoots being developed have average width of 5½', are 3,000' long and proven to depth of 150', according to management.

Development by a 40' shaft and 200' tunnel estimated to have blocked out 25,000 tons of ore averaging 15% copper, 5 oz. silver and \$1.50 gold per ton. Copper occurs principally as chalcopryrite and bornite.

Company plans installing power plant and driving a crosscut tunnel to tap vein, 500' deep. The company is reported to have \$10,000 in treasury, with no debts. Mine is being systematically developed with a force of 15 men. Mine is 9 miles from the Grand Trunk Pacific railroad.

ROCK ISLAND MINE.

MONTANA

Idle many years. Mine office: De Borgia, Missoula Co., Mont. Anton Lutz, mgr.; Jas. Presnell, resident mgr., at last accounts. Lands, 20 quartz claims and 160 acres of placer ground, 5 miles north of De Borgia, carry 3 veins, 1 opened to depth of 320', mainly by tunnel, with about 2,000' of workings. The workings on the main vein show mainly silver-lead ore, with a little copper followed at greater depth by a great decrease of silver-lead ore. Equipment includes a steam plant with two 60-h. p. boilers, a hoist good for 1,200', and a 6-drill air compressor.

ROCK SPRINGS EXPLORATION CO.

NEVADA

Address: William Ace, president, Rock Springs, Wyo. Property, a group of claims near Contact, Nev., shows low-grade contact metamorphic deposits of copper ore. Property idle most of 1913, but reported preparing to resume work in October.

ROCKY MOUNTAIN CONCENTRATING & MLG. CO. COLORADO

Mine office: Black Hawk, Gilpin Co., Colo. Edgar S. Moulton, manager, at last accounts. Ores carry gold, silver and copper. Has gasoline power, a 25-stamp mill and a 75-ton concentrator. No returns secured.

ROCKY MOUNTAIN MINES CO. NEW MEXICO

Office: care G. L. Brooks, pres.; Albuquerque, N. M. Mine at Cerrillos, Santa Fe Co., N. M. E. L. Goose, sec.; H. O. Brooks, treas.; B. A. Stotz, mg. engr. and gen. mgr. Organized 1913, to work property formerly owned by the Sunset Mining & Smelting Co.

Property, 3 claims, 240 acres, in the Cerrillos district, held under lease and bond. Claims show orebodies in zone of crushed monzonite and andesite, averaging 18" wide, 360' long and proven to a depth of 176'.

Development, by former companies, by 3 shafts, 76 to 140' deep and 3 drift tunnels, 120', 361' and 442' long, said to show ore carrying 0.30% copper, 7% lead, 20% zinc, 4 oz. silver and \$0.60 gold per ton. The Tom Payne claim is the only one now worked.

Equipment includes a 15-h. p. hoist, several buildings and concentrator with 1 Dodge crusher, 11x14", 1 Hardy and 5 Wilfley tables, 2 slime tables. Smelter, 6 miles from the mine, will not be operated by present company, management planning to make zinc-lead concentrates only during 1913.

ROGERS-ARIZONA MINING CO. ARIZONA

Office: Indianapolis, Ind. Mine address: Rogers Springs, via Cave Creek, Maricopa Co., Ariz. Dr. O. C. Lukenbill, pres.; H. H. Udell, supt. Capitalization \$100,000, shares \$1 par, nonassessable.

Property, 27 unpatented claims in Cave Creek district, 28 miles north of Phoenix, the nearest railway point. Elevation 2,000'. Claims are covered by granite and granite porphyry with a 40-acre tract of mineralized and silicified porphyry on the Dora B and May claims. On this portion of the property there is a shear zone in which the rock is copper stained and contains copper glance. Though the ore over the surface is of concentrating tenor, it is of no present commercial value as it is too remote from a railroad.

Development is slight, consisting of numerous shallow pits and a 110' shaft, now inaccessible. Churn drilling has been proposed to determine whether property contains a large enough deposit of disseminated ore to warrant building a railroad, as without it the property cannot be profitably worked.

ROGERS SPRINGS MINING & SMELTING CO. ARIZONA

Address: W. E. Marlar, rural delivery 4, Phoenix, Ariz. This company is the residuary legatee of several corporations formed by James Marlar to work the Red Top group west of Cave Creek settlement.

An old blast furnace, a stack that had been hauled around Arizona for 20 years or more, was purchased and put upon the Red Top claim, but afterward moved to its present location where there is water nearby. In 1912, this company bought 10 tons of ore from the Kay Copper Co., and smelted it to black copper, but have not paid for the ore at last accounts.

The claims show blocky schist with occasional slight staining.

ROHR-GEDDES MINING & DEVELOPMENT CO. NEW MEXICO

Office: Raton, N. M. Letter unclaimed at mine office, Clayton, Union Co., N. M. Fred Rohr, pres.; Robt. Vogl, vice-pres.; L. G. Gregory, treas.; Frank A. Wall, sec.; J. E. Geddes, gen. mgr., at last reports. Lands, 420 acres, a few miles west of the Pittsburgh Copper Co., in the Peacock Canyon district, have several pits and shafts of 15 to 40' depth, and a 267' shaft showing sulphide ore, said to assay 22% copper, with small gold and silver values. No returns secured.

ROMERO MINING CO.**NEW MEXICO**

Margarita Romero, owner, Las Vegas, N. M. Property, the Santa Nino claim at El Porvenir, San Miguel Co., N. M., has a deposit of copper-gold ore, developed by tunnel and shaft work. Equipment includes steam power and a 10-ton King mill and rolls for concentration work.

ROOSEVELT MINES & REDUCTION CO.**ARIZONA**

Address: Silver Hill, Pima Co., Ariz. Incorporated 1912, but died in early infancy.

ROOSEVELT MINING CO.**UTAH**

Organized 1913, capitalization \$100,000, shares 10 cts. par. Property, 9 claims, N. E. of the American Flag mine in Park City district, Summit county, Utah.

ROOT RIVER GOLD & COPPER SYNDICATE.**ONTARIO**

Idle. Office and mine: Sault Ste. Marie, Algoma, Ont. B. W. Harris, pres.; F. B. Sullivan, vice-pres.; Alex. McIntyre, second vice-pres.; T. Robinson, sec.; Wm. Calder, treas. Organized under laws of Ontario, capitalization \$1,000,000, shares \$1 par. Lands, 40 acres surface rights, and mineral rights to 640 acres, in Sec. 32, township of Aweres, 11 miles north of Sault Ste. Marie, on the Algoma Central railroad. Property has a vein of 12 to 16' width, traceable 1,000', carrying auriferous and slightly argentiferous copper ore, giving average assays of 2.37% copper, developed by a 70' shaft. Developed only in recent years.

ROSALIE COPPER CO.**ARIZONA**

Address: Haddock & Schackelford, 424 Dwight Bldg., Kansas City, Mo. Mine near Mayer, Yavapai Co., Ariz. Samuel L. Casey, pres.; Wm. Nellis, first vice-pres.; Marshall Haddock, second vice-pres.; W. N. Rynerson, treas.; E. M. Metcalf, sec.; Geo. C. Meese, gen. mgr.; preceding officers, Chas. Schifferdecker and Wm. A. Moses, directors. Organized under laws of Arizona, capitalization \$3,000,000, shares \$1 par.

Lands, 9 claims, patented, 180 acres, in the Copper Creek district, 25 miles S. E. of Mayer and 18 miles from Cordes siding, the nearest rail point, with a wagon road between. The mine has numerous pits and shafts, of 10 to 148' depth, and a 1,000' tunnel, developing a 2 to 7' vein carrying native copper, in the oxidized zone, followed by bornite, chalcopryrite and occasional chalcocite ores, said to assay 4.15 to 7.3% copper, with small gold and silver values. Equipment includes a 50-h. p. gasoline engine and air compressor. No recent returns. Not favorably regarded.

ROSARIO MINE.**ARIZONA**

Address: Superintendent, Rosario Mine, Benson, Cochise Co., Ariz. Property, on northern flank of Santa Rita mountains, has orebodies in limestone yielding smelting ore. Working and shipping in summer of 1913.

ROSARIO MINE.**MEXICO**

Situated in the Nacozari district, Sonora, Mex. Mine produces high-grade copper-silver ore, found in small bunches in fissure veins in igneous rock. Has been worked intermittently for several years past.

ROSE, JOHN.**ARIZONA**

Owens group of 9 claims north of and adjoining the Inspiration mine, Miami district, Gila Co., Ariz. Developed by 100' tunnel in diabase which cut 2½' vein showing shoot of copper silicate ore averaging 15% copper, in July, 1912.

ROSE SPRINGS MINING CO.**CALIFORNIA**

Office: 514 Pacific Bldg., San Francisco, Cal. Mines at Battle Mountain, Lander Co., Nev., and at Tuolumne, Tuolumne Co., Cal. James Healey, pres.; L. H. Trescott, vice-pres.; S. O. Trescott, sec.-treas. Capitalization \$2,500,000, shares \$1 par.

Property in California being developed by tunnel. Reported to have opened up a 4' vein of free-milling gold, which was cut by a fault soon after company had erected a mill to treat the ore. In searching for this vein a 7' vein of sulphide ore is said to have been exposed, which management plans to treat later.

ROSEMERE MINING CO.**ARIZONA**

Owned by Edward Pattee, H. S. Smith and A. H. Parkes. Mine address: Florence, Pinal Co., Ariz. Mine in the Sacaton mountains, 44 miles east of Phoenix, and 5 miles from Webster station on the Arizona Eastern railroad. Property is a small prospect that shows a little copper ore. Only shallow work as yet.

ROSEMONT COPPER CO.**ARIZONA**

Office: 11 Broadway, New York. Mine at Rosemont, Pima Co., Ariz. Is controlled by Adolph Lewisohn and Lewisohn Bros. The mine has numerous orebodies in limestone, occurring under geological conditions superficially similar to those at Bisbee. Considerable new development work was done in 1912. Company also owns claims at Helvetia and others adjoining the Tiptop mine, near Helvetia, but the bulk of its holdings are on the east side of the Santa Rita mountains, west of the Rosemont postoffice. Company has a small smelter, long idle. Property regarded as promising.

ROSS MINING & MILLING CO.**COLORADO**

Idle many years. Office: Ross Bldg., Waynesburg, Pa. Mines and works office: Silverton, San Juan Co., Colo. J. M. Mitchell, pres.; Frank L. Ross, sec.; H. T. Hamilton, treas.; J. B. Ross, mgr.; Patrick Lonergan, mine supt., at last accounts. Organized Dec. 13, 1904, under laws of Colorado, capitalization \$2,500,000, shares \$1 par, nonassessable. Had an indebtedness, July 31, 1909, of \$111,173, of which \$100,000 was in the form of 6% bonds. Pittsburgh Trust Co., registrar and transfer agent. Annual meeting, second Saturday in September.

Lands, 42 lode claims, 310 acres, and 50 acres of placer claims, mainly patented, with 3 mill sites, 80 acres, and miscellaneous lands giving total holdings of 760 acres, in the Animas, Eureka and Red Mountain districts. Apparently the lands formerly held under bond and lease from the San Juan Smelting & Refining Co. were taken over, 1909.

The Champion mine, opened 1885, has 3 fissure veins in granite, and is developed by tunnels with total workings of 2,550', showing ore claimed to give assays of 5.5% copper, 25 oz. silver and \$10 gold per ton, probably above the average value of the ore. Equipment of the Champion includes a 75-h. p. steam plant, 5-drill Rand air compressor and 7 mine buildings.

The Belle Creole mine shows 2 fissure veins in andesite, reported as 20' wide and 1,600' long, slightly developed by shafts of 15' and 35', and by tunnels of 75' and 150', carrying low-grade milling ore estimated to average 15% lead, 12% zinc, 15 oz. silver and \$4 gold per ton. This mine is practically without equipment.

The Galtie Boy property shows 3 fissure veins in andesite, of 6' claimed average width, said to be traceable 3,000', opened to a depth of 600' by a 50' shaft and tunnels of 350' and 2,500', with total workings of 2,900'. Ore is said to give average assays of 3% copper, 10% lead, 10 oz. silver and \$5 gold per ton.

The company has had much financial trouble, like its predecessors and collateral relatives in the chain of promotions.

ROSSLAND GROUP.**NEVADA**

Situated 20 miles east of Mason, Lyon Co., Nev. Ross Thompson, owner. Was shipping ore to the Thompson smelter, said to average 8% copper, in 1913.

ROSSLAND KOOTENAY MINING CO., LTD. BRITISH COLUMBIA

Idle since 1904. Office: Salisbury House, London, E. C., Eng. Mine office: Rossland, Trail district, B. C. C. Williamson Milne, chairman; Dr. G. Shack-Sommer and Ernest E. Surridge, directors; Bedford McNeill, cons. engr.; F. A. Labouchere, sec. Organized May 17, 1902, under laws of Great Britain, as a reconstruction of Rossland-Great Western Mines, Ltd., and Kootenay Mining Co., Ltd., capitalization £150,000, shares £1 par; issued, £148,607.

Lands, 171 acres, at Rossland, carrying auriferous and argentiferous copper ores, of low grade, and 113 acres placer at West Kootenay. The company also owns 4,347 shares of the Santa Eulalia Development Co., Ltd., owning the Nueva Chihuahua property, at Santa Eulalia, Chihuahua, Mex. Has given a lease on the Nickel Plate mine at Rossland on a royalty basis, 1912.

ROUGH RIDER MINING & MILLING CO.**MONTANA**

Mine address: De Borgia, Missoula Co., Mont. A. L. Thurston, pres.; A. E. Wayland, sec. Capitalization \$1,500,000, shares \$1 par. Lands, 4 claims, 6½ miles from a railroad, carry an orebody without defined walls, opened by a 60' shaft, showing ore with values in lead, copper, silver and gold. No returns secured.

ROY MINING & MILLING CO.**UTAH**

Mine in Clifton, or Gold Hill district, Tooele Co., Utah, 90 miles N. E. of Cherry Creek on the Nevada Northern railroad. Franklin N. Millett, pres.; John H. Stratton, vice-pres.; Don. C. Clayton, sec.-treas.; preceding officers, Paul A. Millett and Walter Cox, directors. Organized May, 1909, under laws of Utah, capitalization \$55,000, shares 5 cts. par.

Lands, 12 claims, unpatented, have a 4' contact deposit along a limestone porphyry contact. This is opened by a 25' shaft, showing copper ore giving assays of 1 to 17% copper and \$7 to \$60 gold per ton. No returns secured.

ROYAL BASIN MINING CO.**MONTANA**

Office: Makeever Bros., 170 Broadway, New York. Mine office: Maxville, Granite Co., Mont. R. D. McRae and John McRae, former owners, Phillipsburg, Mont. John D. Fields, manager, Capitalization \$2,000,000, shares \$1 par, fully paid and non-assessable.

Property, the North Star mine of 2 lode claims, 90 acres, in Wymans gulch, within the Missoula forest reserve and 3 miles east of the Drummond branch of the N. P. R. R. Also owns the Northern Bell mine, a silver property near Princeton. Claims show a fissure vein 15 to 40' wide, in 3 upper tunnels, 100' vertically apart. A new lower tunnel is being driven which cut the vein 800' in and at a depth of 700'. At this point the vein carries concentrating ore 12' wide with a paystreak of sulphide ore, assaying 7½% copper and 5 to 70 oz. silver per ton. The smelter returns for over 1,100 tons shipped showed 5.14% copper.

Mine is equipped with a leaching plant using sulphuric acid to get the copper into solution and depositing electrolytic copper as cathode plates in tanks, direct from the solution, by electrolytic current. This plant was designed and is operated by the manager, J. D. Fields, who has since designed and built a similar plant for Capt. A. B. Wolvin at the Butte-Duluth mine in Butte, Mont.

While we have no details of this plant, the process, while simple and doing all that is claimed for it in the production of electrolytic copper, is not a cheap one when acid and electric power have to be purchased. Property considered promising, but advertising matter of fiscal agents is not favorably regarded.

ROYAL BLUE MINE.**ARIZONA**

Fraser, Lewis & McDonald, leasors, Benson, Ariz. Mine in Tyndall district, in the north end of the Santa Rita mountains, Cochise county, has a vein of copper-silver ore developed by tunnels. A shoot of ore found in the winze of lower tunnel is said to average 4' thick and \$60 in value. This shoot is being stoped and regular shipments are made to Benson.

ROYAL CONSOLIDATED COPPER CO.**NEVADA**

Office: 1206 Fullerton Bldg., St. Louis, Mo. Mine office: Hawthorne, Esmeralda Co., Nev. L. L. Crisp, pres. and gen. mgr.; G. L. Werth, vice-pres.; R. E. Drake, sec.-treas.; B. H. Martens, supt.; preceding officers, Robt. W. Alt and Albert Lawson, directors. Organized April 27, 1907, under laws of Arizona, capitalization \$2,500,000, shares \$1 par, nonassessable; issued, \$1,434,477, Dec. 31, 1910. Bonds, \$300,000, authorized, at 7%; issued, \$2,300, Dec. 31, 1910. Annual meeting, first Monday in April.

There are 2 companies of this title, 1 an Arizona, the other a Nevada corporation, the Arizona company apparently holding stock in the Nevada operating company.

Lands, 10 claims, 1 fractional, 200 acres, 8 miles from Luning and 16 miles from Hawthorne and Mina. According to the company's former expert, the formation is "dyarite," porphyry and limestone, with large "burns" of iron gossan, the ore deposits consisting of copper, gold and silver, lying in a fissure "cutting" a contact of porphyry and lime, the orebody being claimed to be 250' wide. Company reported Dec. 31, 1910, having 2 known orebodies of 6' average width. The president, in his report of 1909, claimed that "all high-grade deposits in large quantities are always found where 2 or more veins intersect or cross." In Dec., 1910, the company reported having shafts of 86' and 35', with a number of prospect pits and tunnels of 485', 35', 85' and 125'. Apparently the property has no power equipment and no buildings.

The company's past literature contains some ridiculous and misleading statements. Three men were working, early 1911.

ROYAL COPPER MINING CO.**WASHINGTON**

L. J. Winslow, president. Mine address: Chewelah, Stevens Co., Wash. Seven claims said to show 3 parallel ledges having slate and granite contacts. Developed by 400' tunnel said to show values in copper, lead, silver and gold. Being operated in 1913, a contract for crosscutting being given to C. F. Weist. Property is a silver-lead mine with but small amounts of copper.

ROYAL COPPER MINING CO., LTD.**MONTANA**

Office: Wallace, Idaho. Mine office: Belknap, Sanders Co., Mont. John H. Nordquist, pres.; Claus E. Anderson, vice-pres.; Otto A. Olsson, sec.-treas.; preceding officers, O. A. Olin, and Chas. Solberg, directors; Chas. D. Johnson, supt. Stock is assessable.

Lands, 12 claims, patented, near Thompson Falls, show a vein of about 18' surface width, traced 1,500' on company land, carrying copper and lead carbonates and sulphides, said to average 6% copper and 18% lead, with small silver values. Development is by prospect tunnels of 50' and 600', and it is planned to drive a third tunnel 200' vertically below No. 1. The property is a prospect on which assessment work only has been done for 2 years past.

ROYAL GOLD & COPPER MINING CO.**UTAH**

Mine in Paradise district, Cache Co., Utah. Reported to be operating extensively, but no trace of the owners, managers or development is obtainable.

ROYAL MOUNTAIN MINING CO.**MONTANA**

Was absorbed by the Cactus Copper Co. which bought the Sunday mine, a gold property in Granite county, west of Phillipsburg, Mont., in 1913.

ROWLEY COPPER MINES CO.**ARIZONA**

Office: Baxter Springs, Kans. Mine address: Gila Bend, Maricopa Co., Ariz. T. H. Goodwin, pres.; Mrs. Dora Rowley, vice-pres.; J. T. McRuer, sec.; J. O. Goodwin, treas. Organized July, 1909, under laws of Arizona, capitalization \$10,000,000, shares \$1 par.

Lands, 6 claims, unpatented, 120 acres, about 28 miles north of Gila Bend, developed by an inclined shaft to 80' below water level; is reported to have disclosed 3 strong veins of copper-gold ore. Company shipping ore from drifts. Equipment includes 100-h. p. boiler, hoist, compressor, etc. Property was bought for \$20,000 cash and \$1,000,000 stock, in 1910. Company is heavily overcapitalized.

R. R. R. COPPER MINE.**ARIZONA**

Described under Three R Mines.

RUBENA MINING CO.**MEXICO**

Probably dead. Letters unclaimed at La Poza, Sonora, Mex. Chicago Title & Trust Co., formerly registrars, write that they have failed to locate company for last 3 years. Fully described, Vol. X.

RUBI; COMPANIA MINERA.**MEXICO**

Office: Centro Mercantil, 30 Piso 25, Mexico, D. F. Mine office: Matchuala, E. de San Luis Potosi, Mex. Julio Limantour, pres.; Manuel Lomeli, sec.; T. A. Verger, gen. mgr., at last accounts. Organized July 24, 1907, under laws of Mexico, capitalization 250,000 pesos, shares 50 pesos par; paid in, 2 pesos 50 centavos per share. Lands, 84 hectares, including the Rubi, Bonanza, Todos Santos and Anexas de Todos Santos groups, opened by two 75-meter shafts, with about 200 meters of workings, showing gold, silver, copper and lead ores. Equipment includes gasoline hoists. A railway runs to the shafts, and ore is shipped to the Aguascalientes smelter, 6 kilometers distant. No returns secured and property probably closed down owing to revolution.

RUBY COPPER CO.**ARIZONA**

Office: 303 Midland Bldg., Kansas City, Mo. Mine office: Patagonia, Santa Cruz Co., Ariz. H. A. Sutermeister, pres.; F. D. Reasor, vice-pres.; C. E. Sweet, sec.; Chas. L. Cookson, treas.; preceding officers, A. E. White, R. W. Pierce, Harry J. Richards, F. P. Greenwood, and Dr. Emil Thielman, directors; C. A. Pierce, gen. mgr. and supt. Organized 1912, under laws of Arizona, capitalization \$2,000,000, shares \$1 par; issued, 528,388 shares. Debentures, \$200,000 at 6%; issued, \$35,000.

Property, the Lee group of 7 claims, 6 patented, about 10 miles N. of Patagonia. Claims show remnants of Tertiary lavas capping a series of limestones and other sedimentary rocks, altered by metamorphism and underlain by a dense black crystalline rock that carries ore. This rock, though seemingly devoid of crush zones or fissures, contains disseminated particles of chalcopryite with occasional bunches and patches of high-grade ore assaying as high as 27% copper and 100 oz. silver per ton. This rock also holds kidneys, or globular masses of primary copper glance and bornite. Ores are estimated to average about 5% copper, 2.5 oz. silver and 11 cts. gold per ton.

Development is by shafts of 400' and 80' and a drift tunnel, in ore for 160', with about 600' of workings. The shaft is dry, unlike that of the Hosey mine to the N. and the Happy Jack to the S., both in higher ground.

RUBY COPPER CO.**CALIFORNIA**

Address: E. A. Walters, Eureka, Cal. Antonio Licare, superintendent, Korbelt, Humboldt Co., Cal. Property, the Ruby group, shows a copper deposit developed by a 1,000' tunnel. Company plans installation of concentrator in near future.

RUBY COPPER CO.**NEVADA**

N. H. Falk of Eureka, Nev., vice-president. Property on Horse mountain, developed by 300' tunnel.

RUBY GOLD & COPPER CO.**ARIZONA**

Mine near Parker, Yuma Co., Ariz. C. H. Ferry, director and chief owner; W. E. Balcolm, gen. mgr., at last accounts. Company owns the Billy Mack mine, an old and well-known property, 8 miles by wagon road from Parker. Claims cover an area of pre-Cambrian limestone and schist, whose beds dip steeply N. W. Ore occurs as a contact vein between schist and limestone, the deposit being an irregular replacement with no known connection between the small ore pockets. Ore consists chiefly of malachite, chrysocolla and specularite with porous quartz. In the main mine workings a bunch a few feet across consisted of a mass of needle malachite shot through with threads and stringers of gold. As a rule the ore, though often rich, occurs in short and very thin bunches and so far as known, does not afford a basis for profitable mining on a large scale.

Developed by 200' shaft with levels at 100', 150' and 200', below surface and by several lesser prospect tunnels and inclines. Is too pocketty to make a big mine.

RUBY HILL TUNNEL & MINING CO.**NEVADA**

Mine office: Eureka, Eureka Co., Nev. A. P. Mayberry, superintendent, at last accounts. Lands, between the Richmond and Connor mines, are opened by a tunnel, said to be 2,200' long. No returns secured.

RUBY KING COPPER CO.**CALIFORNIA**

Mine at Ladoga, Colusa Co., Cal., developed by 1,200' shaft and 1,000' tunnel. Although generally known as a copper mine, no copper ore has as yet been discovered and property is operated as a mineral paint mine, ore being iron oxide.

RUBY MINE.**MONTANA**

Pat Dowling, owner, Ruby Mine, Lowland creek, via Basin, Jefferson Co., Mont. Property comprises a group of contiguous claims covering the old Ruby and adjoining Columbia mines; the first was a producer of remarkably rich gold-silver ore from a "pipe" of quartz in dacite, terminated downward by a flat clay slip. In summer of 1913, a new deposit of high-grade copper ore was discovered by the present owner in doing development work on a virgin section of the group.

RUBY MINING CO.**WASHINGTON**

Mine and home office: Nighthawk, Okanogan Co., Wash. Eastern office: Mansfield, Ohio. Monroe Harman, pres. and gen. mgr.; Jas. A. Hower, vice-pres.; Chas. B. Bushnell, sec.-treas.; preceding officers, Dr. S. P. Ecki and M. L. Branyan, directors. Organized Nov. 5, 1902, under laws of Washington, capitalization \$1,500,000, shares \$1 par, nonassessable; issued, \$1,175,000. Bonds, \$100,000 authorized, at 7% maturing 1915; issued, \$35,100. Annual meeting, second Tuesday in June.

Property, 7 claims, unpatented, 136 acres, with 46 acres miscellaneous freehold lands, on Mt. Chopaca, near the Similkameen river, 3 miles south of the international boundary and within 600' of the Great Northern railroad. Claims show syenite, cut by veins containing lenticular orebodies running N. W.-S. E. and dipping at 47°. The vein under development is

about 4' thick, traceable for 1,000', and carries cupriferous ore stated by management to assay 0.5 to 10% copper, 1.5% lead, 2.5% zinc, 5 to 2,800 oz. silver and from a trace to \$4 gold per ton.

Development is by 3 crosscut tunnels with drifts on the vein. The main working tunnel, 300' below the old workings and about 350' below the outcrop, is 1,110' long, and has 550' of drifting on the vein and an equal amount of drifting run from a 100' upraise. An inclined shaft sunk on the vein from the lower tunnel has short levels at 100' and 200' depth. The development work is said to have blocked out 135,000 tons of ore carrying 30 oz. silver besides copper and gold values and which it is believed can be profitably mined and milled.

Equipment, installed 1909, includes a 15-h. p. electric hoist and 5 buildings. Ore shipments of 7 carloads, 1907, netted \$5,500. Management is trying to raise \$35,000 for the erection of a mill and compressor in order to put the property on a producing basis before bonds mature in April, 1915. Company's report shows a total expenditure at the mine from beginning of work to April 28, 1913, of \$118,000, of which ore sales furnished \$17,062, bonds \$35,100 and stockholders (175,000 shares) \$65,838.

Property promises to make a good small mine.

RUDOLPH LAND CO.

WISCONSIN

Mine near Gordon, Douglas Co., Wis. Cuyler Adam, gen. mgr.; L. A. Barton, supt., at last accounts. Organized 1905, as successor of Minong Range Copper Co. Lands, 12 miles from Gordon, are in Secs. 11, 12, 13 and 14, T. 43 N., R. 10 W., on the southern fold of the Keweenaw syncline. Development is by two 7x10' shafts, deepest 350', sunk at an angle of 36°, on a dark amygdaloidal trap bed carrying small quantities of native copper. Equipment includes a 6-stamp mill. Property fully described under title of Minong Range Copper Co., Vol. III.

RUSH & BROWN GROUP.

ALASKA

Address: Kasaan, Prince of Wales island, Alaska. U. S. Rush, mgr., and Geo. F. Brown, owners. Property, 8 claims, 160 acres and 15 acres mill site, near the end of Kasaan bay, 8 miles N. W. of Kasaan.

Two orebodies have been developed, one a contact metamorphic deposit consisting of a copper-bearing magnetite body, 100' long by 30' wide, in a garnet-epidote-calcite gangue lying between granodiorite and an indurated greenstone tuff, the line of contact striking nearly east and west. The other deposit, 160' to the north, is 4 to 8' wide, occupies a shear zone in the greenstone tuff and conglomerate beds and is a sulphide body composed of pyrite and chalcopyrite in a quartz-calcite gangue. The strike of this sulphide deposit is N. E. and its dip 60° S. E. toward the larger deposit.

Development consists of 3 tunnels and a 184' shaft with drifting on the 1st and 2nd levels, from which ore was stoped in 1912. Some work was also done in 1912 on the Copper Mountain claim, long idle.

Equipment includes a steam plant with hoist and necessary mine buildings. Ore is taken over a 3-mile private railway of 42" gauge to Kasaan bay. Work was suspended, 1907, because of the depression of the metal market and was resumed July, 1910. About 20,000 tons of ore have been shipped from the 100' level.

Production for 1912 was about 700,000 lbs. fine copper with small gold and silver values. Property operated with force of 20 men in 1913, shipping ore regularly to Tacoma. Mine considered promising, but like all deposits of this type, of uncertain downward extent.

RUSSIA-JAPAN MINE.

WASHINGTON

Andrew and Arthur Raub, owners, Methow, Okanogan Co., Wash. Property consists of 2 claims, held by annual assessment work for 17 years

and located 50 miles from a railroad. The claims show a vein 5 to 7' wide, opened by a 175' tunnel whose face is reported to show 5' of 17% ore.

RUTH-FRANCIS GROUP.

BRITISH COLUMBIA

J. H. Nesbitt and A. Archie, owners, Stewart, B. C. Mine in the Portland Canal division, Skeena district, B. C., on the North fork of Glacier creek. Development by 64' tunnel has exposed an ore shoot of silver-lead-copper ore about 10' wide in the face of the tunnel.

RYE PATCH CONSOLIDATED MINES CO.

NEVADA

Property at Rye Patch, Humboldt Co., Nev., leased for 7 years to Rye Patch Mining & Leasing Co. and described under that title.

RYE PATCH MINING & LEASING CO.

NEVADA

Office: Salt Lake City, Utah. Mine at Rye Patch, Humboldt Co., Nev. C. A. Conklin, pres.; S. A. Greenwood, sec.; David W. Jeffs, gen. mgr. Organized 1910, under laws of Utah, as a reorganization of the Rye Patch Consolidated Mines Co. Capitalization \$250,000, shares 25 cts. par, assessable.

Property, 6 claims, patented, held under a 7-year lease. Mine is 14 miles from a railway and is said to have been worked extensively, prior to 1873, with a reputed production of \$12,000,000 in silver. Development consists of a 1,200' tunnel in which the present company started new work and developed a 14" vein of extremely rich silver ore carrying 4 to 9% copper.

Equipment includes a 10-stamp mill with a concentrator and company is preparing to operate on an extensive scale as soon as new ground is opened up.

SACAJEWEA GOLD & COPPER MINING CO.

MONTANA

Office: 11 Broadway, New York. Mine near Helena, Mont. Col. Henry Altman, pres. and gen. mgr.; W. J. Anson, sec. Capitalization \$5,000,000, shares \$10 par. Lands, 47 claims, in the Scratch Gravel district, adjoining the Copper-Silver Montana Mining Co. Idle some years, and presumably defunct.

SACRAMENTO MINE.

ARIZONA

Owned by Copper Queen Consolidated Mining Co., at Bisbee, Ariz.

SACRAMENTO VALLEY COPPER CO.

CALIFORNIA

Office: Placerville, Cal. Mine office: Greenwood, El Dorado Co., Cal. L. H. Wilkins, pres., J. J. Crawford, Wm. Sherrieff, E. C. Voorhies and Donald Woodrum, directors; Thos. G. Patton, sec.-treas.

Organized under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Title to property is held through the Sacramento Valley Copper Co. of California.

Lands, 12 claims, patented, about 220 acres, in Sec. 24, T. 12 N., R. 9 E., in the Greenwood district. The property shows an extensive series of sedimentary rocks, with igneous rocks of various ages, intercalated with the sedimentaries, or more commonly occurring as intrusives. Ores occur as sulphide deposits in contact and shear zones. The latter are flat-lying, with chalcopyrite disseminated in pyrite, almost invariably auriferous, but low in copper tenor.

The mine has an 80' shaft, and several short tunnels. There is no power equipment. Property considered promising.

SADDLE MOUNTAIN MINING CO.

ARIZONA

Office: 902 Chapel St., New Haven, Conn. Lewis S. Welch, pres.; Clarence Stephens, vice-pres.; Story B. Ladd, sec.; Wilbur W. Delano, treas. Organized 1902, under laws of Arizona, capitalization \$1,000,000, increased later to \$2,500,000, shares \$1 par. Bonds, \$1,000,000, first-mortgage, 6%, due July 1, 1918, which have been assumed by the Gila Copper Sulphide Co. Property consists only of \$300,000 of the capital stock of the Gila Copper

Sulphide Co. The former mining property at Christmas and Saddle mountain was sold, Oct. 26, 1909, to the Gila Copper Sulphide Co. Very fully described Vol. VIII.

SAGAMORE MINING CO.

CALIFORNIA

Office: Third and Chestnut Sts., Philadelphia, Pa. Mine near Purdy, San Bernardino Co., Cal. Norman P. Sloan, pres. and mgr.

Lands, 8 claims, 160 acres, known as the New York mine, 5 miles S. E. of Manvel, in the New York mountains, an extension of the Providence range. The property shows limestone, quartzite and schist, with intrusive dikes of rhyolite and felsite along which the principal veins are found. Ores found in the quartzite are gold bearing, the silver and copper ores being in limestone.

Development is by shafts of 30', 45', 100' and 150' and several tunnels, longest being 454', showing a number of veins ranging from 18" to 4' in width. A complete report on the property was made, 1902, by Carl Andersen.

Equipment includes gasoline power and a 50-ton mill. Idle several years.

ST. CROIX CONSOLIDATED COPPER CO.

WISCONSIN

Office and mine: Superior, Douglas Co., Wis. Robt. Kelley, pres.; Dr. A. S. Andrews, vice-pres.; W. W. Strickland, sec.; Ernest A. Arnold, treas. and managing director. Organized 1903, under laws of Wisconsin, capitalization \$1,500,000, shares \$1 par, nonassessable. Lands, about 15,000 acres, 35 miles south of Lake Superior, on the St. Croix range of Douglas county, Wis., carry the western extension of the Keweenaw copper belt of Lake Superior. The corporation is a land-holding company that has done no mining work and plans none.

ST. EUGENE MINE.

BRITISH COLUMBIA

Owned by Consolidated Mining & Smelting Co. of Canada, Ltd.

ST. JOE GOLD-COPPER M. & M. CO.

MONTANA

Office: Wallace, Idaho. Lands, 9 claims, well timbered, on Kelly creek, near Saltese, 3 miles west of the Monitor mine, and one-half mile from a railroad, showing 2 strong ledges. Idle some years, but presumably again active in 1913, owing to a renaissance of mining interest in this section.

ST. JOE MINING & MILLING CO.

WASHINGTON

Idle. Office and mine: Latah, Spokane Co., Wash. I. H. Stockdale, pres.; J. W. Olney, vice-pres.; J. A. Adams, sec.-treas., at last accounts. Organized 1906, under laws of Washington, capitalization \$7,500,000, shares \$5 par.

Lands, 13 claims, one fractional, about 255 acres, well timbered, 15 miles from the Puget Sound railway, show quartzite, with shafts of 20' and 80'. Property has 3 buildings.

ST. LAWRENCE COPPER MINING CO.

MONTANA

Mine office: Saltese, Missoula Co., Mont. Thos. Jay, superintendent at last accounts. Lands, about 6 miles S. W. of Saltese, have a 10' vein, paralleling the vein of the Richmond and Monitor mines, of about 10' average width. Veins carry gold and silver-copper ore, giving assays up to 42% copper. Idle.

ST. LOUIS COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston. Mine office: Calumet, Houghton Co., Mich. Jas. MacNaughton, general manager. Organized under laws of Michigan, capitalization \$1,000,000, shares \$25 par, fully issued. Is controlled by the Calumet & Hecla Mining Co., through ownership of entire share capital.

Property, lying next south of the Old Colony, east of the Laurium and S. E. of the Calumet & Hecla, was opened 1844, as the New York & Michigan, under permit from the Federal War Department, and later became the

Washington, changing that name eventually to the present title. Lands, 800 acres, being S. $\frac{1}{2}$ of Sec. 19 and W. $\frac{1}{2}$ of Sec. 20, T. 56 N., R. 32 W.

In very early days a shaft showing some fine copper was sunk at the junction between the trap belt and the eastern sandstone. Idle many years, until 1910, when exploratory work was resumed. A cross-section of the formation was made, 1910-12, and ground broken for a shaft, on the St. Louis amygdaloidal bed, July, 1911. The shaft was 600' deep, Aug., 1912. Diamond drilling, in 1912, is thought to have located the extension of the so-called Mayflower lode.

Equipment includes a 14x18" duplex-cylinder Lidgerwood hoist, with 5' drum, good for one-half mile depth, and a 12-drill air compressor.

ST. LOUIS GOLD GULCH MINING CO.

NEW MEXICO

Mine office: Silver City, Grant Co., N. M. G. A. Easton, manager, at last accounts. Property shows gold and copper ores, and equipment includes a 50-ton concentrator. Idle.

ST. MARY'S MINERAL LAND CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Geo. Peabody Gardner, pres.; Chas. J. Paine, vice-pres.; Chas. J. Paine, Jr., sec.-treas.; preceding officers, E. V. R. Thayer, Nathaniel H. Stone, Walter Hunnewell, Albert S. Bigelow, Thos. N. Perkins, Charles E. Perkins, Richard Olney and Chas. N. King, directors; Fredric W. Nichols, resident agt.; Dr. Lucius L. Hubbard, cons. geologist.

Share assets of the company, July 31, 1912, were: 50,000 shares Champion Copper Co., 25,000 shares Mayflower Mining Co., 20,165 shares La Salle Copper Co., 20,000 shares Hancock Consolidated Mining Co., 20,000 shares Pacific Copper Co., 37,222 shares Houghton Copper Co., 1,571 shares Franklin Mining Co., 9,000 shares North Lake Copper Co., 2,000 shares Ojibway Mining Co., 56,778 shares Winona Copper Co., 208 shares Copper Range Consolidated Copper Co., 640 shares St. Mary's Mineral Land Co., 80 shares Old Colony Copper Co., 6,340 shares Naumkeag Copper Co., 18,162 shares Douglas Copper Co., 10 shares Amphidrome Co.

Lands, July 31, 1912, were 93,084 acres freehold, with mineral rights to 14,081 acres additional, property being scattered along the Lake Superior copper belt, with principal holdings on the South Range, S. W. of Houghton, in Houghton and Ontonagon counties.

Organized March 4, 1901, under laws of New Jersey, capitalization \$5,000,000, shares \$25 par; issued, \$4,000,000. Controls, through ownership of entire stock issue, except founders' shares, the St. Mary's Canal Mineral Land Co., a corporation organized 1863, under laws of New York, to acquire 180,000 acres of land given by the state of Michigan for the construction of the first ship canal at Sault Ste. Marie. These lands in Houghton, Ontonagon and Keweenaw counties, Mich., formerly included the tracts on which the Calumet & Hecla, Baltic, Trimountain, Champion, Ojibway and other mines have been developed. Company has about 400 shareholders. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar. Annual meeting, first Wednesday in March, in Jersey City, N. J.

From 1863 to 1900 the old company paid cash dividends of \$2,200,000, and also paid stock dividends of 1 share of Tamarack, 1884; 1 share of Iroquois, 1890; $1\frac{1}{4}$ shares of Baltic and one-half share of Winona, 1898; 1 share of Old Colony and $1\frac{1}{2}$ shares of Trimountain in 1899. Dividends of the present company have been as follows: \$1 in 1903; \$1 in 1904; \$2 in 1905; \$4 in 1906; \$5 in 1907; nothing in 1908; \$1 in 1909; \$1 and a stock dividend of one-fifth share of Franklin, 1910; \$3 in 1911; \$3 in 1912; \$2 to Nov. 1, 1913. Income of the company consists mainly of dividends from the Champion Copper Co., with a small but steady income from sales of lands, timber and

wood, and occasional but irregular large receipts from sales of mineral lands. The balance sheet of Dec. 31, 1909, gave quick assets of \$4,489,273, and on Dec. 31, 1912, the company had \$150,370 cash on hand, with notes receivable and sundry shareholdings of \$215,000, and was without liabilities.

The Challenge mine, described Vol. VIII, was abandoned Aug., 1909, after the expenditure of about \$250,000.

The company, since its reconstruction, in 1900, has refused to sell its mineral lands, outright, preferring to join with other land holders in the formation of new companies, taking pay for its lands in shares, on a pro rata basis, or partly in shares and partly in cash. This policy involves heavy outlays for exploratory and development work, but has resulted in giving the company a half interest in a new mine, the Champion, which is capable, alone, of furnishing funds to St. Mary's company for both dividends and development work elsewhere, and a continuance of this policy must result in time in making St. Mary's Mineral Land Co. the part or sole owner of a number of fine mines. Owing to the great extent of its lands, located mainly on the Keweenaw copper belt, stretching along the mineral range for scores of miles, the landed holdings of the company are of great potential value. The management is vigorous and far-seeing.

ST. MARY MINING CO.

UTAH

Office: 601 Providence Bldg., Duluth, Minn. Mine office: Milford, Beaver Co., Utah. Hansen Ev. Smith, pres.; J. Eton Bowers, vice-pres.; Paul M. T. Thompson, sec., all of Duluth. Organized 1908, under laws of Arizona, capitalization \$500,000, shares \$1 par, assessable.

Property, 4 claims, 3 of 30 acres area, patented near the Moscow and Red Warrior mines, on the east side of Topache peak, 4 miles from Milford in the Star district. Claims show 5 contact veins between limestone and an igneous intrusive. Orebody under development claimed to average 17% copper, 10 oz. silver and one carload said to have returned \$76 per ton. Development consists of a 165' shaft with several hundred feet of drifts.

The mine, opened about 1870, produced considerable ore until 1890. After many years idleness, mine was again opened in 1909 and has been operated intermittently since then, producing about 270 tons of ore in 1910 and 1912.

ST. PATRICK MINING & MILLING CO.

UTAH

Office: 855 Sherman Ave., Salt Lake City, Utah. Mine office: Hughes Canyon, Salt Lake Co., Utah. D. A. Buck, pres.; H. H. Paterson, vice-pres.; B. A. M. Froiseth, sec.-treas. Organized March 17, 1906, under laws of Utah, capitalization \$50,000, shares 20 cts. par, nonassessable; issued, 180,000 shares. Lands, 6 claims, unpatented, 7 miles from railroad, opened by shaft and tunnel, with about 650' of workings, showing gold and silver-copper ore. Idle except for annual assessment work.

ST. PAUL MINING & REDUCTION CO.

COLORADO

Mine office: Silverton, San Juan Co., Colo. Norwood Johnson, pres. and treas.; J. B. Ross, vice-pres. and gen. mgr.; Frank L. Ross, sec., at last accounts. Organized March, 1908, under laws of Colorado, capitalization \$100,000, shares \$1 par. Owns 1 claim, in the Red Mountain district, an old mine that formerly shipped some ore netting \$1,000 per carload. The mine has a 300' shaft, with levels at 200' and 300', developing small but rich ore shoots, said by management to carry about 8% copper, 10% lead, 10% zinc, 5 to 10 oz. silver and 1 oz. gold per ton. Presumably idle.

ST. REGIS COPPER MINING CO., LTD.

MONTANA

Mine office: St. Regis, Missoula Co., Mont. G. F. Franklin, superintendent. Organized March, 1906. Lands, bought for \$35,000, are developed by tunnels of 400 to 500', showing several well-defined veins, carrying gold-copper ore.

ST. REGIS COPPER MINING & MILLING CO.**MONTANA**

Office: Missoula, Mont. Mine office: St. Regis, Missoula Co., Mont. S. J. Wilson, pres.; F. W. Wilson, sec.-treas.; Peter Strobel, supt. Organized May, 1901, under laws of Montana, capitalization \$300,000, shares \$1 par, in half preferred and half common stock.

Lands, 5 claims, also a 15-acre mill site and miscellaneous lands, 180 acres, on the Northern Pacific railway. Property shows quartzite and shale, with 2 orebodies under development of 6' estimated average width, carrying chalcopryite ore said to give average assays of 8% copper and \$1.50 gold per ton. Development is by tunnels of 60', 380', 800' and 600'.

ST. VALENTINE GOLD & COPPER MINING CO.**ARIZONA**

Office: Sawtelle, Cal. Mine office: Parker, Yuma Co., Ariz. S. S. Denton, president and general manager, at last accounts. The mine was developing with a small force in 1910.

SALIDA COPPER CO.**COLORADO**

Office: 16 State St., Boston, Mass. Operating office: 709 Colorado Bldg., Denver, Colo. Mine office: Salida, Chaffee Co., Colo. Lester C. Wead, pres.; Edw. C. Williams, sec.; Wm. Tudor, treas., at last accounts. Organized Oct. 26, 1908, under laws of Arizona, capitalization \$500,000, shares \$1 par. Controls the Mountain Mining Co., of Georgetown, Clear Creek Co., Colo., through stock ownership. Property was formerly held by the Shawmut Consolidated Copper Co., which this company seems to have succeeded.

Lands, about 200 acres, 5 miles from Salida, include the Sedalia mine, 1 patented claim, 20 acres. Company is also said to hold 60 acres of patented ground under bond and lease. The Sedalia mine has a vein of 35 to 40' estimated average width, carrying oxidized copper ores, mainly below smelting tenor, to shallow depth, succeeded by chalcopryite ore said to average 3 to 4% copper and \$1.40 per ton in combined gold and silver values, but also carrying an average of 4.5% zinc. The mine is developed mainly by a 2,000' tunnel to depth of 700' and is said to have about 2½ mi. of workings.

Equipment includes electric power and an 8-drill air compressor and the mine is connected with the mill by a 1½-mile tramway.

The 50-ton reduction plant, known as the Colorado mill, includes a concentrator and leaching plant, 76x119' in size and 4 stories high. The leaching plant, idle for some years, is said to have effected an extraction of 77% of assay values, as against an extraction of 85% of assay values in the

SALINA GROUP.**WASHINGTON**

Mine address: Rock Cut, Ferry Co., Wash. C. F. Taylor, owner. Lands, 3 claims, on the Kettle river, in the Orient district, well timbered, showing copper ore said to carry an average of 6.5% copper and \$1.60 in combined gold and silver values.

SALISBURY COPPER CO.**NORTH CAROLINA**

Idle. Address: Capt. W. M. Wiley, Salisbury, N. C. Mine near Gold Hill, Rowan Co., N. C. T. B. Brown, pres.; W. S. Blackmer, sec.-treas.; Richard Eames, Jr., gen. mgr., at last accounts. Organized 1904, under laws of Arizona, capitalization \$100,000, shares \$100 par.

Lands, 50 acres, freehold, showing altered schists, carrying a fissure vein with N.-E. strike, and estimated at 4' width. Developed by a 100' shaft, showing chalcopryite reported to average 5% copper and \$5 gold per ton. Is unfavorably regarded.

SALMON RIVER MINING CO.**NEVADA**

Office: 19 West Granite St., Butte, Mont. Mine near Contact, Elko Co., Nev., carries gold and silver-bearing copper ore. Had gasoline power and a small smelter. No returns secured.

SALMON RIVER MINING & MILLING CO.**WASHINGTON**

Mine office: Conconully, Okanogan Co., Wash. Wm. McDaniel, manager, at last accounts. Lands, on Peacock mountain, are said to give a fair showing of copper. Development by tunnel was planned. Idle.

SALT LAKE-CALIFORNIA COPPER CO.**CALIFORNIA**

Office: 302 Hooper Blk., Salt Lake City, Utah. Mine office: Smith River, Del Norte Co., Cal. W. Mont Ferry, pres.; Isaac Sparey, vice-pres.; J. H. Turner, sec.-treas. and gen. mgr.; preceding officers, C. W. Hoover, Jas. Ivers and L. A. Mehse, directors. Organized Nov. 29, 1907, under laws of Utah, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$841,615.

Lands, 14 claims, unpatented, near Smith river, in the Low Divide district, 120 miles S. W. of Grants Pass, on the S. P. R. R. and 12 miles from the coast. The mine, which was one of the first copper properties on the Pacific coast, was operated 1857-67, when closed by the low price of copper. Claims show 4 parallel shear zones, with prominent gossans, traceable about 3 miles, ore occurring in lenticular masses and shoots, in serpentine or altered peridotite. The zone has a N.-S. strike, and average dip of about 70°, the orebodies ranging 3 to 16' in width, carrying chalcocite and chalcopyrite, estimated by the management to average about 16% copper, which presumably is from selected ores. The mine has a 180' shaft, with about 3,500' of workings. Old workings are said to extend down to the 500' level.

There are 3 mine buildings. Small shipments, 1907-08, returned 16 to 30% copper, and production 1908, was 300 tons of ore, shipped by sea giving returns of 16 to 30% copper, with an average of about 20%, estimated to have yielded 120,000 lbs. fine copper. Idle, except for annual assessment work, since early 1910, with no immediate plans for resumption. Property is for sale.

SALT LAKE COPPER CO.**UTAH**

Office: 11 Broadway, New York. Operating office: McIntyre Bldg., Salt Lake City, Utah. Mine office: Lucin, Box Elder Co., Utah. Frederick Lewisohn, vice-pres.; E. C. Westervelt, treas.; other directors, Walter Lewisohn, S. W. Peck, E. H. Westlake, E. J. Macnamara, Philip S. Henry, O. B. Van Sant and J. E. Schoenberg; Geo. B. Wilson, mgr. Organized Oct. 10, 1906, under laws of Maine, capitalization \$2,200,000, shares \$10 par. Debentures \$118,000, at 6%, payable out of net earnings.

Lands, 108 claims, known as the Copper Mountain mine, at an elevation of 7,200' above sea level, in the Newfoundland district, and 100 acres within the limits of Salt Lake City.

The Copper Mountain mine has a number of tunnels and shafts, the 1,500' main tunnel having a back of about 400', and a 500' tunnel has been planned to be driven 1,200', to enter the hoped-for sulphide zone. The mine has upwards of 2 miles of workings, and was estimated, in 1908, to have in sight and blocked out, 75,306 tons of copper ore of 1.1% average tenor, not at present commercial ore; 27,960 tons of 3.13% copper ore, and 138,370 tons of ore of 7.2% copper tenor. Ore shipped, apparently all oxidized, has averaged about 7% copper tenor. Production, 1912, was 5,498 tons of ore, yielding 833,926 lbs. copper.

SALT LAKE GROUP.**NEVADA**

Office: Contact, Elko Co., Nev. W. F. McArdle, superintendent. Lands, 17 claims. Property shows an area of monzonite, impregnated with copper minerals and with commercial ore at a depth of 40 to 150', as proven by shaft work. Development is by a shaft 75' deep, Oct., 1913.

Equipment includes a small hoist and other necessary development machinery.

SALTESE CONS. COPPER MINING & MILLING CO. MONTANA

Reorganized March, 1911, as the Saltese Mining & Milling Co.

SALTESE MINING & MILLING CO. MONTANA

Address: C. I. Grismoe, secretary, Mullan, Idaho. Mine near Saltese, Missoula Co., Mont. A. P. McRae, pres.; O. V. Manring, treas.; preceding officers, J. B. Ward and Patrick Gleason, directors, at last accounts. Organized March, 1911, as the successor of the Saltese Cons. Copper Mining & Milling Co., capitalization \$1,500,000, shares \$1 par, assessable. Levied an assessment of 1 mill per share, Sept. 16, 1911.

Lands, 12 claims, 240 acres, east of Mullan, near the National mine in the St. Regis district, about 8 miles N. W. of Saltese. The Property is developed by 2 tunnels aggregating 1,000'. The lower one, 655' in length, opens a 13' vein, probably the Black Traveler vein, at 460' from the portal, which is said to show 5' of high-grade copper ore. The tunnel is being extended to cut the big iron-capped vein seen on the surface. Property considered promising.

SALTILLO, S. A.; COMPAÑÍA MINERA DEL. MEXICO

Office: Primera de Galeana No. 2, Saltillo, Coahuila, Mex. Mine and works office: Mazapil, Zacatecas, Mex. Lic. Miguel Cárdenas, pres.; Ramón J. Rodríguez, vice-pres.; Pedro García León, sec.; Dámaso Rodríguez Fuentes, treas.; Ing. Camilo Figueroa, gen. mgr., directors; Serapio Chavez, mine supt.; Regulo Fuentes, mill supt. Organized June 15, 1899, under laws of Mexico, capitalization 100,000 pesos, shares 100 pesos par, fully paid. Dividends were 10,000 pesos in 1907; 15,000 pesos in 1908. Annual meeting, Jan. 31, each year.

Owens the Jesus Nazareno mine with 116 acres of mineral land and 2,099 hectares of miscellaneous lands, in the Nazareno mining district of Mazapil, 10 miles from a railway. The mine has an orebody carrying auriferous lead and copper sulphides sufficiently developed to produce 1,000 metric tons of silver-lead ore monthly. The company has a 5-mile private tram line, and is equipped with a 135-h. p. gas and electric plant.

SALTILLO MINING & MILLING CO. MEXICO

Mine office: El Salado, Catorce, San Luis Potosí, Mex. Merle M. Stewart, gen. mgr., at last accounts. Property is El Saltillito mine, developed by shafts and tunnels, carrying gold and silver-bearing copper ores, with values mainly in the precious metals. Equipment includes steam and electric power, and there is a 3-stamp mill. Presumably idle.

SAMSON MINING CO. UTAH

Is a subsidiary of the Bingham Mines Co., under which title the property is described.

SAN ACASIO y ANEXAS; COMPAÑÍA MINERA DE. MEXICO

Mine office: San Juan de Guadalupe, Durango, Mex. Property includes the San Acasio and Tres Rosas mines, carrying gold and copper ores. Has steam power. Presumably idle.

SAN ANTONIO COPPER CO. MEXICO

Address: Geo. J. Eisele, sec.-treas., Iron Mountain, Mich. Mine office: San Antonio de la Huerta, Sonora, Mex. Otto C. Davidson, pres.; Dr. J. A. Crowell, vice-pres.; preceding officers, John Uno Sebenius, D. M. Clemson, Hon. Richard C. Flanagan, E. G. Kingsford and W. H. Johnston, directors; John E. McIntyre, supt. Organized Sept. 23, 1908, under laws of Arizona, capitalization \$2,500,000, shares \$10 par; issued, \$1,000,000 full paid and \$1,000,000, with \$3.50 paid on the latter. Direct title is held through the San Antonio Copper Co., S. A., organized April 12, 1908, under laws of Mexico,

with all stock owned by this company. Statement of June 1 showed a cash balance of \$6,000 with no liabilities. Annual meeting, second Monday in April.

Lands, 9 groups, about 7,500 acres, with 2,000 acres about 3 miles from San Antonio de la Huerta, near the Yaqui river. The property was worked 1862 in a small way.

Lands show a mineralized zone of 200 to 500' width. Ore includes high-grade oxides and carbonates, with sulphides of good average tenor, there being a considerable quantity of chalcocite, giving assays up to 11% copper. Development work consists of 20 tunnels with 15,000' total workings, opening 7 separate orebodies in 2 tunnels, with 4,000' of workings in ore. Mr. Dwight E. Woodbridge estimated, March 4, 1910, that the San Antonio had exposed on 1 plane, 300,000 tons of ore, figured conservatively, averaging 7% copper, with very low values in the precious metals, and that the newer tunnels should increase this tonnage five-fold. Railway connections to within 2.2 miles of the main tunnels were secured, 1910, and will be extended to the tunnel mouth as soon as peace prevails again. Operations were suspended Aug. 1, 1912, on account of revolutionary disturbances. Property considered promising and management good.

SAN ANTONIO MINING CO.

COLORADO

Office: 312 Century Bldg., Denver, Colo. Mine office: Red Mountain, Ouray Co., Colo. M. T. Chestnut, pres. and gen. mgr.; Otto Koehler, vice-pres.; Wm. L. Stephens, sec.-treas., at last accounts. Organized Feb. 5, 1908, under laws of Colorado, capitalization \$500,000, shares \$1 par.

Lands, 30 claims, about 200 acres, a 20-acre mill site and 10 acres miscellaneous lands, 1 mile from a railway, in the Red Mountain district of Ouray and San Juan counties. Property, including the Carbon Lake mine, shows porphyry, carrying several orebodies, estimated at 20 to 30' width, traceable for more than 3,000' and reported by the company to show enargite ore carrying 12% copper, 10% lead, 10 oz. silver and \$3 gold per ton, which is from a narrow paystreak.

Development is by shafts of 37' and 200', the Camp Robber tunnel of 625', and the Koehler tunnel of 2,800', with a back of about 500'. Equipment includes a 5-drill air compressor and there are 10 mine buildings and dwellings. Idle several years.

SAN BERNABE y ANEXAS; COMPAÑÍA MINERA.

MEXICO

Office and mine: Zacatecas, Zacatecas, Mex. C. A. Bentley, manager, at last accounts. Lands, 25 hectares, including La Confianza, El Faro and La Fama mines, west of the Malanoche mine. Lands include the oldest mine in Zacatecas, discovered about A. D. 1546, which was a considerable producer of silver. Property formerly was under option to an English company, but option was dropped after unwatering the old shaft. Ore is copper, associated with some lead, values being mainly in silver.

SAN BERNARDO MINING CO.

MEXICO

Is the Mexican incorporation of the Southern Sonora Development Co., controlled by the Sonora Central Mines Co.

SAN CRISTOBAL COPPER CO.

NEW MEXICO

Letter unclaimed at 116 Broad St., New York. Mine Office: Arroyo Seco, Taos Co., N. M. Richard Hopkins, pres.; B. F. Shakespeare, sec.; J. K. Turner, mgr., at last accounts. Organized 1901, as successor of Rio Hondo Copper Mining Co. Lands, 1,850 acres, with water rights and a railroad franchise. The mine has an 80' vein carrying copper, gold, silver and lead ores, opened by a 1,000' tunnel. Original development was for copper, but later operations have been confined to developing a big ledge of gold-bearing quartz. Equipment includes a 10-stamp mill and 25-ton cyanide plant, and there is said to be a small smelter. No returns secured.

SAN FELIPE MINING CO.**MEXICO**

Office: Philadelphia, Pa. Mine office: Hostotipaquillo, Jalisco, Mex. Col. N. Z. Seitz, president and general manager, at last accounts. Organized 1902, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. The property includes a mill, claimed to have 50 tons daily capacity. The company is said to have paid dividends from stock sales and was considered by Horace J. Stevens as a rank bit of stockjobbery. Idle and probably defunct.

SAN FERNANDO; MINA.**MEXICO**

Idle. Office: San Fernando, Durango, Mex. John T. Canfield, manager, at last accounts. Property includes La Fortuna group, carrying gold and silver-copper ores. Equipped with water and electric power, a 100-ton concentrator and a 40-ton smelter. The property was operated formerly by the Fernando Copper Mining Co., and it is generally understood that the mine was effectively robbed before abandonment.

SAN FRANCISCO GROUP.**MEXICO**

Mine office: Matehuala, San Luis Potosí, Mex. W. B. A. Dingwall, manager. Property includes the San Francisco and San Miguel mines, carrying gold, silver and copper ores. Has steam power, lixiviation plant and a 50-ton mill. Property reported under option to Guggenheim interests in 1912.

SAN JUAN BAUTISTA MINING CO.**MEXICO**

Office: 513 Ouray Bldg., Washington, D. C. Mine office: Moctezuma, Sonora, Mex. Dr. F. S. Chamberlain, pres.; A. G. Drake, sec. and mgr.; Wm. Carter, treas.; Geo. F. Woodward, gen. mgr.; Wm. M. Reese, supt., at last accounts. Organized March, 1906, under laws of Arizona, capitalization \$5,000,000, shares \$10 par.

Lands, 19 claims, on El Cerro Rosario, include antiguas showing large slag dumps, remaining from ancient smelting operations. Property carries a mineralized zone between limestone and porphyry of about 1,000' claimed width, traceable nearly 1,500'. Development is by a 2-compartment 100' shaft on the Rosario claim, also shafts of 50' and 126' on other claims. La Bronzosa mine carries argentite, stephanite and chalcopryrite ores with pyrite, and La Cobrizza mine is said to show 30' of ore carrying highly argentiferous cuprite. Idle several years.

SAN JUAN GRANDE MINE.**MEXICO**

Address: Soyopa, Sonora, Mex. R. E. Faver and A. G. Pace, owners. Property, 12 miles from Soyopa, is developed by 3 shafts of 50', 50' and 25', and a short tunnel, showing a 2' vein of copper ore, said to assay up to 50% copper, 30 oz. silver and \$10 gold per ton. The mine has no power equipment.

SAN LAZARUS MINES CO.**NEW MEXICO**

Idle. Office: 2837 Hennepin Ave., Minneapolis, Minn. Mine near San Pedro, Santa Fé Co., N. M. R. C. Thompson, pres.; Dr. Edw. Gorgen, vice-pres.; L. J. Hemen, sec.; Clarence R. Thompson, treas.; Geo. W. Churchill, gen. mgr. Organized March 9, 1904, under laws of New Mexico, capitalization \$2,000,000, shares \$1 par, nonassessable; issued, \$1,500,000.

Lands, 10 claims, unpatented, 200 acres, show a contact deposit between syenite and limestone, of 3' average width, N.-S. strike and dip of 15 to 25°. This deposit carries copper carbonates and chalcopryrite ore estimated by the management to average 3 to 12% copper, without lead or zinc, 15 oz. silver and \$2 to \$6 gold per ton. Lands are in 3 groups, 2 miles from San Pedro, adjoining the Santa Fé Gold & Copper Mining Co. Development is by a 405' incline shaft, and tunnels of 300', 350', 200' and 450', estimated to show 1,000 tons of ore,

Equipment includes a small steam plant and 20-ton concentrator with Dodge crushers, Huntington mill and 1 Wilfley table.

SAN LUCAS COPPER CO.

MEXICO

Is controlled, through ownership of entire stock issue, by El Magistral Copper Co. (which see).

SAN LUIS; CIA. BENEFICIADORA.

MEXICO

Works office: San Luis de la Paz, Guanajuato, Mex. Owns the Ojo de Agua smelters. Idle.

SAN LUIS MINING CO.

MEXICO

Office: 15 William St., New York. Mine office: Panuco de Coronado, Durango, Mex. David F. Beggs, pres. and treas.; Col. Britton Davis, managing director; C. P. Jacobs, F. C. Hanford, W. B. Raymond, Wm. F. Read and Hollister S. Logan, directors.; Myra B. Martin, sec.

Organized 1900, under laws of West Virginia, and capitalization increased, 1905, to \$3,000,000, shares \$1 par. First dividend, 1%, was paid Jan., 1906, and a second dividend was paid July, 1906, both unearned. Direct title to this property apparently is held in the name of Lucía Mining Co. Annual meeting, last Tuesday in February.

Lands, 506 pertenencias, 1,241 acres, in 64 groups, and a 25-acre mill site, in the San Lucas and Pánuco de Coronado districts of Durango. Company also claims to hold El Cura ranch, 35,000 acres.

The mineral property shows limestone and porphyry, carrying fissure veins and contact deposits, the company reporting 64 orebodies, of which 6, under development, were estimated by the management to average 3% copper, 12% lead, 1% zinc, 35 oz. silver and \$4 gold per ton, mainly from sulphide ores. The mines were discovered A. D. 1650, and worked more or less irregularly until 1830, when closed on account of water and Indian troubles, remaining idle until reopened, 1901, by the present company.

The San Luis mine shows a considerable body of copper ore, of low average tenor, with some high-grade silver ore.

The Potosina mine, with 1,994' of workings at last accounts, is said to show, at the western end, a considerable body of ore of smelting grade and a large quantity of milling ore.

The San Gonzalo mine, 350' deep, has a vein showing mainly low-grade ores, carrying silver values above, with copper on the lower levels, and is reported also to have a 2' vein carrying 25 kgs. silver per ton, with some gold.

The Castellana mine carries a continuation of the vein of the San Gonzalo mine, next west, said to have been proven for 1,600' by trenches and pits of 10 to 60' depth, and a 120' shaft, now idle.

The Sidney has a 2' vein of galena, giving assays up to 45% lead, 4 oz. silver and 3 grams gold per metric ton, opened by a shallow shaft, but has been idle for some years on account of water.

The San Lucas mine, 19 hectares, about 35 miles N. W. of Gabriel, is an old property claimed to have nearly 2 miles of workings, carrying mainly lead and zinc ores, and presumably is idle.

The Adventura mine, adjoining the San Lucas, has a heavy gossan over a 3' vein of carbonate ore, claimed to give assays of 32% copper and 12 grams gold per metric ton, developed by an old shaft.

The San Pablo mine has parallel veins said to carry 6 to 36" paystreaks of sulphide ore, giving assays up to 16% copper, 360 oz. silver and 14 grams gold per ton. Development is by an abandoned incline shaft and a 175' vertical shaft, latter equipped with headgear and hoist.

Equipment includes steam plants, claimed to aggregate 750 h. p., with 6

hoists and 2 Ingersoll-Sergeant air compressors of 12 drills combined capacity.

Buildings are claimed to include a machine shop, carpenter shop, smithy, offices, 4 general stores and a large number of dwellings for workmen, with a total of 175 buildings.

The 60x180' mill has 2 crushers, 1 jig and 4 Bartlett tables. Concentration seems to have proven more satisfactory than leaching.

The Trinidad leaching mill, of 120 tons claimed daily capacity, has 2 calcining furnaces and apparently treated only about 40 tons of ore daily, when in operation.

Idle on account of revolutionary disturbances in Mexico. The company is one of the Treadwell-Logan-Martin promotions and its early history is described in Vol. X by the late Horace J. Stevens.

SAN LUIS POTOSI SMELTER.

MEXICO

Owned by Compañía Metalurgica Mexicana.

SAN MARTÍN y ANEXAS, S. A.; COMPAÑÍA MINERA.

MEXICO

Office: Apto. 145, Oaxaca, Mex. Mine office: San Martín de los Cansecos, Oaxaca, Mex. Frank M. Leonard, pres. and gen. mgr.; Lic. Jesús Acevedo, vice-pres.; Ranulfo Bravo, sec.-treas. and supt.; preceding officers, Frank J. Woods and Alfredo Castillo, directors. Organized Jan. 15, 1907, under laws of Mexico, capitalization 400,000 pesos, shares 10 pesos par, in 35,000 fully paid shares, and 5,000 assessable shares; issued, 37,995 shares, at last accounts.

Owns 53 pertenencias, including El Billete de Banco, King Dodo, La Liga, Las Virginias, La Maria and La Roseta mines, about 10 miles from Ocotlan. The San Martin property formerly owned was sold, 1911, for \$500,000.

Property shows diorite cut by a 6' vein, carrying silver ore assaying 5 kgs. silver and 50 grams gold per ton.

Development consists of a 160' shaft, on the Maria, an 80' shaft on the Billete de Banco and a 350' tunnel on La Liga claims.

The political disturbances in Mexico have caused a suspension of operations and the mine is now filled with water. Property considered promising and management good.

SAN MARTIN MINING CO.

MEXICO

Office: Paseo Bolivar 407, Chihuahua, Mex. Mine office: Uruáchic, Chihuahua, Mex. John J. Clague and John J. Waterson, managers, at last accounts. Lands, 68 hectares, have 4 shafts and a 1,600' tunnel developing copper, lead, zinc, silver and gold ores. Equipment includes a 50-h. p. Pelton wheel, and a concentrator with two 4' Bryan mills, 2 Bartlett tables and 3 Wilfley tables, and there is a small smelter with a 25-ton reverberatory furnace. Presumably idle.

SAN MATEO, S. A.; CIA MINERA.

MEXICO

Office and mine: Velardena, Durango, Mex. Carlos Michaud, pres.; Lloyd A. Rone, mgr. Organized 1911, as successor of the Hileta Gold & Silver Mining Co. Lands, 72 acres, including the Santo Tomas, Bolsa and other mines, and a 60-acre mill site. Property is reported to show 5 fissure veins in limestone and porphyry, having a generally E.-W. strike. One vein of 12" to 3' width is developed by a 1,600' tunnel, with 6,000' of workings, carrying ore said to average 1% copper, 6% lead, 36 oz. silver and \$10 to \$50 gold per ton. Equipment includes steam and gasoline hoists, good for 1,000' each, and a 3-drill air compressor. There are 9 buildings.

SAN PABLO; COMPAÑIA MINERA.

MEXICO

Mine office: San Pedro de las Colonias, Parras, Coahuila, Mex. Juan

Cuyas, superintendent, at last accounts. Property carries gold, silver and copper ores. Presumably idle.

SAN PEDRO COPPER CO., S. A.

MEXICO

A Mexican corporation, a subsidiary of the Greene Cananea Copper Co. H. B. Paull, vice-pres.; George Young, sec.; J. V. Montague, treas.; preceding officers, J. S. Douglas and S. P. Applewhite, directors. The entire capital stock is owned by the Greene Cananea Copper Co. This company holds title to the following mines: America, Bryan, Copper Belt, El Oriente, Las Dos Naciones, Seguro, Square, Swansea, eastern part of Massey No. 2, and owns a three-fortieths undivided interest in the Sierra de Cobre mines. (See Greene Cananea Copper Co.).

SAN ROBERTO MINING CO.

MEXICO

Office and mine: Zacatecas, Zacatecas, Mex. C. A. Bentley, general manager, at last accounts. The mine, opened to depth of 300', shows copper and lead ores, occasionally assaying up to 30% copper, with good gold and silver values. The mine has given a limited production of excellent ore. Equipment includes a malacate, for hoisting. Presumably idle.

SAN SIMON COPPER CO.

ARIZONA

Office: Marquette, Mich. Mine office: Paradise, Cochise Co., Ariz. Nathan M. Kaufman, pres.; Hon. Norman W. Haire, vice-pres.; S. R. Kaufman, sec.-treas.; preceding officers, Thos. F. Cole, John A. Duncan, Wm. G. Rice and Thos. H. Collins, directors. Organized 1907, under laws of Arizona, as a reconstruction of the Chiricahua Development Co., capitalization \$2,500,000, shares \$10 par.

Lands, 40 claims, 7 patented, about 750 acres, 16 miles from nearest railway, at Rodeo, taken over April, 1903, by predecessor of present company, and previously operated by Capt. Thos. Burns as a silver mine. The mine has a 750' crosscut tunnel with a 100' winze 700' from the portal, cutting 50' of leached ore, apparently the apex of a sulphide orebody. The 400' Mars shaft, sunk on a vein having a 150' gossan, passed through leached ore and is bottomed in chalcopyrite of 2 to 4% copper tenor. The 400' Planet shaft has drifts on the 4th level.

Equipment includes two 150-h. p. boilers, two 2,000' Lake Shore double-drum hoists, and a 16-drill Sullivan air compressor. There are several mine buildings. Idle, except for annual assessment work.

SAN TIMOTEO MINING & SMELTING CO.

MEXICO

Idle. Mine office: Uruachic, Chihuahua, Mex. T. A. Ripperdan, superintendent. Mine carries auriferous and slightly argentiferous copper ore, said to average about 50 pesos per ton in gross values. A smelter, built 1909, has a 25-ton reverberatory matting furnace.

SAN XAVIER COPPER CO.

MEXICO

Idle. Office: Tucson, Ariz. Mine office: San Xavier, Sonora, Mex. C. C. Rountree, pres.; Wm. Foster, sec., at last accounts. Organized under laws of Arizona, capitalization \$1,000,000, shares \$1 par and holds direct title to lands through the Compania Minera de Cerro Verde, S. A., organized in Mexico.

Property, 1,440 pertenencias, 3,500 acres, 80 miles east of La Colorado in the Hermosillo district, Sonora. Company also owns 300 pertenencias lying 24 miles to the southward and about 4 miles north of the Yaqui river.

SANTA ANA-ARIZONA MINING CO.

ARIZONA

Letters sent to mine office, Middlemarch, Cochise Co., Ariz., are unanswered. A. W. McPherson, pres.; Geo. H. Neale, vice-pres.; A. F. Gressler, sec.-treas.; Wm. Goar, gen. mgr., at last accounts. Organized April, 1906, under laws of Arizona, capitalization \$2,500,000, shares \$1 par.

Lands, 14 claims, unpatented, 280 acres, between the Middlemarch and

Black Diamond mines, on Dragoon mountain, in the Black Diamond district, 8 miles from the Southern Pacific railway at Pearce. The property shows limestone and porphyry, with 2 orebodies, under development, that show carbonates and chalcopryite ore, estimated by the management to average 10% copper, 15% lead and 6 oz. silver per ton, which is high. Development is by tunnels of 70' and 80', and by shafts of 56', 110' and 300'.

Equipment includes a small steam plant, with a 10-h. p. hoist, good for 500' depth, and there are 2 buildings. Idle some years.

SANTA CRUZ MINING CO.

MEXICO

Is a subsidiary of the Sonora Central Mines Co., and properties described under that title.

SANTA EDUBIJIS MINE.

MEXICO

Office: Union de Tula, Autlan, Mex. Dargin & Richardson, owners. Lands, 60 pertenencias, 7 miles S. W. of Ayutla, show a fissure vein of 5 to 10' width, in diorite, carrying argentiferous oxides and carbonates, associated with hematite. Has a 130' shaft and 325' crosscut tunnel reported to show some ore blocked out for stopping. Presumably idle.

SANTA FE CONSOLIDATED MINING CO.

MEXICO

Mine address: Yzabel, Sonora, Mex. P. J. Tehaney, president and general manager, at last accounts Organized April, 1909, under laws of Arizona, capitalization \$500,000, shares \$2.50 par.

Property consists of 238 hectares, on the Sonora river, 9 miles below Cananea, worked in 1886 by Col. Wm. C. Greene. Development includes the 350' Santa Fe shaft and 206' Montoyo shaft, showing veins with small shoots of sulphide ore assaying up to 7% copper and 300 oz. silver per ton. Equipment includes a hoist, and management was said to plan erecting a 100-ton mill.

SANTA FE; MINA.

MEXICO

Idle. Mine office: Salto de Agua, Palenque, Chiapas, Mex. This property, formerly held by the Chiapas Mining Co., Ltd., is developed by a 1,560' tunnel and a 200' main shaft, showing a mineralized zone of about 100 meters width, between diorite and limestone, apparently formed by contact metamorphism. Values are mainly in copper ore, but the ore is extremely complex, carrying cuprite, malachite, bornite, chalcopryite, tetrahedrite, chrysocolla, sphalerite, galena, and free gold, associated with pyrite, with a gangue that is mainly wollastonite. The best grade of concentrating ore is mainly bornite, disseminated in a gangue of wollastonite and garnet. Equipment includes a water-power plant, 30-stamp mill, 100-ton concentrator and 75-ton smelter. Mine was actively worked and extensively developed under former ownership, producing a gold-copper ore carrying auriferous bornite that was difficult to treat, and despite abundant capital and experienced management, property could not be made profitable.

SANTA FE COPPER & GOLD MINING CO.

MEXICO

Office: 1207 Fort Dearborn Bldg., Chicago, Ill. Is controlled through stock ownership by International Copper & Gold Co., which is itself a subsidiary of the Sonora Central Mines Co. Lands are 8 groups, in the states of Sonora and Sinaloa. Described under Sonora Central Mines Co.

SANTA FE GOLD & COPPER MINING CO.

NEW MEXICO

Office: 11 Broadway, New York. Mine office: San Pedro, N. M. E. C. Westervelt, pres.; E. J. Macnamara, sec.-treas.; preceding officers, O. B. Van Sant, Ernest W. Brown, Herman Asendorf, J. DeSmet Maguire, M. Kaufman, O. B. White and Chas. N. King, directors; Haines Gridley, supt.

Organized Jan. 25, 1899, under laws of New Jersey, capitalization \$2,500,000, shares \$10 par, as a reconstruction of the Santa Fe Copper Co. The company began business with \$500,000 cash, and had a cash balance of \$27,-

983, Jan. 1, 1912. State Street Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, fourth Tuesday in January.

Owens the San Pedro mine and 49,400 acres land, 3,400 acres of copper claims and 46,000 acres of miscellaneous lands, including coal areas of promise, all in the San Pedro land grant, Santa Fe county, N. M. The San Pedro mine, 21 miles from the Santa Fe railway, is opened by a single shaft, on a blanket vein of 150' average thickness, dipping at an angle of less than 15°, about half the orebody being workable, though of low average grade. Ore is chalcopyrite, with garnet and quartz gangue, and, being highly silicious, requires heavy iron and lime fluxes. Ore smelted, 1907, returned an average of 2.7% copper, 0.8 oz. silver and 75 cts. gold per ton.

Production was begun Jan. 1, 1901, and suspended Nov., 1901, after which nothing but diamond drilling was done, until the smelter was blown in Feb. 10, 1907, but again blown out Oct. 12, 1907, since which date the management reports having blocked out 100,000 tons of ore averaging better than 3% copper, which is now being stoped.

Equipment includes a steam plant, with a hoist and a 15-drill air compressor.

The mill treats second-class ore of about 2% copper tenor, making 15% concentrates, and the management formerly planned the installation of a Wetherill magnetic separator for treating low-grade ores.

The smelter, at the mine, has one 125-ton blast-furnace, burning Colorado coke, and producing matte of about 60% average copper tenor, shipped to New Jersey for conversion.

The property employs about 350 men, labor being mainly Mexican.

Production was 370,483 lbs. fine copper in 1903, and in 1907 was 21,298 tons of ore smelted, yielding 1,223,457 lbs. fine copper, 17,625 oz. silver and 786 oz. gold, secured at an average cost of about 14 cts. per lb., after deduction of included gold and silver values. The mine was idle several years following 1907, owing to the low price of copper, but operations were resumed July, 1912. During the last 6 months of 1912, production was 801,895 lbs. copper, 13,133 oz. silver and 494 oz. gold. Net profits for the period were \$15,526.

The deposit is low in grade, though possessing an immense tonnage of potential ore. Property considered promising and management good.

SANTA GERTRUDIS MINES, LTD.

MEXICO

Mine office: Villa Alta, Oaxaca, Mex. R. H. Jeffrey, general manager, at last accounts. Property includes a number of mines, among these being La Purisima, San Guillermo and Los Remedios, all carrying auriferous and argentiferous copper and lead ores. Developed by 16 tunnels and numerous shafts, 2 deepest on the San Guillermo, having 19 levels. There is a 600-ton mill.

SANTA ISABEL MINING & MILLING CO.

COLORADO

Letters unclaimed at former offices: Colorado Springs, Colo., and Creston, Saguache Co., Colo. Howard F. Browning, superintendent. The mine is mainly a silver and gold producer, securing a little copper as a by-product. Equipment includes steam power, and a 75-ton concentrator. Idle several years.

SANTA MARIA DE LA PAZ y ANEXAS, S. A.;

CIA. MIN. y BEN. de.

MEXICO

Mine office: Teapulco, Mex. Organized Aug. 20, 1913, capitalization, 15,000 pesos. Owns the Helvetia mine carrying silver-copper ores, apparently but slightly developed. No returns secured.

SANTA MARIA DE LA PAZ; NEGOC. MIN.**MEXICO**

Office: 10 Cinco de Mayo, San Luis Potosi, Mex. Mine office: Matehuala, Catorce, San Luis Potosi, Mex. Pedro Barrenechea, pres.; Edgardo Mead, sec.; W. B. A. Dingwall, gen. mgr.; J. H. Wentworth, asst. mgr.; B. G. Lott, supt. Organized under laws of Mexico, capitalization 240,000 pesos, shares 25 pesos par. From 1895 to 1904 inclusive, the mines yielded 11,327,210 pesos worth of ore, and the company paid 5,778,270 pesos dividends therefrom.

The mines which are extensively developed carry gold and silver-bearing copper and lead ores, with values mainly in silver and lead, the gold and copper being byproducts. The ores are mined to depth of 1,500'.

Equipment includes steam and electric power. The reduction plant includes a 300-ton concentrator with Blake crushers and Chilean mills, and a smelter with two 40-ton furnaces. Company employed about 1,500 men, but was closed down Nov., 1913, on account of revolution.

SANTA MARIA GOLD & COPPER MG. & REDUCTION CO.**UTAH**

Office: P. O. Box 517, Ogden, Utah. Mine office: Utah Hot Springs, Box Elder Co., Utah. Don Maguire, pres. and mgr. Organized 1907, under laws of Utah, capitalization \$500,000, shares \$1 par.

Lands, well watered and fairly timbered, are extensive, including mill and smelter sites, lying in a very rugged territory in the Sierra Madre district of the Wasatch mountains. The property carries 7 fissure veins, practically parallel, with a strong cross-fissure, and 1 contact deposit. The veins range from 12 to 70' in width, and carry ore holding chalcopyrite, associated with pyrite and occasional small amounts of galena, ore being mainly of concentrating grade. The mine is developed by the 2,000' Clara Belle tunnel, cutting 3 veins, and planned to cut 5 more, with backs of 200 to 1,800'. The mine has about a mile of workings, showing ore developed regarded as sufficient to warrant a mill.

Buildings include a power house, having an air compressor, and a smithy and boarding house.

SANTA MARIA GROUP.**NEW MEXICO**

Address: care Geo. S. Carson, Iowa City, Ia. Lands, 5 claims, patented, about 80 acres, lying between the Chino and the Hermosa properties in the Santa Rita district, Grant Co., N. M. Property, slightly developed by Cyclone core shot-drill work, shows low-grade ore. Idle several years.

SANTA MARIA MEXICO MINING ASSOCIATION.**MEXICO**

Idle. Office: Merrill Bldg., Milwaukee, Wis. Mine near Parral, Chihuahua, Mex. Wm. G. Gruber, pres. and gen. mgr.; Arthur H. Gruber, sec. and treas., at last accounts. Organized under laws of Wisconsin, capitalization \$250,000, shares \$1 par.

Lands, 50 claims, in 3 groups, known as La Lolita, La Viola and Santa Clara, in the Galeana district of the San Blas mountains of the Sierra Madre, midway between and 25 miles from the Mexican Central and Sierra Madre Pacifico railways. Principal development is on La Lolita group, which has shafts of 75' and 150', showing oxidized ores, shipments from which are said to have averaged 15% copper.

SANTA RITA; COMPANIA MINERA.**MEXICO**

Mine office: Santa Barbara, Chihuahua, Mex. Alberto Terrazas, pres.; Miguel Horcasitas, mgr., at last accounts. Property is the Santa Rita mine, in the Sierra Chorreros, showing ore with values mainly in copper. Idle.

SANTA RITA COPPER MINING & SMELTING CO.**ARIZONA**

Office: care C. F. Elliott, P. O. Box 592, El Paso, Tex. Mine office: Arivaca, Pima Co., Ariz. Organized June, 1901, under laws of Arizona, capitalization \$3,000,000, shares \$1 par; issued, \$2,750,000.

Lands, 12 claims, unpatented, 220 acres, in the Tyndall district of the Santa Rita mountains, 13 miles from Arivaca.

The property shows granite, porphyry and diorite, carrying several veins of sulphide ore, usually at the contact of the diorite and granite. Veins range from 4 to 12' in width.

The mine has 2 shafts and several tunnels, with a total of about 2,000' of workings, mostly in low-grade ore. A new tunnel, planned to give a back of 110', was 200' long, July, 1913. The mine is without power equipment.

SANTA ROSA MINE.

MEXICO

Mine address: Fronteras, Sonora, Mex. Jas. H. Kirk, owner. Lands, 126 hectares, $3\frac{1}{2}$ miles from the Nacozari railroad, in the Cabullona mountains, in a very arid section.

Property shows several veins said to lie between porphyry and limestone, and reported to give assays up to 37% copper, 35% lead and 20 oz. silver per ton. Orebodies are isolated, small and mostly low in grade.

Development is by 5 short tunnels and 5 shafts, No. 1 being 350', and No. 3 being 300' deep, showing pockets of ore in leached iron, with a 50' orebody on the 200' level. Equipment includes a good machinery plant, with a 50-h. p. engine, and about a dozen mine buildings. Former owners shipped a little ore to the Douglas smelter. The property is under lease to J. E. Englent, of Sonora. Property has been examined by S. M. Greenidge, of Douglas, Ariz.

SANTA ROSA MINING CO., LTD.

MEXICO

Is a subsidiary of the Exploration Co. of England & Mexico, Ltd., itself owned by the Exploration Co., Ltd.

SANTA ROSA MINING & MILLING CO.

MEXICO

Letters unclaimed at former offices, Marion, Ohio, and Ayutla, Jalisco, Mex. Lands are the Chinos group, near the village of Santa Rosalia, carrying argentiferous and slightly auriferous copper ore, developed by a cross-cut tunnel showing considerable ore said to assay \$20 to \$60 per ton.

Equipment includes steam power, an old 10-stamp mill and a new 100-ton concentrator, built 1910, latter having a No. 5 Huntington mill, 4 Overstrom tables, 2 Woodbury tables, 2 Richards classifiers and 2 Callow settling tanks. Probably idle during revolution.

SANTA TERESA MINING CO., S. A.

MEXICO

Is the Mexican incorporation of Sonora Consolidated Mining Co.

SANTIAGO CONS. MINING, MILLING & TUNNEL CO. COLORADO

Mine office: Georgetown, Clear Creek Co., Colo. Wm. Rogers, mgr.; D. H. Burlingame, supt. Mine has a 5,000' tunnel showing gold and silver-bearing copper ores. Early in 1913, company was mining a 2' streak of cerrusite ore. Equipment includes steam power and a 50-ton concentrator.

SANTIAGO MINING CO.

MEXICO

Letters unclaimed at former office: St. Joseph, Mo. Mine near Parral, Chihuahua, Mex. Geo. J. Greene, pres.; Geo. Roche, vice-pres.; T. G. Travis, sec.-treas.; Nat P. Wilson, gen. mgr.; at last accounts. Organized 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 6 claims, 79 acres, near Parral, and 1 claim in Otero county, N. M. The Chihuahua property shows limestone and porphyry, carrying several fissure veins of 12' average width, giving average assays of 3.5% copper, 15% lead, 22 to 25 oz. silver and \$6 gold per ton, from oxide and sulphide ores. The mine has 7 shafts of 55 to 150' depth, with total of 755' of workings.

Equipment includes a 250-h. p. electric plant, with 3 hoists, good for

1,000' each, a 7-drill air compressor, machine shop and other mine buildings. Idle several years.

SANTIAGO MINING CO.**MEXICO**

Mine office: Zacatecas, Mex. Jas. H. Davis, manager, at last accounts. Property is a small copper-gold-silver mine near Zacatecas, developed by a 300' shaft, equipped with a small steam plant. Presumably idle.

SAPPHIRE GOLD & COPPER CO.**ARIZONA**

Office: Swansea, Yuma Co., Ariz. H. A. deRudio, pres. and gen. mgr.; Chas. B. Croner, sec. Organized Sept. 30, 1911, under laws of Arizona, capitalization \$1,000,000, shares \$2 par, nonassessable. Debentures, \$200,000 authorized, but not issued, at last reports.

Lands, 5 claims, unpatented, in the Owens district, Mohave county, 12 miles from a railway. The property carries a contact vein between quartzite and porphyry, said to be 8' wide, traceable for 800' and to show a 4' streak of high-grade gold-copper ore. Development consists of 2 short tunnels. Property is without power equipment.

SARATOGA MINING CO.**COLORADO**

Office: Union Trust Bldg., Detroit, Mich. Mine office: Idaho Springs, Clear Creek Co., Colo. F. L. Colby, pres.; Chas. R. Dunn, sec.; E. W. Pendleton, treas.; preceding officers, F. W. Blair, Edwin Dodge and E. Van Cise, directors. John Owen, gen. mgr. Organized Nov. 18, 1911, under laws of Colorado, as the successor of the Clear Creek Mining & Reduction Co., capitalization \$300,000, shares \$10 par, nonassessable; issued, 20,024 shares.

Property is the Saratoga-Gaston group, and the Cyclops claim, at Russell Gulch, opened through the Newhouse tunnel. Equipment includes steam power. The smelter, at Golden, has been disposed of.

SASCO SMELTER.**ARIZONA**

See Imperial Copper Co.

SAVAGE COPPER CO.**WYOMING**

Office: Lincoln, Neb. Mine address: Encampment, Wyo. Owns 3 claims, under lease and option to purchase to C. E. Winter and C. L. Martin, adjoining the Hidden Fortune group, above the Doane-Rambler mine. The property, developed by several shallow shafts, shows a wide vein of low-grade ore.

SAVAGE GOLD & COPPER CO.**ARIZONA**

Letters unclaimed at former offices, Chicago, Ill.; Douglas, Ariz., and Paradise, Cochise Co., Ariz. F. M. Wajtalewicz, pres.; J. A. Lewandowski, vice-pres.; P. Dryzmaliski, sec., at last accounts. Organized Jan. 6, 1904, under laws of Arizona, capitalization \$3,000,000 shares \$1 par.

Lands, 53 claims, about 1,000 acres, in the California district, lying in the eastern foothills of the Chiricahua mountains, 10 miles from Rodeo, the nearest rail station. Patents were applied for and adverses filed, 1909. The property shows 5 lenticular orebodies, of which 4, under development, are of 2 to 36' width, giving assays of 5% copper, 1% lead and from nothing to 30 oz. silver per ton, lead values being from occasional bunches of galena.

Development is by 5 shallow shafts, to depth of 300', the 710' Snowball incline shaft showing an orebody ranging up to 23' in width. There also is a 350' tunnel with about 3,000' of workings.

Equipment includes a 60-h. p. Otto gasoline engine and a 75-kw. electric generator, 2 motors, electric hoist and electric drills.

Idle since Aug., 1909, and is not regarded favorably.

SAVAGE GOLD & COPPER MINE CO. COLORADO & NEW MEXICO

Office: 315 Exchange National Bank, Colorado Springs, Colo. Mine at Santa Rita, Grant Co., N. M. J. R. McKinney, pres.; M. W. Savage, vice-

pres.; L. L. Aitken, sec.-treas.; preceding officers, J. L. Lindsey and E. C. Sharer, directors. Organized 1899, under laws of Colorado, capitalization \$1,500,000, shares \$1 par. Company owns a 50% interest in the Battle Lake Exploration Co., at Encampment, Carbon Co., Wyo., and a 20% interest in the Arizona Copper & Gold Mining Co., having 5 claims near Salome, Yuma Co., Ariz.

The New Mexican holdings are said to comprise 7 claims, 105 acres, near the Chino mine, but idle, apparently for several years.

The Colorado claims, 12 acres, form the Gold King or International Gold King mine, on Gold hill, near Cripple Creek, Teller Co., Colo., showing veins developed by a 520' main shaft.

SAVANNA COPPER CO.

NEW MEXICO

Address: Henry Hovland, Lonsdale Bldg., Duluth, Minn. Operating office: Silver City, N. M. Mine and works office: Silver City, Grant Co., N. M. David L. Fairchild, pres.; Geo. J. Lonstorf, vice-pres.; Harvey P. Smith, sec.; Lucien Merritt, treas.; preceding officers, Carl Landsee, Walter A. Barrows, Jr., C. W. Moody, Thos. A. Merritt and J. E. Rothaus, directors, I. J. Stauber, supt. Organized Sept. 16, 1908, under laws of Arizona, capitalization \$2,000,000, shares \$10 par, half in full-paid and half in part paid stock, latter \$5 paid. The company was a merger of the Copper Gulf Mining Co. and Comanche Mining & Smelting Co., and also absorbed the Casa Grande Development Co., owning in fee simple all property formerly owned by the Comanche Mining & Smelting Co. and holding all but 320 shares, or 99.36%, of the stock issue of the Copper Gulf Mining Co. In Jan., 1913, the company had 133,116 shares of full-paid stock outstanding. Cash balance, Feb. 1, 1913, was \$12,628.

The Copper Gulf Mining Co. owns its property in fee and owes the Savanna Co. \$124,464 for money borrowed to develop its claims. The combined properties consist of 199 claims, about 4,000 acres, all in Grant county, N. M., but in 5 districts. The Burro Mountain group of 149 claims, 86 patented, is in the district of that name. The company has 28 claims, 16 patented, in the Pinos Altos district, 4 patented claims in the Anderson district, 17 unpatented claims in Chloride Flat district and 1 patented claim in the White Signal district.

The claims in the Burro Mountain group constitute the principal and most valuable holdings. They are 12 miles from Silver City, less than that from Whitewater on the railroad, and close to the New Whitewater branch of the A. T. & Santa Fe R. R., now being built. The Burro Mountain properties lie south of the Phelps-Dodge properties, formerly owned by the Burro Mountain Copper Co. and the Chemung Copper Co.

The Burro Mountain group of 149 claims has an area of 2,577 acres, including about 1,000 acres of iron-ore lands, known as the Iron Mountain mine, held for fluxes, about 1 mile west of Silver City, with ranch and orchard lands, and springs having an estimated flow of 400,000 gal. daily. The Comanche group comprised 43 claims. The Copper Gulf group consisted of 1,440 acres.

The lands now held by the Savanna comprise many different groups, held at various times in the past by many different companies, including former holdings of the Copper Gulf Development Co., Comanche Mining & Smelting Co., Alessandro Copper Mining Co., Virginia Copper Mining & Smelting Co. and Leopold-Tyrone Copper Co.

The Jennie group of 4 claims, patented 1910, on the Gila river, 35 miles N. W. of Silver City, is not worked owing to its inaccessibility, and development on the Chloride Flat property has been confined to assessment work.

The Burro Mountain group show a central stock of granite-porphry, surrounded by granite and coarse-grained porphry, with no sedimentaries in the district, save a recent conglomerate forming small patches on the crests of the hills. The mineralized zone, 2 by 3 miles long, shows numerous strong and well-defined fissure veins in altered monzonite and quartz-porphry. Both these cross veins and entire sheets of intrusive porphry carry disseminated copper and iron sulphides, the fissures also having both chalcocite and chalcopyrite, associated with pyrite, little silver and practically no gold, the ore ranging 2 to 10% in copper, with an average of 3%. The upper workings of this group show oxide, carbonate and silicate ores. The group as a whole has 8 principal shafts of about 300' average depth, with 4 miles of workings, developing sulphide ore of 3 to 4% estimated average copper tenor.

The Virginia mine, having a 300' shaft, is an old property that shipped for several months in 1907 about 3 carloads of ore weekly to the Calumet & Arizona smelter said to have averaged \$23.25 per ton in value. This mine is said to have 100,000 tons of ore developed on the 100' level.

The Gettysburg mine has a 350' shaft, from the bottom of which a crosscut was run to the Fairhaven mine. Drilling on the Gettysburg apparently has not given very encouraging results.

The Fairhaven mine is developed by the Fairhaven tunnel, which crosscuts the great Sampson dike, on which the big orebody of the Burro Mountain Copper Co. is located, the tunnel cutting this orebody about 100' from its portal.

The Boone, Oquawka and Klondike shafts of the Comanche group have about 6,449' of workings. These 3 mines have shafts of about 300' depth each, and ore has been developed for about 700' in length by drifts and drill borings, latter, near the Oquawka shaft, encountering 15' of sulphides averaging 3.4% copper. The Copper Gulf mine also has a 300' shaft. "B" shaft, sunk near the Fairhaven tunnel, is 300' deep, with about 100' of drifts on the 300' level showing no commercial ore, but churn-drill borings in the vicinity have exposed a large amount of low-grade material, a small part of which is commercial ore. It is planned investigating this deposit by drifts from the shaft. In 1910, forty churn-drill holes were bored to an average depth of 440', aggregating 18,806', put down at an average cost of \$1.89 per foot.

The Savanna did considerable drilling along the boundary with the Burro Mountain Copper Co., at the joint expense of both companies, this work resulting in a rather indifferent showing on the Virginia-Copper Gulf-Colwell groups, but several holes on the Copper King group showed sulphide ore of 5.25% average copper tenor, with indications of the existence of a large body of ore, apparently improving in tenor toward the north and east, in which direction later holes have been bored, but holes at this point are much deeper than were drilled previously, being put down for 700 to 950' in depth, requiring 4 to 6 weeks per hole to drill. The holes on the Copper King claim, adjoining the Chemung mine, offer strong encouragement for the development of a large and valuable body of ore. Borings on the Faulkner claim show ore assaying 3 to 10% copper, and No. 39 drill hole, on the Altos claim, gave cores assaying 5.25% copper at depth of 135', and chalcocite averaging about 1.5% copper at depth of 200', with commercial ore from 625 to 745' depth.

The Pinos Altos group has 30 contiguous claims at Pinos Altos, about 9 miles N. E. of Silver City. The claims show fissure veins carrying complex sulphide ores. The group has 4 shafts of 400 to 900' depth, with about 30,000' of workings. The property was a considerable producer for years under the ownership of the late Senator Hearst and has large bodies of copper

and zinc sulphides, carrying up to 3% copper, and 10 to 20% zinc, with \$8 to \$20 combined gold and silver values per ton. The principal workings are the Gillette shaft sunk on Pacific No. 1 claim, and the Hearst shaft on Pacific No. 2 claim.

The Pinos Altos water supply is somewhat inadequate and a pumping plant was installed 1910, in the Michigan shaft, to furnish water for drilling and camp use. A new pumping plant was also installed at drill hole No. 21, which developed considerable water. A private railway line connects this mine with the reduction works at Silver City.

The Silver City reduction works comprise 2 mills, one being a 50-ton concentrator and leaching plant of small present importance. The new concentrator, 1,500' west of the smelter, is of about 200 tons daily capacity, equipped with crushers, 4 Huntington mills, rolls, jigs, elevators and 12 Wilfley tables, and, with minor alterations, could be brought to a daily capacity of about 300 tons. This mill also has a magnetic separation process plant for the treatment of zincy ores.

The smelter on the Silver City branch of the Santa Fe railway, has large ore bins. There are 200-ton and 300-ton water-jacket blast furnaces, 1 calciner, and 1 reverberatory furnace, and the works have a briquetting plant and a converter department. Slag losses were said to have been only 0.39% copper when the smelter was operated by the Comanche Co.

The reduction plant includes a powerhouse, boiler house, machine shop, carpenter shop, office and a number of dwellings for employees.

Mining on a commercial scale was begun early 1913. Property considered promising and management good.

SCANLAND MINE.

ARIZONA

Office and mine: Paradise, Cochise Co., Ariz. F. S. Douglas, gen. mgr.; L. H. Scanland, owner and mine supt. Lands, 12 claims, unpatented, 240 acres, also a 10-acre mill site, in the California district, show limestone, quartzite and porphyry, with 4 orebodies of 4 to 30' width, of which 1, under development, traceable about 4,500', carries oxide and carbonate ore, changing downward to ore containing chalcopryrite, galena and sphalerite. The output is estimated to average 5% copper, 20% lead and 23% zinc, with a trace of gold. Development is by a 175' shaft and 470' tunnel, with about 700' of workings. Idle several years, except for annual assessment work.

SCOTT HILL MINING CO.

UTAH

Idle. Letter unclaimed at former office and mine, Park City, Summit Co., Utah. W. D. Lewis, pres.; S. L. Raddon, sec.-treas.; at last accounts. Organized May, 1909, under laws of Utah, as a reconstruction of the Copper Apex Mining Co., capitalization \$100,000, shares 10 cts. par, assessable.

Lands, 10 claims, 7 patented, on Scott hill, between the Big Cottonwood and Uintah districts, carry lead and copper ores. Development consists of an 800' tunnel, and a shallow shaft, showing medium-grade silver-copper ore. Equipment includes a steam hoist.

SEABOARD COPPER CO.

VIRGINIA

Idle. Office: 77 South Market St., Boston, Mass. Mine office: Virgilina, Halifax Co., Va. Geo. R. Leghorn, pres.; Edward L. Pond, sec., at last accounts. Organized July, 1902, under laws of New Jersey, capitalization \$300,000, shares \$1 par.

Property, the Dorothy and Bailey mines, 135 acres, in the Virgilina district, 3 miles from the Southern railroad, shows an 8' fissure vein in schist, carrying bornite ore, estimated to average 3 to 4% copper, with combined gold and silver values of \$1 to \$1.20 per ton. Development is by shafts of 30', 265' and 115', and by 2 tunnels, of 165' each, with a total of 840' of underground workings. The ore occurs in well-defined shoots but the proportion

of shipping ore is small and the recovery in milling is low. Is not considered likely to be profitably worked.

Equipment includes a 275-h. p. steam plant, with a 25-h. p. Lidgerwood hoist, good for 500' depth, and a 5-drill Ingersoll-Sergeant air compressor. There is a 100-ton mill, and buildings include an engine house, bunkhouse and office. Company inactive since 1904, but still alive.

SEARCHLIGHT COPPER-GOLD MINING CO.

NEVADA

Idle. Office: 512 Stimson Blk., Los Angeles, Cal. Mine office: Searchlight, Lincoln Co., Nev. Samuel T. Graham, pres.; J. W. Cornick, vice-pres.; G. A. Brewer, sec.-treas. and gen. mgr., at last accounts. Organized Nov. 27, 1901, under laws of Arizona, capitalization \$1,000,000, shares \$1 par; nonassessable.

Property, 7 claims, 140 acres, reported to carry 3 fissure veins in granite with 1, under development, of 4' average width, traceable 4,500', carrying copper carbonates and chalcocite. Development consists of the 100' Oom Paul shaft and tunnels of 20', 65' and 100'. The property has no equipment or buildings.

SEATTLE-ALASKA COPPER CO.

ALASKA

Office: 638 New York Blk., Seattle, Wash. Mine office: Latouche, Latouche island, Alaska. E. Sparks, pres.; Geo. W. Terwilliger, vice-pres.; Geo. J. Hodge, sec.; Jos. Bjorn, treas. and O. B. Hess, directors. Organized under laws of Washington, capitalization \$1,000,000, shares \$1 par, nonassessable.

Lands, 35 claims, about 700 acres, near Montgomery bay, in the southern and central part of Latouche island. Claims are in 2 groups, 1 of 10 claims on tide water, with another of 25 claims about a mile from the harbor, latter being said to carry the extension of the Beatson-Bonanza vein.

Development is by a 287' tunnel, on the Delta claim, showing a vein of 4 to 6' width, yielding ore which, when sorted, assays 11 to 22% copper. The Santa Clara No. 1 claim has a 101' shaft, with an 85' crosscut, showing 2 veins, 1 of 4' width.

Equipment includes steam power, and there is a mill operated by water power, having five 1,000-lb. stamps, with room for additional stamps, 2 Card tables, and 1 slime table.

SEATTLE CASCADE MINING CO.

WASHINGTON

Office: Seattle, Wash. Mine office: Berlin, King Co., Wash. F. G. Winquist, manager, at last accounts. Lands, 6 claims, about 1 mile north of the Una mine, on Miller river, 4 miles from Berlin. Claims carry a 4 to 5' vein showing galena and chalcopryite, ore with values in silver, lead, copper and gold in the order named, developed by a 400' tunnel having a back of 275'. Equipment includes water power, an air compressor, and a small concentrator.

SEATTLE CONTACT MINING CO.

NEVADA

Mine office: Contact, Elko Co., Nev. V. A. Marshall, pres.; J. V. Marshall, supt. Property, the Delano group of 48 claims developed by a 100' shaft and 300' tunnel, with several prospect tunnels. A 3' streak of ore, cut in the main tunnel, 30' from the portal, gave assays of 25% copper, 0.5 oz. silver and \$5 gold per ton. There also is a parallel vein of 16' estimated width, said to average 5% copper. Company was shipping to Salt Lake City, at the rate of 2 carloads weekly, early 1913.

SEATTLE COPPER & ASBESTOS CO.

WASHINGTON

Office: 531 People Bank Bldg., Seattle, Wash. Mine near Leavenworth, Chelan Co., Wash. Edwin R. Peterson, president and general manager, at last accounts. Organized 1906, under laws of Washington, capitalization \$2,000,000, shares \$1 par, nonassessable.

Lands are reported by the company as 27 claims and 2 mill sites, including 7 claims known as the Chrisolite group, on Mt. Stewart. The copper group of 6 claims, 3 miles from the Aurora Mining Co., is claimed to have 2 veins, 1, of 3' width, between granite and schist, traceable 6,000', carrying melanconite, chalcocite and chalcopryite ore, estimated by the company to average 20% copper, 6 to 29% lead and 10 to 20% zinc, which figures represent selected samples only. The company also owns asbestos claims. Idle several years.

SEATTLE COPPER MINING CO.

MEXICO

Mine address: Turkey Track Ranch, via. Naco, Ariz. D. W. Davies, incorporator. The property, 8 miles S. E. of Naco, in Sonora, Mex., leased of Tom Ewing, shows a soft silicious formation carrying streaks and bunches of malachite and chalcocite ore with about 10% copper.

SECTION TWELVE EXPLORATION CO.

MICHIGAN

Office: Hancock, Mich. Mine near Houghton, Mich. B. H. T. Burritt, agent; Jas. P. Edwards, engr. Is a private syndicate, capitalization \$20,000, shares \$2 par, convertible into shares at subscription price, in case of the organization of a mining company to succeed the present syndicate.

Lands, 480 acres, held under options, lying N. E. of the Superior and next east of the Isle Royale, including the Lynch farm, lands being in Sec. 12, T. 54 N., R. 34 W. and Secs. 6 and 7, T. 54 N., R. 33 W. The property has been tested by 2 trenches and 6 diamond-drill holes, all showing more or less copper. An amygdaloidal bed, thought to be the northern extension of the Baltic, has been cut by trenches and cores taken at depth by diamond-drill borings all show copper in promising quantities. At surface the bed carries calcite and quartz, stained with copper carbonates from weathering, with some native copper and a heavy conglomerate bed, 60 to 150' in the footwall, that outcrops prominently, conforming to the conglomerate in the foot of the bed at the Baltic mine. Idle since 1910, awaiting an active market for undeveloped Michigan copper properties. Is considered promising.

SECURITY COPPER CO.

WASHINGTON

Mine office: Chewelah, Stevens Co., Wash. H. A. Sprague, pres.; D. T. Alexander, vice-pres.; L. D. Geeslin, treas.; A. H. Syverson, sec.; L. K. Armstrong, gen. mgr.; Jack Gilfallen, supt. Organized 1913, capitalization \$1,000,000.

Lands, 3 claims, 60 acres, purchased for \$30,000, include the Matterhorn group, adjoining the Standard-Chewelah, and the June-Echo mines. Claims cover a section of the "main lead" of the camp, developed on the property by 2 tunnels cutting ore. Company is planning sinking a vertical shaft with extensive underground development work in 1914.

SEDALIA COPPER CO.

COLORADO

Mine at Salida, Chaffee Co., Colo. Property was under lease to the Salida Copper Co., at last accounts.

SELBY SMELTING & LEAD CO.

CALIFORNIA

Office: Merchants Exchange Bldg., San Francisco, Cal. Works office; Selby, Contra Costa Co., Cal. H. B. Underhill, Jr., pres.; Eugene B. Braden, vice-pres.; Chas. J. Durbrow, sec.; E. N. Englehardt, supt. Organized 1875, under laws of Nevada and is controlled, through stock ownership, by American Smelters Securities Co., a subsidiary corporation of the American Smelting & Refining Co. The works represent an investment of about \$4,000,000.

The smelter, at Vallejo Junction, near Carquinez Strait, receives ore by rail and water, from all of the Pacific states, but principally from Nevada. The works include a 400-ton smelter having lead stacks, a 200-ton lead re-

verberatory, a refinery for parting gold and silver, and a plant for the manufacture of bluestone. Equipment includes steam, electric and air power. Some trouble has been had with the agricultural interests, over alleged damages from fumes, and an injunction was secured 1907, by the authorities of Solano county, but the works were not closed, and it is probable that much of the fume damage claimed was mythical. The plant includes a bag house, and also a special chamber having the Cottrell process for precipitating solids from fumes, used in connection with the parting room of the gold and silver refinery.

The Selby is perhaps the largest smelter producer of gold in the United States, or possibly in the world.

SEMINOLE COPPER CO.

UTAH

Office: 208 Brooks Arcade, Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. Clyde H. Wilson, pres.; F. L. Wilson, sec.-treas. Organized 1907, under laws of Utah, capitalization \$125,000, shares 25 cts. par.

Lands, 12 claims, adjoining property of the Wilson Consolidated and holdings of the Lucy L. Mining & Milling Co. The property in addition to veins carrying free gold, has a contact deposit between limestone and monzonite-porphyry, carrying auriferous and argentiferous copper and lead ores, with some surface ores assaying up to 30% in copper tenor. The property is also said to show lead, tin and nickel. Development is by shaft. No returns secured.

SENECA MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine near Mohawk, Mich. Rodolphe L. Agassiz, pres.; Geo. A. Flagg, sec.-treas.; Jas. MacNaughton, gen. mgr.; preceding officers, Francis L. Higginson and Thos. L. Chadbourne, directors; S. Russell Smith, supt. Organized March 23, 1860, under laws of Michigan, capitalization \$500,000, shares \$25 par, fully issued, \$10 paid. Is controlled, through ownership of 11,207 shares, by the Calumet & Hecla Mining Co. The company had a debit balance, Jan. 1, 1913, of \$142,318. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Annual meeting, fourth Monday in March.

Property, 1,880 acres, just north of the Mohawk and Ahmeek mines, is a swampy tract, somewhat irregular in outline and is heavily covered with drift. The property carries the Calumet, Keweenaw and Allouez conglomerates and the Osceola, Kearsarge and other amygdaloidal beds, this statement being based mainly upon the outcrop of the Kearsarge lode seen in the northeastern corner and extending for $1\frac{3}{4}$ miles across this property. The mine is on the Keweenaw Central railway.

The property was diamond drilled, 1907-08, giving some good cores from the Kearsarge amygdaloidal bed and was followed by the sinking of a single 3-compartment shaft, known as No. 1, located about 3,000' north of No. 1 shaft of the Gratiot mine. The collar is concreted through 14' of overburden, with an anchorage of 44' in the rock, and is watertight against seepage. The shaft is sunk in the footwall, being 60' from the Kearsarge bed on the 1st level, 250' on the 3rd level, and 220' on the 5th level. The shaft is 957' deep, with 5 levels, spaced about 200' apart to the 3rd level, below which they are opened at 175' intervals. Development show little or no copper values above the 4th level, but the bed has been opened by crosscuts and drifts on several levels, with about 2,000' of laterals. On the 5th level the Kearsarge bed is about 15' wide and for a distance of 150' carries a 4' pay-streak having fair copper values. No. 1 shaft has a large temporary frame shaft rock house, with an 18x24" crusher.

There is room on the tract for a second shaft on the outcrop of the

Kearsarge bed, but this lode must be reached by vertical or sharply inclined shafts on the balance of the property as the lode outcrops outside the holdings, though the underlay extends under the entire tract.

Equipment includes a small power house, having a Lake Shore duplex hoist raising $2\frac{1}{2}$ -ton skips, good for depth of 2,000', a 15-drill air compressor and 2 locomotive firebox boilers. Buildings include a boarding house and bunk house. Operations were suspended April, 1911. Property considered promising.

SENER-DUPEE DEVELOPMENT CO.

MICHIGAN

Office: care Thos. Hoatson, Calumet, Mich. Organized Dec., 1910, but not incorporated, being a private syndicate. Lands, 1,520 acres, held under long term options, 2 to 3 miles south of the Delaware mine and N. E. of Gratiot lake, near the eastern standstone, in about the center of Keweenaw county, and carrying about 2 miles of the strike of the Keweenaw formation. Lands are the S. $\frac{1}{2}$ of Sec. 26; S. $\frac{1}{2}$ of Sec. 27; N. $\frac{1}{2}$ of Sec. 34; N. $\frac{1}{2}$ of Sec. 35; S. E. $\frac{1}{4}$ of Sec. 34; E. $\frac{1}{2}$ of N. W. $\frac{1}{4}$ Sec. 33, T. 58 N., R. 30 W. Diamond drilling was begun Dec., 1910, and suspended Oct., 1911, resulting in the disclosure of 27 lodes, without, however, finding any deposits of commercial ore. Total footage drilled was 6,585'.

SEOUL MINING CO.

KOREA

Office: 418 First National Bank Bldg., Denver, Colo. Mine office: Hol-Kol, Hwang-Hai, Korea. Organized April 27, 1908, under laws of Connecticut. See company of same title in Part III.

SEVEN DEVILS COPPER CO.

IDAHO

Office: Huntingdon, Pa. Mine office: Landore, Adams Co., Idaho. Wm. K. MacNamara, pres.; Chas. F. Riddle, vice-pres.; Chas. H. McColloch, sec.; Fred D. Smith, gen. mgr.; preceding officers, M. J. Brundage, and Jas. A. Howard, directors; Geo. A. Jones, supt. Organized March 31, 1908, under laws of Arizona, capitalization \$2,000,000, shares \$1 par, nonassessable; issued, \$1,558,993. Debentures, \$20,000 at 6%. Annual meeting, second Tuesday in March.

Lands, 15 claims, partly patented, 175 acres, including the Arkansas, Decorah and Margaret mines, 16 miles from a railway. The property shows contact deposits, between diorite and limestone, having a strike of N. 75° W., and said to be 15 to 50' in width. These deposits carry oxidized ores, succeeded at a little depth, by sulphides, the chalcopryite and bornite ores said to average 5% copper, 2 oz. silver and \$1 gold per ton. Development is exclusively by tunnels, there being drift tunnels of 900' and 150', and a 483' crosscut tunnel, with 2,700' of workings, estimated by the management to show 156,600 tons of ore blocked out for stoping. The Arkansas mine has produced a little high-grade ore in the past.

Equipment includes a 125-h. p. electric plant, taking power from the Oxbow station of the Oregon-Idaho Power Co., and there is a sawmill near the mine.

SHAFTER MINING CO.

COLORADO

Office: 1 Broadway, New York. Mine office: Idaho Springs, Clear Creek Co., Colo. Thos. Peyton, pres.; M. S. Peyton, vice-pres.; Chas. D. Ross, sec.-treas.; Arthur H. Roller, gen. mgr., at last accounts. Organized 1880, under laws of New York, capitalization \$100,000, shares \$100 par.

Lands carry copper ores with values mainly in gold. Development is by an 800' shaft and a 5,500' tunnel. Has steam and electric power.

SHAMROCK MINE.

CALIFORNIA

Address: P. O. Box 117, Placerville, Cal. Mine office: Greenwood, El Dorado Co., Cal. Lle. H. Wilkins, owner and manager. Lands, 28 claims,

560 acres, in Sec. 26, and 12 claims, patented, 150 acres, in Sec. 24, T. 13 N., R. 9 E. Property, well watered and timbered, 3 miles from Greenwood, in the Foothill copper belt, carries about 4,500' of the strike of a copper ore-zone, having a hematite foot and porphyry hanging. Development is by the 80' Lipton tunnel, showing an orebody of 2 to 4' width, giving assays up to 4% copper, 12 oz. silver and \$10 gold per ton, and the 180' Dundee drift tunnel, breasted in a vein of about 4' width carrying a 2' pay-streak showing good values in copper, gold and silver.

SHAMROCK MINING CO.

ARIZONA

Mine office: Vicksburg, Yuma Co., Ariz. Robt. McEntee, pres.; Lawrence McEntee, vice-pres. Lands, 8 miles N. W. of Vicksburg, in the Plo-mosa district, carry silver-copper ore with good assay values. Developed by a 125' shaft. Property was under bond and lease to D. G. Lorenzo, at last accounts.

SHAMROCK MINING CO.

UTAH

Mine office: Marysville, Piute Co., Utah. W. J. Wostenholm, manager. Lands, in Buillion canyon, have a 3' vein, developed by 2 tunnels, No. 1 showing ore assaying up to 8% copper, 60 oz. silver and \$12 gold per ton, and No. 2 showing ore giving assays of 8% copper, 18 oz. silver and \$108 gold per ton. A few carloads of rich ore was shipped, 1910. Presumably idle.

SHAMROCK MINING & MILLING CO.

NEW MEXICO

L. D. Harrigan, pres., Newark, N. J.; Geo. A. Kalar, supt., Steeple Rock, Grant Co., N. M. Property, the Shamrock mine, shows gold-bearing copper ore, developed by tunnel work. Has steam plant and railroad spur at mine. Was shipping ore in 1910.

SHANNON COPPER CO.

ARIZONA

Office: 67 Milk St., Boston, Mass. Mine office: Metcalf, Greenlee Co., Ariz. Works office: Clifton, Ariz. Nathan L. Amster, pres.; Alex. B. Clough, vice-pres.; Col. Chas. Hayden, Berthold Hochschild, Kenneth Mc-Neil, Wm. A. Paine, Jas. Virdin, R. T. McKeever and David A. Ellis, di-rectors; Chas. R. Jeffers, sec.-treas.; J. W. Bennie, gen. mgr.; K. D. Brown, gen. supt.; H. A. Collin, mine supt.; Wm. H. Bond, mill supt.; H. H. Dyer, cons. engr.

Organized Nov. 13, 1899, under laws of Delaware, capitalization \$3,000,-000, shares \$10 par, increased July, 1909, to \$3,300,000; issued, \$3,000,000, with \$300,000 held in the treasury. Debentures, \$600,000 at 7% were retired 1911, but the company has guaranteed an issue of \$600,000 of 6% bonds, autho-rized May, 1909, by the Shannon-Arizona Railway Co., reduced by purchase to about \$350,000. The company has paid 5 dividends, aggregating \$750,000, to end of 1913. Shares are listed on the Boston Stock Exchange. National Shawmut Bank, Boston, registrar; Boston Safe Deposit & Trust Co., trans-fer agent. Annual meeting, third Wednesday in March.

Controls the Coronado Mining Co., through ownership of 53% of the stock issue and operates, under lease, the property of the Leonard Copper Co., owning the Copper Belle mine at Gleeson, Cochise county, Ariz.

Consolidated balance sheet of the Shannon Copper Co. and the Shan-non-Arizona Ry., as of March 31, 1912, shows: Assets—Mines, equipment, etc., \$3,844,452; investments in other properties, \$345,966; railroad and equip-ment, \$713,474; cash and accounts receivable, \$261,016; supplies, \$226,295; prepaid expenses, \$7,828; total, \$5,399,031. Liabilities—Capital stock (S. C. Co.), \$3,000,000; funded debt (S. A. Ry), \$391,792; accounts payable, etc., \$140,067; accrued interest, \$9,825; reserves, \$35,613; surplus, \$1,821,733; total, \$5,399,031.

The income account for the years 1908-12, follows:

	1908	1909	1910	1911	1912
Metal sales.....	\$2,346,429	\$2,407,862	\$2,418,071	\$2,014,219	\$2,594,867
Expenses	2,574,191	2,644,801	2,227,584	1,895,365	2,034,252
Profit	88,842	84,338	190,487	118,854	581,015

Lands, 34 claims, 562 acres, at Metcalf, in the Greenlee district, also about 600 acres mill and smelter sites at Clifton, Ariz., and some limestone claims on the San Francisco river. Three claims and a half interest in another claim were bought 1910, including the Weaver claim. Apparently the Greenlee group, adjoining the Clifton & New England property on the north is held under lease. The Shannon has a side-line agreement with the Arizona Copper Co., Ltd., by which extra-lateral rights are waived mutually, obviating all possibility of future litigation over apex rights.

Ore occurs between limestone and porphyry, under hematite gossans, the oxidized ores favoring the limestone, while the ores in the porphyry side are mainly silicious sulphides. The ore occurs in irregular deposits, some of which are up to 300' in the greatest dimension. Many of the orebodies are large, and though low-grade and bunchy, the quantity is very great. The upper levels in the mine show oxide and carbonate ores of 3 to 8% copper tenor; sulphide ores of 2 to 6% copper tenor are mined in the lower workings, the ores holding chalcopryite with a little chalcocite. The mine as a whole is deficient in sulphide ores, and about one-third of the production is silicious ore, too low in grade to smelt, not readily amenable to concentration, but giving good results with the Benny system of leaching when mixed with other ores. The concentrating ores average 2.5% and smelting ores about 4%.

The mine is extensively developed by shafts, tunnels and open pits, with underground workings reaching a depth of 1,300' below the crest of the mountain, and the mine had upwards of 25 miles of workings 1912, with considerable ore reserves. The mine is timbered with 12x12" square sets. Extraction is by 3 double-track tunnels, connecting with a 1,400' double-track incline tram leading to the Shannon-Arizona railway, with 6 ore bins at either end, the tramway, inclined at 36°, having 10-ton cars, operating in counterbalance, the steel cable passing around a 13' double drum, which runs a small air compressor serving as a brake.

The company owns the entire stock of the Shannon-Arizona Railway Co., capitalized at \$600,000, shares \$100 par, with principal and interest of the railway's \$600,000 6% 10-year bonds, guaranteed by the Shannon, and convertible into Shannon Copper Co. stock. The officers are: Nathan L. Amster, pres.; Chas. R. Jeffers, sec.; Alex. B. Clough, treas.; John W. Bennie, B. F. Spriggs and C. G. Cole, directors. This standard-gauge line, of about 10 miles length, was built and equipped at a cost of about \$600,000, the territory traversed being very rugged and including a 900' tunnel. The line was completed 1910, and not only is saving considerable money to the Shannon on ore haulage, but also gives immunity from the serious interferences formerly caused by frequent floods.

The 500-ton concentrator at Clifton, on the San Francisco river, 8 miles from the mine, has ore bins 100' long, in 2 sections, for first and second-grade ores. The mill is of steel, in 2 connected sections, terraced, the 64x95' upper section having two 9x15" Blake crushers, four 6' Huntington mills, a 220' Robins belt conveyor, Hartz jigs and Wilfley tables. The 57x144' lower section has 38 sand and slime tables. The 32x50' steel power house at the concentrator has two 250-h. p. Stirling water-tube boilers and a 300-h. p. Nordberg tandem-compound engine. Water is pumped from wells near the San Francisco river by a 600-gal. electric triplex pump.

The smelter, also located at Clifton, 7 miles from the mines, has 3 blast furnaces with a combined daily capacity of 1,800 tons of ore. The smelter treats concentrates and oxidized ores from the mines at Metcalf and pyritic ore from the Copper Belle mine of the Leonard Copper Co. The mixture is almost self fluxing. Above the charging floor are 23 ore bins, each 20x20x16', with chutes. Fumes from the blast furnace pass through a 10' dust flue to a 20x20x100' dust chamber with hopper bottom, discharging periodically into cars on a railway track in a tunnel beneath, fumes passing from the dust chamber through a 170' flue to a 150' steel smokestack. Slags are hauled by an electric locomotive. The converter plant has 2 stands and is capable of turning out 120,000 lbs. of copper daily. The briquetting plant for fine ore, concentrates and flue dust, has a daily capacity of 60 tons, and there is a small sampling mill in connection. Slag haulage, converters, slag elevators, dust conveyor, briquetting plant and custom sampler, are all operated electrically. The smelter power house has a 300-h. p. tandem compound condensing engine, direct-connected to blowers, and converter blast is supplied by a 250-h. p. Nordberg air compressor. Fuel is petroleum.

The company owns general stores, at Metcalf and Clifton, doing a combined annual business of about \$350,000. There are about 60 dwellings for employees. The Shannon owns and operates a water company. Forces are about 1,200 men at the mines, mill and smelter.

Costs have shown steady improvement, having been 14.6 cts. in 1906; 14.5 in 1907; 12.6 in 1908; 12.2 in 1909; 12.1 in 1910; 11.58 in 1911 and 11.42 in 1912.

Production has been as follows:

Year	Copper, lbs	Silver, oz.	Gold, oz.
1907	10,874,619	34,037	950
1908	16,281,983	50,189	925
1909	15,379,588	43,751	1,233
1910	15,873,481	47,726	984
1911	14,775,829	97,339	1,563
1912	16,511,525	202,975	3,129
1913 (1st 6 mos.)	6,892,745	55,620	1,147

SHASTA BELMONT MINING CO.

CALIFORNIA

Office: Carson City, Nev. Mine office: Winthrop, Shasta Co., Cal. Will E. Casson, pres.; Jas. T. Davis, sec.; G. G. LeMasters, treas.; B. A. Graham, supt., at last accounts. Capitalization \$1,000,000, shares \$1 par, non-assessable.

Lands, 7 claims, 120 acres, known as the Graham group, are in the Copper City district and in the west central part of the Shasta copper belt. The group is about 3 miles east of the Bully Hill mine and smelter, and 8 miles from the Mammoth mine. The property is said to have a surface outcrop resembling that of the Bully Hill mine. It is developed by a 75' shaft, 4 short tunnels and several opencuts, all showing streaks and bunches of high-grade copper ore, but this work is too superficial to open up important orebodies. Buildings include a cabin and smithy.

SHASTA COPPER CO.

CALIFORNIA

Idle. Office of mine: 502 California St., Redding, Cal. J. W. Girdner, pres.; Simeon D. Furber, sec. Organized April 20, 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Property includes the Pit River group of 25 claims, a mile south of Heroult, showing a good gossan, and the Arizona Consolidated group, 25 claims, 4 miles from Redding, formerly worked for placer gold and showing a mineralized zone of about 600' width, carrying low-grade auriferous and argentiferous copper ores.

SHASTA COPPER EXPLORATION CO. CALIFORNIA

Mine address: Redding, Shasta Co., Cal. M. E. Dittmar, mgr.; O. Scribner, sec., at last accounts. Lands were said, March, 1911, to be nearly 1,000 acres, lying between the Balaklala and Iron Mountain mines, near Kennett, and including the Spread Eagle group of 22 claims, reported to be held under an 18-month bond and lease at \$125,000. The property has 8 tunnels, of about 3,000' aggregate length, No. 7 tunnel having cut 3 small stringers of copper ore.

Negotiations for the sale of the property to the Mammoth Copper Co. were pending, early 1913.

SHASTA COUNTY GOLD & COPPER MINING CO. CALIFORNIA

Office: Bacon Bldg., Oakland, Cal. Mine office: Kennett, Shasta Co., Cal. A. J. Hough, pres. and gen. mgr.; Thos. P. Hogan, vice-pres.; M. C. Hough, sec.; preceding officers, D. A. Lyons, R. E. Reeves, L. Daily and M. A. McGinnis, directors. Organized Sept. 15, 1909, under laws of California, capitalization \$500,000, shares \$1 par.

Lands, 6 claims, unpatented, 110 acres, having several short tunnels, aggregating about 200' length, and a considerable number of pits and trenches showing copper at 10 different points and exposing 1 vein of 50' estimated average width, carrying auriferous and argentiferous copper ore. The workings show occasional small bunches of good malachite, bornite and chalcopryite ore. Idle several years.

SHASTA MAY BLOSSOM COPPER CO., CONS. CALIFORNIA

Office: 1009 Mills Bldg., San Francisco, Cal. Mine office: Winthrop, Shasta Co., Cal. Col. Morton Lindley, pres.; Lucius A. Booth, vice-pres.; S. Peter, sec.-treas., at last accounts. Organized 1903, under laws of Arizona, as a reconstruction of the Shasta May Blossom Mining & Smelting Co., capitalization \$10,000,000, shares \$1 par.

Property, known as the Keith group, has 18 claims, about 300 acres, located 13 miles from a railway and 27 miles N. E. of Redding, in the Pittsburgh or Copper City district. The claims show prominent outcrops and have several deposits between porphyry footwalls and slate hangings. The main outcrop, said to be traceable about 1,500', shows ore giving assays of 2 to 7% copper and about \$11.50 per ton in combined gold and silver values. The middle vein, 5 to 40' wide and said to be traceable 1,900', carries chalcocite, bornite and chalcopryite ore, and is opened by tunnels of 200', 300' and 650', with about 1,500' of workings said to show a considerable tonnage of sulphide ore. The West vein, reported to be upwards of 100' in width, has a 100' shaft and 400' tunnel which show ore giving assays of 2 to 7% copper and \$2 to \$2,000 per ton in combined gold and silver values. The mine, as a whole, is reported to have about 3,500' of workings.

Equipment includes a gasoline hoist, air compressor and electric light and power. There is a 20x90' machine shop covered with corrugated iron.

SHATTUCK-ARIZONA COPPER CO. ARIZONA

Office: Duluth, Minn. Mine office: Bisbee, Cochise Co., Ariz. Thos. Bardon, pres.; A. Guthrie, vice-pres.; Archibald M. Chisholm, sec.-treas.; Lemuel G. Shattuck, managing director; preceding officers and Louis W. Hill, directors; Norman E. LaMond, asst. sec.; Arthur Houle, supt. Organized March 22, 1904, under laws of Arizona, capitalization \$3,500,000, shares \$10 par, nonassessable; fully issued. Dividend payments were \$2 in 1910; \$1 in 1911; nothing in 1912; \$1.50 up to Oct. 1, in 1913. Company has about 800 shareholders, with about 275,000 shares of stock owned by the directors. Company is closely connected, in ownership and management, with the Denn-Arizona Mining Co. National Shawmut Bank, Boston, registrar; Old

Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, third Saturday in February.

Property comprises 8 claims, patented, 120 acres, bought for \$1,022,500, lying in the northeastern portion of the Bisbee camp, about one-half mile south of the original workings of the Copper Queen, and to the north of the Calumet & Arizona. The property shows carboniferous limestone, with intrusive porphyry dikes, and a big fault, covered with a silicious gossan of 30 to 50' width. Ores are oxidized, down to 800', with low-grade sulphides at depth.

The orebodies occur as irregular replacements along certain bedding planes, and along dike contacts.

The mine is opened by a 935' three-compartment shaft, 15x4' 6" in size, connected with the Cuprite shaft of the Copper Queen, on the 800' level, with the Powell shaft of the Calumet & Arizona, and also with the workings of the Wolverine & Arizona. Development was begun Aug., 1904, and ore shipments begun Sept., 1906, continuing until Nov., 1907, when the panic put a stop to all work, for some months. Production was resumed Dec. 4, 1908. The mine is opened by levels at 100' intervals from the 300 to 900' points, inclusive, and at the end of 1912 had 44,762' of workings.

Development work is centered in the area above the 600' level. About 1,000' of new openings are made per month. The 300' level shows an extension of the orebody originally opened on the 400' level, averaging 40' in width with 15% copper, 7 oz. silver and \$1 gold. This orebody has been exposed horizontally for a distance of 250' and to a vertical depth of 160', or about 60' below the 400' level. The 500' and 600' levels show lead-silver ores, along a N.-S. fracture, in irregular seams and kidneys for a distance of about 700'. Oxidized copper ores occur in Devonian limestone on the 500' and 600' levels in irregular shoots in an underground gossan, which has been prospected over a length of 650'. The oxidized zone between the 600' and 800' levels carries 3 ore shoots, partially developed, averaging 6% copper. The sulphide ores come in between the 700' and 800' levels, occurring in shoots, estimated to contain 104,000 tons of 3.5% copper ore, and extending downward to the 900' level, where there is a considerable tonnage of massive sulphides of about the same grade blocked out. The company's ore reserves are estimated at 40,000 tons of 15% ore, 110,000 tons of 7% ore, 185,000 tons of 6% ore and 104,000 tons of 3.5% ore.

There are 12 mine buildings, including a 24x42' machine shop, 16x24' carpenter shop, smithy, boiler house, engine house, warehouse, sawmill, and a changing house with accommodations for 200 men.

The 750-h. p. steam plant has five 150-h. p. boilers. The main hoist is a 18x48" Allis-Chalmers duplex double-drum engine, working under 125 lbs. steam pressure, with 2 drums, each carrying 1,500' of 1½" round steel cable, capable of handling continuously a 15,000-lb. unbalanced load at a vertical hoisting speed of 2,000' per minute. The air plant includes a 40-drill Sullivan cross-compound air compressor. Fuel is petroleum, with a normal yearly consumption of about 16,000 bbls.

A 3,300' aerial tram of 500 tons daily capacity, with average grade of 18%, supported by 14 towers of 12 to 40' height, built of 12" timber and set on concrete foundations, leads from a 1,000-ton ore bin near the shaft to the El Paso & Southwestern railway, the buckets discharging loads direct into 50-ton ore cars.

The ore is smelted by the Calumet & Arizona Mining Co., at Douglas, under a 5-year contract dating from July 1, 1913. About 250 tons are shipped daily, returning about 7.5% copper, with appreciable gold and silver values.

Production has been as follows:

Year.	Copper, lbs.	Year.	Copper, lbs.
1906.....	2,541,680	1910.....	14,751,000
1907.....	5,091,542	1911.....	4,596,973
1908.....	301,359	1912.....	2,510,339
1909.....	1,787,649	1913 (first 9 mos.).....	10,180,322

SHAUGHNESSY MINE.

MONTANA

Address: care Reilly Bros., owners, Clinton, Missoula Co., Mont. Property, 7 miles north of Clinton, in the Wallace district, is developed by a 700' shaft, showing gold and silver-bearing copper ore.

SHAWMUT CONSOLIDATED COPPER CO. COLORADO & UTAH

Dissolved by court decree, March, 1911. Fully described Vols. VIII and X.

SHAWNEE-WYOMING COPPER MINING CO.

WYOMING

Office: 926 North 10th St., Waco, Texas. Mine at Holmes, Albany Co., Wyo. A. M. Coffin, pres. and gen. mgr. Organized as a merger of the Shawnee Copper Mining Co. and the Kyhaco Mining Co.

Property, 10 claims, 200 acres, 6 miles from the New Rambler mine, in the French Creek district of Medicine Bow mountains. Claims show fissure veins in granite and bedded deposits between schist and quartzite. The vein of copper-stained limonite ore is developed by a 115' two-compartment shaft. The company also holds the property formerly owned by Ak-Sar-Ben Copper Co., which had a strong gossan capping of hematite and limestone, opened by an 80' shaft. Company is said to have found some ore giving good assays in copper, silver and gold.

Equipment includes a 45-h. p. steam plant and 4 mine buildings. Idle since organization.

SHELDEN & COLUMBIAN COPPER CO.

MICHIGAN

Office: care J. H. Rice, Houghton, Mich. Lands lie next north of the Isle Royale mine. Idle. Described Vols. I and II.

SHIPPER COPPER MINING CO.

NEVADA

Office and mine: Luning, Mineral Co., Nev. Frank Everett, pres.; S. J. Dillabaugh, supt. Property, 4 claims, 5 miles S. E. of Luning, developed by a 300' shaft, shows a small vein of high-grade copper ore, shipments from which are reported to have yielded 8% copper. Was developing with a small force and shipping ore, late 1913.

SHONEE MINING & MILLING CO.

WASHINGTON

Office: Cheney, Wash. Lands near Danville, Ferry Co., Wash., developed by a 218' shaft and an 855' tunnel, show a 4' contact vein between granite and slate. Ore is a cupriferous hematite. Property was under bond and lease to Charles and Walter James, of Republic, Wash., at last reports.

SHOSHONE MINE

NEW MEXICO

Idle. Office and mine: Taos, Taos Co., N. M. Alex. Gusdorf, owner and manager, at last accounts. Lands, 4 claims, developed by a 175' shaft, with drifts on the 100' and 150' levels, showing an 8' vein with a 2' paystreak, carrying 5% copper, 10 to 12 oz. silver and \$60 to \$80 gold per ton, balance of vein being concentrating ore, claimed to average 5 to 8% copper, 4 to 5 oz. silver and \$10 to \$12 gold per ton.

SHOSHONE MOUNTAIN MINING CO.

WYOMING

Idle. Mine office: Meetetse, Big Horn Co., Wyo. P. W. Gates, manager, at last accounts. Lands, on Spar mountain, show a wide vein carrying mainly silver-lead-copper ores, opened by a 560' tunnel, on the Smuggler claim.

SIERRA DE ORO GOLD MINING & MILLING CO.

ARIZONA

Office and mine: Clifton, Greenlee Co., Ariz. F. T. Eldredge, pres.;

W. H. Waite, sec.-treas.; L. P. Potter, mgr.; Benj. M. Crawford, supt., at last accounts. Lands, 15 claims, near the Clifton Consolidated, and a 5-acre mill site, on the San Francisco River. Development is by tunnels, showing 4 parallel blind veins. A 550' crosscut tunnel shows a 10' vein giving assay values of 14% copper and up to \$10 gold per ton, and a 4' vein giving assays of 14% copper and \$48 gold per ton. Idle many years and apparently out of business.

SIERRA RANGE COPPER CO.**CALIFORNIA**

A. L. Beardsley, superintendent, Genessee, Plumas Co., Cal. Property, the Mountain Lion group, shows a vein of gold-silver-copper ore, developed by tunnels. Company is doing work on several prospects, but reports that development is not sufficiently advanced to warrant giving details.

SIGMA CONSTRUCTION & DEVELOPMENT CO.**NEW MEXICO**

Mine office: Hillsboro, Sierra Co., N. M. A. G. Viegis, manager, at last accounts. Property, known as the Wicks mine, on the southern slope of the Animas peak, is developed by a 380' two-compartment shaft, cutting a vein of gold-copper ore at depth of 355'. Equipment includes steam power.

SIGNET GOLD & COPPER MINING CO.**UTAH**

Office: 513 Felt Bldg., Salt Lake City, Utah. Mine near American Fork, Utah Co., Utah. W. S. McConahy, pres.; J. H. Rothwell, vice-pres.; W. S. Zehring, sec.; W. H. Young, treas., and A. L. Hoppaugh, directors. Organized Nov, 1903, under laws of Utah, capitalization \$75,000, shares 25 cts. par, assessable, with 8 assessments levied to end of 1912; issued, 93,468 shares.

Lands, 6 claims, patented, known as the Signet group, in American Fork canyon, slightly developed by tunnel, showing mainly silver-lead ore. Idle some years.

SILICA GOLD & COPPER MINING CO.**IDAHO**

Probably idle. Office: Wallace, Idaho. Letter unclaimed at former mine office, St. Joe, Kootenai Co., Idaho. Wm. Sites, vice-pres.; Adolph Haupt, sec., at last accounts. Lands, 11 claims, on the north branch of the East fork of the St. Joe river, west of the Monitor mine and about 1½ miles from the Puget Sound railway, in the Grand Fork district. The property has an upper tunnel showing ore assaying up to \$12 in gold and a 140' lower crosscut tunnel showing a 15' vein, with a 4' paystreak giving assays of 4.3 to 20% copper.

SILVER BELL MINING CO.**UTAH**

Idle. Office: 25 East North Temple St., Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. Chas. A. Tyng, pres.; M. E. Christopherson, vice-pres.; W. J. Bateman, sec.-treas. Organized Oct. 28, 1899, under laws of Utah, capitalization \$250,000, increased 1906, to \$1,000,000, shares \$1 par, assessable. Has levied 14 assessments. Lands, 6 claims, patented, in Thaynes canyon, 5 miles from railroad, slightly developed.

SILVER CLIFF GOLD & COPPER MINING CO., LTD.**IDAHO**

Office: Wallace, Idaho. Mine address: Larson, Shoshone Co., Idaho. Jas. D. Young, pres., treas. and gen. mgr. Edw. C. Young, sec. Capitalization \$1,500,000, shares \$1 par, assessable; an assessment of 5 mills was levied Oct. 11, 1913, with delinquent sale, Dec. 10, 1913. Lands, 18 claims, 7 miles from Mullan, developed by 4 shallow shafts and 3 tunnels, the lower of 850' and longest of 1,500', showing chalcocite, bornite and chalcopyrite ore, giving assays up to 43% copper, with some lead and fair gold values. Equipment includes a Pelton wheel, operating under a head of 240', and an 8-drill air compressor.

SILVER CREEK MINING & MILLING CO.**WASHINGTON**

Office: 804 East Washington St., Greensburg, Ind. Mine office: Keller,

Ferry Co., Wash. R. L. Boyle, pres. and gen. mgr.; Ira J. Hollensbe, sec.-treas., at last accounts. Organized Dec., 1900, under laws of Washington, capitalization \$75,000.

Lands, 4 claims, patented, 80 acres, well watered and timbered, including the Gold Cord mine, in the San Poil district, 5 miles N. E. of Keller. Silver creek, near by, is capable of producing considerable water power. The property shows a fissure vein, in diorite of 3 to 8' width, with a 30" paystreak of ore carrying cuprite, azurite, malachite, bornite and chalcopyrite, in a quartz gangue. The vein is opened by a 304' shaft and by tunnels of 130' and 620', with tunnels connected by a 195' winze. Idle some years.

SILVER FISSURE MINING CO.

MONTANA

Idle. Secretary and office: A. W. S. Cochrane, 30 Broad St., New York. Mine near Polaris, Beaverhead Co., Mont. Property is the Polaris mine, formerly operated by F. Aug. Heinze, carrying silver, gold and copper ores, latter produced in small quantities as a byproduct. Equipment includes steam and electric power, and there is a 100-ton smelter, the mine and smelter formerly employing about 100 men. Shut down at last report.

SILVER HILL CONSOLIDATED COPPER CO.

ARIZONA

Letter unclaimed at former offices: Tucson, Ariz., and Silver Bell, Pima Co., Ariz. Col. Wm. Herring, pres.; T. M. Smith, sec., at last accounts. Capitalization \$3,000,000, shares \$1 par. Lands, 6 patented claims, 120 acres, in the Silver Bell mountains, 3 miles from Silver Bell, opened by tunnel, with about 1,000' of workings, having an extreme depth of 200', showing copper carbonates and sulphides, apparently occurring as contact deposits between limestone and granite. Idle several years and presumably out of funds.

SILVER KING MINE.

ARIZONA

Address: care Messrs. Wall and Duffy, Superior, Pinal Co., Ariz. The property, 3 miles from Superior, on the Stoneman grade, is an old silver mine, popularly credited with a production of \$10,000,000, and known to have paid \$1,950,000 in dividends up to July, 1887. Opened to a depth of 1,900', the mine was originally worked for gold and silver, copper ore in the form of tetrahedrite coming in at a depth of about 310' and continuing to depth of 510', below which very high-grade silver ores were again encountered. There are about 6 miles of old workings.

More recent operations were limited to work above the water level, 70' from surface, in a number of narrow stringers carrying high-grade silver-copper ores.

The property was bonded 1913, to John Hays Hammond for \$200,000.

SILVER KING MINES, LTD.

BRITISH COLUMBIA

Office: Trail, B. C. Mine address: Nelson, Kootenay district, B. C. R. H. Stewart, pres.; S. G. Blaylock, vice-pres.; T. W. Bingay, sec.; W. M. Archibald and R. S. Lennie, directors. Company is owned jointly by the Kootenay Bonanza Co. and the Consolidated Mining & Smelting Co. of Canada, Ltd., in the proportion of one-quarter and three-quarters, respectively.

Lands, 5 claims, on Toad mountain, include the old Silver King mine, formerly owned and operated by the Hall Mining & Smelting Co., Ltd. Mine is opened by a shaft to the 10th level, showing 3 well-defined veins in diabase schist. The ore occurs in those portions of the veins which are intersected by 2 dikes, and in the altered surface zone is principally bornite, with tetrahedrite, iron pyrites and silver occurring in the unaltered zone below. Gold is present in small amounts. Considerable ore was extracted in the past from above the 5th level in the Main vein. The South vein and the K vein are practically untouched. The Main vein is lower in silver

but higher in copper than the South vein, and the K vein is higher in silver than either of the others. The total ore reserves in the mine are conservatively estimated at 100,000 tons. Ore in the Main vein has been proven to a depth of 1,130' by diamond drill borings.

Equipment includes electrical motors of 50-h. p., a 100-h. p. electric pump, an 1,850' tramway, and all necessary mine buildings.

SILVER LAKE MINES.

COLORADO

Mine address: Silverton, San Juan Co., Colo. Owned by the American Smelting & Refining Co. and operated under lease by Otto Mears and John Slattery, of Ouray, Colo.

SILVER MOUNTAIN MINE & MILL CO.

COLORADO

Mine office: Empire, Clear Creek Co., Colo. F. G. Bishop, superintendent, at last accounts. Property has gold and silver-copper ores. Equipped with water power and a .25-ton concentrator. Presumably idle.

SILVER MOUNTAIN MINING CO., LTD.

IDAHO

Office: Potlatch, Idaho. Letter unclaimed at former mine office, Mullan, Shoshone Co., Idaho. E. B. Wilkins, pres.; Samuel J. Tennal, vice-pres.; W. E. Ponto, sec.; W. E. Horstkotti, treas., and Phil Tice, directors; Cole Frazier, mgr.

Lands, 9 claims, 4 patented, near the Alice mine, on St. Joe Gulch, shortly west of the Morning Mill, near Mullan. The mine has 3 tunnels, lower of 285', and a 500' crosscut tunnel intersects an 8' vein carrying ore giving assays of 2% copper, 3 oz. silver and \$1.80 gold per ton. Equipment includes a small steam plant and an air compressor. Was developing with a small force, late 1913.

SILVER PEAK MINE.

NEW MEXICO

Address: Alma, Socorro Co., N. M. The mine has an 80' tunnel, showing ore said to average 24% copper, 24 oz. silver and \$4 gold per ton.

SILVER QUEEN MINE.

UTAH

Office: 53 W. First St., Salt Lake City, Utah. E. G. Holding, owner. Property, 80 acres, patented, near Midway, in the Snake Creek district, Wasatch Co., Utah, 6 miles S. W. of Heber on the D. & R. G. R. R. Ores are complex, carrying lead and zinc as well as copper. Development consists of 3 tunnels, showing gold and silver ore. Inactive.

SILVER QUEEN MINING CO.

WASHINGTON

Mine office: Kettle Falls, Stevens Co., Wash. J. J. Budd, superintendent. Owns sundry claims, 2 miles south of Kettle Falls, developed by shaft showing silver-copper ore.

Equipment includes steam power plant. Presumably idle.

SILVER REEF MINING & SMELTING CO.

ARIZONA

Office and mine: Vekol, Pinal Co., Ariz. J. V. Neuhaus, superintendent, at last accounts.

Lands include the Lake Shore and the Silver Reef mines, originally worked for their silver ores. Development is by a 375' shaft and 425' tunnel. Ores are silver-lead and copper.

Equipment includes a gasoline hoist and air compressor, and a 50-ton smelter, long idle. Company was planning extensive development work, late 1911, but apparently has done no work in recent years.

SILVER ROCK MINING CO.

IDAHO

Office and mine: Wallace, Shoshone Co., Idaho. H. J. Rossi, pres.; A. P. Bailey, vice-pres.; Geo. Austin, sec.-treas. and gen. mgr.; preceding officers, A. E. Bronson, Sig Hofslund and V. E. Waltman, directors. Organized July, 1909, capitalization \$1,500,000, shares \$1 par; issued, 900,000 shares.

Lands, 8 claims, next east of the Argentine and west of the Rainbow mine, carry the extensions of 2 Rainbow veins, in Shield's gulch, in the

vicinity of Osburn. The property shows a heavy gossan, carrying gray copper ore, and the mine has 4 tunnels, the longest 450'.

The company was planning, June, 1913, to consolidate with the Rainbow Mining & Milling Co., Ltd.

SILVER SEAL MINING CO.

MEXICO

Letter unclaimed at former office, Los Angeles, Cal. Mine office: Pilares de Teras, Sonora, Mex. Fred O. Colsen, lessee and manager. Lands include El Aguaje mine, 12 miles east of Nacozari, showing a fissure vein in andesite rock cut by granite and carrying narrow paystreaks of gray copper, chalcopryrite and galena ore. The mine has yielded ore assaying up to 15% copper and 400 oz. silver per metric ton, and in 6 months the company shipped, by pack-trains, about \$25,000 worth of ore said to have given smelter returns of \$75 to \$90 per ton, and the lessee shipped about \$48,000 worth of ore during the first 7 months of 1910. Property worked intermittently during 1912-13.

SILVER SPAR MINING CO.

COLORADO

Office: 834 Equitable Bldg., Denver, Colo. Thos. H. Jenks, superintendent, White Pine, Gunnison Co., Colo. Property, the Spar silver mine, shows a vein with lead-copper ore; developed by 1,300' tunnel. Has gaso-line engine.

SILVER TIP GROUP.

NEW MEXICO

Address: care P. M. Shelly & Son, Alma, Socorro Co., N. M. The property comprises 6 claims, 120 acres, in the southern end of the Mogollon range, 3 miles from the main wagon road between Mogollon and Silver City.

Development is by a 100' shaft showing gold and silver-bearing copper ores, said to average \$65 per ton.

SILVER TIP MINING & POWER CO., LTD.

WASHINGTON

Office: 960 Empire Bldg., Seattle, Wash. A. Julian, pres.; M. Hardman, sec.; other directors, J. F. Reed, J. B. Bruen and W. O. Browning; C. H. Waters, engr. Organized Jan. 15, 1910, under laws of Washington, capitalization \$1,000,000, shares \$1 par; issued, 658,804 shares.

Lands, 557 acres, including the Lakeside mine, in the Cascade mountains, Skagit county, said to carry gold, silver, lead and copper ores. No trace of operations securable.

SILVERED-COPPER MINING CO.

BRITISH COLUMBIA

Office: 1621 Madison St., Denver, Colo. Mine office: Aldermere, Atlin district, B. C. F. Thoman, pres.; C. W. Peaslee, vice-pres.; C. A. Hubbard, sec-treas.; C. E. Thoman, gen. mgr. Organized March 23, 1908, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, 540,219 shares. Debentures, \$50,000 authorized and unissued.

Lands, 5 claims, 250 acres, in the Hunter Basin, Omineca district, about 15 miles from the railway at Telkwa. The property shows a bedded agglomerate of volcanic rocks, chiefly diorite, beds standing almost perpendicular and striking N. 35° E. Orebodies occur as true fissure veins in diorite. Ores contain bornite and chalcocite and assay up to 45% copper, with good silver values.

Development is by a short tunnel and numerous pits and opencuts, with a total of about 170' of workings, April, 1913.

The mine has no power equipment, but a water power plant is under consideration. A concentrator is also planned, but ore reserves should first be developed.

The company is pinched for funds, but apparently has a valuable property, which, if handled right, may develop into a paying mine.

SILVERFIELDS MINING CO., LTD.

NEVADA

Secretary's address: J. M. Hamilton, Suffolk House, London, E. C.,

Eng. Mine office: Golconda, Humboldt Co., Nev. H. M. Eakin, manager. Organized Dec. 27, 1906, in Great Britain, as Golconda Consolidated Co., Ltd., and changed name to present title Feb., 1909, capitalization £250,000, shares £1 par; issued, £143,353, fully paid.

Owens sundry claims, with a third interest in the Honolulu group, balance of which is owned by the Golconda-Nevada Copper Co., in the Kennedy and Battle Mountain districts, 8 miles west of Millers.

Development is by a 250' shaft showing a 3' vein in limestone said to assay 8% copper, 26% lead, 390 oz. silver and \$4 gold. Equipment includes a 25-h. p. hoist and necessary mine buildings.

SIMILKAMEEN MG. & SM. CO., LTD.

BRITISH COLUMBIA

Office: Vancouver, B. C. Mine near Princeton, Boundary district, B. C. Fred Buscombe, chairman; W. H. Armstrong, managing director; Chas. F. Law, sec., at last accounts. Organized Feb. 8, 1906, under laws of British Columbia, capitalization \$2,000,000, shares \$10 par.

Owens the St. Lawrence and St. George groups, 5 claims, 3 crown granted, about 300 acres, 3 miles from Tulameen City, at the head of Bear creek, a few miles from the Similkameen division of the Great Northern railway. Claims have a 250-h. p. waterfall, available for power purposes. Development is by 4 shallow shafts of about 50' depth each, besides a short crosscut tunnel and numerous trenches. The work shows a strong ore-body between schist and granite, with intrusive porphyry dikes. The St. Lawrence mine has an 8' vein of massive cupriferous iron sulphide, giving average assays of about \$10 per ton in copper, silver and gold. The St. George group shows a 4' vein, carrying ore with quartz gangue, giving average assays of \$1.38% copper, 2.08 oz. silver and \$53 gold per ton. Idle some years.

SIN RIVAL COPPER CO.

ARIZONA

Mine office: Superior, Pinal Co., Ariz. Wm. G. Kirchoff, mgr.; J. H. McCabe, supt., at last reports. Lands, 25 acres, near the Magma Copper Co.'s Silver Queen mine and near the Lake Superior & Arizona property, in the Pioneer district. Claims show ore giving good assays in silver and gold. No returns secured.

SINALOA SMELTING & REFINING CO., S. A.

MEXICO

Company, a subsidiary of the Pacific Smelting & Mining Co., owns a concession from the Government for a smelter at Mazatlan, or elsewhere in the state, for a period of 20 years from April 17, 1906. It covers the entire state of Sinaloa and is particularly exclusive in its terms.

SISKIYOU COPPER MINING CO.

CALIFORNIA

Mine office: Hutton, Siskiyou Co., Cal. W. R. Oxley, pres.; Robt. Hall, vice-pres.; C. E. Monteith, sec., at last accounts. Organized Oct. 10, 1905, under laws of Idaho, capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, known as the Cook & Green group, near the Blue Ledge mine, in the Upper Applegate district, show a vein claimed to have a surface width up to 200', developed by 3 tunnels, of 75', 100', and 125', all in copper ore. Idle some years and probably dead.

SIXTEEN TO ONE MINE.

NEW MEXICO

G. F. Hall, owner, Tusas, Rio Arriba Co., N. M. Property has a deposit of silver-bearing copper ore, developed by shaft equipped with steam power and hoist.

SKINCUTTLE MINING CO.

BRITISH COLUMBIA

Mine office: Jedway, Queen Charlotte island, B. C. Property, near Skincuttle inlet, at the southern end of Queen Charlotte island, on which apparently little, or no mining work has been done. Idle and presumably defunct.

SKULL VALLEY MINING & MILLING CO.**ARIZONA**

Letter unclaimed at former office, Bisbee, Ariz. Mine office: Skull Valley, Yavapai Co., Ariz. F. J. McAfee, gen. mgr.; C. E. Williams, mgr., at last accounts. Organized 1910. Lands, 22 claims, held under bond and lease from T. M. Sanders, include the Roosevelt, Bryan and Hearst group of claims, about 4 miles from Skull Valley, in the foothills of the Copper Basin mountain. Claims show 2 veins, 1 of 12' estimated width. The mine has an 80' two-compartment shaft, developing a vein about 3' wide. The development of large reserves in the Commercial mine nearby, owned by the Phelps-Dodge interests, and increased activity at Zonia generally, have made the property interesting.

SLEEPING BEAUTY COPPER CO.**ARIZONA**

Office: Globe, Ariz. Geo. E. Shute, pres.; T. C. Hendricks, vice-pres.; I. W. Frye, sec.-treas.; Dr. E. R. Oliver, fiscal agt.; Wade Sotel, supt.

Lands, 20 claims, about 4 miles north of Miami, are under lease to Messrs. Dunham & Jones.

Property shows intrusive dikes of diorite and porphyry in limestone, along which several veins of gold-copper ore are noted.

Development is by a 40' shaft and 350' tunnel, planned to connect at a depth of about 130' in the shaft. Samples taken from the outcroppings of a well-defined vein are said to have assayed 12% copper, 130 oz. silver and \$2 gold, which cannot be considered as representative of the vein as a whole, but merely a rich specimen.

SLOCUM COPPER CO.**ARIZONA**

Mine office: Phoenix, Maricopa Co., Ariz. John G. Hardin, president and general manager. Lands, in the Winifred district, 22 miles north of Phoenix, have shafts of 130' and 150', showing ore assaying well in copper, silver and gold.

SMITH, SAWYER & CO.**ARIZONA**

Office: Kingman, Mohave Co., Ariz. Anson H. Smith, manager. Property, 9 claims, 160 acres, in the Cedar Valley district, 25 miles from a railway.

Claims show numerous fissure veins in granite, among which is a quartz vein carrying ore said to average 4.5% copper, 8% molybdenite, 5 oz. silver and \$1 gold.

Development is by a 30' shaft, and tunnels of 30' and 85', with about 150' of workings.

SMOKEHOUSE MINING CO.**MONTANA**

Is a subsidiary of the Davis-Daly Copper Co. At Butte, Mont.

SMOKEY DEVELOPMENT CO.**NEVADA**

Office: 50 Congress St., Boston, Mass. Mine office: Ely, Nev. S. H. Williams, pres. and gen. mgr.; E. P. Anthony, vice-pres.; H. P. Eastwood, sec.; A. L. Kingsbury, treas., and T. J. Hammond, directors. Organized Dec. 16, 1911, under laws of Maine, capitalization \$2,000,000, shares \$10 par, fully paid; issued, 148,000 shares. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock is listed on the Boston curb.

Lands, 12 claims, 175 acres, patented, including former holdings of the Turner Ely Copper Co., in the Robinson district. Country rock is similar to that of the Nevada Consolidated, which it adjoins, about 60 acres showing chalcocite disseminated in monzonite-porphyry ore of low grade, and a richer zone of chalcocite and carbonate ores along the limestone contact. Ore in the contact zone is said to assay up to 10% copper, with fair gold and silver values. The ore in the porphyry proper is said to average about 1.5% copper. Assays made of the sludge from 30 different places in 7 drill

borings, between depths of 115' and 360' gave indicated values of from 1% to 5.6% copper.

Development is by a 1,700' tunnel, planned to have an ultimate length of 1,900 to 2,000' and give a maximum depth of 450', with portal about 30' above the Nevada Northern railway, thus affording every facility for the economical handling of ore.

Equipment includes an air compressor, smithy and assay office.

SNAKE RIVER CONSOLIDATED MINING CO.

WYOMING

Office: 430 Railway Exchange Bldg., Denver, Colo. Mine P. O.: Columbine, Routt Co., Colo. L. A. Pease, pres., treas. and gen. mgr.; A. L. Arnold, sec. Organized July, 1906, under laws of Wyoming, capitalization \$5,000,000, shares \$1 par, nonassessable; fully issued, with \$2,500,000 stock assigned to a trustee, for the benefit of the treasury. Annual meeting, second Wednesday in July.

Lands, 9 lode claims, 2 patented, 180 acres, and 520 acres of placer claims, unpatented, in the Encampment or Battle district, 26 miles S. W. of Encampment, the nearest rail point. The property shows granite and diorite, reported by management to have veins carrying auriferous galena, with strike of N. 25° W., and cross veins carrying copper, striking at nearly right angles. The management reports the galena vein to have an extreme width of 120', with length of 4,500', and estimates the galena ore to average 10 to 20% lead, free from zinc, and 8 to 800 oz. silver, with from a trace to very high gold assays which, if true, would make the mine a bonanza producer. The copper veins are undeveloped, but show a variety of oxidized ores, at surface. Development is by numerous pits and shafts, of 10 to 106' depth, and numerous short tunnels, from 30 to 500' in length, nearly all openings showing ore. The management reports 5,000 tons of ore blocked out for stoping. The mine is without power equipment, and is not favorably regarded.

SNOW CLIFF COPPER MINING CO., LTD.

IDAHO

Office: Court House, Wallace, Idaho. G. W. Dougherty, secretary. Lands, near Lookout, Nez Perce Co., Idaho, adjoining the Silver Cliff and Liberty mines, are slightly developed. Idle except for annual assessment work.

SNOWSHOE GOLD & COPPER MINES, LTD. BRITISH COLUMBIA

Secretary and office: H. W. Batty, 6 Throgmorton Ave., London, E. C., Eng. Mine office: Phoenix, Boundary district, B. C. Geo. S. Waterlow, D. L., J. P., chairman; C. K. Milbourne and C. G. Pym, directors. Organized Jan. 20, 1901, under laws of Great Britain, capitalization £250,000, shares £1 par, issued £198,855.

Profit and loss account for year ending Sept. 30, 1911, showed: Royalties on ore shipped, £1,974; fees, £30; debit balance, £20,499; general expense, £1,342; income tax, £251; loss on exchange, £45.

Company's mines were operated June, 1906, to April, 1911, by the Consolidated Mining & Smelting Co. of Canada, Ltd., on a royalty basis.

Lands, 4 claims, freehold, 120 acres, at Phoenix, B. C., about a quarter mile from the Granby. The claims show fissure replacements of 25 to 200' width, with an average of about 100', traceable 1,000', carrying chalcopyrite averaging about 1.3% copper and \$1.25 gold per ton, ore occurring occasionally in distinct bodies, somewhat mixed, but mainly disseminated, in minute particles, through a silicious to calcareous gangue, carrying occasional magnetite and specular hematite. Development is by tunnels of 200', 250' and 600', and shafts of 200' and 350', the main shaft having 3 compartments, but the bulk of the production is secured from opencast workings.

Equipment includes a 350-h. p. steam plant, now held in reserve as an

auxiliary, the property being operated by commercial electric current from the Bonnington Falls plant. There is a 150-h. p. double-drum electric hoist, raising 2-ton skips, and the high-pressure half of a 30-drill Rand Corliss compound condensing air compressor.

For the year ending Sept. 30, 1911, the mine produced 60,855 dry tons of ore averaging 1.19% copper, 0.27 oz. silver and 0.066 oz. gold. Total production has been as follows.

	1906.	1907.	1908.	1909.	1910.	1911.
Copper, lbs.....	175,602	2,464,530	1,113,537	3,616,739	3,667,809	1,445,040
Silver, oz.....	1,840	29,285	13,240	35,072	36,830	16,546
Gold, oz.....	510	5,842	2,496	9,547	10,921	3,990

This production is without deduction of smelter losses.

SNOWSHOE MINING CO.

IDAHO

Office: 608 Cedar St., Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Fred Stroh, sec.; Paul Lucia, gen. mgr. Organized Sept., 1903, under laws of Idaho, capitalization \$1,000,000, shares \$1 par; assessable; fully issued. Shares are listed on the Spokane Stock Exchange.

Lands, 8 claims, patented, adjoin the Snowstorm on the east and supposedly carry the extension of the Snowstorm fault, at the head of Gentle Annie gulch, near the top of Snowstorm mountain, in the Hunter district, 1 mile from a railway. The property shows Revett quartzite, mineralized for 30' in the Snowstorm fault, with some cuprite, azurite and chalcopyrite, giving assays up to 9% copper and 8 oz. silver per ton. Development is by crosscut tunnels, longest 1,400', and a 400' drift, showing a mineralized zone of 30 to 40' width, carrying various copper ores sparsely disseminated. Equipment includes an air compressor power house and several buildings. An agreement was made 1913, with the Snowstorm Mining Co., for the development of Snowshoe ground at greater depth through one of the Snowstorm's lower tunnels.

SNOWSTORM APEX MINING CO.

IDAHO

Office: Hotel Vallamont, Spokane, Wash. Mine office: Larson, Shoshone Co., Idaho. A. B. Babb, president, at last accounts. Organized April, 1910, capitalization \$1,500,000, shares \$1 par.

Lands, on Snowstorm mountain, east of Mullan, show 2 veins opened by a shallow shaft and a 130' tunnel, with about 200' of workings. Was developing with a small force, late 1912.

SNOWSTORM EXTENSION COPPER MINING CO.

IDAHO

Mine address: Mullan, Shoshone Co., Idaho. H. H. Lively, superintendent. Organized Oct., 1909, under laws of California, as successor of Snowstorm Extension Mining Co., Ltd., capitalization \$1,000,000.

Lands 9 claims, adjoining the Snowstorm on the east, supposedly carry the extension of the Snowstorm ore zone. Pits and trenches have shown ore of about 3% copper tenor, markedly similar to that of the Snowstorm. Development is by a drift tunnel, starting from North Fork creek, that was 2,000' long Oct., 1913, planned to be driven to secure an eventual back of 1,630', on the dip of the vein. Buildings include bunkhouses.

SNOWSTORM MINING CO.

IDAHO

Office and mine: Larson, Shoshone Co., Idaho. Leo Greenough, pres. and gen. mgr.; J. Brush Greenough, vice-pres.; R. E. Walters, sec.-treas.; preceding officers, J. W. Greenough, J. H. Heward, M. D. Hall and H. E. Chaney, directors; Frederick McCormick, supt.; L. E. Warner, mill supt.; A. Rocca, engr.; F. Hofer, chemist-assayer.

Organized July, 1900, under laws of Idaho, capitalization \$1,500,000, shares \$1 par, nonassessable; fully issued. For fiscal years ending June 30, earnings were \$5,677 net in 1905; \$144,322 in 1906; \$498,013 in 1907; \$243,262

in 1910; \$25,691 in 1911; \$15,787 in 1912; \$141,639 in 1913. Company reported a surplus of \$295,044, June 30, 1909, and \$85,725, June 30, 1913. Dividends were \$90,000 in 1906, \$360,000 in 1907, \$150,000 in 1908, \$202,000 in 1909; \$179,940 in 1910, \$44,985 in 1911, \$74,975 in 1912, and \$142,452 in 1913, a total of \$1,147,147.50 to end of fiscal year, 1913. Shares are listed on the Spokane Stock Exchange. Annual meeting, last Tuesday in July.

Lands, 20 claims, 16 patented, about 400 acres, with a 2-acre mill site, and 300 acres available for tailings in Daisy gulch, 3 miles east of Mullan, in the Hunter district of the Coeur d'Alene region.

The workable ore of the Snowstorm mine occurs in a bed of white quartzite about 40' thick, known as the ledge. The rock is harder and purer than the quartzite above and below it, but there is no definite vein wall. The ledge dips steeply to the S. W. and the mineralization is cut off by a fault zone with a throw of 700' or less. It is not all commercial ore, the ore shoot being 700' long and stopping at the 900' level. If displaced by the fault, the lost ore shoot must lie below the No. 4 tunnel level. The ore consists of quartzite impregnated with minute particles of bornite, chalcocite and chalcopyrite. When rich, it is dark gray, but the leaner ore is dappled, or speckled. The oxidized ore which formed the greater part of the mine output, is greenish brown and stained by limonite. The mine output averages about 2.75% copper with 2 oz. of silver for each percent of copper. The richer ore contains about 5% copper and as it carries 90% silica, it is hard to find a steady market for it, now that converters use basic, instead of silicious lining.

Development is entirely by tunnels, the 2 uppermost now disused, though the lower is connected with the surface by an air shaft. Tunnel No. 4, the lowest, and now the main working tunnel, is 1,600' below the outcrop and 535' below No. 3 tunnel, known as the 1,100' tunnel. The total workings amount to many miles of underground development.

Ore reserves are estimated at about 250,000 tons, including about 70,000 tons of 3.5% ore, blocked out above No. 3 tunnel, other ore averaging between 2 and 2.5% copper.

No. 4 tunnel has a back of about 1,750' on the dip of the vein. At 3,150' from the portal, this tunnel encountered a fault, apparently identical with the fault in No. 3 tunnel. The east drift of No. 4 tunnel is about 1,800' long, practically reaching the boundary line of the Pandora mine and has shown some patches of chalcocite ore, but payable ground has not as yet been developed in this tunnel, and the prospects apparently are not bright. A winze sinking from this level, east of the fault, is expected to pick up a possible extension of the orebody at a depth of about 600'.

The mine is connected with the railway spur at Larson by a 7,300' tram line from No. 2 tunnel, and a 3,000' Riblet aerial tram from No. 3 tunnel.

Electric energy is used throughout, the power installation having two 20-drill air compressors, with direct-connected motors, 3 additional motors and an electric light plant. The company maintains a good system of water works, water being brought through a 4½-mile pipe line, generating 300 h. p.

The new concentration mill, built 1912, of 300 tons rated capacity, has a No. 6 gyratory crusher, 2 Hardinge mills, 2 Richard-Janney classifiers, 14 Wilfley tables, 17 Deister tables, 7 vanners, 3 trains of rolls and Callow tanks. The mill is handling about 230 tons per day and making an extraction of 55 to 60%. Concentrates run about 25% copper and 27 oz. silver per ton. The old leaching mill is dismantled.

Buildings include a 40x50' office, machine shop, smithy, changing house, and a sawmill at the mouth of No. 2 tunnel. There are 2 hotels, with accommodations for 300 workmen, these buildings being 52x84' and 40x200' in

size, the latter having 110 rooms, with hot and co'd water in each, steam heat and electric lights, no mine in the N. W. having superior accommodations for its workmen. About 110 men are employed.

Production, begun 1904, has been decidedly irregular, since the mine is dependent upon outside smelters for the sale of its ores. This has brought about curtailment and suspension of output on numerous occasions, owing to erratic demand, suspensions of smelting, and other causes, over which the Snowstorm Co. had no control. Ores have been shipped, at various times, to almost every copper smelter in the northwestern states and British Columbia, including the Washoe Works at Anaconda, the Butte Reduction Works and the Pittsmont smelter at Butte, the Tacoma smelter in Washington, the Greenwood and Great Falls smelters of British Columbia. Concentrates are shipped to Tacoma.

Production for fiscal years ending June 30, has been as follows:

Year	Ore, tons	Fine copper, lbs.	Silver, oz.
1905		4,950,000	
1906		6,233,940	
1907	76,224	6,850,000	525,000
1908	87,503	8,000,000	596,000
1909	119,816	10,363,438	734,968
1910	91,368	7,125,105	605,075
1911	34,464	2,653,036	267,263
1912	29,964	2,074,447	204,870
1913		4,522,605	368,906

The cost of finished copper delivered, after deducting silver values, was 10.735 cts. per lb. in the fiscal year, 1913. The property is one of present importance, and should be a considerable producer for some years to come.

SNUG HARBOR COPPER CO.

ALASKA

Office: 821 Marbridge Bldg., New York. Letter unclaimed at former mine office: Valdez, Prince William Sound district, Alaska. Wales J. Watson, pres.; Alfred G. King, vice-pres.; Harry L. Earle, sec.-treas., at last accounts. Organized Feb., 1910, under laws of Arizona, capitalization \$5,000,000, shares \$10 par, fully issued.

Lands, 18 claims, on Snug harbor, Knight's island, presumably held under bond and lease.

Company apparently has done little or no work on the property and because of its careless regard for the truth, shown in the prospectus, is regarded with much suspicion. See Vol. X.

SOMBRERETILLO MINING CO., S. A.

MEXICO

Controlled through stock ownership by the Sonora Central Mines Co.

SOMBRERO DEVELOPMENT CO.

ARIZONA

Office: Houghton National Bank Bldg., Houghton, Mich. Mine office: Globe, Gila Co., Ariz. Dr. Lucius L. Hubbard, gen. mgr.; Clarence A. Botsford, supt. Company is a syndicate, not incorporated. Lands, on Cherry creek, west of Sombrero Butte, and about 50 miles north of Globe, are slightly prospected by adits. The mine has a small water-driven plant. Inactive.

SONORA CENTRAL MINES CO.

MEXICO

Office: 1207 Fort Dearborn Bldg., Chicago, Ill. Mine office: Alamos, Sonora, Mex. Joseph Hodnett, pres.; E. M. Board, vice-pres.; A. L. Kanagy, sec.; Stephen C. Goss, treas.; preceding officers, Henry Pelgrim, D. L. Watson, C. B. Cole, A. P. Ballou, O. R. Barnett, J. E. Randall, Alice M. C. Allen, J. C. Pirkey, Wm. B. Jones, J. W. Snyder and J. B. Arnold, directors.

Organized July 18, 1907, under laws of Arizona, capitalization \$10,000,-

000, shares \$10 par; issued, 775,000 shares. Corporation Trustee & Agency Co., Chicago, registrar. Annual meeting, Sept. 15.

This company was a merger of the controlling interests of the International Copper & Gold Co., Southern Sonora Development Co. and Santa Cruz Mining Co., and is merely a holding company, controlling the corporations named and other subsidiary and collateral corporations. The management reports that this company controls, through ownership of nearly all outstanding stock, the Southern Sonora Development Co., International Copper & Gold Co. and Santa Cruz Mining Co., these subsidiary corporations in turn controlling the San Bernardo Mining Co., Sombretillo Mining Co., S. A., Santa Fe Copper & Gold Mining Co., and the Montana Copper & Gold Co. Inasmuch as the corporate relations between these different subsidiaries are not clearly shown by the official reports of the different companies, it has been deemed best to describe the various properties, no matter how owned or controlled, under this title.

Lands were reported by the company, 1913, to be 3,603 acres, including 140 acres in Montana, 148 pertenencias in Mexico and 3,087 acres of agricultural lands in the Mayo valley, where the management claims that 3 crops can be raised yearly. There are 20 different properties, of which 5 are said to carry copper, 1 lead, 6 silver and 8 gold.

The Santo Domingo group of 21 pertenencias, which is the principal property, is an antigua, lying between the Quintera and Zambona mines, near Alamos, Sonora, Mex. This property shows fissure veins traversing granite and porphyry and occurring along the contact between granite and porphyry, apparently forming an ore zone of about 30' width and 2,000' length, with shoots of payable ore, 6 to 8' wide and 40 to 90' long. The Santo Domingo is said to have an orebody carrying a footwall paystreak of silver-copper glance ore assaying up to 220 oz. silver per metric ton and is said to have 7' of mixed copper and silver ore assaying 17 oz. silver per ton.

Development is by a 360' shaft, with about 3,000' of workings and management estimates reserves above the 3rd level, at 150,000 tons of concentrating ore, carrying values of \$11 to \$25 per ton. The consulting engineer estimates the Santo Domingo ores to average 24 oz. silver per ton. Equipment at this mine includes a 10-stamp mill and small concentrating plant.

The Dolcoath group of 11 pertenencias, at Alamos, is said to show ore assaying 12% copper and about 20 oz. silver per ton. El Sorteo group of 10 pertenencias, 7 miles from San Bernardo, Alamos, Sonora, has a 30' vein, opened by a 300' tunnel, showing ore giving good assays in copper, silver and gold. El Pedregal group of 14 pertenencias, 17 miles from Alamos, has a 200' shaft and a 1,760' tunnel. La Negra group of 4 pertenencias, adjoining El Pedregal, has a 100' shaft, with about 1,500' of workings, and is equipped with a 10-stamp mill. El Nino group of 10 pertenencias, 8 miles east of El Pedregal, and 30 miles south of San Bernardo, has 90' of workings, said to show silver-lead ore. La Josefita group of 14 pertenencias, about 30 miles east of Alamos, has about 100' of workings, said to show copper ore. The Zacatecas group of 10 pertenencias, near the Trigo gold mine, has 50' of workings, said to show gold ore. La Higuera group of 8 pertenencias is said to have a 50' vein, with a 16' paystreak carrying mainly silver values. The Santa Ana group of 4 pertenencias has 50' of workings, said to show silver-lead ore. The San Pablo group of 10 pertenencias, in the Altar district of Sonora, is said to be an antigua, with considerable workings. The Santa Cruz group of 12 pertenencias, includes the Cuiche gold mines, in the Altar district, the Santa Cruz mine having a 380' shaft and 300' tunnel, and

the Cuiche mine having a 60' shaft, the group, as a whole, having about 3,000' of workings, with a 10-stamp mill. La Australia group of 20 pertenencias, in El Fuerte district of Sinaloa, has a 70' shaft, with about 400' of workings, showing a 12' paystreak of ore giving assays up to 15% copper and 112 oz. silver per ton.

The Ruth claim, in Missoula county, Mont., is said to show copper ore, and has 100' of workings. The Stone Creek mines, sometimes known as the Ballarat & Wallede group, area 120 acres, 18 miles from Dillon, Madison county, Mont., have a 300' two-compartment shaft, with 1,370' of workings, and are said to have shipped some ore to Butte smelters returning 17% copper.

The Montana properties have been idle several years, and operations at the Mexican properties have been interrupted by political disturbances since 1911.

SONORA CHIEF MINING CO.

MEXICO

Office: 219 Argyle Bldg., Kansas City, Mo. Mine office: Suaqui de Batuc, Sonora, Mex. Jas. E. Crosby, pres.; Dr. Moses T. Runnels, vice-pres. and treas.; R. A. Bruns, sec.; preceding officers, C. D. Stoll and I. D. Waggener, directors. Organized July 18, 1904, under laws of Arizona, and protocolized, Oct., 1905, under laws of Mexico, capitalization \$1,500,000, shares \$1 par.

Lands are 2 groups, known as the Phoenix and Lakeside, 464 acres, 8 miles south of Suaqui de Batuc. The property shows granite-porphry, diorite and limestone, with several large, continuous orebodies, of which 4, of 5 to 6' average width, carry ores said to give average assays of 15.8% copper, 10 to 80 oz. silver and \$25 to \$49 gold per ton. Development, mainly at the Phoenix group, includes shafts of 95' and 125', and tunnels of 25', 754' and 248', with 4,000' of workings. The company also owns the DeWet and Kruger placer grounds, about 75 acres, on the Yaqui river, with an available waterfall, estimated as capable of generating 440 h. p.

The whole affair was a crooked proposition manipulated by one L. H. Jansen, now deceased, probably in collusion with others. The property has no such showing as reported and described. Such veins as exist are tiny streaks a few inches wide, which in places contained very high-grade ore, chalcocite and perhaps whitneyite. Its location, on the far side of the Yaqui river, is such that even a remarkably good showing would not have been worth development at the time the company was active. The property is totally devoid of merit. Idle several years.

SONORA COPPER MINING CO.

MEXICO

Office: 895 So. Clarkson Ave., Denver, Colo. Edward J. Wilcox, pres.; H. L. Peebles, vice-pres.; Fred W. Webber, sec.; C. A. Parker, treas., and L. J. Stark, directors. Organized May 17, 1910, under laws of Colorado, capitalization \$10,000, shares \$1 par.

Lands, 10 claims, 24 acres, on Laradero creek, 4 miles from San Felipe, in the Arizpe district, Sonora, and 62 miles from Posa on the S. P. R. R.

Property is developed by numerous pits and short tunnels with about 820' of underground workings, showing a 12' vein, with some ore said to average 24% lead, 27% zinc, 4 oz. silver and up to \$2 in gold per ton. The mine has no power equipment nor mine buildings of consequence. Idle since 1912.

SONORA COPPER SMELTING CO.

MEXICO

Office: 424 Scarritt Bldg., Kansas City, Mo. Mine office: Noria, Sonora, Mex. A. M. Conard, pres. and gen. mgr.; J. M. Lowe, vice-pres.; C. E. Kroh, sec.; W. R. Moore, treas.; preceding officers, J. G. Burnley, F. E. Reed, E. E. Axline, J. E. Kramer and Chas. L. Irons, directors. Organized

June 25, 1908, under laws of Arizona, capitalization \$3,000,000, shares \$10 par. Company was supposed to have been organized as successor of the Sonora Copper Co., but apparently owns only a 50% stock interest in that company, and title to the Mexican property is held in the name of the International Copper Ore Corporation, which is controlled, in some manner, by this company, the corporate relations being neither clear nor satisfactory. Annual meeting, third Tuesday in December.

Lands, about 500 acres, with miscellaneous holdings of approximately 8,500 acres of valley land, on both sides of the railway, including the town-site of Noria. The mineral lands, east of Noria, include the Cobre Grande, Creston de Cobre, Veta Grande, Wedge and Extension de la Washington properties. The Cobre Grande, 123 acres, 5 miles east of Noria, is the principal mine. Considerable work has been done on the Extension de la Washington group on a vein said to be of 4 to 97' width, traceable 3 miles on the company's lands, and to carry oxidized ores, succeeded by chalcocite, chrysocolla, tetrahedrite and galena, with some chalcopyrite in the deepest workings. The ore is reported to carry 2 to 40% copper, 5 to 25 oz. silver and \$2.50 to \$30 gold per ton, and claimed to average about 6% copper and \$5 per ton in combined silver and gold values, but the quantity of ore of this grade must be small.

Development is by several shallow shafts with 1 of 260' depth, and by tunnels of 50', 200', 560', 950' and 2,150', the latter, the main working tunnel, cutting the main vein to give a back of 650', and having winzes of 155' and 275'. The property has upwards of 6,000' of workings, estimated by the management to show 140,000 tons of ore, and the company plans continuing development in the sulphide zone.

Equipment said to include a steam plant with three 60-h. p. boilers, 50-h. p. and 100-h. p. engines, 20 and 75-kw. generators, a 4-drill Sullivan air compressor, a 25-h. p. gasoline hoist at No. 2 shaft, and electric hoists of 25 and 30 h. p. at the main tunnel winzes.

A 3,500' Leschen automatic aerial tramway, with drop of 450', connects the portal of the main tunnel with the smelter. A mill may be built later, adjoining the smelter. A 100-ton smelter, built under a 20-year concession granting exemption from state and municipal taxes, has a 44x80" water-jacket blast furnace, to make matte only, three 60-h. p. boilers, 50 and 80-h. p. engines, a Connersville blower, and a 10-kw. electric generator. Water is secured from wells.

Property is not considered worthy of the money spent upon it and the past history of the president is such that the company is regarded with much suspicion.

SONORA DEVELOPMENT CO.

MEXICO

Office: 603 New Ridge Bldg., Kansas City, Mo. Mine office: Moctezuma, Sonora, Mex. Alfred Blaker, pres.; Chas. M. Williams, vice-pres.; Col. Geo. M. Bowie, vice-pres.; John W. Amerman, sec.; W. A. Rule, treas.; preceding officers, R. N. Richmond, A. A. Potter and A. D. Fetterold, directors; E. H. De Vore, cons. engr. Organized under laws of Arizona, capitalization \$1,000,000. Company absorbed the Goodlander Mining & Milling Co.

Lands, 98 hectares, including the Nacozari Copper Queen, Wostenholm, Conformé, Goodlander, Don Genaro y Anexas, Cuauhtemoc and La Verde groups, carrying auriferous and argentiferous copper and lead sulphides. The Nacozari Copper Queen mine, 65 acres, lying between the Pilares de Nacozari and Belle Unión mines of the Moctezuma Copper Co., has given ore assaying up to 58% copper. The property is developed by shafts and tunnels, apparently somewhat at random. The Goodlander has a 10-stamp

mill. The company has been idle for several years and apparently is ready for reorganization.

SONORA EXPLORATION CO.

MEXICO

Mine office: Estación Yzabal, Sonora, Mex. Lands, formerly held by the Florida Copper Co., in the vicinity of the El Tigre mine, include El Temblor, Last Chance, Texas and other properties, carrying gold and silver-copper ore, developed by shaft. Equipment includes steam power and an air compressor. Idle.

SONORA EXPLORATION & METALS CO.

MEXICO

Office: care F. H. Cothren, 2 Rector St., New York. T. B. Johnstone, pres.; A. Oltmann, sec.-treas.; A. A. Leach, Jr., supt. Is a close corporation. Capitalization \$1,500,000.

Lands, 27 pertenencias, 67 acres, known as the Domingo group, lying between the Las Animas and the Nahuila mines, at San Javier.

The property is a gold-silver-copper prospect, said to have ore assaying up to 4% copper, 95 oz. silver and \$20 gold per ton.

SONORA MINING & DEVELOPMENT CO.

MEXICO

Office: 207 Spitzer Bldg., Toledo, Ohio. Works office: Toledo, Sonora, Mex. A. E. Klauser, pres.; H. R. Klauser, vice-pres. and gen. mgr.; H. C. Gerber, sec.-treas.; and A. V. Baumann, directors. Organized 1901, under laws of Arizona, capitalization \$5,000,000, shares \$1 par. Company operates in Mexico under the name of the Yaqui Smelting & Refining Co., S. A., which is organized under the laws of Mexico, capitalization 100,000 pesos. Company is exempt from the payment of property tax for 20 years, and also enjoys a 50% reduction on the state tax for 20 years. International Trust Co., Boston, registrar; Frederick R. Tibbetts, Boston, transfer agent.

Lands are about 154 hectares of mineral property, and about 1,000 acres of miscellaneous lands, including a smelter site and town site. Property is reached by a branch of the Southern Pacific railway, and the company has a government concession for construction of an aerial tram line of 40 kilometers length. Lands are in the Ures, Hermosillo and Sahuaripa districts.

The mineral lands include numerous claims in the municipalities of San Antonio de la Huerta, San Javier and San Onavos, about 80 miles east of Torres and about 60 miles below Campo Santo Niño. The principal property is the Veta Grande mine, about 10 miles from the smelter, said to show a gossan 40' wide, outcropping for a quarter mile. Property also includes the Almeda, Plomosa, Isabella, Moctezuma, San Francisco, Caballos, Ferruginosa, Independencia and Gerberina mines, carrying mainly gold-silver-copper ores, with some auriferous silver-lead ore.

The reduction works include a sampler, smelter and power plant, with necessary adjuncts. The works are on a hillside on the west bank of the Yaqui river, and is the only custom plant in a district rich in mines whose development has been delayed by lack of rail facilities and depredations of the Yaqui Indians. The 50-ton sampling mill is 30x50' in size, 2 stories high, equipped with a 9x12" Blake crusher, 5x8" Allis-Chalmers gyratory crusher, 12x12½" Allis-Chalmers rolls and a 10x12" engine.

The smelter, of 150 tons nominal daily capacity, has a 40x60' blast furnace building, with a 36" circular Allis-Chalmers blast furnace, for use interchangeably on lead and copper ores, and a smaller furnace for copper only. Fuel formerly local coal and coke, both unsatisfactory, is imported coke, available by rail. The reverberatory furnace is 18' 4" x 26' 2" in size. The power plant includes two 80-h. p. water-tube boilers, 2 engines, an Erie high-speed engine being belted to a 25-kw. generator for light and power and a No. 7 Connorsville blower, for furnace blast. The lead refinery building has a softening furnace, refining furnace and 2 desilverizing kettles, operating

on the Parks process. The silver refining plant includes 2 cupel furnaces, with blast attachments, 1 bullion furnace, 1 muffle furnace, and necessary pots and moulds, with a bullion vault.

Buildings at the works include a laboratory, a machine shop, smithy, general store, hotel and an ice plant. Presumably idle.

SONORA-PACIFIC MINING CO.

MEXICO

Mine office: Noria, Sonora, Mex. Ira E. Bowers, general manager. Organized, 1911, as the successor of the Llano Copper Co.

Lands, 10 groups, 526 hectares, on Caracahui mountain, 3 miles east of Noria, the nearest rail point, also 5,000 hectares of ranch lands. Property shows limestone cut by intrusions of diorite and porphyry, with a quartz vein of 3 to 50' estimated width, traceable 6,000' on the company's lands, which is reported to show bunches of ore carrying chalcocite, bornite and chalcopyrite, with a little native copper that will average about 7% copper, 6 to 10 oz. silver and \$2 to \$5 gold per ton, as developed. Development consists of the 105' No. 1 shaft, No. 4 shaft of 800', and No. 7 shaft of 600', with tunnels of 50', 200', 577' and 750'. Orebodies developed so far are too small and too few for commercial production.

Equipment includes a 125-h. p. steam plant, with 7x8" and 8x10" hoists, and a 6-drill Ingersoll-Rand air compressor.

SOUTH BUTTE MINING CO.

MONTANA

Mine address: Butte, Silver Bow Co., Mont. John G. Williams, M. E. Riley and Arthur Howell, directors, at last accounts. Organized May 25, 1906, under laws of Minnesota, capitalization \$500,000, shares \$100 par. This company was organized by the Great Northern railway interests. The company has had much litigation, with various individuals and corporations, including the Butte Central Copper Co., East Butte Mining Co., P. D. Morgan and others, winning practically all of the suits. Property was leased to the Montana Consolidated Mining Co., but nothing of particular value was developed, and the latter-named company was liquidated.

Lands include the Surprise placer claim, but company's chief asset consists of mineral rights to a narrow strip along the Great Northern right-of-way. Idle.

SOUTH FORK & KALISPELL COPPER CO.

MONTANA

Office: Kalispell, Mont. Chris Best, S. M. Logan, William Morris, Mrs. Mary T. Morris, W. Curran, Thos. Lee and W. Howe, incorporators. Organized July, 1913, capitalization \$1,000,000, shares \$1 par.

Lands, 4 claims, 2 patented, in the Silver Basin district, Flathead county, 8 miles from Essex and the Great Northern railroad.

The property, slightly developed, shows ores, said to have given assays of 36% copper, 4.28 oz. silver and up to \$41 gold per ton.

SOUTH HECLA MINING CO.

UTAH

Office: Walker Bank Bldg., Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. Geo. H. Watson, pres. and gen. mgr.; Herman Bamberger, vice-pres.; H. L. Pratt, sec.-treas.; preceding officers, H. C. Edwards, Theo. Tobiason, E. C. Ashton and L. P. Palmer, directors; Arvi Roininen, mine supt.; Robt. Gorlinski, engr. Organized Sept. 14, 1910, under laws of Utah, capitalization \$500,000, shares \$1 par, assessable; issued \$226,781. Company was organized as a merger of the South Columbus Consolidated Mining Co., and Alta-Hecla Mining Co., and holds properties formerly held by the Bingham-Centennial, Alta-Quincy, Columbus Wedge, Ivanhoe and Lilburn mining companies. Company exchanged stock on the basis of 1 share of South Hecla for 5 shares of South Columbus, and 1 share of South Hecla for 5 shares of Alta-Hecla. Shares are listed on the Salt Lake Stock Exchange. Annual meeting, second Wednesday in September.

Lands, 40 claims, partly patented, and partly with patents applied for, 550 acres, in the Little Cottonwood district. The property carries fissure veins in grano-diorite and limestone, and contact deposits between limestone and granite. The 2 orebodies under development are reported by the management to range from 4' up to 30' in width, and to carry malachite, azurite and tetrahedrite in the surface zone, succeeded by chalcopryrite, galena and sphalerite, estimated by the management to average 3.5% copper and 20 oz. silver per ton.

The mines were operated throughout 1912, but the copper production was small, in fact the total for all the 15 working mines of both the Big and Little Cottonwood districts, coming mostly from the Michigan-Utah holdings, was but 386,963 lbs. copper in 1912, with a total value for lead, silver, gold and copper output of but \$232,381. The property includes a number of old mines, with rather extensive workings, including No. 1 shaft of 100' depth, No. 2 of 112', No. 3 of 160', No. 4 of 90', No. 5 of 125', No. 6 of 110', and No. 7 of 155'. Development is principally by tunnels, as follows: The Dwyer of 2,000', the Alta-Quincy of 1,800', the South Columbus of 1,400', the Rustler of 1,200', the Scott of 1,700', the Neversweat of 150' and the White of 700'. The mine as a whole has about 20,000' of workings, lighted by electricity.

Equipment includes a 60-h. p. electric plant, with a 10-h. p. hoist good for 200' depth, and a 3-drill Ingersoll air compressor. Buildings, partly destroyed by snowslides, 1908-09, have been replaced, and there are now 8 structures, including a 40x130' shop building, housing a machine shop, smithy and carpenter shop, with a 3-story boarding house and 5 dwellings.

SOUTH KEARSARGE MINE.

MICHIGAN

Owned by Osceola Cons. Mining Co., at Calumet, Houghton Co., Mich.

SOUTH LAKE MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Mine office: Houghton, Mich. John C. Watson, pres.; Arthur C. Paine, sec.-treas.; R. M. Edwards, gen. mgr.; preceding officers, Ashley Watson and Frederick Hoitt, directors. Organized Feb. 25, 1880, under laws of Michigan, capitalization \$1,000,000, shares \$25 par, as the Aztec Copper Co., and reincorporated Aug. 12, 1909, under present title, with capitalization increased to \$2,500,000, shares \$25 par and corporate existence extended for 30 years from Feb. 25, 1910; issued 67,919 shares, \$6.60 paid in. Last assessment was \$2, payable June 3, 1912. Of the issued stock 20,000 shares were put out at \$2 each Aug., 1909, to shareholders of record pro rata and 10,000 shares were sold May, 1913, to an underwriting syndicate at \$6 net per share. Balance of assets Dec. 31, 1912, were given as \$29,885. American Trust Co., Boston, registrar; Federal Trust Co., Boston, agent. Annual meeting, first Tuesday in March.

Property, 334 acres of mineral lands, being the W. $\frac{1}{2}$ of Sec. 31, T. 51 N., R. 37 W., adjoining the Lake mine on the east, and the Adventure property on the west.

Mining work was begun on the property in 1862, though the name Aztec was originally taken because the remains of extensive workings by a prehistoric race were thought, in those days, to have been the work of the Aztecs. A 16-lb. stone hammer was taken from the old workings. The mine had a stamp mill in early days, and produced 756,853 lbs. fine copper, of which 100 tons was secured in a single mass. Exploratory work was done, 1905-06, on the Knowlton bed, of the Evergreen series, by the Aztec-Algomah Development Co., and diamond-drill borings were begun Sept., 1909, continuing until March, 1911, when suspended by reason of adverse financial conditions. Borings were begun at the base of Evergreen bluff, near the foot of the Evergreen belt, thence working southward toward the

eastern sandstone. Eight drill holes were put down at various points on the property and in addition 4 stand pipe holes were put down to test the depth of the overburden in search of points having a comparatively shallow capping of drift. Stand-pipe work disclosed an overburden of homogeneous clay, of 272' average thickness, in the vicinity of drill holes Nos. 3 and 7, and from the comparative ease with which stand pipes were driven through the overburden, and from the material brought up, it would appear that the overburden of the South Lake, varying from 105 to 300' in thickness, is almost entirely argillaceous and contains very few boulders.

No. 1 hole, driven in the north-central part of the property, was unproductive of results. No. 2 hole, bored close to the eastern, and about 1,000' north of the southern boundary, cut ore matter at depth of a little more than 1,800' in what is supposed to be the Lake amygdaloidal bed, and was bottomed at about 2,400' depth in a conglomerate thought to be identical with that underlying the Lake bed on the Lake property. No. 3 hole cut amygdaloidal beds at 748' and at 878', both beds carrying copper. At still greater depth 2 other amygdaloidal beds, without copper, were penetrated, and the hole penetrated a conglomerate bed at a depth of about 1,300' and was bottomed at 1,953'. No. 4 drill hole cut the first cupriferous bed at depth of 824', the first 16' carrying copper, and at 50' greater depth the second cupriferous bed was cut, this carrying copper for 30'. At depth of about 1,090' this hole cut a third amygdaloidal bed carrying fair copper values for about 20' and hole was stopped at a depth of 1,235'. No. 5 hole yielded results almost identical with those from No. 4, except that the fourth or bottom bed of the cupriferous series carried very little copper. No. 6 hole first cut copper at about 500' depth, in a bed of about 20' thickness, having 5' of extremely rich copper ground, 5' of fair copper ground, and 10' of ground ranging from lean to almost barren.

Holes Nos. 3, 4, 5 and 6 were bored to form a square of about 200', near the eastern boundary, approximately equidistant between the north and south lines of the property. Data from these 4 holes indicate the general strike of the formation to be N. 70° W. at this point, with a dip of about 56° S. This series of holes has disclosed 4 copper-bearing beds, 1 lying immediately above an ophite stratum, and 1 below, with 2 other cupriferous beds at distances of about 30' and 60'. The borings of the South Lake have been carefully correlated with the underground work at the Lake mine adjoining, and with the results of the diamond-drill boring on a number of other properties in the same district.

Dr. Hubbard has held, rightly it proves, that the South Lake carries the western extension of the rich amygdaloidal stratum first opened in the Lake mine. The apparently irreconcilable difference of 70° in the strike of the bed in the Lake mine and the supposedly same bed in the South Lake mine is accounted for by the hypothesis that there is a flexure in the Lake bed and parallel strata, and that the northerly continuation of the Lake series is deflected from a N.-S. strike in the workings of the Lake mine, to a strike of N. 70° W., where cut by drill holes Nos. 3, 4, 5 and 6 on the eastern border of the South Lake tract. A further flexure to the west of this point on the South Lake property would give an ultimate strike parallel with that of the bedded series of the Evergreen belt, shortly to the northward. The correctness of this hypothesis is proven by the western deflection of the Lake bed in the northernmost workings of the Lake mine. The confusing feature of the structure has been the southerly dip of the 4 copper-bearing beds developed by the South Lake drill holes, Nos. 3 to 6, which is opposed at right angles to the northerly dip of the Evergreen lodes a short distance to the north. The detailed structural geology of this section has

yet to be worked out, but it is evident that the South Lake contains the continuation of the rich amygdaloid of the Lake Copper Co.

Ground was broken May, 1912, for a vertical shaft designed to open up the copper-bearing beds disclosed in drill holes Nos. 3, 4, 5, 6, 7 and 8. The shaft has 3 compartments with a concrete collar through the over-burden and was 515' deep at the end of 1913. The first level is at 300' with other levels at 100' intervals. At depths of 110', 145', and 170', the shaft passed through 3 amygdaloidal lodes, 18', 10' and 40' thick, respectively, all of which have been opened in a crosscut on the 300' level. These lodes carry good copper values and presumably are identical with those cut in the No. 1 drill hole between depths of 160 and 254', where all showed copper. These lodes are not to be confounded with the lodes discovered in drill holes No. 3 to 8, which are to be opened by a crosscut in an opposite direction on the 600' level.

The South Lake has installed all machinery necessary to carry on development up to the point of production and has a decidedly promising property upon which to work.

SOUTH LIVE OAK DEVELOPMENT CO.

ARIZONA

Office: 518 Railway Exchange Bldg., Milwaukee, Wis. Mine office: Miami, Gila Co., Ariz. Geo. J. Lonstorf, pres.; L. D. McClure, vice-pres. and gen. mgr.; C. C. Faires, sec.; S. A. Dunn, treas.; preceding officers, P. D. Kennedy and Geo R. Hill, directors; H. E. Dunn, supt. Organized 1912, under laws of Arizona, capitalization \$500,000, shares \$10 par, assessable; issued 10,000 fully paid shares and 30,000 shares, marked \$2.50, paid in. Last assessment was 50 cts., payable Oct. 15, 1912. Shares are listed on the Boston curb.

Lands, 16 claims, 310 acres, held under bond and lease, for \$250,000, payable \$12,500 March 15, 1912, \$25,000 March 15, 1913, and \$25,000 at 3 months intervals thereafter, with final payment of \$137,500 March 15, 1914.

The property, known as the Schulze group, adjoins the Southwestern Miami, and carries the extension of the Miami ore belt on which the Miami, Inspiration Consolidated and Live Oak mines are opened. Property shows Pinal schist capped by granite porphyry, both formations being highly altered and fissured. The mineralized schist, exposed in places, covers about 100 acres on this property. The oxidized zone shows low-grade copper carbonate ore, and ore of commercial grade occurs entirely in secondary form, as chalcocite, in veinlets and coatings on brecciated material.

Development is by churn drilling, a total of 8 holes, having been drilled to end of 1913. The No. 1 hole, located about 3,000' south of the Southwestern Miami boundary line, disclosed a leached and oxidized brecciated granite capping to a depth of 455', below which chalcocite ore of low grade was encountered, ore of commercial tenor appearing at about 490' and continuing to a depth of about 550'. The hole was stopped at a depth of 825'. No. 2 hole, 500' west of No. 1 hole, was started in granite, and abandoned at a depth of 755' without disclosing ore. No. 3 hole, about 200' from the Southwestern Miami boundary, entered mineralized schist at a depth of 610', and ore of about 2% copper tenor at a depth of 750', which continued to 815', where the hole passed into barren ground and was stopped. No. 4 hole, 1,000' west of hole No. 3, showed small amounts of carbonates, and was abandoned at about 850' without developing ore of commercial value. No. 5 hole, 200' west of No. 3, disclosed 90' of ore, reported to have assayed better than 2% copper, and was stopped at a depth of 917'. No. 6 hole, 300' S. W. of hole No. 5, went to a depth of 950', without important developments. No. 7 hole, 300' north of No. 3 hole, was abandoned at a depth of 965' without developing ore. No. 8 hole, 400' west of No. 5 hole, was without

showings of importance to a depth of about 250' when work was suspended, June, 1913, since which time the property has lain idle.

Buildings include an office, boarding house, bunkhouse and several dwellings.

SOUTH MOUNTAIN MINES.

IDAHO

Mine address: Silver City, Owyhee Co., Idaho. Property, about 20 miles south of Silver City, originally worked for its gold-silver-lead ores, in the early 70's, shows a wide contact zone of marbelized limestone, capped by an iron and manganese gossan, traceable several miles, flanked by granodiorite. Ores at and near surface are mainly silver and lead carbonates with occasional gold values, succeeded at comparatively shallow depth by copper-iron sulphides in a silicious gangue, reported to average about 10% copper, 30 oz. silver and \$1.50 gold. The copper sulphides also carry occasional kidneys of clean galena with high values in silver, and there is a pronounced streak of zinc sulphides with very small values in gold and silver.

The mine has an old 50' shaft and a 1,000' tunnel, the former showing a 4' vein of silver-copper ore. Idle several years.

SOUTH RANGE MINING CO.

MICHIGAN

Office: 199 Washington St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. John W. Belches, pres.; Irving J. Sturgis, vice-pres.; Arthur E. Coe, sec.-treas.; preceding officers, John C. Watson, Horace H. Stevens and Rufus R. Goodell, directors; Fredric W. Nichols, resident agt. Organized Nov. 12, 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, fully paid; issued \$2,370,000. Annual meeting, first Wednesday in June.

Owens 7,000 acres of undeveloped mineral ground, lying mainly between the Globe and Lake mines, in Houghton and Ontonagon counties, Mich., and so effectually scattered that future mining companies acquiring territory in that district will need more or less land from the South Range Mining Co. to secure regular tracts.

SOUTH SAN XAVIER COPPER CO.

ARIZONA

Office and mine: Tucson, Pima Co., Ariz. S. M. Franklin, manager. Lands show a contact deposit between limestone and porphyry, with a gossan cap of 30' estimated width, carrying a 30' paystreak of sulphide ore assaying up to 28% copper and 12 oz. silver per ton. The ore deposit is developed by a 2-compartment shaft of about 200' depth. Smelter shipments have returned 13.5 to 20% copper, with small silver values. Presumably idle.

SOUTH SIDE MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. John C. Watson, pres.; Arthur C. Paine, sec.-treas.; preceding officers, Harry F. Fay, Ashley Watson and D. C. Forbes, directors. Organized 1868, under laws of Michigan, and reincorporated Nov. 2, 1898, capitalization \$1,000,000, increased, 1911, to \$2,500,000, shares \$25 par; fully issued, \$9.70 paid in. The company levied assessments of about \$90,000, to 1872, and April, 1912, paid a cash dividend of 25 cts per share and 1,935/10,000 of a share of stock of the Naumkeag Copper Co., received in payment for lands sold to that company.

Lands were about 200 acres, lying west of the Dacotah and north of the old Naumkeag properties, immediately west of Houghton, sold, with the exception of about 31 acres of surface rights surrounding the water supply of the village of Houghton, for \$22,515 cash and 7,740 shares of stock of the Naumkeag Copper Co. Negotiations for the sale of remaining surface rights to the village of Houghton are in progress, and when completed, company can be liquidated.

SOUTH UTAH MINES & SMELTERS**UTAH**

Office: 165 Broadway, New York. Mine office: Newhouse, Beaver Co., Utah. Hugo Hoffstaedter, pres.; H. G. Robinson, sec.-treas.; preceding officers, J. F. A. Clark, E. P. Earle and Samuel Newhouse, directors; W. L. Heidenreich, gen. mgr.; R. J. Tullock, mill supt. Organized Feb. 28, 1910, under laws of Maine, as successor of Newhouse Mines & Smelters, capitalization \$4,300,000, shares \$5 par; issued 645,800 shares. Debentures \$1,071,000 of 6% 20-year income bonds, convertible into stock at par, remaining from a \$1,500,000 bond issue put out by the Newhouse Mines & Smelters. Interest on bonds is said to be payable annually, but only if and when earned, and then out of net profits of the year's operations. The old company defaulted in interest on its bonds, and the property was bought for \$500,000 under foreclosure, old shareholders being given stock, share for share, plus a payment of \$1 per share for new stock. The reorganization brought about \$600,000 into the treasury, of which all but about \$200,000 was required to liquidate the floating debt of the old company. The annual report for year ended June 30, 1912, showed an operating loss of \$31,113, increasing a former deficit to \$118,353, and gave current assets as \$179,500 and current liabilities as \$33,723. No report was issued in 1913. Equitable Trust Co., New York, transfer agent; Windsor Trust Co., registrar. Annual meeting, third Monday in October.

A dividend of 50 cts. per share, amounting to \$300,000, paid Aug. 31, 1907, by the Newhouse Mines & Smelters, was termed a first quarterly dividend, but had no successor, there being no profits to divide. Apparently the action of the management in declaring this dividend, and calling it the first quarterly dividend, was for market effect only, and censurable.

Lands, 13 claims, patented, 201 acres, with miscellaneous holdings, including the Midvale placer of 168 acres area, water rights at Wah Wah springs, mill and town sites and grazing lands, giving total holdings of 7,882 acres.

The mineral property carries about 1 mile of the strike of the Cactus vein. The Cactus mine shows monzonite-porphyry country rock, near a limestone contact, and ore is essentially an irregular mass of brecciated monzonite, carrying copper impregnations, including some oxidized ores in the upper workings, but at depth mainly chalcopyrite, associated with pyrite, averaging about 1.15% copper and 25 cts. per ton in combined gold and silver values. Although the average grade of ore is very low, there is some high-grade sulphide ore, mainly chalcopyrite, assaying up to 15 and even 20% copper, but the quantity of such ore is very small.

The mine has practically no ore reserves, though there is an orebody between the 700' and 800' levels containing about 100,000 tons of 1.5% ore, with an additional 100,000 tons of probable ore. A new orebody opened on the 600' level for a short distance shows ore averaging about 1.8% copper.

The mine is developed by two 3-compartment working shafts, of 600' and 900' depth, with levels at 100' intervals, and connected on the 600' level with a 6,300' main haulage tunnel, having a grade of 5%, laid with 30-lb. steel rails. Trammings is done by 2 electric locomotives, each hauling trains of 21 cars. The tunnel is electric-lighted throughout, and cuts several cupriferous veins before reaching the main orebody. The mine has upwards of 4 miles of workings. Principal developments are between the 300' and 700' levels, and the 600' level, giving the principal showing of ore, was said Aug., 1912, to have an orebody of 135' width and about 125' length, carrying ore of a little better than 1% copper. The mine had some trouble, 1908, from caving and the management has since operated the mine on the caving system.

At the portal of the main tunnel the ore trains pass to an ore house,

where 7 cars at a time are run into a great steel tube, which is partially rotated, and the ore dumped from the cars upon grizzlies, oversize going to Blake crushers that reduce it to lumps of 1" size and smaller, fines and crushed ore going to 800-ton storage bins, whence the ore is loaded into railroad cars, and taken to the mill.

The mine has a 200-h. p. steam plant, with a 150-h. p. hoist good for 600', and a 40-drill Ingersoll-Sergeant air compressor, both operated electrically. There also is an auxiliary electric hoist on the second level.

The mine and mill are connected by the Newhouse, Copper Gulch & Sevier Lake railroad, 2.3 miles in length, of standard gauge, owned by the company, which connects with the San Pedro & Salt Lake railway, equipment including a Shay mountain-climbing locomotive and five 50-ton dump cars.

The 1,000-ton mill is 100x400' in size, in two 500-ton duplicate sections, designed on the unit plan, to allow for future expansion. The western section, which is the concentrator proper, is of structural steel, with corrugated iron sides and roof, having a 15-ton Whiting traveling crane, while the power plant, under the same roof, is of structural steel and brick. Equipment includes three 10x24" Blake crushers, 4 sets of rolls, 1 Huntington mill, 22 Hartz jigs, 48 Wilfley tables, 10 Johnston tables, 8 Wilfley slimers, 16 Callow tanks and Sherman settling tanks and classifiers. Ore is received in 1,000-ton steel bins, whence it is drawn by belt conveyors, equipped with plunger feed, and transferred to elevators, of which there are 2 for each section, 1 for dry and 1 for wet ore. The mill was overhauled and practically rebuilt 1910, at a cost of about \$70,000, going into commission Sept., 1910, after which it was claimed to have been so improved that it was extracting 75% of the assay values as compared with the former average extraction of about 50%. Concentration is about 12.5 into 1. The mill was reported Aug., 1913, to be treating between 200 and 300 tons of ore daily with an extraction of 65% of assay values, and concentrates were said, Sept., 1912, to average about 7.9% copper. The mill product is sent under a 5-year contract calling for 1,000 tons of concentrates monthly, to the Tooele smelter of the International Smelting & Refining Co. Concentrates formerly were reported to carry 10 to 25% excess of iron, commanding a premium of about 10 cts. per unit.

The power plant includes five 350-h. p. Babcock & Wilcox boilers, a Green fuel economizer and a 165' steel smokestack of 8' diameter. The steam plant is held in reserve, machinery being actuated by electric energy, brought 50 miles over the lines of the Telluride Power Co. There are two 500-h. p. Westinghouse-Parsons turbines, making 3,600 r.p.m., formerly direct-connected to two 400-kw. generators that furnished all power, except compressed air, used in the mine and mill.

Water is brought 8½ miles from 6 large springs, at Wah Wah, through a line of 12" and 14" riveted steel pipe, laid across Preuss valley, discharging into a cement reservoir of 300,000 gals. capacity, located on high ground above the mill and town site, the springs having a flow of about 1,000 gals. per minute.

The buildings of the company include a machine shop, carpenter shop, smithy, sawmill and a 3-ton ice plant, the latter being necessary in summer, as the property is on the edge of the Escalante desert.

A town site called Newhouse has been platted near the mill, and the company owns therein 47 dwellings, a club house and a brick hotel with accommodations for 150 men.

Production for the fiscal years ending June 30 was 5,670,993 lbs. fine copper, 53,862 oz. silver and 2,272 oz. gold in 1906; 7,244,179 lbs. copper,

48,595 oz. silver and 1,721 oz. gold in 1908; and for the period Sept. 1, 1910, to June 30, 1912, was 5,527,810 lbs. copper, 43,691 oz. silver and 2,450 oz. gold, secured from 426,703 tons of ore, of which 701 tons were smelting ore and 34,062 tons of concentrates, giving an actual net extraction of about 13 lbs. fine copper, 6 cts. silver and 11 cts. gold per ton. Production for calendar years was 2,590,230 lbs. in 1911, 2,071,544 lbs. in 1912, and 1,151,476 lbs. for 6 months ending Sept. 30, 1913. Mining costs have been estimated at 90 cts. and milling costs at 50 cts. per ton, and while the margin of profit, after allowance for smelting costs is exceedingly small on 12-ct. copper, it is very satisfactory on 16-ct. copper. It is obvious that the Cactus is an exceedingly low-grade mine and will require careful handling to earn any profits.

SOUTH YUBA MINING & SMELTING CO. CALIFORNIA

Mine office: French Corral, Nevada Co., Cal. Al. Elliger, pres.; C. D. Tregonning, supt. Capitalization \$50,000.

Lands, 10 claims, in process of patenting, including the Red Ledge mine, 10 miles N. W. of Nevada City, the nearest rail point. The property shows granodiorite and diabase. There are 3 known veins, mainly copper-bearing, and 1 vein, originally worked for its gold ores, carries considerable quantities of this metal in the copper zone below.

Development is by 6 tunnels, longest 330', with total openings of about 2,000', showing malachite, chalcopyrite and good values in gold and silver. Principal tunnel, starting just above the South Yuba river, is expected to intersect 3 veins, including a 35' vein of cupriferous hematite, and give a back of about 1,500'.

Equipment includes a 10-stamp mill, cyanide plant and water power. Was developing with small force at last accounts.

SOUTHERN ARIZONA MINING CO. ARIZONA

Office: 303 Midland Bldg., Kansas City, Mo. C. A. Pierce, superintendent, Patagonia, Santa Cruz Co., Ariz. Property, the Sweet group, showing gold-bearing copper ore. Mine employs about 20 men and has shaft equipped with steam hoist and Rand air compressor.

SOUTHERN ARIZONA SMELTING CO. ARIZONA

Office: 11 Pine St., New York. Works office: Silver Bell, Pima Co., Ariz. E. B. Gage, pres.; W. F. Staunton, vice-pres. and gen. mgr.; A. N. Gage, sec.-treas.; preceding officers, Selwyn Eddy, V. L. Mason, F. M. Murphy and H. M. Robinson, directors; Meade Goodlow, supt. Organized Aug. 10, 1906, under laws of Arizona, capitalization \$1,500,000, shares \$100 par. Is a subsidiary of the Imperial Copper Co.

Lands, 8 miles south of Red Rock and 12 miles from the Imperial mine, with a down-grade haul, include the 110-acre town site of Sasco, with 400 lots, each 50x150'.

The reduction plant, known as the Sasco smelter, includes a sampling mill, blast-furnace building, converter building, power house, boiler house, machine shop and smithy, all of steel frames, with dwellings, a store, office and miscellaneous buildings. All of the principal buildings are planned so that they can be extended in 2 directions, giving an almost unlimited capacity for expansion. The smelter, blown in Feb. 1, 1908, and blown out Aug., 1910, did a general custom business, but treated mainly ore from the Imperial mine. The plant is of about 750 tons nominal daily capacity.

The sampling mill is small, but fully equipped. Ore is received from the mines in 50-ton steel-bottom dump cars, discharging into 4,000-ton storage bins.

The cupola building has two 300-ton blast furnaces, 1 of which, under pressure, has given an actual duty of nearly or quite 400 tons daily. Charg-

ing is from cars hauled by locomotives on tracks of 36" gauge. The settlers are elliptical, slags, which are of low copper tenor, skimming into 10-ton slag trucks, hauled by steam locomotives on a standard-gauge track. The 100x350' dust chamber leads to a 175' stack of 12' diameter.

The converter department has a 50-ton electric traveling crane, of 45' span. There are six 84x126" shells, rotated hydraulically, and hoods from the converter stands lead to an independent dust chamber and stack. Product is blister copper, averaging 99.3% copper, with small quantities of silver and gold.

The power plant has an electric traveling crane and a 650-kw. electric installation with 440-volt induction motors. There are 2 Nordberg Corliss condensing engines, direct-connected to No. 9 Connorsville blowers, and a Nordberg cross-compound Corliss condensing air compressor having 15" and 30" steam cylinders, with two 36" air cylinders and 42" stroke. The boiler house has 4 Morrison marine boilers. Water is secured from wells in the Santa Cruz valley, by an 8" pipe line. Entire plant cost \$500,000. For production, see Imperial Copper Co.

SOUTHERN EXPLORATION & MINING CO. COLORADO

F. B. Goudy, business manager, 2379 Forest St., Denver, Colo. H. P. King, superintendent, Red Mountain, Ouray Co., Colo. Property, the Congress mine, which shows a vein of copper-lead ore that is developed by a 400' shaft with extensive workings. Equipment includes electric driven compressor.

SOUTHERN PACIFIC GOLD & COPPER M. & M. CO. UTAH

Office: 39 North Capitol Ave., Salt Lake City, Utah. Mine near Ogden, Weber Co., Utah. T. S. Freaney, pres.; Wm. Pough, vice-pres.; J. W. Burnham, sec. and gen. mgr. Organized July 20, 1903, under laws of Utah capitalization \$1,000,000, shares \$1 par, assessable; issued \$798,910. Shares are listed on the Salt Lake Stock Exchange.

Lands, 12 claims, unpatented, 240 acres, 3 miles from a railway and about 8 miles north of Ogden, in the Sierra Madre district, reported to carry 25 orebodies, mainly contact deposits between quartzite and gneiss. The main vein, of about 50' width, shows some oxidized ores, but mainly auriferous sulphides, including covellite, bornite and chalcopyrite, with some molybdenite, in a 6' vein. Development is by a 65' incline shaft on the Wizard claim, showing a 2' vein of high-grade copper ore and 8 tunnels, longest about 440', with about 700' of workings, at last accounts, said to show ore assaying up to 6% copper, 37 oz. silver and \$1.60 gold per ton. Presumably idle.

SOUTHERN SONORA DEVELOPMENT CO. MEXICO

Office: 1207 Fort Dearborn Bldg., Chicago, Ill. Property near Alamos, Sonora, Mex. E. M. Board, pres.; A. P. Ballou, vice-pres.; A. L. Kanagy, sec.; Stephen C. Goss, treas.; F. B. Smith and Jas. Hodnett, directors. Organized July 1, 1904, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Is controlled by the Sonora Central Mines Co., and in turn controls the San Bernardo Mining Co. Property described under Sonora Central Mines Co.

SOUTHERN SULPHUR ORE CO. ALABAMA

Mine at Pyriton, Clay Co., Ala. W. T. Williams, superintendent, at last accounts. Property is a mine carrying cupriferous and slightly auriferous and argentiferous iron pyrites. Equipment includes a steam plant. Idle.

SOUTHERN SWANSEA MINING CO. UTAH

Office: 408 South State St., Salt Lake City, Utah. Mine office: Silver City, Juab Co., Utah. Geo. Jones, pres.; A. T. Sanford, vice-pres.; Richard B. Shepard, sec.-treas.; E. R. Higginson, supt. Organized 1906, under laws

of Utah, capitalization \$10,000, shares 1 ct. par. Shares are listed on the Salt Lake Stock Exchange.

Lands, 4 claims, unpatented, 80 acres, south of the Swansea mine and supposed to carry an extension of the Swansea vein, showing porphyry, quartzite and lime, with a fissure vein of 12' estimated average width, traceable 1 mile, carrying auriferous and argentiferous oxidized and sulphide ores of copper and lead, developed by a 200' shaft.

SOUTHWESTERN COPPER CO.

ARIZONA

See Arizona-Southwestern Copper Co.

SOUTHWESTERN MIAMI DEVELOPMENT CO.

ARIZONA

Office: 85 Devonshire St., Boston, Mass. Mine office: Globe, Ariz. Geo. F. Ruez, pres.; R. T. McKeever, vice-pres.; Robt. H. Gross, sec.-treas.; preceding officers, Thos. S. Dee, D. T. Kennedy, H. B. Hovland and Geo. J. Maas, directors; F. W. Hoar, gen. mgr.; E. R. Rice, mg. engr.; Philip Maverick, chemist-assayer. Organized June 24, 1911, under laws of Arizona, capitalization \$250,000, increased Feb., 1912, to \$500,000, shares \$5 par; issued 15,000 fully paid shares and 85,000 assessable shares, \$2 paid in. Last assessment was \$1, payable Jan. 15, 1912. The first annual report as of date Dec. 31, 1912, gave receipts since organization as \$276,084 and disbursements as \$197,162, of which \$65,944 was payments on options, leaving a balance of \$78,922. Shares are listed on the Boston curb. Boston Safe Deposit & Trust Co., registrar.

Lands, 35 acres, owned in fee, and 226 acres, held under options, lying next west and south of the Inspiration Consolidated holdings, in the Miami district, 8 miles west of Globe.

The property shows silicified schist, mineralized at and near the contact with granite-porphyry, the orebody being an extension of the porphyry deposit opened in the Inspiration and Miami properties. Ore occurs as chalcocite disseminated in schist.

Development is by churn drilling, along the same lines followed by its big neighbors, Miami and Inspiration. Up to end of Oct., 1913, 17 holes had been drilled, those completed averaging about 1,200' deep and the total footage amounting to about 20,000. Ore developed in this manner was estimated by Mr. Hoar, Feb., 1913, at about 1,500,000 tons of 1.5% copper, on which a recovery of about 65% is expected. Mr. Hoar also estimates mining costs at \$1.15, milling costs at 65 cts. per ton, and cost of smelting, etc., at about 3 cts. per lb.

Development work to prove the extension of the orebody continues without interruption and in Nov., 1913, hole No. 15 was 1,155' deep, and No. 16 was 787' deep, both holes in silicified schist, while No. 17 was 449' deep. Property considered promising and management excellent.

SOUTHWORTH CONSOLIDATED MINING & MILLING CO. UTAH

Office and mine: Farmington, Davis Co., Utah. J. D. Wood, pres.; J. H. Robinson, vice-pres.; J. H. Wilcox, sec.-treas.; preceding officers, David Hess and W. Crawford Anderson, directors; W. J. Huselton, gen. mgr. Capitalization \$30,000, shares 10 cts. par. Property has a copper deposit, with quartzite hanging and gneiss footwall, developed by a 345' tunnel, showing a 40" vein carrying ore said to average 1.5% copper, 3% lead, 2.5 oz. silver and \$2 gold per ton. Idle several years.

SPECIE PAYMENT MINE.

COLORADO

John Owen, manager, Idaho Springs, Clear Creek Co., Colo. Property shows a vein with gold-silver-copper ore, developed by a 2,500' tunnel. Equipment includes electric driven air compressor and a 20-stamp mill. Was formerly owned by Specie Payment Gold Mining Co., described Vol. X.

SPECULATOR MINE.

See North Butte Mining Co.

MONTANA**SPECULATOR MINING CO.****MONTANA**

Office: Butte, Mont. Mine office: Clinton, Missoula Co., Mont. John A. Creighton, pres.; John Dougherty, vice-pres. and gen. mgr. Property, near Clinton, includes the Black Hawk group, developed through the Cape Nome shaft, which this company sunk 200' to the 500' level. The company was said 1909, to have bonded the Aladdin mine, near Clinton. Company formerly owned the Speculator mine at Butte, sold 1905 to the North Butte Mining Co. Presumably idle. Former holdings, now owned by the North Butte, were fully described Vol. V.

Office and mine: Kerby, Josephine Co., Ore. Dr. Jas. Spence, gen. **SPENCE & CO.** **OREGON**

mgr.; C. W. Spence, supt. Lands, 11 claims, 220 acres, 40 miles from a railroad, show diorite and porphyry, carrying 4 veins, under development, estimated at 4 to 100' width, opened by 7 tunnels, aggregating 1,500'. Ores carry cuprite, melaconite, malachite, azurite and chalcopryrite, mainly the latter, giving assays of 3 to 20% copper, 1 to 6 oz. silver and \$1 to \$10 gold per ton. The Edelweiss claim shows some native copper ore with fair gold values. The property has been under development with a small force for several years.

SPENCE MINERAL CO.**CALIFORNIA**

Office: 1061 Mills Bldg., San Francisco, Cal. Mine near Spenceville, Nevada Co., Cal. D. M. Kent, secretary. Property is an old mine, operated 1875-1903, the shaft caving in the latter year. Company acquired property in 1897. Ore contains auriferous and argentiferous chalcopryrite, associated with pyrite and ranges from 2 to 20% copper, but averaging 5%, and 45 to 50% sulphur. The ore occurs in irregular fissure veins 15 to 50' wide that lie near the contact of diorite and granodiorite. The mine has yielded over 12,000,000 lbs. fine copper and owing to the large orebodies and good average values in copper, gold and silver, as well as to the good sulphur values, would seem worthy of further development. There is a leaching plant at San Francisco. Idle.

SPENCER MOUNTAIN TUNNEL CO.**COLORADO**

Office: Boulder, Colo. Mine office: Eldora, Boulder Co., Colo. Wm. B. Allbright, pres.; J. A. Gilfillan, vice-pres. and gen. mgr.; W. B. Hayes, sec.-treas.; preceding officers, J. T. Odell, Geo. F. Randolph and Chas. Mackey, directors. Organized Feb., 1906, under laws of Colorado, capitalization \$1,250,000, shares \$1 par, nonassessable, in \$250,000 preferred and \$1,000,000 common stock; issued \$1,088,000.

Lands, 8 fractional claims, 25 acres, besides 2 mill sites and a 10-acre dumping site, in the Grand Island district. The property carries a network of fissure veins in gneiss, 12 of which are of 1 to 10' estimated average width, and are more or less developed. The ores carry sylvanite, petzite and a copper telluride, Rickardite, first discovered on this property. Ore is estimated by the management to average about 10% copper, with traces of silver, and \$5 to \$50,000 gold per ton. Development includes shafts of 110', 60', 40' and 25' and 90', but is mainly by a 6,000' drainage and transportation tunnel, the mine having about 7,000' of workings.

Equipment includes 100-h. p. steam plant, with a 5-drill air compressor, and there are 3 buildings. Idle since 1907.

SPITZEE MINING CO., LTD.**BRITISH COLUMBIA**

Mine office: Rossland, Yale district, B. C. Organized 1905, under laws of British Columbia, as a reconstruction of Spitzee Gold Mines, Ltd., capitalization \$350,000, shares \$5 par. Lands, 110 claims, about 5,500 acres. The

mine produced to Sept., 1905, about 5,000 tons of ore averaging about \$12 per ton in values, and was said to have about 30,000 tons of ore in sight. Property was bonded 1907, to Le Roi Mining Co., Ltd., and a little diamond drilling was done, but mine has been idle since.

SPOKANE TUNNEL MINE. IDAHO

Mine on Placer Creek, north of Wallace, Idaho, is opened by a 1,100' tunnel, showing a 15' vein of black copper sulphides.

SPRAGUE COPPER CO. WASHINGTON

L. K. Armstrong, manager, care Northwest Mining Review, Spokane, Wash. Mine near Chewelah, Stevens Co., Wash. Property, the Matterhorn group of claims, showing a 3' vein with a paystreak of gold and silver-bearing copper ores. Development by tunnel and shaft work aggregates 500'. Plans installation of power plant and compressor, 1914.

SPRINGFIELD GOLD & COPPER MINING CO., LTD. IDAHO

Office: 720 Bank St., Wallace, Idaho. Letter unclaimed at former mine office, Mullan, Shoshone Co., Idaho. O. E. Anderson, pres. and gen. mgr.; E. Hedin, vice-pres.; Mrs. Tillie Zeitfuchs, sec.-treas.; preceding officers, A. H. Featherstone, Christ Anderson, Frank Hess and Christopher Grossbusch, directors. Capitalization \$100,000, shares 10 cts. par, assessable. Lands, 4 claims, patented, 80 acres, well timbered, adjoining the Park and Champion mines, at the head of Champion creek, on Stevens peak, in the St. Joe district, 7 miles south of Mullan. The mine has 2 tunnels, the upper showing chalcopryite ore assaying up to 33% copper, with good gold values, and the lower, a 1,935' crosscut, showing, at 1,800' from the portal, a vein assaying 15.3% copper.

SPRINGFIELD-MEXICAN MINING CO. MEXICO

Office: 213½ South Sixth St., Springfield, Ill. Mine office: Unión de Tula, Jalisco, Mex. Geo. F. Stericker, pres.; Geo. M. Morgan, vice-pres.; Harvey C. McCann, sec.; Samuel S. McElvain, treas.; preceding officers, Geo. R. Brown, Dr. Jas. W. McElvain, Robt. Johns, A. F. Maurer, A. C. Brown, Geo. Hoffman and Robt. L. Perkins, directors; Gerald G. Hereford, supt. Organized June 3, 1903, under laws of Arizona, capitalization \$500,000, shares \$1 par, nonassessable. Annual meeting, third Tuesday in May.

Lands, 25 hectares, 6 miles south of Ayutla and 40 miles from the Mexican Central railway, include the Concepcion mine, an antigua, closed 1821 and reopened 1901. The property shows fissure veins in porphyry, those under development estimated to average 5' wide, traceable a mile with ores carrying malachite, azurite, bornite and chalcopryite that average 5% copper and 10 oz. silver per ton. The mine has 6 shafts, including 3 of 270', 80' and 60' and 7 tunnels, longest 375', with about 1,600' of workings, estimated by the management to show 30,000 tons of ore with 15,000 tons blocked out for stoping.

Equipment includes a 90-h. p. steam plant with a 12-h. p. hoist and 5 mine buildings. Idle on account of revolutionary disturbances.

SPRUCE MOUNTAIN COPPER CO. NEVADA

Mine office: Sprucemont, via Jasper, Elko Co., Nev. Lands, adjoining the Latham mine, about 50 miles south of Wells and 15 miles west of Mizpah, carry copper and lead ores in replacement deposits in limestone cut by rhyolite. The mine has steam power. Presumably idle.

SQUARE DEAL MINING & DEVELOPMENT CO. COLORADO

Office: Winnebago, Ill. Mine office: Frisco, Summit Co., Colo. A. T. Roberts, pres.; J. C. McEvoy, first vice-pres.; J. E. Compton, second vice-pres.; Geo. F. Bunn, treas.; H. G. Allen, sec.; Edw. Huter, mgr., at last accounts. The mine carries auriferous and argentiferous lead and copper ores, and is equipped with electric power and air compressor. The company

advertised, May, 1907, that an investor could not gamble on the Square Deal Mining & Development Co.'s stock, and it seems that this statement was correct, though perhaps not in the sense meant to be inferred, as the company is in debt. Idle since 1909, and apparently defunct.

STANDARD CHEWELAH MINING CO.**WASHINGTON**

Mine office: Chewelah, Stevens Co., Wash. F. R. Clark, president and general manager. Mine is opened by 2 shafts, deepest 200', showing a vein carrying streaks of silver-copper ore. Equipment includes a steam plant with hoist and a 5-drill air compressor.

STANDARD COPPER CO.**NEVADA**

Address: Buckskin, Douglas Co., Nev. Capitalization \$5,000,000, shares \$1 par. Company owns, or did own, a lease on the lands of the Kennedy Consolidated Gold Mining & Milling Co., but is said to be in a bad way financially, and is not favorably regarded.

STANDARD COPPER MINES CO.**ALASKA**

Idle. Office: 68 Williams St., New York. Mine office: Landlock, S. E. Alaska. Morris B. Mead, pres.; John L. Steele, vice-pres. and engr.; E. F. Bourke, sec.; J. O. Molander, treas.; Jas. A. Bourke, gen. mgr.; preceding officers, Thos. R. Manley and Chas. Williams, directors. Organized Feb. 2, 1906, under laws of New Jersey, capitalization \$300,000, shares \$100 par; issued \$220,000. Bonds, \$300,000 issued. Is operated as a close corporation. Annual meeting, third Saturday in December.

Lands, 13 claims, at Thorn Arm, on Landlock bay, in the Prince William Sound district. The lands, which are very precipitous, show country rock of greenstone, reported to carry 17 fissure veins, of which 4, under development, carry lenticular shoots of ore estimated to average 6% copper, 1 oz. silver and 90 cts. gold per ton. Development is by a shaft and tunnels of 260', 80' and 460', with about 3,000' of workings, estimated 1908, to show 20,000 tons of ore with 12,000 tons blocked out for stoping.

The mine is connected with 500-ton ore bunkers on a wharf at tide-water by a 3,300' aerial tram, in 2 sections, 1 of 912' and 1 of 2,526' length.

STANDARD COPPER MINING CO.**MONTANA**

Office: care of A. M. Stevens, Higgins Blk., Missoula, Mont. Organized 1907, under laws of Montana, capitalization \$1,000,000, shares \$1 par. No trace of operations securable, and company apparently never did any work, with a small force at last accounts.

STANDARD COPPER MINING CO.**WYOMING**

Office: 1217 Nicholas Bldg., Toledo, Ohio. Mine office: Encampment, Carbon Co., Wyo. Geo. P. Waldorf, pres.; Alphonse Mennell, vice-pres.; Jos. M. Spencer, sec.-treas.; Chas. E. Winter, managing director; preceding officers, Fred O. Paddock, Harvey M. Cook, John H. Lloyd, John D. Dorn and John A. Scott, directors; O. B. Cothorn, supt. Organized Aug., 1903, under laws of Wyoming, capitalization \$1,500,000, shares \$1 par.

Lands, 15 claims, patented, 300 acres, including the Cothorn group of 5 claims, and the Susquehanna group of 6 claims, about one-half mile east of the Itmay mine. Claims carry contact and fissure veins of 10' estimated average width, with 1 vein, of 40' claimed width, developed by pits and shafts of 10 to 200' depth, showing azurite, malachite, chalcocite, bornite and chalcopyrite, giving assays up to 18% copper and \$2 gold per ton, with small silver values. Equipment includes a 120-h. p. steam plant, with hoist good for 500', a 3-drill Norwalk air compressor, and 5 mine buildings. Property was idle from Dec. 15, 1905, until Aug., 1910, but was developing

STANDARD COPPER PYRITES CO.**ALABAMA**

Office: 1309 Brown-Marx Bldg., Birmingham, Ala. Mine office: Pyriton, Clay Co., Ala. Robt. Ross Zell, pres.; J. C. Clark, vice-pres.; G. John-

son, treas.; J. D. Stagg, sec. Capitalization \$50,000. Lands show a large body of cupriferous pyrite, giving assays up to 6% copper and 42 to 46% sulphur. It is probable that copper values will decrease at slight depth, as they have done in other pyritic deposits in the southern states, but the property seems valuable for its sulphur ores alone.

STANDARD DEVELOPMENT CO. COLORADO & CALIFORNIA

Letter unclaimed at former office: 84 Van Buren St., Chicago, Ill. Mine office: Redding, Shasta Co., Cal. J. M. Dearing, pres.; C. F. Taylor, vice-pres.; John E. Windsor, sec.; Geo. Lill, treas.; preceding officers, Julius C. Pruter, Wm. W. Lill, Simon P. Donnelly, Wm. E. Cloyes and C. M. Harlan, directors. Organized under laws of Arizona, capitalization \$10,000,000, shares \$1 par. Company controlled, through stock ownership, the Grand Republic Copper Mining Co. and Mt. Zirkel Copper Mining Co., of Pearl, Larimer Co., Colo., both dead, and the Pend d'Oreille Mining, Milling & Development Co., of Idaho, title to properties of which are in litigation. Lands are the Jennie "group" of 20 acres on the McCloud river, Shasta Co., Cal.

STANDARD MINES CO. CALIFORNIA

Mine address: Cima, San Bernardino Co., Cal. John W. Kemp, pres.; Frank S. Adams, sec., and R. R. Patterson, directors. Lands, 11 full and several fractional claims, 10 miles north of Cima, having a 356' shaft, with about 2,000' of workings, showing carbonate ores near surface, with melaconite and sulphide copper ores on the 100' level. Idle since about 1907. No new information secured.

STANDARD MINING CO. CALIFORNIA

R. D. Staley, superintendent, Kimberly, Shasta Co., Cal. Property, the Uncle Sam group, shows a deposit of gold-copper ore developed by a 525' shaft and a 1,230' tunnel. Employs 15 men at mine and in the 10-stamp mill. Equipment includes electric power and air compressor.

STANLEY MINES CO. COLORADO

Office: 305 Colorado Bldg., Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo. The late Col. Arthur G. Brownlee was pres. and gen. mgr.; Henry J. Wolf, supt., at last accounts. Organized 1906, as successor of the Consolidated Stanley Mining & Milling Co. Lands, about 90 claims, showing gold and silver-bearing lead and copper ores. Has steam and water power. The reduction plant has 10 stamps, and a tube mill.

STARLESS MINE. UTAH

Office: care Col. Enos A. Wall, owner, Salt Lake City, Utah. Mine office: Bingham Canyon, Utah.

Lands, 8 claims, patented, 160 acres, lying just N. E. of the holdings of the Utah Copper Co. The Starless is developed by an incline shaft and numerous tunnels, longest 2,000', with crosscuts and upraises, aggregating 10,000'. Development said to block out 800,000 tons of 1 to 2% copper ore. Equipment includes a hoist.

The 125-ton mill, enlarged and remodeled 1910, at a cost of \$50,000, is equipped throughout with machinery of Col. Wall's own design, comprising Wall corrugated rolls, Wall steel rolls for middlings, 3 sets of jigs, 2 tables for concentrates, 2 Wilfley tables, and washers, of trough form, with valves and sprayers, concentrates being discharged through the bottom and sands from the top.

STAUFFER CHEMICAL CO. CALIFORNIA

Office: San Francisco, Cal. Mine offices: Kennett, Shasta Co., Cal., and Oakland, Alameda Co., Cal. Chas. E. Kunze, mgr.; Geo. F. Graves, supt.

The Alma mine, 80 acres, in the outskirts of Oakland, has 600' of tun-

nels, developing a lens of cupriferous pyrite, between serpentine and metamorphosed Tertiary cherty rocks. The ore zone is about 3,000' long and the ore contains 3.5% copper, up to 50% sulphur, and up to \$2.50 gold per ton.

The Shasta county lands consist of 30 claims, unpatented, including the Summit mine and the Graves and North Mammoth groups, on the eastern slope of Bohematosh mountain, between the north and south forks of Little Backbone creek, adjoining the Mammoth mine on the N. W. The Summit mine is owned outright, having been bought from the Phoenix Securities Co. for \$80,000. It is developed by 3 tunnels, with about a quarter-mile of workings, No. 2, the main tunnel, of about 400' length, showing a vein of 35' estimated width, carrying sulphide ore assaying up to 14.5% copper. The 400' No. 3 tunnel follows a rhyolite and porphyry contact. Equipment includes a 4-drill air compressor.

Company also held the Tarantula group under bond, the claims lying west of Iron Mountain and having a deposit of gold ore, equipped with a 10-stamp mill.

STEAMBOAT MINING & MILLING CO.

COLORADO

Mine office: Steamboat Springs, Routt Co., Colo. Lands, in the Copper Ridge district, 9 miles N. W. of the D. N. W. & P. R. R., show a 30' vein, carrying a narrow paystreak of high-grade gold-bearing copper ore. Idle.

STEECE COPPER CO.

CALIFORNIA

Mine office: Calzona, San Bernardino Co., Cal. H. E. Steece, president and general manager. Lands, adjoining the Calzona Mines Co., about 2 miles west of the Colorado river, carry auriferous copper ore. The mine has a 700' shaft and 400' tunnel, with about 5,000' of workings, blocking out some ore. Company was working a force of about 20 men, and preparing to make shipments, at last reports. Equipment includes a 15-h. p. gasoline hoist.

STEIN COPPER CO.

ARIZONA

Mine near Kirkland, Yavapai Co., Ariz. B. L. Wolcott, superintendent. Owns sundry claims, known as the Vesuvius group, in the Zonia district, south of Prescott, developed by shaft, showing gold-copper ore of good grade. Equipment includes a 30-ton leaching plant.

STEMP SPRINGS COAL & POWER CO.

WYOMING

Office: 55 High St., Oshkosh, Wis. Mine near Copperton, Carbon Co., Wyo. E. E. Meeleus, pres.; Henry L. Larsen, vice-pres.; H. O. Granberg, sec.-treas. and gen. mgr.; preceding officers, J. S. Armstrong and Fred W. Heddle, directors; Henry C. Beeler, cons. engr.; John F. Binger, mine supt., at last accounts. Organized Nov. 21, 1905, under laws of Wyoming, capitalization \$250,000, shares \$1 par, nonassessable; issued, \$237,976.

Lands, 6 claims, patented, 120 acres, including a smelter site, with 640 acres of coal lands additional, in the Battle Lake district. The copper property shows an 11' vein between quartzite and diorite, traceable 3,000', with occasional stringers of 3 to 12" width carrying chalcopyrite assaying about 12% copper, with small quantities of nickel and cobalt and traces of gold and silver.

Development is by a 200' incline shaft, a 273' tunnel and various prospect pits. The coal lands are reported to carry 3 beds of coal of 3 to 6' thickness. A 15' waterfall is held under a 20-year lease, with privilege of renewal from the Jackpot Mining Co.

Equipment includes a 40-h. p. steam plant at the mine, with a 3-drill Ingersoll-Sergeant air compressor. Buildings include a machine and carpenter shop and smithy.

The smelter, 20 miles from a railway, has a 60-ton McDougall hot-blast furnace, planned to turn out either 50 to 60% matte, or 80% pimple metal, with a 100-h. p. steam plant. Idle.

STEPTOE VALLEY SMELTING & MINING CO.

NEVADA

Office: 165 Broadway, New York. Works office: McGill, White Pine Co., Nev. Silas W. Eccles, pres.; Cornelius B. Lakenan, gen. mgr.; Geo. F. Waddell, mill supt.; S. Severin Sørensen, smelter supt. Organized Jan., 1907, under laws of Maine, capitalization \$10,000,000. Is the smelting subsidiary of the Nevada Consolidated Copper Co. Lands and improvements cost \$8,-452,363.78 to Dec. 31, 1912.

Lands cover 8 square miles, with water rights, the company having with wise foresight secured a large tract in order to prevent damage suits from agriculturists, because of smelter fumes. The property is on the eastern side of Steptoe valley, on the slope at the foot of the Schell Creek range, 14 miles N. E. of Ely and 22 miles from the mines, on the line of the Nevada Northern railway. The smelter site proper comprises 320 acres, 1 mile long and one-half mile wide, on a hillside with 10% grade, permitting the works to be terraced, and handling material by gravity throughout. Lands carry water rights to Duck creek, and to the McGill ranch, estimated as capable, jointly, of furnishing water for a 25,000-ton plant.

The reduction plant is one of the largest and best in existence. The present average capacity is 12,000 tons daily, but the plant is so designed that it can be increased easily to a much greater capacity. All main buildings are of steel frame and the plant is built on the unit system, with allowance for expansion.

The ore bins of timber, about 800' long, are in four 6,000 ton units. Ore is drawn from the bottoms of the bins by belt conveyors which carry it over automatic weighing machines and thence to distributing bins of 40 ton capacity, located at the head of each section of the mill.

The mill, nearly a mile from the smelter, is 378x756' in size. There are 8 sections treating a total of nearly 11,000 tons of ore daily in Dec., 1912. Each section can be operated independently, but the plant is run in 4 units of 2 sections each.

The mill handles a moderately hard silicified altered porphyry ore containing tiny specks of chalcocite, pyrite and some chalcopryrite and averaging 1.3% copper. This is concentrated 25 into 1, with a recovery of about 70% of the assay value, the product containing 18% copper.

The ore treatment is as follows: From the distributing bin ore passes through a belt-driven feeder to a set of 36x15" rolls set for one-half-inch product and run dry, water being introduced underneath, washing the product to a pair of bucket elevators having 8x8x18" buckets. These elevators deliver to 2 trommels 42" diam.x8' long, having 1 section each of 3/16" and 5/16" perforations, the oversize of 5/16" returning to a second set of rolls. 36x14", which deliver to the same elevators. The undersize of 5/16" returns to a third set of rolls, 36x14", also delivering to the same elevators. The undersize of 3/16" passes to eight 2-mm. trommels, 36" diam.x8' long. The oversize of 2mm. passes to a fourth set of rolls 36x15", set to produce a 2-mm. product and delivering to the same elevators as the preceding rolls.

The undersize of the 2-mm. trommels passes to 4 Yeatman hydraulic classifiers designed and made at the plant, each one delivering 5 spigot products and an overflow, each separate class of spigots feeding a separate group of Wilfley tables. The first spigot product goes to 10 Wilfleys, making finished concentrate, middlings, which are treated on 2 Wilfleys following, the reject of which is reground. The second spigot product is also treated on a group of 10 Wilfleys, making finished concentrate, middlings

and tailings to waste. The third spigot product is similarly treated on another group of 8 tables, making products the same as those of the preceding group. Middlings from these 2 groups, together with all reject from the 2 tables treating middlings, also tailings from first group of Wilfleys, are reground in two 6-ft. Chilian mills. Several sections are fitted with 2 sets of 36x15" rigid rolls for this purpose, all reducing through .029" slot mesh wire screen.

The product of regrinders is elevated by a pair of 8x8x18" belt elevators to 4 classifiers of the same type as the preceding, but making 4 spigot products and an overflow. The first spigot product is screened through a pair of trommels 36" diam.x8' long, with same screen as used on Chilean mills, as a guard against accidental leakage or breakage of screens on the latter. The oversize of these returns to the mills. The undersize joins the product of the second spigot and is treated on 10 Wilfleys making a finished concentrate, a middling and a tailing to waste. The product of the third spigot is joined with that of the fourth spigot of the primary classifiers and is treated on another group of 10 Wilfleys, making products similar to the preceding group. The product of the fourth spigot is joined by that of the fifth spigot of the primary classifiers and is treated on a group of 20 Wilfleys making a finished concentrate, middlings and tailings which are retreated.

The middlings of the first 2 groups of 10 tables each following the regrinders, are retreated together on 4 Wilfleys. All middling of the group of 20 Wilfleys following the regrinders, is treated on a group of 12 six-foot vanners. All tailing of the group of 20 Wilfleys following the regrinders is treated on a group of 16 six-foot vanners. All classifier overflows are treated on a group of 16 six-foot vanners. All feed to concentrating machines following the regrinders, is dewatered by cone tanks or by "Dorr" thickeners.

Experiments are being carried on with canvas belt and other machines to effect a saving of the values carried in the overflows of the cone and other settling tanks.

Automatic samplers are used to determine the grade of all material leaving the mill. All concentrates are sluiced to steel tanks having a capacity of approximately 225 tons, dried by suction through a filter bottom, and loaded by means of a Blaisdell disc excavator, into cars running on a track underneath.

Water is secured from Duck creek, which has an average flow of 8,000 gals., per minute, water being collected in the hills in reservoirs and brought by gravity for 9 miles through a 32" iron-banded wooden pipe line and delivered at the highest point of the works under a pressure of 10 to 20 lbs. per sq. in. An electrically-driven pumping plant in Steptoe valley, immediately below the works, has a capacity of about 4,000 gals. per minute. By means of a system of settling tanks, ponds and pumps, approximately 10,000 gals. of water per minute is recovered from mill tailings for re-use. Approximately 4½ tons of fresh water to 1 of ore are used in the process.

The smelter is about one-half mile from the concentrator, and is connected therewith by a standard-gauge railway line. The works have about 12 miles of railway track, equipped with 8 small locomotives, a switch engine and 50 cars.

The smelter includes separate buildings for calcining, reverberatory smelting, blast-furnace smelting and conversion, all of steel frame, with corrugated iron sheathing. Each department has independent flues and chimneys.

The roaster building, 228' in length, has 4 floors, with sixteen 18' six-

hearth McDougal roasters, set in 2 rows. Concentrates are delivered to the calcining building in 8-ton standard-gauge cars, entering over a trestle built of timbers, the feed floor being on a level with the railway trestle. All the roasters have air-cooled rabbling arms, and center columns supplied with air under a pressure of about $3\frac{1}{2}$ " of water by a National Blower Co.'s fan of about 22,000 cu. ft. capacity. The roasters are driven by 30-h. p. electric motors. Hot calcines, carrying 7.5 to 10% sulphur, are discharged into hoppers beneath the roasters and trammed directly to the reverberatories, or to nine 150-ton calcine storage bins, built of brick and steel, which serve as a balance-wheel between the roasting and smelting departments. Each roaster discharges gases through two 32" elbows to a brick flue running between the 2 rows. This flue discharges fumes into the main flue, which is in 2 parts, each of 312' square cross-section, permitting either to be cut out for cleaning. The flue is 1,070' long, including the dust chamber which is 150x50x30', and leads to a brick stack 250' high and of 18' internal diameter at the top. Dust from the flue in the roaster building is piped to the ground floor, for loading into cars, and for about 500' the flue has tracks underneath, permitting the collection of dust from steel hoppers in cars, which are hauled by small locomotives.

The reverberatory building has five 400-ton furnaces, each 19' wide x 111' to 130' long, fired with California crude oil, atomized by air at 40-oz. pressure from a Connersville blower and fed through 7 burners per furnace. From 300 to 500 bbls. of oil per day are used by each furnace, varying with the nature of the charge smelted. Each furnace is connected with two 400-h. p. boilers arranged in parallel, instead of tandem, in the flue between the furnace and the dust chamber. These boilers develop about 100% of their nominal rated capacity under oil firing. Each furnace has bypasses with dampers giving a direct passage for the gases from furnace to dust chamber, when boilers have to be cut out. The equivalent of about 40% of the fuel value of the oil used in the furnaces, is recovered as steam by these boilers. As the gross oil used per ton of charge is about 0.90 bbl., the net, after deducting these waste heat credits, is about 0.52 bbls. per ton of charge.

The reverberatory furnaces are charged with calcines mixed with limestone, dumped through slide gates, from hoppers suspended from the charge floor. Each furnace has 2 tap holes on one side, from one of which matte is drawn off into matte cars of about 10-ton capacity. These cars are tilted and contents poured into the converters by stationary hydraulic apparatus. Slag is skimmed twice every shift, the skimmings going to a cast-iron box leading to a lined launder, in which a jet of water granulates the slag and washes it to the dump. Slags carry 40 to 45% silica, 6 to 12% calcium oxide, 40 to 30% iron oxide and 4 to 6% alumina. The reverberatory building has a dust chamber of 1,000' square section, 155' long, leading to a 300' brick chimney, 15' in diameter at top.

The blast-furnace building, located between the reverberatory and converter departments, has a single blast furnace, 42x240" at the tuyeres, and 84x240" at the shaft, with a capacity of 300 to 500 tons of charge per day, the furnace being so planned that it can be enlarged if desired to 80' in length. The furnace is 13' above the ground level, with a height of 16' from the tuyeres to the charging floor, operating with a 10' column charge and 40-oz. blast pressure. There are 4 steel water jackets on each side, and 1 at each end, and each side has 24 four-inch tuyeres, 10" apart, receiving blast from a 30" bustle pipe. The water jackets each have separate blast boxes and independent air and water connections, so that any jacket may be removed by breaking 3 simple connections. Charging is done by cars

dumped pneumatically, matte is tapped into ladles on cars and slags granulated and sluiced, as in the reverberatory building. Fumes discharge through a 108" downtake to a 12x15x250' brick flue, terminating in the main roaster flue. The blast furnace is not in operation.

The converter building is about 600' from the reverberatory furnaces, and receives molten matte from cars, behind and above the converters, the contents being poured into a launder, while the shells remain in position for blast. The building has two 5-motor Shaw electric cranes, each with a hoist capacity of 60 tons besides 2 auxiliaries of 25 tons each. There are 3 of the old stalls with 96x150" shells of the barrel type built for acid linings, but now used with magnesite brick linings. There are also 2 Pierce-Smith barrel-type converters both originally 25' 10" long by 10' diameter shell. One of these was lengthened at the smelter to 33' 11". They originally had 30 tuyeres each but these have been increased to 47 and 46 respectively. The blast pressure used is nominally 15 lb. gauge at an altitude of 6,327'. The Pierce-Smith converters produce about 60 and 50 tons of copper per day on 40% matte.

Blister copper is poured into ladles and transferred into a brick-lined steel cylindrical receiver. This is mounted on rollers and rotated on its own axis by an electrical motor, so that the molten blister copper is poured through a tilting pouring spoon into moulds on a horizontal straight-line chain and sprocket conveyor. These moulds discharge on a submerged apron conveyor which after traveling in the water horizontally for a few feet turns on an incline and raises the copper ingots out of the water and lands them on the loading platform. They contain 99.5% copper, weigh about 350 lbs. and after trimming and being weighed on accurate scales, they are shipped in box cars.

The converter's slag is taken back to the reverberatory furnaces in 10-ton side-tilting pots operated by compressed air. Flux for the converters consists of concentrator slimes and a silicious carbonate ore from the Copper Flat pit, mixed and dried in an oil-fired rotary drier at the converter building. It is at present being handled and charged by boats but will later be dropped direct from hoppers over each converter. The hoods from the converters lead to a balloon flue running along over the charge floor for the extent of the converter building covered by stalls. It is then connected by a circular flue 10' diam. to a brick dust chamber which in turn connects to a brick stack 100' from the ground, 10' diam. at top.

The power plant has 4 batteries of two 400-h. p. Babcock & Wilcox water-tube boilers each. Two batteries have Foster and 2 others have Babcock & Wilcox internal superheaters and there is a separate Foster superheater for the steam supplied by the reverberatory waste heat boiler plant of ten 400-h. p. boilers. Steam is generated at 150-lbs. pressure and can be superheated 100°F. Some of the boilers are fired by hand and others by power-driven underfeed stokers. Coal is brought in 1,200-lb. buckets by an overhead crawl from the coal pile outside. Each double battery of boilers has a 9x40' steel stack with induced draught, furnished by 2 Sturtevant fans, each connected to a 30-h. p. Sturtevant slide-valve engine, running at 150 to 175 r. p. m. Forced draught is also provided by a National Blower Co.'s fan belt driven from a 50-h. p. motor in the engine room.

Each battery of boilers is equipped with fuel economizers of about 3,360 sq. ft. heating surface, set between the boilers and the induced draught fan; they are dampered so that they can be cut out for cleaning while the boilers are in service.

The engine-room, main floor, contains the generating engines, blowers, 3 exciters and a switchboard, and the basement contains condensers, air

pumps and oil filters. The electrical equipment consists of two 1,100-h. p. 22x48x48" Allis-Chalmers Corliss cross-compound engines, with 800-kw. Bullock a. c. generators mounted on the shafts, and two 2,000-h. p. 31x66x48" Nordberg Corliss cross-compound engines with 1,500-kw. Bullock a. c. generators mounted on the shafts. Current is generated at 600 volts and carried to a concrete transformer station, equipped with four 200-kw. Bullock water-cooled transformers, stepping the current up to 40,000 volts, for transmission to the mines; four 750-kw. Westinghouse water-cooled transformers, stepping current up to 13,200 volts for transmission to the mills; 13,000 and 40,000-volt choke coils and lightning arresters.

The smelter blast plant, in the engine house, includes a 350-h. p. 14x28 x36" Nordberg tandem-compound engine direct-connected to a No. 10 Connersville blower with capacity of 300 cu. ft. of air per revolution, making 120 r. p. m. This is for the blast furnace. For the converters air is supplied at 15-lbs. gauge pressure by 1 Allis-Chalmers blowing engine, 16" and 24" diam. steam, 34" and 34" diam. air by 48" stroke of 6,000 cu. ft. capacity, 1 Nordberg 25" and 54" diam. steam, 52" and 52" diam. air by 48" stroke of 12,000 cu. ft. capacity, and 1 Nordberg 26" and 56" diam. steam, 54" and 54" diam. air by 48" stroke of 18,000 cu. ft. capacity. These are all of the cross compound steam, tandem, air and steam type.

A Laidlaw-Dunn-Gordon cross-compound air compressor with steam cylinders 11" and 21" diameter and air 21" and 12" diameter and 18" stroke of 1,080 cu. ft. displacement, compresses air to 100-lbs. gauge. This was originally for tamping converter linings but is now used for pneumatic tools of various kinds at the shops and the mill.

In connection with the works are a number of thoroughly appointed shops, including a boiler, machine and carpenter shop, foundry, warehouse and roundhouse.

The Steptoe works were started in April and the finished copper shipped in Aug., 1908. Nearly 1,500 men are employed at the plant.

STERLING COPPER CO.

ARIZONA

Office: care Judson A. Elliott, Pasadena, Cal. Lands, in the vicinity of Dos Cabezas, Cochise county, Ariz., are developed by a short tunnel, following a limestone porphyry contact, showing copper ore.

STEVENS COPPER CO.

ARIZONA

Office: Bridgeport, Conn. Mine office: Clifton, Greenlee Co., Ariz. Henry Setzer, pres.; Chas. D. Hawley, vice-pres.; Fred Enos, sec.; Frederic S. Hunt, treas.; Isaac N. Stevens, mgr.; Chas. E. Stevens, supt., at last accounts. Lands, 39 claims, 780 acres, about 2 miles from Metcalf, Ariz., show granite overlaid by Cambrian quartzite and Silurian limestone, with much faulting and intrusive porphyritic dikes, with orebodies near the fault lines. The mine shipped a little ore of 12 to 30% copper tenor to the Shannon smelter, early 1906. Equipment includes a small steam plant. Idle some years, except for annual assessment work.

STODDARD MINES CO.

ARIZONA

Office: 225 Fifth Ave., New York. Mine office: Stoddard, Yavapai Co., Ariz. W. H. Reynolds, pres.; Hon. Isaac T. Stoddard, vice-pres.; C. M. Stoddard, sec.-treas.; J. S. Murphy, gen. mgr. Organized Jan., 1906, under laws of Arizona, as successor of Stoddard Copper Co., capitalization \$100,000, shares \$1 par; fully issued. Annual meeting, in January.

Property, 6 claims, patented, 105 acres, known as the Binghamton mine, some distance from a railway, shows fissure veins in schist, opened by a 500' tunnel and shafts of 600' and 190', with about 4,000' of workings. Mine was discovered 1882, and reopened June, 1906, by present company.

Equipment includes a 50-h. p. steam plant with 2 hoists, a 2-drill air

compressor and 6 mine buildings. Was developing a large body of sulphide ore and shipping, at last accounts.

STONY PASS MINING CO.**COLORADO**

Office: Marrs Hill, Me. W. S. Brown, secretary. Property consists of the Mammoth tunnel and sundry patented mineral claims, held under lease, near Silver City, Can Juan Co., Colo.

The Mammoth tunnel, 2,209' in length, was driven for the purpose of draining and developing the Prospect Basin group and surrounding claims, and at 6,927' from the portal is expected to make connections with the Hercules shaft. The tunnel, when completed will pass under the Henrietta mine workings.

The mineral lands of the company carry silver, lead, copper and manganese ores. Idle several years.

STOWELL MINE.**CALIFORNIA**

Is under bond and lease for \$75,000 to the United States Smelting, Refining & Mining Co. Robt. E. Hanley, superintendent, Kimberly, Cal. Property contains a deposit of gold-silver-copper ore, under development. About 50 men are employed.

STRATTON GOLD & COPPER MINING CO.**COLORADO**

Idle. Office: Salida, Colo. Mine office: Turret, Chaffee Co., Colo. R. F. Stratton, pres.; F. S. Green, vice-pres.; Dr. J. F. Roe, sec.; Geo. Sullivan, treas.; preceding officers and W. E. Stratton, directors. Organized Aug. 24, 1909, under laws of Colorado, capitalization \$500,000, as a reconstruction of the Stratton Gold & Copper Mining & Milling Co., part of the property of which was set aside under title of Hecla-Granite Mining Co. Lands, 11 claims, 220 acres, in the Badger Creek district of Fremont county, Colo. Development, at last accounts, was by a 1,400' crosscut tunnel, with a back of 900', showing bunches of high-grade copper ore.

STRONG COPPER MINING CO.**WYOMING**

Office: 210 Grant Ave., Laramie, Wyo. Mine office: Leslie, Albany Co., Wyo. N. E. Corthell, pres.; M. E. Stickney, sec.-treas.; E. P. Baker, supt., at last accounts. Organized Jan. 17, 1903, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par; issued, \$837,959. Annual meeting, first Wednesday in January.

Property, 16 claims, unpatented, 260 acres, about 14 miles N. E. of Laramie, is reported to show a fissure vein in pegmatite, which perhaps is a pegmatite dike, and contact deposits between limestone and granite. The contact deposit of 7' estimated average width, shows ore carrying malachite, chalcocite, bornite, chalcopyrite, galena and wulfenite, reported to assay 4% copper, 5 oz. silver and \$3.60 gold per ton, with some lead and molybdenum.

Development includes about 20 shallow pits, a 360' shaft and a 450' tunnel, with about 1,300' of workings. Management estimates 10,000 tons of ore on the 250' level, the vein carrying 2 to 7' of concentrating ore, with occasional paystreaks of ore of smelting grade.

Equipment consists of an 80-h. p. steam plant, with a 25-h. p. hoist and 3-drill Nordberg air compressor. Idle except for annual assessment work.

SUCCESS MINING CO.**ARIZONA**

Mine office: Quartzite, Yuma Co., Ariz. Chas. Eichelberger manager. Property, 6 claims, 120 acres, formerly owned by the Success Copper Mining Co., in the Plomosa district. The mine, formerly called the Apache Chief, was opened 1863, and shipped some ore via the Colorado river. The property is said to show sedimentary rocks with intrusive porphyry and hornblende andesite. The orebodies occur along igneous contacts and in

fissure veins. The 2 thus far developed are said to be 12' thick and to yield high-grade copper ore when sorted.

Development consists of about 1,700' of underground work, all done by the former company, including a 300' tunnel, a 250' shaft and 4 shallow prospect shafts. A little copper glance is reported in the deep workings, the other ore is oxidized.

Equipment includes a steam plant. The company shipped several carloads of high-grade argentiferous chalcocite to El Paso smelter, ore being hauled by wagons to Vicksburg, some 150 tons, shipped in 1911, netting about \$2 per ton.

SUCCESS MINING CO.

COLORADO

Mine office: Alma, Park Co., Colo. Jas. Moynahan, manager. Owns the Orphan Boy group, said to carry gold-copper and zinc sulphides, developed by a 450' tunnel. Equipment includes a small steam plant, and 2 small air compressors. Mine was under development, with a small force, at last accounts.

SUISUN CLAIM.

MEXICO

Located about 3½ miles west of Cananea, Sonora, Mex. Col J. B. Breathitt, owner, Tucson, Ariz. Lands, 40 pertenencias, about 100 acres, slightly developed, carry numerous veins in diorite porphyry and limestone. Ores carry gold, silver and copper values.

SULLIVAN DEVELOPMENT CO.

ARIZONA

Office: care P. H. Nelson, pres.; Lonsdale Bldg., Duluth, Minn. Mine office: Paradise, Cochise Co., Ariz. E. B. Hawkins, vice-pres. and gen. mgr.; Geo. H. Crosby, sec.-treas. Lands, 37 claims, partly patented, including the Sullivan, Copperopolis and Horace Mountain groups. The Sullivan group, 7 claims, 4 miles west of San Simon, has opencuts, showing leached copper ore and a little very rich ore, and has a 60' tunnel showing lead ore. The Copperopolis group, 8 claims, near the Sullivan, is slightly developed. The Horace Mountain group of 18 claims has a 300' tunnel. Litigation over the Sullivan group was settled in the company's favor, 1908. Management considered good and property promising. Idle, except for annual assessment work.

SULPHIDE COPPER CO.

COLORADO

Idle. Office: P. O. Box 358, Denver, Colo. Letter unclaimed at former mine office, Crested Butte, Gunnison Co., Colo. J. C. Lewis, pres.; Frank Jérôme, vice-pres.; Geo. S. Ryan, sec.; Geo. N. Wheeler, treas.; Horace Miller, mgr., at last accounts. Lands, in the Rock Creek district, have 75' and 170' tunnels, in argentiferous copper ore. Closed down many years, and apparently hopeless.

SULPHUR MINING & RAILROAD CO.

VIRGINIA

Office: 11 S. 12th St., Richmond, Va. P. H. Haskell, superintendent, Mineral, Louisa Co., Va. Property, a pyrite mine whose ore carries low copper values. Has 600' shaft with steam power, compressor, etc. Ore handled in 500-ton concentration mill. Company makes cement copper from its mine and seepage waters, but is primarily a producer of pyrite for sulphuric acid plants. Is controlled by Virginia Carolina Chemical Co.

SULTANA-ARIZONA COPPER CO.

ARIZONA

See Kelvin-Sultana Copper Co.

SUMMIT COPPER CO.

ARIZONA

Office: 710 Lonsdale Bldg., Duluth, Minn. Wm. A. Eaton, pres.; A. O. Rabideau, sec.; H. L. Palmer, treas. Organized June 22, 1910, under laws of Minnesota, capitalization \$600,000, shares \$1 par, nonassessable; issued, \$570,000.

Balance sheet to Jan. 31, 1912, shows as follows: Receipts—Sale of

stock, \$163,780.00; ore sales, \$28,534.77; bills payable, \$23,000.00; interest and exchange, \$150.65; insurance refunds, \$330.12; miscellaneous refunds, \$73.90; total, \$215,869.44. Expenditures—Mine office expenditures, \$141,333.82; payments on property, \$45,891.34; Duluth office and general expenses, \$5,611.32; interest on Gibson bonds, \$540.00; legal expenses, \$3,146.49; royalties and commissions, \$17,660.53; exchange, \$2.00; Summit Gold Mining Co., \$1,600.00; cash on hand, \$83.94; total, \$215,869.44.

Property was the Gibson copper mine, near Miami, held under lease and bond for a year or more, but surrendered Jan., 1912, after about \$215,869 had been spent deepening shaft 329' and opening up 4,000' of new drifts, etc. The company has now turned to gold mining in Montana, reorganizing as the Summit Gold Mining Co. Shares of the old company are transferable into stock of the Summit Gold Mining Co. (which see) on the basis of 5 old shares for 2 new shares, and a right to subscribe for 1 new share at 40 cts. for each 3 old shares held.

SUMMIT GOLD MINING CO.

MONTANA

Office: 709 Lonsdale Bldg., Duluth, Minn. Mine office: Radersburg, Broadwater Co., Mont. W. A. Eaton, pres.; T. M. B. Hicks, vice-pres.; A. O. Rabideau, sec.; H. L. Palmer, treas.; T. W. Parker, supt. Organized Jan. 22, 1912, under laws of Minnesota, capitalization \$400,000, shares \$1 par, nonassessable; issued, \$300,000. Annual meeting, third Tuesday in January. Company is virtually successor of Summit Copper Co., shares of which are convertible into stock of this company at the ratio of 2½ old shares for 1 new share.

Lands, 8 claims, about 150 acres, including the Blue Bell, 1905, Iowa, Crown Point, Bull Moose, Keywest, Bull Mountain and Lone Tree claims, in the Cedar Plain district, 4 miles S. W. of Radersburg, held under bond and lease.

The property shows 5 fissure veins in diorite, 2 of which have been prospected and are now under development. The Keystone vein trends N. 48° W. and dips 86° N. E., varying in width from 3" to 5'. This vein has been opened by a 139' shaft with 3 levels, extending 305' south and about 100' north, exposing an ore shoot 400' long of solid iron pyrite, carrying gold, an old stope above the 3rd level yielding oxidized ore assaying \$19 to \$65 per ton. There is also a 1,014' tunnel on this vein, connecting with a new working shaft 350' from the portal, and at a depth of 100' in the shaft. This shaft is to be deepened to 400' and at 110' shows a 12' vein of sulphide ore carrying \$8 to \$76 gold, about 2 oz. silver per ton and from trace up to 7% copper, in the form of bornite. The Keywest vein, approximately parallel to the Keystone and of nearly vertical dip, has been developed by shafts of 110' and 64' and a tunnel 160' long at last reports. A development shaft on the Crown Point vein, 750' N. E. of the Keystone shaft, was planned early 1913. No work of importance has been done on this vein in the past, but assays from shallow pits and workings have returned 6 to 7% copper and the usual gold values.

Equipment includes an electric hoist, good for 600' depth, and a 3-drill air compressor. Power is obtained from the Missouri River Power Co.

The property is an old one, and was worked for its oxidized gold ores to a depth of about 100'. The new owners plan to sink shafts to a depth of about 500', before attempting further lateral work, and to develop the sulphide ores occurring at depth. Property considered promising.

SUMPTER SMELTER.

OREGON

See Northwest Smelting & Refining Co., at Sumpter, Baker Co., Ore.

SUNNYSIDE MINES.

COLORADO

Owned by Wm. L. and Jos. T. Terry and Ellen Terry-Strong; Wm. L.

Terry, superintendent, Eureka, San Juan Co., Colo. Property shows a deposit of complex silver-lead-copper-zinc ore, developed by 400' shaft and 200' tunnel. Equipment includes electric power, air compressor, a 150-ton concentrator with 40 stamps and tube mills and a new electrostatic Huff zinc separating plant.

SUNRISE MINING CO.

CALIFORNIA

Mine office: Genesee, Plumas Co., Cal. W. S. Mason, pres., sec. and gen. mgr.; L. B. Hogan, treas., and J. C. Cross, directors. Organized Nov., 1910, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, non-assessable; issued, \$400,000.

Property, 4 claims, unpatented, 75 acres, 21 miles from nearest point on Western Pacific railroad, shows 3 fissure veins in schist near a porphyry contact, estimated to average 3 to 5' in width; 2 orebodies seen in pits of 14' and 25' show copper oxides and carbonates and chalcopryite ore, estimated by the management to average 3% copper, 5 oz. silver and \$2.10 gold per ton. Mine has no power equipment, but there are several buildings. Idle and property for sale.

SUNSET COPPER CO.

NEW MEXICO

Office: Hachita, N. M. L. M. Stiles, pres. and mgr.; W. P. Stiles, vice-pres.; S. F. Johnson, sec.; L. B. Wilcox, treas. Property includes the old King mine, 7 miles N. W. of Hachita, which has a 150' shaft with workings on a vein showing gold-silver-copper ores. Property is a prospect.

SUNSET MINING & DEVELOPMENT CO.

NEVADA

Office: 265 Russ Bldg., San Francisco, Cal. Mine office: Rhyolite, Nye Co., Nev. Company is a silver producer, incorporated Dec. 9, 1912, under laws of Nevada, as a reorganization of the Tramps Consolidated Mining Co., Bullfrog Sunset Mining Co. and Denver Bullfrog Annex Mining Co. Capitalization \$5,000,000, shares \$1 par; issued, \$2,063,357. Balance sheet April 26, 1913, shows cash, \$14,212; accounts receivable, \$5,516.

SUNSET MINING & DEVELOPMENT CO.

WASHINGTON

Mine office: Northport, Stevens Co., Wash. H. W. Working, president and general manager. Lands carry gold and silver-copper ore, developed by a 400' main shaft, with about 1,400' of workings. Diamond-drill borings 1910, from the 400' level, showed 5 veins of 14", 18", 30", 4' and 4' estimated average widths, in a distance of 350', carrying chalcopryite, associated with pyrrhotite. Equipment includes steam power, with hoist and air compressor. No returns secured for 1912-13.

SUNSET MINING & MILLING CO.

ARIZONA

Idle. Office: 1427 Majestic Bldg., Detroit, Mich. Mine address: Dos Cabezas, Cochise Co., Ariz. Eugene F. Bradt, pres.; C. Wm. Beck, vice-pres.; Frank A. Rasch, sec.; Hon. Carl Franke, treas.; preceding officers, Frederick C. Deinzer, Oscar B. Marx, Geo. A. Greening, Chas. A. Maurer and Frederick Knorr, directors. Organized July 15, 1904, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, nonassessable, in \$350,000 preferred and \$650,000 common stock, of which \$25,632 of preferred and \$618,484 of common stock were issued, Feb. 6, 1911. Annual meeting, first Tuesday after first Wednesday in January.

Lands, 8 claims, unpatented, 160 acres, 10 miles from Willcox, have shafts of 76', 50' and 60', and crosscut tunnels of 75', 125', 100' and 17', showing silver-copper ore. The company writes that its land will be patented before serious mining work is undertaken.

SUNSET-NATIONAL MINING CO.

MONTANA

Mine near: Homestake, Jefferson Co., Mont. C. W. Foster, pres.; W. A. Beatty, sec.; R. L. Stevens, mgr., at last accounts. Capitalization \$500,000, shares \$1 par. Lands, 8 claims, 2 patented, 125 acres, in 2 groups, 1 ad-

joining the Lion Gulch mine, 4 miles north of Homestake and about 8 miles east of Butte. The claims show fissure veins in granite that carry small ore shoots with clay gouge. The veins vary from 3 to 10' in width, but the orebodies are small and not rich enough to cover development expenses. Development includes the National shaft of 120', the Sunset shaft of 165', and a 250' tunnel, the former said to show a vein of 3 to 14' width, carrying a paystreak of ore averaging 2.5 to 13% copper, up to 12 oz. silver and \$3.40 gold per ton. Idle.

SUPERIOR BONANZA MINING CO.

MEXICO

Incorporated under laws of Wyoming. Legal domicile, Cheyenne, Wyo. Head office, Cananea, Sonora, Mex. Controlled through stock ownership by Greene Cananea Copper Co. Authorized capital \$1,250,000; shares issued, 74,923. J. S. Douglas, pres.; John Cuddihy, vice-pres.; George Young, vice-pres. and sec.; J. V. Montague, treas. and asst. sec.; J. F. Carmichael, asst. treas.; preceding officers, A. E. Peterman, A. S. Cox, A. C. Cole and W. L. Thomas, directors. Owns the entire capital stock of Bonanza Mining Co., S. A.

SUPERIOR & BOSTON COPPER CO.

ARIZONA

Office: Houghton, Mich. Mine office: Globe, Gila Co., Ariz. Wm G. Rice, pres.; John H. Rice, vice-pres.; John R. Pimlott, sec.-treas.; preceding officers, Hon. Norman W. Haire and Jas. W. Harrington directors.; E. B. Tinker, supt.

Organized Nov. 23, 1906, under laws of Arizona, capitalization \$6,500,000; was originally \$1,500,000, increased Sept. 5, 1908 to \$2,000,000, April 22, 1909, to \$2,500,000, July 25, 1911, to \$3,000,000, and again increased Sept. 30, 1911, to present amount; shares \$10 par, \$6 paid in; issued, 283,827. Company has levied 6 assessments, last one of \$1, Jan. 4, 1913. Balance sheet of fiscal year ending Sept. 30, 1913, showed an income of \$421,939, of which \$153,436 was from ore sales, \$265,211 from calls and \$3,291 from interest. Expenditures were \$428,052, including \$319,093 for development and office expenses, \$8,959 for construction and mine equipment and \$100,000 in loans repaid. Balance of assets Oct. 1, 1913, was \$75,268 compared with \$81,381 in 1912. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, first Monday in December.

Lands, 51 claims, 785 acres, of which 28 claims, 388 acres, are patented. The Globe & Arizona tract of 22 claims was bought for \$320,000, an adjoining group of 21 claims was bought for \$46,000, and the Collins-Doyle group of 5 claims was bought for \$150,416.35, giving a total cost of \$516,416.35 for lands. The Collins-Doyle group, added 1909, adjoins the former holdings on the north, carrying the extension of the Old Dominion fault, and being well located with respect to the Great Eastern vein. The property, as now constituted, is a compact tract next east of the Arizona Commercial, and east of the Old Dominion. Lands are about 4,200' above sea level, and about 800' above Pinal creek, at Globe. The property carries both limestone and iron ore for fluxes. It is reached by the Arizona Commercial and Arizona Eastern railways, both connecting with the main line at Globe.

The property shows diabase cutting through about 600' of quartzite with interbedded shale and Globe limestone. The copper ore occurs in veins filling fault fissures. There are 2 dominant fault-belts, one series including from north to south, the Old Dominion, Great Eastern or Black Hawk, Limestone, Quo Vadis, Black Oxide and Iron King fault veins, intersected at nearly right angles, by other faults of later age, apparently but slightly mineralized. Three of the veins named show ore in commercial quantities. The average strike of the faults is N. 70° E., with average dip of 60° N. The

oxidized zone is deep, ore opened on the 8th level including cuprite, native copper, as well as chalcocite. Malachite is found in the workings above.

Development is by 4 shafts, known as the McGaw, Great Eastern, Limestone and Gardner, aggregating 2,477', and 1 tunnel. The Great Eastern shaft, sunk vertically to 444' depth being poorly located, has been replaced by the McGaw shaft, to the north.

The McGaw shaft is 1,185' deep, with 3 compartments, one of 5x7' and 2 of 5x4' 6" each. The 10th level opened at 970' corresponds with the 10th level of the Arizona Commercial mine, next west. This shaft lies 900' north of the old shaft and is sunk between the Old Dominion fault on the north and the Great Eastern vein on the south and is planned to intersect the great Eastern vein at depth. This is the main working shaft of the mine and does the ore hoisting for the entire property.

In the early development of the mine, ore was found on the 100', 300' and 400' levels of the Great Eastern shaft, the upper levels showing leached ore, but the 400' level having a shoot of commercial ore extending 230' from the eastern boundary of the Arizona Commercial, while on the sub-level 56' deeper, the ore shoot was 320' long, proving that it raked eastward. At 456' considerable chalcocite was found increasing with depth. The average width of the Great Eastern orebody on the 400' level and 456' sub-level was 20', all shipping ore averaging 7 to 10% copper and yielding several million pounds copper.

The Great Eastern vein on the 6th level in the McGaw shaft, shows an ore shoot 10 to 30' wide, proven for a distance of about 800'. The 8th level has exposed this vein for about 400' and also shows the zone of oxidation to continue to this depth. The 10th level discloses the first sulphide ore encountered in the McGaw workings of the mine, but the 12th level shows little or no copper in this vein, as far as developed. The vein matter is heavily stained with iron, highly silicious and, when commercial, carries about 7% copper.

The Old Dominion vein is tapped by crosscuts from the McGaw shaft, on the 4th, 6th and 10th levels, where it shows only oxidized material, quite thoroughly leached, carrying slight silver values, but with promise of copper ore at greater depth.

The Limestone shaft is 318' deep, with levels at 100', 200' and 300', the latter showing a 4' footwall paystreak of commercial ore, with improvement, on the successive levels, in both width and grade of ore, giving promise of good orebodies at greater depth.

The Gardner vertical shaft, started April 4, 1908, at the southern end of the property, on the Black Oxide vein, has 3 compartments, one of 5x7' and 2 of 5x4' 6" each, framed with 10x10" timber, and is 435' deep, no sinking having been done since 1908. The Black Oxide vein apparently is a continuation of the Buckeye fault, on which the Old Dominion has opened mines on the Buckeye, Carrie and True Blue claims.

The 1,054' Black Oxide tunnel has its portal about 1,000' S. W. of the Limestone shaft, and cuts the Black Oxide vein at 670', giving a 400' back, drifts on this level showing a vein carrying micaceous hematite, with small quantities of copper, and a little shoot of smelting ore, from which lessees extracted a small amount of 7% copper ore in 1910. Indications are favorable to the existence of good bodies of high-grade sulphide ore at greater depth. The Black Oxide is 280' east of the True Blue mine of the Old Dominion, from which lessees have shipped small quantities of high-grade ore for several years past.

The Iron King vein, parallel with the other 4 faults of the property,

shows a good gossan, and has an old 70' shaft, in leached vein material similar to that in the other faults, at similar depth.

The mine as a whole has about 27,000' of workings. The development for the year ending Sept. 30, 1913, comprised 5,842', mostly drifts and crosscuts.

Equipment includes hoists at each shaft, aggregating 1,260 h. p. The main plant, at the McGaw shaft, has four 250-h. p. Stirling water-tube boilers, a 5-ton 14x14x28" hoist good for depth of 1,600', and a 1,200-cu. ft. Nordberg cross-compound air compressor; there is also an auxiliary compressor at another shaft. The mine has two 1,000-gal. Prescott pumps.

The company owns 38 buildings, including a 40x40' machine shop, 32x40' smithy, 40x60' carpenter shop, 40x60' office and warehouse, and other mine structures, with a considerable number of dwellings for employees. The shops are well equipped and the smithy has a Word drill sharpener. The changing house at the McGaw shaft has steam-heated lockers, showers baths and drying racks. Buildings are lighted by electricity. Fuel is mainly petroleum, with 5,000-gal. and 12,000-gal. storage tanks.

Production was begun Feb., 1908, and to end of 1910 amounted to 27,126 tons ore, yielding 3,846,402 lbs. copper and 94,698 oz. silver, all from the Great Eastern vein above the 6th level with the exception of about 681 tons extracted by leasers from the Black Oxide workings. Ore reserves having been exhausted, production was suspended Aug., 1910, to March, 1913, when ore shipments were again resumed and gradually increased to about 150 tons daily, Nov., 1913. Production for fiscal year ended Sept. 30, 1913, was 15,458 tons ore averaging 5.56% copper and 1.91 oz. silver per ton, yielding 1,747,433 lbs. copper and 29,567 oz. silver. Property considered good and management competent and energetic.

SUPERIOR & BOSTON COPPER MINING CO.

WISCONSIN

Office: care Ernest A. Arnold, Superior, Wis. Organized under laws of South Dakota, capitalization \$1,500,000, shares \$1 par.

Property, the old Fond du Lac mine, in Douglas county, opened by 2 shafts of 60' and 75', sunk on a 52' amygdaloidal lode in No. 1 shaft and a 16' lode in the No. 2 shaft. Idle since 1902.

SUPERIOR COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine address: Houghton, Mich. Quincy A. Shaw, pres.; Rodolphe L. Agassiz, vice-pres.; Geo. A. Flagg, sec.-treas.; Jas. MacNaughton, gen. mgr., and Francis L. Higginson, directors.; Ocha Potter, supt.

Organized July 23, 1904, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; fully issued, and \$1 paid. Is controlled, through ownership of 50,100 shares, bought, 1906, by the Calumet & Hecla Mining Co.. Financial report for 1910, showed a balance of liabilities of \$8,572.77 which increased, 1911, to \$73,089.06. The report for 1912 showed a net profit of \$172,873.14, and balance of assets of \$99,784.08. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in June.

The property, comprising 400 acres, carries about 6,000' of the strike of the Baltic amygdaloidal bed, between the Isle Royale and Atlantic mines. It embraces Sec. 15, of T. 54 N., and R. 34 W. The tract has room for 3 or 4 shafts, and has a light overburden, the bed being proven by trenches at intervals of 1,000', these showing an amygdaloid of 35 to 40' average width, having extensive carbonate stains, due to weathering, with a little fine copper near surface. The property has been trenched to the eastern sandstone.

The mine has 2 workable copper lodes, the Baltic, locally known as

the Superior, and the West lode, discovered in 1911, a formation independent of the Superior, 14 to 30' thick which, however, cannot be stoped until the Superior lode is mined.

The mine has 2 shafts, both sunk in the footwall of the lode, insuring solid ground, but necessitating crosscuts at each level. Owing to the great width of the copper-bearing stratum, it is necessary to crosscut along the bed at 100' intervals. The drifts are driven along the center of the bed to obtain a fair average of its values. The Superior mine is opened on the northern extension of the Baltic amygdaloidal bed, though some men call this the Superior lode, not being satisfied that this correlation is correct. The Baltic bed, in the Superior mine, carries copper impregnations in the footwall, always an evidence of strong mineralization, and there is a conglomerate bed under the foot that carries a small amount of copper. The stamp rock is remarkably deceptive in appearance, as the copper oxidizes readily, and when it has been broken a few weeks, appears lean, unless a fresh fracture shows its true nature. As a triangular tract of land intervening between shafts No. 1 and 2 is owned by others, they cannot be connected above the 12th level. The mine had about 7 miles of workings at the end of 1912.

No. 1 shaft, located about 1,200' south of the northern boundary of the property, was 2,014' deep at end of 1913. This shaft develops the Superior and the West lodes, the first opened on all levels, and the second lode from the 12th to 20th inclusive. Both lodes carry copper in exceptional quantity.

Improved values have been encountered with depth, and the workings of No. 1 shaft give a good showing, with the exception of several drifts that ran into a series of faults north of the shaft, some of which have since passed through one of the faults, and are again in good ground. The ground in this shaft, especially in the upper levels, is very treacherous, and requires careful attention and close timbering.

No. 1 shaft has a frame shaft rock house, of the Calumet & Hecla type, equipment including a Westinghouse engine and two 23x36' crushers. The hoist is good for a depth of 4,000'.

No. 2 shaft, 2,540' S. W. of No. 1, and 2,400' from the southern boundary, sunk 40' in the footwall, at an angle of 53°, was about 1,700' deep, Dec., 1913. This shaft has but a limited amount of drifting, the bed being reached by crosscuts. Equipment at No. 2 includes a steam hoist, formerly used at No. 1, and a shaft rock house having two 17x24" crushers and a Westinghouse engine, with rated capacity of 1,000 tons daily.

The equipment at No. 1 shaft includes a combination boiler and engine house, with 90" Belpaire boilers, a hoist, and 10-drill and 18-drill air compressors. No. 1 shaft is connected with the main line of the Atlantic railway by a 7,000' spur, and also with the Isle Royale railway.

Buildings include an office, warehouse, smithy, change house, and a number of dwellings for employes at a small town site lying between the shafts.

Production was begun Jan., 1909, and was at the rate of 600 tons of rock daily, in 1912. Returns from rock stamped were 21.82 lbs. fine copper in 1909, 22.64 lbs. in 1910, 19.90 lbs. in 1911, 22.76 lbs. in 1912, an excellent return, and materially above the average secured from the good amygdaloidal mines of the Lake Superior district. Production has been as follows: 1909, 1,789,315 lbs. copper; 1910, 3,181,041 lbs.; 1911, 3,236,233 lbs.; 1912, 3,921,974 lbs.; 1913 (6 mos.), 1,705,000 lbs.

The cost of production is high, having been 14.29 cts. per lb. fine copper in 1910, 15.31 cts. in 1911, 12.75 cts. in 1912 and 13.55 cts. in the first 6 months of 1913. The average cost of mining and milling per ton is between

\$2.25 and \$2.50, an unusually high figure among Lake Superior amygdaloid mines, largely accounted for by the comparative newness of the mine. The Superior is one of the very richest mines opened in this district, and has an excellent management.

SUPERIOR COPPER CO., LTD.

ONTARIO

Office: Sault Ste Marie, Ont. Mine office: Superior Mine, via Algoma Central Railway, Algoma, Ont. G. R. Nicholson, pres.; C. H. L. Jones, vice-pres.; Emory W. Clark, sec. and treas.; preceding officers, E. L. Fisher, Capt. John Mitchell, Geo. T. Arnold, J. W. Staley, Geo. Kemp and Capt. Benj. Boutell, directors.

Organized Sept. 13, 1901, under laws of Ontario, capitalization \$1,500,000, increased 1903, to \$2,000,000, and again increased July 29, 1907, to \$3,000,000, shares \$10 par; issued, \$2,402,160. The company was organized with nonassessable stock, but a special act of the provincial parliament of Ontario rendered the stock assessable. Total assessments to Dec. 31, 1910, were \$132,080.52. Security Trust Co., Detroit, registrar and transfer agent. Annual meeting, second Thursday in June.

Property, 11 claims, crown granted, 800 acres, in an unorganized mining district of Algoma, shows granite and chloritic schist carrying fissure veins of 10' and 70' estimated average widths, traceable 7,000'. The quartz veins carry chalcopryite with a little chalcocite, estimated by the management to average 4% copper, 1 oz. silver and 40 cts. gold per ton. Development, amounting to 1,233' includes a 400' shaft and a 949' tunnel with other shafts of 90', 114', 154', 50' and 90', besides a 189' tunnel and many surface cuts.

Mine is reported to show 4,000 tons of ore on the dump, with 140,000 blocked out, apparently a serious over-estimate.

Equipment includes a 150-h. p. steam plant, 12-drill compressor engine house, changing house, boarding house, machine shop, smithy, office, store and dwellings, and a 50-ton concentrator.

The property is connected with the Algoma Central railway. The mine has been idle since Dec., 1908. Property considered promising.

SUPERIOR COPPER MINING CO.

WASHINGTON

Mine office: Chewelah, Stevens Co., Wash. Organized 1907, under laws of Washington, capitalization \$1,500,000, by Carl Montgomery, P. M. Poole and John C. Witherspoon. Lands carry 3 veins, of which 1, of 14' claimed average width, is opened by a 600' crosscut tunnel, showing auriferous and argentiferous copper ore and galena. The mine was leased, 1912, for 3 years, to J. B. Sullivan, W. L. Marsh, C. Gleiforst and W. L. Smith, of Chewelah.

SUPERIOR & GLOBE COPPER CO.

ARIZONA

Office: 3 Calumet State Bank, Calumet, Mich. John Daniell, pres.; Fred Smith, vice-pres.; Chas. Chynoweth, sec.; Joseph W. Selden, treas., and Hon. Norman W. Haire, directors. Organized Dec., 1908, under laws of Arizona, capitalization \$3,000,000, shares \$10 par; issued, \$2,450,000, in 15,000 shares of full paid stock and 230,000 shares of stock \$1 paid. Property is fully paid for, lands having been bought for \$75,000 cash and 15,000 shares of full paid stock, and company began business with about \$125,000 cash. Cash surplus was \$4,311.85, Nov. 1, 1911. The promoters took 30,000 shares of \$1 paid stock for their services. First National Bank, Calumet, registrar. Annual meeting, third Monday in November.

Lands, 13 claims, 250 acres, include the Magnet group of 12 claims, adjoining the Mineral Farm group of the Globe Mining Co., and 1 fractional claim, of several acres. The property, 2 miles N. E. of Globe, is in the eastern portion of the Globe district, lying north of the Arizona & Michigan and N. E. of and adjoining the Globe Mining Co. and the Yuma mine of the Old Dominion, latter carrying the Yuma-Big Johnnie-O'Dougherty

fault. The outcrop of the Yuma fault, on the Superior & Globe lands, shows an iron gossan carrying copper stains for about 3,000'.

There are several old shafts of 50 to 60' depth, said to have been sunk for gold ore. Present owner has sunk a 680' vertical shaft in the hanging of the Yuma fault, on Copper Trust No. 2 claim, about three-fourths mile from the Superior and Boston mine. The shaft cuts a 5' vein carrying iron with copper stains and has about 1,100' of workings on the 650' level, the north crosscut 522' long showing 2 veins. The Yuma vein, cut at 235' from the shaft, has 320' of drifting, with an 85' winze and a 17' crosscut to the vein from the bottom of the winze. The vein shows merely iron and manganese, with copper stains and small silver contents. In the north crosscut, 487' from the shaft, a second vein was cut showing a width of 20' and a 38' drift thereon showed material similar to that in the other vein, neither carrying commercial values. The south crosscut on the 650' level was driven 233' in hard diabase, developing nothing of value.

Underground work was discontinued and diamond drilling begun in June, 1910, a 350' horizontal and a 957' vertical hole being bored from the bottom of the shaft. This work was continued until early 1912, but developed nothing of importance.

Equipment includes a 100-h. p. gasoline plant having a 60-h. p. Fairbanks-Morse hoist good for 1,000' depth, and a 3-drill gasoline air compressor. There are 5 buildings, including a 14x22' carpenter shop, engine house, office and dwelling.

SUPERIOR MINING CO.

WASHINGTON

Office: 407 Truax Bldg., Superior, Wis. J. P. Simon, pres. and treas.; B. A. Baerlocher, sec. and supt., at last accounts. Organized 1902, under laws of Washington, capitalization \$2,000,000, shares \$1 par. Lands, 4 claims, 80 acres, and a mill site, 4 miles south of Berlin, in the Money or Miller Creek district, opened by a 140' tunnel, showing a 5 to 8' fissure vein in granite, carrying copper ores, mainly auriferous, argentiferous and cupriferous pyrite, and galena with talcose gangue, assaying about 6% copper, 7 oz. silver and \$1 to \$30 gold per ton. Idle some years, except for annual assessment work.

SUPERIOR & PITTSBURGH COPPER CO.

ARIZONA

Office: Calumet, Mich. Is a subsidiary of the Calumet & Arizona Mining Co. Mine office: Warren, Cochise Co., Ariz. Chas. Briggs, pres.; Capt. Jas. Hoatson, first vice-pres.; Capt. Thos. Hoatson, second vice-pres.; Gordon R. Campbell, sec.; Peter Ruppe, treas.; John C. Greenway, gen. mgr.; preceding officers, Thos. F. Cole, Geo. E. Tener, Chas. d'Autremont, Jr., Chester A. Congdon and Henry R. Rea, directors; Henry B. Paull, auditor.

Organized June 30, 1907, under laws of Minnesota, capitalization \$20,000,000, shares \$10 par; issued, \$14,997,920. The company was a merger of the Calumet & Pittsburgh Mining Co., Lake Superior & Pittsburgh Mining Co., Pittsburgh & Duluth Mining Co. and Junction Mining Co. The Calumet & Arizona Mining Co. owns 1,396,528 shares of this company's stock. The company ended 1910 with a balance of assets \$1,349,642 and Jan. 1, 1913, had a surplus of \$2,785,308. Net earnings in 1912 were \$3,393,618. Dividends aggregating \$1.16 were paid in 1911 and \$1.28 in 1912, since which time dividends of 38 cts. per share have been paid quarterly.

Lands, 100 claims, patented, 1,354 acres, in the heart of the Warren, or Bisbee district, Ariz. The holdings include 44 claims, 629 acres, formerly held by Lake Superior & Pittsburgh; 21 claims, 325 acres formerly held by Calumet & Pittsburgh; 17 claims, 215 acres, formerly held by Pittsburgh & Duluth, and 18 claims, 185 acres, formerly held by the Junction. The major portion of the Junction tract is covered by Bisbee conglomerate, flanked by

porphyry and limestone. The property contains large replacement deposits in limestone, often along porphyry contacts and connected with vein fissures. These deposits are similar in character and origin to those of the Copper Queen and of the Calumet & Arizona mines. The orebodies now mined consist of direct smelting pyritic ores and the largest deposits are found in the Junction mine. There are 5 working shafts, the Junction 1,837' deep, Hoatson 1,575', Cole 1,450', Briggs 1,530' and Congdon 1,267' deep. The mines are extensively developed, new openings having been 27,847' in 1910, 25,222' in 1911 and 29,547' in 1912, an average of about 5 miles new workings yearly.

The Cole shaft, formerly known as No. 2, and sunk nearly 1,000' by the former owners, was cut down to 3 compartment size, 8x24' in outside measurement and retimbered, work being done simultaneously on 10 levels, in record-breaking time. This shaft has been the principal outlet for ore from Pittsburgh & Duluth territory. The Cole shaft opens up large orebodies on the 900', 1,000' and 1,100' levels, ore improving with depth and a shoot of great size has been developed on the Granville claim, between the 800' and 1,000' levels. The Cole shaft has Prescott and Cameron station pumps, caring for a flow of 225 gals. of water per minute and was shut down Sept. 25, 1910, in the interests of economy.

The Briggs shaft, about 2,000' south of the Junction shaft, is 1,550' deep and 3,000' east of the Lowell shaft of the Copper Queen. The Briggs shaft shows enormous bodies of leached ore similar to that capping big commercial orebodies of adjoining mines. The first level at 910' shows 600' of good ore. Low-grade sulphide ore, averaging about 2% copper, was cut at 1,265', continuing to bottom of shaft. Two other bodies of low-grade sulphide ore, with about 7% copper, were developed on the 1,300' level for upwards of 500' without reaching the end. The Briggs shaft has an 8' airline and two 12" water columns, with 3 pumps, and raises about 400 tons of ore daily.

Equipment at the Briggs shaft includes a steel gallows frame. The power plant has 7 boilers, 5 of 250 h. p. each, burning crude petroleum, with a powerful hoist, and an 18-drill Sullivan straight-line air compressor.

The Hoatson shaft, on the Del Norte claim, 2,500' from the Briggs, with collar 150' higher than the Junction shaft, has 4 compartments, and is 1,530' deep. This shaft shows tremendous bodies of leached ore and a very large tonnage of low-grade sulphides is being developed at depth. The 12th level shows some oxidized ores, including cuprite, and the lower workings also carry high-grade oxides and sulphides, similar to those in the Lowell shaft of the Copper Queen. The big body of oxidized ore has been opened for a length of 700' and width of 100' on the 1,200' level, and is about 120x700' in size on the 1,300' level, and 90x175' on the 1,400' level, and extends almost to the 1,500' level. This shaft has a 1,000-gal. pump on the 1,300' level.

Equipment at the Hoatson shaft includes a steel headgear, and a double-drum hoist, good for 1,500' depth. The power plant has 6 boilers, and there is a framing mill, duplicating that at the Oliver shaft of the Calumet & Arizona.

The Congdon shaft, developing the Pittsburgh & Duluth tract, on the Black Bear claim, only 650' from the Calumet & Arizona mine, is 1,267' deep, but has been out of commission several years, as the territory can be worked to better advantage through the Cole shaft. The Congdon shaft has a 1,000-gal. pump on the 1,000' level. Surface equipment includes a 300-h. p. steam plant, with a 12x36" double-drum hoist and a 5-drill straight-line air compressor.

The Powell shaft is on the line of the Hope and Wagner claims of the Calumet & Arizona, on ground formerly owned by the Pittsburgh & Du-

luth. Equipment includes a Hendrie & Bolthoff double-drum hoist, a Sullivan air compressor and two 75-h. p. Atlas boilers.

The Junction shaft, sunk on the boundary line of the Calumet & Pittsburgh and Junction tracts, has 4 compartments, and was 1,837' deep at end of 1912, being the deepest, by nearly 200', of any shaft in the Bisbee district. The 1,300' level shows considerable leached ground and a small body of good sulphide ore, and the 1,400' level shows a big body of low-grade ore, with about 40' of high-grade ore on the Rathmoon claim. At depth of 1,750' the Junction shaft shows a small body of rich sulphides. The big developments of the Junction shaft are on the south drifts of the 1,300', 1,400' and 1,500' levels, where, on the Oregon claim, there has been developed what is perhaps the richest body of sulphide ore ever found in the Bisbee camp. It has been proven for an average of 20' width and length of 415' on the 1,300' level, with a width of 15 to 40' on the 1,400' level, and for width of 55 to 100' and length of 375' on the 1,500' level, this ore-body averaging about 10% copper, and forming in itself a very large and valuable mine. At 1,700' depth the Junction develops a shoot of sulphide ore of fair grade, which apparently extends down to the 1,800' level.

The Junction shaft drains the entire mine, and also, owing to its location and depth, drains both the Calumet & Arizona and Copper Queen workings, raising upwards of 1,500,000,000 gals. per annum. A station on the 1,200' level has a pump of 2,000 gals. capacity per minute, and the station on the 1,500' level has a 2,500-gal. Prescott pump. The tremendous flow of water from the Superior & Pittsburgh is not entirely wasted, as this flow, averaging 4,000,000 gals. daily, for every day of the year, is utilized largely in the irrigation of formerly desert lands on the flat toward Naco, south of the mine.

Equipment of the Junction shaft includes a 75' steel headgear, planned for 5 compartments. The power plant has a 16x42" Nordberg 4-cylinder incline double-frame hoist, good for 1,500' depth, which is a duplicate of that at the Cole shaft, and there are 12x14" and 12x15" auxiliary hoists. There are 2 cross-compound air compressors, of 12 drills aggregate capacity, and a Nordberg 4-cylinder triple-expansion air compressor, having capacity to compress 5,975 cu. ft. of free air per minute to a pressure of 70 lbs. per sq. inch. The boiler plant includes ten 250-h. p. marine boilers, and there are three 5,000-gal. oil tanks for the storage of petroleum. There also is a large machine shop at this shaft.

The property is served by the El Paso & Southwestern railway, reaching all the principal shafts and shops.

The ore of the Superior & Pittsburgh is smelted by the Calumet & Arizona Mining Co. The value of precious metals recovered was equal to \$21.20 per ton of finished copper in 1911, and \$27.10 per ton of finished copper in 1912. The net cost of refined copper produced, after deducting values of precious metals, was 6.6 cts. per lb. in 1911, and 6.33 cts. in 1912.

Production has been as follows:

Year.	Copper, oz.	Silver, oz.	Gold, oz.
1906.....	9,084,875	32,564	143
1907.....	9,691,405	55,464	
1908.....	21,924,359	182,773	1,267
1909.....	24,325,667	169,177	3,856
1910.....	26,183,146	(not reported)	
1911.....	28,469,166	236,960	8,785
1912.....	36,618,399	361,227	13,815

The relations of the Superior & Pittsburgh with the Calumet & Arizona have been extremely close from the inception of the enterprise, both com-

panies having practically the same directorate. But for the help of the Calumet & Arizona, the Superior & Pittsburgh scarcely could have been made a success. Plans for merging these companies were given very careful thought and the physical valuation was made by Mr. Walter Douglas and Dr. L. D. Ricketts, both thoroughly acquainted with the Bisbee camp, but personally disinterested. The plan of consolidation called for the giving of $3\frac{1}{2}$ shares of Superior & Pittsburgh for 1 share of the new consolidated Calumet & Arizona stock, after the previous payment, by the Superior & Pittsburgh, of a dividend equal to $2\frac{1}{7}$ times the amount of all dividends paid by the Calumet & Arizona between Aug. 1, 1910, and April 1, 1911, in the consummation of which plan a dividend of 86 cts. per share was paid by the Superior & Pittsburgh. All but about 100,000 shares of the Superior & Pittsburgh stock had been deposited Jan., 1913, for conversion into the stock of the Calumet & Arizona, at the ratio of $3\frac{1}{2}$ to 1, and the Superior & Pittsburgh Copper Co. will in time be fully merged in the Calumet & Arizona Mining Co., and the company wound up.

SUPERSTITION MOUNTAIN MINING CO.

ARIZONA

Mine office: Florence, Pinal Co., Ariz. F. S. Hoyt, superintendent, at last accounts. Property, 30 claims, about 30 miles north of Florence, in the Superstition mountains, show promising copper outcrops developed by shaft. Equipment includes a small mill, including a Huntington mill. It was started in 1910 and the first test shipments of concentrates assayed 26% copper, 39.6% lead, 502 oz. silver and \$6 gold per ton. Presumably idle.

SUTTON CONSOLIDATED MINING CO.

NEW MEXICO.

Office: Elgin, Ill. Mine office: Lordsburg, Grant Co., N. M. Robt. F. Fitz, general manager, at last accounts. Lands include the Last Chance, Clara Sutton, James Thomas and Olivia properties, in the Pyramid district, 8 miles south of Lordsburg, showing veins in igneous rocks, diorite and andesite, the principal vein of 7' width carrying gray copper ore with good silver values in the upper workings, and copper increasing at depth. Development is by the 275' Last Chance shaft. Equipment includes steam power. Presumably idle.

SWANSEA CONS. GOLD & COPPER MINING CO.

ARIZONA

Office and works: Swansea, Yuma Co., Ariz. Camille Clerc, gen. mgr.; W. H. Seamon, smelter supt. Organized 1912, as the successor of the Clara Consolidated Gold & Copper Mining Co., which was declared bankrupt Jan. 27, 1912. Capitalization \$4,000,000, shares \$1 par.

Lands are reported as 132 claims, 3,300 acres, about 10 miles from Planet. Property consists of the Signal mine, erroneously called the Clara, and the Moro and Clara groups.

The Signal orebody is a replacement deposit formed in a limestone bed 15 to 100' thick, associated with overlying shales and amphibolitic schist and resting on granite gneiss, all of pre-Cambrian age. The outcrop is an irregular replacement, 30' wide, of copper-stained hematite, dipping at 52° N. This orebody extends 150' downward in the mine, is 20 to 30' wide, 90' long and contains boulders of unreplaced limestone. The orebody is encased in soft chloritic schist derived from amphibolite and appears to rest on a strong fault plane that separates the granitic gneiss from the sedimentary series. Two parallel, smaller, but similar orebodies occur in the hanging wall of the deposit. The ore consists of soft, red hematite with manganese-oxide and chlorite, holding grains and nodules of chalcopryrite and pyrite. The ore as a whole averages perhaps 2.5% copper, though 4% ore is obtained for smelting by rough sorting.

Development is by 2 main shafts with extensive underground workings along the main fault or lode, and by stopes on 3 orebodies. The mine has

4 vertical and 2 inclined shafts. No. 1 shaft, 400' deep, vertical, has a 15-h. p. Fairbanks & Morse gasoline hoist, raising ore with a bucket. No. 2 shaft, 325' deep, is an incline, and has a 50-h. p. Western gasoline hoist, operating a 2-ton skip. No. 3 shaft, also inclined, is 200' deep. No. 4 shaft, the largest and deepest, having 3 compartments, is 500' deep, with a hoist. No. 5 shaft, 373' deep, has a 75-h. p. steam hoist, and No. 6 shaft, 250' deep, has a 25-h. p. steam hoist. Some drilling done 1908, with a Key-stone churn drill, showed another orebody.

The power plant has two 250-h. p. boilers, a 300-kw. d. c. Westinghouse motor, and a 150-kw. belt-driven Ideal motor, latter operating pumps at the Bill Williams Fork river, supplying water to the mine and works through 3" and 6" pipe lines. Buildings include a machine shop, sawmill and other structures.

The smelter has a 44x292" Mitchell water-jacket blast furnace of 750 tons rated daily capacity, with a 125' stack, 7' in diam. A reverberatory furnace was being installed, April, 1913. The power house has a 15,000 cu. ft. Nordberg air compressor, and a Connersville blower direct-connected to a Hamilton Corliss compound engine. Slags are handled by a Jeffrey electric locomotive. The smelter building is of structural steel. The converter department has 2 stands and 9 shells, rotated electrically, with a 40-ton electric crane, having 2 auxiliary hoists, and a silica mill, with electric motor, for linings. The smelter was running on custom ore early 1913.

The mines and works are connected with the Santa Fé, Prescott & Phoenix railway by a 21-mile line, known as the Arizona & Swansea railroad, operated, but not owned by the company. The property is an example of enthusiasm run wild, coupled with reckless stock selling and the foolish construction of surface works before the development of enough ore to keep them busy.

SWANSEA SMELTER.

ARIZONA

See Swansea Consolidated Gold & Copper Mining Co.

SWARTHMORE CONSOLIDATED MINING CO.

COLORADO

Mine near Cardinal, Boulder Co., Colo. Chas. B. Galbreath, pres.; Harvey Hanes, vice-pres.; J. E. Carpenter, sec.; Paul Barriclow, treas.; H. H. Carpenter, gen. mgr., at last accounts. Organized July, 1907, under laws of Colorado, as a merger of the Swarthmore Copper Co. and Enterprise Mining Co., capitalization \$3,500,000, shares \$1 par.

Lands, 17 claims, 11 patented, 60 acres, are about 2 miles west of Cardinal and the D. B. & W. R. R. and in the Grand Island mining district of Boulder county. Property includes the Golden Fleece mine, having fissure veins in pre-Cambrian gneiss cut by dikes. The vein thus far developed averages 8' wide and carries a paystreak of 3 to 5% copper ore with occasional telluride of gold. Milling ore is estimated to carry \$10.84 and smelting ore \$24 per ton, in average metallic values. Development is by 5 shafts, deepest 403', and by tunnels of 800', 1,000' and 2,000'.

Equipment includes 2 small steam plants, one having a 60-h. p. hoist and a 12-drill air compressor. There is a small concentrator with a 50-ton chlorination plant, and 4 new mine buildings. Idle.

SWASTIKA COPPER MINING CO., LTD.

MONTANA

Mine near Carter, Missoula Co., Mont. J. B. Purcell, pres. and mgr.; J. W. McDonald, vice-pres.; Geo. E. Marlowe, sec.; Thos. N. Marlowe, treas. Organized July, 1907, in Montana, capitalization \$150,000, shares 10 cts. par, fully issued.

Lands, 4 claims, 80 acres, and a 5-acre mill site. The property, well timbered, near the King and Queen mine, and about 2 miles W. of Carter, shows 2 parallel veins of 6 to 8" width, said to be traceable one-half mile,

having 2 to 4" paystreaks carrying malachite, bornite and chalcopryrite ores, said to give assays of 17 to 32.5% copper, 1 to 2 oz. silver, and from a trace to \$6.40 gold per ton. Test smelter shipments are said to have returned about 25% copper, with fair gold and silver values. Development is by 12 trenches, and tunnels of 60', 200' and 270'.

Equipment includes necessary mine buildings. Was developing and preparing for production, at last accounts.

SWASTIKA COPPER & SILVER MINING CO.

ARIZONA

Office: Tucson, Pima Co., Ariz. Mine address: Twin Buttes, Pima Co., Ariz. W. K. Royce, pres. and gen. mgr. D. H. Cochran, vice-pres.; J. S. Hopley, sec.; J. M. Ormsby, treas. Capitalization \$1,500,000, shares \$1 par. Lands, unpatented, include the Swastika group of 14 claims and the Calendar group of 10 claims, about 3 miles S. of Olive, or Twin Buttes camp. The Swastika group carries silver-lead ores, and the Calendar group has silver-copper ores in contact metamorphic deposits between limestone and granite. The property also includes the Pioneer and Alice mines. The property has 360' of workings, and was said, Jan., 1911, to have made a good strike of copper ore. Equipment includes a small steam plant. Presumably idle.

SWASTIKA MINE.

MONTANA

Mine office: Phillipsburg, Granite Co., Mont. Mr. Williams, mgr.; C. E. Hansen, sec.

Property, known as the old Basin mine, shows a 10' vein of argentiferous copper ore, oxidized to carbonates near the surface, where it is exposed by trenching. Development consists of a 125' shaft, said to show ore averaging \$25 to \$35 per ton in silver, with additional values up to 10% in copper, which is important if true.

Equipment includes an electric hoist good for 500', an air compressor, and a No. 7 Knowles sinking pump.

Was planning to make a regular production, Nov., 1913.

SWISSHELM MOUNTAIN MINING CO.

ARIZONA

Office: Warren, Ariz. Mine address: McNeal, Cochise Co., Ariz. M. S. Peysert, pres.; S. H. Tallman, sec.-treas.; W. R. Shanafelt, supt., at last accounts. Organized 1911, under laws of Arizona, as the successor of the Swisshelm Development Co., capitalization \$2,000,000, shares \$1 par.

Lands, 16 claims, about 10 miles from McNeal, in the N. E. end of the Swisshelm mountains, several miles from a railroad. Property shows limestone and granite. Development is by a 275' tunnel driven along an ore zone of 40' width, said to carry cupriferous ores, but with values mainly in lead and silver. The mine has no power equipment.

SWITCHBACK CLAIM.

MONTANA

Mine address: Saltse, Missoula Co., Mont. Wm. Burke, superintendent. Property, 2 miles S. W. of Saltse, near the Monitor mine, is developed by 2 tunnels, longest 150', showing a very narrow vein of siderite and chalcopryrite ores, reported to carry more than \$2 per ton. Country rock is a green shale of the lower Newland formation.

SYCAMORE MINING, SMELTING & DEV. CO.

ARIZONA

Idle. Letters unclaimed at former office, Fort Worth, Tex., and Jerome, Yavapai Co., Ariz. C. G. Stover, pres. and gen. mgr.; H. Martin, vice-pres. and supt.; C. H. Plumb, sec.-treas., at last accounts. Organized under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, on the Verde river, 4 miles from Jerome, but 13 miles by wagon road. The mine has a 325' two-compartment shaft, bottomed in low-grade chalcopryrite ore, assaying 1 to 3% copper. Equipment includes necessary mine buildings and a good steam plant.

SYNCLINE GOLD-SILVER-COPPER MINING CO.**NEVADA**

Office and mine address: Lida, Esmeralda Co., Nev. C. H. Beesley, pres.; H. Engel, vice-pres.; L. E. Campbell, sec.-treas. and gen. mgr.; preceding officers, F. A. Campbell and B. A. Howes, directors. Organized June 4, 1910, under laws of Nevada, as successor of Washington-Nevada Mining & Milling Co., capitalization \$1,000,000, shares \$1 par, nonassessable; issued \$799,700. Annual meeting, first Monday in January.

Lands, 22 claims, unpatented, 400 acres, with 120 acres in mill and smelter sites, 30 miles S. W. of Goldfield and 10 miles from a railway, in the Lida district. District shows Cambrian limestone and shale, cut by quartz monzonite, capped by volcanic rocks. The ores occur as impregnations and veins. The claims are reported by the management to carry 12 deposits, 4 under development of 4 to 20' average width, traceable 5,000', carrying a sulphide ore, said by company to give assays of 8.7% copper, 17 to 19% lead, 12% zinc, 4 oz. silver and \$1.90 gold per ton. Development is by 9 shafts, of 31 to 120' depth, and by 6 tunnels, of 12 to 140' length. Owing to lack of rail transportation, the complex nature of the ore, and the low price of copper, the company is devoting attention mainly to the development of lead carbonate ores.

Equipment includes a 15-h. p. gasoline hoist, and there are 5 mine buildings. The management plans deepening the main shaft to 200'.

TABATACACHI MINING CO.**MEXICO**

Mine near Nacozari, Sonora, Mex. J. L. Fife, pres.; A. M. Doheny, sec.; L. B. Vickerv, treas.; R. O. Fife, supt., at last accounts. Lands, 3 hectares, having about 1,500' of workings, developing silver-copper and lead ores. Equipment includes a 25-h. p. gasoline engine. Idle.

TABLE MOUNTAIN COPPER CO.**ARIZONA**

At Kelvin, Pinal Co., Ariz. Is controlled by Arimex Consolidated Copper Co.

TABOR y ANEXAS; COMPANIA MINERA EL.**MEXICO**

Mine office: Asientos, Aguascalientes, Mex. Antonio Morfin, pres.; Bruno Newman, mgr., at last accounts. Property shows ore giving assays up to 43% copper, with good gold and silver values. Idle, owing to Mexican revolution.

TACOMA SMELTING CO.**WASHINGTON**

Office: 165 Broadway, New York. Works office: Tacoma, Pierce Co., Wash. W. R. Rust, pres. and gen. mgr.; Edw. Brush, vice-pres.; F. W. Clark, treas.; L. D. Craig, sec.; L. C. Beyer and H. Y. Walker, directors. R. F. McElvenny, supt.; T. R. Wilkinson, refinery supt.; Roger Taylor, asst. supt. Organized under laws of Nevada, capitalization \$500,000, shares \$1 par. Is a subsidiary of the American Smelters Securities Co.

Property, a smelting plant with a 52-acre site, 6 miles from Tacoma, located on Puget sound, whose tidal flats are being reclaimed by filling in with slag. The property is well located for receipt and dispatch of materials, and has extensive wharves, with ore bunkers and automatic devices for unloading cargoes, the wharves being connected with all departments of the works by an electric tram line.

The smelter, originally of 300 tons capacity, built for lead ores only, has been increased to 1,200 tons daily capacity, and now treats lead matte, copper, lead, silver and gold ores and concentrates, from the entire western coast of North America, and a considerable tonnage of South American ores.

The smelter has three 60-ton mechanical roasters and two 10-ton hand-roasters. There are 6 blast furnaces, including four 100-ton stacks for lead ores, and a 400-ton water-jacket blast furnace for copper, 42x160" at the tuyeres, with forehearth 14' in diameter and 4' high, holding 60 tons of

molten matte. A 36" cupola resmelting furnace, with outside settler, can treat 75 tons of 50% matte daily. There is a circular slag-casting machine, having 144 tilting molds. The reverberatory furnaces are of 350 tons daily capacity. The 1,000' dust flues of the blast and reverberatory furnaces lead to a 306' stack of reinforced concrete.

The converter department, equipped with a 30-ton electric traveling crane, has 2 stands and six 72x100"-shells, of barrel type.

The electrolytic plant, increased from 35 to 50 tons daily capacity, has a 20-ton electric traveling crane for handling anodes and cathodes.

Electric power is received at 40,000 volts and stepped down to 100 volts for use, the works requiring about 2,000 h. p. There are 3 Connorsville blowers, driven by a 200-h. p. Westinghouse induction motor, furnishing blast for the lead furnaces. Fuel is petroleum, brought in tank steamers from the oil fields of southern California.

The Tacoma smelter is one of the most important custom plants on the Pacific coast, the management is progressive, and the metallurgical practice excellent.

TACOMA STEEL CO. BRITISH COLUMBIA & WASHINGTON

Office: Provident Bldg., Tacoma, Wash. Mine offices: Van Anda island, B. C., and Darrington, Snohomish Co., Wash. Joshua Pierce, pres.; E. M. Shelton, vice-pres.; A. Y. Eastman, sec.-treas. and gen. mgr.; Alex Grant, supt. Organized with capitalization \$5,000,000, reduced later to \$3,000,000. Paid a \$35,000 dividend April 2, 1907.

Lands include a property at Darrington carrying gold-copper ore, idle for some years, 4,000 acres of lands carrying coke and coal in Washington, 208 acres of iron ore lands on Redonda island, B. C., and the Marble Bay mine, 640 acres, crown-granted, near Marble Bay harbor, at the northern end of Texada island.

The Marble Bay mine, about one-fourth mile from the Cornell and Copper Queen mines, has ore of similar nature occurring as lenticular shoots of ore carrying argentiferous chalcopyrite, with bornite, in a garnetiferous marble near a contact between diorite and limestone. The mine is developed by a 1,350' three-compartment shaft, showing, on the lower levels, a vein of 18' width, with the copper values unchanged and gold values gaining with depth. Ore is reported by the British Columbian government to average 4.3% copper, 23 oz. silver and \$14 gold per ton.

Equipment includes steam and electric power, with 5 Lidgerwood hoists, 5-drill Ingersoll-Rand, small Canadian-Rand and 10-drill Allis-Chalmers-Bullock air compressors. Buildings include a power house, machine shop and there is a wharf, on Marble bay, having large ore bunkers, connected with the mine by a ground tram. In connection with the mine there is a limestone quarry and 4 kilns, with daily capacity of 300 bbls. of lime.

Production, shipped mainly to the Tacoma smelter, was 6,237 tons of ore, yielding 293,269 lbs. fine copper in 1907; 11,438 tons of ore, estimated to have yielded 1,250,000 lbs. fine copper, in 1909, 22,500 tons averaging 5% copper in 1911 and 17,870 tons in 1912. Mine considered valuable and management good.

TAFT & DUNLAP MINE.

NEVADA

Geo. Compton, owner. Mine at Mina, Mineral Co., Nev., is under option to a London syndicate for \$150,000. Property comprises several claims in the limestone hills, W. of Mina, from which shipments were made, 1913. Examined Aug., 1913, by R. W. Hadden, 1807 Harvard Blvd., Los Angeles, Cal.

TAFT MINE.

MONTANA

Mine address: Taft, Missoula Co., Mont. Is a prospect on the south

bank of the St. Regis river, W. of Taft. Development is principally by tunnel, showing a little siderite vein rock, but no sulphides. Country rock is a greenish shale. Ores are said to carry copper and gold in small quantities.

TAHOE COPPER MINE.

CALIFORNIA

Office: P. O. Box, 296, Placerville, Cal. Mine office: Greenwood Creek, El Dorado Co., Cal. L. H. Wilkins, manager. Property, 24 claims, about 420 acres, in Sec. 26, T. 12 N., R. 9 E. This tract is reported to carry an extensive gossan underlain by copper ores. The development work on the Lipton claim amounts to about 500' and 220 samples taken by the manager are said to average 5% copper. See Sacramento Valley Copper Co.

TAKILMA SMELTING CO.

OREGON

Office: P. O. Box 64, Colorado Springs, Colo. Works office: Takilma, Josephine Co., Ore. Chas. L. Tutt, Jr., pres.; Wm. T. Tutt, vice-pres.; J. A. Hull, sec.-treas.; C. E. Tucker, supt. Organized under laws of Colorado, capitalization \$250,000, shares \$10 par. Owns a controlling interest in the Waldo Smelting & Mining Co.

Lands, 175 acres, and a 160-acre smelter site, with total holdings of 335 acres, 320 acres patented, in the Waldo district, including the Queen of Bronze mine, showing diorite and serpentine, carrying several veins, with N.-S. strike, of which 3 are more or less developed.

The Queen of Bronze mine carries lenticular orebodies in diorite and serpentine that occur along vein fractures. The ore contains bornite and chalcopyrite, and is reported to average 8 to 15% copper with \$6 to \$10 in gold. Development includes a 150' shaft and tunnels of 200', 640' and 150' length, with several thousand feet of workings, estimated at last report to show 20,000 tons of oxidized and sulphide ores.

The smelter, at Takilma, has a 125-ton water-jacket blast furnace, making matte, when in blast averaging 45% copper, 2.5 oz. silver and \$2.50 gold per ton, that is shipped to the Tacoma smelter for conversion. The fuel supply is somewhat uncertain and in 1907 the works were compelled to import Japanese coke packed in 100-lb. bags. Owing to the heavy rains in fall and winter, causing impassable roads, the smelter could be worked only in summer. The nearest rail point is Grant's Pass, 42 miles distant, and when in commission the smelter employed 60 teams hauling out matte and hauling in coke and supplies. Equipment includes a sawmill.

Production was 7,543 tons of ore smelted yielding 1,563 tons of matte of about 45% copper tenor, indicating an average return of 8% copper from ore smelted, with production of about 1,350,000 lbs. fine copper in 1905, and 499,662 lbs. fine copper in 1907, the works being idle since Jan., 1908, owing to the death of the late Chas. L. Tutt.

TAM O'SHANTER MINING CO., LTD.

IDAHO

Mine near Osburn, Shoshone Co., Idaho. John H. Wourms, pres.; David C. Coates, sec.; Edw. Eisman, mgr.; preceding officers, P. J. Dills and Chas. Gamble, directors. Capitalization \$1,000,000, shares \$1 par.

Lands, 7 claims, between the Chester and Vortex groups, and near the Nellie mine, in the Evolution district, 1½ miles south of Osburn, the nearest rail point. The property shows a vein of 5 to 12' surface width, traceable 2,000', by numerous pits and trenches, carrying gray copper ore, with some silver-lead, ore shipped having returned up to 750 oz. silver per ton. Development is by a 50' shaft, showing an 18' vein, and there are 2 tunnels, a 210' drift tunnel showing a little gray copper ore assaying up to 18% copper and 200 oz. silver per ton. The main tunnel, 200' lower, is a crosscut about 900' long at last accounts. Is not considered as a likely copper, but rather a silver-lead property.

TAMARACK MINING CO.**MICHIGAN**

Office: 12 Ashburton Place, Boston, Mass. Mine office: Calumet, Mich. Works office: Hubbell, Houghton Co., Mich. Rodolphe L. Agassiz, pres.; Quincy A. Shaw, vice-pres.; Jas. MacNaughton, gen. mgr.; other directors, F. L. Higginson, R. S. Bradley, F. L. Whitcomb and E. C. Lewis; Geo. A. Flagg, sec.-treas.; Clarence H. Bissell, asst. sec.-treas.; John T. Been, supt.; Chas. D. Hohl, chief engr.; John T. Reeder, gen. clerk and purch. agt.; A. Lincoln Burgan, mill supt.; E. J. Waters, chief mg. capt.; John Rowe and Wm. Rosevear, mg. capts.

Organized 1882, under laws of Michigan, capitalization \$1,500,000, shares \$25 par. Dividends, begun 1888, were 43 in number, aggregating \$9,420,000 to end of 1913, last dividend having been \$4, July 23, 1907. The company sold its Cliff lands, 1910, for \$680,000 to the Cliff Mining Co., using the proceeds to liquidate the floating debt, interest on which was equivalent to 85 cts. per share, 1909. Balance sheet of Dec. 31, 1912, gave assets, exclusive of mining equipment, of \$1,500,152, with liabilities of \$379,290, leaving a balance of assets of \$1,120,862. Operations 1907-11 have given net annual losses, amounting to \$249,277 in 1907; \$172,246 in 1910; \$193,198 in 1911, and resulted in a profit of \$271,625 in 1912. Is controlled, through ownership of 19,400 shares of outstanding stock, by the Calumet & Hecla Mining Co. State Street Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Annual meeting, first Wednesday in April.

Lands, 1,120 acres, in Secs. 10, 11, 14 and 15, T. 56 N., R. 33 W., with a mill site on Torch lake, miscellaneous timber lands and other realty giving total of 8,746 acres, from which the Cliff mine was sold, 1910.

The Tamarack mine proper is a tract of very irregular outline, bounded on all sides by lands of the Calumet & Hecla, and the mine is opened on the underlays of the Calumet conglomerate and Osceola amygdaloidal beds. The mine was planned by the late Capt. John Daniell, who conceived the idea of opening the underlay of the conglomerate by a deep vertical shaft. The actual work of sinking No. 1 shaft began 1882, and the conglomerate was cut 3½ years later, in 1885, at a depth only 10' greater than the estimate of Capt. Daniell made before the work was started.

Tamarack No. 1 shaft, 3,409' deep, cuts the Calumet conglomerate at 2,270' beneath the surface and the Osceola amygdaloid about 1,000' deeper. This shaft is used exclusively for hoisting water, raising approximately 13,000,000 gals. per month, all the water of the mine being diverted to this shaft, since at greater depth the amount of seepage is trivial. There are 2 Nordberg direct-connected duplex pumps on the 6th and 9 the levels, each are of capacity to lift 600 gals. per minute from the 9th level. Equipment at No. 1 includes a powerful hoist.

The Tamarack No. 2 shaft, N. E. of No. 1, is 4,355' deep, it has a double lining, the inner wall being braced against the outer by timbers of varying lengths which can be transferred or replaced from time to time, thus remedying the trouble caused by crushes or creeps. The ground began 1910, to show signs of crushing with a slight movement to the east. The conglomerate ground tributary to No. 2 shaft has been worked out, down to and including the 26th level, leaving the 27th to 30th levels, inclusive, still to be stoped. The pressure on the conglomerate is very great, requiring the installation of timber pillars in order to keep the drifts open.

The mine has 5 shafts, 2 at the South Tamarack, called No. 1 and No. 2, two at the North Tamarack, known as No. 3 and No. 4, with No. 5 shaft about midway between. The 16th level of No. 3 and the 38th in No. 5 are the same depth and are connected. The shafts are all connected for ventilation but the mine records show that the efficiency of miners measured

in tons of rock broken per man per diem, is only two-thirds as great in the Tamarack as in the adjoining Calumet & Hecla mine, having better ventilation.

Stopes are made with light timbering so that the workings will cave after ore extraction and sub-levels are opened with stope drifts 12x12' in size, rock chutes being used also, saving considerable timber. New openings have been 6,221' in 1907, 5,501' in 1910, 8,912' in 1911 and 2,656' in 1912. Average annual forces in 1912 were 796 men. Ore is mined from both the Calumet conglomerate and the Osceola amygdaloid.

As the Tamarack lands do not carry the outcrop of the copper lodes worked, but cover the "underlay," or downward continuation of the veins below the Calumet & Hecla workings, the Tamarack shafts are vertical and all levels must be opened by crosscuts, some of them at great depth, having a length of nearly one-third of a mile.

The mine is dry, though there was an increase in the inflow of water after the earthquake of 1905. A concrete dam has been built on the 34th level, to increase the storage capacity for water underground. The lowest level of the mine shows only a slight seepage of water, extremely bitter to the taste, shown by analysis to carry sodium and magnesium chlorides and bromides. The rock temperature, at a vertical depth of 5,000', is approximately 90° F., reduced somewhat by ventilation.

Tamarack No. 3 shaft, nearly a mile north of No. 1, is the principal shaft of the mine. It is 5,253' deep, and below this depth, only 27' less than 1 mile, is continued for 406' further as a blind shaft, sunk on the dip of the bed at the end of an 800' crosscut. This was done to save deepening of main shaft and the cost of crosscuts, constantly increasing in length. The incline blind shaft has a single track with stations on the 19th, 20th and 21st levels. It has a compressed air hoist, on the 18th level, which raises all rock to that point. The 18th level has shown only fair copper values. No. 3 shaft cuts the Calumet conglomerate at a vertical depth of 4,835' where the bed is 20 to 25' wide, but carrying irregularly-distributed copper, though payable as a rule. The shaft is connected with the Calumet & Hecla mine on the 17th level south and 39th level north. The mine has endless rope haulage on the 15th, 16th, 17th, 31st, 32nd and 35th levels. The normal output of No. 3 shaft is about 1,000 tons daily.

No. 3 shaft has an Allis-Chalmers hoist having a semi-conical drum with 18' maximum diameter. There is a 32x72" Nordberg auxiliary hoist used for lowering and raising men and timber in No. 4, with an 18' 6" drum having lathe-turned grooves for coiling the cable. Equipment at No. 3 shaft also includes a 60-h. p. fan, 10' in diameter, with blades 3' 6" wide, capable of supplying 192,000 cu. ft. of free air per minute, to the depth of the shaft, both ventilating and cooling the mine, which otherwise would be 90° F. in the bottom levels.

No. 4 shaft, 4,450' deep and about 600' N. E. of No. 3 is connected with the levels of No. 3 shaft for ventilation and safety. While occasional payable ground is shown, the section of the lode about the mine is as a whole poor.

No. 5 shaft, sunk about 3,300' S. W. of No. 4, and midway between the old Tamarack and North Tamarack workings, is the deepest and largest shaft of the mine, and is the only shaft that has been deepened for several years, ending 1912, with a vertical depth of 5,308', or a mile and 28'. Though No. 3 mine of the Tamarack has deeper openings, No. 5 is the deepest shaft sunk anywhere in the earth's crust. Sinking was begun Aug. 2, 1895, and the conglomerate was cut Dec. 20, 1901, at a vertical depth of 4,062', the late Capt. Wm. E. Parnall having foretold the depth within 12', and the time

required within 11 days, when the work was started, more than 6 years previously. No. 5 is connected underground with the workings of No. 2 and No. 3 shafts and its bottom is just below the footwall of the Osceola amygdaloidal bed.

In sinking this shaft, 83 separate trap, amygdaloidal and conglomerate strata, all barren, were cut, before the Calumet conglomerate was reached. The north drifts on the 35th, 36th and 37th levels have been carried to the Calumet & Hecla boundary and the 41st is the bottom level. Openings on the 40th level are in good copper ground though the showing on the 39th level is rather poor. The Osceola amygdaloidal bed shows no copper values except in a small streak along the hanging wall. The ground on the conglomerate bed tributary to this shaft is limited and though the conglomerate is of good width it is low in grade and shows constantly decreasing copper contents with depth.

As this shaft is the deepest mine shaft in the world the particulars concerning it are worthy of notice. The shaft is 7x29', inside measurement, with 5 compartments in a row. The 3 central compartments, 5x7' 2" each, are used for cages. One of the end compartments, also used for a cage, is 7' 2"x5' 4", the extra 4" being allowed for timber strain, while on the other side of the shaft there is a 3'x7' 2" compartment for ladders, pipes and wires. The 10x14" wall plates of this shaft are 29' 2" long, and the 5x7" runners, serving as guides for the cages, are 16 to 22' in length. Instead of lag screws being countersunk, the runners have a central groove 2" wide and 1½" deep running from top to bottom on both sides of each of the 4 hoisting compartments, these grooves providing for the escape of loosened lag screws, without damage to cages or runners. The shaft openings have automatic covers that lift for passage of the cages.

The shaft house and rock house at No. 5 are on separate foundations and are separately framed and braced although apparently standing as 1 building, 56x120' on the ground, with an extreme height of 131'. The foundations are exceptionally heavy and the girders and framing are of unusual strength to withstand the great strains caused by hoisting heavy cages and the operation of powerful rock-breaking machinery. In these buildings no wood is exposed, except in the floors, asbestos sheathing paper being used elsewhere to protect the wood, thus rendering the building practically fire-proof. The rock house has 3 Portage Lake crushers, of the reciprocating jaw type, with room for 5 more.

Surface equipment at No. 5 is the most extensive at any shaft of the property. The engine house has 2 duplicate 6,500-h. p. Nordberg hoists, each with four 36" high-pressure cylinders, having 72" stroke. The drums were 24' in diameter in the center tapering to 16' at the ends, each half carrying 6,500' of 1½" steel cable, the hoists, operating in counterbalance, being capable of raising from 6,000' depth a net load of 6 tons of rock, this having a gross weight, with cage and cable of about 12 tons. The hoists cost \$60,000 and \$90,000 respectively, and 1 hoist was made over, 1910, and given a 36' Nordberg drum, weighing upwards of 30 tons. The boiler house has six 200-h. p. Burt boilers, with 84" shells, and 2 115' brick-lined self-supporting steel smokestacks.

The compressor house at this shaft has a 35-drill Ingersoll-Sergeant and a 100-drill triple-expansion Nordberg compressor. The electric plant at No. 5 shaft has a 150-kw. generator supplying current to all branches of the mine.

The pumping station on the shore of Lake Superior, nearly 5 miles N. W. of the mine, has two 1,250,000-gal. pumps that take water from a 40' well, connecting with a tunnel driven 425' under the bed of the lake, the

intake being about 35' below water level. These pumps raise water against a static and frictional head of nearly 700', delivering it into steel tanks of 42' and 65' diameter, with combined storage capacity of 200,000 gals., standing on the highest ground at the mine. Water is distributed from these tanks to the Tamarack and Osceola locations.

The Tamarack has 2 stamp mills, on Torch lake a little more than a mile S. of the Calumet & Hecla mills, each with 5 compound heads and 2 simple heads, the latter being idle, as the 5 compound heads are capable of caring for all rock crushed at present. The mills have a combined daily capacity of about 3,500 tons of conglomerate rock, which is materially greater than any possible productive capacity of the mine. The stamp heads are fitted with 8" mortar grates, opening into one-quarter-inch mesh revolving screens, with Parnall-Krause hydraulic discharges. The stamps have accessory Nordberg crushing rolls, to care for raggings from the mortars, the rolls having rigid journals, with independent wash for each set. Mineral is dressed to about 50% copper.

No. 1 mill has Allis heads, 3 of which are compounded and has a steel trestle approach. No. 2 mill has Allis-Chalmers steeple compound stamps and is equipped with a traveling crane.

The joint pump house of the Tamarack and Osceola mills has two 40,000,000-gal. pumps and one 15,000,000-gal. pump. The 2 larger pumps, which are duplicates, have triple-expansion steam ends, with 22", 40" and 60" cylinders of 52" stroke, and the water end of each has three 30" plungers and a 42" discharge pipe. The foundation for the newest large pump is 25' deep, in solid sandstone.

The Tamarack and Osceola companies have joint wharves, and steel coal sheds, with 2 steel unloading towers, at Dollar Bay, on Portage lake, these being among the most extensive in the district.

Gross costs of mining and stamping per ton of rock, and gross cost of finished copper per pound, have been as follows:

Year	Cost per ton	Cost per lb. cts.	Year	Cost per ton	Cost per lb. cts.
1903.....	\$2.32	11.50	1908.....	\$2.57	15.24
1904.....	2.42	12.98	1909.....	2.44	14.30
1905.....	2.39	13.37	1910.....	2.67	14.70
1906.....	3.62	14.37	1911.....	2.69	15.56
1907.....	3.28	15.82	1912.....	2.23	13.15

Maximum production was 20,222,529 lbs. fine copper in 1897. Recent production has been:

Year	Lbs. Copper	Year	Lbs. Copper
1903.....	15,286,093	1908.....	12,806,127
1904.....	14,961,885	1909.....	13,533,207
1905.....	15,824,008	1910.....	11,063,606
1906.....	9,832,644	1911.....	7,494,077
1907.....	11,078,604	1912.....	7,908,745

The Tamarack always has been an expensive mine to work, and unavoidably must continue such, with expenses increasing by reason of depth and decreased mineral values. As it stands the Tamarack mine saw its best years before the opening of the twentieth century.

TAMARACK-OSCEOLA COPPER MFG. CO.

MICHIGAN

In liquidation. Entire assets consisting of a wire and sheet mill at Dollar Bay, Houghton Co., Mich., were sold, 1912, to John A. Roebling's Sons Co. for \$180,000.

TANK PASS CONSOLIDATED MINING CO.

ARIZONA

Office: care Reginald C. Pryor, Houghton, Mich. Mine near Salome,

Yuma Co., Ariz. A. Tennyson Pryor, pres. and gen. mgr.; Ward Smith, vice-pres.; Wm. D. Calverley, sec.-treas. Organized Nov., 1909, capitalization \$3,000,000, shares \$10 par. Company controls the Alvin Development Co. through stock ownership, and took over the property of the Cobralla Copper Co., March, 1910.

Lands, known as the Ultimatum or Cobralla group, adjoin the Alvin, near Tank Pass in the Harcuvar mountains, Ellsworth mining district, about 10 miles from Wenden. The property carries about 4,500' of the strike of various fractures in a contact zone following granite intrusive in quartzite, amphibolite and limestone, the ores carrying bornite and chalcopyrite, and estimated to average 3 to 5% copper, 5 to 6 oz. silver and \$1 to \$8 gold per ton, with occasional paystreaks and masses of high-grade ore. Development is by the 150' Carbonate Hill shaft and a 200' tunnel. Equipment includes a gasoline hoist. Idle for several years past but considered worthy of further prospect work.

TASMANIA COPPER MINING & MILLING CO. COLORADO

Letters neither answered or returned from 603 Provident Bldg., Philadelphia, Pa. Mine office: Winfield, Chaffee Co., Colo. D. B. Dance, vice-pres.; G. Albert Smyth, sec.; Edw. O. McHenry, treas. Organized April 20, 1898, under laws of Colorado, capitalization \$1,000,000, shares \$1 par. Lands, 13 claims, 250 acres, in the La Plata district, with about one-half mile of underground openings, estimated to show 750,000 tons of auriferous and argentiferous galena, sphalerite and chalcopyrite. Has a 25-ton pyritic smelter.

TASSOO MINING & SMELTING CO., LTD. BRITISH COLUMBIA

Mine office: Jedway, Queen Charlotte islands, B. C. Lands, 12 claims, 850 acres, including a town site on the S. W. side of Tassoo harbor, W. side of Moresby island. The mine is accessible by steamer direct, or by 5-mile trail from Sewell. Property shows granite cutting limestone, with diabase and trap dikes in both rocks. The ore deposits, in limestone, consist of magnetite containing 62% iron, 2% copper, 1% lime and 3% silica. The orebody is 107' wide, with 56' of 2.5% ore, balance 1.55% and 23' more of 1%. A 280' adit tunnel, at 1,130' elevation, cuts the orebody. A Vancouver syndicate was preparing to develop this property, 1913.

TAYLOR MOUNTAIN MINING CO. COLORADO

Office: 609 New York Life Bldg., Omaha, Neb. Operating office: Salida, Colo. Mine office: Garfield, Chaffee Co., Colo. W. F. Norway, pres.; C. S. Montgomery, sec.; Geo. H. Purmort, supt. Organized Oct., 1905, under laws of Colorado, capitalization \$600,000, shares \$1 par. Annual meeting, in November.

Property consists of the Lily mine, with 7 claims, 65 acres, in the Monarch district, 1½ miles from Garfield and 19 miles from Salida. The property shows a nearly vertical N.-S. contact vein, between granite and limestone, carrying lead and copper ores. The mine shows a little lead carbonate ore assaying 20% lead, 75 to 180 oz. silver and \$6 gold per ton, besides copper ore which the management estimates will average 10% copper, 8 oz. silver and \$1 gold per ton. Has shipped 100 tons of 12% copper ore. Development is by a 280' main shaft, with 4,000' of workings.

Equipment includes electric power with 16-h. p. hoist and 35-h. p. General Electric air compressor. Buildings include an engine house, smithy, carpenter shop. The mine employed about 25 men at last report.

TECOLOTE COPPER CO. MEXICO

Owned by the West Coast Smelting & Refining Co. and property described under that title.

TEDDY MINING & MILLING CO., LTD. IDAHO

Idle. Office and mine: Kellogg, Shoshone Co., Idaho. J. B. Cox, sec.;

John Pelkes, supt., at last accounts; J. L. Safford, cons. engr. Capitalization \$1,000,000, shares \$1 par. Lands, 7 claims and a mill site, 1 mile E. of Kellogg, show 2 veins, 1 of about 15' width carrying copper ore with quartz gangue, and 1 of about 12 to 35' width carrying silver-lead ore giving assays up to 12% lead and 30 oz. silver per ton. Development is by crosscut tunnels of 100' and 550'. There are several mine buildings. No returns secured.

TEJON MINING CO.

ARIZONA

Office: Bakersfield, Cal. L. I. Thiers, superintendent, Gleeson, Cochise, Ariz. Property, a group of claims at Gleeson, in the Turquoise or Courtland district, Ariz., which adjoin the Copper Belle mine of the Leonard Copper Co. Property shows heavy bedded limestone dipping steeply eastward into the mountain ridge and cut by intrusive bodies of monzonite and later quartz porphyry. Ore occurs as replacements in large but irregular masses. It is a heavy pyrite, low in copper, with some high-grade oxidized ore in caves and open fissures.

Development is by the 800' Tejon shaft, crosscuts and levels and by several old tunnels with extensive drifts and stopes in oxidized ore.

Equipment, modern and complete, includes electric and steam power, compressor, etc. Railway is close at hand. Property appears meritorious and management good.

TEMPLE MINING CO., LTD.

IDAHO

Dormant. Office: Wallace, Idaho. Mine near Burke, Shoshone Co., Idaho. Louis H. Hays, pres.; John Stambaugh, vice-pres.; Geo. Edmiston, sec.; Thos. Scott, gen. mgr., at last accounts. Stock is assessable. Lands, near the Great Western mine, are developed by 2 tunnels, the lower showing lead and copper ores, with quartz gangue, giving assays up to 20% copper.

TENABO MINING & SMELTING CO.

NEVADA

Office: 105 Mercantile Bldg., Salt Lake City, Utah. Mine address: care A. E. Raleigh, supt., Tenabo, Lander Co., Nev. W. Mont Ferry, pres.; John Pingree, vice-pres.; John Janney, sec.; E. O. Howard, treas., and Benner X. Smith, directors; Duncan MacVichie, cons. engr. Organized 1909, under laws of Nevada, capitalization \$3,000,000, shares \$2 par; issued \$1,922,156. Annual meeting, second Monday in February. Union Trust Co., New York, registrar; Windsor Trust Co., New York, transfer agent; Walker Bros. Bank, Salt Lake City, depository. Stock is listed on the unqualified department of the Boston curb.

Company bought, 1909, the property of the Gem Consolidated Mining Co., at Tenabo, which in turn had taken over the property of the Reliance Mining & Milling Co., the Tenabo Mining & Smelting Co. giving 450,000 shares of stock to the Gem Consolidated for the lands. Company also bought the property of the Tenabo Consolidated Mines Co., comprising the Copper Hill and Widows mines, for 300,000 shares of stock.

Lands are 223 acres of mineral lands and an 80-acre mill and smelter site. Lands are in 4 groups, all with more or less development work.

The principal group shows a deposit of low-grade copper ore, stated by company to average 300' in width, outcropping for nearly a mile, with indications, of making a mine similar to that of the Utah Copper Co., at Bingham. The management estimates the ore on this group to run about 3% copper, with small gold and silver values.

The Little Gem mine, about 1 mile from Tenabo, has a contact deposit between rhyolite and sedimentary rocks, carrying copper carbonates and chalcopryite, with quartz gangue, a 450' shaft, sunk at the very flat angle of 22°, showing an orebody ranging from 2 to 14' in width, giving assays up to 31.1% copper, 122 oz. silver and \$9.60 gold per ton. Mine is estimated to have 24,884 tons blocked out, that will average \$18 per ton.

The property was acquired upon a report in 1908 by Duncan MacVichie that it contained 7,783 tons of \$13.38 smelting ore and 17,257 tons of \$3.88 concentrating ore and that \$25,000 spent on the property would bring reserves up to 100,000 tons.

Another property has a 150' incline shaft, in a vein, apparently widening in depth with 5 parallel veins in a cross-section of about 600'.

The property as a whole has about 3,000' of workings, and about \$100,000 has been expended in development and equipment. Capt. MacVichie estimates \$479,000 worth of ore blocked out in the Gem mine alone and that the expenditure of a few thousand dollars additional would increase this amount of developed ore to \$1,840,000 in value, or more at the present metal prices. Company shipped 23 cars of ore, from the Little Gem mine, with gross smelter returns of \$23,774, and net smelter returns, after deducting freight, sampling and smelting charges, of \$17,640.

Equipment includes 2 gasoline hoists and company plans erecting a mill. About 35 men employed doing development work in 1912 and 1913.

Property considered promising but finances do not permit rapid development to fit it for production.

TENAS MINING CO.

WASHINGTON

Idle. Office: 320 California Bldg., Tacoma, Pierce Co., Wash. Mine near Keller, Ferry Co., Wash. J. R. Turner, pres.; P. J. Sweeney, vice-pres.; C. E. Peterson, sec.; D. McPherson, treas.; preceding officers, Otto B. Roeder and F. W. Heide, directors, all of Tacoma, Wash. Organized Sept., 1910, under laws of Washington, succeeding the Iconoclast Consolidated Mines Co., whose property was sold for debt; capitalization \$10,000, shares \$1 par, fully paid and assessable up to 25% per year; issued, 3,448. Assessments to date 32%.

Lands, 5 claims, 95 acres, relocated 1912, 2 miles N. of Keller, show 3 contact deposits with an orebody 30' in maximum width, giving average assays of 3.6% copper and 2 oz. silver per ton with some gold. Development is by a 325' main shaft and 3 tunnels with claimed total length of 514'. Annual assessment work only has been done since 1908. Company is a holding corporation, awaiting an opportunity to sell or bond the property.

TENDROY MINE.

IDAHO

Address: Salmon, Lemhi Co., Idaho. Property, 2 miles N. of the Queen of the Hills mine, at head of Wallace creek, near contact between granite and Algonkian slate series. Claims show 2 veins of gold-copper ore developed by 400' of tunnel work. A 2-stamp Nissen mill on the property has treated a small amount of ore.

TENNESSEE COPPER CO.

TENNESSEE

Office: 2 Rector St., New York. Mine at Copperhill, Polk Co., Tenn. Jas. Phillips, Jr., pres.; E. H. Westlake, vice-pres.; Walter M. Briggs, sec.-treas., preceding officers, Wm. B. Thompson, A. R. Peacock, W. A. Neereamer, S. J. Jennings, G. W. Breen, Jos. Walker, Jr., F. Felix Rosen, Utley Wedge, Richard Sutro and H. M. Kilborn, directors; J. B. Risque, mgr.; M. A. Caine, mine supt.; A. J. Bone, smelter supt.; D. F. Dryden, acid plant supt.; Utley Wedge, cons. engr.; A. M. Failie, assayer; Chas. A. Magnell, purch. agt.

Organized April 26, 1899, under laws of New Jersey, capitalization \$5,000,000, shares \$25 par; fully issued. Debentures \$1,500,000, fully issued; \$300,000 paid. State Street Trust Co., Boston and Equitable Trust Co., New York, registrars; Old Colony Trust Co., Boston and National City Bank of New York, transfer agents. Stock listed on New York, Boston and London exchanges. Annual meeting, fourth Thursday in February.

Net profits and dividends have been as follows, the first figure being the

profits and the last the dividends for each year: \$417,565 and \$218,750 in 1903; \$186,966 and \$218,750 in 1904; \$452,106 and \$218,750 in 1905; \$824,231 and \$250,000 in 1906; \$800,634 and \$650,000 in 1907; \$324,768 and \$500,000 in 1908; \$339,406 and \$250,000 in 1909; \$445,387 profits, without dividends, in 1910, but a dividend of \$1.50 per share, amounting to \$300,000, declared Dec., 1910, was paid Jan. 26, 1911; \$2.50, or \$500,000 in 1912 and \$3 to Dec. 1, 1913. Total dividends to Dec. 1, 1913, \$19.00. Net profit for 1912, \$1,095,875.

In 1912, the company's bonded indebtedness was reduced to \$1,200,000. Besides paying \$150,000 on this account, \$100,000 was added to the reserve for plant depreciation, \$50,000 for special depreciation and \$150,000 was added to the surplus reserve account. At the annual meeting, Feb., 1913, the control of the property passed from the Lewisohns, who organized the company and brought the property to its present efficient state, to a new management with James Phillips, Jr., as president and a board currently supposed to represent Standard Oil interests.

Property comprises 2,080 acres of mineral land and 11,000 acres of miscellaneous lands, in the Ducktown district. Ore was discovered and mining first begun in 1850, and the mines were operated regularly by a New York company previous to the Civil War, and, during the earlier part of the war, under compulsion by the Confederate Government to supply copper for munitions of war. Company owns the Burra Burra, London, Polk County, Eureka and Tennessee mines. The Eureka was formerly operated under lease for iron ore by the Virginia Iron, Coal & Coke Co., yielding 39,498 long tons of iron ore, 1907.

The property shows pre-Cambrian metamorphosed mica-schist, carrying several lines of mineralization with lenticular orebodies. Four deposits, under development, show extensive gossans, originally having a little rich sooty glance ore under the gossan, which was mined out many years ago. The lenses range 30 to 70' in width, 500 to 2,000' in length, and are of unknown depth. The ore consists of a massive mixture of pyrite and pyrrhotite, with a little chalcopyrite, in a gangue of various metamorphic minerals and quartz, ore ranging from 2 to 4% copper, 40% iron, 27% sulphur and 15% silica, with minute quantities of gold and silver. As zinc and other refractory elements are lacking the ore is excellently adapted to smelting, giving very clean slags.

The mines are extensively developed, the new work for 1910 including 2,898' of level workings, and 5,058' of diamond drilling amounting to 2,717' in 1912, including 1,196' of diamond-drill holes and 655' of winze and raise work. Levels are spaced 100' apart. In order to conserve the sulphur content of the ore, which is valuable for acid making, the company's old mines were worked on a smaller scale than usual, 1910.

Ore reserves, Dec. 31, 1912: 3,691,000 tons of available ore, with 1,380,000 tons of probable ore, giving a total of 5,071,000 tons.

The Burra Burra mine, which is the principal property, is operated through an 800' main central, sunk at 75° in the footwall, having its first level 170' below the collar, with succeeding levels at 100' intervals, the mine ending 1910, with 6 producing levels, the 7th level under development and the shaft sinking for the 9th level.

The method of back stoping adopted in 1912 met expectations and over 60% of the 1912 tonnage from back stopes in this mine and over 65,000 tons of broken ore was in the stopes, Dec., 1912.

The main orebody of the Burra Burra is 1,200' long and averages 60' wide on the 3rd level. There also is the north or McPherson orebody, developed by a drift from the 3rd level of the main shaft, connecting with the old McPherson shaft, 2,200' N. E. of the main shaft, the McPherson orebody

being about 900' long with an average width of 25'. The Hiwassee shaft, 900' S. W. of the main Burra shaft, is sunk to the 3rd level, showing a comparatively small orebody, of about 200' length and 12' average width. Burra Burra produced 298,348 tons of ore in 1912.

• The London mine has a 600' shaft, sunk at an incline of 75°, with 6 levels opened, developing an orebody of 25 to 75' width and about 600' length, ranging 2 to 4% in copper tenor. The London produced 98,917 tons of ore in 1912.

The Polk County mine has a 485' vertical shaft, with 5 levels opened, developing an orebody of very irregular shape, up to 120' maximum width, of about 2% average copper tenor. Production of the Polk County mine was 45,773 tons of ore, 1912.

In 1912, company took a 25-year lease on the School property, an extensive orebody developed by an open cut about 3,500' long, from which the iron ore, or gossan has been removed down to the sulphides. Property is being explored by diamond drill.

The Eureka mine, idle in 1912, has a shaft sunk 1910, to depth of 165', at which point the first level will be opened. Diamond-drill borings have shown an orebody of 20 to 165' width, by about 1,000' length, and it is estimated that this mine has 2,500,000 tons of ore developed that average 44% iron, 36% sulphur and about 1% copper. This ore is to be treated in 1914 for its iron and sulphur, as experiments indicate that the ore will make a good non-phosphorus iron ore. An initial unit to try out the process is planned.

Equipment at the Burra Burra includes a combination shaft house and crusher building, 127' long, containing the crushing plant. Equipment includes an 18x36" Blake crusher, feeding to a 36"x33" Robins belt conveyor, used as a picking belt, which discharges into storage bins of about 2,500 tons capacity, and as far as possible all barren rock is removed from the crushed ore by hand picking. The crushing plant includes 42x14" screens and a 180-h. p. engine, the plant having a daily crushing and assorting capacity of 2,000 tons, ore being reduced to 4" size. There are similar shaft rock houses at the London and Polk County mines.

The brick power plant at the Burra Burra includes four 150-h. p. Babcock & Wilcox boilers, having Murphy automatic stokers. An 18x42" Nordberg first-motion duplex hoist has two conical drums, each of 7' minimum and 9' maximum diameter, with 5' face, raising 5-ton skips with 1½" steel cables. There also is a man car, similar to those of the Lake Superior district. There are 2 Nordberg 2-stage air compressors, each capable of reducing 2,000 cu. ft. of free air per minute to 70 lbs. initial pressure. A small plant furnishes electric light for the Burra Burra and London mines.

The company's private railway connects all of the mines with the works and has connection at Copperhill with the Louisville & Nashville railway, where there is a central yard for interchange of traffic. The track is of standard gauge, with 7½ miles of main line and 4½ miles of sidings and spurs. Equipment includes four 105,000-lb. Schenectady locomotives, 50 thirty-ton Rogers ballast ore cars, 10 gondolas and 11 miscellaneous cars. The company has a repair shop for locomotives and cars, equipped for making all repairs and capable of completely rebuilding when necessary. This line, in 1912, handled 648,480 net tons in the company's cars, and 488,654 tons in foreign cars.

The smelter at Copperhill, a little N. of the Tennessee mine and 1 to 5 miles from the other mines of the company, was designed and built by J. Parke Channing. On the upper level are the ore bins, having storage capacity for 10,000 tons of ore, 800 tons of coke, and necessary fluxes and furnace

products requiring retreatment. Charges are drawn from the bins into cars of 44 cu. ft. capacity, hauled by electric locomotives, there being scales for weighing charges, and 4 tracks that run under the bins and circle around the furnaces, so that a train loaded on any track may go to any furnace and return to the bins.

An ore-bedding system of the Messiter type was completed and put in operation, 1911. Belts receive ore from the railway bins, passing it through the sampling mill to the beds, of which there are 2 for ore, of 10,000 tons capacity each, and 2 for matte, of 3,500 tons each. Ore is reclaimed by 2 machines, which send it by belts to the charge-floor where the charges are measured and sent in regular charge cars to the furnaces.

Dust is removed from the chamber by two 12" conveyor belts running in the tunnel underneath and treated in a sintering plant. This plant, rebuilt in 1912, has two 42x264" Dwight-Lloyd machines, producing over 1,000 tons of sinter coke monthly, part of the flue dust is spread over the beds and covered with low-grade first-fusion matte, the product being a light porous material in excellent condition for resmelting.

The furnace building of steel has 7 blast furnaces, 3 being 56x180" and 4 being 56x270" at the tuyeres, with a height from tuyeres to charge-floor of 18', and from tuyeres to the cast-iron water-cooled sole plates of 42". Each blast furnace has a 16' circular settler lined with low-grade silicious copper ore, which has replaced fire brick. Slags skim into pots of 105 cu. ft. capacity, which are hauled by electric locomotives, considerable slag being used for railway ballast. There is a 25-ton refining furnace.

The converter department has two 40-ton electric traveling cranes taking matte from the settlers to the converters, 4 stands and 15 shells, each 84x126", of the Leghorn type. The converters were changed, 1912, from acid to basic lining which necessitated the drying of silicious material. For this purpose a Ruggles-Coles dryer, with necessary bins and conveying belts, was installed.

Hot converter slag is poured into the blast furnace settlers, by reason of which the only converter slags requiring resmelting are the skulls forming in the ladles. Converter bars average about 99.4% in copper tenor, and formerly were shipped mainly to Europe as blister copper without electrolytic refining, but copper is now cast in 210-lb. pigs and sent to the Baltimore Copper Smelting & Rolling Co. for electrolytic refining, which effects the saving of the very small gold and silver values contained. The finished electrolytic copper is marketed through the American Smelting & Refining Co.

The smelter power house is of steel frame with brick walls. Equipment includes two 250-kw. 500-volt d. c. Westinghouse generators, direct-connected to 2 Nordberg tandem-compound Corliss engines, and one 400-kw. 500-volt d. c. Crocker-Wheeler generator, driven by a Bates tandem-compound Corliss engine, all 3 engines running non-condensing, with exhaust steam going to a feedwater heater. Furnace blast is supplied by 3 Nordberg piston blowing engines, each of 20,000 cu. ft. capacity per minute, and 3 Nordberg duplex cross-compound piston blowing engines, each of 30,000 cu. ft. capacity per minute, having 15x33x42" cylinders, with 70x42" air ends. These engines supply blast at 50 oz. pressure to a common blast-main, above the charge floor. Converter blast is furnished by 2 Nordberg duplex cross-compound air compressors, supplying 10,000 cu. ft. per minute each, at 12 lbs. initial pressure. An Ingersoll-Rand air compressor furnishes air at 100 lbs. pressure for operating the charging doors and sundry pneumatic tools. The electric plant includes a 110-kw. 250-volt Keystone generator, direct-connected to a Ball tandem-compound engine furnishing current for electric

light, and there is a motor-generator set for transforming a 500-volt current to 220-volt current for electric lighting outside of the power plant. The engine house has a complete oiling system which is effecting a considerable economy in oil consumption and reducing the cost of repairs.

The smelter boiler house has four 512-h. p. Altman & Taylor water-tube boilers, with Murphy automatic stokers and Foster superheaters, delivering steam at 175 lbs. pressure, with 150° superheat. Coal and ashes are handled mechanically by a bucket and chain conveyor, an 800-ton steel coal bunker being located to feed automatically to the boilers.

The shop equipment is very complete, there being machine, pipe, plate, pattern, carpenter and paint shops, with smithy and foundry having 1 cupola for iron castings and another for brass and lead, with an autogeneous welding outfit. All repairs for the mine and works are made in these shops.

Water supply is pumped from the Ocoee river by two 10" 2-stage Worthington pumps, belt-driven by motors, each with capacity of 2,800 gals. per minute, to large storage tanks above the smelter, and a large reservoir at the McPherson shaft, built, 1912. A 4,000,000-gal. reservoir at about the level of the furnace floor received the flow from the water-jackets, which passes over a Worthington water-cooling tower.

The company operates a quartz quarry at Austral, Tenn., 35 miles N. of Copperhill, on the Louisville & Nashville railway. Equipment of the quarry consists of a boiler, air compressor, rock drills and a Bucyrus steam shovel. The production of this quarry was 48,000 tons in 1910. The mines and smelter employ a total of 1315 men.

Much damage was done to farms and forests by the sulphur fumes from the works of the company but this was materially reduced by the discontinuance of heap-roasting, and the substitution of semi-pyritic smelting. A certain amount of deleterious fumes continued, even after the change to semi-pyritic smelting, and meanwhile, the matter had been taken into the courts. An already delicate situation was further complicated by the peculiar geographical location of the works, which stand in the extreme S. E. corner of the state of Tennessee, the prevailing winds carrying the bulk of the fumes into the state of Georgia, by reason of which the state authorities of Georgia brought suit against the Tennessee Copper Co., in the Federal courts, and the latter decided that the smelter must eat its smoke. Bad as this decision seemed at first, it has been transformed from a curse into a blessing through the installation of a mammoth sulphuric acid plant. This undertaking, which at first seemed merely a matter of considerable outlay, proved much more difficult than was anticipated by reason of the intermittent and varying nature of the gas supply from the blast furnace tops. The problem has been solved successfully, after no little research, experimentation and worry, accomplished by a large expenditure of money.

The acid plant, which has cost considerably upwards of \$1,600,000, was begun 1906, and completed 1907, but was not put into full operation until early 1908, when the rated capacity was 120,000 tons yearly of 60° Beaumé chamber acid, and the plant has been enlarged since to a nominal capacity of 180,000 tons yearly, with actual capacity somewhat greater. Two Gay-Lussac towers, Nos. 9 and 10, put in operation 1911, proved successful and a new tower was built, 1912. Production was 192,084 tons of 60° Beaumé in 1912.

As the furnace gases contain sulphur dioxide, sulphur trioxide, carbon dioxide, oxygen and nitrogen in considerably varying percentages, new methods of control were found necessary to maintain the volume of sulphurous gases suitable for making sulphuric acid by the chamber process. After some experimentation the problem was solved by equipping 1 of the smaller

and 3 of the larger blast furnaces with tight tops, above the charge floor, to exclude atmospheric air, these being connected with a dust chamber 26x36x163' in size, where most of the solid matter is precipitated from the gas, the dust chamber being so constructed as to conserve the heat of the gases sufficiently to concentrate the acid in the Glover towers. There are 2 octagonal Glover towers of 30' diameter and 50' height with suitable nitre plants at the foot of each. After passing through the towers the gases are conducted through very large lead flues of 200 sq. ft. sectional area, which deliver the fumes to the chamber system containing 4,600,000 cu. ft. of chamber space. In a general way the chamber plant is of conventional design, yet the enormous quantities of fumes received and acid produced have brought about developments that are quite new to the industry, among the most notable being the size of gas connections, acid lines, acid coolers and fans, which are all on a scale never before known. The discharge from the chamber plant is conducted into 11 Gay-Lussac towers, which also are of a gigantic size hitherto unknown, the 2 latest and largest being octagonal of 36' diameter and 65' height. The estimated capacity of 180,000 tons per year of 60° Beaumé chamber acid is now demonstrated to be low. The company has contracted for the sale of its entire production of sulphuric acid and for an even larger output of acid than 200,000 tons yearly, for a period of 10 years, to the International Agricultural Corporation, at a price understood to be \$3 per ton and received very considerable bonuses under this contract. The acid production was 25,000 tons in 1908, nearly 50,000 tons in 1909, above 192,000 tons in 1912 and is expected to reach 200,000 tons in 1913. This mammoth acid plant, the largest and most complete in existence, requires a force of only about 30 men for its operation.

Production has been as follows: 1,948,759 lbs. fine copper in 1901; 7,961,734 lbs. in 1902; 10,690,389 lbs. in 1903; 8,617,697 lbs. in 1904; 7,977,982 lbs. in 1905; 11,319,591 lbs. in 1906; 12,599,019 lbs. fine copper, 14,905 oz. silver and 85 oz. gold in 1907; 14,464,585 lbs. fine copper in 1908; 14,058,954 lbs. in 1909; 12,429,009 lbs. in 1910; 13,808,940 lbs. fine copper in 1911; 13,252,634 lbs. fine copper, 50,622 oz. silver and 337 oz. gold in 1912. In addition to this production from the company's own ores, the smelter produced 4,406,423 lbs. copper from custom ores.

The output for 6 months in 1913 totals 9,415,705 lbs. copper; sulphuric acid production, 97,546 tons.

Cost of finished copper was 8.08 cts. per lb. in 1905, 11.79 cts. in 1907, 10.64 cts. in 1910 and 11 cts. in 1912. Costs per ton of ore treated were \$2.81 in 1905, \$3.37 in 1907, \$3.12 in 1910 and \$2.88 in 1912, or 9.65 cts. per lb. of copper. The ore treated yielded an average extraction of 29.3 lbs. copper per ton in 1910, 31.6 lbs. in 1911 and 29.8 in 1912, the lower figure being due to the idleness of the sintering plant during rebuilding.

Low-grade copper ores are treated profitably at other points, but in nearly all other cases there are considerable gold and silver values, which are lacking in the case of the Tennessee. This company has shown both courage and ability in changing the old method of semi-pyritic smelting, and has shown equal ability and greater courage in the installation of its acid plant, by virtue of which a very serious handicap has been turned into a permanent source of large revenue. The property is managed with great business ability and technical skill, and its annual reports are unusually complete and satisfactory, giving detailed figures that are thorough and furnish the shareholders and others interested with ample material for an adequate understanding of the company's resources, operations and results.

TENNESSEE MINE.

ARIZONA

Near Chloride, Mohave Co., Ariz. Mine contains mostly lead ore, but

development on the 900' level has opened up an oreshoot averaging 5% copper, according to reports. Shipping about 100 tons daily to the Needles smelter. No returns secured.

TENNESSEE MINING & MILLING CO.

COLORADO

Office: care J. W. Thayer, sec., 677 Roscoe Blvd., Chicago, Ill. Mine office: Empire, Clear Creek Co., Colo. J. W. Looffbrouw, pres.; S. B. Anderson, vice-pres.; J. F. Kidnell, treas., and H. J. Fersdick, directors; Abel Guion, supt. Organized Feb. 11, 1911, under laws of Colorado, capitalization \$400,000, shares \$1 par, nonassessable; issued 260,000. Annual meeting, Aug. 13. Company is a reorganization of the Gold Bug Mining Co.

Property, 6 claims, 2 deeded, in the Colorado district, 1¼ miles from Colorado Southern railroad. Claims have veins which show gold and silver ore with traces of copper. Management expects to erect a mill, as it estimates enough ore blocked out by 3,000' underground development to keep a small mill busy. Production for 1913 reported by company as \$1,500.

TERNERES MINE.

MEXICO

Owned by Velardeña Mining & Smelting Co., at Velardeña, Durango, Mexico.

TERRA NOVA PROPERTIES, LTD.

NEWFOUNDLAND

Secretary and office: E. A. Swisham, Fleetway House, Farrington St., London, Eng. Mine address: Millertown, Newfoundland. Mayson M. Beeton, chairman; William Scott, supt., at Grand Falls, Newfoundland; preceding officers, directors. Is a subsidiary of the Anglo-Newfoundland Development Co. Company owns rights over about 2,500 sq. miles, held by 99 year lease, in the central part of Newfoundland, surrounding Long lake. The principal property is Buchan's River mine, about 5 miles W. of the lake on the N. shore. Ore occurs in sericitic schists formed of volcanic grites, the vein having strike of N. 51° E. and dipping about 30°.

Development consists of a 370' shaft with several levels, having long drifts on the vein. The one orebody thus far found varies from 5 to 10' in thickness, is 350' long, horizontally, and 370' in downward extension. The ore is a complex sulphide carrying 2.36% copper, 8.14% lead, 20.38% zinc, 6.70 oz. silver and \$2.72 gold per ton.

Property closed down for the present pending determination of cheap method of treatment.

TESORA; MINA EL.

MEXICO

Office and mine: Calmallí, Baja California, Mex. Emilano Ybarra, owner and manager. Property carries highly auriferous and argentiferous copper ores, and is equipped with a small steam plant and a 10-stamp mill. Employed about 25 men, at last accounts. Probably idle, owing to revolution.

TESORA DE SONORA MINING CO.

MEXICO

Letter unclaimed at Kemper Bldg., Kansas City, Mo. Mine at Suaqui de Batuc, Ures, Sonora, Mex. Dr. J. C. Rogers, pres.; J. B. Hinthorn, vice-pres.; Geo. L. Hines, sec.; Geo. E. Wittich, treas.; Stanley F. Mers, supt. Organized 1905, under laws of Arizona, capitalization \$5,000,000, shares \$1 par, and holds title to lands through ownership of entire capital stock of the National-Wardwick Consolidated Mining Co., S. A., organized under laws of Mexico.

Property, the Nacional and Wardwick mines with 360 hectares mineral lands, 830 acres, in 2 groups, 1 mile from the Yaqui river and 9 miles from Suaqui de Batuc, latter including the Todos Santos mine, an antigua once having a smelter, as evidenced by a large slag dump. Claims show ore-bearing fissures in limestone with replacement deposits of copper and silver-lead ores. The old workings were shallow, only oxidized ores having been

mined and smelted, but the property is said to have been a considerable producer long ago. The mine shows a 75' silver-lead orebody carrying oxidized and sulphide ores, and has yielded ore assaying 28.7% copper, 2.8% lead and 139 oz. silver per ton. La Nacional mine has the 75' Mendosa tunnel, and a 65' shaft, claimed to have yielded 150 tons of ore of \$19.31 average assay value. No recent returns secured.

TETER-STONE AZURITE MINING CO.

ARIZONA

Mine office: Dragoon, Cochise Co., Ariz. Dr. D. W. Teter, pres.; Geo. A. Brown, supt. Lands, 3 miles south of Dragoon, have a 4 to 10' contact deposit, between limestone and granite, showing outcrops of azurite and malachite, with sulphide ore shown in a tunnel. Developing 1913, but operations hindered by a heavy inflow of water.

TEXAS-ARIZONA MINING CO.

ARIZONA

Mine office: Dragoon, Cochise Co., Ariz. J. Q. Marrion, pres.; J. R. Hubbard, gen. mgr. Property near the Centurion mine, about 20 miles from Dragoon, in the Castle Dome mountains. Mine has a shallow incline shaft and a 200' vertical shaft showing silver-lead and copper ores with small copper values. The company is shipping regularly to El Paso, having recently encountered high-grade ore on the 200' level.

TEXAS COPPER CO.

ARIZONA

Probably idle. Mine, 20 miles N. W. of Tucson, Pima Co., Ariz. Chas. E. Hoff, president and manager. Capitalization \$3,000,000, shares \$1 par. Lands, 3 claims, unpatented, 60 acres, one-half mile N. of the Gould mine, in the Amole district, show fissure veins in volcanic rocks, developed by a 35' shaft and a 140' tunnel. Workings expose a strong iron gossan with copper stains.

TEXAS GROUP.

ARIZONA

Eight claims, near Douglas, Cochise Co., Ariz. Formerly owned by August Baron, sold 1913, to Tennessee interests. Property said to carry copper, silver-lead and zinc ores.

TEXAS TURQUOISE MINING CO.

TEXAS

Address: A. D. Hudson, owner, El Paso, Texas. Mine, 2 miles W. of Van Horn, Texas, is a producer of turquoise and copper minerals, showing evidence of making a copper mine when gems are exhausted.

TEZIUTLÁN COPPER CO.

MEXICO

Organized under laws of New Jersey, capitalization \$1,000,000, shares \$100 par. Is controlled, through ownership of entire stock issue, by Teziutlán Copper Mining & Smelting Co. Fully described Vol. V.

TEZIUTLÁN COPPER MINING & SMELTING CO.

MEXICO

Office: R. E. Safford, sec., 82 Beaver St., New York. Mine office: La Aurora, via Teziutlán, Puebla, Mex., and Ejutla, Oaxaca, Mex. Employs 2,500 men. Robt. S. Towne, pres. and treas.; Stephen W. Reynolds, vice-pres.; Chas. J. Peabody, second vice-pres.; preceding officers, A. Foster Higgins, W. J. Best, E. W. Gould, Jr., Henry L. Nelson, Henry Shepard and R. M. Carter, directors; Donald C. Brown, asst. gen. mgr.; T. Skewes Saunders, mine supt.; Frank Cazin, chief engr.; R. L. Lloyd, smelter supt.

Organized April, 1905, under laws of New Jersey, capitalization \$10,-

Traveler's Edition, North American mines only—thin paper, flexible leather cover—for machinery salesmen and mining engineers.

Price, \$6.00. Sent on receipt of price.

000,000, shares \$100 par. Controls, through entire stock ownership, the Teziutlán Copper Co., and has a close working agreement with the Compañía Minera Mexicana. Regular dividend rate is 6% per annum, and dividends were \$100,000 in 1903; \$350,000 in 1904; \$495,216 in 1905; \$800,000 in 1906; \$800,000 in 1907; \$300,000 in 1908; none in 1909-10; \$400,000 in 1911, and \$400,000 in 1912. State Street Trust Co., Boston, transfer agent. Annual meeting, first Thursday in June.

Owms La Aurora and the Ocote mines, the former with 4,500 acres, 10 miles from Teziutlán, and about 130 miles E. of the City of Mexico, with a 16-acre smelter site, and 2,500 acres of miscellaneous lands, including La Chignautla limestone quarry, about 3 miles from the smelter. The climate is equable, and the mines are surrounded by fine arable lands, with an adequate supply of good labor.

La Aurora mine, opened mainly by tunnels, has developed a considerable body of chalcopryite ore containing sphalerite, giving average assays of about 8% copper, up to 200 grams silver and 5 grams gold per metric ton, with 15% iron, 20% sulphur, 10% calcium carbonate and 30% silica.

Los Ocotes group, 240 hectares, bought Oct., 1905, is 2½ miles N. of San Martín, Ejutla, Oaxaca, Mex., and includes the San Juan mine, which is one of the few copper properties that has paid for development, from production, since inception, and in addition, has given a profit, the mine having been a steady producer since 1900. This property shows 4 fissure veins, in porphyry. The one worked in the San Juan mine varies from 2 to 30' in width and has lenticular shoots of quartzose-chalcopryite ore without zinc, antimony, arsenic or bismuth. The ore averages 4 to 5% copper, and 15 oz. silver per metric ton, with a trace of gold, and the mine has produced considerable ore carrying up to 11% copper and 4 kgs. silver per metric ton. Development is by 4 shafts, 1 for ventilation. The San Juan or main shaft is 830' deep, and is connected on the 7th level with the Dolores shaft, 200 meters to the N. of 164 meters depth, having 9 levels. The San Francisco shaft, 475 meters S. of the San Juan, is not yet connected with the main workings. The mine is quite dry, making only about 25,000 gals. of water daily. Ore reserves were estimated March, 1912, at 1,000,000 tons. Property was closed down 1912, owing to disturbed conditions in Mexico.

Equipment at the San Juan mine of Los Ocotes group includes steam, gas and electric power, with steam hoists good for 500 meters depth, at the San Juan and Dolores shafts, and a 6-drill Rand air compressor. There also is an old mill erected by the former owners near the San Juan shaft. The production of Los Ocotes group was 290 tons of concentrates, yielding 121,000 lbs. fine copper and 16,700 oz. silver, in 1904, under the old management, since greatly increased.

The company owns a private narrow-gauge railway, of 10.7 miles length, from La Aurora mine to Teziutlán, where connection is had with the Inter-oceanic Railway of Mexico. This line, formerly operated electrically, now has 2 Shay mountain-climbing locomotives, with a Rogers switch engine at the works. A railway is projected from Teziutlán to the port of Nautla, on the Gulf of Mexico, a distance of 100 miles, which would give a direct outlet, and reduce transportation charges, which are very high at present.

The company has 2 aerial tram lines, the lower of 50 metric tons hourly capacity, carrying ore and limestone, and the upper, of 15 metric tons hourly capacity, with automatic loading and dumping devices, carrying limestone only.

A new 500-ton concentrating mill was under construction, 1913, at Aire Libre, Puebla, Mex., and was expected to start work in December.

The old smelter, near La Aurora mine, has 3 blast furnaces, and is of

about 300 tons daily capacity. The new smelter, 17 kilometers from Teziutlán, is thoroughly modern in design and equipment, having been remodeled and blown in April 8, 1910. Buildings are all of concrete and steel and the flow of material is by gravity throughout. Ore is brought from the mine in trains of 4 cars each, passing over a gravity tramway equipped with scales and dumped in two rows of six 250-ton ore and flux bins, built of 3/16" steel, having pneumatic gates. There are two 500-ton blast furnaces, each 48x240" at the tuyeres, doing semi-pyritic smelting, requiring about 7½% charges of Connellsville coke, charged by cars taking current from a third rail, with motors mounted on the axles, ore being dumped into 65-ton charge hoppers above each furnace. Each hopper is divided into 6 vertical sections, for half the height, each section having 2 gates, operated hydraulically by banks of levers in front of the furnace, permitting charging to any part of each furnace desired, as charging can be done at 10 different points independently. The discharge of the water-jacket piping is visible. The furnaces have 11' circular settlers, of 4' 6" height, with 18' linings, provided with cooling pipes. Under the furnace floor is a 4x7' concrete-lined s'ag tunnel, which also cares for drainage, slags being granulated and washed out by a jet of water into the river, the launder having a 45' fall. A 10' steel balloon flue leads from the furnaces to the 150' steel stack, of 14' diameter, set on a 30' concrete base.

The converter department, occupying an extension of the furnace building, has a 30-ton electric crane, of 40' span. There are 2 stands and six 84x126" shells, with fusible disks, tilted electrically. Blister copper is cast into 110-kg. pigs, in tilting moulds carried on trucks, and converter bars, averaging 98.6% in copper tenor, are exported through Vera Cruz for refining at the Perth Amboy works, and electrolytic copper is marketed by L. Vogelstein & Co.

The power plant at the smelter has 5 Connorsville blowers of 10,000 cu. ft. capacity each, driven by 100-h. p. individual motors, for furnace blast, and a 40x42" Nordberg double blower, rope-driven by a 350-h. p. motor, for converter blast. There are 2 hydro-electric power plants and the cost of electric power is figured at only \$14 per h. p. year, exclusive of interest and insurance. The 1,000-h. p. hydro-electric installation at the smelter takes water from the Totoyic or Xolat river, through a 3,600' flume, under a head of 150', the company having a government concession for 2,500 liters of water per second from that stream. The second hydro-electric power plant, on the Atexcaco river, 9 kilometers from the smelter, has about 3,000 h. p. available, partially developed by a 1,500-kw. hydro-electric plant of 4 units, driven by Pelton wheels under a head of 1,340', delivering current at 6,000 volts, which is carried by double transmission lines, each of capacity adequate for the entire load, and stepped down to 440 volts in a transformer station at the smelter.

Production was 6,788,404 lbs. fine copper in 1902; 6,786,488 lbs. in 1903; 7,512,252 lbs. copper, 286,012 oz. silver and 3,057 oz. gold in 1905. The smelter was closed down Nov. 23, 1907, with development work continued in the mines, and the new smelter was completed and blown in late 1908, but was remodeled and again blown in April 8, 1910. The new plant has a capacity of about 12,000,000 lbs. fine copper yearly, and was producing, early 1911, at the rate of nearly or quite 1,000,000 lbs. fine copper monthly. The Teziutlán is the most promising and successful copper mine in southern Mexico, and the management is considered good.

THARSIS-YORK CO.

MEXICO

Office: 178 Devonshire St., Boston, Mass. Mine office: Nacozari, Sonora, Mex. Herbert E. Young, vice-pres.; Thomas L. Pryor, sec.; Wil-

lard T. Carleton, treas.; preceding officers, R. C. Heath, E. C. Williams, W. R. Sparrell, C. N. Lindley, Morton Lindley and Wm. J. Maloney, directors; M. Lindley, gen. mgr.; James Nolan, supt. Organized April 29, 1909, under laws of Delaware, capitalization \$1,000,000, shares \$5 par, fully paid and nonassessable; issued 145,761. Boston Safe Deposit & Trust Co., registrar; State Street Trust Co., transfer agent, Boston, Mass. Annual meeting, second Wednesday in April.

Lands, 12 claims, 1,015 acres, in 6 groups, 1 known as the Esquina, the main group, adjoining and lying between the Nacozari Consolidated Copper Co. and the Pilares mine of the Moctezuma Copper Co., with 1 shaft near the boundary of the latter. There are several attractive orebodies on the property, 3 partly developed.

The Esquina claims carry a dike-like mass of red-stained mineralized porphyry, similar to the outcrop of the Pilares orebody and on the same line of fracturing. This outcrop is 600' wide and extends across the claims. Like the Pilares it has a footwall of white rhyolitic breccia, a hanging wall of andesitic breccia and the lode filling is an altered, sericitized, silicified and mineralized rhyolite, supposedly with copper and iron sulphides below water level.

Development includes considerable prospect work, with shafts of 168' and 170', latter planned to be sunk to 300' with tunnels of 330', 107', 268' and 485', the mine having about 1,500' of workings March, 1913. At present the company is driving a crosscut tunnel (485' in April, 1913) to cut the lode at 800' in and to drain the bottom of the 168' shaft and continue across the ore zone. This mineralized belt has thus far shown only bunches of ore, but is expected to develop ore similar to that of the Pilares mine.

Equipment includes an 80-h. p. electric plant, with a 25-h. p. hoist and a 3-drill air compressor, and the company has the use of the shops of the Moctezuma Copper Co. The management plans continuous development doing 1,000 to 2,000' of drifting, 1913. Property considered promising and development well planned.

THIRD VENTURE MINING CO.

COLORADO

J. B. Stewart, mgr., Leadville, Lake Co., Colo. J. A. MacLennan, supt. Company owns a lease on the St. Louis mine which has a vein with complex sulphide ores carrying copper-lead and zinc with gold-silver values. Development is by 1,450' tunnel. Equipment is electric with Leyner air compressor.

THOMPSON FALLS COPPER MINING & MILLING CO. MONTANA

Company owns the Copper King mine at Thompson, Sanders Co., Mont., which was operated by leasers about 1911, and E. D. Farmin was general manager, at last accounts. Mine has an 8' vein showing low-grade concentrating ore with streaks of shipping ore. This is an old mine equipped with a concentrating mill, but idle for many years prior to 1909, when it was reopened, worked for a few years and again became inactive.

THOMPSON-QUINCY CONSOLIDATED MINING CO.

UTAH

Office: 603 Judge Bldg., Salt Lake City, Utah. Mine in the Park City district, Summit Co., Utah. Frank J. Hagenbarth, pres.; Arthur L. Thomas, Jr., sec.; W. S. McCornick, treas. Organized Dec. 24, 1910, under laws of Utah, capitalization \$1,250,000, shares \$1 par, as a merger of the J. I. C. Mining Co. and the Quincy-Thompson Consolidated Mining Co., the latter company being itself a merger of the West Quincy and Thompson Mining companies. The West Quincy received 285,890 shares, the Thompson Co. 338,600 shares; 75,000 shares each were given the Ontario Silver Mining Co. and Daly Mining Co. and 50,000 to the Daly West for the use of their workings. The financial statement of the company for the year ending

Oct. 31, 1912, shows \$5,411 spent for mine supplies, \$11,562 for mine labor and \$1,958 for general expenses, all met by the sale of 5,000 shares treasury stock and a 6% loan. Total debt of company, \$26,552.

Property, 134 acres, of which 5 claims were furnished by the West Quincy and 64 acres by the Thompson. The property of the West Quincy Mining Co. was a three-eighths interest, with an option on the outstanding five-eighths interest, in the property of the J. I. C. Mining Co. The claims supposedly carry the extension of the Quincy orebody of the Daly West mine and are developed by a 625' two-compartment vertical shaft and a crosscut tunnel through the Little Bell mine, cutting a contact vein carrying ore assaying up to 20% lead, 160 oz. silver and \$2 gold per ton. The mine is to be developed through the Ontario drain tunnel No. 2, which was extended to the Quincy-Thompson mine by the Ontario company.

The company has found rich silver-lead ore and started production with a 50-ton shipment of high-grade ore in July, 1913. In September it was reported to have 2½ of smelting ore in several faces. Present work is mainly from the 900' level of the Daly and Ontario companies and a shaft raised from the 900' Daly West level to the contact was completed, 1913. Company's present copper production is negligible.

THOR MINING CO.

UTAH

Office: 412 Judge Bldg., Salt Lake City, Utah. Mine office: Brighton, Salt Lake Co., Utah. W. L. Snyder, pres.; Peter Kane, vice-pres.; Blaine Bowman, sec.-treas.; Peter Cass, supt. Organized Sept., 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par. Property, 22 claims, unpatented, in the Bonanza Flat section. The group is at the head of Big Cottonwood canyon adjoining the Daly Judge on the S. W., and is opened by the Snake Creek tunnel. The veins carry argentiferous and slightly auriferous lead and copper ores. Equipment includes a small steam plant, with an air compressor.

THREE B. MINING CO.

COLORADO

C. E. Himan, superintendent, Lake George, Park Co., Colo. Property has vein of copper ore carrying gold-silver values. Developed by 150' shaft. Equipment includes steam power, compressor, etc.

THREE CRIPPLES MINING CO.

WYOMING

Office and mine: Esterbrook, Albany Co., Wyo. H. C. Saul, sec.; G. W. Johnson, vice-pres. Lands, lying immediately N. of the holdings of the Maggie Murphy Copper Co., have an 85' shaft, showing copper ore with values mainly in gold. Equipment includes a small steam plant. Company reports 1913, that annual assessment work is kept up, but no development attempted.

THREE FORKS COPPER MINING CO.

MONTANA

Mine office: Three Forks, Gallatin Co., Mont. Herbert G. Dunbar, superintendent, at last accounts. The mine has a 300' shaft, developing somewhat bismuthiferous ore assaying up to 20% copper, with small gold and silver values. Equipment includes steam power and an air compressor. No returns secured.

THREE FRIENDS MINE.

ALASKA

Owned by Three Man Mining Co.

THREE MAN MINING CO.

ALASKA

Office: 31 Nassau St., New York. Mine office: Landlock, Prince William sound, Alaska. W. A. Dickey, pres. and gen. mgr.; H. C. Bryan, sec.; Duncan Edward, treas.; preceding officers, directors. C. W. Harrington, supt., and H. H. Dickey, purch. agt. Organized under laws of New York, capitalization \$1,000, shares \$100 par, fully issued. Is a close corporation having only 3 shareholders.

Lands, 43 claims, 10 patented, 812 acres, on tidewater, at Landlock bay, in the Valdez mining district of Alaska. The property, which has been under continuous development since 1903, shows 10 orebodies having a general E-W. strike, occurring as fissure veins and as deposits in shear zones in greenstone and slates and averaging 8' in width, carrying chalcopryite ore in lenticular shoots which average 10% copper. Low-grade ore is continuous, with rich ore found mainly on the footwall in paystreaks of 1 to 8' width, the largest shoot carrying massive chalcopryite assaying 10% copper, 1 oz. silver and 50 cts. gold per ton. The quantity of low-grade ore of concentrating tenor is very much greater than that of the smelting ore, but the concentrating ore is not available for present use.

The mine is developed by 5 tunnels, 100 to 1,000' long, Nos. 1 and 2 being connected by a 65' raise, all in ore, and the mine, having upwards of 5,200' of workings, was estimated by the management to have about 20,000 tons of ore in sight, April, 1913. A test shipment of 150 tons gave returns of about 12.5% copper. No stoping has been done, all ore produced having been extracted from levels and upraises.

The mine has no machinery or power equipment, owing to development by tunnel, but has 14 buildings, with ore bunkers on a wharf at tidewater, connected by a short ground tram with the portal of the 5th level. Production was about 600 tons of 10% ore 1910, shipped to the Tacoma smelter, yielding 120,000 lbs. fine copper and over 3,000 tons of 10% ore yielding 610,000 lbs. fine copper in 1912. The company has a bond and lease on the Mason & Gleason property at Irish cove, and did development work on the claims in 1912. Property considered promising.

THREE R MINES.

ARIZONA

Mine office: Patagonia, Santa Cruz Co., Ariz. R. R. Richardson and A. E. Crepin, owners. Property operated under option since April, 1912, by N. L. Amster, 67 Milk St., Boston, Mass. John D. Wanvig, superintendent.

Lands, 55 claims, about 1,000 acres, unpatented, on the westerly slope of the Patagonia mountains, 9 miles S. of Patagonia, at an elevation of 5,000'. Claims show alaskite with small, irregular areas of trachyte and rhyolite porphyries. Ore occurs mainly along several lodes in a N-S shear zone as chalcocite in high-grade shoots and also disseminated low-grade values. The first orebody opened had stopes 70 to 80' long and 40' wide extending from the 50' to the 400' level, a second parallel ore shoot, 100' from the first, was 23' wide and carried 8% ore.

Development consists of the 346' Colossus tunnel, Evening Star tunnel of 843' and the 260' Colossus shaft, with total underground workings of 8,740', of which 6,635' is at the Colossus mine. Reserves, Sept., 1913, are reported as 50,000 tons of 3 to 4% ore. Practically all the high-grade ore has been mined.

Equipment includes a 50-h. p. Fairbanks-Morse oil-type hoist at the Colossus shaft, 40-h. p. and 60-h. p. oil-type engines operating individual belt-driven Sullivan air compressors. Company employs about 25 men.

Mine produced from April to Sept., 1913, 3,717,571 lbs. fine copper from 22,253 tons dry ore, averaging 9.1% copper. In Oct., 1913, high-grade ore was reported to have been found on the 800' level.

THUMB BUTTE MINING CO.

ARIZONA

Probably idle. Office: Yuma, Ariz. Mine near Dome, Yuma Co., Ariz. J. Porter Moffitt, pres.; G. Livingstone, vice-pres.; J. L. Lee, second vice-pres.; H. E. Penny, third vice-pres.; A. B. Ming, sec.-treas., and A. H. Keat, directors; Chas. Theobald, supt. Organized July, 1907, capitalization \$1,500,000.

Lands, 24 claims, 480 acres, 20 miles from a railway, opened by a 330' main shaft, with bottom level at 300', show a vein of 14' estimated width, carrying argentiferous and auriferous copper ore, including some chalcocite, estimated to average \$32 per ton in gross values. Equipment includes a 12-h. p. gas engine. No returns secured.

THUMB BUTTE MINING & MILLING CO.

ARIZONA

Mine office: Prescott, Yavapai Co., Ariz. Lands, 4 claims, 240 acres, 4 to 8 miles W. of Prescott. The property, having a fair surface showing, is developed by several short tunnels, showing copper ore of low average grade. Annual assessment work being done.

THUNDER CREEK MINING CO.

WASHINGTON

Succeeded by Thunder Creek Transportation & Smelting Co., reorganized as Puget Sound, Chelan & Spokane Railway Co., 1912.

THUNDER CREEK TRANSP. & SM. CO.

WASHINGTON

Office: Marblemount, Skagit Co., Wash. Is probably a reorganization of the Thunder Creek Mining Co., whose property on the creek of that name, in Cascade district, eastern Skagit county, was sold in 1912 to the Skagit, Cascade & Chelan Railway Co., which later changed its title to the Puget Sound, Chelan & Spokane Railway Co.

Claims show veins of complex sulphide ore holding lead and zinc and copper. Development includes several short tunnels only.

TIA JUANA MINE.

ARIZONA

Owned by Balcolm, Kane and the estate of Prof. W. P. Blake. Mine is on the S. slope of the Santa Rita mountains, in Santa Cruz county, Ariz., at 7,000' elevation. Is said to show wide veins carrying copper and silver ores. Examined in the spring of 1913 for English copper interests.

TICON MINE.

MONTANA

Wm. O. Glymo, superintendent. Property is owned by Jas. A. Murray and the estate of Silas F. King, of Butte, Mont. Lands are 1 fractional claim, about 2 acres, lying between the Bell and Wild Bill mines of the Anaconda and the Speculator and Edith May claims of the North Butte. Mine has a 600' incline shaft on the vein with levels opened at 300', 500', 550' and 600', said to show 4' of good ore in the bottom. Work was stopped by an injunction, secured by the Anaconda Copper Mining Co. in 1908.

TIEWAUKEE LEASING CO.

UTAH

Is controlled, through stock ownership, by Scott Mines Co. Company has, or did have, a lease of the Tiewaukee mine, now owned by the Montana Bingham Consolidated Mining Co. No trace of operations secured.

TIGER GOLD CO.

ARIZONA

Office: 184 La Salle St., Chicago. Mine office: Harrington, Yavapai Co., Ariz. Andrew G. Scherer, mgr.; Stanton W. Forsman, supt., at last accounts. Property is the Grey Eagle and Oro Bella mines, carrying veins with auriferous and argentiferous copper ore, developed by 8 tunnels and a 400' shaft. Property is primarily a gold mine with smaller values in silver and copper. Equipment includes steam and water power, an air compressor, a 20-stamp mill and a 60-ton concentrator, employing about 35 men at last accounts. Production was 19,010 lbs. fine copper, 9,937 oz. silver and 4,313 oz. gold in 1907; 3,639 oz. silver and 1,823 oz. gold in 1908; 4,802 lbs. fine copper, 2,725 oz. silver and 1,226 oz. gold in 1909. Company has operated mine continuously 1912-13, but the production has not been reported to this office.

TILLICUM DEVELOPMENT CO.

WASHINGTON

Office: Holyoke, Mass. Mine at Loomis, Okanogan Co., Wash. A. G. Elston, pres.; L. M. Deller, sec., both of Spokane, Wash.; F. G. Burnham, treas., Holyoke, Mass.; E. C. Limbach, gen. supt. Is the successor of the

Palmer Mountain Tunnel Co., organized Aug. 1912, under laws of Washington, capitalization \$300,000, shares \$1 par, 50,000 preferred, 250,000 ordinary; issued 30,000. Debentures, \$19,000, 6%, none issued.

Property, 15 claims, 250 acres, in the Loomis (Palmer Mt. or Wannacut Lake) district, 12 miles from the Great Northern railroad. The Summit claim shows a N.W.-S.E. fissure vein in diorite, averaging 8' wide and proven to depth of 115'.

Development comprises 3 tunnels, all on the vein, the 2 uppermost 35' apart vertically, connected by raises, besides a 50' winze from the middle tunnel. The lower tunnel is 157' long and must be extended 250' to reach this winze. These workings are all on the vein and all show ore of commercial grade, but in small amounts. Vein averages 5' between walls and gives indications of opening up an orebody of profitable size. Ore reported to average \$40 gold and 10 oz. silver with traces of copper. Company has 750-h. p. water power and 450-kw. electric plant, transmission line and machinery, as well as 100-stamp mill and sawmill.

The reorganization was effected by purchase of property at receiver's sale for \$26,000, \$19,073 cash and balance in old company's overdue notes. Old noteholders receive 27,958 shares preferred new stock at par with an equal amount of common stock as bonus for their notes and all stockholders of the Palmer Mountain Tunnel Co. are offered stock on the same terms. Company's original plan of tunneling Palmer Mountain is temporarily abandoned. This crosscut is reported to be 5,993' long.

TILT COVE COPPER CO., LTD.

NEWFOUNDLAND

Office: 9 Queen Street Place, London, E. C., Eng. Mine office: Tilt Cove, Newfoundland. John Taylor, chairman; E. C. Leaver, sec.; preceding officers and A. E. Berthoud, directors; John Taylor & Sons, mgrs.; F. J. Williams, supt. Organized April 4, 1888, under laws of Great Britain, capitalization £200,000, shares £2 par; issued £178,000, fully paid. Debentures, £80,000, at 5½%. The property has been under lease for 99 years, expiring 1989, to the Cape Copper Co., Ltd., but terminated by notice from the lessees, Aug. 31, 1913. The annual rental was £4,400, plus one-half of the net profits. Profits were £99,340 in 1906; £57,534 in 1907; £9,107 in 1908; £5,714 in 1909; £7,050 in 1910; £15,072 in 1911, and £13,293 in 1912, half of which goes to the Cape Copper Co. After payment of London expenses, profit was £5,380. Reserve fund, 1912, £10,000 cash; debentures holders objected to this being distributed to stockholders. The company has a reserve fund of £10,000, invested in British consols. Dividends were 11¼% in 1901; nothing in 1902; 5⅜% in 1903; 7½% in 1904; 13¾% in 1905; 26¼% in 1906; 12½% in 1907; 4⅜% in 1908; 3⅜% in 1909; none in 1910; 3⅜% in 1911, and 3½% in 1912.

The ore is pyritic with 3 to 4% copper and is shipped to Britonferry, South Wales, where its sulphur is used in acid and fertilizer manufacture and the residue smelted for copper.

Lands, freehold, are on Notre Dame bay, 7 miles W. of Cape John, on the northern shore of Newfoundland. The property includes the East, Bluff and South mines, which have been worked since 1870. The East mine shows some nickel ore, and its copper ore is of somewhat higher average grade than the other properties. The East and South mines have an ore zone of about 250' width, with a diorite hanging wall, associated with ferruginous slate, and a prominent gossan caps lenses of chalcopyrite and pyrite ore of 4 to 36' width, the largest one 150' long, but thinning out on all sides. The East and South mines yield ore averaging 3 to 3.5% copper, with \$1 to \$2 silver and gold per ton. The pyritic ore from the East mine averaged about 3.7% copper in 1896. Ore reserves in all mines, estimated 1911, at

only 20,000 tons, and former annual production of 75,000 to 100,000 long tons, has shrunk to about 37,000 tons. Ore mined cost \$1.86 in 1910. The monthly output in the summer of 1912 averaged 692 tons of 3.25% ore from the East mine, 565 tons of 3.75% ore from the South lode and 133 tons of 7.28% ore from the West Bluff mine.

Production has been as follows: 1904, 6,122,000 lbs.; 1905, 5,104,960 lbs.; 1906, 5,136,320 lbs.; 1907, 3,875,200 lbs.; 1908, 3,203,200 lbs.; 1909, 3,095,680 lbs.; 1910, 2,419,200 lbs.; 1911, 1,435,000 lbs.

The output for 1912 is not reported but is said to have given a profit at the mine of £15,561, or a net profit of £13,293.

TINTIC CENTRAL MINING & MILLING CO.

UTAH

Office: Provo, Utah. Mine address: A. N. Haldaway, Knightsville, Juab Co., Utah. Geo. M. Smoot, pres.; R. L. Anderberg, sec.-treas. Organized June, 1907, under laws of Utah, capitalization \$50,000, shares 5 cts. par, assessable; all issued. Three assessments yearly of one-half cent a share. Cash on hand; Jan. 1, 1913, \$498.

Property, 20 claims, covering ground adjacent to the Iron Blossom in the Tintic district and supposedly carrying the extension of the ore bearing fissures of that mine. These fissures are in limestone and are cut by porphyry, carrying irregular but very profitable orebodies.

Development includes a 1,038' shaft with extensive workings on the 870', 920' and 1,020' levels. During 1912, work was confined to the 920' level running main drift 990' N. E., but finding only copper-silver ore with 1.1% copper and 5.5 oz. silver, on which a raise was driven.

TINTIC COMBINATION MINING CO.

UTAH

Office: 425 Atlas Block, Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. W. H. King, pres.; B. H. Bullock, vice-pres. and mgr.; H. J. Fitzgerald, sec.-treas.; preceding officials, I. A. Smoot and T. H. Fitzgerald, directors; Elmer Duncan, supt. Organized June 20, 1908, under laws of Utah, capitalization \$1,000,000, shares \$1 par, assessable. Shares are listed on the Salt Lake Stock Exchange. Lands, 10 claims, opened by a 220' two-compartment shaft, developing auriferous and argentiferous lead and copper ores. Is reported by state official as a copper producer, in 1912. Equipment includes a small hoist.

TINTIC CO.

UTAH

Office: 747 Fifth Ave., New York. Mine office: Bingham Canyon, Salt Lake Co., Utah. Grant B. Schley, pres.; Kenneth B. Schley, vice-pres. and sec.; E. B. Schley, treas.; preceding officers, Frederick Strauss, Alfred Jaretzki, E. J. Berwind and D. Sullivan, directors. Organized 1903 under laws of Maine, capitalization \$2,700,000, shares \$3 par; issued \$2,091,249. Original capitalization, \$3,000,000, shares \$5 par, increased, 1906, to \$4,000,000, with an outstanding issue of \$3,500,000 stock in 700,000 shares of \$5 par, which was first reduced 1909, to \$2,100,000, by cutting the par value from \$5 to \$3 and was immediately thereafter increased to present amount of \$2,700,000. Bonds, \$500,000 authorized, at 6%, convertible into stock, of which \$422,900 is outstanding, this bond issue having been made to liquidate a floating debt. The company is a securities-holding corporation only, and is the parent company of the Tintic Mining & Development Co., Yampa Smelting Co. and West Mountain Tramway Co., properties of which are described under the titles of the 2 first-named companies.

TINTIC DELMAR MINING CO.

UTAH

Office: Snow Bldg., Provo, Utah. Mine office: Eureka, Juab Co., Utah. Andrew Madsen, pres.; Wilford Giles, vice-pres.; Harvey Cluff, sec.-treas. Organized March 27, 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par. Lands, 27 claims, partly patented, in the North Tintic district,

having a 400' tunnel with a depth of 170', showing stringers of quartz carrying ore giving good assay values in silver, lead and copper where 2 large cross breaks intersect. In Aug., 1913, a 100' winze encountered fissures opened by drift at bottom, showing ore carrying 358 oz. silver, \$3.09 gold, 2.65% lead and a little copper in a shoot encased in low-grade ore.

TINTIC MAYFLOWER MINING CO.**UTAH**

Idle. Office: Snow Bldg., Provo, Utah. Mine office: Eureka, Juab Co., Utah. W. D. Rawson, pres.; Andrew Madsen, vice-pres.; J. C. Anderson, sec.-treas.; preceding officers, Hyrum Madsen and Rufus Babcock, directors. Organized July, 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par. Property, in the northern part of the Tintic district, near the Tintic Delmar Mining Co., is under the same general management.

TINTIC MINING & DEVELOPMENT CO.**UTAH**

Office: 747 Fifth Ave., New York. Mine office: Bingham Canyon, Salt Lake Co., Utah. Grant B. Schley, pres.; D. Sullivan, vice-pres.; W. J. Walworth, sec.-treas.; E. B. Schley, asst. sec.-treas.; preceding officers, W. S. Gurnee, E. J. Berwind and Kenneth B. Schley, directors; D. F. Sheehan, supt. Organized Aug., 1896, under laws of West Virginia, capitalization \$3,000,000, shares \$5 par, and reorganized Jan., 1906, under laws of Maine, capitalization \$600,000, shares \$1 par. Is a subsidiary of the Tintic Co., and operated as a close corporation, making no public reports. Property was mortgaged 1910, for \$150,000, jointly with the Yampa Smelting Co. and West Mountain Tramway Co., to secure a \$675,000 issue of 8% gold bonds.

Lands include claims near the Mammoth, Grand Central and Centennial-Eureka mines in the Tintic district, having a 300' shaft, with a power plant and air compressor. Heavy expenditures on this property gave in different results, and it has been idle several years.

Owens the Yampa mine and a group of 30 claims, 180 acres, on Carr fork, Bingham canyon, near the Ohio mine, and adjoining the Utah Consolidated on the N. and Boston Consolidated on the W. The claims carry a contact or bedded vein, of 10' minimum, 37' average and 200' maximum width, between a quartzite foot and limestone hanging, this being among the largest orebodies in the Bingham district, outside of the properties having disseminated porphyry ores. The deposit carries disseminated chalcocite, covellite and chalcopyrite, said to average 1 to 3% copper, 2 oz. silver and \$1.50 gold per ton, while smelter returns for 1909 were only about 1.7% copper, and probably under \$2 per ton in combined gold and silver values. The ore has a considerable excess of iron, rendering it valuable for smelting the highly silicious ores common to the Bingham district.

Development is confined to the Yampa mine, a claim of less than 6 acres, entirely surrounded by the Utah Consolidated, and developed by 2 tunnels and a shaft. The Craig haulage tunnel, on the 1,200' level, is 3,248' long, intersecting the main vein at about 2,200' from the portal and connecting with the shaft at 2,448'. The upper or Yampa tunnel intersects the shaft at 475' and runs about 1,000' on the vein. The 1,700' shaft has 3 compartments, and is operated in 2 sections, 1 from the 400' level to surface, and 1 from that level to the 1,200' level, with balanced hoists. There are 12 levels opened, approximately 128' apart. Ore from the upper workings is sent down the shaft to the Craig tunnel, which has an electric haulage system, with 2 electric locomotives, taking trains of six 3-ton cars.

Equipment includes an electric hoist, installed 1912, and a power plant near the portal of the Craig tunnel, with steam and electric motors. Power

is furnished by the Telluride Power Co. There is a 35-drill Ingersoll-Rand 2-stage air compressor, direct-connected to a 200-h. p. motor. Ore is transported by the West Mountain Tramway Co., controlled also by the Tintic Co., which has a 12,270' Leschen aerial tram, the longest in the district, of 700 tons daily rated capacity, having 600-ton ore bins at the upper terminal, connecting with the Yampa smelter at the lower end. The tram line saves about 25 cents per ton on cost of transporting ore.

Production was 4,069,886 lbs. fine copper, in 1905; 4,699,765 lbs. in 1906; 5,001,255 lbs. in 1907; 5,412,850 lbs. in 1908; 6,500,000 lbs. in 1909, 6,172,243 lbs. in 1910, and 6,157,175 lbs. in 1911. Production, formerly sent to the Yampa Smelting Co., is now shipped to Garfield. The Yampa mine, though small, is considered valuable and the management good.

TINTIC SILVER CROWN MINING CO.

UTAH

Letters unclaimed at Salt Lake City and Mammoth, Utah. Hon. John A. Edwards, pres.; Dr. L. W. Snow, vice-pres.; Mansfield L. Snow, sec-treas. and gen. mgr.; preceding officers, C. E. Cole and M. K. Green, directors. Organized Aug. 20, 1908, under laws of Utah, capitalization \$1,000,000, shares \$1 par, nonassessable; fully issued.

Lands, 25 claims, 500 acres, in the Blue Belle district of the West Tintic, 8 miles from a railway. The property shows fissure veins in porphyritic rocks and contact deposits in crush zones in quartzite, carrying outcrops of ore giving good assay values. There are 10 orebodies, of which 3 are developed by three 50' shafts and 5 tunnels of 40 to 250', the mine having about a quarter mile of workings. One vein shows a 10" paystreak of massive galena, estimated at 70% lead, 12 oz. silver and 75 cts. gold per ton. Equipment includes a small steam plant and an air compressor. Presumably idle.

TINTIC SMELTING CO.

UTAH

Office: Provo, Utah. Works office: Silver City, Juab Co., Utah. Chas. W. Nibley, pres.; Jesse Knight, vice-pres. and gen. mgr.; H. E. Rolapp, sec.; John Pingree, treas.; Bela Kadish, supt.; preceding officers, David Eccles and Col. C. Edw. Loose, directors. Organized Dec., 1906, capitalization \$500,000, shares \$1 par.

Property is the Knight smelter, or reduction plant, built 1907-08, of about 350 tons daily capacity. The works include a sampling mill, two 14x60' hand roasters, 4 Kelly sintering converters and three 46x162" lead furnaces. A 125-ton blast furnace for copper is in a separate building. The plant was blown in, 1908, and closed down Sept., 1909, after making an operating loss said to have been \$211,000 in 1 year, with a total loss, including the cost of the plant, of nearly \$1,000,000. The plant is of modern design, well equipped and well located for receipt of lead ores, with considerable copper ore available, but was put out of business by its inability to secure coal and coke at the same freight rates as other Utah smelters, and by its failure to secure a sufficient variety of ores to permit satisfactory furnace mixtures. Property idle at last reports and the title held by the Knight Metallurgical Co.

TINTIC STANDARD MINING CO.

UTAH

Office: 422 Judge Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. E. J. Raddatz, pres., treas. and gen. mgr.; W. I. Snyder, vice-pres.; Geo. F. Busch, sec.; preceding officers, A. N. Holdaway and Jas. Beveridge, directors; John Westerdahl, supt. Organized Oct. 2, 1907, under laws of Utah, capitalization \$1,000,000, shares \$1 par, assessable; issued \$895,000. Annual meeting, Sept. 15 each year.

Lands, 11 claims, patented, 185 acres, 2½ miles from a railway, in the East Tintic district. The property shows limestone and porphyry, carrying

fissure veins with N.-S. strike and dip of 55° W., in limestone, with lead and copper ores, reported to assay from a trace to 50% lead, 1 to 105 oz. silver and \$1 to \$15 gold per ton. The management reports the main orebody as 200' wide. The mine has an old incline shaft and a 1,000' shaft, with nearly a mile of workings. The 1,000' level, 925' E., has a promising showing but though the company has done a large amount of work by shaft, drifts and diamond drill, it has failed to locate a profitable orebody, though some shipping ore was found, 1910.

Equipment includes a 100-h. p. steam plant, with an 80-h. p. double-cylinder hoist, good for 1,500' depth, and a 3-drill Rand air compressor. There are 5 buildings.

TINTIC VOLCANIC MINING CO.

UTAH

Idle. Office: 26 Walker Bank Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. R. A. Barney, pres.; Nicholas Comes, vice-pres.; E. H. McBeth, sec.-treas. Organized April 1, 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par, assessable; issued \$70,000. Lands, 5 claims, unpatented, adjoin the Tintic Standard on the E., developed by shallow shaft showing argentiferous and auriferous lead and copper ores.

TIP TOP COPPER CO.

ARIZONA

Idle. Office: Commonwealth Bldg., Philadelphia, Pa. Mine office: Helvetia, Pima Co., Ariz. Geo. A. Aman, pres.; S. Charles Pratt, vice-pres. and gen. mgr.; Jos. Chamrod, supt., at last accounts. Organized 1902, under laws of Arizona, capitalization \$1,150,000, shares \$1 par.

Lands, 24 claims, 400 acres, also known as the Little Helvetia mine, including the Tip Top and Copper Duke claims, also a 100-acre mill site, about 2 miles from Helvetia, show 3 veins, averaging 14' width. These veins have extensive bodies of soft black sulphide ore in altered clayey limestone and porphyry. This ore is reported to give average assays of 5% copper and 1 oz. silver per ton, with a trace of gold.

Development is mainly by tunnel with portal near the wagon road. The workings and stopes are extensive (4,000), but not deep. There are also the usual prospect shafts and tunnels. Equipment includes gasoline power. Was bonded 1907, to Guggenheim interests, for \$250,000, with cash payment of \$75,000, but both parties to bargain were dissatisfied, and property reverted to owners. Made considerable ore shipments, 1906-07.

TIP TOP MINE.

ONTARIO

Col. O. S. Ray, owner, Port Arthur, Ont. Mine near Kashaboiwe, Rainy River district, Ont. Lands, 4 claims, freehold, 336 acres, being locations K62, K63, K64 and K65, 9 miles by trail S. W. of Kashaboiwe station, Canadian Northern railway. The claims are near Round lake, in Moss township. They show schist, greenstone and quartz porphyry of Keewatin age, with folded quartzite cut by quartz porphyry dikes. The ore occurs disseminated in dikes of flesh-colored felsite and quartz porphyry. There are several lenses of this chalcopryite and pyrite ore, stoped for 8 to 10' wide and 40' long, giving average assays of 7% copper, 5 to 12 oz. silver and \$1 to \$2 gold per ton.

Development is by a main incline shaft, dipping 70° N., of 208' depth, with about 700' of workings, on 4 levels, with 100 to 120' of drifting on each level. This work is estimated to show 45,000 tons of ore, of 4 to 6% copper, on a vein ranging up to 60' width in the bottom workings.

Equipment includes a 100-h. p. steam plant, with 30-h. p. hoists, and a 4-drill Ingersoll-Sergeant air compressor. Part of the material for a smelter was secured 1907, but the smelter was not built. See Ontario Bureau of Mines Report, 1911, p. 209.

TIRO GENERAL DE CHARCAS MINE.**MEXICO**

Mine address: Charcas, San Luis Potosi, Mex. Owned by Cia. Metalurgica Nacional de Matchuala, controlled by the American Smelting & Refining Co. Mine was formerly owned by the Cia. Minera del Tiro General, S. A.

Lands, 72 pertencias, 178 acres, with a 46-acre mill site, and a 50-acre farm, in the Venado district. The property, which is an antigua, discovered A. D. 1583, was worked on a small scale for 3 centuries, and in a larger way since 1859, shows 2 main ore zones, carrying fissure veins in porphyry, near a limestone contact, with a generally E.-W. strike and dip of about 70°. The N. vein, of 3 to 8 meters width, with known length of 500 meters, is opened to depth of 1,361', showing chalcopyrite and sphalerite estimated by the management to average 2% zinc, 430 grams silver and 8 grams gold per metric ton. There are 9 tunnels, 4 being reported by the management to be of 656' each, and 5 being reported to be of 1,312' each, the mine having 13,123' of workings. Feb. 18, 1911. The mine and works employ about 1,200 men.

Equipment includes a 700-h. p. steam plant, with hoists of 100-h. p. and 175-h. p. and a 10-drill air compressor, and some use is made of malacates, at the shallower shafts. Fuel is Mexican Rosita coal, costing 15.50 pesos per metric ton, with a yearly consumption of about 4,000 tons. Buildings include an engine house, combination smithy and carpenter shop, a well-equipped machine shop, general store, office, laboratory, warehouses, a hospital, 5 dwellings for officials, and accommodations for 40 Mexican families. There is a 10-stamp mill and a 150-ton concentrator, having 7x12" and 10x20" Blake crushers and 5 sets of rolls, with trommels and other necessary equipment. This mill has 10 Sutton, Steele & Steele pneumatic dry concentrators, treating all the sulphide ores and giving a preliminary lead concentrate, cut out from the final zinc concentrate, the latter being a 45% zinc product, secured largely from rosin jack.

The company has a private standard-gauge railway, known as the Central de Potosi, of 15.1 kilometers length, running to Charcas, where connection is had with the Mexican National line.

Production was 40,449 metric tons of ore, of 2.27% average copper tenor, in 1907, and 50,000 metric tons of ore, averaging 2.1% copper, in 1910; 1,929,036 lbs. fine copper in 1904; 2,281,761 lbs. in 1905; 1,620,000 lbs. in 1907; 2,100,000 lbs. in 1910. The property is considered valuable, and management good.

TIRO GENERAL; CIA. MINERA DEL.**MEXICO**

Sold property to the Cia. Metalurgica Nacional de Matchuala, San Luis Potosi, Mex., which is controlled by the American Smelting & Refining Co.

TOGO MINING & SMELTING CO.**WASHINGTON**

Office: 1023 Paulsen Bldg., Spokane, Wash. Mine at Springdale, Stevens Co., Wash. M. Isbister, pres.; Geo. C. Gates, vice-pres.; V. W. Brasch, sec. and gen. mgr.; Wm. H. Stowell, treas., all of Spokane; preceding officers, M. M. Ferguson and W. D. Valentine, directors. Organized 1905, in Washington, capitalization \$1,500,000, shares \$1 par, nonassessable since 1910. Annual meeting, June 30.

Property, about 240 acres, 160 patented, in Cedar Canyon district. Ore occurs principally as copper pyrites in slate, serpentines and quartzite with a N.-S. strike and 60 to 90° dip. One orebody, developed by tunnels, with about 2,000' of workings, is reported by management to average 3 to 5' in width, in upper levels, and to carry 8% copper, 3½ to 5 oz. silver and a trace to .02 oz. gold per ton. Upper levels said to show bornite, copper

glance and a little native copper. A 1,000' crosscut tunnel is said to cut several veins, undeveloped at last reports.

Equipment includes gasoline engine and hoist, but mine buildings were destroyed by a forest fire and mine has been closed down since 1910. Management plans erecting new buildings this year, as well as installing power, compressor and drills.

TOLEDO MINING & POWER CO.

MONTANA

Mine near Sheridan, Madison Co., Mont. Louis D. McCall, president and general manager, at last accounts. Organized 1905, capitalization \$50,000, as successor of Bismarck-Nugget Gulch Consolidated Mining Co. Lands, 17 copper claims and 18 gold claims, 3 groups of copper claims being on Stone creek, in the Ruby mountains. Property has a 60-ton concentrator and a 30-ton smelter. No trace of operations secured.

TOLTEC MINE.

MICHIGAN

Idle many years. Office: care Alfred Meads & Sons, owners, Marquette, Mich. Mine at Greenland, Ontonagon Co., Mich. Lands, 320 acres, carry the underlay of the Evergreen belt and the Calico and adjacent beds of the Michigan. Production, 1851-60, was 413,443 lbs. fine copper. Some diamond drilling was done, 1908.

TOM MOORE MINE.

UTAH

Office: 12 West First South St., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. A. M. Surbaugh and Thos. Moore Surbaugh, owners. Lands, 39 claims, 22 patented, 600 acres, with direct rail connection, in the N. E. part of the Bingham camp. The mine has 16 shallow shafts and short tunnels, principal development being by the Highline tunnel, with another tunnel driving at lower depth. The mine carries gold and silver-bearing lead and copper ores, with small quantities of native copper, in quartz. Owners do not care to have output or other details made public.

TONOPAH LIBERTY MINING CO.

NEVADA

Office: 1020 Arcade Bldg., Philadelphia, Pa. Mine address: C. R. Olson, mgr., Tonopah, Nev. Chas. A. Smith, mine supt. Property, the Burbank group, 28 miles N. of Tonopah, shows veins of silver-gold ore with shoots of copper ore. Development is by a 460' shaft with various levels. A shipment of 19 tons of \$36 copper ore was made Oct., 1913. Equipment includes electric power, air compressor, 10-stamp mill, with Chilean and tube mills, and a 100-ton cyanide plant.

TOPEKA CONSOLIDATED MINING CO.

COLORADO

Office and mine: Central City, Gilpin Co., Colo. Henry P. Lowe, pres., treas. and gen. mgr.; C. A. West, sec.; preceding officers, Sir Chas. Allen, Arthur Firth and M. A. Lowe, directors; Robt. Wilkinson, gen. supt. Organized July 30, 1909, under laws of Colorado, as successor of Topeka Mining Co., capitalization \$1,000,000, shares \$5 par, nonassessable, fully issued. Annual meeting, June 30.

Lands, 7 claims, patented, 16.46 acres, in the Russell district, show schists and metamorphic gneiss, cut by 3 veins with N.-E. strike and dip of 45°. One vein of 4' average width, traceable 1,300', carries chalcopyrite and sphalerite estimated to average 0.5% copper, 2% zinc, 2 oz. silver and \$10 gold per ton. The mine has a working shaft 1,500' deep, with a second 510' shaft and a total of 11,640' of workings, estimated to show 50,000 tons of ore. The mine was discovered 1862, and worked at intervals until 1900, when closed by litigation, until reopened Aug., 1909.

Equipment includes steam plants, with a 250-h. p. hoist at No. 1 shaft, and a 60-h. p. hoist at No. 2 shaft. There is a 7-drill Rand Imperial 2-stage air compressor and 15 hammer drills are used. There is a dressing

plant having 200-ton storage bins and a sorting floor with grizzlies, from which ore is loaded direct into railway cars. Property considered a promising gold mine, and management good.

TOQUIMA COPPER CO.

NEVADA

Office and mine address: P. O. Box 9, Manhattan, Nye Co., Nev. W. J. Stock, pres.; Omer Maris, vice-pres. and mgr.; F. P. Jayne, sec.-treas.; preceding officers, J. B. Giffen and L. W. Haworth, directors. Organized Aug., 1906, under laws of South Dakota, capitalization \$1,000,000, shares \$1 par.

Property, 7 claims, 120 acres, about 35 miles E. of Manhattan, the nearest rail point, shows a mineralized zone of about 600' width, traceable 2,000'. The outcrop shows altered schists and coarsely crystalline limestone with irregular iron patches, ferruginous, highly friable limestone and quartz, all showing carbonate copper stains.

Development is by a 180' incline shaft on the footwall of the mineralized zone, this work develops a little ore with bornite and chalcoppyrite below a depth of 20'. Equipment includes a small electric plant, Cornish pump and whini.

TORCH LAKE MINING CO.

MICHIGAN

Idle since 1900. Office: 5-19 Exchange Place, Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. Thacher Loring, pres.; Chilton Cabot, sec.; Frederick W. Nichols, agt. Organized under laws of Michigan, capitalization \$500,000, shares \$25 par, assessable. Lands, 1,280 acres, being Secs. 35 and 36, T. 56 N., R. 33 W., lying east of the Tecumseh mine of the La Salle, and about midway between Calumet and Lake Linden. The property was slightly prospected, 1899-1900, by diamond-drill borings.

TORPEDO MINE.

NEW MEXICO

Address: Organ, Dona Ana Co., N. M. Geo. E. Fitzgerald, manager. The mine is an old one with a reported production of \$600,000. Property includes several claims covering a contact between limestone and granite, having lenticular orebodies with chalcoppyrite. Mine was formerly owned by Torpedo Mining Co., but closed down 1903, owing to heavy inflow of water and reopened 1913, by Chicago capitalists.

TORREON, S. A.; COMPANIA METALURGICA DE.

MEXICO

Office and works: Torreón, Viesca, Coahuila, Mex. Ernesto Madero, pres. and gen. mgr., at last report. Col. Carlos Gonzales, vice-pres.; Lic. Pragedis de la Peña, sec.; Lic. Pedro Torres Saldeña, treas.; preceding officers, Evaristo Madero, Tomás Mendirichaga, Mauro de la Peña, Rómulo Larralde and Joaquin Serrano, directors; Joaquin Villegas, comisario; F. S. Villareal, asst. gen. mgr.; Donald R. Morgan, gen. mine supt.; Ivan Ragaz, asst. mine supt.; Ernesto Harms, gen. smelter supt.; J. Arthur Rule, asst. smelter supt.; Chas. Moser, J. W. Pender, Pedro Vota and Pablo Gaudin, mine supts.

Organized June, 1901, under laws of Mexico, capitalization 1,250,000 pesos, increased 1903, to 1,750,000 pesos, 1904, to 3,500,000 pesos, and again increased 1905, to 5,000,000 pesos, shares 100 pesos par. in 1,500,000 pesos 6% preferred redeemable stock, and 3,500,000 pesos common stock. The company maintains a large cash working capital, and has been controlled by the Madero family. Profits were 629,279 pesos in 1904, and 775,285 pesos in 1906. Dividends were 20% in 1902; 18% in 1903; 14% in 1904; 12% in 1905; 12% in 1906; none in 1907 or 1908; 6% in 1909.

Company owns a number of lead mines and several partly-developed copper mines, in northern Mexico. The San Diego and Buena Suerte mines at Santa Barbara, Chihuahua, produce galena and sphalerite ores, treated in

a 125-ton concentrator, and employ about 250 men. Las Adargas mine, Jiménez, Chihuahua, has auriferous silver-lead ores; La Voladora and La Mitra mines, in Nuevo León, produce silver-lead ores; Las Cabrillas and Las Higueras mines, at Los Muertos, Centro, Coahuila, produce silver-lead ores and also have promising deposits of iron ore.

The smelter, of 1,250 tons rated daily capacity, having connection with all railway lines entering Torreón, treats the large production of the company's own mines and also does an extensive general custom business on gold, silver, lead and copper ores, and has ore-purchasing agencies in the leading mining camps of northern and central Mexico. The smelter has 10 blast furnaces, including eight 100 metric ton silver-lead stacks, and two 250-ton copper stacks, the blast furnaces using mechanical charging. There are 8 reverberatory roasters, for lead matte, the first-fusion product carrying only 10 to 15% lead, which is calcined and resmelted. The works have a converter plant, installed 1907, of 15 metric tons daily capacity, increased early 1910, to 30 tons daily capacity. Water is furnished by 3 large wells. The works employed about 600 men.

Ore treated by the smelter was 71,294 metric tons in 1901; 201,612 metric tons in 1904; 258,572 metric tons in 1906; 277,594 metric tons in 1907 and 294,394 metric tons in 1908, showing a continuous and gratifying growth. This company went through the 1907 panic in better shape than perhaps any other Mexican smelting corporation. The company is one of the most successful and well-managed mining and smelting enterprises in the republic, its success being especially interesting because the works are owned and controlled by Mexicans, who have shown their ability to compete, on even terms, with the ablest American and European mining men and financiers. Property was operated throughout 1912, but was forced to close down during the fighting that continued in this district, 1913.

TORRETTE GROUP.

ARIZONA

John Miller, owner. Constellation, Yavapai Co., Ariz. Property adjoins the Monte Cristo silver mine and the Arizona Copper Belt mine. Claims show 7 parallel ledges, 1 to 40' wide, said to carry 5 to 27% copper and \$6 to \$35 gold.

TORTILLITA COPPER CO.

ARIZONA

Office: 32 N. Stone Ave., Tucson, Ariz. Mine at Red Rock, Pinal Co., Ariz. Hon. Nott E. Guild, pres. and mgr.; Geo. F. Kitt, vice-pres.; Hon. John B. Wright, sec. and counsel; John W. Estill, treas.; preceding officers and F. Ronstadt, directors. Organized March, 1912, under laws of Arizona Territory, capitalization \$1,000,000, shares \$1 par. Company is a reorganization of the Calumet-Pinal Mining Co.

Property, the Cloud Burst and Yankee Girl mines, 17 claims, 340 acres, about 15 miles from Red Rock. The mines show 3 orebodies occurring at contacts between andesite and schist. One vein being developed is reported by management to average 20' in width, traceable for 4,000' and proven to depth of 330'. Surface shows carbonates, oxides and malachite, changing to copper glance with depth.

Developed by 2 shafts, 300' and 94' deep, with 500' drift and a 30' winze on 300' level. This drift follows a strong wall and is said to expose chalcocite. A crosscut from the winze opened 27' of shipping ore. Management plans to sink new shaft 100'. Apparently no equipment has as yet been installed, besides hoist and blower being used at the Yankee Girl mine.

TOTTENVILLE COPPER CO.

NEW YORK

Works at Tottenville, Richmond Co., N. Y. W. M. David, superin-

tendent, at last accounts. Is a smelting plant and factory for working copper and brass into commercial forms.

TRAIL SMELTER.

BRITISH COLUMBIA

Owned by Consolidated Mining & Smelting Co. of Canada, Ltd.

TRAMP MINER MINING CO.

NEVADA

Address: Mine supt., St. Thomas, Clarke Co., Nev. Property, 17 miles from the Colorado river and from the terminus of the Moapa-St. Thomas branch of the S. P., L. A. & S. L. R. R. Property shows a vein carrying high-grade ore and also a large deposit of iron ore with low copper values. Development consists of a 350' tunnel, opening up ore returning 34% copper from shipments said to have been made in 1913. The iron ore is reported to carry 51% iron and 3% copper. Property is in a district which is considered promising.

TRANSCONTINENTAL SILVER & COPPER MG. CO., LTD. IDAHO

Company abandoned property 1912, on account of title controversy. Formerly at Mullan, Shoshone Co., Idaho.

TRANSVAAL COPPER MINING CO., S. A.

MEXICO

Is the Mexican incorporation of the Transvaal Mining Co. of Utah.

TRANSVAAL MINING CO. OF UTAH.

MEXICO

Office: 1410 Traction Bldg., Cincinnati, Ohio. Mine and works office: Cumpas, Sonora, Mex. Louis J. Hauck, pres.; Percy Andreae, first vice-pres.; Theo. M. Foucar, second vice-pres.; Alfred Vogeler, sec.-treas.; preceding officers, Louis Hehman, J. M. Eilers, Leo. G. Cloud, Bernhard Freiberg and Solon Spiro, directors; H. C. Beauchamp, gen. mgr.; S. R. Pratt, supt.; Arthur Houle, cons. engr.

Organized Dec. 19, 1908, under laws of Utah, as a reconstruction of the Transvaal Copper Co., capitalization \$6,200,000, shares \$10 par; issued 540,000 shares. Bonds, \$650,000, authorized, at 6%; issued \$497,600. Annual meeting, first Tuesday in March.

Property, 5,560 acres of mineral land, including a 50-acre smelter site with 75-acre townsite adjoining; La Piedra Verde ranch of 15,000 acres and an interest in the San Nicolas Tolentino ranch, 26,000 acres, including timber and grazing lands.

The company's holdings cover the heart of a mountainous district showing widespread rock alteration with acid stream waters, bleached and iron-stained areas, and "chimneys" or "pipes" of silicified breccia. The tract shows granitic exposures, part of an underlying batholith, cutting recrystallized volcanic breccias, baked by contact action. In the Transvaal mines, both granite and this cover of fragmental rock are cut by irregular mineralized fractures along which orthoclase, carrying chalcocopyrite, fluorite, chlorite and calcite have been deposited by pneumalytic action. The "pipe" or "chimneys" of brecciated material cemented by quartz, are mostly barren, but in some cases, as at La Verde and Cobre Rico, contain workable copper ores. It is a peculiar type of deposit and resembles the Calumet-Copper Creek deposits of Arizona, the Kamloops mine in British Columbia and the neighboring Washington mine, 4 miles W. of the Cobre Rico property.

Extensive drilling at La Verde, or the Transvaal mine proper, has developed a great tonnage of low-grade primary ore, averaging $1\frac{1}{2}\%$ copper and estimated by the management at 3,000,000 or more tons, which will doubtless be treated some day by flotation methods. The drills have shown the ore to extend to a depth of 1,100'.

The Cobre Rico mine has 2 shafts, No. 1 of 100' and No. 2 about 140' deep, with several tunnels and about 16,400' of workings, including diamond drilling developing several orebodies in a mass of brecciated rock, locally

called trachite. Ore is estimated to average about 2% copper, 1 to 2 oz. silver and a trace of gold. Management estimates 2,500,000 tons available in this mine.

The Transvaal or Verde mine has shafts, 318' and 210' deep, former the main working shaft with about 5,000' of drift and crosscut work including several tunnels. This development has opened up considerable low-grade ore carrying chalcopyrite which can only be treated by concentration. Development near the mine by diamond-drill work has shown the existence of a large body, or bodies of primary ore, the cores varying from a trace up to 17.85% copper and 46.8 oz. silver for 2' at 1,032' depth. About 10,000' of drill work had been done up to March, 1913, which shows that the ore-body is somewhat irregular in shape and spotty in character but of fair average value.

Equipment at the Verde shaft includes two 80-h. p. boilers, a steam hoist and air compressor. The water supply at this mine is bad, owing to its acidity. Management estimates between three to four million tons of concentrating ore available at this mine.

The Buckeye mine has about 10,000' of tunnel work, on a blanket vein of 6" to 4' thickness, showing ore reported to have given average returns of 12% copper and 8 to 10 oz. silver, with a trace of gold. There are about 5,000 tons of high-grade ore left in the mine and a considerable amount of low-grade ore of no present commercial value. The mine, however, has been thoroughly explored in the bottom, or lower tunnel level and the ore shoot found to have played out.

The San Nicolas mine is a silver property about 8 or 10 miles from the Transvaal. It shows a vein along an igneous contact varying from 1 to 4' in width, carrying silver-lead ore said to change to copper in the lower workings. The mine is reported to have yielded 6,000 tons of 60 oz. silver ore and still has between 2,000 and 3,000 tons of 50-oz. silver ore, but is locally regarded as practically worked out, though the limited amount of development work does not disprove the downward extension of the ore shoot. It is regarded as a promising prospect, especially for lateral development.

The Ultima Chanza mine has a 300' incline shaft and a 100' winze, with about 5,000' of workings, developing a fissure vein of 10 to 42" width. The management estimates 50,000 tons of ore in sight, averaging 10% copper, 5 oz. silver and a trace of gold. This property is a good, but small mine, needing further development. Equipment includes a steam plant and hoist.

The Guadalupe mine carries cupriferous iron ore, used for flux.

The nearest rail station is at Nacozari, 30 miles north, but the Cananea, Rio Yaqui y Pacifico railway has surveyed a line to within 9 miles of the smelter. The company has built about 35 miles of wagon roads and 25 miles of trails at a cost of \$50,000, with a maintenance charge of about \$5,000 yearly.

The main camp is at La Verde, 25 miles S. W. of Cumpas, where mining operations are centered. There are 20 buildings, including 3 power plants, a 30x75' machine shop, 30x30' carpenter shop, smithies at the principal mines, 2 laboratories, a boarding house, a 22x90' general store, with a branch store at the smelter, a hospital, and several dwellings. The company has a telephone system, costing about \$5,000.

The smelter, at Cumpas, at an average distance of about 25 miles from the mines, was located at that point because of a good site and ample water supply, both lacking at the mines. Equipment includes a 125-ton 42x120" El Paso Foundry & Machine Works water-jacket blast furnace,

with room for 2 additional furnaces of the same size, 1 of which was under erection, early 1911. There is a reverberatory furnace, variously rated by the company as of 20 to 50 tons daily capacity, and the works have a sampling mill, capable of sampling ore to feed 3 furnaces. The smelter power plant includes three 80-h. p. Babcock & Wilcox boilers, an Allis-Chalmers tandem-compound engine and a Connersville blower. This smelter was blown in, May 1, 1906, treating ores from the Buckeye and San Nicolás mines and doing a little custom business, producing matte shipped to the Laurel Hill works of the Nichols Copper Co., that was variously reported by the company as averaging 40% copper, 100 oz. silver and 0.5 oz. gold per ton and as averaging 37% copper, 140 oz. silver and 0.1 oz. gold per ton. The smelter was blown out, Oct., 1907, and has been idle since.

From May 1, 1906, to Nov. 3, 1907, a period of 18 months, the smelter, in operation about two-thirds of the time owing to scarcity of freighting outfits, smelted 18,550 tons of ore having an average assay tenor of about 10% copper and 8 oz. silver for copper ore, and 2% copper and 60 oz. silver for silver ore, making 3,089 tons of matte, yielding 2,178,855 lbs. fine copper, 407,607 oz. silver and 240 oz. gold.

The extensive development work done on the property since 1909, shows the existence of small veins of rich ore and large deposits of low-grade ore. The property is a valuable one and will be worked on a large scale when given the rail connections now lacking, but absolutely essential to the successful exploitation of the ores.

TREADWELL MINING CO.

ARIZONA

See George A. Treadwell Mining Co.

TREMONT & DEVON MINING CO., LTD.

MICHIGAN

Idle. Office: First National Bank Bldg., Hancock, Mich. Mine at Victoria, Ontonagon Co., Mich. Hon. Chas. Smith, pres.; Fred H. Begole, vice-pres.; Chas. D. Hanchett, sec.-treas.; preceding officers, Jos. Bosch, Jas. B. Cooper, Henry L. Baer and Robt. T. Dunstan, directors. Organized Dec., 1908, under laws of Michigan, capitalization \$250,000, shares \$25 par, 100,000 issued; two 10-ct. assessments levied to date.

Lands, 680 acres, freehold, including the old Tremont and Devon mines, adjoining and directly W. of the Victoria, carrying about 1¼ miles of the strike of the Keweenawan copper formation, and apparently in the horizon of the western extension of the Lake bed. The Victoria has a vein of some promise, outcropping about one-half mile from the Tremont & Devon line. A little work was done, in olden days, on shallow shafts near the center of the property, from which rock was taken, said to have yielded 500 lbs. fine copper per fathom of ground broken, which was better than 25 lbs. of finished copper per ton.

TRENCH CONSOLIDATED MINES CO.

ARIZONA

Address: 207 Felt Bldg., care Salisbury Co., Salt Lake City, Utah. C. B. Felt, secretary. Property, also known as the Farrel mine, is near Patagonia and Harshaw, Santa Cruz Co., Ariz. The mines are now under bond to Senator W. A. Clark, for 2 years, at a price said to be \$250,000. Work was started with D. Hogan as superintendent, late in 1912.

TRENTON MINING CO.

ARIZONA

Office: care J. L. Gillingham, sec.-treas., 154 Nassau St., New York. Mine address: care S. F. Noon, Nogales, Santa Cruz Co., Ariz. Melvin Stephens, pres.; Jas. Van Sicken, vice-pres.; preceding officers, Abraham Van Sicken, Peter Van Sicken, Henry W. Mason and Chas. W. Henderson, directors. Capitalization \$500,000, shares \$1 par, in \$300,000 of 7% preferred

and \$200,000 common stock. Company purchased the lands of the Arizona Gold & Copper Co. and paid the indebtedness of the latter.

Lands, 13 claims, 175 acres, 8 miles W. of Patagonia, in the Tyndall district, having about 1,200' of workings, with several shafts and a tunnel, latter showing a vein of 12' estimated width, carrying gray copper and silver-lead ores assaying 3% copper, 3 to 15% lead and up to 10 oz. silver per ton. Smelter returns, from shipments to El Paso, have given up to 2% copper, 47.8% lead and 52 oz. silver per ton. The reduction plant, on a 20-acre tract at Patagonia, includes a sampling mill or concentrator, and has been said to include an 80-ton smelter.

TRENTON-SONORA MINING CO.

MEXICO

Office: Trenton, N. J. Mine office: Tarachi, Sonora, Mex. L. Laurent, mgr.; F. Acock, supt., at last accounts. Lands, 4 miles S. of La Calera, include the San José, Santa Eduvigis, El Porvenir and other mines, carrying copper ores, with values, mainly in silver. The San José mine is reported to show an 18" paystreak of highly auriferous chalcopryite. Development is by a 200' shaft, sunk on the vein, equipped with a hoist. There is a mill and a smelter. Probably idle owing to Mexican revolution.

TRES SEÑORES MINING CO.

MEXICO

Mine at San Pedro Ocampo, Zacatecas, Mex. Property includes La Providencia and La Poderosa mines, near San Pedro Ocampo, yielding ores that have given smelter returns of 10% copper, 3,234 grams silver and 120 grams gold per metric ton. Was a small producer at last accounts. Letters returned from Mexican border, 1913.

TRIANGLE MINING & DEVELOPMENT CO.

MONTANA

Office: 8 Allen Blk., Missoula, Mont. Mine office: Clinton, Missoula Co., Mont. Dr. Frank C. Robb, pres.; Oliver Blood, vice-pres.; H. Y. Gephart, sec.-treas.; Robt. B. Hughes, gen. mgr. and supt.; preceding officers, David C. Smith, E. C. Mulroney, and Geo. E. Sullinger, directors; Henry E. Kuphal, engr. Organized Aug. 25, 1906, under laws of Montana, capitalization \$500,000, increased later to \$1,200,000, shares \$1 par, non-assessable; issued \$662,808. Debentures, \$150,000 6%, none issued. Annual meeting, third Monday in February.

Lands, 13 claims, unpatented, 250 acres, well-watered and partly timbered in the Wallace district, 2½ miles from a railway, in 3 groups, known as the Triangle group of 8 claims, and the Hill group of 5 claims, 2 miles N. E. of Clinton and 17 miles E. of Missoula. The company also owns several lots of land in the town site of Clinton, and holds a perpetual lease on the upper workings of the Hidden Treasure mine, about one-half mile from the Triangle, at a royalty of 30% of the gross assay value of ore extracted.

The claims contain a number of fissure veins cutting granite and altered sedimentary rocks near the contact with a large batholith of granite. The veins show chalcopryite and bornite associated with hematite, siderite, and quartz in altered granite. There are 3 veins on the Triangle group, the largest, a 16' vein, opened by a 540' tunnel with back of 450'. At the face the vein is 14' wide and assays 2% copper, ½ oz. silver and 40 cts. gold, while an 8" streak averages 15.04% copper, 3.20 oz. silver and .24 oz. gold, and a 4' footwall streak averages 4.65% copper, 1.2 oz. silver and 80 cts. gold.

Development on the Triangle consists of a 140' crosscut and 540' drift tunnels and 40' shaft, estimated to block out 25,000 tons of \$14 ore. The Grass Widow claim has 513' of crosscutting and 300', 75' and 100' drifts. The Hill group has a 300' drift tunnel. The Hidden Treasure, a 21' quartz

vein, is said to be opened by 740' of tunnel work exposing 100,000 tons of ore in place, with 10,000 tons broken, valued at \$15 per ton.

Equipment includes a 40-h. p. boiler and an Ingersoll-Rand air compressor, besides several mine buildings. Management plans installing electric power, erecting a 50-ton concentrator and driving a new 1,800' tunnel, 500' below the old workings.

TRI-BULLION SM. & DEV. CO.

ARIZONA & NEW MEXICO

Office: 2 Rector St., New York. Mine office: Kelly, Socorro Co., N. M. Howard Paschal, pres. and gen. mgr.; Scott E. Welker, Ellis P. Earle and Hon. John B. Corliss, executive committee; preceding officers, F. W. Anness, Allen Curtis, Louis O. Hedden, Leonard J. McAneny, R. J. Marshall and L. J. Pierson, directors; Geo. R. Shidle, first vice-pres.; John F. Skeel, second vice-pres.; Harry J. Clarke, sec.-treas.; Robt. W. Bull, acting gen. mgr.

Organized 1903, under laws of Arizona, capitalization \$5,250,000, shares \$1 par, in 250,000 participating cumulative 12% stock, with 5,000,000 common; issued 34,653 preferred, and \$4,997,500 common.

Property includes the Kelly mine, for many years the company's principal asset, which is a zinc, lead and copper producer in New Mexico; also the Starlight group of copper claims in Arizona and a 150-acre group of gold-silver claims in the Pipestone district, Jefferson county, Mont. The Montana property has about 800' of shaft work but is idle save for annual assessment requirements.

The Starlight group of 12 patented copper and lead claims, in Godless gulch, in the Stanley Butte district, 8 miles S. of the San Carlos Indian agency, was discovered 1886, but not opened until 1903, because it was a part of the San Carlos Indian Reservation, previous to its segregation in 1901. This property shows quartzite, granite and limestone, with short veins, carrying replacement deposits, of 3' estimated average width, holding oxidized ores, estimated by company to average 8% copper, 40% lead, 10 oz. silver and \$3.50 gold per ton. The ore being low in silica, and rich in lime and iron, is self-fluxing. Development is mainly by a 1,700' crosscut tunnel exposing low-grade orebodies. There are also 2 shafts of 140' and 150' respectively. Ore shipments from the Starlight group 1906, returned 4 to 12% copper, 40 to 50% lead, 10 oz. silver and \$3.50 gold per ton, with smelter returns aggregating \$15,900.

The Kelly mine, the company's main property, has an area of 350 acres, patented, showing veins of ore yielding lead and zinc carbonates in the upper workings, running from 25 to 30% lead with small silver values and 25 to 40% zinc. The sulphide ores occurring in depth, give average smelter returns of 25 to 35% zinc, 12 to 15% lead $\frac{1}{2}$ to 2% copper and 6 to 8 oz. silver per ton. The development includes the 400' Traylor shaft and a 365' accessory shaft.

The Nit and Silver Bell groups were acquired in 1912. The Nit mine, adjoining the Graphic, has an underground connection with the Waldo mine of the Ozark Smelting & Milling Co. The workings of this mine disclose a 50' vein of 4.7 to 6% copper ore, 454' E. of the 215' shaft, in a crosscut from the bottom of a 45' winze sunk from the bottom level.

The Kelly mine has a power house with three 150-h. p. boilers, a large first-motion hoist, 15-drill air compressor, electric pumps and electric light plant. An aerial tram, built 1912, connects the Paschal and Grand Tower (or Legal Tender) shafts.

The concentrating mill of 100 tons capacity includes a 75-ton magnetic plant equipped with roasters and Ding electric separators for parting the zinc and iron sulphides. This plant has been in successful operation for

several years. The output of the property comes mainly from the Kelly workings, but a tramway to connect the Nit and Silver Bell properties with the mill will increase the production from those mines in 1913 and 1914.

Production for the year ending Oct. 31, 1912, was 14,117 tons of ore mined and milled, compared with 21,743 tons in 1911. This ore, however, had a total value of \$319,487, compared with \$221,058 in 1911. The metallic production for 1912 included 9,243 tons zinc concentrate, 2,060 tons of lead concentrate, 956 tons of iron middlings, 1,552 tons zinc carbonate, 31 tons of zinc sulphide ore and 266 tons of copper ore. The net profit for the year is reported as \$71,307.

The Kelly mine is reported to be practically worked out and the operations from Nov., 1912, to July 7, 1913, resulting in a loss and consequent debt of over \$30,000, the mine was shut down on the latter date and is still idle. A proposition to sell the Kelly group of 15 claims, with all its equipment and power plant, for \$87,500, was submitted to the stockholders in Sept., 1913, and the sale approved. The cash balance after all debts are paid, will be used to develop the copper deposit found on the Nit group and to do prospecting work on the Starlight group near San Carlos, Ariz.

TRI-METALLIC MINING, SMELTING & REFINING CO. MEXICO

Idle. Address: P. Sandoval, treas., Nogales, Sonora, Mex. Mine near Tonichi, Sonora, Mex. J. L. Shepard, pres. Lands, 9 groups of claims, including the Creston de Cobre mine, 6 miles from Tonichi, the nearest rail point, in the Ures and Hermosillo district. The Creston de Cobre mine has a shallow shaft, and a crosscut tunnel, developing auriferous and argenteriferous copper ores.

TRIMOUNTAIN MINING CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Mine office: Trimountain, Houghton Co., Mich. Wm. A. Paine, pres.; Frederic Stanwood, sec.-treas.; Frederick W. Denton, gen. mgr.; preceding officers, J. Henry Brooks, Chas. A. Snow, R. Townsend McKeever and John R. Stanton, directors; John Jolly, supt.; Edw. Koepel, mill supt.; H. T. Mercer, engr.; Benj. D. Noetzel, clerk; Richard Bowden, mg. capt.; Wm. J. Richards, master mechanic.

Organized 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, paid in \$20. Is controlled, through ownership of 99,335 shares, by Copper Range Consolidated Co. Old Colony Trust Co., Boston, registrar. Annual meeting, second Wednesday in May.

Dividends have been \$3 in 1903, \$5 in 1908, \$1.50 in 1910, \$3 in 1912.

Balance of assets Jan. 1, 1913, was \$531,394, including cash and copper amounting to \$266,479.

Lands, 1,120 acres, being the E. $\frac{1}{2}$ of Sec. 19, W. $\frac{1}{2}$ of Sec. 20, N. $\frac{1}{2}$ of Sec. 29, and N. E. $\frac{1}{4}$ of Sec. 30, all in T. 54 N., R. 34 W. The Baltic mine lies to the N. and the Champion to the S., with undeveloped lands to the E. and W.

Owing to a very heavy sand overburden the mine was opened by dropshafts sunk through alluvium, with raises to surface on the angle of the dip of the stratified formation. The Baltic bed runs 15 to 50', with an average width of 25', on the Trimountain property. Heavy copper is found near the walls, and masses upwards of a ton in weight have been found, but values occur mainly disseminated in stamp rock.

The Trimountain shafts enter lean streaks or shoots, sometimes 500' in horizontal length, with flat northerly pitch or rake, underlain by copper ore. Lying parallel with and about 65' W. from the Baltic bed, is a wide amygdaloid, carrying some heavy copper and considerable stamp rock. This bed has not yet been worked, but may be made available for production at some time in the future. The great width of the lode has led to dry-walling

with waste rock, which is used also for building underground chutes, which are roughly circular, with inner diameter of about 5' and are filled about with waste, as stopes are carried upward, the chutes being built at a sharp pitch, the wedging of the surrounding waste rock serving to hold the walls immovable. The saving in timbering brought about by dry-walling and building chutes of waste rock is very great. The mine has electric pumps and works about 60 drills.

Shafts are all of the same size and style, being 8x22' outside of timbers, with 3 compartments, framed with 14x14" sticks, exceptionally heavy timbering being required to withstand the pressure of shifting sand above the solid rock.

Good ground has been opened on the 10th to 20th levels, inclusive, in Nos. 3 and 4 shafts; No. 2 shaft shows excellent ore below the 21st level.

No. 1 shaft, 210' north of the Champion boundary line, is sunk at an angle of 68°, and has a sand overburden of about 40' depth, with 1st level opened 168' below the collar, with levels thereafter at 100' intervals. The upper levels tributary to No. 1 shaft have been worked out, and the shaft permanently abandoned at depth of 2,284'.

No. 2 shaft, 1,023' N. E. of No. 1, was 2,742' deep at the end of 1912, and a considerable improvement has been noted in ground below the 14th level, with the bottom levels the best opened in this shaft. The shaft rock house, 40x62' on the ground, and 84' high, of steel frame, iron-sheathed, has 2,000-ton rock bins, and is equipped with an engine, steam hammer and two 18x24" crushers. Rock is raised by a 2,500-h. p. 36x72" Nordberg direct-connected duplex hoist, with double-conical drum of 18' maximum diameter, capable of raising 6-ton skips from 1 mile depth.

No. 3 shaft, 1,027' N. E. of No. 2, sunk at an angle of 68°, was 2,267' deep at the end of 1912. Beneath 60' of sand, the rock was found to be badly fractured and barren down to the 2nd level, only becoming solid and payable below the 14th level. Equipment includes a shaft rock house and hoist, duplicates of those at No. 2.

No. 4 shaft, the northernmost, 2,191' deep at the end of 1912, is the best shaft of the mine. No. 5 shaft is merely the site for a shaft, there being an overburden of sand mixed with boulders, 208' deep. No. 6 also is a tentative site for a shaft, so located as to develop the Trimountain territory to the Baltic line.

The mine buildings near shafts Nos. 2 and 3, include machine and carpenter shops, smithy and warehouse. There is a 35-drill Rand air compressor at No. 2 shaft, with a Deane condensing plant in a separate building. The power plant at No. 3 shaft includes a battery of Stirling water-tube boilers and a 4,500' Nordberg air compressor. The mine is served by the main line of the Copper Range railway, which reaches all the shafts and principal shops.

The mine property has macadamized roads, a large boarding house, upwards of 100 dwellings, general store, hospital and a nurses' home.

The 176x205' mill, at Beacon Hill, 2 miles west of Redridge, occupies a 100-acre mill site having about 2 miles of frontage on Lake Superior. The mill has 4 steeple-compound Nordberg stamps. Complementary machinery for each stamp includes crushing rolls, 36 improved Hodge jigs, 6 slime tables and 1 Wilfley table. Tailing losses, originally as high as 0.50 to 0.65%, have been reduced to 0.26%, by the installation of regrinding rolls and settling tanks. The mill is also equipped with regrinding machinery, including Hardinge mills, for treating the richer portions of the mill tailings. The mill has a 300-h. p. engine, and a small but complete machine shop on the second floor.

The mill boiler house, of steel, has six 250-h. p. and two 200-h. p. Stirling boilers, the latter maintaining a steam pressure of 180 to 200 lbs. per sq. inch. The boiler plant has a self-supporting brick-lined steel smoke-stack, 165' high and 7' 6" in diameter. At the rear of the boiler house are 3 coal-trestles, under each being a 6x7' tunnel, 400' long, leading to the boiler rooms, the floors of the sheds forming the roofs of the tunnels.

The steel-frame pump house at the mill has a 20,000,000-gal. Nordberg pump, taking water from a well connected with a tunnel running 1,960' to an intake crib in Lake Superior.

The town site of Beacon Hill, lying on the slope above the mill, has a number of dwellings lighted by electricity, supplied by a generator in the mill engine room.

Production was begun Jan. 4, 1902, with 1 leased head at the Arcadian mill. The Trimountain began production with a return of 37 lbs. fine copper per ton, but fell off later to 27 lbs., and, when the present management secured control, the production fell sharply to 18 lbs. fine copper per ton. Returns from rock stamped were 18.43 lbs. fine copper per ton in 1907; 18 lbs. fine copper per ton in 1908; 16.58 lbs. in 1909; 17.5 lbs. in 1910; 17.59 lbs. in 1911, and 19.04 lbs. in 1912.

Production has been as follows: 1902, 5,732,160 lbs. copper; 1903, 9,237,051 lbs.; 1904, 10,211,230 lbs.; 1905, 10,476,462 lbs.; 1906, 9,507,933 lbs.; 1907, 8,190,711 lbs.; 1908, 6,034,908 lbs.; 1909, 5,282,404 lbs.; 1910, 5,694,868 lbs.; 1911, 6,120,417 lbs.; and 1912, 6,980,713 lbs.

TRINIDAD DE CHARCAS, S. A.; COMPANIA MINERA LA. MEXICO

Office: Espalda de Santa Veracruz 12, Mexico, D. F. Mine office: Charcas, San Luis Potosi, Mex. Lic. Jose Luis Requena, pres.; Luciano de la Rosa, mgr. Organized Oct. 1, 1903, under laws of Mexico, capitalization 300,000 pesos, shares 100 pesos par, increased by a later issue of 100,000 pesos, shares 50 pesos par, 10 pesos paid in.

Lands include the San Agustin, La Mascota, La Reina and El Rey mines. The San Agustin mine, 20 hectares, has an 80-meter shaft, developing silicious copper ores with values mainly in gold and silver. Another property has a 105-meter shaft. Equipment includes steam power. Was producing about 1 carload of ore daily, carrying 4 to 5% copper and 700 to 1,000 grams silver per metric ton at last accounts. No returns secured.

TRINIDAD MINING & SMELTING CO. WASHINGTON

T. W. Brown, superintendent, Tonasket, Okanogan Co., Wash. Property, the Central group, shows gold and silver-bearing lead-copper ores, developed by tunnels.

TRINITY COPPER CO. CALIFORNIA

Office: 33 State St., Boston, Mass. Mine office: Kennett, Shasta Co., Cal. Thos. W. Lawson, pres.; Arnold Lawson, vice-pres.; Homer Albers, sec.; Allen Arnold, treas.; Austin H. Brown, gen. mgr.; preceding officers, Arthur P. French, H. M. Shreve, John R. Turner, E. A. McSweeney, and Dr. Max Heicht, directors.

Organized Oct. 18, 1900, under laws of New Jersey, capitalization \$6,000,000, shares \$25 par. International Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange.

The balance sheet, as of Sept. 1, 1913, shows assets as follows: Mining claims, \$5,221,000; mine development, construction and interest account, \$679,872; expenses, \$194,344; Railway & Power Co., \$36,500; cash, \$3,525; total, \$6,135,240. Liabilities: Capital stock, \$6,000,000; American Smelting contract payable in ore, \$23,969; ore account, \$39,471; accounts payable, \$71,800; total, \$6,135,240.

Lands, 1,700 acres, also a patented town site, near Kennett, with total holdings of 3,233 acres, a smelter site of 422 acres, formerly owned, having been sold to the Mammoth Copper Mining Co. of Maine. Property includes the Shasta King, which is the principal mine, the Lost Desert group, and the King Copper group.

The Shasta King group, of 12 claims, adjoins the Balaklala mine, on the southern fork of Squaw creek, 4 miles east of Iron mountain. The main tunnel, 1,145' long, is 7x8' in size, with double tram tracks, and there is also a 7x8' double-track tunnel, driven 175' vertically lower. The mine has 15,000' of workings and the property has been tested by 5,119' of diamond-drill borings. The orebody is a lens, claimed to be approximately 150' wide by 1,000' long, but apparently the ore does not go to great depth, and it is possible that the bottom limits have been reached. The property has ore reserves of 400,000 tons, with fair chances of 750,000 tons, and possibilities of a greater tonnage. The crosscut tunnels, driven in from the sides of the mountain, connect with drifts on the orebody, which is low-grade pyritic ore containing disseminated chalcopyrite, and holding 1 to 2½% copper, with combined gold and silver values of about \$1 per ton. The ore carries small quantities of zinc and an excess of iron, and probably averages around 2½% copper and 1 oz. silver per ton, with small gold values. The Trinity also has an orebody, of undetermined size, on the opposite side of the gulch from the Shasta King.

The Shasta King mine has ore bins, and a 2,000' incline tram, of about 500 tons daily capacity, leading to the head house of the Balaklala tramway. The Copper King group of 22 claims, on Motion creek, about 2½ miles S. of the Shasta King mine, has about 1,000' of exploratory workings, but apparently no ore has been found in place. The Statesman group has been partially explored, in an effort to locate and develop silicious ores required for fluxing the heavy sulphide ores of the Shasta King mine. The Uncle Sam group, held under bond and lease at last accounts, also has been explored for fluxing ores, the Shasta King having large bodies of low-grade copper sulphide, but lacking the silicious ores required to make free-smelting furnace mixtures. The Uncle Sam group shows some oxidized ore, at and near surface, of 3 to 8% copper tenor.

Equipment includes a steam plant with 6-drill air compressor and power drills; also a diamond drill, with which considerable boring has been done. Buildings include a laboratory, warehouse, shops, hospital and about 25 houses for employes.

The company was reported to be ready for production Sept., 1907, at the rate of about 150 tons daily, but none of the ore reached the smelter. Management started production Oct., 1908, and shipped ore to the Balaklala smelter, but closed down early, 1909, and no record of the actual production of copper can be secured. The Trinity Co. claimed to have a contract with the Balaklala smelter calling for the treatment of 300,000 tons of ore for the first year and 360,000 yearly for the 9 succeeding years; with a minimum of 300 and maximum of 1,000 tons daily, which was to have been matted for \$3 per ton, but the contract was not carried out, and the mine has been closed down since Feb., 1909, waiting first for 15 ct. copper and now for the Balaklala smelter to resume operations. For the history of the company, see Vol. X.

President Lawson stated, at the annual meeting, 1913, that Trinity's day will come and that the property's decriers will be forced to "eat their born-of-ignorance criticisms." His statement was in part as follows: "Trinity is still awaiting the resumption of First National-Balaklala smelting operations, and if these efforts are successful, the unbroken chain of Trinity's mis-

fortunes should be at an end. Mining operations were entirely suspended during the year, but mine workings, machinery, buildings, roads and fire-protection apparatus have been maintained with a minimum of depreciation, considering the adverse conditions of a shutdown in a rugged, mountainous country, so that ore extraction may commence economically at short notice."

TRINITY GOLD MINING & REDUCTION CO. CALIFORNIA

Office: 175 Fifth Ave., New York. D. W. Shanks, gen. mgr., Los Angeles, Cal. Mines and works at Carrville, Trinity Co., Cal. Henry W. Miller, pres.; Archibald Nesbitt, vice-pres.; James H. Lee, sec.-treas.; preceding officers, John C. Hanson, H. M. Miller, Warren E. Green, Jos. J. Bonneau, Lincoln Bonneau, Wm. N. Croxton and John Eisele, directors. Organized Feb., 1909, under laws of Arizona, capitalization \$1,000,000, shares \$1 par; issued, \$969,220. Lincoln Trust Co., New York, registrar. Annual meeting, second Tuesday in January.

Profit and loss account for year ending Nov. 30, 1912, shows sales of bullion, \$198,403, compared with \$180,955 in 1911; net gross return for year, \$175,384; operating expenses, \$129,032; New York expenses, \$7,819; net profit for year, \$38,533, compared with \$66,265 for 1911.

Property, 498 acres, 323 patented, including the Headlight mine, in Trinity Center district, 1½ miles S. E. of Carrville. Company also owns 115 acres timber land. The mine has an orebody forming a flat shoot 40' thick but containing large dikes of disintegrated porphyry which did not show at the surface, so that the ore reserves reported by engineers do not exist and the oxidized ore has been worked out. A new orebody, found 1912, in another part of the property, has developed 100,000 tons of ore carrying ½ to 2% copper, 47% sulphur and about \$4.50 in gold and silver. This orebody has been proved by diamond drilling and by a 200' crosscut, finished March, 1913.

Equipment includes a complete power plant, stamp mill and concentrator which, in 1912, treated 47,600 tons of ore with a recovery of 81.88% at a cost of \$1.01 per ton. Mining costs were \$1.43 and the ore assayed \$4.36 per ton. Company is now experimenting with a wet process for the treatment of the sulphide ore as it cannot be roasted owing to the Government Forestry restrictions.

TROJAN MINE.

A. A. Anderson, superinendent. Situated in Orient mining district, Stevens Co., Wash. W. A. Kimmel, pres.; R. E. Cozzens, vice-pres.; W. F. Brown, sec.; all of Washington, D. C.; H. A. Fellows, treas.; Falls Church, Va. Property developed by 800' tunnel, intended to cut the vein at 500' level. Ore exposed in shallow workings contained values in gold, silver, copper and lead.

TROY MINING & MILLING CO.

Address: J. B. Gemmill, Troy, Latah Co., Idaho. D. H. Hilliard, C. A. Hillyard, W. O. Bond, of Clarkston; J. F. Tomlin and J. C. Edwards of Lewiston, incorporators. Organized about Nov., 1911, under laws of Idaho, capitalization \$1,000,000, shares \$1 par.

Property, 2 claims, about 2½ miles from Troy, in Bear Creek district, shows a vein reported to be 20' wide carrying copper ore with gold-silver values and assaying from \$12.50 to \$30 per ton.

TRUE FISSURE MINING CO.

MONTANA

Mine, 5 miles N. of De Borgia, Missoula Co., Mont. Wm. Trentesaky, pres. and supt.; Wm. Hart, vice-pres.; Geo. Batley, sec.-treas. Lands, 21 claims, having a 2,200' tunnel showing extensive orebodies of shipping ore, carrying mainly silver-lead ore. Equipment includes an air compressor. Eight men employed.

TUBAL-CAIN COPPER & MANGANESE MG. CO. WASHINGTON

Frank Hanford, pres. and treas., 211 Colman Blk., Seattle, Wash. Mine at Iron Mountain, Jefferson Co., Wash. I. A. Nadeau, sec.; Victor E. Tull, gen. mgr.; S. Marpel, supt., at last accounts.

Lands, 29 claims, 1 fractional, on Iron mountain, of the Olympic range, 40 miles from Port Townsend and 18 miles from a railway. The property is reported to show 5 veins, in a cross section of 1,800', one of which is claimed by the company to be nearly 200' wide at surface, and is otherwise reported as 11 to 96' in width, showing an altered compact iron-stained schist, bearing traces of copper, gold and silver. Other veins are said to show native copper, chalcocite and chalcopyrite, at surface. The center of the main or manganese vein is said to be a paystreak of 4 to 6' width, carrying native copper. Development was reported as by an 1,800' tunnel planned to cut all 5 veins. Equipment includes a Pelton wheel, taking water from the Dungeness river.

TUBE CITY MINING & MILLING CO.**ARIZONA**

Office: McKeesport, Pa., Mine office: Vekol, Pinal Co., Ariz. E. R. Zimmerman, superintendent. Property is the Jackrabbit mine, near Vekol, 22 miles south of Casa Grande, the nearest rail station. Development is by a shaft of 400' depth, with ores carrying values mainly in silver and gold. The mine is wet, having a Prescott high-duty triple-expansion pump on the 400' level, rated at capacity to lift 1,000 gals. per minute against a head of 1,000'. Equipment includes a steam plant. See Brownell-Arizona M. & S. Co.

TUCKER MINING & MILLING CO., LTD.**IDAHO**

Office: 25 O'Neil Bldg, Wallace, Idaho. Mine near Mullan, Shoshone Co., Idaho. Peter Bahn, pres. and gen. mgr.; Harry Harris, vice-pres.; W. W. Bixby, sec.-treas.; preceding officers, directors; Stanley R. Moore, engr., at last accounts. Organized March, 1907, under laws of Idaho, capitalization \$1,000,000, shares \$1 par, assessable; issued, \$700,000, given in exchange for the property. Annual meeting, second Saturday in April.

Lands, 6 claims, unpatented, 120 acres, in the Hunter district, 3 miles E. of the Snowstorm. The property shows Burke quartzite, cut by a diabase dike and showing veins, 1 up to 50' in surface width, traceable 800', carrying copper ore. Development by a 675' tunnel, shows a 4' vein, 85' from the portal, carrying low-grade copper and lead ore, and another vein, about 300' from the portal with stringers of high-grade copper carrying silver.

Equipment includes a hydraulic installation of about 100-h. p. Buildings are a 16x16' smithy, 16x16' carpenter shop and 16x26' bunk house, all of logs.

TUCSON CONSOLIDATED COPPER CO.**ARIZONA**

Office: 511 Chamber of Commerce, Milwaukee, Wis. Mine office: Tucson, Pima Co., Ariz. J. H. Wussow, pres.; Dr. M. A. Brandt, vice-pres.; F. J. Rodee, sec.; C. W. Schneider, treas.; Hon. Fred W. Fickett, gen. mgr.; preceding officers, J. G. Albright, C. F. Freeman, P. P. Donohue, A. Ballantine, R. L. Bennett and S. W. Purceil, directors. Organized April 15, 1907, under laws of Arizona, capitalization \$3,000,000, shares \$1 par, nonassessable, in one-half full paid and one-half common stock; issued, \$1,500,000. Annual meeting, third Monday in March.

Lands, formerly 103 claims, in 6 groups, 2,060 acres, now 81 claims, unpatented, in 4 groups, 1,620 acres, in the Papago district. The property of the Old Pueblo Mining & Milling Co., 9 claims, is held by this company under an option calling for 51% of stock on completion of \$50,000 worth of work.

The 4 groups are 8 miles W. of Twin Buttes and 35 miles W. of Tuc-

son. Claims show granite-porphry and limestone, with fissure veins and contact deposits, 5 being under development. The largest deposit is described as a chimney in limestone, about 55x150' in size. The groups as a whole have 3,800' of workings, mostly tunnels, longest 800', but including 10 shafts, deepest 525', estimated by management to show a large amount of ore, with considerable quantities blocked out for stoping. Property shows ores giving assays of 6 to 30% copper, 12 to 80% lead, 3 to 125 oz. silver and 80 cts to \$30 gold per ton, from azurite, chalcocite, chalcopyrite and galena. The reserves were estimated at 500,000 tons ore blocked out for stoping, which estimate is regarded as excessive.

The Purcell group of 16 claims, 3 fractional, 275 acres, shows 3 approximately parallel mineral zones, developed by a 96' shaft and a 200' tunnel, estimated by the company to give assays of 15% copper, 20 oz. silver and \$1.50 gold per ton.

The Bolello group of 9 claims, 180 acres, 2 miles S. of the Purcell, has basic granite, with frequent quartz-porphry intrusions, showing 3 copper veins, slightly developed, carrying ore that has given assays up to 24% copper, with gold and silver values.

The Black Dyke group of 48 claims, 960 acres, is W. of and about 3 miles N. from the Purcell group, constituting a parallelogram 3,600' wide and 12,000' long, showing strong iron outcrops, with favorable indications, having a number of shallow shafts, showing copper ore of 4 to 25% copper tenor, and silver-lead ore assaying up to 69% lead and 139 oz. silver per ton. This group has little development, but appears promising.

Equipment includes a 250-h. p. steam plant, burning petroleum, with 2 hoists, and there are 6 buildings, including 2 general stores.

The Old Pueblo Mining & Milling Co.'s property consists of 9 claims, 5 miles W. of Tucson, developed by the 517' Quien Sabe shaft and a tunnel. A 70' shaft cut, at depth of 30', a 15-ton pocket of chalcocite, assaying 33% copper, 16 oz. silver and \$2.50 gold per ton.

TULAROSA COPPER CO.

NEW MEXICO

Office: Tularosa, N. M. Mine office: Bent, Otero Co., N. M. F. P. Kern, pres.; John A. Thatcher, chairman; A. J. Merrill, Geo. B. Bent, secretaries; J. N. Beatty and P. M. Lynch, directors; W. Roland Cox, cons. engr.; Geo. F. Harley, gen. mgr. Organized March 5, 1905, under laws of New Mexico, as successor of Tularosa Mining & Milling Co., capitalization \$5,000,000, shares \$5 par; issued, \$3,125,000. Stock dealt in on New York curb.

Property, 307 acres, patented, at Bent, on the Tularosa river. Mine is 12 miles N. E. of Tularosa on the E. P. & S. W. R. R., about 100 miles N. E. of El Paso, Texas. The company also owns 670 acres, unpatented.

The property is underlaid by a flat sheet of diorite resting on quartzite and covered in general by the basal sandstone of the Red Beds of the region. This diorite outcrops at the Virginia mine, as the company's workings are called, and dips gently in every direction away from this point. The ore is found in the uppermost part of the diorite, which is much altered to a depth of 35 to 55' below its surface. This ore bed shows lenses of glance, 2 to 18" wide, running in all directions, which together with stringers and veinlets of ore, make a stockwerk proved to be ore-bearing over an area 200' wide and about 1,200' long. The altered rock between the lenses also carries disseminated copper glance and the ore as a whole averages 2½% copper. 30 to 55' below the diorite surface, the rock is fresh except along fractures; stringers of ore occur however at depths of several hundred feet. At the Virginia mine there is an open pit 60x120' across and 35' deep which is opened on the richest part of the deposit. The 1st level corresponds to the bottom of the pit, the 2nd level is 25' deeper. These work-

ings are said to block out 85,398 tons of ore in an area of 105x180', in extent. Twelve diamond-drill holes from 88 to 400' deep prospect the ground and the results form the basis for an estimate of 820,000 tons of indicated ore of an average value of 2¼% copper.

At the present time 3 churn drills are reported to be working on the property and one hole, 350' W. of any previous development, is said to show commercial ore at a depth of 83'. Management states that property will be drilled in 100' squares and the limits of the orebody fully determined.

Equipment includes a 12,000' power ditch with hydro-electric plant, consisting of Platt-Francis turbine, alternating-current generator and complete electrically-driven concentrating plant.

The mill, originally of 30 tons daily capacity, was entirely remodeled and enlarged to 400 tons capacity in 1912, new rolls, a hydraulic classifier, another Wilfley table and 5 No. 3 Deister slime tables being added under the supervision of Godfrey D. Doveton. It is said that about 7,000 tons of ore was run through the 30-ton experimental plant in the 4 years ending July 1, 1910, giving a return of 221,230 lbs. fine copper, a net return of almost exactly 1.5% copper. The mill put 15 into 1, giving concentrates said to average 37% in copper tenor, with about 1 oz. silver per unit of copper, but the figures indicate 25% copper tenor for concentrates, if made at the ratio named.

Compared with other deposits of similar character, this one is extremely small and the ore bed very thin, averaging perhaps 35', while the ore reserves cannot be considered large enough to be even compared with those of any of the copper porphyries. This, of course, means that the property does not warrant a large mill, and the handling of the great tonnages which alone make it possible to produce copper at a low cost.

There seems to be no reason why the orebody should not extend over a greater area, or another one be found, and the drilling campaign inaugurated by the company may result in such an extension being found. The new parties in control have had wide experience in mining and possess ample means to test the property thoroughly.

TULLOCH GOLD & COPPER CO.

NEW MEXICO

Office and mine: Silver City, Grant Co., N. M. D. H. Tulloch, president. Organized 1907. Lands, formerly 15 claims, 300 acres, apparently are now 1,200 acres, on Edith mountain in the White Signal district, said to show good ore near surface, and developed by 2 shallow shafts, 1 of 50', on the Dagger Point claim, showing ore claimed to average 14% copper. Property under option to the Mangas Development Co. but given up.

TUOLUMNE COPPER MINING CO.

MONTANA

Mine office: 16 West Granite St., Butte, Mont. Edw. Hickey, pres.; N. J. Bielenberg, vice-pres.; J. J. Harrington, sec.; R. J. Mac Donald, treas.; preceding officers, T. E. Murray, J. A. Clifford, Daniel Shields and M. E. O'Rourke, directors; A. E. Hobart, engr.

Organized June 4, 1906, under laws of Arizona, capitalization \$800,000, shares \$1 par. of which \$400,000 in stock was given for the property, and 210,000 shares were sold on the Butte market at par. Shares are listed on

the New York curb, Boston, Spokane and Butte stock exchanges. Annual meeting, June 20. Dividends to date have been three, 15 cts. per share in 1911, none in 1912 and two 10 ct. dividends per share up to Aug., 1913. Owners of 321,055 shares waived their dividend rights Dec. 31, 1910, saving company \$144,429.

An audit of books by J. P. Callan, submitted Oct., 1913, shows balance sheet July 31, 1913, as follows: Assets—Mining claim, \$400,000; equipment, \$163,542; railroad spur, \$33,231; development, \$218,960; furniture, \$1,029; insurance prepaid, \$65; supplies, \$17,082; copper, gold, silver in transit, \$11,655; cash, \$36,713; miscellaneous, \$2,072. Liabilities—Capital stock, \$800,000; dividends unpaid, \$149; taxes, \$2,823; wages and accounts payable, \$13,709; surplus, \$67,669; total, \$884,352. Profit for period, \$572,029; five dividends, \$375,420. Profit and loss account shows mining expense, \$685,818; administration, \$89,846; agency maintenance, \$36,430; claims, \$900; Smoky Moke lode, \$432; profit, \$572,029. Credit, net return from ores, \$1,249,168; income from agency, \$50,000; income from investment, \$75,000; interests on deposits, \$11,378; total, \$1,647,371.

The auditor criticizes payment of \$36,117 for legal expense and \$89,846 for general office expense, June, 1908, to July, 31, 1913.

Property, 1 fractional claim 6 acres, lying between the Speculator and Jessie claims of the North Butte. The claim carries the Jessie and Edith May veins, parallel N. W.-S. E. fault veins with large ore shoots. The Jessie has stopes 25 to 50' wide of high-grade ore. The company had a suit with the North Butte, over the Jessie vein, the apex of which was found in the so-called compromise strip, lying between the Tuolumne and the Jessie claim of the North Butte, in which the North Butte held an undivided three-eighths interest. The litigation was settled amicably, Nov. 28, 1910, a decree of the court giving the Tuolumne the eastern 412' of the Jessie vein, below the 400' level and confirming the title of the North Butte to the Jessie vein in said 412' above the 400' level, and also confirmed the title of the North Butte to all of the Jessie vein lying W. of the 412' previously referred to, for a distance of about 1,100'. Development work seems to have established the fact that the apex of the North vein of the Tuolumne lies in the property of the Tuolumne Co., and that it unites with the Jessie vein near the 400' level of the Jessie shaft, and the Tuolumne was the prior location, hence the North Butte secured a very satisfactory settlement.

The Tuolumne is opened by a main shaft, 2,350' deep, Nov., 1913, which is to be sunk to 3,000', developing an orebody of 12 to 15' width, carrying high-grade ore ranging from 5 to 12% copper with an average of about 7%. The E. drift on the 2,200' level showed 10' of 4.6% ore carrying good silver values. The 2 other veins of the Tuolumne are of promise, 1 vein carrying about 25' of very low-grade copper ore on the 1,000' level and in Oct., 1913, a new orebody 12' wide, of $4\frac{1}{2}$ to 6% copper ore was cut on this vein on the 800' level.

Equipment includes a steam plant with six 150-h. p. Erie City boilers delivering steam at 150 lbs. pressure per sq. inch. There is a powerful Nordberg hoist, good for 3,000' depth, installed 1911, and a 20-drill Nordberg air compressor. The power house, covering boilers, hoist and compressor, is 40x100', of steel, sheathed with corrugated iron. Other buildings are a 70x80' carpenter shop, of wood and iron, a 16x24' smithy, and minor structures.

Ore, formerly shipped to the Butte Reduction Works, now goes to the Washoe Works, under contract. Production, Sept., 1909, to May 31, 1910, was 19,484 tons of ore, estimated to have averaged about 10% copper and 35 oz. silver per ton. Production was about 3,750,000 lbs. fine copper in

1910; 30,499 tons in 1911, yielding 4,261,705 lbs. copper, 6,373 oz. silver and 146 oz. gold. During 1912, company shipped 14,391 tons of 7.35% and 33,291 tons of 4.5% copper ore. The shipping ore carried 3.38 oz. silver and the concentrating ore $2\frac{1}{2}$ oz. silver per ton. Product for 1912 was 4,716,047 lbs. fine copper, 131,867 oz. silver and 259 oz. gold. Total production for the 5 years ending July 31, 1913, was 136,815 tons of ore of a gross value of \$1,857,346.

A proposition to merge with the Butte Main Range Copper Mining Co. and thereby to acquire 40 acres of desirable undeveloped ground on the E. side of the Butte district, was opposed by several stockholders and finally abandoned, Aug., 1913.

TUSAS PEAK GOLD & COPPER MINING CO. NEW MEXICO

Idle. Office: Portage, Wis. Mine and mill at Tusas, Rio Arriba Co., N. M. R. H. Owen, pres.; R. J. Rosenfeld, sec.-treas.; Col. F. Randall, supt. Organized April 28, 1902, under laws of New Mexico, capitalization \$2,000,000, shares \$1 par. Bonds, \$100,000 authorized; issued, \$16,000.

Lands, 13 claims, 230 acres, and a 5-acre mill site, in the Bromide district, 14 miles W. of Tres Piedras, and 10 miles from a railway. Principal development is on the Tampa mine, having a 13' vein of copper ore, with a 5' paystreak said to average 7.5% copper, balance of ore being of concentrating grade. The Tampa has shafts of 80', 85' and 425', with about one-half mile of workings, showing ore reported by company to assay 5 to 44% copper, 1 to 4.5 oz. silver and \$1.20 to \$3.80 gold per ton, with some ores assaying up to 2.3 oz. platinum per ton and carrying some molybdenum. The main shaft shows ore of good average tenor, but in small quantities, and the management believes that it will be necessary to sink to 500 or 1,000' depth in order to develop good orebodies.

Equipment includes a hoist and 3-drill air compressor, with a hydraulic dam on Tusas creek, sawmill and a 40-ton leaching plant, planned to treat oxidized ores, but not in operation. The mine and plant were shut down Jan. 1, 1910, and no work done since, but company expects to resume work shortly.

TUSCARORA MINING & MILLING CO. CALIFORNIA

Address: care Al. D. Myers, president, Los Angeles, Cal. Mine in the Monument Peak, or Whipple Mountain district, 12 miles N. of Parker, and 14 miles N. of Vidal, on the A. T. & S. F. R. R. Company is a reorganization of the Tuscarora Mining Co. Property shows pre-Cambrian schist and gneiss with veins from 2 to 5' wide, carrying chalcopryrite and glance ore with gold values. Development consists of 2 shafts on the same vein, 2,000' apart, opening ore to a depth of 300'. A "strike" of gold ore was reported, Feb. 1912.

TWIN BUTTES MINING & SMELTING CO. ARIZONA

Office: 314 Railway Exchange, Milwaukee, Wis. Mine office: Twin Buttes, Pima Co., Ariz. Michael Earls, pres.; W. A. Barber, vice-pres.; Edw. P. Hackett, treas.; preceding officers, Hon. David S. Rose, W. B. Hill, Howard Nunnemacher, Geo. P. Mayer, John G. Baxter and Jas. R. Ricketson, directors; Albert L. Waters, gen. mgr.; J. S. Brown, engr.; E. G. Bush, supt.

Organized Sept. 8, 1903, under laws of Arizona, capitalization \$1,000,000, increased, 1905, to \$1,250,000, and again increased, Jan., 1910, to \$2,000,000, shares \$1 par. Bonds outstanding were \$100,000, at last accounts. Controls the Twin Buttes Railroad Co., and it was said Feb., 1910, that the sale of part of the road would liquidate the company's indebtedness. Wisconsin Trust Co., transfer agent and registrar. Annual meeting, third Tuesday in January.

Property, the King and Glance mines with 61 claims, partly patented,

1,250 acres, in the foothills of the Sierrita mountains, in the Helvetia district. Lands are reported to carry fissure veins in limestone, and contact deposits having a limestone foot and granite-porphry hanging. The various properties of the company had about a mile of workings 1906, estimated to show 50,000 tons of ore blocked out for stoping, averaging 7% copper and 1.85 oz. silver, with traces of gold, which estimate was too high.

The Senator Morgan mine has a 7x16' three-compartment shaft, of about 500' depth, showing a vein of 25' estimated average width, carrying sulphide ore, estimated formerly to average 10% copper. The mine was being worked with 25 men in October, 1913.

The new Main shaft, 700' east of the Senator Morgan, was 700' deep, April, 1910, and has the equipment formerly at the Senator Morgan shaft, including a hoist and air compressor.

The Copper Glance mine has a 415' shaft, sunk on an orebody having a 30' gossan, succeeded by about 200' of carbonate ore, and on the 300' level a crosscut passed through 35' of marcasite carrying kidneys of chalcocite, and a crosscut on the 400' level encountered a promising ledge of soft leached ore.

The Copper King mine has a 200' shaft, showing carbonate ores in the upper workings and sulphides in the bottom. New orebodies are being developed on 2 last-named claims.

Equipment includes a 300-h. p. steam plant, burning wood and petroleum, with a 125-h. p. Leyner double-drum hoist, capable of raising 3-ton loads, and a 10-drill Leyner compound air compressor at the Main shaft. There is a gasoline plant at the Copper King mine. There are 14 dwellings, including the power house, machine shop, smithy and a general store.

The Twin Buttes railway, 25 miles in length, running from Twin Buttes to Tucson, completed 1906, has 1 locomotive and 3 flat cars. It was said Feb., 1910, that the company had agreed to sell 18 miles of its line to the Southern Pacific, for \$215,000, leaving 7 miles to the company.

Production was 700,329 lbs. fine copper and 11,294 oz. silver in 1906; 94,056 lbs. copper and 342 oz. silver in 1907; 963,000 lbs. copper and 6,745 oz. silver in 1908; 1,097,550 lbs. copper and 9,800 oz. silver in 1909; 258,672 lbs. copper and 3,446 oz. silver in 1910. Was shipping about 100 tons daily in 1912, to the Pioneer smelter, but under lease to E. G. Bush, Oct., 1913. Property considered promising, but handicapped by lack of adequate capital.

TWIN CITY MINING & MILLING CO.

MONTANA

Office and mine: Elliston, Powell Co., Mont. W. M. O'Connell, pres.; F. B. Hubbard, vice-pres.; E. J. P. Dwelly, sec.-treas.; preceding officers, P. H. McCauley, J. L. Hurd and John Churchill, directors. Allan McNaughton, gen. mgr. Organized in Montana, capitalization \$500,000, shares \$1 par; issued, 300,000, fully paid and nonassessable. Annual meeting, April 4.

Property, 5 claims, 70 acres, patented, in Elliston district, 8 miles from Elliston, on east side of Telegraph creek. Ore occurs in granite and management reports 6 veins, of which 1 is under development by 2 shafts, 170' and 50' deep, and a 250' tunnel with 3 crosscuts. Total workings 525', said to prove vein 25' wide, traceable for 3,000' and proven to 170' depth, carrying 5% copper, 4% lead, 19 oz. silver and \$3 gold per ton. Values said to increase in depth and sulphide ores expected at about 300'.

Equipment includes steam power, one 40-h. p. hoist and several buildings. Company plans installing steam hoisting plant, sinking shaft to 500' level and exploring generally.

TWIN-EDWARDS COPPER MINE CO.

NORTH CAROLINA

Office and mine: Greensboro, Guilford Co., N. C. Organized Sept., 1902,

capitalization \$100,000, shares \$100 par. Owns sundry old properties, including the Twin mine, with an 18' vein, which was worked previous to the American Civil War. Property shut down many years, but company understood to be only dormant, not dead.

TWIN METALS MINING CO.

NEVADA

Address: care Al. Price, pres., Reno, Nev. E. E. Granger, vice-pres.; August Frolich, treas. Property, the Emily May group of 3 claims, 5 miles N. of Reno, held under bond and lease. The claims, near the Summit switch of the N. C. O. R. R., have only been worked since Aug. 1, 1913. A 40' shaft shows a well-defined fissure vein, 5' wide, carrying a 20" paystreak running 42% copper and 44 oz. silver. The bond is for \$15,000 and shipments now being made will apply on purchase price.

TWO LAKES COPPER MINING CO., LTD.

ONTARIO

Idle. Office: Oil City, Pa. Mine office: Sowerby, Algoma, Ont. Dr. E. L. Dickey, pres.; S. F. Amsler, vice-pres.; D. G. Bailey, sec.; J. C. Wilkins, treas.; F. W. Bailey, gen. mgr; preceding officers, J. W. Russell, C. W. Coulter, G. W. Freeman and Edw. Schwabenbauer, directors; A. J. Drescher, engr. Organized Oct. 12, 1906, under laws of Ontario, capitalization \$500,000, shares \$1 par, nonassessable; issued, \$270,000. Annual meeting, first Tuesday in November.

Lands, 8 claims, 1 fractional, 300 acres, freehold, including the Robinson and Tupper mines, 8 miles from Thessalon, and 4 from a railway. The property shows pre-Cambrian rocks, slate, conglomerate and greenstone, carrying a number of fissure veins, of which 3, under development, are of 2 to 10' estimated average width, carrying sulphide ores of about 4.5% copper, with small quantities of silver and gold. Development is by shafts of 50', 25' and 10'.

Equipment includes a 60-h. p. boiler and 35-h. p. hoist. There are 8 small buildings. In 1913, the management plans further development, as soon as the financial situation improves.

TWO REPUBLICS MINING CO.

ARIZONA

Mine, 10 miles from Jerome, Yavapai Co., Ariz. R. A. Smith, pres.; John B. Lecorr, vice-pres.; Paul Smyly, sec.-treas.; A. T. Dixon, mgr., at last accounts. Organized 1908, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Lands, 16 claims, unpatented, developed by a 600' tunnel. No returns secured.

TYEE COPPER CO., LTD.

BRITISH COLUMBIA

Office: 45 Leadenhall St., London, E. C., Eng. E. V. Hearn, agent, Victoria Trust Bldg., Victoria, B. C. Works office: Wm. J. Watson, mgr., Ladysmith, Vancouver Island, B. C. Thos. Headland Wilson, chairman; Harry von Berg and H. Loeffler, directors. Wm. Gardner, sec. Organized April 4, 1900, under laws of Great Britain, capitalization £180,000, increased 1901, from £120,000, shares £1 par, fully issued and paid. Accounts for year ending April 30, 1912, show a debit balance of £97,166, being a slight increase. Reserve fund and investments are reported as £47,858; debtors, £4,000; cash, £204 and creditors, overdrafts and loans, £52,542. Dividends were 10%, or 2 shillings in 1904, 10% in 1905, 5% in 1906, 7½% in 1907, none since.

Property, 1,247 acres, including 13 claims, crown granted, 342 acres, a 45-acre smelter site and 800 acres timber lands. Company had option on the Big Strike group of claims, on Ship bay, near Valdez, Alaska, and also prospected for coal, with diamond drills, on islands adjacent to the E. coast of Vancouver Island.

The Tyee mine, on Mt. Sicker, in the Somenos district, 11 miles N. W. of Duncans, and about 80 miles from Victoria, yielded only 1,200 tons of

ore 1907, and has been idle since. The orebody was rich, but shallow, and although the vein was explored thoroughly, nothing of value was found.

Company has been looking for a new mine for several years. It had a bond and lease on the Cornell mine, J. W. Bryant, superintendent, at Van Anda, Texada island, B. C., and has examined various properties without finding one to its liking.

The smelter, known as the Lady'smith works, is well located, on a 45-acre site on Oyster harbor, and takes custom ores from as far N. as Alaska and as far S. as Mexico. The smelter was considerably improved, 1907-08, at a cost of £20,000, and was remodeled and practically rebuilt 1909-10. There is a 40x210' wharf, having an electric hoist, connected, by an elevated incline trestle, with the smelter bins, which are of 5,400 tons capacity. The works are terraced throughout, permitting handling of material by gravity, and have a capacity of 500 tons daily. The sampling mill is 29x34' on the ground, and 70' high.

The 56x81' wooden furnace building has 42x120" and 48x160" Allis-Chalmers blast furnaces, of 200 and 300 tons daily capacity respectively, only the larger furnace being in blast, the smaller being held as a spare. The furnaces use a hotblast, and have water-jacket forehearth, slags skimming into a settler, and thence into a launder, where granulated and sluiced out by running water to low ground in the bay for filling. The 8x11x165' dust flue leads to a 90' smokestack of 7' diameter. The furnaces reduce 9.45 tons of ore and flux with 1 ton of coke. Equipment also includes a briquetting plant for fines, apparently not in present use, and the matter of adding an electrolytic refinery has been considered. Furnace product is a 40% copper matte, shipped to American works for refining. Smelter closed down Dec., 1911, when converters were installed.

The smelter power plant uses electric current and includes 2 Connorsville blowers and an Ingersoll-Sergeant air compressor. Miscellaneous buildings at the smelter include a good laboratory, smithy and machine shop.

Smelter production was 3,604,474 lbs. copper in 1903; 5,045,000 lbs. in 1904; 3,039,398 lbs. copper, 103,474 oz. silver and 5,952 oz. gold in 1905; 3,173,431 lbs. copper in 1908; 2,148,058 lbs. copper in 1909; 45,758 tons of ore, yielding 3,392,901 lbs. copper, 41,128 oz. silver and 10,041 oz. gold in 1910. In 1911, 42,030 tons of custom ore were treated. The Red Cliff Mining Co., Ltd., is reported to have had an option on a controlling interest in the company, 1912. In 1913, the Tyee Co. made an ore-smelting contract with the Ptarmigan Mines, Ltd., for the ores from the Big Interior mine and Mr. H. H. Johnston was sent out as manager.

TYRONE COPPER CO.

NEW MEXICO

Properties at Tyrone, Grant Co., N. M., adjoining the Chemung group, are now owned by the Phelps, Dodge Co.

UBEHEBE COPPER MINES & SMELTER CO.

CALIFORNIA

Office: 1316 Continental Bldg., Baltimore, Md. Operating office: Tonopah, Nev. Mine office: Lone Pine, Inyo Co., Cal. John Salisbury, pres. and gen. mgr.; Henry G. Merry, vice-pres. and cons. engr.; J. J. Griffith, sec.-treas.; Raymond T. Baker, supt. Lands, 50 claims, 1,000 acres, in the Ubehebe district, 50 miles W. of Bonnie Clair station, on the Bullfrog & Goldfield railway. The property, said to show veins of 8 to 50' width, carrying gold and silver ore up to 20% in copper tenor, has an 80' shaft and a 145' tunnel, with some development on other holdings. The company has done annual assessment work but contemplates no further extensive development until the financial situation improves.

UINTAH MINING, MILLING & DEVELOPMENT CO.

UTAH

Office: 625 Kearns Bldg., Salt Lake City, Utah. Dr. J. A. Denike, pres.;

Dana T. Smith, sec. Owns the Castro group of mines, Bingham Canyon, Utah, formerly belonging to the Castro Grecian Co.

ULCAHOMO MINING & MILLING CO.

WYOMING

Idle. Office: 800 Custer St., Laramie, Wyo. Mine near Leslie, Albany Co., Wyo., J. S. Atherly, pres. and gen. mgr.; M. T. Ulen, vice-pres.; A. Carpenter, treas.; Mrs. A. Ulen, sec.; preceding officers, Hon. Leroy Grant, R. H. Scott and W. H. Crandall, directors. Organized 1904, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$758,000.

Lands, 11 claims, freehold, 220 acres, 1 to 2 miles from the Strong Copper Mining Co., and 8 miles from the Union Pacific railway, in Natrona county, Wyo., showing gabbro, granite and schist with 4 fissure veins in granite, having a S.-E. strike, estimated by the management to average 23' in width, to carry cupriferous pyrite, and to average 6% copper, 2 oz. silver and \$3 to \$1,000 free gold per ton. Development is by 6 pits and shafts, of 10' to 105' depth.

Equipment includes a 40-h. p. steam plant with hoist and 3 buildings.

ULIDA CONSOLIDATED COPPER CO.

NEVADA

Organized, 1913, in Salt Lake City, Utah, to operate in Cocomunga district, Esmeralda Co., Nev. Is apparently no relation to company formerly owning mine of this name in Inyo county, Cal.

UNCLE JOE MINING CO.

UTAH

Office and mine: Goshen, Utah Co., Utah. Louis Weber, pres.; Wm. Weber, vice-pres.; Prof. J. H. Weber, sec.-treas. and gen. mgr. Organized under laws of Utah, capitalization \$10,000, shares 10 cts. par, nonassessable; issued, \$7,250, Dec., 1909.

Lands, 9 claims, unpatented, 180 acres, developed by a tunnel of 2,409', showing streaks of high-grade copper ore. The Copper Jack group of 10 claims, in the Erikson district of Tooele county, was explored, 1909-10, but apparently the bond thereon was surrendered. Equipment includes two 50-h. p. hoists, a 6-drill air compressor and a churn drill. No recent returns secured.

UNCLE SAM CONSOLIDATED MINING CO.

UTAH

Office: 516 Dooley Block, Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Hon. John Dern, pres.; M. P. Braffet, vice-pres.; Frank Kimball, treas.; Fred C. Dern, sec.; J. C. Dick, gen. mgr. and George Haverkamp, directors; C. C. Griggs, supt.; Geo. Castleton, assayer and A. E. Hadley, purch. agt.

Organized June 29, 1900, under laws of Utah, capitalization \$750,000, shares \$1 par, assessable; increased, Aug. 21, 1912, from \$500,000; issued, \$550,000, with 1 assessment levied. The company formerly owned a 50% stock interest, 400,000 shares, in the May Day Mining & Milling Co., which stock was distributed 1910, to shareholders, as a stock dividend. The Richmond & Anaconda Mining Co., adjoining, was absorbed 1912, by the Uncle Sam. Regular dividend rate was 2 cts. per share monthly, changed June, 1910, to 2 cts. quarterly, with an extra dividend of 3 cts., Dec., 1910, dividends for 1910 having been 19 cts. per share; total dividends to April, 1913, were \$470,000. Shares are listed on the Salt Lake exchange. Annual meeting, first Monday in June.

Lands, 4 claims, patented, in Tintic district, including the Humbug mine, which is the principal property, producing mainly auriferous silver-lead ore of both smelting and milling grades, but the mine has some cuprite and copper carbonates of 12 to 33% in copper tenor. A good orebody was developed, 1911, in the western part of the property. Equipment includes steam power and a concentrator.

Production, for fiscal years ending June 7, was 185 carloads of ore, giving net smelter returns of \$135,444.94, in 1908; 4,465 tons of ore, averaging \$29.26 per ton, giving net smelter returns of \$130,697.49, in 1909; ore giving net smelter returns of \$116,323.77, permitting dividends of \$45,000 in 1910.

UNCLE SAM COPPER CO.**ALASKA**

Former mine office: Ketchikan, Alaska. Lands, on Kasaan peninsula, 3 miles from the Hadley, show a 40' vein, traceable 1,200', carrying ariferous and argentiferous copper ore, of fair average tenor. Property has necessary mine buildings and a 1,150' tramway leading from the mine to a wharf on tidewater. Mine shut down in 1912.

UNCLE SAM MINE.**MONTANA**

Located near Wickes, in Boulder district, Jefferson Co., Mont. Is an old mine which produced some 12,000 tons of ore carrying from \$30 to \$90 per ton. Vein is near a contact of aplite and andesite, the latter metamorphosed by granitic intrusion. The old workings exposed an ore shoot 12' wide carrying galena and sphalerite with some tetrahedrite. Mine was being reopened in 1912 and a crosscut tunnel run to intersect the lode at about 175' depth.

UNEEDA MINING CO.**ARIZONA**

Office and mine: Globe, Gila Co., Ariz. Samuel Seelig, pres.; T. L. Cross, vice-pres.; C. W. Cross, sec.; preceding officers, J. F. Mayer, Eugene Barrows, G. W. Leonard, Wade Stowell and C. W. Cross, directors. Organized April, 1909, under laws of Arizona, capitalization \$1,000,000, shares \$1 par. Property, 18 claims, on the Troy road, Pinal mountains, 4½ miles S. W. of Globe, have a 140' shaft showing sulphide ore assaying 7.63% copper, 1 oz. silver and \$1.40 gold per ton. Was operated and shipped a small amount of ore, 1912.

UNIDA GOLD & COPPER MINING CO.**ARIZONA**

Idle. Office: 907 College Ave., Cleveland, Ohio. Mine office: Wickenburg, Maricopa Co., Ariz. Geo. Margaretic, pres. and gen. mgr.; J. F. Buchanan, sec. Lands, in the Black Rock district, formerly held by the Electra Mining & Milling Co., which claimed average assay values of \$27 per ton, have a 300' shaft and tunnels of 200' and 300', showing ore giving good assay values in gold and copper. Equipment includes gasoline power. Several carloads of good ore shipped, 1907. No recent returns secured.

UNION; COMPANIA MINERA LA.**MEXICO**

Presumably idle. Mine office: Viesca, Coahuila, Mex. Property includes El Esfuerzo, La Ampliacion de Providencia and other groups, producing mixed ores carrying mainly copper values.

UNION y CONSTANCIA; MINAS.**MEXICO**

Letters unclaimed at Inde, Durango, Mex. Reinaldo E. Avila, owner and manager. Mines, which include the Union, Constancia and Misma Matracal, were opened in the sixteenth century. Country rock is andesite, showing 9 veins, carrying chalcoppyrite, galena and sphalerite ores containing pyrite. Orebody averages 2 meters width and is opened by a shaft of 18m. and by tunnels of 70m. and 100m., developing first-grade ore averaging 43% lead, 100 oz. silver and 54 oz. gold per metric ton, and second-grade ore averaging 4% copper and 20 oz. silver per ton, latter showing a little native copper. Probably idle owing to revolution.

UNION COPPER CO.**ARIZONA**

Probably defunct. Letter unclaimed at Globe, Gila Co., Ariz. S. G. Reading, pres.; W. F. Anthony, vice-pres.; F. L. Toombs, sec.-treas.; H. F. Campbell, supt., at last accounts. Organized Oct. 31, 1906, under laws of Arizona, capitalization \$1,000,000. Lands include the Chapparal, Sieboth and Halliday groups, the Chapparal group, 13 claims, 2 miles N. W. of the

Gibson, and the Halliday group, 4 claims, lying between the Gibson and Central. Equipment includes a small steam plant.

UNION COPPER CO.

NEVADA

At Yerington, Nev. Title changed to Standard Copper Co., in 1912 (which see).

UNION COPPER LAND & MINING CO.

MICHIGAN

Office: 70 State St., Boston, Mass. Mine office: Houghton, Mich. Harry F. Fay, pres.; Harold H. Anthony, Ezra H. Baker, Samuel Carr, Albert B. Merrill and John G. Stone, directors. C. J. Morrissey, sec.-treas.

Organized 1863, and reincorporated 1893, under laws of Michigan. Capitalization \$2,500,000; issued, \$2,000,000; shares \$25 par, \$2.06 paid. Company paid a dividend of 50 cts. cash and one-eighth share of new stock per share, in 1899; \$2 per share in 1907 and 50 cts. in 1908. Cash balance, March 27, 1913, \$3,853. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock listed on Boston Stock Exchange. Annual meeting, fourth Thursday in March.

Property, 5,323 acres of land, carrying both surface and mineral rights, and 1,043 acres additional of mineral rights only, comprising 200 different tracts on the Keweenaw copper belt in Keweenaw, Houghton, Ontonagon and Gogebic counties. Company is primarily a land-holding corporation, but has from time to time investigated various tracts to determine their mineral value. Much of the land is covered with timber, stated by company's president to be valued conservatively at \$125,000.

In the winter of 1910-11, exploratory work by diamond drill on Sec. 1, T. 56 N. and Sec. 36, T. 57 N., R. 33 W., lying W. of the Allouez mine, was done by the company. Eight holes were drilled to an average depth of about 1,000' cutting the Allouez conglomerate and the Quincy-Pewabic amygdaloid, as well as a number of other beds carrying indications of copper.

UNION COPPER MINE.

NORTH CAROLINA

Office: care Sig. H. Rosenblatt, 42 Broadway, New York. Mine address: Gold Hill, Rowan Co., N. C.

Lands, 1,150 acres, freehold, about 15 miles from Salisbury, in Rowan and Cabarrus counties, well watered and timbered. The property has schists, carrying 5 veins with average strike of N. 20° E. and practically vertical dip, of 2 to 20' width, 3 of which carry copper ores, the other 2, reported to carry silver and gold ores respectively, being but slightly developed. The copper veins are mineralized zones carrying lenticular shoots of ore, longest about 100' in length. The principal development is on the Big Cut copper vein, trenched at intervals for a distance of about 1 mile, and having 10 shafts, of 150', 225', 650', 400', 200', 300', 200', 400', 165' and 200', the deepest shaft of 650', formerly claimed to be 900' in depth and these shafts were claimed to show a vein of 20 to 40' width, but actual maximum width is about 20' only. The Big Cut vein shows oxidized ores and a little native copper in the upper workings, succeeded by chalcopryrite, with quartz gangue. A careful sampling by Dr. A. R. Ledoux gave averages of 4.4% copper, 4 oz. silver and 40 cts. to \$1.20 gold per ton, and this apparently was from ore produced, and not a sampling of the mine itself, which was claimed, Oct. 26, 1908, by Alex. H. Low, assistant to the president, who was then Calvin H. Allen, to average only 3% copper, 2 oz. silver and 50 cts. gold per ton. No. 7 shaft, of 200' depth, shows a vein 4" wide at surface and 3 to 4' wide on the bottom level, where the ore is claimed to average 4.5% copper. There are 14 shafts all told, and the mine has about 5,000' of workings. The property has been claimed, in the press, to have produced about \$1,000,000 worth of gold in early days.

The machinery plant is extensive, but archaic, formerly including 27 boilers, 18 hoists and 3 air compressors, replaced by a new Ingersoll-Rand air compressor. There is a small electric light plant.

Buildings include a machine shop, smithy, engine house, boiler houses, foundry, office building, 50-room hotel, 130 dwellings and a stable for 400 horses and mules.

UNION COPPER MINES CO.

NORTH CAROLINA

Bankrupt. Office: 18 Broadway, New York. Mine office was Gold Hill, Rowan Co., N. C. Louis M. Ogden, pres.; Jos. Swift, vice-pres.; Woodruff Leeming, sec.-treas.; preceding officers, Alex. Konta, Erastus M. Cravath, Douglass Green, Chas. A. Heckscher, Samuel H. Lever and Edw. H. Swan, directors, at last accounts.

Organized May, 1907, under laws of Maine, as a reconstruction of the bankrupt Union Copper Mining Co., which in turn was a reconstruction of the Union Copper Co., shareholders exchanging 2 old shares for 1 new share. Capitalization \$2,500,000, shares \$5 par, nonassessable; fully issued.

Lands, 1,150, about 15 miles from Salisbury, in Rowan and Cabarrus counties, were sold at sheriff's sale July 7, 1913, to the Security Transfer & Registrar Co., for \$7,100, in satisfaction of a judgment obtained against the company for labor and wages due. An effort to save the property by having shareholders contribute 10 cts. per share was made May, 1913, but met with no response. Shares worthless. Fully described Vol. X.

UNION MINE.

MICHIGAN

Idle. Property, originally held by the Isle Royale & Lake Superior Co., was the first mine opened in the Porcupine mountains, Oct., 1864. The mine has 4 shafts of 85 to 400' depth, with 4 levels opened on an amygdaloidal bed lying N. of the Nonesuch lode, and once had a small stamp mill with Frue vanners. Was optioned and unwatered, 1908, by the Calumet & Hecla Mining Co., but relinquished.

UNION MINES CO.

ARIZONA

Hoval A. Smith, owner, Bisbee, Ariz. Holds an undivided interest of about 50% in the Arizona King, or Copper King mine, at Bisbee, described under title of Copper King mine.

UNITED ARIZONA COPPER CO.

ARIZONA

Probably dead. Mine office: Prescott, Yavapai Co., Ariz. Lands, known as the Mahoney group, in the Black Rock district, are said to show a vein of 5 to 50' width, opened by a 100' shaft, and about 1,000' of workings, showing ore assaying well in copper, silver and gold.

UNITED ARIZONA COPPER CO., LTD.

ARIZONA

Idle. Office: 1 Broad Street Ave., London, E. C., Eng. Mine office: Vekol, Pinal Co., Ariz. Rt. Hon. Earl of Orford, chairman; Horace J. Nevill, vice-chairman; preceding and Thos. Syminton, directors; Jas. Francis Shearer, sec.; Van H. Brooks, mine mgr. Organized Oct. 15, 1902, under laws of Great Britain, capitalization £200,000, shares £1 par; issued, £160,000, fully paid. Has an indebtedness of £30,000, not bearing interest.

Lands, 500 acres, known as the Reward mine, 6 miles from Vekol, bought Oct. 15, 1902, of the Reward Consolidated Copper Mining Co., for £160,000. Property includes a 30-ton smelter, of small present value. Lands were bonded 1907, for 30 months, to the Casa Grande Development Co., which was succeeded by the Savanna Copper Co., but the bond was forfeited, 1910. Property is supposed to contain a deposit of disseminated ore, besides veins, but needs further prospecting to develop tonnage. Negotiations for sale were in progress, 1913.

UNITED COPPER CO.

UNITED STATES

Office: care Hudson Trust Co., Hoboken, New Jersey. L. A. Dunham,

pres.; Chas. W. Saacke, sec.-treas., 74 Broadway, New York. W. C. Shaw, Geo. Lane, Bernard C. Hughes, G. Kuehne, Jr., J. B. Coates, directors. Receivers, John S. Sheppard, Jr. and Addison E. Cudworth.

The entire assets of the company were taken over by the Assets Realization Co., in 1913, for an overdue loan of \$1,000,000. Late in Nov., 1913, negotiations were in progress for the sale of these securities. The Assets Realization Co. claims \$1,800,000 additional for the La France Copper Co's bonds and unpaid coupons guaranteed by the United Copper Co.

Organized April 28, 1902, under laws of New Jersey, with capitalization \$80,000,000, shares \$100 par, in \$5,000,000 preferred 6% cumulative stock, and \$75,000,000 common stock; issued, \$50,000,000, in \$5,000,000 preferred and \$45,000,000 common shares, at last accounts. Stock is listed on the Boston and Pittsburgh Stock Exchanges. Metropolitan Trust Co., New York, Old Colony Trust Co., Boston, and Fidelity Title & Trust Co., Pittsburgh, registrars. American Trust Co., Boston, Union Trust Co., Pittsburgh, and C. S. Buckingham, New York, transfer agents.

The company has paid \$7,462,500 dividends, of which \$1,500,000 was paid on preferred and \$5,962,500 was paid on common shares, preferred dividends being \$150,000 in 1902, \$300,000 each in 1903, 1904, 1905 and 1906, and \$150,000 in 1907. The first dividend on common shares was paid 1905. Dividends on common shares were \$450,000 in 1905, \$3,150,000 in 1906, and \$2,362,500 in 1907. The common stock was placed 1906, on a "quarterly" dividend basis, at rate of 7% per annum, but the company maintained this rate for only a short time, suspending the dividends 1907.

For fiscal years ending June 1, the company's statements show income as follows: \$1,045,475 in 1904, \$1,513,850 in 1905, \$3,011,620 in 1906, \$861,023.97 in 1908, of which \$841,662.50 was from dividends on securities held, and \$19,361.47 from interest. Former president, F. Augustus Heinze, informed shareholders June, 1908, that the floating indebtedness of the company did not exceed \$1,100,000, but the company reported a surplus of only \$13,000, May 31, 1908.

The United Copper Co. is a securities-holding corporation solely, and was organized, ostensibly, along much the same lines as its former rival, the Amalgamated Copper Co., except that the Amalgamated buys control of subsidiary corporations to retain and operate, while the United operated as a blind pool, under the personal direction of the president.

The status of the company was changed materially 1906, with the settlement of the protracted litigation between this company and the Amalgamated, through the sale of its holdings in Butte to the Butte Coalition Mining Co., for which it is said to have received \$14,000,000 in cash and shares.

The chief subsidiaries and assets of the company have not been definitely reported, but are understood to include substantially all of the \$2,020,825 outstanding stock of the Montana Ore Purchasing Co.; the Basin Reduction Co.; the La France Copper Co., now defunct and without property; the Ohio Copper Co.; two-thirds of the capital stock of the Pittsburgh & New York Coal Co. and a mortgage of \$600,000 thereon, held by the Montana Ore Purchasing Co., owning about 9,300 acres of coal lands in Washington county, Pa., said to be worth \$18,000,000 and conservatively valued at \$4,000,000; an interest held jointly with the Canadian Pacific railway in 543,000 acres of agricultural and timber lands, valued at \$2 to \$3 per acre in southern British Columbia; 10,000 acres of timber land near Garrison, Mont.; the Danielsville gold mine, 13 claims, valued at \$100,000; a 60% interest in the Rimini Gold Dike, a porphyry gold mine, 400 acres, and the Katy and other mines at Basin, Mont.

The company also held \$75,000 first-mortgage bonds of the Ohio Cop-

per Co., \$62,000 bonds of the Western Ice Co. and is said to own 400,000 shares controlling the Stewart Mining Co., 100,000 shares and a block of bonds of the Ohio Copper Co., with smaller share interests in the Alice Gold Mining Co., the Western Utah Copper Co., Basis & Bay State Mining Co., Davis-Daly Copper Co.; Copper Securities Co., Bingham Mines Co., Bank of Discount, Fidelity Development Co., Consolidated Steamship Co., Balanced Cable Crane Co., Opex Consolidated Mining Co. and 1,200 shares Anaconda Copper Mining Co.

The petition in bankruptcy, filed by the Aetna Indemnity Co., stated that the United Copper Co. had less than \$1,000 in its treasury with total liabilities of nearly \$4,500,000, of which \$2,081,734 was past due. According to the Boston News Bureau "the Aetna Indemnity Co., was a creditor to the extent of \$10,000, through ownership of coupons from bonds of the La France Copper Co., guaranteed by the United Copper Co.

"The United Copper Co., which is largely a holding company, has made large advances to its various subsidiaries, amounting in all to \$2,591,000, according to the petition for receivership. In detail these advances are as follows: \$675,063 due from La France Copper Co. on advances; \$196,110 due from La France Copper on coupon guarantee; \$63,354 due from Pittsburgh & New York Coal Co. advances; \$212,959 due from Basin Reduction Co. on advances; \$1,244,143 due from Montana Ore Purchasing Co. on advances; \$200,000 due from miscellaneous; total, \$2,591,629.

"United Copper Co. assumed a liability of \$2,880,000 when it guaranteed La France Copper Co. bond coupons, of which \$460,000 are past due. There are unsecured debts of \$21,734, while secured claims approximate \$1,600,000. This amount is understood to be owed the Assets Realization Co., which has held the United Co.'s assets for some time past as security for loans.

"It is understood that United at one time held 20,000 shares of United Cobalt Exploration Co., 2,000 shares of Consolidated Steamship, several thousand shares of Western Ice and \$73,000 of its bonds, while the holdings in Stewart, Ohio and Davis-Daly were each in excess of \$100,000 shares.

"That the United Copper Co. operation was not limited to mining properties is apparent, for the Bank of Discount later became the Northern Bank of New York, which went down in the Robin failure; the Fidelity Development Co. was a land sales concern, which was supposed to control the Morris Park race track, while the Crane Co. owned a patent crane that was used to some extent during the construction of New York's first subway."

Receivers having been appointed by the United States Court, Feb. 15, 1913, and the receivership extended to include the Montana Ore Purchasing Co. in March, a protective committee of preferred stockholders was formed. This committee consisting of Dudley Olcott, chairman; E. T. Rice, J. T. West, with L. K. Thorn, secretary and Huntington, Rhinelanders & Seymour, of 54 William St., New York, as counsel, asked stockholders to deposit their holdings with the Old Colony Trust Co. of Boston or the Central Trust Co. of New York, for the purpose of reorganization. The deposit agreement provides that the committee have full power to act for the benefit of the depositing stockholders, and the agreement is binding until April 1, 1914, unless terminated by the committee. The time for deposit, originally April 13, was extended to May 15, 1913. To June 13, 1913, there had been deposited with the committee over 37,500 shares of preferred stock. An assessment of 30 cts. for each share deposited was ordered by the committee.

As the United Copper Securities Co. is the holder of much preferred stock under agreement of Dec. 18, 1911, whereby holders of preferred stock

of the United Copper Co. were offered \$15 per share, in collateral trust notes of the Securities Co., the latter company is an important factor in the re-organization.

UNITED COPPER-GOLD MINES CO.

OREGON

Office: Murphy Blk., Salem, Ore. Mine at Selma, Josephine Co., Ore. W. S. Low, pres. and gen. mgr.; C. E. Lebold, vice-pres.; Daniel Webster, sec.; James Greig, treas.; preceding officers, F. E. Newberry, E. O. Rice and J. A. Sellwood, directors. Capitalization \$500,000, shares \$1 par; issued 219,654. Annual meeting, first Monday in August.

Property, on Pickett creek, near Merlin, has been sold and company now owns 11 claims, in Illinois district, Ore., about 12 miles N. W. of Selma. Ore occurs, in serpentine near porphyry and diorite contacts. A dark gossan sometimes stained with copper is underlain at 15' depth by ore carrying 18% copper and 5 to 10 oz. silver and upwards of \$1 gold, according to management.

Development amounts to 1,000' with a 500' tunnel and 200' crosscut, exposing 1,000 tons of ore. Property is 34 miles from S. P. R. R. Is regarded as a prospect which will be worked on a large scale when railroad transportation is nearer.

UNITED COPPER MINING CO.

WASHINGTON

Office: 417 Hutton Bldg., Spokane, Wash. Mine office: Chewelah, Stevens Co., Wash. Conrad Wolfe, pres. and gen. mgr.; W. G. Collins, vice-pres.; M. E. Poole, sec.; S. Rosenhaupt, treas.; preceding officers, Daniel Hoch, J. H. Griffith, directors; R. H. Hewer, supt. Organized 1906, under laws of Washington, capitalization \$1,000,000, shares \$1 par, fully issued. Assessments to date, \$10,000. Bonds, \$20,000, authorized. Dividends, \$40,000 to end of 1912. Annual meeting, Jan. 28.

Lands, 8 claims, 4 fractional, patented, 123 acres, and 320 acres miscellaneous lands, 6 miles N. E. of Chewelah, the nearest rail point. The property shows shale and schist, carrying an orebody of 6' estimated average width, traceable 450', carrying malachite, chalcopryrite and tetrahedrite, reported by the company to have been proven to average 2.9% copper, 6 oz. silver and 40 cts. gold per ton. Ore is mainly chalcopryrite, with streaks of gray copper ore on both walls, latter carrying up to 24% copper, 400 oz. silver and \$2 gold per ton.

Development is by shafts of 600', 175' and 275', and a 1,700' tunnel on the 400' level, of which the first 735' is a crosscut and balance a drift, with a 2,700' lower tunnel, on the 1,000' level, planned to be driven 5,000' to gain a back of 1,100'. The mine has about 8,000' of workings, estimated to show 150,000 tons of ore, of about \$15 gross value, per ton.

Equipment includes a 200-h. p. steam plant, with 2 hoists, 4-drill and 6-drill Franklin air compressors, 11 power drills, 2 pumps, an electric light plant, and a 125-ton concentrator, operated by electrical power obtained from the Meyers Falls Power & Light Co. There are several mine buildings, including a 15x24' frame machine shop.

UNITED COPPER SECURITIES CO.

NEW YORK

Office: 42 Broadway, New York. Calvin O. Geer, president. Organized about Dec., 1911, for the purpose of giving the shareholders of United Copper Co. an opportunity to co-operate for the protection of their rights and property. Capitalization \$4,000,000; \$2,000,000 6% cumulative preferred, \$2,000,000 common. Company authorized \$2,500,000 6% 10-year collateral trust notes, and company offered holders of preferred stock of the United Copper Co. \$15 per share in company's trust notes, with proviso same cannot be sold below \$25 per share, and that a note holder shall receive one-half of any excess over \$15 per share realized upon the sale of his stock.

In lieu of this agreement the depositing stockholder may accept for each share United Copper preferred, \$10 in Securities Co.'s preferred stock in addition to the \$15 note, waiving further claim save as collateral security for note.

Holders of common stock of United Copper Co. were offered \$3 per share in trust notes with proviso of sale at \$10 per share, note holder to receive one-half of any excess over \$3 per share on the sale of the stock. In lieu of this, he may accept \$3.50 per share in preferred stock of Securities Co. in addition to the \$3 paid by note. All stock deposited is to be held as collateral security, against notes issued.

Assets apparently consist solely of a \$30,000,000 "damage" suit brought early 1913, against the Amalgamated Copper Co. and its subsidiaries.

UNITED ELY COPPER CO.

NEVADA

Mine address: Ely, Nev. G. L. Rickard, president and general manager, at last accounts. Organized Oct. 22, 1906, under laws of Nevada, capitalization \$5,000,000, shares \$5 par. Lands, 8 claims, slightly developed by churn drilling. Inactive.

UNITED EMPIRE CO., LTD.

BRITISH COLUMBIA

Office and mine: Princeton, Yale district, B. C. Wm. C. McDougall, pres. and gen. mgr.; John M. Smith, sec.-treas.; preceding officers, Mrs. M. L. McDougall, John M. Murray and R. L. Reid, K. C., directors. Organized Dec., 1906, under laws of British Columbia, as successor of United Empire Co., capitalization \$500,000, shares \$1 par; issued \$300,000.

Lands, 9 claims, 250 acres, 692 acres of crown-granted coal lands and 2,500 acres miscellaneous lands, in the Similkameen district. The copper lands show limestone, diorite and sandstone, with 2 orebodies, the one under development estimated to be 100' wide and to be traceable 4,500'. The ore shows malachite and occasional azurite, with chalcopyrite at depth, and is estimated to average 2% copper, 2 to 4 oz. silver and \$1 to \$2 gold per ton. Development is by shafts of 30' and 50', and by tunnels of 125', 225' and 80'. Adjoining the copper ore, on the western boundary, is a series of workable coal measures. Inactive.

UNITED GLOBE MINES.

ARIZONA

Office: 99 John St., New York. Mine office: Globe, Gila Co., Ariz. Jas. Douglas, pres.; A. C. James, vice-pres.; Geo. Notman, sec.-treas. Capitalization \$2,300,000, shares \$100 par. Is controlled, through ownership of entire stock issue, by the Old Dominion Co. For 1912, income was \$1,319,451 from ore and limestone, with expenses of \$699,975, giving net income of \$619,475, with a total surplus of \$580,781 Dec. 31, 1912. Paid dividends of \$6.50 in 1905, \$6 in 1906, \$4 in 1907, \$20 in 1912 and \$22.50 to Oct 1, 1913.

Lands, 29 claims and 3 mill sites, lying W. of the Old Dominion group, including the Grey, Buckeye and Buffalo mines. The mine is developed by 5 shafts and through the workings of the Old Dominion, of which this mine is practically a part, carrying the main vein of the Old Dominion in which the greater part of the development work is centered. The Maggie, Josh Billings and Grey No. 3 veins show low-grade sulphide ore. The Buckeye mine shows a little high-grade oxide ore on the 2nd level, and recent development work in the Buffalo mine has opened considerable ore, carrying good values in gold and silver.

Good productive ground is opened on the 800', 1,000', 1,200', 1,400' and 1,600' levels in the Old Dominion vein. The orebodies are extensive, but erratic, and the ores are decidedly silicious, but are in good demand at the smelting works of the southwest for converter charging. Practically all of the ore is treated in the Old Dominion smelter. An enormous tonnage of concentrating ore, of 3 to 4% copper, has been developed, as well as large

quantities of high-grade smelting ore up to 10% in copper tenor. An underground haulage line has been installed on the 14th level E. drift from "A" shaft of the Old Dominion mine.

Production was 4,607,537 lbs. fine copper and 5,277 oz. silver in 1906; 3,399,084 lbs. copper and 12,382 oz. silver in 1907; 2,599,155 lbs. copper, 29,308 oz. silver and 17 oz. gold in 1908; 3,674,728 lbs. copper, 43,486 oz. silver and 33 oz. gold in 1909, and 12,252,073 lbs. copper, 124,361 oz. silver and 789 oz. gold in 1912. (See Old Dominion Co.)

UNITED GOLD & COPPER MINING CO.

ARIZONA

Letter unclaimed at former office, Prescott, Ariz. J. B. Tomlinson, managing director. Lands, 7 claims, patented, well timbered, carrying water rights on the Hassayampa river, 10 miles south of Prescott. The property shows a vein of 4 to 5' width, carrying values mainly in gold, developed by the 300' Gold Bug shaft, and a tunnel on the American Eagle claim. There is a 20-stamp mill. Inactive.

UNITED GREENWATER COPPER CO.

CALIFORNIA

Office: Tonopah, Nev. Mine office: Dale, via Amboy, San Bernardino Co., Cal. John McGee, superintendent. Originally owned sundry claims in Inyo county, which apparently have been abandoned, and the company is now operating under bond and lease on the Seal of Gold group of gold quartz mines in the Dale district. This group embraces 50 claims and is developed by shafts of 700' and 1,000'. A 50-ton cyanide plant is being installed.

UNITED METALS CO.

ALASKA

Is owned by the Alaska Metals Co. Property is the Corbin mine, near Coppermount.

UNITED METALS SELLING CO.

NEW YORK

Office: 42 Broadway, New York. John D. Ryan, pres.; T. Wolfson, vice-pres.; R. M. Stuart-Wortley, Wm. Rockefeller, H. H. Rogers and J. W. Allen, directors. A. W. Evarts, sec.; C. W. Welch, treas.; C. S. Henry & Co., 12 Leadenhall St., London, E. C., Eng., European agts.

Organized Jan. 29, 1900, under laws of New Jersey, capitalization \$5,000,000, shares \$100 par. Is controlled by the Amalgamated Copper Co., through ownership of entire share capital.

The company does a general commission business in metals, mainly in copper, and is the largest copper broker in the world, being the sales agent for the Amalgamated Copper Co., and affiliated corporations, and for a number of other producers, having the marketing of upwards of 400,000,000 lbs. of copper yearly. A considerable part of the company's former profits were derived from the Raritan refinery, sold 1909, to the International Smelting & Refining Co., which was fully described under title of this company, Vol. VIII. For dividend record, see Vol. X.

UNITED MEXICAN MINES.

MEXICO

Office: Kansas City, Mo. Mine office: Cumpas, Sonora, Mex. O. L. Neer, manager. Lands, 40 miles S. of Nacozari, include the Veta Grande and Cerro Gordo groups, near the Transvaal mine.

Property shows rhyolite, granite and porphyry, with several orebodies occurring in fissure veins, and as breccia deposits between trachite and granite. Ores are principally auriferous and argentiferous copper sulphides, and as mined and smelted give returns of about \$300 per ton.

Equipment includes a small smelter. Company is presumably controlled by La Exposicion Mining Co. Is not favorably regarded.

UNITED MINING CO.

NEVADA

Mine office: Carson City, Nev. H. D. Cowden, pres. and gen. mgr.; R. H. Hingston, treas. and gen. supt.; F. W. Boston, sec. Organized 1905,

under laws of Nevada, capitalization \$3,000,000, shares \$1 par, nonassessable; 500,000 preferred and 2,500,000 common; issued \$1,876,150.

Property, 34 claims, 680 acres, in the Delaware district, 12 miles from Carson City. Country rock is granite, cutting sedimentary and intrusive rocks. Claims show 4 fissure veins in andesite and porphyry, capped by a strong iron gossan up to 200' in width. The limestone is highly crystallized and intruded by porphyry dikes. Ores developed are azurite and malachite with some copper oxides and silicates succeeded by sulphide ore at a shallow depth.

Development is, by shafts of 100' and 315', numerous test pits and prospect tunnels. The veins vary greatly in width, the principal orebody being 7 to 12' wide, so far as developed.

Equipment includes a 25-h. p. gasoline hoist, a 90-h. p. gas engine with air compressor of 5 drills capacity and a sinking pump, with about 8 buildings.

UNITED MINING & HOLDING CO. COLORADO & NEW MEXICO

Presumably idle. Letters unclaimed at former offices: 65 Journal Bldg., Boston, Mass., and Estey, Socorro Co., N. M., and White Pine, Gunnison Co., Colo. Geo. H. Cragin, pres.; Benj. F. Coburn, sec.-treas. and gen. mgr., at last accounts. Company was promoted apparently as successor of the Dividend Mining & Milling Co. There is said to be an issue of \$75,000 first-mortgage bonds, on the New Mexico property.

Lands, 9 claims, patented, 55 acres, known as the Morning Glim or Spar group, formerly held by the Spar Copper Mines & Tunnel Co., on Contact mountain, in the Tomichi district, Colo., said to have been bought for \$60,000 from the estate of Chas. L. Tutt. The Spar group, developed by tunnel, has about 2,200' of workings and is claimed to have produced upwards of \$75,000 worth of ore in the past. The Spar group has a small gasoline plant.

UNITED M., M. & COPPER SM. CO. MARYLAND & PENNSYLVANIA

Office: Frederick, Md. Mines at New London, Md., and Charmian, Pa. Thos. A. Dunshee, gen. mgr.; Henry Johnson, supt. Organized 1913, under laws of New Jersey, capitalization \$2,000,000, as a merger of the Eagle Metallic Copper Co. and the Linganore Copper Co.

Lands, 806 acres, in 2 groups, include the Dolly Hyde, New London and Eagle mines, on the Western Maryland and Baltimore & Ohio railroads.

The Dolly Hyde mine, 220 acres, was for many years the principal copper property of Maryland, though never a large producer. The mine has contact deposits in dolomite and phyllite, carrying a little malachite in the upper workings, succeeded at shallow depth by bornite and chalcopyrite in white marble. This mine is idle, but was being prepared for production, late 1913.

The New London or Linganore mine, 86 acres, with 14 acres of timber land, was opened and worked 1835-55, apparently at a profit, and was idle after 1881, until reopened, May, 1907, but is again idle. The property has two 4 to 5' fissure veins in slate, with N.-E. strike, carrying bornite and gray copper, estimated to average 3% copper and 16 oz. silver per ton, with a trace of gold. Development is by a 250' shaft, planned to be deepened to 500', and 4 tunnels, longest 340', with a total of 1,095' of workings, estimated to block out 17,307 tons of ore for stoping.

The New London mine has a 65-h. p. steam plant, with a 35-h. p. hoist, good for 500' depth, and an 8-drill Sullivan air compressor. There are 12 buildings, including a 24x36' machine shop, 20x24' smithy, 20x28' carpenter shop, office, engine house, saw mill and 6 dwellings.

The mill is 44x54' with a 26x76' concentrating room, equipped with a 125-h. p. steam plant, 15x30" Cresson crusher, of 100 tons daily capacity, 4 sets of rolls, 1 Richards jig, 5 James tables, 5 trommels, screens, settling tanks, etc. This mill proving inadequate, a new plant 40x25' in size, consisting of a ball mill and slime tables, was installed 1911, to treat the fines of the older mill.

The Eagle mine comprises 500 acres near Charmian, including an old copper mine, never successfully worked. Property shows a mineralized zone of 400' average width, carrying native copper, chalcocite, bornite, chalcopyrite and tetrahedrite, averaging about 2 oz. silver per ton, with traces of gold. Mine has a 480' shaft at 40° incline, in ore from surface, giving assays up to 6% copper, but is worked opencast.

Equipment includes a 175-ton smelter and 150-h. p. steam plant.

UNITED SMELTERS, RAILWAY & COPPER CO. WYOMING

Office: Cleveland, Ohio. Mine office: Rudefeha, Carbon Co., Wyo. Works office: Encampment, Carbon Co., Wyo. Isaac N. Pennock, pres. and receiver; J. E. Haskell, vice-pres.; Willard Pennock, treas.; preceding officers, Warner Moore, A. L. Hawse, W. E. White, Eugene M. Cobb, F. A. Baldwin and Andrew S. Upson, directors, at last accounts. Organized Feb. 10, 1909, under laws of Wyoming, capitalization \$12,500,000, shares \$10 par, nonassessable, in \$2,500,000 noncumulative 7% preferred stock and \$10,000,000 common stock; issued \$8,190,000, at last accounts. Bonds, \$2,500,000 authorized, at 6%, for 20 years; issued \$2,100,000, of which apparently \$1,600,000 remain outstanding. This bond issue was put out Jan. 1, 1909, by the Penn-Wyoming Copper Co. The preferred stock was provided, ostensibly for the purpose of taking up the bond issue at any time during the life of the bonds, or at the option of the bondholders. On Nov. 5, 1909, the United Smelters, Railway & Copper Co. was claimed to hold more than 91% of the outstanding stock of the Penn-Wyoming Copper Co. Cleveland Trust Co., registrar.

The property claimed by this company is described under the title of the Penn-Wyoming Copper Co., which apparently was the legal owner, and full particulars regarding the entire chain of promotions, including this company, are given in Vol. X, under Penn-Wyoming Copper Co. This company was claimed, March, 1909, to have a working capital of \$250,000 in its treasury, but went into bankruptcy later. President Pennock sent out notice of what was practically a 5% assessment, June, 1910, ostensibly to protect the property from foreclosure by bondholders, and an attempt to foreclose was made by the bondholders, who apparently are mainly insiders of this corporation.

UNITED SMELTING & REFINING CO. MONTANA

Is controlled through stock ownership by the American Smelting & Refining Co. Property, the East Helena and the Great Falls smelters, Mont., the latter idle for many years.

UNITED STATES COPPER CO. NEW MEXICO

Office and mine: Hanover, Grant Co., N. M. J. W. McAlpine, pres., treas. and gen. mgr.; John Orelbeke, first vice-pres.; F. C. Bell, second vice-pres. and supt.; N. A. Karsten, sec.; J. T. James, cons. engr.; Vere Leasure, chemist-assayer. Organized May 1, 1911, under laws of New Mexico, as a reconstruction of the Philadelphia Copper Mines Co., capitalization \$500,000, shares \$1 par, nonassessable; issued \$185,000.

Lands, 5 claims, 3 fractional, surveyed for patent, about 60 acres, partly timbered, in the Central district, near Hanover, showing a contact vein between limestone and granite-porphry, with a strike of N. 36° E., and practically vertical dip. The ore estimated by the management at 150'

width, carries chalcopryite, with some bornite and occasional chalcocite, said to average 6% copper, 4 oz. silver and \$3 gold per ton. Selected surface ores have given assays of about 2% copper, 2 oz. silver and \$28.50 gold per ton. The mine, opened 1881, shipped some good ore, and is said to have paid its way in the past, under various ownerships. Development is by trenches and shafts of 180', 265', 65' and 35', with tunnels of 210', 480' and 60', all in ore. There are 1,655' of workings, estimated by the management to show 5,000 tons of ore blocked out for stoping.

Equipment includes a steam plant with two 100-h. p. Freeman tubular boilers, 2 hoists, and a 10-drill Ingersoll-Rand No. 10 Imperial air compressor. There are 10 buildings, including a warehouse and office.

UNITED STATES COPPER-GOLD CO.

WASHINGTON

Office: Chewelah, Stevens Co., Wash. H. W. Brooks, pres.; H. T. Spedden, sec.; C. M. Grove, treas., at last accounts. Owns sundry claims, slightly developed. No trace of recent operations, and presumably defunct.

UNITED STATES METALS REFINING CO.

NEW JERSEY

Office: 42 Broadway, New York. Works office: Chrome, Middlesex Co., N. J., and Grasselli, Lake Co., Ind. Wm. G. Sharp, pres.; L. Vogelstein, vice-pres.; F. Y. Robertson, vice-pres. and gen. mgr.; E. J. Hothorn, sec.; F. W. Batchelder, treas.; preceding officers, Chas. G. Rice, A. F. Holden and A. G. Todd, directors; Lawrence Addicks, supt. Chrome works; Wm. Thum, supt. Grasselli works.

Organized Nov., 1903, under laws of New Jersey, and reorganized Oct. 15, 1906, capitalization \$4,000,000, shares \$100 par, half in 7% cumulative preferred and half in common shares; issued \$3,100,000, half preferred and half common stock. Is controlled, jointly, through stock ownership, by the United States Smelting, Refining & Mining Co., and Aaron Hirsch & Sohn, of Halberstadt, Germany. Annual meeting, second Tuesday in May.

The Chrome works, which have had to be enlarged nearly every year since they were first built, include a complete smelting and converting plant for the treatment of ores, concentrates and mattes, with smelting capacity of 15,000 to 18,000 tons a month, converting capacity of 3,500,000 to 4,000,000 lbs. of blister a month, and an electrolytic refinery with a capacity of from 15,000,000 to 18,000,000 lbs. a month.

The smeltery has two 42x180" blast furnaces, two 84x120" basic-lined converters and one 60x6' rotary kiln for sintering fine material. The smeltery is further equipped with a 500' steamship dock, with berth for 2 steamers, the most modern type of Fairbanks scales, having a sensitiveness of 10 lbs. on a load of 100,000 lbs., and a very complete automatic sampling mill, equipped with Brunton samplers.

The refinery has one 225-ton and two 175-ton anode furnaces and two 225-ton wire-bar furnaces, equipped with charging cranes, casting wheels, waste heat boilers and the most modern devices for mechanical handling. The tank house has 896 tanks arranged on the Walker system.

The power house is steam-driven and arranged for highest economy with economizer and superheater equipment, 3 compound condensing units and 1 triple expansion unit, using an exhaust steam turbine for the third expansion. Current is generated at the rate of 11,500 amperes, but changes are now under way to raise this to 13,000 amperes. Three circuits are carried in the tank house with a voltage of 115 volts each, 1 power unit being carried in reserve.

The anode slimes are refined by the usual processes, the doré bullion produced being parted electrolytically. Some of the rarer elements are recovered as byproducts.

The Grasselli plant, consisting of a 75-ton electrolytic lead refinery, at

Grasselli, a suburb of Chicago, was the first electrolytic lead refinery in the United States.

The plants of the United States Metals Refining Co. are strictly modern in design and equipment and are noted for the technical excellence of their practice and the purity of their commercial products.

UNITED STATES & MEXICAN MINING CO.

MEXICO

Letter unclaimed at former office: 42 Murray St., New York. Mine office: Hostotipaquillo, Jalisco, Mex. Isaac P. Martin, manager, at last accounts. Lands include the Trinidad and Guadalupe mines, carrying auriferous and argentiferous copper and lead sulphides. Has water power. Presumably idle.

UNITED STATES MINING CO.

COLORADO & WYOMING

Office: 37 Wall St., New York. Henry T. Clarke, Jr., pres.; John T. Clarke, vice-pres. and treas. Capitalization \$1,500,000, shares \$10 par, in \$500,000 preferred and \$1,000,000 common shares. Is a securities-holding corporation only, controlling a majority of the outstanding stock issue of the Doane Verde Mining Co., and share interests in the Battle Lake Tunnel Site Mining Co., Penn-Wyoming Copper Co. and Newsboy Mining & Milling Co., all defunct, and also owns an interest in a tract of mineral land near the Reindeer, Bessie Wilgus and Coon Valley mines, at Leadville. Lake Co., Colo.

UNITED STATES MINING CO.

UTAH

Office: 55 Congress St., Boston, Mass. Operating office: 920 Newhouse Bldg., Salt Lake City, Utah. Mine offices: Bingham Canyon, Salt Lake Co., Utah, and Eureka, Juab Co., Utah. Wm. G. Sharp, pres.; C. G. Rice, vice-pres.; Frederick Lyon, vice-pres. in charge of operations; F. Winthrop Batchelder, sec.-treas.; Albert F. Holden, managing director; preceding officers, E. L. Carpenter, B. Preston Clark, J. J. Storrow and Sidney W. Winslow, directors; Hon. Clarence E. Allen, mgr. of mines; C. F. Moore, cons. engr.

Organized 1899, and reorganized 1901, under laws of Maine, capitalization \$15,000,000, shares \$25 par. Is controlled, through ownership of 99% of stock issue, by United States Smelting, Refining & Mining Co., stock control having been obtained through exchange of shares, with a cash bonus paid to the United States Mining Co. Controls the United States Smelting Co., the Centennial-Eureka Mining Co., Niagara Mining Co. and owns a half interest in the International Metals Selling Co. National Shawmut Bank, Boston, registrar. Annual meeting, in October.

The properties at Bingham include the Old Jordan, Telegraph, Commercial, Galena and adjoining claims.

The Old Jordan and Telegraph mines were silver properties originally, opened on a fissure vein of silver-lead ore, crossing the big sulphide copper dike from which production has been secured latterly. The Old Jordan group has about 5 miles of workings, developing a large amount of ore. Copper ores range from 1.5 to 8% copper, 2 to 5 oz. silver and \$1 to \$2.50 gold per ton.

The Galena mine, reopened 1905, is said to have produced upwards of \$1,000,000 worth of ore, under previous ownership, with average smelter returns of 20% lead, 25 oz. silver and up to \$10 gold per ton. The mine carries low-grade copper values, in addition to auriferous silver-lead ores, with a productive capacity of about 400 tons daily.

The Centennial-Eureka mine, in the Tintic district, is described under the title of its owner, the Centennial-Eureka Mining Co.

In addition to its metalliferous mines, the United States Mining Co. owns iron mines and a large limestone quarry, supplying flux, and has coal

mines, with a coking plant in connection. The advantages pertaining to control and ownership of ores, fluxes, fuel and smelter, under a single management, are very great.

Smelting is done by the United States Smelting Co., a subsidiary corporation, the smelter being described under title of its owner. Further details regarding closely related interests will be found in the descriptions of the United States Smelting Co. and United States Smelting, Refining & Mining Co.

UNITED STATES MODERN MINING CO.

WASHINGTON

Office: Bellingham, Wash. Letter unclaimed at former mine office. Glacier, Whatcom Co., Wash. Lands, 5 miles from Shuksan and 19 miles W. of Glacier, on the headwaters of the Nooksack river, show contact deposits, between granite-porphry and slate, of which 1 vein of 25' reported average width carries ore giving good assay values in copper, zinc, silver and gold. The mine has about 150' of tunnels. Idle several years and apparently dead.

UNITED STATES SMELTING CO.

UTAH

Office: 55 Congress St., Boston, Mass. Operating office: 920 New-house Bldg., Salt Lake City, Utah. Works office: Midvale, Salt Lake Co., Utah. Wm. G. Sharp, pres.; C. G. Rice, vice-pres.; Albert F. Holden, managing director; preceding officers, S. W. Winslow, B. Preston Clark, E. L. Carpenter and J. J. Storrow, directors; F. W. Batchelder, sec.-treas.; Geo. W. Heintz, gen. mgr.; L. D. Anderson, smelter supt. Is controlled, through ownership of entire capital stock issue, by the United States Mining Co., which in turn is controlled by the United States Smelting, Refining & Mining Co.

Lands are a smelter site of 150 acres, near the former sites of the Utah Consolidated and Bingham smelters, 12 miles from Salt Lake City and about 80 miles from the Tintic camp, on the bank of the Jordan river. The works include a sampling mill, lead concentrator and electrostatic plant for the separation of zinc and iron from lead ores, a lead smelter, an arsenic plant, a baghouse, and a calcining plant, also a copper smelter now idle. The company owns its own limestone quarries at Toplift.

The sampling mill has a 10x20" Blake crusher, a Gates gyratory crusher, a set of Davis rolls, a set of Colorado Iron Works rolls, and a Synder sampler, giving a final sample of 1 part in 720.

The concentrator, 350 tons daily capacity, is on the bank of the Jordan river, about one-half mile S. W. of the smelter. Equipment includes a Blake crusher, Allis-Chalmers rolls, a Denver Engineering Works tube mill, Hartz jigs, Overstrom and Wilfley tables, Sherman slimers, Callow tanks, trommels, elevators and centrifugal pumps. Water is taken from the Jordan river, by gravity, through a 7-mile canal. Concentration is about 2 into 1, with an extraction of 92 to 95% of the lead and zinc, 85 to 90% of the gold and silver, and 80% of the copper, by assay values.

The electrostatic mill treats zinc middlings made by wet concentration. This mill, of 75 tons daily capacity, is 40x40' in size and 3 stories high, adjoining the concentrator. Zinc middlings go to a dryer-bin in the top story, dropping thence to 2 Bartlett & Snow dryers, of 50 tons capacity, consisting of 9x7x22' and 11x7x20' chambers. From the drying chambers middlings go to 9 roughing jigs on the third floor, and 12 finishing jigs on the second floor, and are screened through trommels of 16, 40, 60 and 90 mesh, passing to rolls and going thence to Huff separators, of which there are 15, made in sections, each 6' 6" long, 18" wide and 24" high, each containing 2 electrodes. The electric generating apparatus is contained in a room on the second floor.

The smelter has a lead and a copper department of about 1,200 tons daily capacity each. The copper smelter, idle for several years, has six 200-ton water-jacket blast furnaces, and a 125-ton reverberatory furnace. Pyritic smelting, employed originally, was abandoned. The converter department of the copper smelter has 2 stands, with an electric traveling crane and silica mill, and the works include a briquetting plant for fines. The smelter has a 300' steel stack, connected with the furnaces by flue, with separate brick flues leading to a baghouse.

The lead smelter has six 200-ton blast furnaces, each having 2 water-jackets on each side, and 1 on each end, with ten $3\frac{1}{2}$ " tuyeres on each side, the furnaces being 48x160" at the tuyeres, widening to 132x160" in the shaft. The crucible is elliptical, firmly braced by four 5" I-beams, stayed with $2\frac{1}{2}$ " bolts. Lead matte is tapped to shallow circular moulds, in which anchors are placed, for imbedding in the cast matte, for handling by a monorail crane, running to the end of the building, where matte is broken by sledging and sent to the calcining department. Slag is tapped to the forehearth, which have hoods for the fumes, through a pipe, and slag runs into cars hauled by electric locomotives for transportation to the dump. Slag cars are tapped through a hole 8" above the bottom and buttons and shells carrying 0.6 to 0.9% lead are returned to the blast furnace bins for resmelting. Fumes discharge from each furnace through a 3x6' downtake, to a 15x180' balloon flue leading to a rectangular brick flue chamber, with hopper bottom, terminating in the fan house.

The matte, assaying 7 to 10% copper, 12 to 15% lead, 3 to 4% zinc, 21 to 23% iron and 21 to 23% sulphur, is taken to the roaster plant, which has 2 Wedge roasters, and after roasting is taken to the sulphide mill, which has a 20x10" Blake crusher, rolls, elevators and trommels, driven by a 50-h. p. 440-volt General Electric induction motor. The crushed matte from the sulphide mill then goes to a 30-ton reverberatory furnace, 8x12x20' in size, treating crushed matte of about 40% copper tenor, and making white metal of about 80% copper tenor, sent to the United States Metals Refining Co., at Chrome, N. J., for conversion. Lead is drawn off through an Arents siphon, to pots, and wheeled to the bullion house, where it is dumped into 3 melting kettles, set in a brick furnace. The molten lead yields first a dry dross, consisting mostly of copper, which is skimmed off, and, after the temperature is lowered a wet dross of antimony and arsenic is skimmed, this being sent to a sweating furnace and the lead sweated out as far as possible. The residue are sent to the blast furnaces. After skimming and sweating, the lead is drawn from the melting pots through iron siphon pipes and cast into anodes, which are sent to the Grasselli works of the United States Metals Refining Co., for electrolytic refining.

The lead plant includes 26 converter roasters and 4 Dwight sintering machines, adapted to raw ores. Each converter roaster consists of a 3x6x6' brick-lined square shell, with a 3' hood, and a bottom of grate bars, through which a 9-oz. blast is blown. Charges require about 12 hours' treatment, and sinter to a solid cake, which is discharged by a ram, like coke from a byproduct oven, after which the sinter cakes are broken in a Blake crusher and crushed material is conveyed automatically to steel cars, going thence to bins in the furnace house where mixed with charges for the blast furnaces.

The brick baghouse is 60x283' in ground section, and 58' high, with 2 floors, 1 a basement and the other the thimble floor, divided into 8 compartments, 3 for roast gases and 5 for blast furnace fumes. The floor is of steel, underneath which is a 12' basement, with 8 cellars, each divided into 3 sections. There are 2 fans, driven by a 100-h. p. electric motor, draw-

ing smoke and fumes from all parts of the works. The gases, having an initial temperature of 300° C., are cooled by passing through 3 series of steel tubes, from one brick chamber to another, 10 tubes, each 2' in diameter and 20' long, connecting each chamber, the gases finally going through a pipe 30' long and 6' in diameter into the baghouse. Each of the 5 blast-furnace bays has 416 bags and each of the 3 roaster bays has 420 bags, each bag being 18" in diameter and 32' 6" long, woolen bags being used for roast gases, and canvas bags for the blast-furnace gases. The bags are hung vertically with metal thimbles at top and bottom, the upper ends being closed and lower ends opening into the dust cellars, the floor of the baghouse above the basement having 18" circular holes with thimbles 6" high and 18" in diameter, extending upward from each hole, over which the feet of the bags are slipped. Apparently the bags wear for a long time. Gases, after leaving the baghouse, contain less than 0.75%, by volume, of sulphurous fumes, this amount being the maximum permitted by the courts. Each blast-furnace bay has a separate stack, 6x100' in size, and the gases from the 3 roaster bays discharge through a steel stack 235' high and 16' 6" in diameter.

The baghouse saves considerable zinc, lead and silver, previously lost through volatilization. The dust from the bags returns about 30% lead, with a heavy proportion of arsenic. Patents have been issued in connection with a new process providing for the neutralization of sulphurous gases with zinc oxide, to form zinc sulphate, which is retained in the baghouse, the reaction taking place in the flues while the fumes pass to the baghouse at a temperature a little higher than 100° C. The baghouse produces zinc oxide from crude zinc sulphide and other materials not yet disclosed, which is mixed with 50%, by weight, of crushed coke, dampened and fed upon the grates of a battery of 5 small furnaces, each about 15' long and 3' wide, with party walls, the mixture being maintained at a thickness of about 12" upon the grates, each furnace having a capacity of 5 tons daily.

The arsenic plant, installed 1909, is very complete. The dust collected on the basement floor of the baghouse, from blast-furnace fumes, is taken in 5-ton motor cars to the arsenic plant and dumped into storage bins. From these bins it is carried by handcars to charge hoppers feeding 2 Brunton arsenic furnaces, of 16 tons daily capacity respectively, yielding about 2 tons of finished product daily. The charge hoppers are kept continually full to prevent air entering the furnace, each hopper having a steel rod with revolving vanes, keeping the charge loosened so it flows freely, regulation being effected by raising or lowering the cast-iron sleeve connecting the spout of the hopper with the furnaces. Each furnace is circular built of fire brick, with a sheathing of 3/16" steel, 14' 6" in diameter and 3' high, with a 9" crowned roof at the center. Each furnace has a revolving hearth, of 14' diameter, actuated by a 5" spindle, on which is mounted a 66" gear wheel, driven by a 12" gear connected with a worm on the shaft, which is belted to a 5-h. p. motor, 1 motor driving both furnaces, a clutch on the 66" gear allowing individual control. A period of 5 minutes 17 seconds is required for one revolution, at which speed 10 to 12 hours are required to work the charge from the center of the hearth, where received, to the edge. The hearth is supported by 8 circular angle irons, on which is laid a 2" course of fire brick, surmounted by 1" of cement, forming the surface of the hearth. Further support is given by 12 radial steel arms. The furnace temperature is about 900° F., which volatilizes the arsenic, but not the lead, and the byproduct remaining after the arsenic has been driven off discharges at the back of each furnace by a cut in the wall, with an 8x12" steel overflow

pipe, on a level with the hearth, leading to steel hopper having a cylindrical discharge opening closed by a gate.

Fumes leave the furnace at a temperature of 900° F., and pass to the condensing chambers, recording thermometers being placed along the walls of the chambers, the temperature decreasing to only about 80° F. in the last bay, but the operation of the furnaces is governed more by deposition of arsenic in the chambers than by temperature. The condensing chamber is double, 200' long, 20' wide, with height of 10' for the first 50' of length, and is 8' high for the remaining distance of 150'. Each side is divided, by baffle walls, into 25 bays, so arranged that the fumes are compelled to take a zigzag course in passing through the chamber, each alternate bay having a 3x5' door. Fumes from the condensing chambers are drawn off by a 4' Sturtevant fan, driven by a 10-h. p. motor, and discharged to a chamber at the end having 9 woolen bags, 18" in diameter and 22 to 28' long, bags being shaken down once a shift, a fan and bag equipment being provided for the crude chambers and also for the refined chambers.

The crude product carries 97 to 99% arsenious trioxide, which is removed through the doors, and sent, in buggies, over a monorail crane, to the refining furnace, where charged direct into three 30x66" steel hoppers, in the top of the refining furnace, which is 6x15x25' in size, of ordinary reverberatory type, having a fire-brick lining with 2 fireboxes, each 31x54". Access to the interior of the refining furnace is through three 9x15" doors on each side and a temperature of about 700° F. is maintained. The capacity of the refining furnace being 15 tons daily, and output of crude arsenic being only about 2 tons daily, from each Brunton furnace, the refining furnace is worked only part time. The product of the refining furnace is crystalline arsenious trioxide of 99.87% average tenor, which is sent to a 3' buhr-mill, ground and packed for shipment. The grinding is done in a small room, tightly closed, and connected with an exhaust fan discharging to the crude condensing chamber, so that no arsenic may escape into the air. Workmen about the arsenic plant wear a one-piece suit of overalls, with a hood, furnished by the company, and also wear respirators, when entering the chambers, or otherwise coming in contact with the arsenic. All employes of the arsenic plant are required to take a bath and make a complete change of clothing when going off shift.

The power plant includes steam and electric installations. There are two 400-h. p. Stirling water-tube boilers, generating steam at 140 lbs. pressure, fed by American automatic stokers, with draft induced by a National centrifugal blower, discharging to a 150' steel stack. Electric current, taken from the hydro-electric plant of the Mill Creek Power Co., 10 miles distant, is received at 45,000 volts, and stepped down to 480 volts in three 300-kw. transformers. The current for the concentrator is stepped up to 1,440 volts for transmission and again stepped down at the mill to 480 volts, by a 200-kw. transformer, the power plant at the concentrator including two 75-h. p., one 30-h. p., one 50-h. p., and one 25-h. p. Westinghouse 3-phase 60-cycle 440-volt induction motors. The main power plant includes a 750-h. p. General Electric steam turbine, a 200-h. p. General Electric induction motor, belted to a 150-kw. continuous-current generator; 3 Nordberg tandem-compound Corliss engines, direct-connected to Connersville blowers; one 16x24x36" Nordberg cross-compound Corliss engine, tandem-connected to a 16x30x40" air compressor, having a capacity of 9,000 cu. ft. of free air per minute, compressed to 95 lbs. working pressure, for operating the air-lift pumps, sampling mill, forges and various pneumatic machinery. There is also an electric light plant. Company employs about 600 men.

Further particulars in connection with this company will be found in the description of the United States Smelting, Refining & Mining Co.

UNITED STATES SM., REF. & MG. CO. UNITED STATES & MEXICO

Office: 55 Congress St., Boston, Mass. Sales office: 42 Broadway, New York. American operating office: 920 Newhouse Bldg., Salt Lake City, Utah. Mexican general office: 11 San Bernardo, Mexico, D. F. Wm. G. Sharp, pres.; Chas. G. Rice, vice-pres.; Albert F. Holden, managing director; and B. Preston Clark, Jas. J. Storrow, Sidney W. Winslow, executive committee; Frederick Lyon, vice-pres., in charge of operation; Sidney J. Jennings, vice-pres., in charge of exploration and mining investments; preceding officers, Robt. S. Bradley, Stephen L. Bartlett, Robt. J. Edwards, Galen L. Stone, John W. Weeks, Chas. F. Brooker, Robt. Treat Paine, 2d., Andrew Preston, Frederick Ayer, C. A. Hight, Edw. B. Bayley, S. W. Winslow, Jr., and David A. Ritchie, directors; F. W. Batchelder, sec.-treas.; M. F. Kennedy, asst. to the pres.; John Laurie, comptroller; Carl F. Moore, chief engr.; A. P. Andersen, field engr.; Geo. W. Heintz, traffic mgr. and gen. mgr. United States Smelting Co.; J. H. Horlick, mercantile mgr.

Organized Jan. 10, 1906, under laws of Maine, capitalization \$75,000,000, shares \$50 par, in \$37,500,000 of 7% preferred cumulative stock and \$37,500,000 common stock; issued, \$24,316,000 preferred and \$17,555,250 common stock, March, 1913. The company had 9,131 shareholders Jan. 15, 1912, and had 8,245 holders of preferred shares and 2,557 holders of common shares, March 20, 1913. National Shawmut Bank, Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Annual meeting, in May.

The company ended 1907 with an available surplus of \$4,067,087, which was cut down through adding \$733,255 to reserve, and by various other deductions, to a net surplus of \$557,003. The balance sheet of Dec. 31, 1909, gave current assets of \$11,419,214 and current liabilities of \$5,718,191, leaving an excess of current assets over current liabilities of \$5,638,022, and the company ended 1912 with excess of current assets of \$9,013,408, and surplus of \$3,648,722. Net earnings were \$3,504,522 in 1906; \$2,386,539 in 1907; net earnings of \$3,535,556, with deduction of \$517,609 for depreciation, reserves and general expenses, leaving a net profit of \$3,017,947 in 1908; net earnings of \$4,155,012, less deductions of \$1,018,652, leaving a net profit of \$3,136,360 in 1909; net earnings of \$3,738,540, and net profit, after deductions, of \$2,484,318 in 1910; net earnings of \$3,961,102 and net profit, after deductions, of \$2,840,412 in 1911; net earnings of \$5,497,965 and net profit of \$4,232,965 in 1912.

The company's dividend rate is 7% on preferred stock, payable in quarterly dividends of $1\frac{3}{4}\%$, January, April, July and October, first dividend having been paid April 15, 1906. Dividends on the common stock, begun 1907, are 6% yearly, in quarterly dividends of $1\frac{1}{2}\%$, giving dividend requirements for both preferred and common shares of \$2,755,000, yearly. Dividends were \$1,700,963 on preferred and \$701,961 on common shares in 1909; \$1,701,700 and \$703,100 in 1910; \$1,702,120 and \$702,209 in 1911; \$1,702,120 and \$877,762 in 1912, making a grand total of \$16,471,458 paid to end of 1912.

Company is a securities-holding corporation only, controlling, through practically entire stock ownership, the United States Mining Co., United States Smelting Co., Mammoth Copper Mining Co., Needles Mining & Smelting Co., United States Store Co., United States Lime Co., Gold Road Mines Co., and United States Smelting, Refining & Mining Exploration Co. The company also controls, through ownership of a large majority of stock, the Centennial-Eureka Mining Co. and Bullion-Beck & Champion Mining Co., and owns a majority of both preferred and common stock issue of the

American Exploration Co. The company controls, through practically entire stock ownership, the Compañía Minera Real del Monto y Pachuca of Mexico, which property was bought for 3,800,000 pesos; owns a half interest in the United States Metals Refining Co., the other half being owned by Aron Hirsch & Sohn, of Halberstadt, Germany; has a large interest in the International Metals Selling Co., and owns a majority interest in the shares of the Richmond-Eureka Mining Co. The company also owns the Last Chance mine of 14 patented claims, purchased 1913, of the Consolidated Nevada-Utah Corporation for a sum said to be \$100,000, and late 1913, took an option running to March, 1915, on the Ebner group, in Alaska, on which the company has agreed to spend \$200,000 in development work. The various subsidiary corporations are described separately, under their respective titles. Control of the United States Mining Co. was secured by exchanging stock, three-fourths in preferred and one-fourth in common shares of the United States Smelting, Refining & Mining Co. having been given, share for share, plus \$1 per share cash bonus, for each share of United States Mining Co. The company is said to own or control 82 different mines in Mexico, and is popularly credited with planning the location of a smelter on Puget sound.

Production, including the outputs of all subsidiary corporations and metals from custom ores treated, has been as follows:

Year.	Lbs. copper.	Lbs. lead.	Oz. silver.	Oz. gold.
1906.....	33,856,287	27,828,644	4,852,292	162,537
1907.....	38,518,378	53,617,324	6,739,269	235,822
1908.....	32,803,603	27,304,347	8,340,566	128,208
1909.....	36,672,606	41,627,995	9,637,119	128,393
1910.....	28,430,425	51,450,985	10,776,465	113,246
1911.....	22,199,141	49,022,791	10,285,150	118,703
1912.....	21,152,620	56,385,769	12,059,829	140,183

UNITED TINTIC MINES CO.

UTAH

Office: Atlas Blk., Salt Lake City, Utah. Mine office: Silver City, Juab Co., Utah. B. H. Bullock, pres.; H. J. Fitzgerald, sec.-treas.; F. H. Bemis, mgr.; preceding officers, A. Starrh, I. A. Smoot and J. I. Bullock, directors; Elmer Duncan, supt.

Organized, 1911, as a consolidation of the Tintic Empire, Tintic Combination and Bullock companies, capitalization \$1,000,000, shares 50 cts. par, assessable; issued 1,650,000 shares. An assessment of one-fourth cent per share was levied May, 1913. Stock listed on the Salt Lake Stock Exchange.

Lands, 28 claims, about 600 acres, in the Tintic district, near Eureka. The property shows 4 parallel veins in an ore zone, or channel, that lies E. of the Mammoth-Grand Central and the Centennial-Eureka ore zones. The claims are so located as to give approximately 2 miles on the strike of this vein system. Ores are copper, lead, silver and gold.

Development is principally on the Old Bullock property. The mine has shafts of 310', 215' and 102' and several old tunnels. The veins vary greatly in width, but are generally of small size, the Bullock vein, in which work has been centered, showing a maximum width of about 4'. The ore in this vein runs high in iron and carries about \$40 per ton in copper and silver. A test shipment of ore made early 1913, yielded 8.12% copper, 8% zinc, 27.8 oz. silver and \$1.10 gold per ton. The workings above the 210' level are under lease to O. J. Doyle.

Equipment includes a small steam plant with hoist.

UNITED VERDE COPPER CO.

ARIZONA

Office: 20 Exchange Place, New York. Mine office: Jerome, Yavapai

Co., Ariz. Wm. A. Clark, pres.; Jas. A. MacDonald, vice-pres.; J. H. Anderson, sec.; H. H. St. Clair, treas.; Chas. W. Clark, gen. mgr.; officers are the directors; Will L. Clark, asst. mgr.; Robt. E. Tally, mine supt.; Thos. Taylor, smelter supt.; Clarence V. Hopkins, mg. engr.; Dave Hopkins, purch. agt.; A. L. Reese, chem.-assayer.

Organized 1883, under laws of New York and reorganized Sept., 2, 1899, under laws of West Virginia, capitalization \$3,000,000, shares \$10 par; fully issued and fully paid. Is practically a close corporation, having less than 20 shareholders, and is controlled, through stock ownership, by W. A. Clark. Stock transfers are noted only at rare intervals. Five hundred shares were sold at auction, March, 1910, for \$70 per share.

Gross sales of copper, silver and gold were \$5,368,672 in 1909, \$5,605,488 in 1910, \$4,736,834 in 1911, and \$5,899,457 in 1912. The company's investments on Dec. 31, 1912, were valued at \$1,726,394, compared with \$1,666,394 at end of 1911 and 1910 and \$1,422,441 at end of 1909. Cash on hand and in bank totaled \$158,423, Jan. 1, 1913.

Dividend payments were begun, 1892, by old company on the basis of 25 cts. per share monthly. Recent dividends have been as follows: \$2,005,000 in 1905, \$2,700,000 in 1906, \$2,700,000 in 1907, \$2,025,000 in 1908, \$2,700,000 in 1909, \$2,700,000 in 1910, \$2,250,000 in 1911, \$1,800,000 in 1912 and \$1,350,000 to Oct. 1, 1913, a grand total of \$32,797,000.

Lands, 13 claims, patented, 230 acres, with sundry adjoining property, including the North Venture and South Venture claims, which have produced a little high-grade ore, in the Verde district of the Black Hills range, at an average elevation of 5,600' above sea level, and about 1,800' above the valley of the Verde river. The property shows porphyritic rocks, slate and schist, the mine being in a zone of slates and intrusive dioritic rocks, the neighboring limestone being superimposed unconformably and apparently having no genetic connection with the ore deposits. Company also owns the Copper Giant mine, near Hackberry, acquired 1913, and described elsewhere under that title.

The mine is opened on a single large deposit of sulphide ore, in slate that is considered a sheared diorite, about 600' in extreme width and 1,900' length, proven to depth of 1,500'. The orebody consists of more or less irregular masses, in a much broken and disturbed area, the ore shoot having a dip of 72° and containing a 70' quartzite dike that carries about 1% copper and from 0.25 to 0.75 oz. gold per ton, this quartzite being used for converter linings. The gossan outcrop, originally carrying auriferous and argentiferous oxidized ores to a depth of about 160', has been worked out. The zone of secondary enrichment carries mainly chalcocite, with some covellite, and other secondary copper ores, all highly argentiferous. The primary zone carries mainly chalcopyrite, with a little bornite. No ore assortment is attempted, and no concentration is made, everything from the mine going to the furnaces, the average of ore from all openings formerly being about 6.5% copper and 15 to 32% sulphur, with considerable gold and silver values, but the ore mined now is by no means so rich as formerly.

Underground openings are very extensive, with enormous ore reserves, estimated in the papers to amount to 20,000,000 tons, which is probably high. The mine is developed to a depth of 1,500', but production is mainly from the 6th and lower levels. The older portions of the mine are worked pillar-and-stall and timbered with square sets, filled with waste, worked-out stopes being filled with culls, and occasionally with barren rock blasted from the mountainside above the mine and milled into abandoned stopes.

The oxidized zone has been mined by open cut and by the milling system. In the newer workings, and parts of the old mine where the ground will permit, bottom slicing and a modification of the shrinkage system is used.

Development is by No. 3 shaft, 1,500' deep with 12 levels, and No. 4 shaft of 500'. Shafts Nos. 1 and 2 are abandoned. There was also tunnels of 800', 2,640' and 6,593', with electric haulage. No. 3, the main shaft, has 3 compartments and was located 900' from the old main shaft, expecting to sink in country rock throughout, but it cut ore at 600' in depth, considerably extending the known ore limits of the mine. The main shaft has 2 double-deck cages, operated in counterbalance. No. 4 shaft has 2 compartments and is only used for hoisting oxidized ore and ore from the fire zone. The 6,593' drainage tunnel was begun Dec. 23, 1906, and completed Sept. 10, 1908, being driven from both ends in less than 21 months. The tunnel runs from the Verde valley to the 1,000' or bottom level of the mine, draining the entire workings. It is 7x9' in the clear with a 2x2' water conduit underneath, and will eventually become the main haulage level.

The ore is very easily oxidizable, owing to its high sulphur tenor, and is therefore liable to spontaneous combustion, while, owing to the more or less shattered condition of the orebody, it is difficult to entirely prevent the access of air, very little of which will keep a sulphur fire burning incessantly. A serious fire, in Aug., 1902, caused a total suspension of mining, but was controlled by filling the mine with carbonic acid gas, made from crushed limestone and diluted sulphuric acid, the gas passing by natural pressure into the top of the shaft, falling by gravity to the bottom of the mine, and displacing the lighter air. The fire on the 400' level has been burning since 1897, and the mine is on fire in various places, from the 7th level to surface, fire in stopes not worked being walled off by cement bulkheads having steel gates. Mining has been in progress for several years, in the fire zone, under the Plenum system, introduced by J. J. Shaw. By this method, air under pressure is blown against the face of the stopes by electric fans. The air feeds the fire, which is a smouldering one, but drives back the deadly fumes into the shattered rock mass and permits the extraction of ore. The fire, while dangerous and annoying, does not destroy the copper, all of which will be recovered eventually, by mining or leaching.

The mine is subject to bad caves, 1 of which carried down the office building and killed a number of employees some years ago. Owing to fires and caves, the shafts sunk in ore were abandoned and new shafts sunk in the country rock.

The surface plant is located on top of the mine, the precipitous walls of the canyon rendering such a location obligatory, when the mine was opened. Equipment includes a steam plant of about 2,600 h. p., with 2 powerful hoists, and a compound air compressor of 6,000 cu. ft capacity per minute, having steam cylinders of 28" and 52", with 48" stroke and air cylinders of 24" and 44". There is an electric generator direct-connected to a 250-h. p. engine, and electric current is taken from the Arizona Power Co. Fuel is coke, costing \$12.75 per ton for the smelter, and coal and petroleum are used for steaming purposes, there being a 500,000-gal. tank at Jerome Junction, and a 175,000-gal. tank at the mine, for oil storage.

Water is received through 2 miles of 10" pipe from the Walnut Springs dam, but the supply is somewhat scanty.

The precipitation plant was removed to the mouth of the drainage tunnel, the plant consisting of a flume one-half mile long, 5' wide and 10" deep, with a grade of 0.8%, having settling tanks 120' apart, copper being precipitated from the mine water on scrap iron.

The old smelter, built on the hanging-wall side of the mine and too

close to the orebody, has had considerable trouble from caving ground. Present equipment includes 6 water-jacket blast furnaces, 4 handling 500 tons daily and 2 of 48x240" and about 700 tons capacity. There also is a Knudsen furnace of 175 tons daily capacity, operated on the Knudsen discontinuous semi-pyritic process of smelting, for treating ores carrying under 5% copper, but rich in sulphur. The smelter stack has a screen top, to catch the flue dust, which carries high values in gold and silver. Furnace blast is furnished by blowers with a capacity of 20,000 cu. ft. of air per minute at 16-oz. pressure.

The converter room has 8 stands, with 15 shells, and two 50-ton traveling cranes. Converter blast is furnished by 2 Diesel oil engines of 350 and 450 h. p. The product of the converters is shipped East for refining, where gold and silver are parted electrolytically, and the copper is used for wire by the Waclark Wire Works Co., at Elizabeth, N. J.

A new, 3,000-ton smelter is now under construction at Clarkdale, about 6 miles from the mine. The new plant is equipped with 4 blast furnaces and 4 stands of converters, using basic lining. Three of the furnaces are 48x240" and 1 is 56x180", and all have Giroux hot-blast tops, taking blast at from 26 to 28 oz. pressure and heating to 200° F. The larger furnaces have forty 5" tuyeres, each receiving about 33,000 cu. ft. of air per minute. Additional equipment includes 6 Wedge roasting furnaces, 3 reverberatories, each 19x100', 1 Southwick compound blowing engine, 1 Rateau-Smoot steam turbo blower, 1 Diesel double-unit 6-cylinder oil engine and 3 Root blowers. The plant is expected to be in commission about July, 1914.

The United Verde & Pacific railway, controlled by the company, has 28 miles of narrow-gauge line, traversing a very difficult country, connecting the mine and works with the Santa Fé, Phoenix & Prescott railroad at Jerome Junction. A new standard-gauge railway, built 1912, by the Atchison, Topeka & Santa Fé R. R. Co., connects the new smelter and town site of Clarkdale with its main line at Cedar Glade.

Recent production has been as follows:

Year.	Lbs. Copper.	Oz. Silver.	Oz. Gold.	Year.	Lbs. Copper.	Oz. Silver.	Oz. Gold.
1904.	29,275,503	668,842	23,754	1909.	36,694,063	495,480	17,022
1905.	32,683,951	486,041	15,915	1910.	38,663,880	563,133	19,267
1906.	38,827,265	428,317	12,913	1911.	33,167,987	461,145	15,239
1907.	33,015,457	356,938	11,733	1912.	31,565,539	484,222	15,082
1908.	36,183,089	494,574	20,334				

In early years the United Verde made copper for 5 cts. or less a pound, if one deducts gold and silver values from the cost. The reported cost per pound of finished copper, after deducting gold and silver values, was 9.17 cts. per lb. in 1904; 9.27 cts. per pound in 1905; 8.69 cts. in 1906, and 10.54 cts. in 1907. Under average circumstances the cost may be figured as 9 to 10 cts. per lb. The United Verde mine has been lied about more industriously than almost any other mine in the world, especially in the literature sent out by new copper mining companies with stock for sale. The United Verde has been pointed out, as an example of blind luck, but this story is unfounded, the mine having been taken by Senator Clark, when generally considered worked out, and it was developed, by cash and brains, into a magnificent copper mine, the credit being due to the keen mining sense and business acumen of Senator Clark and not to chance. The mine is one of the best copper mines of the world, with many years of large and profitable production ahead.

UNITED VERDE EXTENSION MINING CO.**ARIZONA**

Office: 45 Broadway, New York. Operating office: Prescott, Yavapai Co., Ariz. Mine office: Jerome, Yavapai Co., Ariz. Louis E. Whicher, pres.; Harold Pierce, vice-pres.; Chas. P. Sands, sec.-treas.; Jas. S. Douglas, gen. mgr.; preceding officers, W. W. Cohen, W. J. Maloney, Paul Armitage, W. J. Reid, Archibald Douglas and W. M. Pratt, directors; David P. Morgan, supt. Organized 1902, under laws of Maine, as a reconstruction of the United Verde Extension Gold, Silver & Copper Mining Co., capitalization \$3,000,000, shares \$10 par, reorganized under laws of Delaware, capitalization \$4,000,000, shares \$10 par, and again reorganized 1912, and capitalization reduced to \$750,000, shares 50 cts. par, nonassessable. In this reorganization, approximately 360,000 shares were set aside for exchange, on a share for share basis, for old shares outstanding; about 40,000 shares were issued in liquidation of debts; 150,000 shares were issued to Jas. S. Douglas for services; 50,000 shares were sold to Mr. Douglas for \$25,000 cash; 400,000 shares were optioned to Mr. Douglas and his associates with the right to purchase all or a part of this block at par value at any time prior to June 15, 1915; and 500,000 shares were reserved for treasury purposes. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Shares are listed on the Boston curb. Annual meeting, in October.

Lands, 5 claims, patented, about 75 acres, known as the Little Daisy mine, a two-thirds interest in the adjoining Florencia claim, and a 3-year option on the Jerome Verde group of 26 claims, about 500 acres, adjoining the Little Daisy on the N. and E.

The mine has a tunnel, but is developed mainly by an 800' vertical shaft on the Little Daisy claim, about 1,700' from the main shaft of the United Verde mine, with collar 450' lower. This shaft, after passing through 50' of iron stains, encountered copper carbonates, continuing for depth of about 150', succeeded by conglomerate, and from a depth of 425' to 578' passed through schist carrying copper sulphides and manganese. The mine has about 1 mile of openings, showing a little ore of about 2% copper, 1 oz. silver and \$3 gold, on the 800' level. A 130' winze below this level was bottomed in decomposed schist, showing considerable copper, Aug., 1913. A new shaft has been started at a point about 1,500' E. of the present shaft, for the purpose of exploring at greater depth and also to open the area embraced in the Jerome Verde group. This shaft was 800' deep Nov., 1913, and will be pushed to a depth of 1,200 or 1,400' with all possible speed.

Equipment includes an electric hoist and air compressors. Electric power is used throughout, current being taken from the Arizona Power Co. About 35 men are employed. Property considered promising and management good.

UNUK RIVER MINING & SMELTING CO.**ALASKA**

Mine office: Ketchikan, Alaska. J. W. Daly, manager, at last accounts. Property, on the Unuk river, which empties into Burroughs bay, carries gold and copper ores. Equipment includes a small steam plant. Presumably idle.

U. P. R. MILLING & MINES CO.**COLORADO**

Robt. L. Martin, agent, 310 Quincy Bldg., Denver, Colo.; Herman Lundberg, supt., Central City, Gilpin Co., Colo. Property, the Gregory-Buell group of mines at Central City and the Buell concentrator. Mines have vein with gold and silver-bearing copper ores, developed by 700' shaft, equipped with steam hoist and air compressor. The mill has 45 stamps and handles about 130 tons daily.

URUACHIC MINING & SMELTING CO., LTD.**MEXICO**

Office: 168 St. Vincent St., Glasgow, Scotland. Letter unclaimed at former mine office: Uruachic, Chihuahua, Mex. Dr. Henry D. Boddington, mgr.; W. C. Tait, J. Campbell, J. A. Roxburgh, and T. Macnair, directors; J. M. Davies, Jr., sec.; M. T. Boddington, supt., at last accounts. Organized Oct. 19, 1906, under laws of Great Britain, capitalization £11,000, shares £1 par; issued £10,800, fully paid.

Property, 10 pertenencias, known as La Republica mine, carries copper and lead ores. Equipment includes steam power, an air compressor, a 50-ton concentrator and a smelter with a reverberatory furnace rated at 25 to 50 tons daily capacity. Presumably idle.

UTAH-APEX MINING CO.**UTAH**

Office: 79 Milk St., Boston, Mass. Mine office: Bingham Canyon, Utah. F. A. Schirmer, pres.; J. J. Murphy, vice-pres.; C. G. Schirmer, sec.-treas.; H. M. Burton, asst. treas.; W. L. Creden, mgr.; preceding officers, Louis Ross, R. F. Haffenreffer, C. M. Brewer and J. W. Saladine, directors. Stanley C. Sears, mine mgr.; V. S. Rood, supt.

Organized May, 1902, under laws of Maine, as a merger of the Copperfield Mining Co. and York Mining Co., capitalization \$2,500,000, increased 1906, to \$3,000,000, shares \$5 par; issued 528,000 shares. Bonds, \$500,000, authorized, at 6%, convertible; outstanding \$189,000, July 1, 1913. Company absorbed the Highland Boy, Petro, Minnie and Phoenix mining companies. For fiscal year ending Sept. 1, 1912, gross ore sales were \$654,752, with mining costs of \$402,806, leaving a mining profit of \$251,946. Company ended year with \$98,098 cash on hand. Net earnings for the quarter ending June 30, 1913, were \$83,198. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in September.

Property, 33 claims, 254 acres, including the York, Copper Field, Petro, Highland Boy Consolidated and Phoenix groups, adjoins the Utah Consolidated on the S. and W., on York hill, Carr Fork canyon. Claims show limestone and quartzite, carrying the Parnell, Petro, York and Andy bedded veins. These veins are cut by several fissures which have been more or less developed. The Dana, the principal orebody, is apparently a contact deposit between quartzite and limestone, showing an ore shoot standing vertically, without disseminations in the contact, up to 15' in width and 500' in length on the 4th level. The mine primarily is a producer of high-grade lead ore, but has considerable copper, and all ores carry silver and gold values with an excess of iron, giving low smelting charges. First-class ores carry about 2% copper, and \$6 to \$8 combined gold and silver values per ton, the second class copper ores carrying about \$3 per ton in combined gold and silver values. First-class lead ores carry 35 to 50% lead, with silver and gold values, and second-class lead ores range 7 to 14% in lead tenor, with small gold and silver values.

The mine, opened by 3 shafts and 6 tunnels, has about 48,000' of workings. The tunnels, known as the Parnell, Minnie, Smilax, Andy, Andy No. 2 and Parvenu, are spaced at 200' vertical intervals, and are connected by incline blind shafts, having electric hoists, on the Parnell vein, which is estimated by the company to be 5' in width and to be mineralized for about 1,000' in length and to 2,000' in depth. The Andy tunnel develops 3 ore shoots, on the Parnell vein. The Parvenu tunnel, which is the principal working, is about 1 mile in length, cutting the Parnell vein with a back of about 2,200'. Since the decline in the copper market 1907, attention has been devoted mainly to silver-lead ore. A silver-lead orebody

opened in the Parvenu tunnel, having a maximum thickness of 100', with a width of better than 100', and length undetermined, shows direct-smelting ore of 15 to 20% lead, with 3 to 5 oz. silver per ton, and excess of iron, estimated to carry net values of \$8 to \$10 per ton. Ore in sight and partly developed is estimated at 100,000 tons.

A 3,000' Bleichert aerial tram, not in present use, runs from the portal of the Andy tunnel to a loading station. Ore is shipped over a spur track of the railway line of the Utah Copper Co.

Equipment includes two 15-drill air compressors and 2 electric hoists, 1 of which is a double-drum Davis hoist installed at the 7th level station in the Parvenu tunnel.

The old Phoenix mill at the mouth of the Parvenu tunnel was dismantled and a new 200-ton mill built 1909, on the same site. The new mill is said to effect a concentration of 4 into 1, with a saving of about 77% of assay values. Company was planning, late 1913, to increase the capacity of the concentrator to about 350 tons daily. Production was at the rate of about 50 tons of silver-lead ore and 150 tons of concentrates daily, Nov., 1913. Property considered promising.

UTAH-ARIZONA GOLD & COPPER MINING CO.

ARIZONA

Idle. Office: 107 Continental National Bank Bldg., Salt Lake City, Utah. Mine office: Chloride, Mohave Co., Ariz. Heber S. Cutler, pres.; J. F. Shelley, vice-pres. and gen. mgr.; John W. Geiger, sec.-treas.; preceding officers, L. G. Burton, Henry Green, Geo. F. Shelley and W. J. Burton, directors. Organized Nov. 11, 1907, under laws of Arizona, capitalization \$1,000,000, shares \$1 par, assessable; issued \$715,675. Annual meeting, second Tuesday in September.

Lands, 60 claims, unpatented, about 1,200 acres, and a 20-acre mill site, in the Weaver district, 18 miles N. W. of Chloride, the nearest rail point, show quartz veins traversing granite and mica-schist, carrying gold-copper ore. Property includes the Golden Gate mine, having 2 incline shafts of 125' and 135', on parallel veins, and there are several short tunnels, with total of about 2,000' of workings. Equipment includes a 5-stamp mill.

UTAH CONSOLIDATED MINING CO.

UTAH

Office: 42 Broadway, New York. Operating office: 608 Dooly Block, Salt Lake City, Utah. Mine office: Bingham Canyon, Utah. R. H. Channing, Jr., pres.; Adolph Lewisohn, vice-pres.; C. N. King, second vice-pres.; Sidney Chase and Maxwell Woodhull, directors; A. H. Melin, sec.-treas.; Frederick Cowans, gen. mgr.; A. S. Winther, supt.; T. S. Van Wagoner, purch. agt.

Organized 1903, under laws of New Jersey, capitalization \$1,500,000, shares \$5 par, as a reconstruction of Utah Consolidated Gold Mines, Ltd., a British corporation that in turn succeeded the Sevier Gold Mines, Ltd., Oct., 1896. Property of the Utah Consolidated Mining Co. is 2,490 shares of the 2,500 shares of the capital stock of the Highland Boy Gold Mining Co., of New Jersey, the latter corporation holding direct title to the Utah properties. The company also owns 5,000 shares of stock of the International Smelting & Refining Co., which cost \$500,000 and is returning \$40,000 yearly in dividends. The company has about 4,500 stockholders. Shares are listed on the Boston Stock Exchange. Annual meeting, first Tuesday in April.

The company's total income for 1912 was \$1,677,919 with surplus of liquid assets over liabilities of \$1,257,197. Net earnings were \$1,038,637 in 1903, \$1,164,348 in 1904, \$1,887,385 in 1905, \$2,835,008 in 1906, \$1,179,412 in

1907, \$326,312 in 1908, \$154,263 in 1909, \$65,348 in 1910, \$438,430 in 1911, and \$603,923 in 1912.

Dividends of the present company, and its predecessor have been \$732,000 in 1901, nothing in 1902, \$900,000 in 1903, \$900,000 in 1904, \$1,050,000 in 1905, \$1,500,000 in 1906, \$2,100,000 in 1907, \$600,000 in 1908, \$600,000 in 1909, \$150,000 in 1910, \$150,000 in 1911, \$450,000 in 1912, and \$450,000 to Nov. 1, in 1913.

Lands, 31 claims, patented, 239 acres, known as the Highland Boy group, in Carr Fork canyon, $2\frac{1}{2}$ miles from Bingham canyon. A smelter site, in Pine canyon, across the Oquirrh divide, was sold, 1908, to the International Smelting Co. The Highland Boy mine was a considerable producer of silver-lead ore, 1870-90.

Property has 6 ore deposits which are replacements of limestone beds, 150 to 300' thick, with quartzite above and below. These beds dip from 25 to 45° N. and the rocks are cut by a series of porphyry dikes that are nearly vertical and run N. E. The ore deposits form well-defined shoots with an E.-W. strike and N.-E. pitch. They are large, varying up to 100' in width and 100 to 200' in length, and are separated by barren limestone; the largest orebody so far developed is said to be 320' in extreme horizontal width and 340' in length. A new ore shoot carrying galena has been found in the lower workings in an extension of the Yampa limestone. The predominant ore of the mine carries chalcopryrite, with some bornite and chalcocite, associated with pyrite in a limestone gangue. It averaged, in 1912, approximately 2.15% copper, 1 oz. silver and \$1.40 gold per ton. These ore shoots have grown leaner with depth.

Ore reserves were estimated March, 1913, at 251,500 tons of 1.9% copper ore and 36,100 tons of 12.24% lead ore.

The Highland Boy mine is opened by an old 900' shaft, and 7 tunnels, of 1,000 to 2,600' length. No. 7 tunnel, 700' below the crest of the mountain, is 2,600' in length and is the main avenue of extraction, all tunnels being connected, and ore milled, through chutes, to the bottom tunnel. There are 2 blind shafts, deepest 500', starting from the 700' level, with large electric hoists, raising ore to that point for extraction by the electric haulage plant in No. 7 tunnel. The ore breaks easily and is extracted by the top-slice caving system, ore is broken mainly on contract.

New openings were 12,444' in 1905, 10,732' in 1906, 10,120' in 1907, 7,064' in 1908, 8,950' in 1909, 11,433' in 1910, 18,799' in 1911 and 12,320' in 1912.

A 12,700' aerial tram leads from the portal of No. 7 tunnel to ore bins on the Rio Grande Western railway. There is a subsidiary aerial tram, crossing Carr Fork canyon, used for handling lumber and mining supplies. The long tramway from the mine to the Tooele smelter is described under title of the International Smelting & Refining Co.

The smelter, at Murray, described Vol. VIII, was razed 1909, and all material of value therefrom sold to the International Smelting & Refining Co.

The scandal consequent upon the gross overestimate of ore reserves made by J. W. Finch, who accepted the former manager's figures as correct, caused the stock to depreciate to less than half its former price, but resulted in having a technical man of exceptional ability placed at the head of the company.

While the great orebodies of the mine are worked out, the property is far from exhausted and development work is keeping pace with ore extraction.

Production has been as follows:

Year.	Lbs. Copper.	Lbs. Lead.	Oz. Silver.	Oz. Gold.
1904*.....	13,553,483	—————	—————	—————
1905.....	17,264,474	—————	374,685	28,290

HAYDEN, STONE & CO.

Members New York and Boston Stock Exchanges.

25 Broad Street, NEW YORK

87 Milk Street, BOSTON

Boston and Paris stock exchanges. D. A. Crockett, 165 Broadway, New York, and American Trust Co., Boston, transfer agents; Guaranty Trust Co., New York, and Old Colony Trust Co., Boston, registrars. Annual meeting, fourth Friday in April.

Net income was \$8,449,272 in 1912, of which \$6,273,272 was secured from the operation of its own property, and the balance came from stock interests in subsidiary companies, earnings comparing with \$2,160,000 in 1909, \$5,401,775 in 1910 and \$623,928 in 1911. The company ended 1912, with surplus and undivided profits of \$12,947,590, and current assets exceeded liabilities by \$1,688,798.

Dividends, begun Sept. 30, 1908, were 50 cts. quarterly, 1908 and 1909, and 75 cts. quarterly, 1910, 1911, 1912 and 1913. Dividends aggregated \$696,387 in 1908, \$1,464,387 in 1909, \$4,648,675 in 1910, \$4,703,022 in 1911, \$4,729,747 in 1912 and \$3,559,882 to Oct. 1, 1913, a total of \$19,802,102.

The company controls the Nevada Consolidated Copper Co. owning slightly more than 50% of the outstanding stock, having exchanged its own stock on the basis of 1 share of Utah for $2\frac{1}{4}$ shares of Nevada. The company controls, through stock ownership, the Bingham & Garfield Railway Co., described later. During 1910 the Utah Co. absorbed the Boston Consolidated Mining Co. and the Shawmut Consolidated Copper Co. A large share interest in the Utah Copper Co. is held by the American Smelter Securities Co.

Company owns 740 acres of mineral claims and 5,282 acres of miscellaneous property, latter including mill sites at Bingham and Garfield, Utah. Mineral lands embrace the original group of 195 acres, bought of the De Lamar-Wall Mining & Milling Co., the Boston Consolidated group of 51 claims, 362 acres, the Shawmut Consolidated group of 100 acres, Pay Roll group of 60 acres, Copper Mining Co.'s claim of 15 acres, and outlying fractional claims of 8 acres area, a total of 740 acres, lying on both sides of Bingham gulch, with principal development on the northern side. Of the mineral lands, 217 acres are more or less developed. Property, other than the main mineral group, consists of 1,239 acres in Bingham canyon; 684 acres in Utah county, and 3,358 acres at Garfield. The claims cover the main mineralized portion of a large intrusive mass, or stock, of monzonite porphyry, breaking up through and surrounded by quartzite and other sedimentary rocks. The ore is this porphyry bleached and speckled with tiny grains and webs of copper glance, chalcopyrite and pyrite.

At points the quartzite flanking the monzonite is mineralized to a sufficient extent to render it an ore of commercial value, and the quartzite ore is treated in precisely the same manner as the porphyry ore. The monzonite, at surface, and for some little depth, carries copper carbonates, of low tenor, probably averaging under 1% copper, though giving a bright showing, because of the tendency of the malachite to stain the surrounding monzonite. The upper portion of the porphyry, carrying oxidized ores, is removed and saved for future treatment by leaching process. The management of the company reckons the average thickness of the overlying capping carrying oxidized ores at 105', and the average thickness of the disseminated ores of commercial tenor as 345', a ratio of 0.3 waste to 1 of ore, consequently 3 tons of capping must be stripped for 10 tons of ore developed for mining, the cost of which stripping is chargeable to the mining cost of the ore. In actual practice it has been found cheaper to send considerable quantities of the over-burden, carrying oxidized ores, to the mill, rather than to employ the large amount of additional labor required to separate the waste thoroughly from the sulphide ore.

The Utah Copper Co. has the largest developed orebody in the world,

its proven tonnage exceeding that of the Rio Tinto, its nearest copper competitor, and even exceeding the proven tonnage of the greatest of the enormous iron mines of the Mesaba range, or the developed tonnage of gold ore of all the combined mines of the Witwatersrand. Not only has the Utah Copper Co. the largest body of developed ore of any mine, but it also is the greatest ore producer, measured by tonnage, of any mine of any metal.

The extent of the ore deposit has been proven by very extensive underground workings and by churn and diamond-drill boring. The aggregate length of all underground openings in the Utah and Boston mines was 78.54 miles to Dec. 31, 1912, but most of these workings have been destroyed by opencuts and underground stoping, leaving accessible only 29 miles. Exploratory churn and diamond-drill boring totaled 27,318' at end of 1912, and show a maximum thickness of 600' of commercial ore. This is underlain by similar material, the limit of mining being determined, not by change in the nature of the ore, but by a gradual shading out with depth of the disseminated sulphides. The cupriferous monzonite continues unaltered to the greatest depth reached by the borings. Ore development, Jan. 1, 1913, is reported to be 337,700,842 tons, of which 257,584,500 are fully developed and 80,116,342 tons partially so, including 28,800,000 tons on the slopes of the steam-shovel workings. Fully developed ore averages 1.6% copper and the partially developed ore 1.16%. The general average is 1.495% copper, based upon 43,296 assay samples, representing 279,529 linear feet of drilling and underground workings.

The original underground mine of the Utah Co., stoped by the top-slice caving system, eventually will be broken into open pits and the entire mine worked opencast. The mine openings are rectangular, laid out like the streets of a city, with blocks above blocks, like the successive floors of a building. There are 13 tunnels entering the hills at approximately right angles to the gulch. These tunnels are avenues, and crossing the avenues at right angles, parallel with the gulch, are streets, these being opened 150' apart. Paralleling the tunnels, or avenues, are drifts corresponding to city alleys, these being 75' on either side of the avenues. The tunnels are 10x10', or larger, and all openings are of exceptionally large dimensions, connections between the various floors being by upraises from alley to alley. Stope levels are opened at intervals of 17' and 25'. The main working tunnel has a double tram track, laid with 30-lb. rails, with electric haulage.

The underground workings of the Boston Consolidated, known as the Sulphide mine, included 15 known orebodies, in an area of about 100 acres. Two veins developed had an E.-W. strike, with average dip of 28° N., the main ore shoot being estimated as 160' wide and 340' in length. This mine yielded a limited amount of ore of better than 10% copper tenor, with corresponding increase in gold and silver values, but the average return, from all ore extracted 1906, was only 2.802% copper and became materially lower thereafter. The old management of the Boston Consolidated estimated that the ores of the Sulphide mine averaged 2.5% copper, 2 oz. silver and \$2 gold per ton. The mine is developed by the Armstrong or No. 1 tunnel, the main working level, having an electric haulage system, and by the Armstrong No. 2, Peabody, Work, Phoenix and Ingersoll tunnels. The Sulphide mine was yielding about 200 tons of ore daily when work was discontinued. The zone is not especially promising for underground work, the ore averaging very low in grade.

The porphyry mine of the Boston Consolidated is opened by 15 tunnels with about 10 miles of workings and consists of 110 acres of mineralized monzonite-porphyry, a continuation of the porphyry orebody of the

Utah Copper Co. Opencast work of the Boston Consolidated was by 21 terraces, cut in the sides of the mountain.

The porphyry ores of the Boston Consolidated gave decidedly disappointing results in initial production, the upper portion of the ore deposit showing a considerable excess of iron, and the porphyry ores treated for the first half of 1908 gave concentrates ranging 14 to 19% copper and about 25% iron, with a final smelter recovery of only 19 to 22 lbs. fine copper per ton. It soon became obvious that the Boston Consolidated property could be handled to materially better advantage as a part of the Utah Copper Co. than was possible as an independent unit.

The Utah Copper Co.'s opencut workings are on a truly colossal scale. The porphyry orebody lies mainly on the southern side of a mountain, of which practically the entire face, of about 2,000' height, is being removed, the first 110' or so from surface as capping and an average of about 424' following as ore. Notches are cut along the mountainside for successive lines of railway track, and, as the rock is removed, these notches become broad terraces, that cut deeply into the flank of the mountain. The work of ore breaking and removal is done by powerful movable machinery, the nature of the orebody and the method of its mining precluding the use of any machinery except that capable of moving on a railroad track. Equipment of the opencast mine, at the end of 1912, included 22 Marion and Vulcan steam shovels, of 70 to 90 tons weight each, 36 standard-gauge locomotives, 11 narrow-gauge locomotives, 100 standard-gauge dump cars of 12 cu. yds. capacity each, 117 standard-gauge dump cars of 6 cu. yds. and 144 narrow-gauge dump cars of 4 cu. yds. capacity each. The rock is broken by blasting, before removal by steam shovels, holes being bored by churn drills and blasted in sections averaging 40' thick, 60' deep and 1,000' long, each section or bench containing about 180,000 tons of ore, requiring about 25 tons of dynamite for its blasting; a single blast has sometimes broken down as much as 15,000 tons of ore. As already stated the total cost of mining is about 41 cts. per ton, but excluding stripping and development work, the actual cost of drilling, blasting and loading into the railway cars is about 25 cts. per ton.

Stripping the orebody was begun, with steam shovels, Aug., 1906, and is still in progress. As cost of underground mining is about 4 times that of open work, it will be discontinued entirely if conditions permit and the stripping is far enough advanced. The removal and disposal of the overburden is a great task in itself; the capping of waste rock loaded into cars by steam shovels, and dumped at different points down the canyon on lands bought for the purpose. There are 30.2 miles of standard-gauge track in and around the mines, 5.16 miles of narrow-gauge and 2.26 of 3-rail track, a total of 37.62 miles, all owned by the Bingham & Garfield R. R. Co.

Mining equipment includes steam plants at both the Utah and Boston mines, but extensive use is made of electric power, received from the Utah Power & Light Co. There are 6 air compressors, having a combined capacity of about 8,000' of free air per minute, but the mines have a minimum equipment of fixed mining machinery, for the reason before given. Buildings at the mine include machine and carpenter shops, smithies, and minor structures.

The Bingham & Garfield Railway Co., organized July, 1908, under laws of Utah, has a capitalization of \$2,500,000, shares \$100 par, and is controlled by the Utah Copper Co., through ownership of the entire share capital. There is a \$2,500,000 issue of 10-year 6% bonds, convertible into stock of the Utah Copper Co. at \$50 per share, at any time after July 1, 1914, of which \$337,000 had been retired, March, 1913, through sinking

fund. The main line from Garfield to the mines, including track to the smelter and the Carr Fork extension to the Apex yard, is about 26 miles in length. Yard and side tracks along the line aggregate about 34 miles, and track rights, at Bingham, on other lines, total 37.6 miles, giving a grand total of about 97.6 miles of track. The average grade for the entire line is about 2%, but there is a maximum grade of 2.5% for 14 miles. There are 4 tunnels, all driven 18' wide and 22' high, the longest being 2,079', with an aggregate length of 4,795'. There are 3 steel viaducts, spanning the canyons at a great height, the longest, across Carr Fork, being 690' long and 190' high. Equipment of the line includes 4 Mallet articulated compound locomotives, each weighing 230 tons, on the driving wheels; 2 switching locomotives, each weighing 61 tons; 6 switching locomotives, weighing 78 tons; 423 hopper bottom steel cars; 75 steel concentrate cars; 10 wooden cars; 6 flat cars; 4 cabooses; 3 passenger coaches; 2 tool cars, and one 120-ton wrecking crane. The hopper-bottom steel ore cars are of 60 tons nominal capacity, with 10% excess allowance for overload. The cost of the complete line was upwards of \$5,000,000. The railway was opened Oct., 1911.

The company has had 3 mills, one at Bingham Canyon, now dismantled, and 2 at Garfield, 20 miles from the mines. The 900-ton Copper-ton mill at Bingham Canyon, the first concentrator put up by the company, is fully described in Vol. VIII. It was closed permanently Aug. 1, 1910, and all machinery that was suitable was sent to the Arthur mill for remodeling that plant.

The finely disseminated copper glance necessitates fine crushing with the formation of slimes and a tailings loss of $\frac{1}{2}$ to $\frac{3}{4}$ % copper. Concentration is about 23 into 1.

The Magna mill, the first mill built at Garfield, stands on a 3,000-acre site, 4 miles E. of the Garfield smelter and 1 mile E. of the Arthur mill. It is connected with the mines by the Bingham & Garfield, Denver & Rio Grande and San Pedro, Los Angeles & Salt Lake railways. The building 505x600' is of steel frame, on concrete foundations, with reinforced concrete floors, iron siding and composition roofing. It contains two 3,000-ton units each of 6 sections, each unit being 300x505' in size, the 2 units, with their outlying buildings and yards, occupying a site of about 20 acres. The plant is so designed that 2 additional units of the same size can be added when desired. Milling was begun June, 1907, with 2 sections, and the 12th and final section of the mill started work Nov., 1908.

The ore bins of the Magna mill are of 38,000 tons aggregate capacity, with bins of 25,000 tons capacity in the coarse-crushing department, and 13,000-ton bins in the fine-crushing department.

The Magna mill is divided, longitudinally, into 3 departments, for coarse crushing, fine crushing and concentrating. Each of the 2 coarse-crushing sections of the mill has two No. 7½ Gates gyratory crushers and 4 sets of 54x20" roughing rolls of special design. The fine-crushing department for the entire mill contains 36 six-foot Chilean mills, and 24 sets of 15x37½" rolls, with necessary feeders, 24 elevators and 48 impact screens. The concentrating department for the entire plant is built on 3 floors, 1 above the other, having respective areas of 120x600', 164x600' and 120x600'. In this department there are 41 Wilfley tables, 1,104 six-foot vanners of suspended type, 81 Richards-Janney classifiers, and 388 nine-foot conical settling tanks. The Magna mill made a saving of 66.03% of assay values from ores averaging only 1.36% copper in 1912. The average extraction of both mills was 66.3% in 1912. The Magna mill handles 12,000 tons daily.

The Arthur mill, about 1 mile W. of the Magna mill, built by the Boston Consolidated Mining Co., at a cost of upwards of \$1,500,000, was remodeled and enlarged to a capacity of 10,000 tons of ore daily. The mill, as built, was in six 500-ton units, with 13 operating units, 370x555' in size, of steel and concrete construction. There are 9,000-ton ore bins in the coarse-crushing department, and 12,500-ton bins in the fine-crushing department. The coarse-crushing department is a separate building, 35x74' in size, the ore bins taking up 300' of the length of this building, the remainder being used for crushing. In remodeling the Arthur mill, the Nissen stamps were replaced by Chilean mills and other machinery installed to correspond to the practice at the Magna mill. This includes 4 sets of 72x20" rolls, 20 sets of 15x37" rolls, 26 six-foot Chilean mills, all of special design; 78 impact screens, of 3x4' size; 26 steel apron orefeeders, of 30" size; 52 four-compartment, 54 five-compartment, 39 three-compartment, and 2 six-compartment Richards-Janney mechanical classifiers; 156 Garfield roughing tables of 4x12' size and 26 of 6x12' size; 34 No. 5 Wilfley tables; 832 six-foot vanners, and 312 nine-foot dewatering cone tanks. Electric power, used throughout, is taken from the Utah Power & Light Co.

The 13,000-h. p. steam-electric plant, 2,000' E. of the Magna mill, is in a 158x288' building, of steel frame, erected by the Minneapolis Steel & Machinery Co. The boiler plant has 20 Heine 419-h. p. water-tube boilers, working under 175 lbs. steam pressure, equipped with American automatic stokers, having separate mechanical drives, of special design. There are two 26x50x48" Allis-Chalmers cross-compound Corliss condensing engines direct-connected to two 1,500-kw. a. c. generators, and three 32x70x48" Nordberg cross-compound Corliss condensing engines direct-connected to three 2,250-kw. a. c. generators. There are 2 concrete smokestacks, 180' high, 12' inside diameter at the top.

The pumping plant of the Magna mill includes a Nordberg triple-expansion condensing pump having 42x22x59" cylinders, and plunger 16" in diameter, with a common stroke of 52", of capacity to force 10,000 gals. of water per minute, from a pond on the mill site, through 1,900' of 24" pipe, against a head of 230', to a 3,500,000-gal. concrete-lined reservoir above the mill. The original pumping plant, held in reserve for emergencies, consists of one 12" two-stage turbine pump, direct-connected to a 250-h. p. General Electric induction motors, with capacity to lift 2,500 gals. per minute under the same service conditions as the main plant, one 12" two-stage turbine pump direct-connected to a 350-h. p. General Electric induction motor, with capacity of 3,500 gals. per minute, and one 15" two-stage turbine pump, direct connected to a 450-h. p. induction motor, with a capacity of 4,500 gals. per minute, giving a total capacity of 10,500 gals. per minute for the auxiliary plant, or 20,500 gals. per minute for both plants, jointly. An auxiliary pumping plant, back of the Magna mill consists of two 8" Worthington single-stage pumps direct-connected to induction motors, with combined capacity to raise 3,000 gals. of water per minute to a 500,000-gal. high-service concrete reservoir 100' above the main reservoir.

Water for the Arthur mill is developed partly from springs on the mill site, and is taken partly from the Magna reservoir. The pumping plant of the Arthur mill consists of one 3,000-gal. rotary pump, direct-connected to a 400-h. p. Westinghouse induction motor, and two 1,500-gal. rotary pumps, direct-connected to two 250-h. p. Westinghouse induction motors. Water is pumped from a pond on low ground, below the mill, through 4,000' of 20" wood-stave pipe, to a concrete-lined reservoir of 2,000,000 gals. capacity,

against a static head of 350'. There is a 1,500,000-gal. clay-lined reservoir, 40' above the main reservoir, for fire protection.

Miscellaneous buildings at the Magna mill consist of a 56x105' machine shop, of steel frame, with brick walls, on concrete foundations, thoroughly equipped for all repair work, a 48x72' carpenter shop, a 52x100' warehouse, and an office. Buildings at the Arthur mill, all of steel and concrete, include a 50x180' machine shop, 80x160' foundry, a 40x40' carpenter shop, and a smithy.

The Utah Copper Co. employs 3,500 men, 1,900 at the mines, and 1,600 at the mills and shops at Garfield.

Mining costs for 1912 were 42.33 cts. per ton of ore, including 12.01 cts. for stripping and general development costs. Milling costs for 1912 averaged 41.53 cts. per ton, giving a total cost of 83.91 cts. for mining and milling, but not including cost of transportation, which presumably was 28 cts. per ton, giving a total estimated cost of \$1.123 per ton. The ore treated 1912, averaged 1.346% copper, with an extraction of 66.32% giving a net recovery, in the form of concentrates, of 18.09 lbs. of finished copper per ton, at a cost of almost exactly 6.2 cts. per lb. of copper, in concentrate unsmelted. The total mining and milling cost for 1912 was 2.56 cts. less than in 1911. The following figures of cost of finished copper are net, after deduction of included gold and silver values: 8.787 cts. in 1909, 8.069 cts. in 1910, 7.865 cts. in 1911, and 9.024 cts. in 1912. The high cost in the latter year was due to the disturbed labor conditions and the strike during the last quarter of the year. In the months of July and August, preceding the strike, the plants treated an average of 19,616 tons of ore per day, containing 1.42% copper, with costs averaging 6.89 cts. per lb.

Production of the Boston Consolidated Mining Co. was 3,223,836 lbs. fine copper in 1904; 3,565,483 lbs. in 1906; 6,146,125 lbs. copper, 78,128 oz. silver and 12,446 oz. gold in 1907; 6,148,512 lbs. copper, 49,130 oz. silver and 7,446 oz. gold in 1908.

Production of the Utah Copper Co. was 5,473,469 lbs. copper in 1905; 4,698,906 lbs. in 1906; 43,689,875 lbs. in 1908; 51,749,233 lbs. in 1909; 85,644,511 lbs. in 1910; 98,436,224 lbs. in 1911; 91,366,337 lbs. in 1912, and 87,957,421 in the 9 months ended Sept. 30, 1913. With the remodeling of the mills completed, the company now has a productive capacity of not less than 150,000,000 lbs. of finished copper yearly, while the ore reserves are so enormous that a productive capacity of 24,000 tons of ore daily, the maximum amount that the mills can handle, is by no means the limit of output of the mines. The company's copper is marketed through the American Smelting & Refining Co., on a 1% commission basis.

It is obvious that while the Utah Copper Co. has not reached the 7 ct. cost originally predicted by the management, it has demonstrated its ability to make copper under 10 cts. per lb., which is somewhat lower average than that of the 10 largest producers of the world. The ore reserves of the mine are as long lived as those of any mine in the world. The management is entitled to the credit of making the Utah the pioneer among the so-called porphyry mines, a magnificent success, in the face of very considerable obstacles, despite a vast amount of skepticism and criticism on the part of mining men and the general public.

UTAH & EASTERN COPPER CO.

UTAH

Office: 127 Church St., New Haven, Conn. Operating office: 508 McCormick Bldg., Salt Lake City, Utah. Mine office: Dixie, Washington Co., Utah. Works office: Shem, Washington Co., Utah. Louis E. Stoddard, pres.; T. W. Farnam, sec.-treas.; Chas. H. Doolittle, gen. mgr., at last accounts. Organized 1901, under laws of West Virginia, capitalization \$1,500,-

000, increased later to \$3,500,000, shares \$5 par, in \$2,000,000 preferred and \$1,500,000 common stock.

Lands, 11 claims, patented, 220 acres, and a 40-acre smelter site, including the old Dixie mine, in the Tutsagubet or Cave Springs district, near Green river, showing 5 replacement deposits in limestone, 1 of 40' estimated average width, carrying cuprite, azurite and massive malachite ores, said to give average assays of 15% copper. Principal development was by a 775' blind shaft, sunk from the breast of a 225' tunnel. This tunnel caved, 1905, and it was necessary to run a new tunnel, of 800', to reopen the mine. Old workings said to show about 100,000 tons of ore. Equipment includes a small gasoline plant.

The company has 2 smelters, 1 worthless; the new smelter has a 100-ton water-jacket blast furnace, with water power, secured from the Santa Clara river, 2 miles distant, and a small auxiliary steam plant. The smelter is at Shem, about 50 miles from Acoma, on the Rio Grande Western railroad, the nearest shipping point, and transportation for 14 miles of the distance is by traction engine.

Production was 1,448,597 lbs. copper in 1904, 400,166 in 1905, and 391,779 lbs. in 1907. Property considered promising but is handicapped by lack of rail transportation. Idle since 1907.

UTAH GOLD MOUNTAIN MINING CO.

COLORADO & UTAH

Presumably idle. Mine office: Marysvale, Piute Co., Utah. Letter unclaimed at former mine office, Telluride, San Miguel Co., Colo. Organized 1906, under laws of Utah, capitalization \$4,500,000, shares \$1 par, as a merger of the Log Cabin Gold & Copper Co., Ltd., and the Gold Development Co. Lands, 67 claims, 1,300 acres, 12 miles W. of Marysvale, in the Mount Baldy district, said to have 3 tunnels, with about 3,000' of workings. Claims reported to show a vein carrying ore of good average assay value.

UTAH LEAD & COPPER CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah. Mine office: Bingham Canyon, Utah. W. D. Bohm, manager. Organized Dec. 24, 1912, under laws of Maine, as the successor of the Bingham Copper Co., capitalization \$500,000, shares \$1 par. Debentures \$100,000, at 6%, convertible bonds.

Lands, 11 claims, patented, about 125 acres, on the eastern slope of Carr Fork canyon. Company also owns a one-quarter interest in the Diamond Extension and a one-half interest in the Diamond claims adjoining.

The property shows 3 fissure veins, several bedded deposits of silver-lead ore and a fissure vein of copper ore of less promise. A big outcropping near the W. end line is said to have yielded considerable high-grade gold and silver ore with lead carbonates, to former owner.

The mine is opened by 2 tunnels, longest 1,200', and 2 shafts on the Venice claim. There are about 3,000' of workings, showing ore below commercial tenor generally but with occasional streaks of ore assaying up to 70% lead and 15 to 30 oz. silver. Equipment includes a small air compressor.

UTAH METAL MINING CO.

UTAH

Office: Tooele, Utah. E. P. Jennings, pres.; W. E. L. Dillaway, treas. and chairman executive committee; other directors, H. P. Clark, A. B. Martin, M. A. Taylor, W. M. Wadden, J. E. Rothwell, C. J. Morse and H. L. Ayer; H. D. Kinney, mgr.; Ralph E. Parker, sec.

Organized June 8, 1909, under laws of Maine, capitalization \$7,500,000, shares \$5 par. Debentures, \$375,000, 6% convertible bonds, maturing April 1, 1916. Company is a consolidation of the Bingham Central Mining Co., Bingham Standard Copper Co. and Bingham Metal Mining Co. State Street Trust Co., Boston, registrar; Commonwealth Trust Co., Boston, transfer agent.

Lands, about 3,400 acres, including mineral lands and 139 acres of timber tracts, with a mill site, and water right estimated as capable of developing 1,000 h. p. Company's holdings extend from Carr Fork gulch, in Bingham canyon, over the divide of the Oquirrh range into Middle canyon, Tooele county, Utah. The Middle canyon lands show a limestone belt similar to that on the Bingham side of the divide. The Tooele lands in Middle canyon, have 5 tunnels, No. 1 of 5,000', No. 4 of 1,700' and No. 5 of 500' in length, at last accounts. It is thought that the cupriferous porphyry of Bingham canyon may extend to this property.

The Carr Fork property, in the Bingham Canyon district, adjoins the Boston Consolidated, Utah Consolidated and Bingham-New Haven properties, and includes the Bingham Central and Bingham Standard groups which carry the Saginaw, Burning Moscow and Nast vein systems, each traceable for a distance of about 4,500', and all intersected by the Old Jordan fault. The property also carries several smaller veins having lead ores.

The Bingham Standard lands are opened by the Saginaw tunnel, and the mine is said to have produced \$600,000 worth of ore under a former management.

The Bingham Central group comprises 190 acres, patented, developed by 2 tunnels, with about 9,000' of workings.

The Whiteley or upper tunnel of about 2,000' length, shows mainly silver-lead ore, and has about 500' to drive to reach the main orebodies, which should be tapped at depth of about 450' below the Deems tunnel. The Jeff Davis or lower tunnel of about 2,000' length, cut at about 800' distance from the portal, a vein of sulphide ore carrying about 2% copper, with small gold and silver values, and at a distance of 1,700', cut a silver-lead vein of 2 to 8' width, carrying a considerable percentage of shipping ore, with copper values of 2 to 5%. In 1908, this tunnel opened 2 new orebodies, one, of 3 to 4' width, carrying 12% copper ore, the other being a vein of silver-lead ore.

The Amelia tunnel, with portal about 175' vertically above the Jeff Davis tunnel, develops a lode about 75' wide, which carries low-grade concentrating ore, said to average about 2.5% copper and \$1.50 gold per ton, with small silver values, for 90' in length. The Deems tunnel, driven from Log Fork, is an old working, about 400' long, showing a strong vein carrying some good ore. The Saginaw tunnel, of about 700' length, is a drift for 400', on a strong fissure vein, showing a paystreak of 1 to 12' width, from which considerable ore shipments have been made. The Mountain Maid tunnel of the Bingham Central-Standard group is about 950' in length.

The Utah Metal Co.'s tunnel, also known as Tunnel No. 1, 11,494' in length, driven from the Tooele side, cuts entirely through the mountain, and ending in Carr Fork, gives a back of about 2,300' vertically at its deepest point under the Ridge claim, developing orebodies about 900' below the deepest workings of the Bingham Central-Standard group. The tunnel is 8x9' in the clear, with a grade of 0.5%, carrying double-tracks laid with 35-lb. steel rails. By cutting entirely through the mountain this tunnel affords direct connection and transportation facilities between the Bingham camp and the Tooele smelter, cutting a number of orebodies at great depth, and also developing a considerable water power, the flow of water being about 600,000 gals. per day. A contract with the Utah Copper Co. disposes of a minimum amount of 300,000 gals. daily, and negotiations for the sale of the balance are in progress.

No. 2 tunnel is located about 1 mile down the canyon from No. 1 and is 800' lower, vertically.

The property includes a mill site in Middle canyon, near the mouth of

No. 1 tunnel, about 4 miles from the International smelter. Enough water has been developed for a 500-ton mill, while further water supply can be obtained from springs on the opposite side of Middle canyon.

Equipment includes small mining plants at the various properties. The main power plant, near the portal of the big tunnel, in Middle canyon, has 20, 60 and 125-h. p. direct-connected Pelton water wheels, and management plans installing heavy electrical equipment, ultimately. The plant includes a generator, an Ingersoll-Rand air compressor and a small electric light plant.

The Utah Metal Mining Co., has ambitious plans, a large acreage of land, including a number of properties of merit, and the management is entitled to credit for its wisdom in devoting its efforts entirely to the completion of its great drainage and transportation tunnel, rather than scattering its work over a number of different properties. Development work is now in progress.

UTAH MINING, MILLING & TRANSPORTATION CO. UTAH

Letters unclaimed at former office, Boston, Mass. Mine address: Moscow, via Milford, Beaver Co., Utah. Chas. T. Birchard, pres. and gen. mgr.; John Thompson, mgr. Lands include the Hub and Lady Bryan mines, latter bought 1909, of Mathew Cullen et al., S. of the Burning Moscow, 6 miles from a railway, in the Star district. The property is opened by a 400' two-compartment main shaft, developing a vein variously reported as 2 to 30' in width, carrying silver-lead carbonates, and a bedded deposit in limestone showing high-grade cuprite, from which small shipments of ore of 10 to 12% copper have been made. Equipment includes gasoline power, with a hoist and air compressor. Was developing with small force, at last reports.

UTAH-NEVADA DEVELOPMENT CO. NEVADA & UTAH

Idle. Office: 333 Judge Bldg., Salt Lake City, Utah. Mine office: Lofgreen, Tooele Co., Utah. Letter unclaimed at former office, Black Horse, White Pine Co., Nev. Leslie L. Savage, pres.; H. B. Lamb, vice-pres.; J. A. Foley, sec.-treas. Capitalization \$100,000, shares \$1 par. The company is said also to have lands in the Gold Circle district of Elko county, Nev. The principal property is in the West Tintic district, near Lofgreen, where the company is said to have a 100-ton concentrator.

UTAH ORE SAMPLING CO. UTAH

Office: Provo, Utah. Jesse Knight, pres.; E. P. Ellison, vice-pres.; Arthur Stallings, sec.; A. W. Gates, gen. mgr.; preceding officers, W. L. Mangum and J. W. Knight, directors; W. E. Evans, supt. at Murray; F. Burgner, supt. at Silver City, Utah; M. A. Snow, supt. at Park City, Utah. Capitalization \$200,000.

Company owns and operates ore-sampling mills at Murray, Park City, Silver City and Sandy, with combined capacity of about 500,000 tons of ore annually.

UTAH-RELIANCE MINING CO. UTAH

Office: 408 South State St., Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. J. G. Bywater, pres.; D. B. Tripp, vice-pres.; Richard B. Shepard, sec.-treas. and gen. mgr.; preceding officers, W. A. Langford and Samuel Divett, directors. Organized 1908, under laws of Utah, capitalization \$5,000, shares 1 ct. par, assessable; issued, \$3,000, fully paid.

Lands, 8 claims, unpatented, 160 acres, about 45 miles from a railway, showing porphyry and limestone. Development is by a 175' tunnel and a 100' shaft, latter showing ore assaying up to 16% copper, 4 oz. silver and 40 cts. gold per ton.

UTAH-UNITED COPPER CO. UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Mil-

ford, Beaver Co., Utah. A. J. McMullen, pres., treas. and gen. mgr.; J. E. Edmunds, vice-pres.; Chas. A. Weaver, sec.; preceding officers, Arthur B. Gatrell, T. M. Farrell and R. H. Greenledge, directors; D. P. Rohlfing, engr. Organized Oct. 1, 1908, under laws of Utah, as a merger of the Wasatch Mining & Milling Co. and Skylark Copper Mining & Milling Co., capitalization \$600,000, shares \$1 par, assessable; issued, \$150,000, with \$30,909.11 assessments levied to March, 1913. Annual meeting, second Tuesday in October.

Property, 21 claims, 1 fractional, 2 patented, a 10-acre mill site and a patented water right, including the Skylark and O. K. groups, in the Beaver Lake district, 6 miles from a railway and 12 miles W. of Milford. Claims show limestone, monzonite and granite cut by fissure veins and carrying contact deposits between monzonite and limestone. One vein reported to average 20' in width, is opened by 5 shafts, deepest 470', another of 385', others, 100', 150' and 25', and by several tunnels, longest 250'. The management reports 2,399' of workings which are estimated to expose 70,000 tons of ore with 20,000 tons blocked out for stoping. This ore is reported to average 2% copper and to carry small silver, gold and lead values. The ore minerals include cuprite, melaconite and azurite together with chalcopyrite and marcasite in a ferruginous gangue.

Equipment includes 25-h. p. hoist and 3 buildings.

UTAH-YERINGTON MINING CO.

NEVADA

Office: Provo, Utah. John Roundy, pres.; C. W. Reese, vice-pres.; Heber C. Jex, sec.-treas.; Jos. Harris and Jos. Wirthlin, directors. Organized 1907, under laws of Utah, capitalization \$100,000, shares 10 cts. par. Property, 13 claims, lying E. of the Mason Valley mine, and next to the Butte-Yerington Copper Co. are said to show 8 exposures of copper ore.

Mine is being worked by leasors and was said, early 1913, to be yielding a small quantity of copper, lead and silver ore.

UTE COPPER CO.

UTAH

Office: 306 Dooley Bldg., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Thos. Weir, pres.; John Weir, Jr., vice-pres.; J. M. Burt, sec.-treas.; Henry Catrow and N. J. Catrow, directors. Organized May, 1907, under laws of Utah, capitalization \$3,000,000, shares \$5 par.

Lands were 225 acres, patented, but the company lost 3 claims to the Bingham-Amalgamated Mining Co., 1910, after litigation. Property includes the old Winnimuck mine, which was an important silver-lead producer in early days. Development is by the 900' Weir tunnel, and through the tunnel of the Bingham-Butte Mining Co. Equipment includes an old concentrator of 150 tons daily capacity, which has been leased to Werner Ziegler, and the company is inactive.

UTE GOLD & COPPER CO.

COLORADO

Mine office: Cortez, Montezuma Co., Colo. Edward J. Kelley, supt., at last accounts. No trace of recent operations securable.

UTELAND MINING CO.

UTAH

Office: Heber, Utah. Mine office: Uteland, Uinta Co., Utah. Geo. F. Timm, pres. and gen. mgr.; Chas. Lehman, vice-pres.; W. K. Barton, sec.; O. McCammon, treas.; preceding officers, A. M. Legg, H. B. F. Heath, Chas. Timm, and A. C. Hatch, directors. Organized Oct. 11, 1905, under laws of Utah, capitalization \$1,000, shares \$10 par, increased Nov. 7, 1905, to \$4,000,000, shares \$1 par, fully paid and all issued.

Property, 213 acres, owned in fee and about 20 claims, unpatented, including a 5-acre mill site, 7 miles from Ouray, in the extreme eastern part of the Uintah Indian Reservation, formerly held by the Florence Mining Co. Claims show impregnations in sandstone along favorable beds, forming

blanket veins that outcrop in bold, cliff faces. The ores give assays of about 7% copper, 2 to 5 oz. silver and \$1 to \$2.50 gold per ton. The ore contains malachite and a little chalcopryrite, but sulphide ore is found only in small quantities.

Development is practically all superficial, owing to the nature of the deposit. Equipment includes a 50-ton leaching plant built at a reputed cost of \$40,000. Property now idle, but management plans to resume operations early in 1914.

UTICA MINING & MILLING CO.

COLORADO

Idle. Office: 1420 Chestnut St., Philadelphia, Pa. Mine office: Ward, Boulder Co., Colo. G. A. Davison, superintendent. Ores carry gold, silver and copper. Has water power and a 20-stamp mill. No returns securable.

UTOPIA MINING & MILLING CO.

WYOMING

Office and mine: Centennial, Albany Co., Wyo. Lee Van Voorhis, pres.; Jas. McCune, vice-pres.; P. L. Holtum, sec.; P. H. Milburn, treas.; Bernard Holtum, gen. mgr. Organized, 1898, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$875,000. Annual meeting, third Tuesday in August.

Lands, 2 claims, 30 acres, unpatented, in the Centennial district. The property shows 2 contact veins between diorite and schist, of which 1 averaging 6' in width, is reported to have given assays of 3% copper, 4 to 20% zinc, up to 63 oz. silver and \$44 gold per ton. Ore minerals are mainly chalcopryrite, sphalerite, and pyrites.

The mine has tunnels of 250', 600', 175', 300', and 1,200', with about 2,600' of workings, all in ore.

Equipment includes a small electrical installation, with electric drill, and 6 buildings. Company was developing with a small force, early 1913.

VALENCIANA MINING CO.

MEXICO

Mine office: Matehuala, San Luis Potosi, Mex. Zeferino Salazar, manager. Lands, 9 groups, 60 hectares, including La Valenciana mine at Hacienda de Vanegas, near Matehuala, developed to depth of about 60 meters, carrying silver-copper carbonates, from which a small production has been secured. Also owns La Independencia mine, 38 hectares, near Concepcion del Oro, Zacatecas, Mexico.

VALENSUELLA COPPER CO.

ARIZONA

Office: Terre Haute, Ind. Mine office: Bouse, Yuma Co., Ariz. David L. Watson, pres. and gen. mgr.; Geo. C. Foulkes, sec.; F. W. Deidesheimer, treas., at last accounts. Organized 1901, under laws of Arizona, capitalization \$1,250,000, shares \$1 par.

Lands, 7 claims, patented, about 100 acres, and a 60-acre mill and smelter site, 12 miles S. W. of Quartzite. Property shows limestone and schist, carrying 2 contact deposits. The main contact of 12' estimated average width, is developed by shafts of 270' and 890', latter an incline, with upwards of 1,300' of workings, showing malachite, azurite and copper oxides, said to give a general average assay of 12% copper, 4 oz. silver and \$1.50 gold per ton. Equipment includes gasoline power, 2 hoists, 2 engine houses, smithy and 6 dwellings. Water is supplied by a 1,000' artesian well. There is a 40-ton Vulcan blast furnace, of small present value. Probably idle.

VALENSUELLA COPPER MINING CO.

ARIZONA

Office and mine: Benson, Cochise Co., Ariz. Organized 1907. Lands, about 25 miles N. W. of Benson, near the San Domingo mine of the Hub Mining & Investment Co., are said to show extensive outcrops of self-fluxing copper ore. • Idle several years.

VALERIE MINE.

YUKON

Letter unclaimed at former office, Vancouver, B. C. Mine office: White

Horse, Yukon, Canada. Arthur D. Palmer, owner; Arthur Thompson, manager, at last accounts. Lands, 1 claim, 50 acres, 3 miles S. E. of the Arctic Chief mine, and about 6 miles S. of White Horse, connected by a 2½-mile wagon road with Wigan station, on the White Pass railway. The property shows a contact metamorphic deposit said to average 18' wide lying between limestone and granite. The deposit shows oxidized ores in numerous outcrops underlain by chalcopryite ore holding arsenopyrite, estimated to average about 10% copper. A little stripping has been done and there is an incline shaft of 92' and 2 shafts of 20', with several hundred feet of workings. A 40-ton test shipment of high-grade chalcopryite ore, 1904, gave smelter returns of 18% copper and \$5 gold per ton. Equipment includes a 20-h. p. boiler and an 8-h. p. hoist.

VALLEY VIEW MINING CO.

CALIFORNIA

Idle. Mine office: Lincoln, Placer Co., Cal. W. B. Hellings, manager, at last accounts. Lands, 90 acres, patented, showing a zone up to 250' in width, between schistose walls, covered by a gossan outcrop of about 100' width, traceable 1,000', carrying gold and silver values estimated to average \$4 per ton; the gossan was worked some years for gold. The ore deposit has a 5 to 30' paystreak, carrying copper and zinc sulphides, from which ore was shipped that averaged about 5% copper. Equipment includes two 5' Huntington mills. Idle several years.

VALPARAISO MINE.

MONTANA

Office: Corbin, Jefferson Co., Mont. C. O. Matson, owner. Lands, 8 claims, well timbered, on Valparaiso creek, are developed by 3 tunnels of 1,000', 450' and 200', and a 75' shaft, showing 2 veins of 14 to 16' width, carrying ores said to average 3 to 6% copper, 15 to 25 oz. silver and \$4 to \$8 gold per ton. Presumably idle.

VAN ANDA COP. & GOLD MINES CO., LTD.

BRITISH COLUMBIA

Letter unclaimed at former office, 108 La Salle St., Chicago, Ill. Mine office: Van Anda, Texada Island, B. C. H. W. Treat, gen. mgr. and L. Goodacre, trustees; Jas. Raper, agt., at last accounts.

Lands, 20 claims, crown granted, 840 acres, including the Copper Queen and formerly the Cornell mines, and a town site, on Marble bay. The company has been bankrupt for years, but kept alive by Mr. Treat, and has been bonded from time to time to various operators who have held the property for short periods only.

The mines have lenses of rich ore, mainly bornite, with some chalcopryite, carrying small gold and silver values with garnetiferous and calcareous gangue, but the lenses are neither large nor continuous and have not proven profitable under operation. Ores produced have ranged in tenor up to 8% copper, 2.5 oz. silver and \$1 gold per ton. The Copper Queen mine has a 500' main shaft with a 180' winze. There are other shafts of 80' and 150', and tunnels of about 4,000' aggregate length, the mines as a whole having about 2½ miles of workings.

Equipment includes small steam plants, with 25-h. p. and 35-h. p. hoists and a 5-drill Rand air compressor. The mines have a warehouse and shipping wharf, and there is a 20,000' sawmill.

The reduction plant includes a small sampling mill and a small and obsolete smelter, 1 mile from the mine, connected therewith by tram.

VANCOUVER ISLAND MG. & DEV. CO., LTD.

BRITISH COLUMBIA

Office: 45 Leadenhall St., London, E. C., Eng. Mine address: Duncans, Vancouver Island, B. C. F. H. Faviell, chairman; F. J. Lawrence, secretary. Organized Nov. 18, 1902, under laws of Great Britain, capitalization £50,000, shares £1 par; issued, £36,195. Lands, about 1,800 acres, patented, lying mainly E. of the Tyee mine and supposedly carrying the eastern extension

of the Tyee vein. The Westholm has a 510' two-compartment shaft, 700' W. of known occurrence of ore in the Tyee, and has about one-half mile of workings, showing on the 500' level a wide mineralized zone with occasional ore concentrations of 3 to 10% copper tenor. The Blue Bell has a 110' shaft, showing a little copper ore. Company has done no mining or prospecting in several years, and, at last accounts was engaged in lumbering.

VANGUARD GOLD-COPPER CO.**OREGON**

Mine office: Kerby, Josephine Co., Ore. C. E. Phillips, manager. Organized 1910, capitalization \$1,000,000, shares \$1 par. Lands, 7 miles W. of Kerby, are said to carry gold-copper ore. Was developing with small force at last accounts.

VEKOL MINING CO.**ARIZONA**

Office: Tucson, Ariz. Mine office: Vekol, Pinal Co., Ariz. Maj. E. S. Garnett, pres.; J. V. Neuhaus, vice-pres.; S. J. Garnett, sec.; J. M. Cotton, treas., at last accounts.

Lands, 42 claims, about 6 miles W. of the Reward mine and 35 miles S. W. of Casa Grande, in the Vekol mountains. Property includes 6 old mines, dating from 1881, said to have produced in the past nearly \$3,000,000 worth of silver-lead ore. The old mines shipped some ore carrying up to 400 oz. silver per ton with considerable lead and a small amount of copper. Development is by a 380' two-compartment main shaft, the mines having about 6 miles of old workings, developing a deposit of complex sulphide ore containing lead, copper and zinc, with indications of increased copper values at depth.

Equipment includes a steam and electric plant, with an air compressor and 3 hoists, 1 good for 1,000' depth. Buildings include a smithy, machine and carpenter shops, office and laboratory. The mill, of 40 tons rated daily capacity, has 10 stamps. Probably idle.

VEKOL RANGE COPPER CO.**ARIZONA**

Letters unclaimed at former offices, Security Bldg., Los Angeles, Cal., and Winkelman, Gila Co., Ariz. Chas. E. Finney, pres.; Edw. W. Brooks, vice-pres. and cons. engr.; Robt. J. Simpson, sec.-treas., at last accounts. Organized July 21, 1910, under laws of Arizona, capitalization \$3,000,000, shares \$10 par, in 25,000 shares preferred and 275,000 shares common stock.

Lands, 53 claims, 2 patented, 1,000 acres, 25 miles S. of Casa Grande, including about 200 acres of supposed porphyry copper ore. Mine has a 600' main tunnel and the 350' Phonodoree shaft, with about 2,000' of workings. The mine has been a small producer in former years. Equipment includes an antiquated smelter. Inactive.

VENTURE HILL MINING CO.**ARIZONA**

Office: 1515 Shatto St., Los Angeles, Cal. Jas. G. Scarborough, pres.; Mrs. Carrie G. Taylor, vice-pres.; Wm. R. Uber, sec.-treas. Organized 1900, under laws of Arizona, capitalization \$3,000,000, shares \$1 par. Lands, 6 patented claims, 110 acres, 2 miles S. of Jerome, show 2 fissure veins, claimed to average 4.7% copper, 6.5 oz. silver and \$4 gold per ton, in oxide and sulphide ores, developed by shafts of 65' and 87' and tunnels of 205' and 457'. Idle since 1904, and out of funds.

VERDE APEX COPPER MINING CO.**ARIZONA**

Office: 3 West Main St., Bloomsburg, Pa. Mine near Jerome, Yavapai Co., Ariz. Chas. B. Lutz, pres. and treas.; Jas. H. Mercer, vice-pres.; M. P. Lutz, sec. Organized 1900, capitalization \$3,000,000, shares \$1 par. Property was sold by the sheriff 1906, but was redeemed by the president for benefit of shareholders. Lands, 6 claims, about 90 acres, in Mescal gulch, about 2 miles S. of Jerome, slightly developed by 2 tunnels and shaft. Idle since 1904, and moribund.

VERDE COPPER MINING CO.**ARIZONA**

Letter unclaimed at former office: 167 Dearborn St., Chicago, Ill. Mine office: Jerome, Yavapai Co., Ariz. W. P. Cooper, pres.; E. C. Weatherley, vice-pres.; John Tierney, gen. mgr.; J. J. O'Donohue, sec.-treas.; J. P. Mowles, supt., at last accounts. Organized Jan., 1904, under laws of Arizona, capitalization \$3,000,000, shares \$1 par, as North Verde Copper Co., and name changed, Jan., 1909, to present title.

Lands, 6 claims, 120 acres, near the United Verde, cover a shear zone showing iron-stained rock and ledge matter, with calcite, that is about 150' wide. This mineralized zone has been prospected by a 375' shaft and a 250' tunnel. The latter shows a very little ore carrying 2.5% copper and 3 oz. silver per ton and a trace of gold. Equipment includes a 70-h. p. boiler, 40-h. p. Fairbanks-Morse double-cylinder hoist and an air compressor. Lands were jumped, Jan., 1908, but company claimed that assessment work was done properly, and jumping illegal, and apparently won out on this contention. Idle, except for a few weeks, since 1907. No returns secured.

VERDE GRANDE COPPER CO.**ARIZONA**

Office and mine: Jerome, Yavapai Co., Ariz. J. C. Scott, pres. and mgr.; J. W. Hubbard, vice-pres.; C. M. Heim, sec.-treas.; preceding officers, J. N. Lyons and J. W. Radley, directors. Organized Sept., 1906, under laws of Arizona, capitalization \$8,000,000, shares \$1 par; issued, \$5,700,000. Company endeavored, Aug., 1910, to float a \$20,000 bond issue, among its shareholders, but only \$2,000 was subscribed, which was returned, but in a second attempt, made 1912, about \$5,000 was raised for which 3-year bonds, at 6% were issued. Annual meeting, second Tuesday in December.

Lands, 9 claims, patents pending, 125 acres, on the southern slope of Smelter hill, the United Verde being on the opposite slope, about a mile distant, lands being located on a precipitous hill. The property shows diabase, diorite, slate and schist, carrying stringers of argentiferous and auriferous azurite, chalcocite and chalcopyrite, of good assay tenor, but not in commercial quantities, occurring mainly in schist. The management believes that the lands carry an extension of the United Verde orebody. Development is by an 800' shaft and 3 tunnels, with about 2,000' of workings.

Equipment includes a steam plant, with a 60-h. p. hoist, good for 1,500' depth, and an 8-drill Ingersoll-Rand air compressor. There are 8 buildings, including a 40x44' power house, 12x18' carpenter shop and 12x14' smithy, with a bunk house and mess house. The present management is endeavoring to raise funds to extend a 560' crosscut to intersect a mineralized ledge that gives indications of carrying ore at depth.

VERDE MINING CO., LTD.**IDAHO**

Mine office: Osburn, Shoshone Co., Idaho. L. J. LePage, pres.; J. E. Lefever, vice-pres.; W. G. Lefever, treas., at last accounts. Organized Sept., 1906, capitalization \$1,000,000, shares \$1 par. Lands, 12 claims, in McFarren gulch, 3 miles from Osburn, adjoining the Gray on the S. W. Has a shaft and tunnel showing ore assaying up to 6% copper, 11% lead and 25 oz. silver per ton. Idle several years, and dormant, if not defunct.

VERDE QUEEN MINING CO.**ARIZONA**

Mine office: Pantano, Pima Co., Ariz. P. M. Hilton, superintendent, at last accounts. Lands, in northern end of Helvetia district, about 12 miles from Pantano, and 15 miles W. of Benson, show silver-lead and copper ores, developed by a 2-compartment shaft, from which a little lead ore was shipped to the Deming smelter. Equipment includes steam power. Presumably idle.

VERMONT COPPER CO.**VERMONT**

Office: 576 Fifth Ave., New York. Mine office: South Strafford,

Orange Co., Vt. G. E. Parks, sec.; G. M. Heckscher, mgr.; Chas. Of, supt. Organized 1906, under laws of Arizona, as successor of Elizabeth Copper Co., capitalization \$1,000,000, and since has taken over the Strafford Mining Co. and the Sharon Power Co.

Lands, 12 miles from Pompanoosue, the nearest rail station, include the old Elizabeth mine, opened 1793, for magnetic pyrites, and operated early in the nineteenth century by the Vermont Copperas Co., which is said to have made, at one time about 6,000,000 lbs. of copper yearly, beginning a small incidental production of copper about 1830, when it was found that the mine carried an average of about 3% copper, in the form of chalcopyrite disseminated in pyrrhotite.

The orebody is a thin lens of pyritic ore in foliated mica-schist, wedging out at the bottom. The lens has been mined for 700' in length and is reported, by the management to have been opened up for more than 2,000' in length, ranging from 50 to 100' in width, of which 8 to 10' is ore. Management estimates upwards of 1,000,000 tons of pyritic ore in sight, consisting of pyrrhotite and pyrite with small amounts of chalcopyrite. Diamond-drill borings, made 1909, have shown ore to continue for 200' depth below the present workings. The mine has a 1,340' tunnel with back of 225', and a 200' incline blind shaft. The dumps carry about 50,000 tons of discarded ore of which large portions are estimated by the management to average 1.75% copper.

A hydro-electric power station on the White river, equipped for 500 h. p., and formerly transmitted current 9 miles to the mine and works. There also is a small steam plant and an air compressor at the mine.

The reduction plant at the mine included a mill and smelter, the former using the Rowland magnetic separation process. The smelter has a 300-ton blast furnace in which semi-pyritic smelting was tried, but abandoned 1908, for heap roasting. The smelter is idle, pending the construction of an acid plant, planned by the management. Idle and unlikely to be reopened.

VESUVIUS MINES CO.

OREGON

Frank J. Hand, superintendent, Bohemia, Lane Co., Ore. Property, the Vesuvius group of claims, shows veins with gold-silver-copper ores. Equipment includes water, steam and electric power and 10-stamp mill. Company plans erecting concentrator in 1913-14.

VICEROY MINING CO.

ARIZONA

Office: Janesville, Wis. Mine near Patagonia, Santa Cruz Co., Ariz. Frank H. Baack, pres.; M. G. Jeffris, vice-pres.; M. O. Mouat, sec.-treas. Organized Oct., 1912, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$600,000.

Lands, 8 claims, unpatented, 164 acres, in the Tyndall district, 20 miles N., N. W. of Patagonia.

The property shows a number of fissure veins, traversing porphyry or following contacts between diorite and porphyry and dipping 45°. The vein is said to range from 6 to 75' in width. Ores are principally silver-bearing, but show occasional bornite and a little lead ore above the water level, reported to carry from 16 to 199 oz. silver per ton.

Development is by shafts of 40' and 100' with about 400' of workings in leached ore.

Idle since April, 1913, for lack of funds, but company was planning to resume operations early in 1914.

VICTOR & BELLE CROWN MINING CO.

ARIZONA

Office and mine: Wenden, Yuma Co., Ariz. J. E. Matteson, pres. and gen. mgr.; F. C. Piper, vice-pres.; J. H. Matteson, sec.-treas.; B. J. Quinn, cons. engr.; preceding officers, R. R. MacDonald, W. E. Enos and J. M.

Shaffert, directors. Lands, 10 claims, 180 acres, in the Harcúvar mountains, 8 miles N. of Salome, the nearest rail point. Claims are said to have a vein of 5 to 7' width, a 30 to 36" paystreak, giving assays of 15 to 20% copper and \$15 to \$20 gold per ton. Development includes shafts of 80', 35' and 450', and tunnels of 755', 165' and 230' aggregating about 1,200' of workings. Equipment includes gasoline power.

VICTOR CONSOLIDATED MINING CO.

UTAH

Office: 53 City and County Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. J. S. Wills, pres.; J. A. Groesbeck, sec.; Vivian McCune, gen. mgr., at last accounts. Organized under laws of Utah, capitalization \$375,000, shares 50 cts. par, assessable, with 5 assessments levied and fully paid. Lands, 5 claims, patented, including the Victor and Boss Tweed mines, carrying gold and silver bearing copper ore, developed to depth of 800'. The company is idle and the mine has been in the hands of leasers since 1909.

VICTOR MINING & SMELTING CO.

MEXICO

Office: 315 Schultz Bldg., Columbus, Ohio. Mine address: Cananea, Sonora, Mex. S. D. L. Jackson, pres.; M. F. Cole, vice-pres.; F. P. Jackson, sec.-treas.; preceding officers, J. S. MacLean, W. H. Sartain, C. Thornton, Chas. Schindler and C. A. Stillwagen, directors; W. A. Woodlief, fiscal agt.

Organized May 9, 1905, under laws of Arizona, capitalization \$1,000,000, increased 1907, to \$1,500,000, shares \$10 par; issued, 90,000 shares. Title to property is held through the Guerrero Mining Co., legalized in Mexico. Annual meeting, second Monday in January.

Lands, 47 pertenencias, in 2 groups in the Magdalena district, about 12 miles S. W. of Cananea. The property shows fissure veins in granite-porphry intruding sedimentary rocks. The veins are strong and well defined, very silicious and high in iron content.

Development is by a shallow shaft and 5 short tunnels, with a total of about 1,500' of workings, showing high-grade copper ore with small gold and silver values, in 2 veins of about 4' and 70' width, the wider vein showing evidences of considerable leaching. A test shipment of ore, made 1912, yielded 13.56% copper and 80 cts. gold per ton.

The mine has no power equipment, but a steam plant, with hoist, power drills and a motor truck are to be purchased with money derived from the sale of treasury stock, late 1913.

VICTORIA CONSOLIDATED MINING CO.

UTAH

Office: care A. F. Carden, 406 Dooley Blk., Salt Lake City, Utah. Mine at Eureka, Tintic district, Juab Co., Utah. Lafayette Holbrook, pres.; Hon. Reed Smoot, vice-pres.; J. C. Lynch, mgr.; J. R. Twelves, sec.-treas., Provo. Capitalization \$70,000, shares 10 cts. par; \$50,000 issued. Has paid \$202,500 dividends to date, and \$10,000 in 1912.

Property, the Victoria mine at Eureka. Ore is silver-lead with some copper occurring in fissure replacements in limestone. Copper, though present, is in too small an amount to be paid for by smelters. Like other Tintic mines, it is likely to develop copper ores.

Development includes 1,200' shaft with 2,500' of workings and 1,500', 200 and 300' tunnels. Has new compressor, installed 1913, and uses electric power.

VICTORIA COPPER MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Mine office: Victoria, Ontonagon Co., Mich. Fred H. Williams, pres.; Chas. D. Hanchette, vice-pres.; Jas. P. Graves, treas.; preceding officers, Willard S. Martin and A. W. Chesterton, directors; Sydney S. Millett, sec. and transfer agt.; Geo Hooper, gen.

mng.; C. E. Weed, mine supt.; Chas. Caddo, mill supt.; G. A. Braun, Jr., engr.; A. R. Penberthy, clerk and purch. agt.

Organized Jan. 16, 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; paid in, \$14. Last assessment was \$1, Aug. 21, 1911. Company ended 1912, with quick assets of \$27,623.58, and with 1,155 shareholders. Shares listed on the Boston Stock Exchange. First National Bank, Boston, registrar. Annual meeting, fourth Monday in February.

Property comprises 2,289 acres mining lands, 6 non-mineral, in Secs. 19, 20, 29, 30 and 31, T. 50 N., R. 39 W., and Secs. 24, 25 and 36, T. 50 N., R. 40 W. This tract has an extreme E.-W. width of 2 miles, and a N.-S. length of $2\frac{3}{4}$ miles, lying just W. of the Ontonagon river. It is practically all on the mineral belt, only about 100 acres lying on the eastern sandstone. The tract may carry the western extension of the amygdaloidal bed under development by the Lake Copper Co. Neighboring mines, all idle for many years, are the West Minnesota on the N., National on the E. and Tremont-Devon on the W. The lands are well timbered, with an inexhaustible supply of good sandstone for building purposes. Nearest railroad is the Chicago, Milwaukee & St. Paul, at Rockland, 3 miles distant.

The first known attempt at Lake Superior copper mining was made in the winter of 1770-71, on what is now Victoria property. The next work was done in 1849, when the property was opened under the name of Cushin, on a line of prehistoric pits containing masses of native copper, 1 weighing upwards of a ton. The name was changed 1850, to Forrest, and the property was reorganized 1858, as the Victoria Mining Co. Under these titles the property made 373,279 lbs. fine copper at a loss of about \$180,000. The mine was operated regularly, on a small scale, 1849-55, and thereafter spasmodically. It was unwatered 1883, but remained idle until work was begun March 1, 1899, by the present company.

The mine is located on a high and steep hill, notwithstanding which the solid rock is covered with heavy sand and clay drift. The Forrest amygdaloid bed, on which the mine is opened, is 5 to 80' wide, averaging about 12', but of very irregular width and dip, and very buncy in contents. The average strike is N. 66° E., and dip 61° N. W., the lode having about $1\frac{1}{2}$ miles of outcrop on Victoria lands. The formation is much disturbed at surface, the bed being irregular in dip, but widening at depth, with more regular walls. The lode is low in average grade, but fairly regular in copper contents, carrying low-grade stamp rock, with best values near the hanging wall.

The old mine was opened by 5 shafts, numbered E. to W., located at irregular intervals, with levels spaced at 55 to 65'. No. 1, a single compartment shaft, was 244' deep; No. 2, with 2 compartment, 247' W. of No. 1, was 246' deep; No. 3 with 1 compartment, 258' W. of No. 2 was 300' deep; No. 4 with 1 compartment, 310' W. of No. 3, was 130' deep; No. 5 with 1 compartment, 578' W. of No. 4, was 60' deep. The old mine has about 4,000' of laterals.

No. 2 shaft, which was chosen for new operations, was enlarged to 2 compartments, 8x12' inside measurement, and is 2,250' deep, bottomed just below the 24th level. Levels below the 4th have been opened at regular intervals of 100', with drifting on all levels. The total drifting on the Forrest bed, tributary to No. 2 shaft, was 31,362' at the end of 1912, and in addition there are 7,212' of crosscuts, the longest being 2,117' on the 19th level S. Short drifts have been opened from these crosscuts on various beds, but without much encouragement. The total openings tributary to No. 2 shaft are 42,631', and the mine was estimated, 1912, to show 300,000 tons of stamp rock, with 200,000 tons blocked out for stoping.

The productive part of the mine tributary to Victoria or No. 2 shaft, on the Forrest bed, develops an epidotal amygdaloid having an average width of 4 to 12', widening to 80', at one point in the bottom workings. Walls are quite regular, but where crush zones occur, the mineralization extends into the walls, giving an occasional maximum of 50' width of ore. The footwall bed underlying the Forrest, at a depth of 2 to 12', is also well mineralized in places, carrying occasional masses from 100 lbs. to 3 or 4 tons in weight, but is very bunched, copper occurring mainly on the foot, with considerable epidote on the hanging. Underlying this epidotal bed, at a distance of 60', is a 6' amygdaloid showing much epidote and allied minerals, with a little stamp rock. Stopes have been opened on all levels from the 4th to the 22nd inclusive, with fairly uniform results.

The copper shoot developed by this shaft is 1,000 to 1,500' wide, with a slight rake to the S. W. The ore stope is low in average grade, but fairly regular in contents, with main values in stamp copper. All levels down to the 17th are connected by winzes, giving ventilation and safety. The walls stand well, without timber, excepting shafts and along the levels. New openings 1912, were 4,128' of drifts, 504' of crosscuts, 98' of raises and 141' of sinking, giving a total of 4,871' of new openings for the year, and 6,448 cubic fathoms stoped. The mine works 35 power drills.

An exploratory shaft, 2,600' E. of No. 2, was sunk, 1907-08. to depth of 121', with some drifting and crosscutting, which met with small encouragement, and work was stopped.

No. 6 shaft, 3,455' E. of No. 2, was started Dec., 1909, to develop the eastern end of the property, previously explored by diamond-drill borings. This shaft, 7x15' 6" in dimensions, has 3 compartments, with 2 skipways, designed for 6-ton skips, and concrete and steel construction are used wherever possible, the usual method of concrete stringer construction having been modified by covering the entire footwall with concrete, in which are imbedded light timber stringers on which the rails are set. This shaft was 886' deep, Dec., 1913, with stations cut at 105', 263', 363', 450', 550', 650', 750' and 850', and 1,490' of drifts and crosscuts, showing broken and faulted ground, quite barren of copper, excepting for about 100', a short distance W. of the shaft.

The mine also has a 724' crosscut tunnel driven into the bluff overlooking the river, showing the contact between the Keweenaw trap beds and the eastern sandstone, with several amygdaloidal beds exposed on which 176' of drifting gave a little encouragement. There also are old crosscut tunnels of 150' and 419'.

Considerable diamond drilling has been done N. of the Forrest bed, a total of 15,292' of holes having been drilled, in 2 cross-sections, disclosing several beds that may warrant future attention.

No. 2 shaft has a 30x50' frame shaft house, on stone foundations, equipped with a pneumatic hoist and a 5-ton traveling crane for handling skips, man cage and timber. The rock house, in connection with the shaft house, is 37x40' in size, of wood, on concrete piers, having storage bins for both stamp rock and waste, with chutes, loading gates and air lifts, and there is a pneumatic hammer for mass copper. The skip dumps into a large storage bin, from which rock is fed by gravity to 18x24" and 13x18" crushers that discharge into bins, from which the rock is loaded into 6-ton railway cars.

The power house is equipped with a 20x48" Webster, Camp & Lane duplex-cylinder hoist, having a single conical drum of 8' minimum and 12' maximum diameter with 11' face, carrying 3,000' of 1½" rope, raising 4-ton skips, and equipped with an automatic safety stop and throttle-closing device. The

boiler house is for heating purposes only. Buildings at No. 2 shaft include machine and carpenter shops, smithy, changing house, hospital, warehouse, general store, mine office, mining captain's office, 3-story frame boarding house and 76 dwellings, the company owning upwards of 100 buildings. A 10x16x28' storage cistern holds water from the mine for feeding boilers. Water for domestic use and fire protection is pumped from a well having a storage tank about one-half mile from the mine. A sawmill having a 50" circular saw furnishes timber and lumber, having sawed 212,446' of lumber in 1911 and 355,118' in 1912. A lathe, shingle and planing mill were erected in 1912.

Equipment at No. 6 shaft includes a shaft house, an engine house having a 12x20" Nordberg geared hoist with a cylindrical drum, of 5' diameter and 8' face, which formerly was at No. 2 shaft, and with which No. 2 was sunk to a depth of 2,089', though the hoist was rated at only 1,200' capacity.

A large water power has been developed from Glenn falls, on the W. branch of the Ontonagon river, about 1 mile from the mine, at a cost of \$440,593, to Dec. 31, 1912. This is the best natural water power of the Lake Superior copper district, the stream dropping about 110' on the company's property, by a series of small falls, between which are numerous rapids, with sandstone bottoms. The company utilizes 72' of this drop. Power is developed by means of a dam, canal and shafts.

The dam, built up on excavated bedrock, is 225' between abutments, and has 32 eighteen-inch I-beams, 10' apart, sunk vertically 5 to 10' in bedrock, with cement filling. It has an extreme height of 24', is 14' wide at the bottom and 8' at the top, and has a 320' main section with wings of 100' and 160', giving a total length of 580', built with an arch up-stream. The dam is faced, on the water side, with 5x10' plates of 3/16" steel, bolted to the steel I-beams through the concrete. The center of the dam has an apron 80' wide, also a floating boom to guide logs, as the stream is used for logging operations, and is substantially built, so that it cannot be torn out by a log jam. The dam is provided with two 44" flush gates, for drainage and flushing out silt, a log chute, waste weir and sand fence. There are 6 canal head gates in 2 sets, in a frame of 20" I-beams, set vertically, 6' apart, with 6 heavy oak gates, worked vertically by rack and pinion, the gates being 6' wide in the clear.

The canal diverting water from the dam is 4,800' long, the first 4,000' being earthwork, with 20' base and side slopes of 1½:1. The depth is 10' at the head gates, with a bottom slope of 1" in 100'. The last 800' is cut through sandstone, rectangular in section, with a 14' base and depth of 14'. At the end the canal opens out in a forebay, at the extreme end of which the compressor shafts are located. The canal is equipped with drainage gates, slush gates, overflow weirs and submerged measurement gates.

The 3 intake shafts of the compressor are 5' in diameter, spaced 19' from center to center. The shafts were sunk through solid sandstone, by means of 5" preliminary holes, bored to the required depth of 343', then enlarged from 5" to 5' in diameter.

The shafts, formerly lined throughout with concrete, drew air through 5,000 special ⅜" tubes. This proved unnecessary as the water falling down each shaft sucks air with it and this air is carried through a 360' tunnel at the bottom of the shaft to a large chamber cut in the rock. A water seal at the intake end is formed by ⅜" steel shells, firmly concreted into the bottom of the shafts. The air chamber is 281' 6" long, and 18' wide, with minimum of 21' and maximum of 26' height, having a maximum capacity for 80,264 cu. ft. of compressed air. The water seal at the upflow end is formed by an arch of rock, 40' long, below which a tunnel 10' high leads to the up-

flow shaft, which is 16x18' in section, sunk at 72°, with a vertical depth of 271', leading to surface, where the water is again discharged into the river. The power head developed is 72', and the pressure head 271', giving a maximum air compression of 117 lbs. per sq. inch. Imprisoned air, carried down the shafts by suction and swept along the tunnel in bubbles, by the rushing water, is released in the chamber where the constant accession of bubbles, causes compression, escape backwards being prevented by the falling water in the shafts. The chamber, known as the compressor, is connected with a 12" pipe line to mine and mill. Extra pressure is relieved by a safety or blow-off pipe.

The Taylor hydraulic-pneumatic plant was completed, May, 1906, and began furnishing 4,000 to 5,000 h. p. under a full head of water, and has shown an efficiency of 82% under test. This plant is the largest single-unit air compressor in existence, and the fifth installation of the sort in the world. It is possible to operate 1, 2 or 3 of the inlet shafts, if so desired, with corresponding variation of the energy developed, but only 1 unit is in regular use. The compression is automatic, practically isothermal, and the air as delivered is unusually dry.

An extensive topographical and hydraulic survey of the company's lands and the watershed made 1909, by the J. G. White Co., of New York, shows that an average of 15,000 h. p. can be developed on the western branch of the Ontonagon river, but the expense of development necessarily will be large. During the drought of 1910, the water supply fell far below normal and additional storage for water was secured on the western branch of the Ontonagon river, near the outlet of Lake Gogebic. Ultimately the Victoria will have 8,000 to 12,000 h. p. of electric energy for sale, and a transmission line to Houghton and Calumet would give access to a market where this amount of power would be readily salable, though there is a much nearer market in the Lake district of Ontonagon county.

The mine and mill are connected by a 4,800' tram line, in 2 sections, the upper with 6%, and the lower with a 12% grade. A stationary double-sheave hoist, at the top of the incline, serves to pull the empty cars up the steeper grades, but otherwise trains are operated by gravity, in counterbalance. A compressed air locomotive switches trains of four 6-ton cars from the head of the incline to and from the No. 2 rock house.

The stampmill, on the bank of the river, near the hydraulic works, has a single 24x24" Allis-Cuyahoga stamp. The stamp, of 650 tons daily capacity, has $\frac{3}{8}$ " mortar screens, and all-oversize above 5/16" is run to a set of 16x36" Traylor rolls. The washing floor contains 22 Hodge jigs, 5 Wilfley tables, 6 Card tables, 1 Standard table, hydraulic separators and settling tanks. Machinery is driven by a 12x12" piston-valve engine. The mill went into commission June, 1906, tailing losses running only 0.1 to 0.15% copper. Mineral (concentrate) is smelted by the Calumet & Hecla Co.

Production has been as follows: 1906, 546,334 lbs. copper; 1907, 1,207,237; 1908, 1,290,040; 1909, 1,062,218; 1910, 1,164,564; 1911, 1,303,331; 1912, 1,224,911.

Tonnage costs are low, but finished copper costs are high, owing to the exceedingly low average tenor of the rock stamped which was only 0.63%, or 12.7 lbs. of finished copper per ton, secured at a cost of 15.8 cts. per lb. in 1907, with a cost of 14.34 cts. per lb. in 1908, and 13.67 cts. per lb. in 1909, in which year unusually heavy expenditures were made for new construction and extensive exploratory work. The rock continues painfully low in grade, and averaged a recovery of only about 9 lbs. fine copper per ton in 1910, 10 lbs. in 1911 and 9.3 lbs. in 1912. These returns would be absolutely ruinous, and the mine hopeless, were it not for the great advantage that the property enjoys through the cheapest power that is had by any copper mine in

this or any other district. Cost per ton of rock stamped was \$1.56 in 1908; \$1.48 in 1909, \$1.17 in 1910, \$1.19 in 1911 and \$1.32 in 1912. It is obvious that the Victoria needs 15-cent copper to break even on its present basis of production, but could a larger ore supply be secured, by enlarging No. 2 shaft, even the present phenomenally low average cost could be lowered, and the Victoria is in a position, if given a larger tonnage of rock to stamp, to handle rock of lower average grade than perhaps any other mine in the Lake Superior district. The company's holdings are extensive, exploratory work is being conducted with vigor, and the management has displayed both courage and good judgment in its operations.

VICTORIA MINE.**MONTANA**

Mine address: Troy, Lincoln Co., Mont. Frederick Lang, manager. Property, in the Sylvanite district, 24 miles N. of Troy, on the Yahk river, is developed by an 800' tunnel showing gold and silver-bearing copper sulphides.

VICTORY COPPER MINING CO.**ALASKA**

Inactive. Office: 817 Alaska Bldg., Seattle, Wash. Mine office: Ketchikan, Gravina island, Alaska. M. McTernan, pres.; E. D. Fisher, vice-pres.; Maurice D. Leehey, sec.; J. R. Kelley, treas. Dr. C. O'Connor, C. J. Cronin and E. F. Tiernan, directors; Patrick Heaney, gen. mgr. Organized March, 1901, under laws of Washington, capitalization \$1,500,000, shares \$1 par, non-assessable; fully issued. Annual meeting, first Monday in September.

Property, 14 claims, 9 patented, 260 acres, on Seal bay, Gravina island, 22 miles S. of Ketchikan. The claims extend from sea level to 4,000' above the beach. Lands show granite, greenstone and limestone reported to be cut by 11 veins, of which 4 were developed. The main vein is estimated by management to average 22' in width carrying chalcopryrite with quartz gangue and to assay about 5% copper, 19% sulphur, 19% iron and 52% silica, with \$2 per ton in combined gold and silver values. Development is by a 2,100' tunnel, started just above sea level, intersecting 11 veins.

VIENNA-INTERNATIONAL MINE.**IDAHO**

Mine address: Wallace, Idaho. Property, near the mouth of Flora gulch, on Placer creek, 2 miles S. of Wallace, shows banded shales and quartzites of the middle part of the Newland formation, striking N. 50 to 60° W., and dipping 70° S. Principal vein has a quartz-siderite orebody, 3 to 5' wide with strike almost E.-W. and vertical dip. Ore on the dump shows galena, pyrite and chalcopryrite in a quartz-siderite gangue of too poor a grade to be profitably concentrated.

Development is by a shaft, and 2 tunnels of 700'.

VILLAGE BELLE GOLD & COPPER CO.**COLORADO**

Office and mine: Walden, Larimer Co., Colo. David Hendrickson, pres. and gen. mgr.; M. C. Ward, vice-pres.; T. John Payne, sec.-treas., at last accounts. Organized July 16, 1902, under laws of Wyoming, capitalization \$100,000, shares \$1 par. Lands, 4 claims, unpatented, are said to have an 8' vein carrying ore that will average 15% copper and 7 oz. silver per ton. Development consists of a 100' shaft with a 150' drift, at last accounts. Equipment includes a 20-h. p. steam plant, and the mine has a small concentrating mill. Idle.

VINCENT CREEK GOLD & COPPER CO.**OREGON**

Office and mine: Austin, Grant Co., Ore. Burton Miller, pres. and gen. mgr.; W. H. Miller, vice-pres.; Nellie H. Miller, sec.-treas.; other directors, J. S. Edwards, J. McHenry and E. Blackwell. Organized Dec. 5, 1907, under laws of Oregon, capitalization \$1,000,000, shares \$1 par; issued 500,014 shares.

Lands, 80 acres, in the Greenhorn district, 30 miles from a railway.

Property shows a strong vein, traceable 1,500', said to average 14' in width and 3.5% copper. Development consists of a 25' shaft and a tunnel planned to be driven 600' with back of 400'. There are 3 buildings. Mine has no power equipment.

VIRGIN COPPER CO.

PENNSYLVANIA

Office: 12 West Bldg., York, Pa. Mine office: Charmian, Franklin Co., Pa. John H. Dechert, pres.; Chas. E. Wills, vice-pres. and gen. mgr.; Clarence A. Wills, sec.; Harry S. Wiest, treas. Lands, about 1 mile N. of Charmian, in the Blue Ridge mountains, near the Maryland state line, show ore carrying native copper, with silver and gold values said to give assays of \$25 to \$600 per ton. Development is by a 215' shaft sunk at 47°, and 4 diamond drill holes, of 165 to 800', were bored, 1907. Equipment includes a small hoist and air compressor. Is considered an unpromising venture.

VIRGINIA COPPER MINE.

VIRGINIA

Office: care Richard Lamb, 136 Liberty St., New York. Mine address: High Hill, Halifax Co., Va. Property is the High Hill mine, 1,617 acres, in the Virgilina district, developed by 8 shafts of 140 to 300' depth, with about 1 mile of workings. Property shows 2 veins giving assays up to 5.9% copper, 2 oz. silver and 80 cts. gold per ton. Ores are highly silicious, the gangue containing about 87% silica, which precludes smelting and wet process concentrating, but Mr. Lamb advises 1913, that he has perfected a leaching process and expects to again have the mines in operation. Property was formerly operated by the Virginia Copper Co., Ltd. Equipment includes a 350-h. p. steam plant.

VIRGINIA COPPER M., M. & SMELTING CO.

MEXICO

Letter unclaimed at former office, 16 North Eighth St., St. Louis, Mo. Mine office: Concheño, Chihuahua, Mex. J. W. Clayton, president and manager. Organized under laws of Arizona, capitalization \$1,250,000, shares \$1 par.

Lands, S. of Temósachic, 75 miles from a railway, include the Hidalgo mine, having 4 tunnels, developing a vein of 8' reported width, which in the Santiago tunnel shows sulphide ores giving assays of 22.12 to 42.73% copper, 7.6 to 13 oz. silver and up to 40 cts. gold per ton. A carload test shipment, 1909, to the Torreón smelter is said to have returned 33% copper, 15 oz. silver and 0.32 oz. gold per ton. Equipment includes steam power, with hoist and air compressor.

VIRGINIA DEVELOPMENT CO.

MEXICO

Office: Douglas, Ariz. Mine address: Fronteras, Sonora, Mex. W. B. McBride, pres.; S. Grose, mgr., at last accounts. Lands, 19 hectares, near the Cabullona mine, 16 miles S. of Douglas, have a shallow 2-compartment shaft, said to show native copper and mixed carbonates, giving average assays of 26% copper, 30 oz. silver and \$4.96 gold per ton. Idle.

VIRGINIA MINING CO.

IDAHO

Idle. Office: 123 Atlas Blk., Salt Lake City, Utah. Mine near Baker, Lemhi Co., Idaho. M. B. Sowles, pres.; J. D. Pardee, vice-pres.; W. A. Byers, sec.-treas. and gen. mgr. Organized 1904, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, 15 claims, 9 patented, 300 acres, in the Sand Creek district, 5 miles from a railroad, show slate, granite and porphyry, with 8 fissure veins, said to average 2' in width and to be traceable 6,000', carrying chalcopryrite and galena, assaying up to 7% copper, 2 oz. silver and \$25 gold per ton. Mine is reported to have 3,000' of workings, with 10,000 tons of ore in sight. Equipment includes a 3-stamp mill.

VIRGINIA SMELTING CO.

VIRGINIA

Secretary's address: 131 State St., Boston, Mass. Works office: West

Norfolk, Norfolk Co., Va. W. E. C. Eustis, pres.; A. H. Eustis, vice-pres.; F. A. Eustis, sec.-treas.; E. H. Hamilton, supt. Organized Nov. 10, 1909, under laws of Maine, as successor of Eustis Smelting Works, capitalization \$1,000,000, shares \$100 par, nonassessable, in \$500,000 preferred and \$500,000 common stock. Annual meeting, first Tuesday in October.

Company owns the Eustis Smelting Works, or Norfolk smelter, located on tide water, near Norfolk, with railroad facilities to all points. The location is favorable for custom smelting, as more coal is shipped out from this vicinity than from any other center in North America and this traffic commands favorable freight rates on return cargoes. The location also insures the best coke for metallurgical use, on advantageous terms. Ore received by vessel is unloaded by machinery into standard railway cars, with facilities to set aside any desired portion into a sample car, standing on a separate track. The unloader has a maximum capacity of 1,000 tons in 24 hours. Railroad cars containing ore, whether from the wharf or direct rail shipments, are hauled by locomotives upon trestles, whence ore and coke are dumped into storage bins having capacity for 25,000 tons of ore, and, if necessary, the works can store 50,000 tons of ore.

The smelter has a single water-jacket blast furnace, 4x36' at the tuyeres, of 600 tons daily capacity, using sea water for the jackets. The plant does a general custom business, treating ores from Sherbrooke, Quebec, and ores from El Cobre mine of the Cuba Copper Co., the iron in the Sherbrooke ore fluxing the silicious Cuban ores. The works have steam, electric and pneumatic power. A Dwight-Lloyd sintering plant was installed 1912, and the management contemplates the addition of calciners. Owners are reported to have considered adding a chamber acid plant.

VIRTUE MINING & DEVELOPMENT CO.

ARIZONA

Office: Paradise, Ariz. Mine office: Portal, Cochise Co., Ariz. E. F. Epley, pres. and gen. mgr.; W. T. Epley, vice-pres.; Geo. A. Walker, sec.-treas. Organized July 14, 1906, under laws of Arizona, capitalization \$1,000,000, shares \$2 par, nonassessable; issued \$780,000. Promoters were given \$600,000 for the property.

Lands, 8 claims, unpatented, 160 acres, in the California district, showing 2 ore deposits, 1 of which is claimed to be 100' wide. The main ore-body is a contact deposit carrying irregular pockets of ore, chiefly chalcocite and chalcopyrite, with some oxidized ore, giving assays of from a trace to 58% copper, from a trace to 28 oz. of silver, with traces of gold. Development is by a number of pits, of 10 to 26' and the Virtue tunnel, planned to be driven about 1,100', to cut the vein giving a back of about 600'. There is no power equipment.

VOLCANCILLOS MINES.

MEXICO

Mine office: Avenida Borbon No. 6, Autlan, Jalisco, Mex. Carolina Blake, manager. Property, 28 pertenencias, 70 acres, and a 10-acre mill site, with 100 sq. miles of timber lands, held under a government concession in the Cacoma district, including the Volcancillos and adjoining mines. The Volcancillos group, 12 miles W. of Autlan, shows diorite-porphry dikes, with contact deposits 5 to 80' wide, the largest one containing chalcopyrite ore assaying 4 to 15% copper, 4 oz. silver and nearly \$5 gold per ton.

Development includes a 300' two-compartment shaft with about 1,000' of workings and several tunnels, 1 having a back of about 150' but still in the oxidized zone. The mine is estimated by the management to show about 100,000 tons of ore. The ore deposit, discovered 1860, was opened by Edward Blake, was operated under bond and lease for a while by the

Cacoma Mining & Smelting Co., but reverted to Mr. Blake and still remains in his family.

Equipment includes a steam plant with 40-h. p. hoist, good for 1,000' and a 10-ton mill and smelter, now abandoned. The ore from the Volcanillos is sold to the local Indians, who have been metal workers from time immemorial. The natives buy the crude ore, paying 4 cts. per lb. for the copper content. They crush and concentrate the ore, smelting the concentrate in little furnaces and making copper cakes which are skillfully fashioned into pots, kettles and other articles.

VOLCANIC MINE.

BRITISH COLUMBIA

Mine office: Grand Forks, Boundary district, B. C. R. A. Brown, owner. Lands, 102 acres, and a 320-acre mill site, on the north fork of the Kettle river, show a great hill of cupriferous pyrrhotite. Vein, claimed to be 1,200' long, shows small values in copper and gold near surface, with promise of better values at depth. Has a 900' tunnel, which has not yet reached the orebody. Property, though low in grade, is considered promising, because of vast size of its orebody. There are a number of small buildings, including a boarding house for 40 men.

VOLUNTEER MINING CO.

UTAH

Office: 232 D. F. Walker Bldg., Salt Lake City, Utah. Mine address: Milford, Beaver Co., Utah. W. C. Albertson, pres. and gen. mgr.; W. H. Havenor, vice-pres.; S. G. Cole, sec.; H. E. Havenor, treas., asst. sec. and engr.; preceding officers and Geo. Havercamp, directors. Organized under laws of Utah, capitalization \$50,000, shares 10 cts. par, nonassessable; issued \$25,550. Annual meeting, second Monday in May.

Property, 6 claims, unpatented, 600 acres, in the North Star district, 7 miles from the S. P. L. A. & S. L. R. R. The claims show contact deposits between limestone and intrusive porphyry. The mine has only two 12' pits, and a 70' tunnel, which is to be continued.

VULCAN COPPER MINING CO.

CALIFORNIA

Office: 625 Market St., San Francisco, Cal. Letter unclaimed at former mine office: Kennett, Shasta Co., Cal. John R. Lyle, pres. and gen. mgr.; E. G. Humphrey, vice-pres.; Alton J. Knight, sec.-treas., at last accounts. Organized Oct. 18, 1905, under laws of Oklahoma, capitalization \$3,500,000, shares \$1 par. Company was selling stock 1910, at 25 cts. per share flat, or at 50 cts. per share with a guarantee of money back in 10 years.

Property, the Great Verde mine, 14 claims, patented, 250 acres, adjoining the Balaklala and Shasta King mines on the W., lands being on Squaw creek, about 10 miles from Kennett. Claims show alaskite porphyry and andesite with gossan croppings, 1 covering an orebody, claimed to be 80' wide, of ore containing chalcopyrite, disseminated in pyrite, estimated by management to average 3.5% copper, 2 oz. silver and \$3 gold per ton, which figures seem too high.

Development includes numerous short tunnels, 4 showing low-grade ore, near surface, with about one-half mile of workings. Property is claimed to show occasional native copper and chalcopyrite ore up to 20% copper. Diamond drilling is said to have developed good sulphide ore. Probably idle.

VULCAN MINING, SMELTING & REFINING CO.

NEVADA

Mine office: Cherry Creek, White Pine Co., Nev. J. H. Leishman, manager. Capitalization 2,500,000 shares. Lands, partly patented, in the Hunter district, about 30 miles from Ely, the nearest rail point, show copper and silver-lead ores. Was making small, but fairly regular shipments of ore, late 1913.

WABUSKA COPPER MINES CO.**NEVADA**

Mine office: Wabuska, Lyon Co., Nev. J. E. McDermott, manager. Property, the Minnesota group, 13 claims, 16 miles from Yerington, is said to carry large deposits of iron ore, forming a gossan of 50 to 100' width, covering a contact deposit, between limestone and granite, of about 20' average width, carrying sulphide ore assaying 1 to 30% copper.

Development is by 2 shafts, 1 of about 500' depth, showing ore said to average better than 3% in copper tenor. There also are several shallow pits, deepest 15', showing ore giving assays of 2 to 40% copper. The property has necessary mine buildings. Presumably idle.

WAGNER AZURITE COPPER CO.**NEVADA**

Office and mine: Luning, Mineral Co., Nev. Frank Everett, pres. and mgr.; S. K. Bradford, vice-pres. and engr.; K. C. Martin, sec.-treas.; preceding officers, H. D. Keefer and Jas. I. Keller, directors; W. W. Weisbach, supt. Organized July 15, 1907, under laws of Nevada, capitalization \$2,500,000, increased 1910 from \$2,000,000; shares \$1 par, nonassessable; issued 1,146,034 shares. Annual meeting, second Tuesday in September.

Property, 20 claims, in 2 groups, unpatented, 400 acres, in the Goldyke district, 32 miles N. E. of Luning and in the Wagner and Fair Play districts, latter 35 miles E. of Mina, the nearest rail point. The Atwood group, which is the principal property, shows a contact zone of about 600' width, traceable 2,000' between an altered granite foot and limestone hanging, with N. W.-S. E. strike and dip of 50° N. The outcrop carries silver and gold-copper ores with a quartz gangue. Development consists of 2 tunnels, of 1,700' and 350', with a total of 2,185' of workings.

The Nevada-Wisconsin group, purchased 1913, shows several dikes of 50 to 100' width of which 1, said to show sulphide ore of 2 to 11% copper, is under development by shaft.

Equipment includes a 40-h. p. steam plant with a 15-h. p. hoist and a 3-drill straight-line air compressor. The management plans continuing mining development and building a 100-ton leaching plant and 10-stamp mill. Property considered promising.

WALCOTT COPPER MINING CO.**WYOMING**

Office and mine: Walcott, Carbon Co., Wyo. W. C. Sammons, pres.; F. A. Raynor, vice-pres.; W. W. Petty, mgr., at last accounts. Organized 1907, capitalization \$1,000,000. Property, the Elkhart mine, with 7 claims, near Elk mountain, is said to have an 80' shaft that shows a good sized orebody of about 3% copper. Equipment includes a small steam plant and hoist. Idle.

WALDO SMELTING & REFINING CO.**OREGON**

Office: P. O. Box 64, Colorado Springs, Colo. Mine office: Takilma, Josephine Co., Ore. Spencer Penrose, pres.; Chas. L. Tutt, Jr., vice-pres. and sec.; J. A. Hull, treas.; preceding officers, J. A. Hayes, J. O'B. Gunn and Col. T. Wahn-Morgan Draper, directors; E. C. Tucker, supt. Organized Dec. 3, 1901, under laws of Colorado, capitalization \$3,000,000, shares \$100 par. Is closely affiliated with the Takilma Smelting Co., and owns a share interest therein.

Property, 20 claims, patented, 400 acres, with a mill site and 650 acres of placer ground, near the Queen of Bronze mine, about 40 miles from the S. P. R. R. The claims show several fissure veins said to average 10' in width and to carry sulphide ores averaging 12% copper and \$3 gold per ton. The mine has a shaft and 3 tunnels. The Copper King shaft, about 200' deep, has an 80' level showing a good orebody. The 700' Lyttle tunnel and the 400' No. 2 tunnel, on the same claim, are also said to show good orebodies. The 310' Cowboy tunnel connects with the incline shaft 160'

below surface and was planned to be extended to intersect the known pay-shoots. Management considered good and property promising.

WALDORF CONSOLIDATED MINING CO. COLORADO

Office: 725 Colorado Bldg., Denver, Colo. Mine office: Georgetown, Clear Creek Co., Colo. John S. Mouro, pres.; Fred W. Webber, vice-pres.; Edw. J. Wilcox, sec.-treas. and mgr., at last accounts. Organized 1908, as a reconstruction of the Waldorf Mining & Milling Co., capitalization \$3,600,000, shares \$1 par, in \$400,000 of 7% cumulative preferred stock and \$2,300,000 common stock issued.

Lands, 600 acres, patented, including the Tobin mine, in the East Argentine district. The claims show a strong fissure vein that has a 4' pay-streak of gold-bearing copper ore. Development includes the Tobin and Wilcox tunnels with about 7 miles of workings. Equipment includes a 125-ton mill, at the portal of the Wilcox tunnel.

WALKER MINING CO.

CALIFORNIA

Office: Main and Third South Sts., Salt Lake City, Utah. Mine near Portola, Plumas Co., Cal. Jos. R. Walker, pres.; Chas. H. Post, sec.-treas. Organized Sept., 1909, under laws of Utah, capitalization \$100,000, shares 10 cts. par; issued, \$750,000. Control of company is said to have been purchased 1913, by the Cowan-Browning interests of Salt Lake City and Ogden.

Property, 16 claims, 10 patented, heavily timbered, with a good water power available, in an unorganized district, 18 miles N. E. of Portola, on the Western Pacific railroad. The claims show altered diorite with a big gossan outcrop up to several hundred feet in width, running N. W. across several claims, underlain by a vein estimated to be 27' wide with a shallow zone of oxidation, succeeded by sulphide ore carrying some secondary sulphides, but mainly chalcopyrite. This ore is estimated by the company to average 6% copper, 3 oz. silver and \$1 gold per ton.

Development consists of 35' and 70' shafts. The 70' shaft has a 27' crosscut at the bottom showing a wide orebody with an 8' paystreak assaying up to 4.5% copper, 3 to 5 oz. silver and \$1 to \$2 gold per ton; the balance of the crosscut shows ore of about 2.75% copper with small gold and silver values.

Equipment includes a small steam plant with a 20-h. p. hoist and several mine buildings.

WALLA WALLA COPPER MINING CO.

WASHINGTON

Office: Walla Walla, Wash. Mine office: Keller, Ferry Co., Wash. Jasper King, superintendent. Property, 1 mile N. E. of Keller, in the southern half of the old Colville Indian reserve, shows a vein of 30' estimated width, partially mineralized with gold-copper ore of fair assay value, developed by an opencut shaft and tunnel. No recent returns secured.

WALNUT CREEK MINING & MILLING CO.

ARIZONA

Mine address: Kingman, Mohave Co., Ariz. C. E. Worton, pres.; J. M. Worton, mgr. Property, 10 miles from Kingman, shows a 14" vein of gold and silver-bearing copper ore. Presumably idle.

WALNUT GROVE GROUP.

ARIZONA

Mine address: Miami, Ariz. P. A. Schilling, manager. Property consists of claims and a mill site N. W. of the Ray Consolidated holdings. The claims show mineralized schist said to be similar to that in the Ray mine and lying next to a heavy limestone outcrop. Development is by shafts, with a number of drifts showing ore. Was developing with small force, at last accounts.

WAR EAGLE GOLD & COPPER MINING CO.

MONTANA

Mine address: Alhambra, Jefferson Co., Mont. Lands, 3 claims, 7 miles

S. of Alhambra, in Warm Springs gulch. Claims show strong fissure veins in granite. Values occur in paystreaks in soft altered granite, the ore consisting of pyrite and a little chalcopryite, whose value is mainly in gold.

Development is by a 300' tunnel, planned to intersect the vein at about 1,500' and give a back of about 500'.

WAR EAGLE MINE.

BRITISH COLUMBIA

Rosslund, B. C., owned by the Consolidated Mining & Smelting Co. of Canada, Ltd.

WAR EAGLE MINE.

YUKON

Mine office: White Horse, Yukon, Canada. The property is owned by Messrs. Caldwell, Points, Lucas and Kesler. Lands, 3 claims, 1 fractional, 6 miles from White Horse, show a contact metamorphic deposit between limestone and granite. The ore zone has extreme width of 230', and shows garnetiferous ore carrying chalcopryite and bornite, giving assays of 2.71 to 46% copper. The ore zone has been traced for 1,500' by 6 pits and trenches. Development is by pits of 26' and 28' and a 140' tunnel. Property has shaft house, cook house, smithy and ore bin. Presumably idle.

WARDWELL & OSBORNE COPPER MINES CO.

ARIZONA

Letters unclaimed at former office: 714 International Bank Bldg., Los Angeles, Cal. Mine office: Osbornes Well, via Parker, Yuma Co., Ariz. Edw. S. Osborne, pres. and gen. mgr.; Chas. W. Wardwell, vice-pres. and treas.; Fred W. Morrison, sec.; preceding officers, Edw. S. Osborne, Jr., and E. M. Wardwell, directors. Organized under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Property, 9 claims, 120 acres, 4 miles N. W. of the Consolidation Copper Mines Co., in the Seneca district, 7 to 10 miles E. of Parker by good wagon road. Claims show an extensive gossan consisting largely of specular iron. Development is by a number of shallow pits, shafts and tunnels. A 143' incline shaft shows ore assaying 4 to 32% copper and 75 cts. to \$9 gold per ton. There is also a 400' tunnel, showing a vein 8 to 28' wide, carrying ribs of rich oxidized ores alternating with streaks of leached and barren limestone, the rich ores being claimed to average 15% with maximum of 42% copper. The mine has about 1,100' of workings. Property is reported to have been sold to the Carnation Copper Co. and company is probably in liquidation.

WARREN REALTY & DEVELOPMENT CO.

ARIZONA

Office: 1400 Alworth Bldg., Duluth, Minn. Mine office: Warren, Cochise Co., Ariz. Henry B. Hovland, pres.; Chas. A. Duncan, first vice-pres.; Chas. d'Autremont, Jr., second vice-pres.; Frederic R. Kennedy, sec.; preceding officers, Chester A. Congdon, Thos. F. Cole and Capt. Jas. Hoatson, directors; Henry B. Paull, treas.; John C. Greenway, gen. mgr.

Organized June 29, 1905, under laws of Arizona, capitalization \$900,000, shares \$15 par; issued \$1,260,000, fully paid. Controls, jointly with the Calumet & Arizona Mining Co., Superior & Pittsburgh Copper Co. and Copper Queen Consolidated Mining Co., the Warren Co., a corporation capitalized at \$665,000, that owns the town site of Warren, the public utilities therein, and the Bisbee & Warren street railway.

Annual meeting, second Tuesday in April.

Property, about 1,700 acres, covering the town of Warren, in the district of that name, includes the Cunningham group and former holdings of the Calumet & Cochise Development Co., 3 claims of the latter group being of mineral value. Considerable diamond drilling was done, 1907-08, with 1 hole 3,200' deep vertically, said to be the deepest in the United States.

The Lone Star shaft, started 1905, on the Lone Star claim, 2½ miles S. E. of the Junction shaft of the Superior & Pittsburgh, has 3 compart-

ments and is 844' deep, sunk in limestone throughout. Development to the N. indicates that ore-bearing ground cannot be expected at much less than 2,000' depth. Management considered good and property valuable for surface rights, but with a possibility of making a mine when developments on surrounding tracts have proven the ground. The shaft has been idle since Nov., 1908.

WARRIOR COPPER CO.

ARIZONA

Office: 907 Provident Bldg., Philadelphia, Pa. Mine office: Black Warrior, Gila Co., Ariz. Spencer D. Wright, pres.; W. H. Francis, vice-pres.; D. H. Paris, sec.; H. S. Hopper, treas.; officers are the directors. Organized March 10, 1905, under laws of Delaware, capitalization \$1,600,000, shares \$10 par, in \$750,000 cumulative 7% preferred stock and \$850,000 common stock, as successor of Black Warrior Copper Co., Amalgamated, which came to grief. Bonds \$100,000, issued \$40,000, at 6%, with interest paid.

An option on the property, given 1909, to the Warrior Development Co., was relinquished Oct., 1911, and suit was thereupon entered against that company for failure to observe the terms of the agreement. This suit is still pending.

Lands, 58 claims, about 1,000 acres, including the Black Warrior group and the Lost Gulch group, near the Inspiration mine. The principal property is the Black Warrior mine, a producer since 1904, located about 7 miles N. W. of Globe.

The Black Warrior property shows slightly altered schist, dacite tuff, diabase and conglomerate, the greater part of the area being covered by schist, which is the oldest formation. The diabase occurs as intrusive dikes, and the dacite is a surface flow over both schist and diabase. The Black Warrior vein is a fault zone 30 to 60' wide, filled with crushed mineralized dacite for about 300', with a breccia of schist and some diabase below. The vein has a generally E.-W. trend, and W. pitch. The ore averages about 50 to 60' in width, though a width of 100' is shown at a number of points. This property includes the Montgomery group, with the Montana and Dadeville mines, developed by tunnels of about 1,000' and 1,200' length, developing extensive bodies of copper silicates and hydrated copper oxides of excellent average value. The Black Warrior mine is developed by the Winnie shaft, 500' from the western boundary, and tunnels of about 1,000' and 1,200' length, opening the mine to a depth of 300', with 5 levels, spaced at 50' intervals. The mine has yielded a large tonnage of high-grade ore, giving assays of 8 to 25% copper, between the 200' and 300' levels. Considerable churn drilling was done 1910-11, 1 hole in the vicinity of the Winnie shaft being sunk 506' in schist, showing mineralization, and a 580' drill hole proved the existence of chalcopryite, disseminated in schist, though not of commercial value. The western portion of the property was tested without favorable results by churn drill, May, 1911.

The Lost Gulch claims show a highly altered monzonite-porphry covering the larger part of the area, with extensive outcrops of dacite and limestone and smaller ones of diabase, general geological conditions being much the same as at the Black Warrior.

Equipment includes a steam plant, burning petroleum. Buildings include an assay office, engineering office, smithy, carpenter shop and several dwellings, and there is a 300-ton shipping bin.

A portion of the property has been leased to Messrs. Fiske and Snell, who are operating the plant and shipping about 100 tons of ore daily.

The old mill and mill site at Warrior P. O., about 1½ miles E. of the mine, was sold 1912, to the Inspiration Consolidated Copper Co.

WARRIOR DEVELOPMENT CO.**ARIZONA**

Office: 505 Lonsdale Bldg., Duluth, Minn. Henry B. Hovland, Harvey P. Smith, Michael McCarthy, David L. Fairchild, J. C. Rotterhaus, Edw. C. Congdon and Samuel R. Kaufman, directors, at last accounts. Organized 1909, under laws of Arizona, capitalization \$500,000, shares \$10 par, in \$50,000 full paid and \$450,000 of stock, \$4 paid; issued \$451,500. Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, second Tuesday in September.

The company held a \$1,250,000 three-year bond and lease, dated Oct. 9, 1909, on the Black Warrior and Lost Gulch groups of the Warrior Copper Co., which was relinquished Oct., 1911, after a payment of \$100,000. The company has become involved in litigation with the Warrior Copper Co. based on the allegations that all monies realized from the sale of ore were not accounted for, and that the mine workings and the mill were handled contrary to the provisions in the agreement.

WARWHOOPE MINING CO.**IDAHO**

Letters unclaimed at former offices: Spokane, Wash., and Larson, Shoshone Co., Idaho. W. M. Lingefelter, pres.; A. L. Tinsley, sec.; H. C. Topping, mgr., at last accounts. Property, 6 claims, E. of the Snowstorm mine, in the Hunter district of the Cœur d'Alene region on the Idaho-Montana divide. Claims said to carry about 1 mile of the supposed extension of the Snowstorm vein. Development consists of a 600' tunnel, showing stringers of chalcopyrite and bornite. No returns secured.

WASATCH KING MINING CO.**UTAH**

Office: 2134 Seventh Ave., Troy, N. Y. Mine address: Milford, Beaver Co., Utah. Jos. A. Leggett, pres.; C. W. Cool, vice-pres.; Arthur J. Burch, sec.; Fred E. Wells, treas., at last accounts. Organized May 25, 1901, under laws of Utah, capitalization \$300,000, shares \$1 par, nonassessable. Lands, 7 claims, about 140 acres, known as the Wasatch King mine, near the holdings of the Majestic Mines Co., are 10 miles N. W. of Milford, developed by a 560' tunnel. Idle several years.

WASATCH MINES CO.**UTAH**

Office: Felt Bldg., Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. P. W. Blake, superintendent. Organized 1913, as a merger of the Columbus Consolidated Mining Co., the Flagstaff Copper Co. and Superior-Alta Mining Co., capitalization \$1,000,000, shares \$1 par; issued 450,000 shares. The consolidation of these properties was effected on the basis of 160,000 shares for Columbus Consolidated Co., 100,000 shares for Flagstaff Co. and 40,000 shares for Superior-Alta.

Lands, 52 claims, about 650 acres, and mill sites at Tanner's Flat and at the mouth of Little Cottonwood canyon, on the E. flank of the Wasatch mountains.

The property shows a number of fissure veins cutting limestone, shale and quartzite, also numerous bedded contact deposits between limestone and quartzite. The bedded deposits contain the principal orebodies. Occasional highly-mineralized shoots are found ranging from 30 to 100' in width, several hundred feet long, and carrying up to 8% copper, 18% lead, 15% zinc, 60 oz. silver and \$4 gold per ton, but ore is generally pockety and that now in sight is mainly below payable tenor. Ores are carbonates at and near surface, succeeded by sulphides at depth.

The Flagstaff group carries several ore deposits, 1 of which, ranging up to 300' in claimed width, and traceable 2,000', is developed by the 5,000' Tom Moore tunnel. This tunnel also cuts 6 smaller veins, and has a 450' crosscut to the N. E., with about 13,000' of workings. Other workings include the 500' Burgess tunnel, 1,200' Burnswood tunnel, 1,200' Flagstaff

tunnel, and the 700' Flagstaff shaft. The mine was a considerable producer of silver-lead carbonates, in early days.

The Columbus Consolidated group shows a vein, known as the Braine fissure, of about 12' average width, opened by 2 tunnels, 1,250' apart, on practically the same level. The mine has 5 shallow shafts and 4 tunnels, including a drainage tunnel, 4,000' down the canyon, planned to unwater the Columbus and adjoining properties, with about 3 miles of workings. The Holland and Columbus tunnels are connected on the Braine fissure, the first-named with electric traction. The output is divided into copper ore, silver-lead ore and concentrating ore. The mine is wet and has a 600-gal. pump.

A Pelton water wheel works under a head of 494', taking water through a 20" and 22" steel pipe line of 4,500' length, developing 660 h. p., which is transformed into electricity by two 300-kw. dynamos and carried to the mine by a 4½-mile transmission line. At the mine there are four 25-h. p. hoists good for 600' each, 10-drill Nordberg and 5-drill Ingersoll-Sergeant air compressors, a machine shop and a sawmill.

The 150-ton concentrator was built of material taken from two old 100-ton mills. Equipment includes a Gates gyratory crusher, 2 sets of Rogers rolls, six 3-compartment jigs and 7 Wilfley tables, the mill putting about 4 or 5 tons into 1.

WASHINGTON COPPER MINING CO.

MICHIGAN

Office: Calumet, Mich. Mine near Delaware, Keweenaw Co., Mich. Chas. A. Wright, Jr., sec.-treas.; Thos. F. Cole, Spencer R. Hill, G. G. Hartley and Thos. Hoatson, directors. Organized under laws of Michigan, capitalization \$2,500,000, shares \$25 par; issued \$1,500,000. Is controlled, through ownership of a majority of issued stock by the Keweenaw Copper Co. Annual meeting, fourth Tuesday in March. Lands comprise 1,050 acres, on the western shore of Mosquito lake, on which desultory work has been done at intervals in the past. Idle since 1901.

WASHINGTON-IOWA COPPER MINING CO.

WASHINGTON

Office: care E. P. Hewitt, Index, Wash. Lands, on the eastern fork of Silver creek, 2 miles above Mineral and 14 miles N. W. of Index, adjoin the Edison Mining & Development Co., and both properties are worked under 1 management. Claims are said to show 5 veins, carrying an auriferous, argentiferous and somewhat arsenical complex ore, consisting of chalcopyrite, galena, sphalerite and pyrite, with quartz gangue. Development is through the Bonanza crosscut tunnel, of about 1,200' length, planned to be driven 3,000', which is said to have cut 4 different veins. Equipment includes an air compressor. Presumably idle.

WASHINGTON MINES DEVELOPMENT CO.

MEXICO

Office: Douglas, Ariz. Mine office: Washington Mine, via Huepac, Sonora, Mex. F. O. Bostwick, pres.; A. R. Dickson, sec.-treas.; Gilbert Melcher, supt. Organized 1911, under laws of Arizona, capitalization \$1,500,000, shares \$10 par; issued 90,000 shares.

Property, 76 acres, with options on 174 acres additional, in the Arizpe district, 60 miles from Nacozari, the nearest rail point. Property shows a big "pipe" ore deposit composed of brecciated rhyolite cemented by chalcopyrite. Ore is reported to average 3.5% copper and about \$5 in combined gold and silver values.

Mine is opened by 3 tunnels and there are 2 air shafts with a total of about 6,000' of workings said to show 350,000 tons of ore blocked out for stoping. Company plans development at depth by sinking a winze from No. 2 tunnel level, 313' below the outcrop, and expects to add 4 additional levels to the workings with the funds in hand. Equipment includes a small

steam plant, with hoist good for 500'. Property promising but needs railroad transportation for profitable working.

WASHOE COPPER CO.

MONTANA

Office: 42 Broadway, New York. Former mine office was Butte, Silver Bow Co., Mont. A. H. Melin, pres.; Benj. B. Thayer, vice-pres.; H. J. Meehan, treas. and asst. sec.; preceding officers, John D. Ryan and D. B. Hennessy, directors; D. G. Stivers, sec. Capitalization \$20,000,000, shares \$10 par; issued \$3,046,400. Property was sold May 31, 1910, to Anaconda Copper Mining Co., for 380,000 shares of Anaconda stock. The company is to be dissolved, and its assets, now consisting solely of Anaconda stock, distributed pro rata among shareholders.

Property formerly owned by the company was very fully described Vol. VIII.

WASHOE SMELTER.

MONTANA

Owned by Anaconda Copper Mining Co., at Anaconda, Mont.

WASHOUGAL GOLD & COPPER MINING CO.

WASHINGTON

Letter unclaimed at former office, 5312 Maple Ave., St. Louis, Mo. Mine office: Washougal, Clark Co., Wash. F. A. Mabee, pres.; John Scharboarer, vice-pres.; J. B. Jordan and T. A. Altman, secretaries; Dr. Otta Sutter, treas., at last accounts. Organized 1902, under laws of South Dakota, capitalization \$1,000,000, shares \$1 par.

Lands, 560 acres, held on a 30-year lease, from the state, near Mt. St. Helens, in the Bald Mountain district, on the upper Washougal river. The claims show several vertical fissure veins in granite, 1 of which, averaging 6' thick, is developed by an 1,800' tunnel exposing ore, estimated to average 5 to 20% copper, 15% lead and zinc, 2 to 70 oz. silver and \$1 to \$15-gold per ton.

Equipment includes gasoline hoists and a 3-drill Sullivan air compressor. A hydro-electric plant, installed 1908, has a Pelton wheel, developing about 150-h. p. under a 500' head. There also is a small sawmill, a brick-yard and a 25-ton concentrating mill. Presumably idle.

WAUBA YUMA MINE.

ARIZONA

Mine near Kingman, Mohave Co., Ariz., is a copper prospect, developed by shaft 100' deep, at last reports, showing a 6' vein of good ore at this depth.

WAYNE DEVELOPMENT CO.

ARIZONA

Mine office: Quijotoa, via Weldon, Pima Co., Ariz. W. S. Edwards, superintendent, at last accounts. Property, 49 claims, partly patented, 980 acres and 3 mill sites, total of 1,020 acres, in the Quijotoa district, 40 miles from the Red Rock-Silver Bell railroad. Claims show mineralized zones between granite and andesite carrying several orebodies, 1 of which is said to be 200' wide and characterized by gold ores. The other orebodies show copper ores containing malachite near surface, succeeded by chalcopryrite, mixed with lead and zinc sulphides beneath the oxidized zone. The ore is reported to average 10 to 30% copper and 5 to 70% lead.

The mine has an old 1,800' crosscut tunnel, long abandoned, 7 shafts of 60 to 330' depth and about 10 tunnels, longest 430', with total workings of about 4,500'.

Equipment includes steam and gasoline engines, aggregating 500 h. p. at the mine and mill, two 45-h. p. hoists, good for 700' depth, and Fairbanks-Morse and Leyner air compressors of 5 drills aggregate capacity, with 17 buildings. The 100-ton stamp mill and concentrator has 30 gravity stamps and a 250-h. p. engine, 4 Blake and Samson crushers, one 50-ton Elspass centrifugal crusher and 3 Standard tables. Presumably idle.

W. B. LOWE MINING CO.**COLORADO**

Mine and works office: Silverton, San Juan Co., Colo. A. A. Lamont, superintendent, at last accounts. Lands, bought 1909, of the Boston & Silverton Mining & Reduction Co., include claims in Illinois gulch, shortly N. of Silverton, carrying gold-bearing lead and copper ores, and the Arpad mine and mill, on King Solomon mountain. Equipment includes steam power, and the company apparently owns the Silverton smelter also.

WEIMER COPPER CO.**IDAHO**

Office: care Jesse Knight, Provo, Utah. Mine near Dubois, Frémont Co., Idaho. Lands, 18 claims, 360 acres, on Birch creek, in the Skull canyon district. The property shows a crush zone 100 to 200' thick on the bedding plane between quartzite and limestone. This deposit carries high-grade ore in pockets and in cross fissures, of 3" to 2' width, running at right angles to the main contact deposit. Development is by an open cut and 3 tunnels, 2 longest of 300' each. Considerable ore was shipped, returning 16 to 18% copper, with a production of about 200,000 lbs. fine copper, 1907. Idle several years.

WELDON GOLD & COPPER CO.**ARIZONA**

Letters to former offices at Tucson, Weldon and Quijotoa, Pima Co., Ariz., have not been replied to. Ferris S. Fitch, sec.-treas. and gen. mgr., at last accounts. Company apparently has lost its lands to the Wayne Development Co. (which see), and is presumably dead. Fully described Vol. X.

WELLS BAY MINING CO. OF ALASKA.**ALASKA**

Letters unclaimed at former offices, 1328 Broadway, New York, and Valdez, Prince William Sound district, Alaska. Samuel H. Rapp, pres.; G. A. Leveroos, vice-pres.; Wm. Glendenning, second vice-pres. and mgr.; Dr. Samuel Rapp, treas., at last accounts. Organized under laws of Delaware, capitalization \$1,500,000.

Lands, 12 claims, on Glendenning bay, an arm of Wells bay, are slightly developed by 3 tunnels and a shallow shaft, showing a small amount of high-grade copper ore with fair gold and silver values. Equipment includes several buildings. Idle, and not regarded favorably. See Vol. X.

WENDENDALE GOLD MINING CO.**ARIZONA**

Mine office: Wenden, Yuma Co., Ariz. Otis E. Young, manager, at last accounts. Lands, in the Cunningham Pass district, are developed by a shaft, showing ore that gave returns of 13% copper and \$12 gold per ton, from a test smelter shipment. Probably closed down.

WENTWORTH COPPER CO., LTD.**NOVA SCOTIA**

Mine office: Wentworth, Cumberland Co., N. S. Organized 1907, to acquire lands, bought at foreclosure sale, of the Cumberland Copper Co. Company apparently holds property for speculation purposes as no work has been done since purchase and no preparations are reported.

WERTZ MINE.**WYOMING**

Office: Dalton, Ohio. Mine address: Thermopolis, Fremont Co., Wyo. John I. Wertz, manager. Lands, 9 claims, in the Willow Creek district, 18 miles from Thermopolis, the nearest rail point.

The property shows a mineralized dike of diorite intrusive in granite that is reported to be 100' wide and to carry numerous stringers and veinlets of sulphide ore, with quartz gangue, reported to average 10% copper and up to \$2 gold and 125 oz. silver per ton.

Development is by 3 tunnels, longest 93' and by a 100' shaft, with total workings of about 400'. The shaft is said to expose an 18' vein carrying gold-silver ore that assays \$18 gold and 160 oz. silver per ton, figures regarded as excessive. The mine has no power equipment.

WESSELL COPPER MINING & MILLING CO.**ARIZONA**

Letter unclaimed at former office, St. Louis, Mo. Mine office: Casa Grande, Pinal Co., Ariz. R. J. Wessell, pres. and gen. mgr.; N. Ruppener, vice-pres.; H. J. Praechter, sec.-treas. Property, the American Boy mine, 2 miles N. of Toltec, shows a 10' vein with ore that assays 10 to 14% copper, and about \$2 gold per ton, with occasional small silver values. Development includes a 97' shaft equipped with a steam hoist and air compressor. Presumably idle.

WEST COAST MINING & SMELTING CO.**MEXICO**

Letters unclaimed at former offices, 1419 Pennsylvania Bldg., Philadelphia, Pa., and Mocorito, Sinaloa, Mex. Howard L. Haines, pres.; Chas. M. Hicks, sec.; Edw. W. Hicks, gen. mgr., at last accounts. Organized 1906, under laws of Maine, capitalization \$2,500,000, shares \$1 par, non-assessable, in \$500,000 of 7% cumulative preferred stock and \$2,000,000 of common stock.

Lands, 6 groups, 387 acres, 5 to 20 miles from Mocorito, and 12 to 40 miles from Carbó. Principal property is Los Tajos group, 357 acres, including the San Antonio, San Manuel, Los Tajos and Ampliacion de Los Tajos claims, showing andesite, cut by 3 narrow fissure veins of 4' average width that are said to carry chalcopryrite ore, estimated by the company to average 5% copper, 4 oz. silver and \$2.50 gold per ton. The River mine, of Los Tajos group, has a 150' shaft, on a vein of 5 to 8' reported width, carrying ore said to average about 5% copper and \$3 per ton in combined gold and silver values. There are also a number of tunnels on this group.

Equipment includes a 70-h. p. steam plant, having a small Ingersoll-Rand air compressor and 6 Rand drills. There are several buildings. The 30-ton experimental concentrator has a 7x10" Blake crusher, 2 rolls, 2 Bartlett tables and 3 screens. The smelter, at the mine, has a 50-ton water-jacket blast furnace. Idle, and not favorably regarded.

WEST COAST SMELTING & REFINING CO.**MEXICO**

Office: 501 Columbia Bank Bldg., Pittsburgh, Pa. Mine office: Tecolote, via Carbó, Sonora, Mex. W. B. Duvall, pres. and gen. mgr.; T. C. Weaver, vice-pres.; H. G. Lupold, sec.-treas.; other directors, C. H. Kittredge, G. G. D. A. Van der Werff, Wm. Schutte and A. Van der Schuyt; Hugo von Berckefeldt, supt.; Ricketts & Banks, engrs. Organized June 1, 1908, under laws of Arizona, capitalization \$10,000,000, shares \$10 par, nonassessable; issued 751,000 shares. Debentures, \$750,000; issued \$420,000, at 6%. Stock is listed on the Amsterdam and Paris stock exchanges. Annual meeting, second Tuesday in November.

Lands, 1,156 acres, in the Altar district, 42 miles from Carbó, the nearest rail point. The property shows a number of contact deposits between porphyry and limestone, standing almost perpendicular, and striking S. E.-N. W., of which 2 are reported as of 65' average width, traceable 3,300', and carrying an average of 4% copper, 12% zinc, 4 oz. silver and about \$1 gold per ton. Ore minerals are principally chalcopryrite and sphalerite.

The mine has 5 shafts of 70', 73', 100', 100' and 565', and 4 tunnels of 30', 50', 250' and 250', with a total of about 5,000' of openings, said to show 1,000,000 tons of ore blocked out for stoping, which is a gross exaggeration.

Equipment includes a steam plant, with 60-h. p. hoist, good for 1,000', and about 20 buildings. A 200-ton smelter is in course of erection. Auto trucks carrying loads up to 12 tons, are used in transporting supplies between the mine and the railroad.

WEST JORDAN SMELTER.**UTAH**

Owned by United States Smelting Co., at West Jordan, Salt Lake Co., Utah.

WEST MINNESOTA MINING CO.**MICHIGAN**

Office: 68 Devonshire St., Boston, Mass. Francis H. Whitman, pres.; Arthur C. Paine, sec. Organized about 1854, under laws of Michigan, capitalization \$500,000, shares \$25 par, having been set off by the Minnesota Mining Co. Property consists of 550 acres, lying mainly W. of the Ontonagon river, including the S. E. $\frac{1}{4}$ and E. $\frac{1}{2}$ of the S. W. $\frac{1}{4}$, and the fractional W. $\frac{1}{2}$ of the N. E. $\frac{1}{4}$ of Sec. 18, and the N. E. $\frac{1}{4}$ and E. $\frac{1}{2}$ of the N. W. $\frac{1}{4}$ of Sec. 19, T. 50 N., R. 39. W. About \$10,000 was expended in exploratory work, previous to 1854, without success, development having been confined to the N. E. $\frac{1}{4}$ of Sec. 19, on the line of the supposed strike of the contact vein of the Minnesota and National mines. No mining work has been done since 1854.

WEST VIRGINIA-WYOMING COPPER MINING CO.**WYOMING**

Idle. Office: Parkersburg, W. Va. Mine office: Rambler, Carbon Co., Wyo. Max Frankenberger, pres.; Myer Newberger, vice-pres. and gen. mgr.; Herbert Frankenberger, sec.; Geo. Newberger, treas.; John W. Buckley, supt.; Leo Von Rosenberg, cons. engr. Organized Feb., 1907, under laws of Wyoming, capitalization \$2,000,000, shares \$1 par, reduced 1910 to \$1,000,000; issued 331,217 shares. Annual meeting, first Tuesday in February.

Property, 8 claims, 7 patented, 118 $\frac{1}{2}$ acres, one-half mile from the Doane-Rambler mine, in the Battle Lake district. Claims are said to show 4 orebodies, of which 2 are contact deposits between diorite and quartzite, with 1 under development, of 5 to 15' width, traceable 3,000', carrying sulphide ores estimated to average 3% copper with small gold and silver values.

Development is by 260' and 90' shafts and a tunnel, 250' long, at last accounts. Equipment includes a 45-h. p. steam hoist and a 4-drill air compressor, besides several buildings.

WESTERN COPPER CO., LTD.**NEWFOUNDLAND**

Probably bankrupt. Property is the York Harbour mine, at York harbour, Birchy cove, Bay of Islands, N. F. Company ended 1911, with a debt of about \$6,000. Described Vol. X.

WESTERN COPPER GROUP.**BRITISH COLUMBIA**

Office: Flack Bldg., Vancouver, B. C. Geo. Martin, Wm. Shannon and J. B. Mathers, owners. Lands, 48 claims, partly patented, 2,136 acres, and 313 acres miscellaneous lands, suitable for smelter sites, town sites and for farming, on the Khutze river, about 10 miles from Swanson bay, in the Cassiar district.

The property shows the granites of the Coast Range batholith, cut by dikes of felsite and andesite. The country is well timbered, and very rugged, rising by precipitous slopes and narrow benches to altitudes of 4,000 to 6,000' within the area embraced by the claims. Principal ore showings occur in a narrow fissure vein in granite, seldom exceeding 4' in width, except where intersected by cross veins, or dikes, under which conditions the vein matter may widen to 10', and also show a higher degree of mineralization. This vein cuts through the mountain at an elevation of about 2,000' above the river, dipping at about 29°, and is traceable for a distance of about 8,000'. The ore contains bornite and chalcopyrite, associated with iron sulphides and has malachite in the oxidized zone. Copper minerals are frequently displaced by auriferous iron pyrite. A small shipment, sent to the smelter at Ladysmith, is reported to have yielded 3.75% copper, 1.85 oz. silver and 1.45 oz. gold per ton, though other samples gave assays up to 30% copper, and \$56 in combined silver and gold values.

Development is by numerous open-cuts, short tunnels and a shallow shaft. There is no power equipment on the property.

WESTERN DEVELOPMENT CO.**NEW YORK**

Office: 42 Broadway, New York. Arthur P. Heinze, pres.; Calvin O. Geer, vice-pres.; Horace G. Abell, treas., at last accounts. Organized 1907, and is practically the successor of Otto Heinze & Co., which firm became bankrupt in that year. Assets apparently consist of large shareholdings in the United Copper Co., and a law suit against the Barnes-King Mining & Development Co. in which the company secured judgment for \$75,000, but which a higher court has since set aside.

WESTERN MINING & LEASING CO.**UTAH**

Office: 1111 Newhouse Bldg., Salt Lake City, Utah. Letter unclaimed at former mine office, Frisco, Beaver Co., Utah. C. C. Parsons, Jr., vice-pres. and treas.; L. L. Nettleton, sec., at last accounts. Organized 1909, under laws of Utah, capitalization \$25,000, shares \$1 par. Property was a bond and lease on the Comet group in the Frisco district. Company is said to have been organized to take over the Nevada-Utah Mines & Smelters Corporation, and did have a bond and lease on the Comet group at Frisco. Inactive and probably defunct.

WESTERN MINING & MILLING CO.**UTAH**

Office: 422 McCormick Bldg., Salt Lake City, Utah. Mine office: Lincoln, Tooele Co., Utah. A. B. Hirth, pres.; E. D. Haskins, vice-pres.; J. H. Hurd, sec.; W. A. Cooke, treas.; John B. Taylor, supt. Organized 1897, and reorganized 1905, under laws of Utah, capitalization \$300,000, shares \$1 par, assessable, with 2 assessments levied; issued \$200,000. Is a close corporation, having only 9 shareholders.

Lands, 20 claims, 19 patented, 215 acres, in the Pine Canyon district, on the western slope of the Oquirrh mountains, 10 miles from a railway. The claims are developed by about 1,000' of workings, which are said to show auriferous and argentiferous copper and lead ores. Equipment includes a steam plant, a boarding house and smithy. Presumably idle.

WESTERN NEVADA COPPER CO.**NEVADA**

Presumably dead. Lands at Yerington, were sold, 1911, at sheriff's sale to Frank Knox, manager of the Bank of the Republic, Salt Lake City, Utah, and also the secretary of the company, to whom the company had become indebted for money advanced. Fully described Vol. X.

WESTERN PACIFIC COPPER CO.**UTAH**

Office: 208-69 East Third South St., Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. E. J. Yard, pres.; Jackson H. McCrystal, vice-pres. and gen. mgr.; Elroy M. Clark, sec.-treas., at last accounts. Lands, 320 acres, adjoin the Western Utah Copper Co., in the Willow Springs division of the Deep Creek district, in Tooele county, just over the Juab county line. The mine has a shaft and tunnel, developing ore averaging about 13% copper, 25% lead and 22% iron, with small silver and gold values. Occasional small shipments of ore have been made. Equipment includes a steam plant and air compressor.

WESTERN PACIFIC GOLD & COPPER M. & M. C.**UTAH**

Office: Salt Lake City, Utah. Letter unclaimed at former mine office, Ogden, Weber Co., Utah. Thos. F. Feeney, president. Capitalization \$1,000,000, shares \$1 par. Stock is listed on Salt Lake Stock Exchange. Lands, 12 claims, 2½ miles from a railroad, in the Sierra Madre district. Development consists of a 150' incline shaft and about 530' of tunnels, all showing low-grade copper sulphide ore carrying gold and silver values. Idle.

WESTERN PACIFIC MINING CO.**UTAH**

Office: 30 South Main St., Salt Lake City, Utah. Organized 1906, under

laws of Utah, capitalization \$100,000, shares 10 cts. par. Lands, 12 claims, unpatented, in the Silver Island district, 20 miles from a railroad, are slightly developed by a shaft and tunnel which are said to show gold-copper ore. No trace of recent operations securable. Presumably dead.

WESTERN SLOPE COPPER MG. & SM. CO.

COLORADO

Office: Thompson Bldg., Butler, Pa. Mine office: Grand Junction, Mesa Co., Colo. J. S. Shaw, president and general manager. Organized July 25, 1900, under laws of Colorado, capitalization \$750,000, shares \$1 par, nonassessable. Bonds, \$50,000 authorized, at 6%.

Lands, 13 claims, 8 patented, 130 acres, with about 100 acres timbered, in the Unaweep district, 23 miles S. E. of Grand Junction and 12 miles from Whitewater, the nearest rail point on the Denver & Rio Grande railroad. The property shows granite and diorite, cutting sandstone and limestone. The claims have 6 fissure veins, 2 of them under development showing paystreaks 8" to 4' thick of bornite and chalcopyrite ore, with malachite ore near the surface. Shipments of 17 carloads made some years ago, gave returns of 11 to 18% copper, 2 to 10 oz. silver and \$1 to \$5 gold per ton. Development consists of shafts of 250', 165', 160', 40', 69' and 72', with tunnels of 310', 305' and 35', the mine having 1,686' of workings.

Equipment includes a 50-h. p. steam plant, with a 40-h. p. hoist good for 1,000' depth, and there are 4 mine buildings. There is an old 50-ton matting furnace at the mine. The management plans adding an air compressor and pushing development when funds are raised. Property considered promising.

WESTERN UTAH COPPER CO.

UTAH

Office: 401 Dooly Bldg., Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. W. S. McCornick, pres.; Capt. Duncan MacVichie, vice-pres. and gen. mgr.; Herman H. Green, sec.-treas., at last accounts. Organized 1906, under laws of Wyoming, capitalization \$2,500,000, shares \$5 par, nonassessable. Debentures, \$100,000 authorized, Aug., 1911.

Lands, 51 claims, 20, of 364 acres, patented, and a 340-acre ranch. Mining property is known as the Gold Hill mine, on Gold Hill, in the Clifton section of the Deep Creek district, some distance from Wendover, the nearest rail point, on the Western Pacific. The lack of railway transportation is at present a serious detriment to the property. The claims show a prominent iron gossan, with copper and lead streaks, formerly claimed to make a 12 to 15' vein, with a 3' paystreak assaying up to 20% copper, 6 to 22 oz. silver, and \$11 to \$14 gold per ton. Later development is said to show an orebody 85' wide, on the 150' level, that will average 5% copper. The mine is reported to have 100,000 tons of ore blocked out. Development includes 14 trenches, pits and shafts, a 600' shaft and a long tunnel, with upwards of 1 mile of workings, the tunnel showing a vein of about 20' width, of which a 5' footwall paystreak carries silver-lead sulphides, balance of vein being mainly iron oxide. Closed down late 1907, owing to lack of funds. Property considered promising.

WETTERHORN LAND CO.

MICHIGAN

Office: care W. H. Garlick, 990 W. Kensington road, Los Angeles, Cal. Lands, 760 acres, in Secs. 21 and 22, T. 51 N., R. 42 W., Ontonagon county. The property shows 14 copper-bearing beds of 4 to 9' average widths, the most important being an 8' bed of cupriferous sandstone, carrying native copper and silver, said to have given assays of 2.6 to 6% copper and 1 to 6 oz. silver per ton. Another vein, amygdaloidal in character, is opened by a shaft to a depth of 84', showing a small amount of copper on the hanging wall. Idle.

WHAT CHEER COPPER MINING CO.**WYOMING**

Office: 171 Westminster St., Providence, R. I. Letters unclaimed at former mine office, Riverside, Carbon Co., Wyo. Jacob Stevens, pres.; J. Frank Baird, vice-pres.; Oliver S. Alers, sec. and mgr.; Isaac L. Goff, treas., at last accounts. Organized under laws of Wyoming, capitalization \$600,000.

Lands, 4 claims, near the Aetna mine, on Dunkards creek, near Purgatory gulch. Development consists of a 65' two-compartment shaft and a 337' tunnel, said to show a 5' talcose vein with ores containing copper carbonates and stringers of chalcocite, carrying good gold and silver values. Equipment includes a steam plant and a small sawmill.

WHEALKATE MINING CO.**MICHIGAN**

Office and mine: Houghton, Houghton Co., Mich. Nathan F. Leopold, pres.; R. R. Goodell, vice-pres.; Reginald C. Pryor, sec.; Albert F. Leopold, treas. Organized Nov., 1902, under laws of Michigan, capitalization \$50,000, shares \$25 par. Lands, 240 acres, including the old Wheal Kate mine, on which a little misdirected work was done many years ago. Though primarily a land and town-site company, the company owns mineral lands in Sec. 17, which carry the southern extension of the Isle Royale and other cupriferous beds of the Keweenaw series. Did some diamond drilling, 1907; idle since.

WHIPPLE MOUNTAIN GOLD & COPPER CO.**CALIFORNIA**

Office: 405 South Hill St., Los Angeles, Cal. Letter unclaimed at former mine office, Needles, San Bernardino Co., Cal. Jos. L. Brice, superintendent, at last accounts. Lands, 21 claims, on Whipple mountain, 7 miles N. of the Parker bridge over the Colorado river and from the Santa Fe R. R.. The property has 4 parallel veins, 1 said to have an outcrop 75' across, carrying promising copper and gold values. Development is by a 180' two-compartment vertical shaft, cutting an 18' vein carrying ore giving assays of about 5% copper and \$20 gold per ton. Equipment includes a 15-h. p. Fairbanks-Morse gasoline hoist and an air compressor, and there are 4 buildings. Has been intermittently worked and assessments kept up for several years past.

WHITE CHIEF COPPER CO.**MONTANA**

Mine near Jefferson Island, Jefferson Co., Mont. Lewis Schmuck, Mrs. Helen Schmuck and Ben W. Wilson, incorporators. Organized Sept., 1913, capitalization \$1,000,000, shares \$1 par. Lands, sundry claims, in the Whitehall district, developed by an 1,800' tunnel showing copper ore. Development hampered by lack of working capital.

WHITE ELEPHANT MINE.**WASHINGTON**

Is owned by the Orient Gold Mines, Ltd. (which see).

WHITE HORSE MINING CO.**ARIZONA**

Letter unclaimed at former office, 20 Broad St., New York. Mine office: Prescott, Yavapai Co., Ariz. H. R. Frost, president, at last accounts. Capitalization \$2,000,000, shares \$1 par. Bonds, \$50,000. Lands, about 200 acres, known as the Fuller group, at Squaw creek, also a group of claims in the Walker district. Development is by 2 shafts and a tunnel. Equipment includes a 10-stamp mill. J. F. Wisner was fiscal agent. No returns secured.

WHITE KNOB COPPER & DEVELOPMENT CO., LTD.**IDAHO**

Presumably dead. Property was the White Knob mine, at Mackay, Custer Co., Idaho, now owned by the Empire Copper Co. For further details of this company and its predecessors, see Vols. IX. and X.

WHITE PINE COPPER CO.**MICHIGAN**

Office: 12 Ashburton Place, Boston, Mass. Mine address: Ontonagon, Ontonagon Co., Mich. Quincy A. Shaw, pres.; R. L. Agassiz, vice-pres.; Geo. A. Flagg, sec.-treas.; Jas. McNaughton, gen. mgr.; preceding officers,

D. S. Dean, F. L. Higginson and F. W. Hunnewell, directors; Thos. H. Wilcox, supt.

Organized 1909, capitalization \$5,000,000, shares \$25 par, in 150,000 common shares and 50,000 5% cumulative preferred shares; issued 85,320 common and 5,476 preferred. Is controlled by the Calumet & Hecla Mining Co. through ownership of entire issue of preferred stock and 43,202 shares of common stock.

Property, the White Pine mine and surrounding lands to the N., S. and W., formerly owned by the Keweenaw Association and others. The White Pine mine, 80 acres, is in Sec. 5, T. 50 N., R. 42 W., 3 miles E. of the Nonesuch mine. The other property was paid for in shares.

Property as a whole shows eruptive rocks with interbedded sandstone and conglomerates of the Secondary Keweenawan series. It also holds what F. E. Wright called epidote veins which are epidotal melaphyrs crossing the face of the cliffs parallel to the sandstones, but showing evidence of faulting and crushing. There is also a second set of minor, nearly vertical epidote veins which, unlike the first, are barren of copper. The sandstone beneath the melaphyr is a fine-grained, dark red, almost quartzitic rock that is jointed and has numerous calcite veins and occasional threads of malachite which extend down a few feet from the contact. The rock is, however, usually concealed by talus from the cliffs. Native copper also occurs in a very fine-grained sandstone-conglomerate. The dip of the bedded formation is towards the S. E., varying from 8° to 35°. The so-called Nonesuch formation consists of 2 parallel beds of sandstone running from 4 to 8' in thickness and separated by a 5' bed of slate. The beds carry considerable finely disseminated native copper which is as a rule very flaky. This formation is badly faulted and in the mine is reported to have been thrown so that the payable lode abutted directly against the unpayable one.

Development includes 2 exploratory shafts, 213' and 135' deep, and an incline shaft, 750' deep at the end of 1912. Both lodes are under development but the upper bed is much the richer and an upraise in No. 1 shaft has exposed about 200' of very rich ground above the first level. The property has been extensively diamond-drilled, more than 110 holes having been made since work was begun in 1907.

Property is decidedly promising.

WHITE STAR MINING CO.

UTAH

Idle. Office: 408 South State St., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Richard B. Shepard, pres. and gen. mgr.; P. A. Sörenson, vice-pres.; Emma C. Shepard, sec.; Bernard Rich, treas., and Harry Rich, directors. Organized 1898, under laws of Utah, capitalization \$30,000, shares 10 cts. par, assessable, with 4 assessments levied. Lands, 4 claims, patented, 80 acres, 3 miles from Eureka, the nearest rail point. The mine has a 100' shaft and 100' tunnel.

WHITETAIL COPPER MINING CO.

ARIZONA

Letters unclaimed at former offices, Stanton, Tex., and Paradise, Cochise Co., Ariz. J. B. Chadwick, pres. and gen. mgr.; John L. Larriau, vice-pres.; E. P. A. Larriau, sec.; F. L. Conyers, treas., at last accounts. Organized Dec., 1909, capitalization \$1,000,000, shares \$2 par.

Lands, 25 claims, including the Doran & Gallagher group of 10 claims, carrying a 4' vein of gold-copper ore. Development includes a 120' vertical shaft, with other shafts of 45', 50' and 65', and a 250' tunnel. Buildings include an office, boarding house, bunkhouse, stable, general store and several dwellings. Idle.

WICKLOW MINING CO.

UTAH

Office: Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah.

J. D. Caldwell, pres.; A. J. Weber, sec.; M. W. Bird, treas. Capitalization \$500,000, originally in 500,000 shares of \$1 par, changed March, 1909, to 1,000,000 shares, par 50 cts. Lands, 6 claims, N. of Eureka Lily and E. of Tintic Development Co. Property shows several mineralized fissures in limestone on 1 of which a 527' shaft has been sunk. Idle several years.

WILHELMI SILVER & COPPER CO.

MEXICO

Mine office: Velardeña, Durango, Mex. R. Tipton, general manager, at last accounts. Organized under laws of Arizona, capitalization \$3,000,000. Lands, about 1,500 acres, include the Santa Eulalia, Loma, Cuchareña and other properties. The properties show auriferous and argentiferous lead and copper ores, developed by a shaft, known as the Santa Eulalia, and 2 tunnels. Idle since 1909.

WILLARD-ELY COPPER CO.

NEVADA

Office: 32 Liberty St., New York. Letters unclaimed at former mine office, Ely, White Pine Co., Nev. Organized 1906, as successor of McKinley Mines Co., succeeding the McKinley Mining & Smelting Co., succeeding the Canton Mining Co. Lands, 5 claims, known as the Aurora group, scattered and apparently poorly located. The Aurora, formerly worked as a gold mine, but showing copper ores in lower workings, has a 300' main shaft with about 1,000' of drifts. Idle, apparently since shortly after organization and by reason of its bad antecedents is regarded unfavorably.

WILLIAM PENN MINING CO.

WYOMING

Office: Lewisburg, Pa. Letter unclaimed at former mine office, Encampment, Carbon Co., Wyo. J. E. Hedding, pres.; J. W. Van Valzale, sec.-treas.; S. E. Phelps, mgr., at last accounts. Organized 1903, under laws of Wyoming, capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, 60 acres, in the Upper Platte district, show a 4' vein carrying carbonate ores and chalcopryite, opened by a 75' shaft. Property long idle, but organization presumably intact and taxes kept up.

WILLIAMS LUMAN MINING CO.

WYOMING

Office: Buffalo, Wyo. Mine office: Depass, Fremont Co., Wyo. L. R. Vanhouten, president. Organized May 2, 1908, under laws of Wyoming, capitalization \$2,500,000, shares \$1 par; issued 2,385,000 shares.

Lands, 9 claims, patented, 130 acres, 16 miles from a railway, in the Copper Mountain district.

Property shows 8 fissure veins in granite, diorite and altered schists, the main vein being an ore zone of 50 to 60' width, traceable 3,400', in crushed and fissured diorite, much altered. This lode has a 2' paystreak carrying free gold, copper ore, and native copper in thin sheets and nuggets, ore minerals being cuprite, melaconite, malachite and chalcocite. Ore is reported to assay 10 to 80% copper, 5 to 10 oz. silver and \$2 to \$8 gold per ton.

Development is by an 820' shaft, showing sulphides on the 800' level, with other shafts of 52' and 30'. There also are tunnels of 513', 300', 70' and 80', and the mine has about 2,000' of workings.

Equipment includes an 80-h. p. gasoline plant, with a 15-h. p. hoist and a 2-drill air compressor. Electric current is taken, over a 16-mile transmission line, from the Asmus Boysen dam. There are 12 mine buildings. The company is operated as a close corporation, money for development having been furnished by about 10 shareholders only. Idle since May, 1912. Property favorably regarded, but needs railroad transportation.

WILLIE ROSE COPPER MINING CO.

ARIZONA

Office and mine: Portal, Cochise Co., Ariz. M. D. Taylor, pres.; Emmett Towers, vice-pres.; C. F. McCord, sec., at last accounts. Organized

Jan. 28, 1908, under laws of Arizona, capitalization \$1,000,000, shares \$1 par.

Lands, near Triangle Springs, have shafts of about 20' and 90', latter said to be bottomed in a 12' vein carrying slightly argentiferous chalcocite, of about 2% copper tenor, and a little gray copper ore is shown near surface. A 30-lb. nugget of native copper was found on the lands of this company. Was developing with a small force, at last reports.

WILMOT MINING CO.

MICHIGAN

Office: 990 W. Kensington Rd., Los Angeles, Cal. Mine near Ontonagon, Mich. W. H. Garlick, pres.; W. B. Goucher, sec. Organized under laws of Michigan, capitalization \$500,000, shares \$25 par. Paid dividends of \$17,000, from sale of timber lands, with mineral rights reserved, and has received \$1,500 from assessments. Owns mineral rights to 3,520 acres in Ontonagon county. No mining done.

WINDFALL MINING CO.

WASHINGTON

Mine office? Chewelah, Stevens Co., Wash. C. T. Rigg, superintendent, at last accounts. The property, developed by tunnel, is said to show several small veins of silver and gold-bearing lead and copper ores.

WINDSOR MINING, MILLING & SMELTING CO.

ARIZONA

Office: Superior, Pinal Co., Ariz. Wm. C. Windsor, manager, at last accounts. Organized 1906, under laws of Maine, capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, known as the Windsor & Lobb group, and 4 mill sites, on Queen creek. The group is said to contain the southern extension of the ore zone of the Lake Superior & Arizona mine. Development is by several short tunnels, and 3 shafts, of about 60' depth each, bottomed in silver and gold-copper ore, in limestone. Presumably idle, but no recent returns secured.

WINNEMUCCA GROUP.

NEVADA

Mine address: Contact, Elko Co., Nev. J. H. Hubley, superintendent. Lands, 8 claims, 160 acres, 35 miles S. of Rogerson, the nearest rail point. The property shows a strong outcropping of ore, lying between granite and porphyry, and said to have given assays of 16% copper, 28 oz. silver and \$2.40 gold per ton.

Development is by open cuts, and a tunnel planned to intersect the vein at about 600', was in 200' at last reports. Rail facilities are badly needed by the entire camp and if financial conditions improve, the Oregon Short Line railroad is expected to build into the camp in 1914.

WINNIMUCK MINE:

UTAH

Owned by the Ute Copper Co., at Bingham Canyon, Utah.

WINNIPEG MINING CO.

WASHINGTON

Idle. Letters unclaimed at former office, Republic, Ferry Co., Wash. E. R. Fraser, gen. mgr.; Jos. L. Lancaster, supt., at last accounts. Property, the Hawkeye mine, and 8 claims, adjoining the Belcher on Lambert creek. Mine has a 240' incline shaft, connecting with a 1,070' tunnel developing a vein of 70' estimated width, carrying auriferous and argentiferous copper ore containing chalcopyrite associated with limonite, siderite, tetrahedrite, magnetite, pyrrhotite and marcasite. Has an ore bin on the Belcher railway, 600' from the tower tunnel, facilitating shipment. Has electric power and an 8-drill Leyner air compressor.

WINONA COPPER CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Operating office: Houghton, Mich. Mine office: Winona, Houghton Co., Mich. Chas. J. Paine, Jr., pres.; Nathaniel H. Stone, vice-pres.; other directors, W. A. Paine, Geo. P. Gardner, Walter Hunnewell, Chas. J. Paine and Jas. H. Seager. E. B.

O'Connor, sec.-treas.; Rex R. Seeber, supt.; Allan Eddyvean, mill supt.; John Broan, mg. capt.

Organized 1898, under laws of Michigan, capitalization \$2,500,000, shares \$25 par, increased 1911, to \$5,000,000; issued 166,667 shares, \$24 paid in. Last assessment, \$1, was payable Sept. 29, 1913. Company ended 1912 with surplus assets of \$62,034. The company 1911, acquired the property of the King Philip Copper Co., issuing 166,667 shares of Winona stock therefor. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, last Tuesday in March.

Lands, 2,608 acres, in a main tract of 2,480 acres, and a smaller tract of 128 acres, with timber rights to 1,768 acres additional, lying 3 to 5 miles S. of the mine. The company also owns a mill site at the mouth of the Sleeping river, with water available from that stream.

The main tract carries the outcrop of the Winona amygdaloidal bed for about 2 miles. The mine was discovered 1864, by a line of old Indian pits along the outcrop, and a single shallow shaft was sunk, but owing to entire lack of transportation facilities little was accomplished. The property was let on tribute 1880, but did not furnish sufficient mass copper to pay and was closed, until taken over by the present company April, 1898, when the old shaft was cut down, retimbered and deepened, and 3 new shafts sunk on the Winona bed, an amygdaloid of 12' minimum, 20' average and 46' maximum width, striking N. 59° E., and having an average dip of about 50°. The Winona amygdaloid greatly resembles both the Baltic bed and the Knowlton bed of the Evergreen belt, carrying considerable epidote, calcite and quartz, with a limited amount of both mass and barrel copper, though the bulk of the metal occurs in stamp rock. Diamond-drill borings have located several other cupriferous beds on the Winona tract, all lean where cut. The mine is on a spur of the Copper Range railway.

The older workings show mineral of the lighter grades, with somewhat heavier copper at depth. The mine made 3,060' of new openings in 1912, and ended the year with about 10 miles of workings.

No. 1, the discovery shaft, in the N. E. $\frac{1}{4}$ of the N. E. $\frac{1}{4}$ of Sec. 29, T. 52 N., R. 36 W., is 8x18' inside of timbers, with 3 compartments. It is 400' deep, and has 4 levels opened, which show a little heavy copper and some stamp rock in the northern drifts, but is of little promise and has been idle since 1901.

No. 2 shaft, 900' S. W. of No. 1, sunk at an angle of 72°, is 1,000' deep, with 9 levels opened, showing good copper at depth of about 200', but with poor ground below, and has been idle since early 1906.

Old No. 3 shaft, 900' N of No. 2 and about 750' deep, shows little ground of promise, and has been idle for some years. Old No. 4 shaft, the northernmost, about 1,350' N. E. of No. 1, developed no ground of importance, and also has been idle for some years. Old No. 5 shaft, started on a wide amygdaloidal bed located by diamond drill, did not develop good ground, and was discontinued at slight depth, some years ago.

New No. 3 shaft, 1,650' S. W. of No. 2, is bottomed at the 13th level. The 3d to 10th levels, inclusive, have been extended to No. 4 shaft at depth of 1,272', showing alternations of good and poor ground. The openings, as a whole, show rock carrying 12 to 15 lbs. fine copper per ton, allowing for judicious stoping and reasonable selection of ground broken.

Equipment at No. 3 shaft includes a steel shaft rock house, equipped with two 24x36" Portage Lake-Farrell crushers, with room for a third, pneumatic steel gates, pneumatic trolley cranes, and grizzlies having differ-

ential slopes, the lower portions being quite flat, grizzlies feeding to crushers.

No. 4 shaft, about 1,700' S. W. of No. 3, and about 400' from the southern boundary, ended 1912 at the 15th level. The shaft is sunk in the footwall and was opened by sinking and raising simultaneously. Underground work has been confined to drifting for the past year or 2, and considerable ground of promise has been opened. Connection is had with the King Philip workings on the 10th and 12th levels.

No. 4 shaft is equipped with a modern steel shaft rock house, having a cylindrical main bin of about 40' diameter, built of heavy steel plate. There are two 24x36" Portage Lake-Farrell crushers, similar to those at No. 3.

The hoist at No. 4 shaft, about 1,700' from the central plant, consists of a hoisting drum connected by double-reduction gearing with a 200-h. p. 550-volt induction hoist motor, operated at 430 r. p. m. The hoist, good for 1,500' depth, operates two 3½-ton skips, working in counterbalance, at a speed of 1,200' per minute.

King Philip No. 1 shaft, about 1,400' S. of Winona No. 4 shaft, is 14x25' in size, sunk about 85' in the footwall, at an angle of 70°, and is temporarily bottomed at the 14th level. The lode shows a width of 20 to 25', and carries considerable epidote.

King Philip No. 2 shaft is 2,780' S. of No. 1, on the southern side of Sleeping river, and 3,400' from the southern boundary of the tract. This shaft, temporarily idle, also sunk in the footwall, is 1,108' deep, with cross-cuts on the 6th, 8th and 10th levels, to the Winona bed, which gives a fair showing, about the same as in No. 1, with which it has underground connection on the 8th level.

Equipment at No. 1 shaft includes an electric hoist, similar to that at No. 4 Winona, and No. 2 shaft has an isolated steam hoisting plant. Both shaft houses are temporary.

The central power plant, near No. 3 shaft and about 1,600' N. of No. 4, furnishes direct current for both No. 4 shaft and King Philip No. 1 shaft. Equipment includes an Allis-Chalmers 250-kw. 3-phase 60-cycle 2,300-volt cross-compound a. c. generator, with a 535-h. p. induction motor direct-connected to two 250-h. p. d. c. generators, speeded at 600 r. p. m. The hoist at No. 4 and King Philip No. 1 is driven by an Allis-Chalmers cross-compound condensing Corliss engine. A motor-generator set consists of a 450-h. p. 3-phase 60-cycle 2,080-volt variable speed induction motor, at 600 r. p. m., connected on either side, by flexible couplings, to two 20-ton flywheels, 10' in diameter. The momentum of the flywheels cares for variations in load, and also provides power for hoisting for 1 hour after the dynamo is closed down, if necessary. The motor-generator set has 2 bearings of 11x33", and 2 bearings of 9x27" with oil pumped through them at the rate of 16 gals. per minute, automatically filtered and water-cooled, insuring perfect lubrication. There is a 100-kw. 575-volt General Electric interpole d. c. generator, a 150-kw. motor-generator operating the electric locomotives, transforming a 2,200-volt alternating current into a 500-volt direct current. There is a 40-drill Nordberg air compressor in the central power house, and steam is provided by three 100-h. p. water-tube boilers, operated at 175 lbs. initial steam pressure.

The engine house, midway between shafts Nos. 1 and 2, has a steam hoist, good for 1,500' depth, operating No. 3 shaft, and a 12-drill Ingersoll-Sergeant class A 2-stage straight-line air compressor, and a smaller single-stage compressor. Adjoining is the 40x48' boiler house of similar construction, housing four 80-h. p. boilers, and a wooden coal trestle, with tunnel beneath, leads to the boiler house.

The King Philip boiler house has a battery of two 200-h. p. Parker tubular boilers, coal being drawn to the boiler house through a concrete tunnel, under a coal trestle surmounted by a railroad track. The 34x40' power house has a 60-drill Nordberg 3-stage air compressor, with 6-drill and 15-drill auxiliary compressors.

Mine buildings include a 20x40' carpenter shop, combination smithy and machine shop, a 15x24' smithy, 26x36' warehouse, a 22x34' general store, an office building, 2 boarding houses and about 150 dwellings for employees, in a town site platted by the company. There also is a sawmill, 30x70' with a 42x66' wing for boilers, and a 16x46' wing containing a shingle mill, the plant having a daily capacity of 20,000' of sawed lumber.

The mill, built at a cost of about \$300,000, is located near No. 4 shaft, the location of the mill adjoining the mine saving about 13 cts. per ton in transportation charges. The mill secures its water from the Sleeping river, across which a dam has been built, with a storage capacity of 150,000,000 gals. Careful hydrographic surveys for 3 years show that the watershed tributary to this river yields about 3,000,000 gals. per day, which is enough for the mill, which will have settling tanks and clarifying devices, using the water several times over. The item of 13 cts. per ton transportation charges saved by the new mill may seem small, at first sight, but it actually means about 1 ct. per lb. on the cost of finished copper, and may mean the difference between success or failure, so closely are costs and income adjusted in a low-grade Lake Superior copper mine. The custom for many years past has been to put Lake Superior mills some miles away from the mines, on large bodies of water, but in the case of the Winona, the management has had to consider costs rather than the easier solution of its milling problem.

Rock, brought to the mill by electric locomotives, is crushed in 2 Allis-Chalmers stamps, 1 a simple head having a 24" cylinder, and 1 a steeple-compound head with 16" and 32" cylinders. Equipment includes 1 Chilean mill for regrinding, 6 Hardinge conical tube-mills, 52 Wilfley tables and 12 settling tanks. Under the wash floor there are 6 large settling tanks for the wash water, which is reused after clarification. Tailings are carried by belt-conveyor for a distance of 321' from the mill, and delivered at a height of 123' above the ground, forming a great hill of waste at hand for retreatment if the time ever comes when that proves profitable. Slimes are delivered by a 1,200' steel launder to a ravine beyond the sand discharge.

Production was begun 1902, and has been as follows: 1902, 101,188 lbs. copper; 1903, 1,036,944 lbs.; 1904, 646,024 lbs.; 1905, no production; 1906, 278,182 lbs.; 1907, 1,285,863 lbs.; 1908, 1909 and 1910, no production; 1911, 1,275,675 lbs., and 1912, 2,307,237 lbs.

The Winona has made 2 separate campaigns of production, on both of which occasions the percentage of copper extracted ran down to unpayable figures, returns averaging 18.95 lbs. fine copper per ton of rock stamped in 1904, 14.34 lbs. in 1906, and 12.59 lbs. in 1907, production having been suspended Nov., 1907. The average yield in 1912 was 12.73 lbs. fine copper per ton of rock stamped. Developments underground are much better to the S. of the property than in the original workings to the N., and the mine has been extensively opened, with a large tonnage of rock available for stoping. Notwithstanding the unsatisfactory results secured in the 2 previous campaigns of production, the Winona is considered to have very fair chances of making a successful low-grade mine, and the management is efficient and resourceful.

WINONA GOLD-COPPER MINING & MILLING CO. WYOMING

Office: 620 Courtland Bldg., Canton, Ohio. Mine office: Painter, Big

Horn Co., Wyo. L. Cavnah, pres. and gen. mgr.; Geo. House, vice-pres.; Dr. J. H. East, second vice-pres.; Wm. H. McAloney, sec.-treas.; preceding officers, Miss H. P. Straight, H. F. Tower, F. H. Weeks and W. H. Lippincott, directors; Ray Cavnah, supt., at last accounts. Organized 1903, under laws of Wyoming, capitalization \$5,000,000, shares \$1 par, fully paid. Management was changed and company practically reorganized Dec. 12, 1905.

Property comprises 25 claims, unpatented, 440 acres, in the Sunlight basin, on Silver creek, in the Bear Tooth and Sulphur mountains, in the N. W. corner of Big Horn county, about 12 miles E. of the Yellowstone National Park. Claims show granite, porphyry and andesitic breccia, carrying 6 fissure veins with shoots of low-grade copper ore. The ores carry chalcopyrite and chalcocite with some malachite and azurite and are reported by the management to average 7 to 8% copper with a paystreak carrying up to 25% copper and about \$3 gold per ton. The principal fissure veins in andesite are known as the Bluff, Malachite and Greenhorn. The Bluff vein is said to be 25' wide with a 12' paystreak of copper ore. The Malachite vein, 10 to 25' wide, has a paystreak of high-grade copper ore. 1½' wide at surface, increasing to 5' at depth.

Development consists of 2 tunnels, the lower or main working tunnel, 804' long. Total workings, 1,032'. Equipment includes steam and electric power plant and 10 buildings.

WISCONSIN MINING CO.

IDAHO

Office and mine: Osburn, Shoshone Co., Idaho. Jos. Bolduc, A. W. Van Gilder, Fred N. Davis, Armand Perrenoud, Louis Bolduc and Hollen N. Shultz, incorporators. Organized 1913, capitalization \$1,500,000, shares \$1 par. Company is practically the successor of the Gold Leaf Consolidated Mines and the Coeur d'Alène Consolidated Mining Co., the shares of the old companies being made transferable share for share in the new company, upon the payment of back assessments.

Lands, 4 claims, 2 to 3 miles from Wardner, have 500' of tunnels and 200' of crosscuts, developing a vein of 5 to 6' width, carrying copper ore and a little lead. Equipment includes a 2-drill compressor, run by water power from Moon creek.

WISCONSIN MONTANA MINING CO.

MONTANA

Office: Downing, Wis. Mine office: Superior, Missoula Co., Mont. A. O. Nichols, pres. and gen. mgr.; D. McDonald, vice-pres.; D. C. Coolidge, sec.; Dr. P. A. Beebe, treas., at last accounts. Organized Jan. 29, 1906, under laws of Wisconsin, capitalization \$50,000, shares 5 cts. par.

Lands, 16 claims, 320 acres, and a 5-acre mill site, in T. 15 N., R. 25 W., 1 mile from the Missoulula river and about 14 miles up the river from Superior. Property shows fissure veins cutting through limestone, slate and quartz. Two veins are under development, 1 reported to be 70' wide, having a 7' paystreak carrying azurite and chalcopyrite ore giving assays of 2 to 25% copper and estimated by the management to average 15% copper. Development is by a 24' shaft, and tunnels of 85', 700', 250' and 38', with about 100' of other laterals. Presumably idle.

WOLF CREEK COPPER MINING CO.

MONTANA

Office: Spokane, Wash. Mine office: Wolf Creek, Lewis & Clark Co., Mont. T. G. Cooper, pres.; C. E. Russell, vice-pres. and mgr.; R. E. Vincent, sec.-treas., at last accounts. The mine, developed by tunnel, is said to show a 14' vein of ore, carrying a 4' paystreak of 20 to 40% copper ore. Presumably idle.

WOLVERINE & ARIZONA MINING CO.

ARIZONA

Office: Calumet, Mich. Mine office, Bisbee, Ariz. John Daniell, pres.;

Paul P. Roehm, vice-pres.; Edw. Ulseth, second vice-pres.; W. Frank James, treas.; Chas. Chynoweth, sec.; other directors, Benj. F. Chynoweth, W. H. Brophy, Fred C. Smith and Michael J. Cunningham; W. H. Roberts, Jr, supt.

Organized 1905, under laws of Arizona, as successor of Wolverine & Arizona Development Co., capitalization \$3,000,000, shares \$15 par; issued 97,156 shares, par value \$1,457,340, subject to assessment, and 21,792 shares, par value \$326,880, of full-paid stock. Levied 25-ct. assessments March 19, 1906; Sept. 17, 1906; June 17, 1907; Nov. 18, 1907. Ended fiscal year Sept. 30, 1912, with surplus assets of \$16,370. Receipts for fiscal year 1912, included \$12,861 from sales of copper ore, with total disbursements of \$10,487. Annual meeting, second Wednesday in November.

Lands, 9 claims, 160 acres, known as the Cairo, Memphis, Kentucky, Georgia, Louisiana, Chicago, Warren, George and Broken Promise. The Georgia claim lies 600' from lands of the Calumet & Arizona, and is about 3,000' from the Irish Mag shaft of that company, and from the Spray and Holbrook shafts of the Copper Queen. The Uncle Sam and White Tail Deer claims of the Copper Queen are adjacent to the Wolverine & Arizona.

Claims lie along the high limestone ridge W. of Bisbee, extending westward to the open valley and the first development was begun on the farthestmost side of the group. The Broken Promise shaft, 700' deep, with 3 compartments, each 5'x4' 6", well timbered, cut mineralized limestone showing considerable iron but no ore in commercial quantity. A drift on the 500' level, running 850' toward the Pittsburg & Duluth group (Superior & Pittsburg Co.) cut leached ore and ledge matter, carrying traces of copper. Drifts running in other directions showed leached ore, but not in encouraging quantities, and work in this area was suspended, 1909.

Exploratory work on the western claims proving disappointing, the easternmost claims were prospected in 1906 by diamond drill and a hole 410' deep passed into 50' of 4 to 10% oxidized copper ore near the Shattuck mine. This orebody being inaccessible from the Broken Promise shaft, the use of the Higgins tunnel was acquired and the ore opened up from the Bisbee side of the mountain. The tunnel was extended 310' to the Wolverine boundary and then southerly to intersect the orebody on the Wolverine ground. This orebody proved to be a replacement deposit of rich oxidized ore, lying within the limits of the Warren claim, about 2,700' from the tunnel portal. After working out the oxidized ore down to the Shattuck boundary, exploration upward was begun and a fine body of sulphide ore was developed in the footwall limestone.

The mine has been a small but steady shipper of high-grade ore to the Douglas smelter, this ore paying all working expenses and building up a small surplus. It formerly averaged about 10% copper, but the sulphide ore is of lower grade. The mine has about 3,000' of workings and its orebodies connect downward with great stopes in the Shattuck mine, the deposit being the top of one of the ore shoots of that property. The mine is connected underground with the Uncle Sam mine of the Copper Queen Co. as well as with the workings of the Shattuck mine.

Equipment includes a 250-h. p. steam plant, 2 single-drum hoists and a 6-drill air compressor, all at the Broken Promise shaft and all unused for several years.

Production, 2,524 tons, netting \$37,962 in 1910; 984 tons, netting \$11,873 in 1911; 762 tons, netting \$12,861 in 1912. Property is excellently handled and has made this production and done its development with only 5 or 6 workmen.

WOLVERINE COPPER MINING CO.**MICHIGAN**

Office: 15 William St., New York. Mine office: Kearsarge, Houghton Co., Mich. Jos. E. Gay, pres.; J. Wheeler Hardley, sec.; John R. Stanton, treas.; Hon. E. B. Hinsdale and Samuel L. Smith, directors; Theo. Dengler, supt.; F. W. Hartmann, asst. supt.; Chas. L. Noetzel, clerk; David L. Vivian, mill supt.; Arthur Williams, mine capt.; Karl A. Mays, engr.; A. B. Holtenehoff, master mechanic.

Organized 1890, under laws of Michigan, capitalization \$1,500,000, shares \$25 par. The company owns \$80,000 stock in the Michigan Smelting Co. Fiscal year ends June 30. Adams Trust Co., Boston, registrar; American Loan & Trust Co., Boston, transfer agent. Annual meeting, first Monday in August.

The first dividend was paid Oct. 1, 1898, and 30 dividend disbursements, to end of 1913, aggregated \$7,740,000. Recent dividends, for calendar years, have been as follows: \$330,000 in 1903, \$450,000 in 1904, \$660,000 in 1905, \$1,020,000 in 1906, \$1,050,000 in 1907, \$600,000 in 1908, \$600,000 in 1909, \$600,000 in 1910, \$540,000 in 1911, \$600,000 in 1912, and \$300,000 in 1913. Net earnings for fiscal year ended June 30, 1913, were \$601,514, with balance of assets standing at \$748,034.

The Wolverine mine, opened 1882, by local capital, was unsuccessful and the company was reorganized 1890, under the present title and management, when new machinery was secured and work resumed.

Lands, 320 acres, 280 acres freehold, and 40 acres mineral rights, carry 3,100' of the strike of the Kearsarge amygdaloidal bed, on which the mine is opened. Neighboring properties are the North Kearsarge on the N., Mayflower on the E., Mayflower and South Kearsarge on the S., and Centennial on the W.

The Kearsarge bed averages about 16' in width on the Wolverine property, and this mine was for many years the richest amygdaloidal mine in the Lake Superior district, second in richness only to the Calumet & Hecla among all Lake Superior copper mines. All shafts are sunk at an angle of 41°, and skip tracks have been given crossties, in place of longitudinal stringers, following the plan introduced in the Calumet & Hecla, which unquestionably is an improvement, as it permits the use of a cheaper grade of timber and allows quicker repairs. All levels, excepting some of the very upper ones, are opened at 100' intervals. Owing to the uniformity of the cupriferous bed, all levels from the 1st to the 23d, inclusive, are opened through the entire property, connecting all 4 shafts to the bottoms of Nos. 1 and 2 and connecting Nos. 3 and 4 only below the 17th level. Man cars are installed in shafts Nos. 2, 3 and 4. About 1 mile of new openings is made yearly, with ground blocked out for about 5 years production, at the rate of 10,000,000 lbs. fine copper yearly. The life of the mine on this lode is estimated at about 10 years.

The system of underground rock handling saves confusion and cash. Tram cars to the average number of 10 are kept on each level. Trammers leave filled cars at the shaft and 2 men attend to the dumping in each shaft, these starting at the topmost level where stoping is in progress and working downward, dumping all loaded cars on each level, in order, then riding on skips to the topmost producing level and repeating the work. By this system all signaling in each shaft is in the hands of 2 men and the engineers in charge of the hoists know exactly what is going on underground.

The mine has 5 Knowles electric pumps, of which 3 are in No. 2 shaft, and 1 each in Nos. 3 and 4, 3 of these pumps having an average lift of more than 1,000' each. Current is taken from the Houghton County Electric

Light Co., and the electric pumps have given much relief to the air compressors. The mine has the Johnson electric hoisting signal system.

Exploration work by diamond drilling in the upper workings has shown good copper ore in a portion of the mine formerly considered worthless. Several parallel lodes have also been prospected, an exploratory crosscut being driven for 2,000' across the formation on the 14th level, reaching the Kearsarge conglomerate on the W., where it was barren. Another exploratory crosscut, 1,600' long, driven E. on the 28th level, intersects the Old Colony lode 1,489' E. of the Kearsarge amygdaloid and cuts other cupriferous beds. A little drifting on the Old Colony lode failed to disclose payable ground. The West lode lying 80' W. of the Kearsarge has been opened by several levels, with some payable ore on the 13th and 14th.

The Wolverine lands carry the Osceola amygdaloid over about 60 acres and a shaft was sunk 631' on this lode and 5 levels opened, but the ground was unproductive and the shaft has been abandoned.

No. 1 shaft, the northernmost, near the Kearsarge line, ran out of the tract at shallow depth, and tributary ground having been worked out, was abandoned some years ago. No. 2 shaft, next S., is permanently bottomed at the boundary line, at a depth of 1,700' and is used exclusively for handling men and supplies. The engine house has a duplex-cylinder hoist with straight-face drum.

No. 3 shaft, sunk in the footwall, is bottomed at the 38th level and can be sunk 2 additional lifts before reaching the limit of possible depth, about 4,000', an exchange of land between the Wolverine and North Kearsarge mine of the Osceola Consolidated having permitted the sinking of this shaft considerably deeper than would have been the case otherwise. Shafts Nos. 3 and 4 are connected by drifts down to and including the 33d level. Equipment of No. 3 includes a steel shaft rock house, duplicating that of Mohawk No. 4 in design and equipment. No. 3 shaft has a duplex-cylinder hoist, with a 17' straight-face drum, to permit hoisting from the maximum depth that the shaft can attain.

No. 4 shaft, sunk 45' in the foot, to guard against drawing, has reached the 37th level, and can be sunk to the 42nd level before reaching the Centennial boundary. Equipment includes an engine house, housing a 14x60" Nordberg duplex-cylinder hoist with double conical drum having a maximum diameter of 18', capable of raising 4-ton skips from 1 mile depth, with a 1¼" steel cable. No. 4 engine house has a large electric transformer. There are 20-drill and 22-drill Rand air compressors, and the boiler house has 3 Stirling water-tube boilers, with American automatic stokers and a Green fuel economizer.

The principal mine buildings are at No. 4 shaft, but there is a model changing house at No. 3 shaft. A telephone system connects underground pump stations and all buildings. The company maintains a 6-ward hospital and staff, and owns a large number of substantial dwellings, the location being exceptionally prosperous in appearance.

Rock is transported between the mine and mill by the Mohawk & Traverse Bay railroad, with a down-grade haul of 13 miles.

The mill is near the mouth of Tobacco river, on Traverse bay, Lake Superior, and adjoins the Mohawk mill, both being served by a single pump and managed by a joint superintendent. The mill, 180x206' in size, of steel on stone foundations, standing 37' above the lake, has 2 Nordberg heads. The mill uses Wilfley tables. Mineral from the heads and wash is sluiced to the basement through iron pipes, going to the works of the Michigan Smelting Co. at Houghton. A Jackson tailings plant provides for settling out the water and stacking the tailings 800' from the mill by belt conveyor.

The boiler house houses a battery of 200-h. p. Stirling water-tube boilers, equipped with American automatic stokers.

The pump house, owned jointly by the Wolverine and Mohawk, has a 20,000,000-gal. Snow horizontal triple-expansion pump, with 18", 33" and 54" steam cylinders and 22" water plungers, with 36" stroke, besides an auxiliary 8,000,000-gal. Nordberg triple expansion water-end pump, with 3 plungers. The pump house is located on the river, near its mouth, the intake being protected by timber cribs running 300' into the lake to prevent clogging from floating bark and anchor ice.

In connection with the mills there is a wharf, owned jointly by the Wolverine and Mohawk, fitted with coal hoists. The 40-acre town site of Gay near the mills, is named in honor of Jos. E. Gay, the president of the company, a man long and honorably identified with copper mining in the Lake Superior district.

Production for calendar years, was 2,316,296 lbs. copper in 1897; 4,789,829 lbs. in 1900; 9,024,034 lbs. in 1903; 9,764,455 lbs. in 1904; 9,464,418 lbs. in 1905; 9,681,706 lbs. in 1906; 9,272,351 lbs. in 1907; 9,681,706 lbs. in 1908. Production for the company's fiscal years, ending June 30, has been as follows: 1908, 9,356,123 lbs. copper; 1909, 9,995,748 lbs.; 1910, 9,757,101 lbs.; 1911, 9,617,168 lbs.; 1912, 9,408,960 lbs., and 1913, 8,350,312 lbs.

The average yield per ton of rock stamped was 26.82 lbs. in 1908, 26.75 lbs. in 1909, 24.96 lbs. in 1910, 24.75 lbs. in 1911, 23.45 lbs. in 1912, and 21.49 lbs. in 1913. The average cost per ton of rock mined since 1908 was \$1.88, and per pound of copper produced was 7.65 cts., and was \$1.86 and 8.66 cts. in 1913.

WONDERFUL MINING CO., LTD.

IDAHO

Office: Otterson Bld., Wallace, Idaho. Mine near Mullan, Shoshone Co. Idaho. A. H. Featherstone, secretary. Stock is assessable. Lands, 4 claims, patented, lying next W. of the Bullion mine, on the eastern slope of Stevens peak, have a 1,200' crosscut tunnel developing a vein said to give a fair showing of galena and copper ore.

WOODLAWN COPPER MINING CO.

UTAH

Idle. Office: 305 Atlas Bld., Salt Lake City, Utah. Mine near Brighton, Salt Lake Co., Utah. H. W. Lawrence, pres.; A. C. Ellis, Jr., vice-pres.; George N. Lawrence, sec.-treas. Organized 1899, under laws of Utah, capitalization \$500,000, shares \$1 par assessable. Lands, 7 claims, patented, in the Big Cottonwood district, 18 miles from a railroad, having 3 tunnels of 360', 980' and 100', with about 3,500' of workings, showing lead, zinc and copper ore; whose value is mainly in lead.

WOODWARD MINING CO.

NEW MEXICO

Office: Silver City, N. M. Mine office: Tyrone, Grant Co., N. M. Robert Brownell, pres.; J. I. Woodward, gen. mgr., at last accounts. Owns sundry claims in the Burro mountains, slightly developed by shaft and tunnel, planned to connect at a depth of about 500'.

Equipment includes a small steam plant with hoist, and an air compressor, and there are about 6 buildings. Idle.

WORLD'S FAIR MINE.

ARIZONA

Address: Frank and Josephine Powers, owners, Nogales, Ariz. Mine office: Patagonia, Santa Cruz Co., Ariz. Lands, 13 claims, near Harshaw, S. of Patagonia, in the eastern end of the Salero mountains. The mine has a 600' main shaft, with about 2 miles of workings, developing an 8' orebody, carrying highly argentiferous lead carbonates and sulphides near surface, changing at depth to argentiferous sulphides, with values mainly in silver.

The mine has been a shipper, since about 1893, of high-grade silver ore, in carload lots, ranging from \$250 to \$350 in value, and one 20-ton carload

gave net smelter returns of \$15,000. The property is popularly reputed to have produced about \$500,000 worth of ore. Equipment includes a steam plant. Production was 16,733 lbs. fine copper, 106,627 oz. silver and 25 oz. gold in 1907, but operations were suspended Oct. 5, 1907, on account of the low prices of silver and copper, and the mine remained idle until late 1910, when shipments were resumed and have continued more or less regularly, though on a small scale.

WYANDOT COPPER CO.

MICHIGAN

Office: 19 Congress St., Boston, Mass. Operating office: Houghton, Mich. Mine office: Winona, Houghton Co., Mich. Ashley Watson, pres.; Frederick Hoitt, vice-pres.; Chas. E. Adams, sec.-treas.; Frank L. Van Orden, mgr., and Jos. Dorr, directors; Louis LaRochelle, mg. capt. Organized Feb. 3, 1899, under laws of Michigan, capitalization \$2,500,000, shares \$25 par; paid in, \$9. Has levied assessments of \$300,000 since organization. Disbursements, for fiscal year ending March 31, 1913, were \$31,276, and the company ended its fiscal year with cash assets of \$53,704. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Annual meeting, second Monday in May.

Lands, 1,065 acres, adjoin the Winona, in Secs. 16, 20 and 21, T. 52 N., R. 36 W. Exploratory work, begun Feb., 1899, has been continued uninterruptedly, though hampered by the great disadvantage of a heavy overburden. Early prospect work was done in search of the Winona bed; later an attempt was made to locate the southern extension of the Baltic amygdaloid, after which attention was turned again to the Winona bed, and latterly has been confined to development work in an amygdaloidal bed, designated as No. 8 lode, lying about 2,300' E. of the Winona lode. The average strike of the Keweenaw formation on this land is N. 53° E., with an average dip of 65°, and the Wyandot lands carry the strike of the Keweenaw bedded series for about 1½ miles.

The mine has 11 shafts, some of which are merely pits, with 2 shafts of considerable depth. No. 1 shaft, 1,000' deep, located in the S. E. ¼ of Sec. 21, T. 52 N., R. 36 W., is sunk in the footwall of the Winona bed, and there is a parallel underlying amygdaloidal bed 60' distant, both broken, and of small promise, though showing occasional patches of well mineralized ground.

No. 11 exploratory shaft, 8x10', inside measurement, is sunk 710' on a stratum paralleling the Winona bed, at a distance of 1,200'. This bed gave encouragement, when first opened, and diamond-drill holes gave good cores, but proved poor under development. A crosscut was driven S. E. from the bottom of No. 11 shaft, for a distance of 2,640', intersecting 13 distinct amygdaloidal beds, of which Nos. 3 and 8 are the only ones showing copper in quantities of any promise, and considerable drifting has been done on both. No. 3 bed disclosed considerable mass and barrel copper, but No. 8 is considered the more promising.

Miscellaneous work of the past includes a 102' vertical shaft, sunk on a lean amygdaloidal bed known as the Misery River bed, in Sec. 16, T. 52 N., R. 36 W., but nothing of value was developed. Some years ago a vertical shaft was sunk on lands held under option, near the W. quarter post of Sec. 28, T. 52 N., R. 36 W., to depth of 250', and crosscuts driven both E. and W. with about one-half mile of workings. This work crossed the horizon of the Baltic bed, but what was deemed the Baltic amygdaloid was found highly altered, and worthless, as was the whole country in the neighborhood.

Extensive diamond drilling has been done, and a core, taken 1904, from the hypothetical horizon of the Lake bed, showed a little copper, but was

not considered important at that time. The ground is being gone over again with a diamond drill, the new work being done in a thoroughly systematic manner, in Secs. 16 and 21. Holes Nos. 21 and 22 showed beds offering encouragement, and some trenching was done on 1 bed, 48' wide, carrying a little copper from foot to hanging. Another trench, 1,500 N. E. disclosed the bed under only 16' of overburden, and a shaft, known as the Sec. 16 shaft, was sunk to a depth of 65'. A crosscut at this depth shows the bed to be 38' wide, carrying finely-disseminated copper for about 10', with small masses along the footwall.

Present activity is centered in development work in the No. 8 lode, 1,100' S. E. of the No. 11 shaft. This lode is opened by the long crosscut on the 700' level, and below this depth by a 115' winze, with about 500' of drifts on the 815' level. The winze discloses copper ground of fair average grade, and the possibility of developing ore of commercial value is thought to be good.

Equipment includes a steam plant with Lidgerwood hoist, good for 1,000', 1 Ingersoll-Sergeant and 2 Rand air compressors, of 12 drills aggregate capacity. Buildings include a machine shop, smithy, warehouse, barns and about 12 dwellings. The Wyandot has worked faithfully for more than a decade, under most discouraging circumstances, but with great economy and persistence, and there are at least 2 points, 1 on No. 8 bed of No. 11 shaft, and 1 in the Sec. 16 shaft, where the present showing is of an encouraging nature.

WYOMING COPPER & GOLD MINING CO.

WYOMING

Office: Alma, Kan. Letter unclaimed at former mine office, Encampment, Carbon Co., Wyo. C. B. Henderson, pres.; Al Rohr, vice-pres.; J. R. Henderson, sec.-treas. Organized Sept. 3, 1903, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, nonassessable.

Lands, 9 claims, in 2 groups, known as the Metal Chief and Jessie, in Hog Park, in the upper Platte district, 12 miles from a railway. Claims show granite and gneiss, cut by 2 fissure veins with S.-E. strike, reported by the management to average 28 to 35' in width, and to carry copper oxide and carbonate ores, estimated by the management to average 3 to 15% copper, about 30 oz. silver and \$1.63 to \$3.29 gold per ton. The Metal Chief group has a shallow shaft and the vein is reported to widen at depth. The Jessie group has an 85' shaft showing ore of 5 to 10% copper tenor with small gold and silver values.

Equipment includes a small steam and gasoline plant with two 5x6" hoists and there are 3 buildings. Development has been slow for some years past, as the officers have furnished most of the funds, but a little work has been done each year ever since the company was organized.

WYOMING COPPER MINING CO.

WYOMING

Office: 303 Detroit Free Press Bldg., Detroit, Mich. Mine office: South Pass City, Fremont Co., Wyo. Charles K. Skinner, pres.; C. F. Remington, treas.; Jas. MacFarlane, vice-pres. and supt.; C. A. Spalding, sec.; preceding officers, Chas. E. Murphy and Chas. D. Ridgway, directors; Geo. N. Walker, engr. Organized 1905, under laws of Wyoming, capitalization \$2,000,000, shares \$1 par, nonassessable; issued \$1,375,000. Annual meeting, last Saturday in July.

Lands, 12 quartz claims, 240 acres, and a 30-acre placer claim, in the South Pass district of the Wind River mountains. This district was a placer gold camp about 1868. The property is reported by the management to show a strongly mineralized contact zone, between granite and metamorphic rock, proven for one-half mile length by prospect pits. Development includes a 250' incline shaft, and tunnels of 65' and 60', with 300' of workings.

The vein is reported by the company to change to sulphide ore at depth of 72', ore giving assays of 2 to 6% copper, with an average of 1 to 2 oz., and maximum of 20 oz. silver, and \$3 to \$4 gold per ton. Mine output is reported by the company to average better than 4% copper, with a trace of zinc, 1 to 16 oz. silver and \$1 to \$3.50 gold per ton.

Equipment includes an 80-h. p. boiler and a 40-h. p. Fairbanks-Morse hoist, with several buildings. The management plans deepening the shaft to 300' and continuing development.

WYOMING GOLD & COPPER MINING CO.

WYOMING

Letter unclaimed at former office, Salt Lake City, Utah. Mine office: Lusk, Converse Co., Wyo. Organized 1906, under laws of Utah. Lands, 3 claims, about 18 miles S. of Lusk, in the northern part of Albany county, said to have a 30' shaft, showing an orebody assaying 16% copper, with gold values. Idle.

YAEGER CANYON COPPER CO.

ARIZONA

Office: Union Trust Bldg., Detroit, Mich. Letter unclaimed at former mine office, Jerome, Yavapai Co., Ariz. Robert E. Plumb, pres.; Richard E. Sloan, vice-pres. and gen. mgr.; Geo. B. Russell, sec.; Geo. H. Russell, treas., at last accounts. Organized April 11, 1903, under laws of Arizona, capitalization \$800,000, shares \$1 par

Lands, 21 claims, 460 acres, 4 miles S. W. of Jerome, in the Black Hills district, carry 3 fissure veins in diorite, 1 averaging 14' width. Mine has shafts of 350' and 1,200', with about one-half mile of workings. Ores contain bornite and chalcopryrite, estimated to average 6% copper, 8 oz. silver and \$2 gold per ton. Equipment includes a 240-h. p. steam plant, with a 140-h. p. hoist and a 10-drill Sullivan air compressor. A 60-ton concentrator has a No. 2 Austin centrifugal crusher, 2 trains of rolls and 5 Wilfley and Bartlett tables. Has been a small producer at different times in past years. Company inactive.

YAK MINING, MILLING & TUNNEL CO.

COLORADO

Office: 60 Wall St., New York. Walter W. Davis, business mgr., Leadville, Colo.; John R. Champion, supt. Property at Leadville, Lake Co., Colo., is a 3-mile tunnel draining an important part of the Leadville camp and developing complex sulphide ores that carry copper as a by-product. Employs about 100 men and has electric power and haulage.

YAMPA SMELTING CO.

UTAH

Office: 747 Fifth Ave., New York. Works office: Bingham Canyon, Salt Lake Co., Utah. G. B. Schley, pres.; D. F. Sheehan, supt. Organized 1903, capitalization \$100,000, and is controlled through stock ownership by the Tintic Co.

Property is a smelter, at Yampa, in lower Bingham canyon, built 1904, and enlarged 1906, to 1,000 tons daily capacity. The works are connected with the Yampa mine by the aerial tram of the West Mountain Tramway Co. The plant includes ore bins, a calcining building, blast-furnace building, converter building and power plant, all main buildings having steel frames.

The calcining department has eight 125-ton McDougall calciners, each with 6 superimposed hearths having sets of rabbling arms and rakes, and an 18x30x30' dust chamber, connecting with a 120' brick stack.

The furnace building has 3 blast furnaces, and a main stack with extreme elevation of 287' above the tuyeres. There are also 3 reverberatory furnaces, each having separate brick stacks.

The converter department, installed 1907, has 2 stands, electrically operated, and six 84x126" shells, converting matte of 50% average tenor to blister copper, but was shut down 1909, and matte sent thereafter to the Garfield smelter. The smelter is well designed for a small plant but cannot

compete commercially with custom smelters having a wide range of ores for furnace mixtures, and there seems small likelihood of resumption. The smelter was operated for several years on the low-grade copper ore of the Yampa mine, but upon the closing of the smelting contract with the American Smelting & Refining Co., the plant was shut down, Aug., 1910, and is now for sale.

YANKEE BOY MINING CO.

IDAHO

Henry Morrill, manager; W. D. Price, lessee, Kellogg. Property leased to Big Creek Mining Co. The Yankee Boy mine is in the Big Creek section, near Kellogg, Shoshone Co., Idaho. Developed by a 700' tunnel which cuts ore at 320' from portal, carrying 500 oz. silver per ton. Equipment installed Sept., 1913, includes gasoline engine, compressor, etc.

YAQUI CANYON COPPER CO.

MEXICO

Letters unclaimed at former offices: 408 Gumbel Bldg., Kansas City, Mo., and Suaqui de Batuc, Ures, Sonora, Mex. A. J. Davies, pres.; S. M. Major, vice-pres.; W. T. Kerr, sec.; Frank B. Foster, treas.; T. W. Foster, gen. mgr. Organized under laws of Arizona, capitalization \$2,000,000, shares \$1 par.

Lands, 60 pertenencias, 148 acres, known as the Todos Santos and Great Republic mines, and a 50-acre smelter site. The property has 6 contact deposits between limestone and porphyry, of which 2, under development, of 10' estimated average width, carry copper and lead ores, former said to assay 7% copper and 50 oz. silver, and latter 15% lead and 30 oz. silver, with a trace of gold. The principal property is an antigua, supposed to be several hundred years of age, showing discarded low-grade ore on the dumps, remaining from old operations. Development is by 4 tunnels and 7 or 8 shafts, and management planned driving a new tunnel, to crosscut all known veins.

Equipment includes a steam plant, air compressor and a small smelter, with a 10-ton reverberatory furnace. Buildings include a small warehouse, laboratory, machine shop and general store. Presumably idle as the region in which the mine is located is notoriously unsafe since the Mexican revolution began.

YAQUI COPPER CO.

MEXICO

Office: 1 Madison Ave., New York. Mine office: Suaqui de Batuc, Ures, Sonora, Mex. Wm. Sauntry, pres.; Dr. A. E. Magoris, vice-pres.; Hon. Geo. E. Green, sec.-treas.; Chas. Kiser, gen. mgr., at last accounts. Organized 1902, under laws of West Virginia, capitalization \$5,000,000, shares \$1 par

Lands originally claimed to be 6,032 acres of mineral territory, and 119,284 acres of timber and grazing lands, also water rights to 25 miles of the Yaqui river, the mining lands being in the vicinity of Suaqui de Batuc, Campo Santo Nino, in the Sierra Madre, 120 miles from Hermosillo. Property is claimed to show antigua workings, iron ore and indications of coal. In June, 1906, the Montana de Cobre Co. was said to have acquired 1,000 pertenencias formerly held by the Yaqui Copper Co., hence area of present holdings is uncertain. Development, begun 1901, is by 2 shafts and 8 tunnels, and so far as can be learned the mine has shown practically no ore. Improvements include an engine and boiler house, office building and store.

The company was promoted with \$10,000 offices, magnificently furnished, in which visitors were royally entertained and given handsome ore samples. Company's literature was untruthful, its representations gross exaggerations, and its property is practically valueless. It is harmless now, but caused as much misery and harm as any mining fraud ever perpetrated. See Vol. VIII for full description.

YAQUI MINING CO., S. A.**MEXICO**

Office: Fundicion, Sonora, Mex. Geo. M. Ryall, president. Organized under laws of Mexico, and controlled through ownership of entire capital stock, by the Mexican Exploration & Mining Co., an Arizona corporation that is controlled by the Pacific Smelting & Mining Co. Property is described under latter title.

YAQUI RIVER CONSOLIDATED GOLD & COPPER CO. MEXICO

Office: Nogales, Ariz. Mine address: Imuris, Sonora, Mex. Lee Regan, mgr.; Jos. Miller, supt. Was consolidated with the Cicero Smith Mining Co., in 1911. Lands include the Mina Verde gold property in the Magdalena district, and a copper property about 25 miles E. of Imuris, latter developed by a 135' shaft, showing a 4' vein carrying auriferous and argentiferous copper ore, said to give good assay values. The Imuris property was equipped 1912, with 50-h. p. hoist, air compressor, etc., taken from the Cicero Smith property, near Wilcox, Ariz. Was developing with a small force, 1912.

YAQUI SMELTING & REFINING CO., S. A.**MEXICO**

Works office: San Antonio de la Huerta, Ures, Sonora, Mex. Is the Mexican operating company of the Sonora Mining & Development Co., and described under latter title. Fully described Vol. VIII.

YAVAPAI CONSOLIDATED GOLD-SILVER-COPPER CO. ARIZONA

Office: Prescott, Ariz. Mine office: Crown King, Yavapai Co., Ariz. Hon. Frank M. Murphy, pres.; Geo. P. Harrington, gen. mgr. Lands, 48 claims, partly patented, including the Old Reliable mine, 3 miles from Crown King; the Wild Flower group, in Pine Grove district; the Tiger group, in the Bradshaw mountains, and the Crowned King mine, in the Bradshaw mountains. The last named group, bought from B. A. Turner, receiver of the old corporation, for \$75,000, half in cash and half in shares, comprising 18 claims, has been a considerable producer, mainly of gold.

The mine has several thousand feet of old workings, showing a contact vein, between porphyry and syenite, carrying slightly auriferous and highly argentiferous copper ores, opened by a 170' shaft. Equipment includes steam power, an air compressor, 10-stamp mill and 100-ton concentrator.

YAVAPAI METALS MINING & REDUCTION CO. ARIZONA

Mine office: Prescott, Yavapai Co., Ariz. Francis S. Law, pres.; O. W. Blickenstaff, vice-pres.; A. C. Nichols, sec.-treas., 3345 A St., San Diego, Cal.; Henry Barksclub and John W. Norton, directors. Organized July, 1909, under laws of Arizona, capitalization \$1,500,000, shares \$1 par, fully paid and nonassessable; issued, 1,021,417. Annual meeting, first Tuesday in December.

Property, 14 claims, 266 acres, unpatented, in the Agua Fria district, about 7 miles N. E. of Humboldt. Claims show granite and schist with a gossan outcrop along the contact. This gossan is underlaid by oxidized copper and gold ores, the deposit having a flat dip, averaging 15° and proven on the incline to a depth of 250'. Company reports its ores to consist of red and black oxide of copper averaging 35% copper, 3.5 oz. silver and \$10 gold per ton. The orebody is said to be 6' thick and to show good sulphide ore on the 250' level.

Equipment includes a 25-h. p. hoist and several mine buildings.

A recent shipment of 12 tons is reported by management to have averaged \$65 per ton.

YELLOW BUTTE COPPER CO.**CALIFORNIA**

Mine office: Weed, Siskiyou Co., Cal. Hon. W. P. Veuve, pres.; Dr. J. D. Ball, sec.; Dr. P. A. Jordan, treas.; L. D. Ball, gen. mgr.; J. D. Hubbard, supt. Organized 1907, under laws of Arizona, capitalization \$1,500,000,

shares \$1 par, nonassessable. Lands, 320 acres, on the eastern slope of Haystack mountain, 12 miles N. of Mount Shasta and 12 miles from Edgewood. The property has a fissure vein in granite carrying malachite at and near surface, succeeded by bornite and chalcopryite, with quartz gangue, developed by 2 shafts, of which No. 1 is 350' deep. Improvements include a 12-h. p. gasoline hoist, with an engine house, boarding house, bunkhouse and smithy. A little ore was shipped, early 1908, to the Kennett smelter.

YELLOW TIGER MINING CO.

NEVADA

Mine office: Goldfield, Nev. J. W. Bates, general manager. Lands, next S. of the Goldfield Consolidated and E. of the Columbia Mountain fault, show a vein of 18" to 2' width developed to a depth of 700' by shaft with several hundred feet of openings. Ores are said to carry from 6 to 9% copper, and gross values reported as from \$25 to \$32 per ton, are apparently mainly in this metal. About \$100,000 has been spent in development work. Was developing and preparing to ship ore to the Mason Valley smelter, late 1913.

YELLOWSTONE MINE.

MONTANA

Mine address: Clancy, Jefferson Co., Mont. The property comprises 10 or 11 claims, on a small stream, tributary to Clancy creek, 5 miles W. of Clancy. Claims show a 25' fissure vein in quartz monzonite, with E.-W. strike, dipping 65° S., and apparently cutting across a dacite dike of 90' width. Ore minerals are mainly chalcopryite and galena, with smaller amounts of sphalerite and pyrite.

The mine has a 90' shaft and a drift tunnel, 200' long, at last reports.

YERINGTON BULLION COPPER CO.

NEVADA

Mine address: Ludwig, Lyon Co., Nev. The mine, 2 miles N. of the Nevada-Douglas property, has shafts of 400', 116' and 30', and 2 tunnels, one 300' E. and the other 300' W. of the main shaft. Ores are copper with small gold values.

Equipment includes a 40-h. p. gasoline engine with air compressor, and a 15-h. p. hoist.

YERINGTON CENTRAL COPPER CO.

NEVADA

Address: Herbert M. Wells, sec., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. W. Mont Ferry, president. The company had a floating indebtedness late 1912, of \$64,526, and was in danger of losing its property to its creditors, as stockholders did not send in their proxies permitting stock to be made assessable. The mine has a 250' three-compartment shaft, showing a 3 to 5' vein carrying chalcopryite, claimed to assay about 10% copper, with a 4" hanging-wall paystreak of melaconite giving assays up to 59.1% copper. Idle several years, except for annual assessment work, practically bankrupt and reorganization inevitable.

YERINGTON CONSOLIDATED COPPER CO.

NEVADA

Office: 701 McIntyre Bldg., Salt Lake City, Utah. Mine office: Mason, Lyon Co., Nev. Frank J. Hagenbarth, pres.; M. B. Johnson, sec.; John Dern, treas.; preceding officers, J. H. Turner and J. H. Mays, directors. Organized Feb. 11, 1907, under laws of Utah, capitalization \$5,000,000, shares \$5 par, nonassessable; issued, 725,000 shares. Debentures, \$100,000 at 6%, authorized. Annual meeting, second Monday in July.

Lands, 14 claims, patented, in 2 groups, known, as the Copper King and Copper Deposit, the former, lying between the Bluestone and Mason Valley mines, developed by a 70' shaft and 2 tunnels of 500' and 600', showing carbonate ores.

YERINGTON COPPER MERGER MG. & SMELTING CO.

NEVADA

Idle. Mine address: Yerington, Lyon Co., Nev. A. J. McDaniel, general manager, at last accounts. Organized 1910, capitalization \$5,000,000,

assessable. The company is a merger of different properties. Lands, 28 claims, 550 acres, in the Buckskin district, slightly developed.

YERINGTON COPPER MOUNTAIN MINING CO. NEVADA

Office: 302 Hooper Blk., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. A. Hanauer, Jr., pres.; Wm. H. Tibbals, vice-pres.; J. H. Turner, sec.-treas. and gen. mgr.; preceding officers, Isaac Sparey, L. A. Mehse and C. W. Hooven, directors. Organized April 25, 1907, under laws of Utah, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$700,000.

Property, 10 claims, unpatented, about 200 acres, 4 miles from a railway, in the Mason district, shows porphyry carrying a vein with N.-E. strike and westerly dip, of 1 to 30' width, opened by surface trenching and short tunnels. Development includes a 150' shaft sunk on the vein and showing 8 to 18" of ore throughout. A 50' perpendicular shaft cut ore 3' wide averaging 6% copper for 35' below the surface, where vein left shaft. A crosscut at the bottom of this shaft cut similar ore in the vein. Idle except for annual assessment work.

YERINGTON IRONSIDES COPPER CO. NEVADA

Office: 302 Hooper Blk., Salt Lake City, Utah. A. Hanauer, Jr., pres.; Wm. H. Tibbals, vice-pres.; J. H. Turner, sec.; J. P. Spaulding, treas.; preceding officers, Moritz Bamberger and Chas. T. Rooklidge, directors; T. L. Walden, supt. Organized Nov., 1906, under laws of Utah, capitalization \$1,000,000, shares \$1 par, nonassessable.

Lands, 7 claims, unpatented, 140 acres, N. of the Nevada-Douglas mine and 5 miles N. W. of Yerington, having numerous pits and trenches, with a tunnel on the Ironsides claim, and a shaft of about 200' depth, with about 600' of workings, showing ore said to average 5 to 8% copper. Sufficient work has been done each year to keep the title good.

YERINGTON MALACHITE COPPER CO. NEVADA

Office: 414 Judge Bldg., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Grant Snyder, pres. and gen. mgr.; H. J. Mayer, vice-pres.; Gidcon Snyder, sec.-treas.; other directors, S. M. Levy and W. T. Snyder; E. L. Riggs, supt. Organized Oct., 1906, capitalization \$5,000,000, shares \$5 par, assessable; issued, 666,333 shares.

Lands, 11 claims, patented, adjoining the Mason Valley mine, show 3 mineralized zones of 20 to 150' width, proven on surface for a distance of 2,000'. Orebodies are fissure veins in limestone, carrying oxidized ores to a depth of about 100' below which ore minerals are mainly chalcopryrite, associated with epidote and garnet.

The property is opened by numerous short tunnels and pits, a 600' tunnel, and a 140' three-compartment shaft, with about 2,000' of workings connecting on the vein with the Mason Valley workings through which considerable development was secured 1912-13. Ores as mined average about 6% copper.

Equipment includes a 125-h. p. General Electric motor, a steam hoist good for 600' depth, a Rand Imperial air compressor, and a 7x10" Hendrie & Bolthoff hoist. Electric power is taken from the Truckee River Power Co. There are several mine buildings.

Production was begun May, 1912, and company was shipping regularly to the Mason Valley smelter, early 1913. Property considered promising.

YERINGTON MINES & EXPLORATION CO. NEVADA

Office and mine: Yerington, Lyon Co., Nev. Sam'l Anderson, pres.; Edgar Yates, vice-pres.; C. S. Durand, sec.-treas. and gen. mgr.; other directors, W. A. Hervey and C. Straesser. Organized Feb. 27, 1909, under

laws of Nevada, capitalization \$1,000,000, shares \$1 par, nonassessable; issued, \$715,000.

Lands, 24 claims, including the Effie May group of 2 gold claims, the Copper Flat group of 10 copper claims, and the Mohawk group of 12 gold-copper claims, latter being the principal property, located 1 mile N. W. of Yerington.

The Mohawk group is developed by a 70' incline and several shallow shafts of 20' average depth, sunk in the copper-bearing formation. A 115' vertical and 3 incline shafts of 40', 80' and 80' have been sunk on gold-bearing veins, of which 1, of 7' width, is said to have given assays of \$200 per ton. The copper veins are reported to carry malachite and chalcopryite with about 6% copper.

The Copper Flat group, 1 mile E. of Yerington, is developed by about 20 pits and shallow shafts, deepest 60', showing malachite and cuprite of about 6% copper tenor.

The Effie May group is a gold prospect developed by a 135' shaft, said to show \$50,000 in ore blocked out for stoping. Property is on the Nevada Copper Belt railway.

YERINGTON MOUNTAIN COPPER CO.

NEVADA

Office: Tonapah, Nev. Mine office: Schurz, Mineral Co., Nev. John G. Kirchen, pres.; Key Pittman, vice-pres.; P. D. Booth, sec.-treas.; E. J. Haug, supt.; George Jones, mine supt.; J. H. Tate, engr. Organized 1912, under laws of Nevada, capitalization \$3,000,000, shares \$1 par, nonassessable; issued, \$1,250,000. First National Bank of Tonapah, Nev., registrar and transfer agent.

Lands, 33 claims, 680 acres, in the Mountain View district, 9 miles N. W. of Schurz and about 12 miles E. of Yerington.

The property shows 2 fissure veins, in grano-diorite, bearing N. 40° E., and dipping 65°. The veins range from 8 to 20' in width. Ore minerals are mainly chalcocite, with chalcopryite, chrysocolla, malachite, cuprite and occasional native copper.

Development is by a 500' main shaft, and 3 tunnels of 650', 750' and 950', with about 5,000' of openings. A crosscut below the Levine tunnel is developing a good body of ore. Openings in the Azurite tunnel disclose ore in bunches and streaks. The Beach tunnel is yielding a good grade of shipping ore of about 5.5% copper.

Equipment includes a 25-h. p. gasoline hoist, and 11 buildings. Company was said, Oct., 1913, to plan installing an aerial tramway.

YORK HARBOUR MINE.

NEWFOUNDLAND

Mine address: York Harbour, Birchy Cove, Bay of Islands, N. F. The mine, at the head of Eagle Nest brook, about 4,000' from the bay, at an elevation of about 1,000' above tide water, carries cupriferous pyrite, giving assays of 3 to 18% copper, with occasional zinc, up to 50% sulphur, 0.5 to 4 oz. silver and 40 cts. to \$1.40 gold per ton. The ore is compact and close-grained with average values of 4.5% copper and 38 to 41% sulphur, the sulphur being valuable for use in the manufacture of acid after the extraction of copper values. Development is by shafts of 54', 64', 70' and 360', with about one-half mile of workings. The 360' main shaft is sunk at an angle of 72° to the S. E., practically the same as the dip of the ore lenses. Levels are opened at 60' intervals, with drifts driven S. W., along the strike of the orebodies. Extraction was carried on by overhead stopes, averaging 10 to 30' in width, and timbering is with 12x12" sticks, in square sets.

The shaft house has a crusher of 500 tons daily capacity, reducing ore to 6" size, whence it goes into cars on the main tramway, 5,400' long, with an elevation of 1,000', having a 36" gauge track, trains consisting of two 3-

ton self-dumping steel cars, which are lowered by a hoist and deliver ore into a 2,000-ton pocket on the bay, to a double-tracked tunnel, both sides of which are fitted with chute gates connecting with the superstructure of the pier, over which 1-ton cars are trammed, delivering ore into the hold of the steamer. Loading facilities are equal to handling about 700 tons daily.

Equipment includes a 250-h. p. steam plant, with a 50-h. p. Flory hoist and an 8-drill Norwalk high-altitude air compressor. Buildings include an engine house, boiler house, sawmill and 15 dwellings. Inactive.

YOSEMITE MINES CO.

UTAH

Office: 60 Congress St., Boston, Mass. Operating office: 404 Dooly Bldg., Salt Lake City, Utah. Mine address: Bingham Canyon, Salt Lake Co., Utah. Jas. T. Graves, pres.; Sydney S. Millett, sec.-treas.; Imer Pett, gen. mgr. Organized Aug., 1909, under laws of Maine, capitalization \$1,000,000, shares \$1 par, and is controlled by the Bingham Mines Co. through ownership of a large share interest.

Lands, 12 claims, patented, including the Yosemite group of 6 claims, the Cluster group of 5 claims, and the Mississippi claim, adjoining. The properties are said to have produced upwards of \$1,000,000 in gross values, mainly in silver-lead ore, under previous ownership, and the mines were considerable lead producers as early as 1892. The lands lie N. and W. of the Dalton & Lark group of the Bingham Mines Co., and carry approximately 2,400' of the strike of the Lark vein.

Principal development is in the Yosemite No. 1 mine, opened by an incline shaft connecting with the Mascotte tunnel on the 2,220' level, thus opening up a large amount of virgin ground. The Cluster group is developed by the 1,650' Paradox tunnel, showing lead ore. Values developed are mainly in silver-lead, but some copper ore is shown, especially below water level, and some chalcopryrite of good grade, associated with pyrite, is found on the 800' level. The mine is quite wet. Equipment includes a power plant and air compressor.

YUCCA-ARIZONA COPPER CO.

ARIZONA

Address: 506 Broadway, Central Bldg., Los Angeles, Cal. Mine, 20 miles from Yucca, on the A., T. & S. Fe R. R., in Mohave Co., Ariz. S. J. Haynes, pres.; C. H. Post, vice-pres.; H. Leon Haynes, sec.; preceding officers, W. S. Bullis and W. H. Dann, directors. J. C. Ashton, supt.; Llewellyn E. Humphries, mg. engr. Organized Jan. 20, 1911, under laws of Arizona, capitalization \$2,000,000, shares \$1 par; 525,000 issued. Annual meeting, third Monday in January.

Property, 15 claims, 12 owned, 3 bonded, 320 acres, with 2 mill sites and 2 water rights. Lands show granite and porphyry with 6 veins, the main ledge under development averaging 3' thick, proven for 3,000' along the outcrop and to a depth of 130'. Ore carries oxidized copper minerals, chalcopryrite and copper glance and is reported to average 11.85% copper.

Development includes 183' shaft, with 86' crosscut on 130' level cutting ore; underground work totals 493'. Equipment includes small gasoline hoist and temporary buildings. Company expects to install new hoist and compressor early 1914, and to sink shaft to 500'.

YUKON DISTRICT GOLD MINES DEV. CO.

YUKON

J. H. Conrad, manager, Carcross, Yukon Territory, Canada. Property, the Venus group, shows veins carrying silver and gold-bearing lead-copper ore. Development by tunnels. Equipment includes steam and hydraulic power plants, air compressor and 50-ton concentrator.

ZACUALPAM, S. A.; CIA. MINERA.

MEXICO

Mine office: Zacualpam, Sultepec, Mexico, Mex. Organized 1907, under laws of Mexico, capitalization 500,000 pesos, shares 100 pesos par, in

1,500 full-paid shares and 3,500 shares with 20 pesos paid in. Mines are the San Agustin y Anexas, carrying veins yielding ores of various metals. Idle.

ZAMBONA DEVELOPMENT CO. MEXICO

Letters unclaimed at former office: 314 American National Bank Bldg., Los Angeles, Cal. Mine office: Minas Nuevas, Alamos, Sonora, Mex. R. R. Coleman, pres. and treas.; Wm. S. Cranz, vice-pres.; C. W. Hayes, sec.; Amos J. Yaeger, gen. mgr.; preceding officers, Bracey Curtis, W. Molten Clark, W. F. Bottsford, Stanley Hirschbaum, L. R. Patterson and Dr. Ray Ferguson, directors; Ernest J. Koch, supt.; Ramon Paez, mine supt., at last accounts.

Property includes the Zambona, Purisima and San Antonio mines, said to have produced about \$7,000,000 worth of ore, in the past, carrying native silver, argentite and chalcocite, with values largely in silver. The mine is developed to depth of 730', and has a long crosscut tunnel, planned to be driven 2,000', with a double track. There remain about 200,000 tons of low-grade disseminated ore on the dumps, available for milling and cyaniding.

Equipment includes a steam and electric plant, a 30-stamp mill having 4 Huntington mills and 3 tube mills, and a 100-ton cyanide plant.

ZELLA MINING CO. UTAH

Office: Walker Bros. Bank, Salt Lake City, Utah. M. H. Walker, pres.; Oscar K. Lewis, vice-pres.; L. H. Farnsworth, sec.-treas. Organized 1910, under laws of Utah, capitalization \$100,000, shares \$2 par. Lands include property at Ophir, Tooele Co., in the Blue Ledge district of Wasatch county, and in Little Cottonwood district, near Alta, Salt Lake county, Utah. All properties are idle, apparently since organization.

ZENOLI SILVER-COPPER CO. NEVADA

Office: 17 West Second South St., Salt Lake City, Utah. Mine office: Palisade, Eureka Co., Nev. H. A. Pederson, pres.; John A. Kirby, vice-pres.; Henry I. Cobb, sec.; R. K. Cobb, treas.; preceding officers, Hyrum Hayball, H. Bullen, Jr., and W. M. Wantland, directors, at last accounts. Organized 1907, under laws of Nevada, capitalization \$500,000, shares \$1 par, assessable. Has levied 2 assessments, and paid a dividend of \$4,400, Dec., 1908.

Lands, 32 claims, surveyed for patent, in the Safford district, 1 mile from a railway, opened by a 600' tunnel, with about 1 mile of workings, developing a vein of 2 to 6' wide, carrying silver-lead ore at surface, changing to silver-copper ore at depth, assaying up to 204 oz. silver per ton. A little ore was shipped, 1907-08, returning about \$10,000, but work has been confined mainly to development. There are necessary mine buildings. Inactive.

ZETTA BLANCHARD MINE. NEVADA

Mine address: Contact, Elko Co., Nev. McArdle, et al., owners. Property shows a 16' vein of copper-bearing ore upon which considerable development work has been done with indications that the mine will make a profitable producer.

ZOMELAHUACAN, S. A.; CIA. MINERA DE. MEXICO

Mine office: Las Minas, Jalacingo, Vera Cruz, Mex. W. Vogel, manager at last accounts. Organized 1893, under laws of Mexico.

Lands include La Ascuncion de Maria y Anexas, El Alto and Espiritu Santo y Anexas mines, near the village of Las Minas, about 110 miles N. W. of Vera Cruz. The mines are remote from roads and railroads and receive supplies by pack animals. El Alto, the principal mine, has been a considerable producer in the past of copper and lead ores. Ore found at depth is chalcocopyrite, averaging 1.5 grams gold per metric ton to each unit of copper, and ore shipped after selection ranges 12 to 25% in copper tenor, nothing under 10% standing the heavy cost of shipment. The dumps con-

tain several thousand tons of low-grade material, averaging 3.5% copper and 2 to 6 grams gold per metric ton. Equipment includes water power and a 10-stamp mill, and the mine employed about 150 men, at last accounts.

ZONIA MINE.**ARIZONA**

Mine address: Zonia, via Kirkland, Yavapai Co., Ariz. Property, near Placeritas, was under development at various times by different companies, including the Zonia Copper Mining Co., which failed, and the Mines Development Co., which did a little churn drilling with disappointing results which led it to abandon the property.

ZUMA MINING & MILLING CO.**UTAH**

Office and mine: Eureka, Juab Co., Utah. Michael L. Garity, pres.; Rasmus Nelson, vice-pres.; P. J. Fennell, sec.; J. E. Driscoll, treas. Organized 1907, capitalization \$500,000, shares 50 cts. par.

Lands, 6 claims, 4 patented, in the vicinity of the Crown Point and Iron King mines, developed by a 200' shaft. Equipment includes steam and electric power, with an air compressor. Presumably idle.

PART II.

GEOGRAPHICAL INDEX.

A list of all North American copper mines and mining companies, including United States, Canada, Newfoundland and Mexico, arranged by states, districts and towns:

COPPER MINES OF FOREIGN COUNTRIES.

AALEN; SOCIÉTÉ ANONYME DES MINES

DE CUIVRE DU.

NORWAY

Office: care Theodore Verstraete, Gand, Belgium. Mine office: Engsvold, Aalen, Trondhjem, Norway. Nøerk Olsen, supt. and engr., at last accounts. Capitalization 200,000 kroner. Property includes the Størhogd grube, carrying cupriferous pyrite, at Aalen, and the Sjöla grube, at Klaebu. Production, about 287 metric tons cupriferous pyrite annually. Presumably idle.

AAMDAL MINE.

NORWAY

Owned by Bandak Elektrolytiske Kobbervaerk.

ABUNDANCIA MINA.

PORTO RICO

See same title Part I.

ACE MINE.

NEW SOUTH WALES

Idle. Mine near Beaconsfield, Kennedy Co., N. S. W., Australia. A. H. Dight, owner, at last accounts. Property shows outcrops of iron gossan estimated to carry 1 to 2.5% copper, traceable for about 1,000'. Underlying the gossan there is 3 to 6' of vein stuff, developed by a 231' main shaft, on the underlay, with levels opened at 170', 220' and 270', the vein at the bottom of the mine being only 18" wide, with a pay streak of 6 to 8", remainder of vein being cupriferous pyrite, estimated to carry 1.5% copper. There are oxide and carbonate ores and gray copper ore on the 170' level, with native copper and secondary sulphides on the 220' level, and chalcocite and chalcopyrite in the pay streak on the 270' level, good ores being estimated to carry an average of about 15 dwts. silver per ton, with a trace of gold. Management planned building a smelter when sufficient ore was developed.

ACHAICHES; SOCIÉTÉ ANONYME DES MINES

DE CUIVRES DE.

ALGERIA

In liquidation. Albert Warin, 24 Cité Trévise, Paris, France, liquidator. Formerly at Achaiches, near El Milia, Constantine, Algeria. Described Vol. X.

ACKERMANN, C. F.

PERU

Mine address: Islay, Camaná, Arequipa, Peru. Property is La Victoria mine, situated on the railroad line, near Mollendo, showing ore of 6 to 10% average copper tenor, with some gold values, in quartz gangue. Presumably idle.

ADAKAI MINE.

JAPAN

Idle. Mine office: Adakai-mura, Yatsuka-gori, Izumo, Japan. Country rocks are Tertiary shale and sandstone, alternating. Principal vein strikes

north-northeast. Ores are bornite, chalcopyrite and pyrrhotite, accompanied by native copper and sphalerite, with clay gouge. No returns secured.

AFRICAN & AUSTRALIAN CO., LTD.

ENGLAND

Secretary and office: A. H. Foster, 6 Great St. Helens, London, E. C., England. J. B. Palmer, chairman; E. A. Foster and E. Pope, directors. Organized April, 1902, as the third reconstruction of the West Australian Mining Co., Ltd., originally Victoria Copper Co. Capitalization £120,000, shares 2s. par; issued 201,718, fully paid. Company formerly held interests in copper mines.

AFRICAN ORE CONCENTRATION SYNDICATE, LTD. ENGLAND

Secretary and office: J. A. Stocker, 4 Broad St. Place, London, E. C., England. A. S. Elmore, T. J. Milner and C. Pakeman, directors. Organized June, 1905, capitalization £12,000, shares £1 par, issued and fully paid. Company has patents for the treatment and concentration of ores and has erected plants at the Transvaal Consolidated Land & Exploration Co. and Namaqua Copper Co.'s properties in South Africa.

AFRICAN OXIDE SYNDICATE.

ENGLAND

In liquidation. J. A. Stocker, 4 Broad St. Place, London, E. C., England, liquidator. Company organized, 1910, to treat copper and other ores by patented process.

AÏN-BARBAR; COMPAGNIE DES MINES D'.

ALGERIA

Office: 10 Rue Rochambeau, Paris, IXe, France. Mine office: Bône, Constantine, Algeria. A. Mérendet, pres.; M. A. DeBilly, administrateur-délégué; preceding officers, M. Baraige, Edmond Bure and Abel Jacquet, directors; Désiré Morda, gen. mgr., at last accounts. Company is a dividend payer.

The company's lands, 22 kilometers northwest of Bône, are on the coast, but there is no nearer harbor for steamers of more than 100 tons, though small vessels can land at a jetty, in favorable weather.

The mine, discovered 1864, and sold, 1874, to an English company, was developed extensively, but owing to the complex nature of the ore and the low price of copper, the company was unsuccessful. The mine was then returned to the Vieille Montaigne Co. and worked for zinc, afterward being taken in hand, 1890, by the present company. Property shows several veins carrying complex sulphides, mainly chalcopyrite, associated with considerable quantities of sphalerite, galena and pyrite. The Abaid orebody has a known length of 600 meters, and there also is another important orebody known as the Playfait. Mine has ore reserves developed for 3 to 4 years' production.

Equipment includes a 360-h. p. electric plant, at the mine, which is expensive in operation, owing to cost of transportation of fuel from Bône.

The mill, of about 100 metric tons daily capacity, includes a magnetic separation plant, which at last report had an annual production of 333 metric tons of copper concentrates and 367 metric tons of zinc concentrates. Company has experimented with various metallurgical processes for more satisfactory separation of the mixed sulphides, but property is on a profitable basis, notwithstanding the difficult nature of its ore. Company is said to plan reducing ores at a prospective smelter, to be built near Marseilles.

Production was 31,351 metric tons of raw ore, giving 7,545 metric tons of washed copper ore and 1,800 tons of washed mixed ore, yielding, after calcining and magnetic separation, 710 tons copper ore and 649 tons sphalerite, former estimated to contain 225,000 lbs. fine copper, for last year reported. For 1907 production included 82 metric tons of chalcopyrite concentrates and 7,705 metric tons of mixed copper, zinc and lead sulphides.

secured from a mine product of 33,058 metric tons, with copper production estimated at 250,000 lbs.

AKANUMADA MINE.

JAPAN

Mine office: Azu-mura, Naka-gori, Kii, Japan. Production, about 700,000 lbs. copper ore annually.

AKAYAMA MINE.

JAPAN

Mine office: Honjo-mura, Minami-Murayama-gori, Uzen, Japan. Production, last reported, was 9,915 lbs. fine copper, and 1,668,430 lbs. copper ore, 1907. Idle.

**AKTIEN-GESELLSCHAFT ZUR GEWINNUNG UND
AUFBEREITUNG VON KUPFERERZEN.**

GERMANY

Idle. Mine near Siebenbürgen, Brandenburg, Prussia, Germany. Jacob Klausner, Ephraim Fritz Klausner, A. Zwack, Alb. Bruck and Martin Kondor, directors. No report, 1913. Organized under laws of Germany, capitalization 80,000 marks, the directors taking the entire capital stock. Properties, in the vicinity of Siebenbürgen, are in the prospect stage.

AKUTOZAWA MINE.

JAPAN

Idle. Mine office: Yokokawame-mura, Waka-gori, Rikuchu, Japan. Property, in the district of Iwate, produced 91,869 lbs. fine copper in 1907.

ALDERSHOT SMELTER.

QUEENSLAND

Idle many years. Works office: Aldershot, Cook Co., Queensland, Australia. Was owned by Queensland Smelting Co., Ltd., but possession was taken, April, 1908, by debenture holders under a mortgage of £43,800. Lands, 1,168 acres, freehold. Smelter has lead and copper stacks.

ALEMTEJANA; COMPANHIA MINEIRA.

PORTUGAL

Office: 4 Praca Duque da Terceiro, Lisbon, Portugal. Mine office: Beja, Alemtejo, Portugal. Waldemar d'Orey, managing director. Property is a group of old mines in the San Domingos district, carrying 2 orebodies in schists, ore being mainly chalcopryrite, with a small quantity of carbonates. Mine, known as the Ruy Gomes, was worked by the Romans. Development includes 4 old shafts, of 20 to 30 meters depth, with 7 levels opened and about 90 meters of drifts. No recent returns secured.

ALEXANDER y CIA.

BOLIVIA

Office and mine: Coro Coro, La Paz, Bolivia. The firm was a small producer of native copper at last accounts.

ALGÉRIE; COMPAGNIE INDUSTRIELLE

ET MINIERE DES CUIVRES D'.

ALGERIA

Office: 35 Rue Joubert, Paris, France. Mine office: Ain-Sefra, Oran, Algeria. Baron de Bondeli, chairman. Organized Sept. 11, 1902, under laws of France, capitalization f 1,000,000, shares f 500 par. Owns the Hendjir mine, 3,800 hectares, 8 miles from Ain-Sefra, with cupriferous sandstone beds of several hundred feet thickness, that carry disseminations of gray copper ore, said to assay 2 to 2.5% copper. Mine is opened to depth of about 100 meters. Beds average too low in copper for profitable mining and company has had to rely on local enrichments of ore of payable grade. Idle, but deposit will be tested for tonnage now that ore can be profitably handled by froth flotation.

ALICAHUE; FUNDICIÓN DE.

CHILE

Owned by Ignacio Silva Ureba c Hijos, at La Legua, Aconcagua, Chile.

ALJUSTREL (PORTUGAL); SOCIÉTÉ ANONYME BELGE

DES MINES D'.

PORTUGAL

Office: 95 Avenue des Arts, Antwerp, Belgium. Mine office: Algarez, Aljustrel, Alemtejo, Portugal. Comte de Ramaix, chairman; Alfred Eyben, managing director; Libert Eyben, sec.; preceding officers, Fred. Jacobs and Francisco da Silveira Vianna, directors; Victorin Valpelière, gen. mgr.; F.

d'Oliveira, chemist-assayer. Organized April 1, 1898, under laws of Belgium, capitalization 7,200,000 francs, 500 francs par, fully paid. Debentures, 1,000,000 francs authorized, at 5%; issued, 277,000 francs. Dividends, to end 1910, were 81 francs, 75 centimes. Annual meeting, third Monday in April. Employs 1,600 men.

Lands, 5 claims, 3,500 hectares, carrying 6 veins of cupriferous pyrite, in schist, under development, estimated by company to average 1.85 to 2% copper, 0.6% lead and 0.2% zinc. Mine, opened by 6 shafts to depths ranging from 60 meters to 120 meters, has over 1,500,000 tons ore in sight, of which fully 250,000 tons is blocked out for stoping.

Equipment includes 7 hoists good for a depth of 800', 2 Flotmann air compressors with capacity for 40 drills, machine shop, smithy, carpenter shop and about 180 other buildings; and a narrow-gauge railway 12.6 miles long, known as the Ferrocarril Aljustrel, equipped with 8 locomotives and 300 cars, connecting with the government railway.

Production, 1912, was 3,637,530 lbs. fine copper and total copper produced by company to end of that year was nearly 40,000,000 lbs. Production, 1913, is estimated by company at about 4,000,000 lbs. fine copper, secured at a cost of about 10 cts. per pound.

ALLGEMEINE ELEKTRO-METALLURGISCHE GES. GERMANY

Works office: Papenburg a/d Ems, Hanover, Germany. Property is a small electrolytic refining plant, with capacity of about 500 lbs. of cathodes daily, treating nickel-copper anodes.

ALLONGORSSUAK MINE. GREENLAND

Owned by Grönlandsk Minedrifts Aktieselskab, at Juliänsaab, Greenland.

ALMA PROSPECTING SYNDICATE. TASMANIA

Mine office: Forth, Devon Co., Tasmania. Lands, about 10 miles from the seacoast, on the north shore of Tasmania, above Wilmot bridge and west of the Forth river, include the old Barrington or Alma mine, opened 1881, at which time about £1,000 was expended, the mine producing a little chalcopryite. The property shows slate and breccia of Cambrian age. Development is by tunnels of 60' and 281', the latter with 2 short crosscuts, showing a little native copper in jointing planes, but mainly chalcopryite with gangue of barite. There also is a 35' shaft. Was idle in 1912.

ALMANZORA; SOCIEDAD MINERA DE. SPAIN

Office and mine: Javier Sanz 4, Almería, Spain. D. Camilo Bilarge, agent, at last accounts. Property includes several small old copper mines, slightly developed, near Almería. Idle many years and presumably moribund.

ALMENDRAL; SOCIEDAD MINERA EL. CHILE

Office: Coquimbo, Chile. Mine office: San Felipe, Chile. Luis Amenábar, manager. Organized Jan. 5, 1906, under laws of Chile, capitalization 1,000,000 pesos, shares 50 pesos par. Property is a lixiviation plant, reported to treat 2% copper ore, securing 60% precipitate. Production, 1907, was 49,780 lbs. fine copper.

ALPHA COPPER MINING CO., N. L. NEW SOUTH WALES

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized 1907, capitalization £1,000, shares £1 par. No trace of mining operations, secured. Idle and presumably dead.

ALTAMIRA MINE. CHILE

Idle. Mine office: San Lorenzo, Combarbalá, Coquimbo, Chile. Jerónimo Tapia, owner and mgr. Mine, 18 leagues from a railroad station, with 20 pesos freight charges per metric ton, shows a vein of about 1 meter

average width, developed to depth of 260 meters. Was a small producer of copper.

ALTENS KOBBERGRUBER.

NORWAY

Idle. Office: care of Sulitelma Aktiebolag, Helsingborg, Sweden. Mine office: Kåfjord, Finnmarken, Tromsø, Norway. Lord-Lieutenant G. Tornerhjelm, chairman; Consul N. Persson, vice-chairman; C. Ingelsson, sec. Lands, 339 claims, also a 60-acre mill site and 2,000 acres miscellaneous lands. This is the northernmost copper mine in the world, lying near North Cape, in 70° north latitude. Post-silurian schists and slates have been penetrated by dioritic greenstone, showing about 75 orebodies in diorite and also as impregnations in dolomitic strata. The veins have a generally north-northwest strike, fissures in diorite dipping at about 30° and dolomitic layers at about 60°. About 20 strong veins and many small ones are under development, former ranging 1 to 3 meters in average width, and traceable 50 to 2,000 meters. The various veins average about 1.25% copper, ores occurring as chalcocite, bornite and chalcopyrite, disseminated in pyrite.

Development is by numerous tunnels, of which the Sture is 650 meters and the Jernmalm 415 meters in length, and by 6 shafts, deepest 100 meters. The mine has several miles of workings, exposing fully 600,000 tons of ore, with 100,000 tons blocked out for stoping. Mine, opened 1825 and closed 1878, was reopened, 1895, by present owner.

Equipment includes 120 hydraulic h. p., 100 electric h. p., 25 steam h. p., and 15 gasoline h. p. There are 4 small hoists, 2 Sullivan diamond drills and an electric light plant. Buildings include a machine shop of 220 square meters area, a 40-meter carpenter shop and 170 buildings of all classes, including dwellings.

The 100-ton concentrator, of 1,716 square meters area, has 2 Blake crushers, 4 Humboldt centrifugal crushers, 2 rolls, 11 jigs, 16 Långbörg vanners and 4 large and 8 small spitzkasten. The smelter has a 20-ton water-jacket blast furnace, smelting to a 20% matte, which, by a second fusion, is brought up to 60% copper tenor, and shipped to Helsingborg for refining.

The mine is 300 miles from a railroad, but only 300 ft. from the sea. The company owns a steamer and a gasoline launch. A school is maintained. Production, 1907, was 25,000 metric tons of ore yielding 1,050 tons of matte and 600 tons of 48% sulphur ore, producing 625,000 lbs. fine copper.

ALTVATER; GEWERKSCHAFT.

GERMANY

Idle. Mine office: Altwaltnau, Hirschberg-Grosselmerode, Hesse-Nassau, Germany. Herr Springorum and Herr Bellwinckel, executive committee; Carl Reichel, agent; Herr Müller, supt. Property has copper and lead ores, developed by 1 shaft.

ALVERDSKI MINE.

RUSSIA

Formerly owned by Compagnie Française des Mines de Cuivre d'Akhtala, at Alverdschi, Tiflis, Russia. Now dead.

AMALGAMATED PROPERTIES OF RHODESIA, LTD. RHODESIA

Office: 277 Salisbury House, London, E. C., England. Mine office: Lomagunda, Mashonaland, Rhodesia. G. R. Bonnard, chairman and managing director; preceding officer, A. Dickinson, A. Joll and T. H. Vernon, directors; G. T. Frost, sec.; Sidney C. Dyer, cons. engr. Organized May 8, 1909, under laws of Great Britain, capitalization £750,000, shares 5s. par, fully paid; increased March, 1911, to £1,500,000; issued, 3,909,954 shares. Company absorbed the Lomagunda Development Co., West Rhodesia Banket Co., Gold Fields of Matabeleland, Ltd., Rhodesia Matabeleland Development Co., Bulawayo Estate & Trust Co., Napier & Wier, Ltd.,

Gwanda Railway Syndicate, Ltd., Clark's, Consolidated, Ltd., Constance Rhodesia Development Co., Transvaal & Rhodesia Farms & Mines, Ltd., and also took over certain properties from the British & Colonial Investments, Ltd., Rhodesian Mining & Finance Co., C. Acton Dodds and other companies and individuals.

Lands are 1,244,380 acres and 2,518 mining claims in Rhodesia, 32,242 acres of land and 1,037 deep-level claims and an 87½% interest in 144 claims in the Transvaal, and various other interests. The property taken over from the Lomagunda Development Co. was 316 claims in the Lomagunda district of Mashonaland, including the United Kingdom claim on which limited development showed a promising body of copper ore.

AMALGAMATED VICTORY COPPER MINING

CO., LTD.

QUEENSLAND

Office: Townsville, Queensland, Australia. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. Company is capitalized at £15,000, shares 10s. par, paid in 9s. per share; issued, 14,755 shares.

Mine has a 5' vein developed by a shaft 312' deep, and had about 100' of openings on the 90' level Jan., 1912. The vein at this depth is narrow and of little value, the ore exposed being mostly iron.

ANDACOLLO; COMPAÑIA MINERA DE.

CHILE

Office: Santiago de Chile. Mine office: Andacollo, Coquimbo, Chile. Organized July 4, 1906, under laws of Chile, capitalization 1,125,000 pesos, shares 15 pesos par.

Lands include La Hermosa and Las Cuevas mines, area 29 hectares, also mineral lands at Tambillos. Mines are wet, showing considerable quantities of 5 to 6% sulphide ore, with ferruginous gangue. Property has extensive old dumps.

A leaching plant, built 1907, treats the mine water, which carries less than 100 grams of copper per cubic meter, and also is leaching old ore from the dumps, with sulphuric acid. Equipment includes a central electric power plant, with a 75-h. p. gas engine and producer gas plant.

ANDINA; SOCIEDAD BENEFICIADORA DE MINERALES.

PERU

Mine office: Chico, Yauli, Junín, Peru. Has argentiferous copper ores. Idle and apparently dead.

ANDREA; SOCIÉTÉ DES MINES DE CUIVRE.

SPAIN

Office: Brussels, Belgium. Mine office: Andrea, Badajoz, Spain. Organized Sept. 27, 1907, under laws of Belgium, capitalization f 1,000,000, in 10,000 shares of f 100 par, and 10,000 shares without assigned value. Lands include the Andrea, Esperanza and Neustra Señora del Carmen mines, in the district of Llorenña. Development work was in progress at last accounts.

ANGLO-CHILENA DE COLLAHUASI; COMPAÑIA.

CHILE

Office: Valparaíso, Chile. Mine office: Collahuasi, Calama, Antofagasta, Chile. Organized May 17, 1906, under laws of Chile, capitalization £200,000, shares £1 par. Property is the Mina Emilia, partially developed, having steam power. In 1913 was exporting 70 metric tons monthly of 20% copper ore.

ANGLO-GERMAN TERRITORIES, LTD.

CAPE PROVINCE

Office: 15 Eldon St. House, London, E. C., England. Organized 1907, capitalization £300,000, shares £1 par. Property consists of several concessions, that in Little Namaqualand having an area of about 1,300 square miles; the one in German South-West Africa of 2,000 square miles, 1,200 square miles being freehold and 800 square miles leasehold, possessing a frontage of 100 miles on the Orange river, this property being subject to a contract held by another company giving the right to select certain lands

in this area. The property in Little Namaqualand is 60 miles from Port Nolloth, with which it is connected by railroad.

The estate shows numerous indications of copper, gold, silver and galena, and is well timbered.

ANI MINE.

Owned by Furukawa Mining Co.

JAPAN

ANNIVERSARY COPPER MINES, LTD.

QUEENSLAND

Office: Townsville, Queensland, Australia. Mine office: Herberton, Cardwell Co., Queensland, Australia. J. M. Hollway, pres.; H. S. Muir, mine mgr. Organized April, 1909, under laws of Queensland, as successor of New Anniversary Copper Prospecting Syndicate, Ltd., capitalization £40,000, shares £1 par; fully issued, in £15,000 full-paid and £25,000 part-paid stock; paid in, 12s. per share. Of the fully paid shares, £12,500 went to vendors and £2,500 for flotation expenses. The New Anniversary paid, 1907, a small dividend.

Lands, 17 claims, leasehold, developed by tunnel and shafts, with shallow workings. The 391' tunnel, planned to be continued to the western boundary, shows a 3' vein of copper ore. The Engine shaft, to be connected with the tunnel, shows a 2' vein of 10% ore at bottom, and a drift therefrom shows a 30" vein giving average assays of 13% copper and 9 oz. silver per long ton. No. 2 shaft is 66' deep.

Transportation facilities have been bad, but the completion of the Atherton-Herberton railway permits ore to go to the Mount Molloy smelter, instead of, as formerly, to the Chillagoe smelter. Equipment includes steam power and an air compressor. Company idle and mine being worked by tributors, Feb., 1913.

ANSWER MINE.

QUEENSLAND

Mine office: Selwyn, Queensland, Australia. Rigby & Daniels, owners. The mine, 16 miles from Selwyn, is developed to a depth of about 100'. The lode, averaging 6' wide, runs northwest-southeast and has 75° dip. Ore, carrying chalcocite, is said to average 26 to 38% copper. Was under option to the Hampden Cloncurry Copper Mines, Ltd., early in 1913.

ANTIGUA GOLD-COPPER CO.

HONDURAS

Office: 612 Hibernia Bank Bldg., New Orleans, La. Mine office: Minas de Oro, Comayagua, Honduras. O. M. Dunn, pres.; Jas. L. Wright and Jos. Weckerling, vice-presidents; L. S. Scott, sec.-treas.; preceding officers, Sylvan Levy, Lionel L. Lyons and E. L. Chappuis, directors; D. H. Lawrence, mine mgr.; E. B. Thompson, mine supt. Organized March 26, 1907, under laws of Arizona, capitalization \$2,000,000, shares \$5 par. Annual meeting, first Tuesday in September.

Lands, 531 acres, near the Honduras Rosario mine, 100 miles south-east of Puerto Cortez, carrying considerable timber in both hard and soft woods. Mine shows antigua workings, with about 3,500' of new openings, developing copper ores, giving assays of 2 to 3% copper, 2 to 4 oz. silver and \$2 to \$4 gold per ton, in limestone. Improvements include 4 buildings and a 48x80' frame stamp mill, of 30 tons estimated daily capacity, having 5 Allis-Chalmers stamps and 3 Huntington mills. No recent returns secured.

APPEALINNA MINE.

SOUTH AUSTRALIA

Mine office: Appealinna, Taunton Co., South Australia. J. Pyman, mgr., at last accounts. The mine, situated about 40 miles northeast of Hawker and 9 miles east of Wilpena Head Station, is developed by 3 shafts, deepest 175', all shafts being connected on the 50' level. The formation is a brecciated and conglomeritic limestone carrying copper glance, copper pyrites and native copper associated with iron oxides, calcspar and car-

bonate of lime. The ore, mainly chalcopyrite, occurs in veins and pockets, veins being 4 to 8" wide, cutting through the formation in all directions, and carrying values ranging from 23.8 to 58.5% copper. Discovered more than 50 years ago, and worked with slight interruptions since 1896, the mine now is idle for want of working capital.

APPLE TREE COPPER CO., N. L.

QUEENSLAND

Probably idle. Office: 371 Queen St., Brisbane, Queensland, Australia. Wm. Hasley, sec. Organized 1906, under laws of Queensland, capitalization £1,200, shares £6 par. Lands, 4 leases, area 45 acres, 1½ miles from Mount Cannindah, Bowen county, Queensland, having old workings consisting mainly of a 20' trench 500' long, showing a 6' vein with pay streaks of 2 to 4' width carrying 10 to 47% copper and up to 5 oz. silver and 3½ dwts. gold per long ton. Mine is said to show about 2,000 tons of ore.

APRILE; SOCIETÀ ANONIMA PER LE MINIERE.

ITALY

Idle. Mine office: Santa Lucia del Mela, Italy. Salvatore Aprile, mgr., at last accounts. Property shows chalcopyrite and cupriferos pyrrhotite, latter giving average assays of 1.83% copper, 26.66% sulphur and 120 grams silver per metric ton, the chalcopyrite giving average assays of 9.96% copper and 7 grams gold per metric ton. Property was under development, 1908.

APSLEY MINE.

NEW SOUTH WALES

Mine office: Perth, Bathurst Co., N. S. W., Australia. Francis Drake, mgr., at last accounts. Mine, 5 miles from Perth, has been worked intermittently, under different owners, since about 1875, and production, 1876, was 20 tons fine copper. Mine was reopened 1907 by a syndicate, but operations were suspended shortly and option was then taken by Mr. Drake. The ore occurs as impregnations in schists, without defined walls, but the payable ore usually ranges 3 to 5' in width. Development is by a 240' shaft. On the 180' level, for a length of 45' and width of 5', the ore was chalcopyrite and sphalerite, associated with pyrite, assaying 7.13% copper, and for 53' on the 240' level, with an average width of 7' 6", the ore averaged 7.92% copper. Ore carries up to 3 oz. silver per long ton, with a trace of gold. Property considered promising.

ARAGON COPPER MINES, LTD.

SPAIN

Idle several years for lack of funds. Office: 12 Lime St., London, E. C., England. Mine office: Tobed, Zaragoza, Spain. Baron Gaston de Fontenillat, chairman; Aimé Bonna, vice-chairman; preceding officers and J. D. O'Brien, directors; A. Lewis Lanseigne, sec.-treas. Organized Oct. 29, 1903, under laws of Great Britain, as Rio Grio District Copper Co. (Tobed & Codos Exploration), Ltd., with capitalization £100,000, shares £5 par, increased, May, 1904, to £130,000, shares £1 par; issued £120,621 and name changed, Jan., 1907, to present title. Lands, 14 claims, reported by company to be of 1,100 acres area, bought for £96,000 in full paid shares. Ore is claimed to average about 7% copper.

ARAKAWA MINE.

JAPAN

Owned by Mitsui Bishi Goshi-Kwaisha.

ARAMAYO FRANCKE MINES, LTD.

BOLIVIA

Office: 148½ Fenchurch St., London, E. C., England. Mine office: Tupiza, Potosi, Bolivia. F. A. Aramayo, chairman; L. A. Kensington, sec.; preceding officers, J. D. Campbell, B. Dale, I. Gutierrez-Ponce and V. M. Michaelis-Braun, directors; M. Roberts, mgr. Organized Oct. 17, 1906, as Aramayo Francke & Co., Ltd., capitalization £500,000 in £10 shares, increased, Aug., 1909, to £600,000 in shares of £1 each; issued, 596,590 shares. Debentures, £60,000, 6% bonds, created March, 1909, are redeemable at 105, by annual drawings of £10,000, repayable July 1. Name of company

changed to present title, Jan., 1911. Fiscal year ends May 31. Dividends paid per share: 6d. in 1909; 1s. 6d. in 1910; 2s. in 1911; 3s. in 1912.

Property includes the Aramayo Francke & Co. mines and metallurgical works in North and South Chichas provinces, the Santa Barbara and Santa Elena concentration works and 817 hectares on Chorolque mountain; the Cotani mines, Quechisla smelter, the Tasna tin mines, area 1,460 hectares, and concentrator and smelter at Buen Retiro; the Chocaya tin and silver mines, area 32 hectares, and various other lands and mining rights.

Production of copper was begun, Sept., 1912, and in 1913 was in neighborhood of 40 tons monthly.

ARAMO COPPER MINES, LTD.

SPAIN

Office: 2 Metal Exchange Bldg., London, E. C., England. Mine office: Pola de Lena, Asturias, Spain. A. van Strallen, Z. Merton, E. R. Merton, H. Gardner and L. Corvilain, directors; C. W. Aston Key, sec. Organized July 3, 1897, under laws of Great Britain, capitalization £40,000, shares £10 par. Property is the Aramo copper and cobalt mines, bought for £20,000 in full-paid shares. No accounts are made public. Idle some years owing to litigation now terminated in company's favor. Planned to resume operations some time during 1913.

ARDTULLY COPPER MINES, LTD.

IRELAND

Secretary and office: E. O'M. Leahy, 4 Stephens Green, Dublin, Ireland. Mine mgr., J. Heckie, Clontoo, Kilgarvan Co., Ireland. P. W. Shaw, J. Nelson, W. L. Joint, M. Anderson and H. Walker, directors. Organized June 3, 1911, capitalization £15,000, shares 5s. par; issued, 53,799 shares.

Property is a leasehold for 99 years on the old Ardtully mines, area 14 acres, and the mining rights to 265 acres adjoining, the latter being subject to an agreement calling for the payment of £20 for each shaft sunk and worked above 6, and the whole property being subject to an annual rental of £200, and a royalty of 5%.

The Ardtully mines have undergone considerable development in past years, and ores shipped to Swansea for smelting yielded 15% copper and 15 oz. silver per ton.

AREACHAP COPPER MINES, LTD.

CAPE PROVINCE

Office: 2 Transvaal Bank Bldgs., Fox St., Johannesburg, Transvaal. Wm. Edwin Bleloch, chairman; preceding officer, Frank E. Rivas, Francis Oats, N. Langkilde and J. A. Thorburn, directors; J. S. Richardson, sec.; J. M. Calderwood, cons. engr.; Wm. Fletcher, mgr.; J. Jones, smelter supt. Organized Nov. 10, 1908, under laws of Transvaal, capitalization £30,000, shares £1 par. Annual meeting, second Thursday in August.

Property was a leasehold on 45,000 acres, 16 miles from Upington, Gordovia, Cape Province, abandoned, 1910, after nearly £30,000 had been spent in development work. Option surrendered and company idle, May, 1913. Described Vol. X.

ARGHANA MAADEN MINES.

TURKEY

Office: care Imperial Minister of Forests & Mines, Constantinople, Turkey. Mine office: Arghana Maaden, Diarbekir, Turkey. Property is owned and operated by the Turkish crown.

ARIÈGE, LTD.; SOCIÉTÉ MINÈRE DE L'.

FRANCE

Presumably idle. Office: 3 London Wall Bldgs., London, E. C., England. Mine office: St. Girons, Ariège, France. Albert Simon and Thos. Turketine, directors; J. Edsall Davis, sec. Organized March 8, 1901, under laws of Great Britain, capitalization £10,000, increased, 1905, to £15,000, shares £10 par; issued, £13,000. Debentures, £1,110, at 6%. Lands include

mining properties in the communes of Riverenert, Esplas, Rimont and Castlenau-Durban, in the arrondissement of St. Girons.

ARMONIA; COMPAÑIA LA MINA.

CHILE

Mine office: Carrizal Alto, Atacama, Chile. Property is an old mine, opened to depth of 414 meters, which has been a considerable producer in the past, but production has been small for some years past.

ASHIO MINES.

JAPAN

Owned by Furukawa Mining Co. and described under that name.

ASTROLABE MINING SYNDICATE.

PAPUA

Mine office: Port Moresby, Papua, British New Guinea. Lands, 150 acres, near Sapphire creek, 16 miles from Port Moresby, main tract of 120 acres being a reward claim for discovery. The main tract has a 50' shaft, said to show a 6' vein carrying cupriferous and arsenical pyrite, giving assays of 3% copper, with traces of gold and silver, but the surface ores, in alluvium, are mainly malachite, giving returns, 1906, from shipment of 17 tons, of 26.8 to 32% copper, with traces of gold. Apparently this ore was secured from detrital material, deposited by the Laloki river. A 30-acre tract lying 1 mile east of the main workings shows a gossan carrying green carbonate stains assaying 3 to 4% copper, and a short tunnel shows a little malachite and cuprite.

A government report, 1913, states that the sulphide ores below the enrichment zone are highly basic and though low-grade in copper can be cheaply smelted with a saving of the small gold and silver contents for electrolytic separation. The report states that prospects are encouraging and should induce further developing.

ATACAMA; SOCIEDAD INDUSTRIAL DE.

CHILE

Office: Copiapó, Atacama, Chile. Works office: Tierra Amarilla, Chile. Mine office: Almolanos, Chile. Company is controlled by the British house of Edwards & Co.

Properties include the Descubridora, San Pedro, Rincon and Lautaro mines.

The Mina Descubridora, at Puquios, opened to depth of 700' by deepest shaft, has veins with lenticular orebodies, along limestone contacts. Ores carry chalcopryrite, associated with much pyrite. Equipment includes a steam plant with Stirling water-tube toilers, and electric power. The mine employs about 80 men. Production, 1908-09, was about 120 metric tons monthly of 15% copper ore.

The Mina Lautaro, in the San Antonio district, carries large quantities of chalcopryrite ore of 5 to 7% tenor, with limey gangue, in a porphyry dike.

The San Pedro mine has a fissure vein, opened by a 165' shaft, having an electric hoist. The Mina Rincón, opened to length of about 1,300', has a steam hoist. Company also owns mines at El Morado, Copiapó, but costs of about \$15 per metric ton for ore forbid any great production.

The concentrator, at Lautaro, built 1904, has a large hydro-electric installation, utilizing the power of a nearby river.

The company has two smelters, known as the Tierra Amarilla and Caldera, on the line of the Copiapó & Interior railway, which do a general custom business, and treat silver-lead ores, as well as copper.

The Tierra Amarilla smelter has 6 reverberatory furnaces, two 3-deck calcining furnaces, 2 reverberatory furnaces for Chile bars, and two 54x54" blast furnaces. Power plant includes four 110-h. p. boilers and 3 small electric motors. Fuel is imported coal and coke, latter used in charges of 1 ton to 6 tons of ore. Product, when working, is argentiferous and auriferous Chile bars and matte. The Tierra Amarilla smelter is idle, as the mines cannot feed both smelters.

The Caldera smelter, of about 200 metric tons daily capacity, is modern, having a 20-ton reverberatory furnace and two 100-ton 40x120" blast furnaces, in parallel. Sea water was used for the water jackets, but was found to corrode and destroy them. Coke charges of 13% are employed. There are 2 Connersville blowers, actuated by a 65-h. p. 240-volt Bullock electric motor. Slag is hauled by mules and dumped into the sea. Management installed sintering pots, 1912. The converter department has 2 stands and 8 Allis-Chalmers shells, 72x100" in size. The smelter has a Dodge crusher with 35-h. p. motor, for linings, and a Maison Beer briquetting press with a 30-h. p. motor, of 30 metric tons capacity hourly. Production is matte, containing about 130 grams silver and 9 grams gold per metric ton, shipped to New York for electrolytic refining, as converter department has been idle since 1907. The power plant includes a producer gas plant of 600-h. p. capacity, with a 266-h. p. 2-cylinder gas engine, and 240-volt 833-ampere Bullock electric generator. Equipment includes an electric motor, and hydraulic and electric accumulators.

Production was 2,166,235 lbs. copper in 1908, and 2,272,465 lbs. copper in 1909. No recent returns secured.

ATBASAR COPPER FIELDS, LTD.

SIBERIA

Was absorbed, 1913, by the Spassky Copper Mine, Ltd., shareholders receiving 1 Spassky share for every 2 Atbasar shares held. (See "Spassky," described elsewhere in this volume.)

ATE MINE.

JAPAN

Mine near Komatsu, Kaga, Japan. Saichi Moriyama, owner. The mine has 2 main veins, in liparite and brecciated tuff, 1 being a fissure, the other called a contact vein. Where these veins cross, rich ore occurs, but a little distance from the intersection the veins thin out and the ore is poor. Ore carries chalcopyrite, associated with pyrite, bornite and tenorite, and averages about 10% copper in the upper portions, but carries no silver or gold.

Equipment includes a 350-h. p. steam installation and mine employed an average of 160 persons, 1908. Recent production has been as follows: 231,484 lbs. fine copper in 1900; 194,305 lbs. in 1907; 134,087 lbs. in 1908. Recent production withheld.

ATLANTA MINE.

QUEENSLAND

Flanagan Bros., owners. Mine in the Herberton gold and mineral field, Queensland, Australia. Developed by 90' shaft with level at 40'. Shipped 40 tons of copper ore to Chillagoe, 1912.

ATTUNGA COPPER MINING SYN.

NEW SOUTH WALES

Office and mine: Attunga, Inglis Co., N. S. W., Australia. R. G. Gibbons, sec.; W. H. Edwards, mgr. Organized 1902, as a private syndicate, capitalization £12,000, shares £1 par; issued, £11,500.

Lands, 5 claims, area 75 acres, and a 20-acre smelter site, 9 miles east of Attunga, in the Tamworth division of the Peel and Uralla district. Property shows contact deposits between limestone and granite, in a garnetiferous formation 5 to 60' wide. One orebody, under development, of 16' estimated average width, traceable 1,200', is opened by pits and shafts of 20', 20', 35', 38', 280' and 302', and by 7 tunnels, 2 longest 310' and 910', workings being estimated to show 30,000 tons of ore, with 13,000 long tons blocked out for stoping. Mine has 6 levels opened. Ore, oxidized and carrying carbonates to depth of about 750', ranges 1 to 21% in copper; sulphides in bottom of mine show nodules of bornite and run 1.5 to 11.9% copper, average of ore being estimated by management at about 6% copper, 7 oz. silver and 10 dwts. gold per long ton. Mine has steam power and several buildings.

ATVIDABERGS KOPPARVERK; AKTIEBOLAGET. SWEDEN

Office, mine and works: Atvidaberg, Ostergothland, Sweden. Baron Theodor Adelswärd, pres. and gen. mgr.; Axel Nygren, supt.; C. A. Rudehus, smelter supt. Organized 1900, under laws of Sweden, capitalization 900,000 kroner, shares 1,000 kroner par, fully paid.

Lands include the Atvidaberg and Bersbo mines, developed by 8 shafts, of 90 to 410 meters depth, latter being the deepest in Sweden, with about 4,000' of workings. Development has proven large quantities of chalcopyrite and sphalerite, in quartzose gangue, with increasing zinc and decreasing copper at depth. Ores are difficult of reduction, requiring special treatment.

Equipment includes a hydro-electric power plant operating the mine and works. The former smelter, at Bersbo, 9 kilometers from the mine, with rail connections, burned 1905, was described Vol. VIII. The new smelter is at Atvidaberg. Mine has been developing, without production, since 1902, when production was 163,270 lbs. fine copper.

AURELIA MINE.**CHILE**

Office and mine: Chuquicamata, Calama, Antofagasta, Chile. Employs 40 men and produces about 100 metric tons of 13% copper ore, monthly.

AVEYRON; SOCIÉTÉ DES MINES MÉTALLIQUES DE L' FRANCE

Idle. Office: 16 Rue du Colysée, Paris, France. Mine office: Saucières, Millau, Aveyron, France. M. Mougin, pres. Property is lands carrying copper, silver-lead and zinc ores, in the communes of Saucières and Saint Jeandu-Bruel, department of Aveyron.

AYACUCHO COPPER SYNDICATE, LTD.**VENEZUELA**

Office: 7 St. Helen's Place, London, E. C., England. T. N. A. Grove, J. P., R. A. Hoblyn, J. L. Major and H. A. Brundell, directors. E. G. Brunker, sec. Organized Sept. 26, 1912, under laws of Great Britain, capitalization £1,500, shares £1 par; 15s. paid in, to acquire mining properties in Venezuela.

AZALIA; NICOLÁS.**PERU**

Office and mine: Morococha, Junín, Peru. Lands, 2 pertenencias, known as the Alicia and Dante mines, former yielding ore of about 10%, and latter about 12% in copper tenor. Production, 38,360 lbs. fine copper and 55 kgs. silver annually at last accounts.

BACKUS & JOHNSTON CO.**PERU**

Office: Desamparados Station Bldg., Lima, Perú. Works office: Casapalca, Oroya, Junín, Peru. A. J. Bennett, pres.; R. R. Storrek, sec-treas.; preceding officers, M. J. de Witt, directors. H. W. Ross, supt.; J. Irving and A. Howie, mine supts.; H. Ross, smelter supt.; B. A. Simpson, purch. agt.; N. M. Zopf, assayer. Organized July 31, 1896, under laws of New Jersey, as successor of Backus & Johnston, who began business 1889. Capitalization \$800,000, shares \$10 par, fully paid; bonds, \$500,000, issued, \$375,000, bearing 8% interest. Annual meeting in January.

Company owns or controls large groups of copper-silver mines in Morococha about 21 miles by rail from Casapalca. The best of these mines is the Natividad, owned jointly with the Morococha Mining Co. Company also owns the Victoria, Alapampa and Churruca mines in Casapalca.

The Natividad mine is opened to the 5th level, developing a vein about 4' wide carrying ore averaging about 14% copper and 14 to 70 oz. silver per ton. The mine water caused much trouble in 1912, now obviated by lead-lined pipes and bronze pumps. Production, 1912-13, was 1,500 to 2,000 tons monthly carrying 8 to 16% copper and 10 oz. silver.

The Casapalca mines develop a lode for nearly $1\frac{1}{2}$ miles by tunnels with backs of 2,600'. The ores average 2% copper and 30 oz. in silver.

The Casapalca smelter at Casapalca, on the Oroya railroad, 92 miles from Lima, at an altitude of 13,600', does a general custom business as well as treating company ores. In 1912, the smelter treated 85,733 tons of copper-silver ore. The concentration mill, recently remodeled, handles 300 tons daily and is equipped with 2 Krupp ball mills, 2 Hancock jigs and 6 Overstrom and Ferrari tables. The smelter, rebuilt in 1913, now has a capacity of 15,000 tons monthly, a new 52x160" blast furnace, 2 new basic lined convertors and a new stack, being added to the plant.

The hydro-electric plant has been enlarged to 4,200 h. p. and will deliver 3,000 h. p. at smelter. Works employ about 800 men and produce a high-grade silver-copper matte assaying about 50% copper and 280 oz. in silver, which is shipped to the American Smelting & Refining Co., Perth Amboy, New Jersey.

Production of company in 1912 was \$9,970,000 lbs. fine copper, 2,439,000 oz. silver, with an estimated production for 1913 of 12,000,000 lbs. copper and 3,000,000 oz. silver.

The death of Mr. Johnston in 1913 has deprived the company of its energetic and capable head.

BADAJOZ COPPER MINES, LTD.

SPAIN

Dissolved Feb. 25, 1911. Formerly at Pueblada, Badajoz, Spain. See Vol. X.

BAILEY'S COPPER, LTD.

TRANSVAAL

Idle. Office: Transvaal Bank Bldg., Johannesburg, Transvaal. Mine office, Section C., Barberton, Middelburg, Transvaal. B. de R. Malraison, chairman; L. K. Jacobs, sec. Organized May, 1907, under laws of Transvaal, capitalization £15,000, shares £1 par. Lands, 96 base metal claims, in the De Kaap valley, near the Barberton Copper Syndicate, on which work was begun July, 1907. Property has a 5' vein, traceable a quarter mile, opened by 2 shafts, "A" shaft being 85' deep.

BAILOR; SOC. ANONYME MINES DE CUIVRE DE.

HUNGARY

Office: 70 Rue de Namur, Brussels, Belgium. Baron d'Inkey de Pallin, director. Organized Feb. 14, 1907, under laws of Belgium, capitalization f2,000,000, shares f100 par. Property is in Hungary. Presumably idle, as no reply is received to letters sent above address.

BALADE MINE.

NEW CALEDONIA

Idle. Mine office: Ouegoa, Arama, New Caledonia. See Vol. X.

BALDWIN MINE.

PAPUA

C. R. Baldwin, owner, Port Moresby, Papua, British New Guinea. Property a group of claims adjoining the Astrolabe, 17 miles from Port Moresby, showing a vein of fair-grade copper ore.

BALFOUR BLOCKS COPPER MINES, N. L.

TASMANIA

Defunct. See Vol. X. Property, 2 sections, 80 acres, west of main fracture line of field. Shows dense, silicified slate changing to chlorite schist. Unpromising ground.

BALFOUR CONSOLIDATED COPPER MINES, N. L.

TASMANIA

Mine office: Mount Balfour, Russell Co., Tasmania. Lands, near the Frankland river, are 5 blocks, leasehold, being 2 adjoining blocks to the south, and 3 separate blocks to the north, shortly north of the Balfour Blocks Copper Mines, N. L. Transportation facilities are poor. Company owns a number of leases with an 8' vein of silicious ore carrying pyrite with chalcopyrite changing to covellite in a sericite gangue. "Property a prospect whose northern section is promising." (Gov't report.) Letter to mine returned marked "Left district."

BALFOUR PROSPECTING ASSOCIATION.**TASMANIA**

Idle. Office: 352 Collins St., Melbourne, Australia. Mine office: Balfour, Russell Co., Tasmania. Hal Sheppard, chairman; preceding officer, Max Gorler and J. A. Graham, directors; H. M. Fielder, local mgr.; C. McKie, supt. Capitalization £500, shares £10 par.

Lands, two 40-acre leases, formerly known as Chester's mine, on the western slope of Mount Balfour, about 3 miles southwest of Murray's Reward claim; 160 acres in the Norfolk range, 11 miles south of Murray's Reward, and 80 acres one-half mile eastward of latter group. The 160-acre tract, developed by tunnel, has a schistose ore channel of 145' reported width, showing streaks and bands, from a few inches to 4' in width, carrying bornite and chalcopyrite, assaying up to 20% copper. This property also shows a 25' quartz outcrop.

BALHANNAH COPPER MINING CO., LTD.**SOUTH AUSTRALIA**

Mine at Onkaparinga, Adelaide Co., S. A. Operated, 1867-76, as Balhannah Copper Co., succeeded by Balhannah Copper & Gold Mine Co. and produced about £25,000 worth of copper and £7,000 worth of bismuth, with gold, silver, antimony and graphite in small amounts. J. A. Sands, Esq., Royal Exchange, Adelaide, gave an option, March, 1913, for £60,000, with working capital of £20,000. Property described in government report, March, 1898. See Vol. X.

BALKAN COPPER CORPORATION, LTD.**TURKEY**

Affairs wound up. Company defunct. See Vol. X.

BANDAK ELEKTROLYTISKE KOBBERVAERK.**NORWAY**

Address: Aamdal, Skafsåsogn, Bratsberg, Norway. Admiral Borresen, managing director. Engineer Hybinette, director and supt. Organized under laws of Norway, 1912, capitalization 500,000 kroner. Half of the capital has been allotted to the managing director and the engineer who is the inventor of the electrolytic system to be employed, as an equivalent for the right to work the Aamdal mines.

The Aamdal is an old mine, reopened A. D. 1900, which was a considerable producer for nearly three centuries. The veins formerly worked were narrow but rich, and the mine shows considerable low-grade ore. Diamond drill borings, 1907, are said to have given good cores at depth of 1,400'. The principal ore is low-grade chalcopyrite and bornite, averaging about 2.5% copper, with a gangue of mica-schist and quartz.

The old mill, destroyed 1907, was replaced by a new mill, in 3 parts, having a crusher-house, 75-ton Ferrari ball mill and an Elmore vacuum oil concentration unit. Production was 240 long tons fine copper, under former ownership, in 1895, and 7,000 metric tons of ore, estimated to have yielded 375,000 lbs. copper in 1909.

BARAGUNDA MINES.**INDIA**

Mines office: Baragunda, Hāzaribagh, Bengal, India. Were operated, 1887 to 1891, turning out about 1,000 tons of copper in 5 years. Ore occurs as chalcopyrite, running only 1 to 3% copper, in a gangue of micaceous schist. All ore treated was carted 24 miles to the smelter at Giridhi. These are perhaps the most promising copper properties now known in India, despite the low grade of the ore and might be worked successfully if given rail facilities, adequate capital and good management.

BARANA COPPER SYNDICATE, LTD.**RUSSIA**

Office: 111-113 Queen Victoria St., London, E. C., England. Organized Oct. 24, 1912, to adopt an agreement with A. H. Foster and the Dominion Share & Debenture Corporation, Ltd., to acquire mining property in Russia. Capitalization £15,250; 15,000 preference shares, £1 each and 5,000 ordinary shares, 1s. each. Preference shares are entitled to a fixed cumula-

tive preferential dividend of 6% per annum and one-third of surplus profits, the ordinary shares taking the remainder.

BARAZARTE; SUCESION DE.

CHILE

Presumably idle. Mine office: Paposo, Taltal, Antofagasta, Chile. Property includes the Reventon mine, 400' deep, and the Abundancia mine, 380' deep, both opened in 1830, also La Unión mine. Has steam power.

BARBERTON COPPER CO., LTD.

TRANSVAAL

Letters unclaimed at Trust Bldgs., Fox St., Johannesburg, Transvaal. Mine office: Barberton, Middelburg, Transvaal. T. F. Allen, chairman. Organized July 25, 1907, under laws of Transvaal, as successor of Barberton Copper Syndicate, Ltd. Lands, 144 claims, near Noord Kaap. The manager stated, some years ago, that he was opening the biggest mining and smelting proposition in South Africa, which was a very ambitious statement, in view of the small amount of work done. Idle, but Bailey's Copper, Ltd., is operating section "C" at Barberton.

BARBERTON EXPL. & DEV. CO., LTD.

TRANSVAAL

Registered May 23, 1906. Property in Middleburg district, Transvaal. Went into voluntary liquidation Aug. 4, 1911. P. C. Bird, 18 Eldon St., London, E. C., England, receiver.

BARRY COPPER PROSPECTING SYNDICATE.

QUEENSLAND

Office: Mt. Garnet, Queensland, Aus. Organized Feb., 1913, capitalization £510, shares £5 par. Provisional directors: Dr. H. F. Perkins, R. J. Hood, T. J. Kerr and N. B. Bowden. A. M. Waddell, sec., Mt. Garnet. Company plans spending £300 in proving property.

Mines were opened A. D. 1600, and have been operated with more or less vigor for 3 centuries. Lands, in the Armenian Tauros, between Diarbekir and Kharpüt, include 6 different properties, of which only 3 have been worked latterly, 2 by the government and 1, to a small extent, by private parties. An excellent water power near the property is available from the western branch of the Tigris river. At the beginning of the century these mines were producing about 1,500 tons fine copper yearly, exported mainly to England, via Alexandria. Development is principally by tunnels. The mine water is strongly impregnated with copper and should be leached.

Selected ore, averaging about 12% copper, is smelted, with charcoal, to a matte of 60% copper tenor, fuel being scarce and expensive. The government has planned a new smelter, 1¼ miles from the mines, the ministry prescribing that the plant must be of the latest type, and reserving first call on 400 tons of copper at current market prices, net profit to be divided between the government and operators, in case the property is taken over by a private company. A 60-year concession on this property was given, 1910, to a Turkish company.

Production is about 3,000,000 lbs, fine copper yearly, part of which is taken by the Turkish government at a fixed valuation. The copper is shipped by camel to Tokat. The workmen are paid in food, clothing and tobacco, and mining and smelting processes are archaic in all respects. The property, under modern methods, and with good equipment, is capable of materially enlarged production.

BASILIO CACERES.

CHILE

Mine office: Pueblo Hundido, Antofagasta, Chile. Property is El Manto Tres Gracias mine, formerly a considerable producer, and employing 100 men, 1903, but of late years making a small production only, secured by a selection of rich ores from old dumps. The mine, now idle, shows large bodies of low to medium grade ore, and might become an

important producer if given adequate transportation facilities. Equipment includes a steam plant.

BATES; JOHN.

BOLIVIA

Office and mine: Coro Coro, La Paz, Bolivia. Property is the Santo Tomás mine, carrying native copper in conglomerate. Equipment includes steam power, and the property was a small producer of barilla copper at last accounts.

BAUSCH y TIANI; SOCIEDAD MINERA.

y FUNDICIÓN DE.

ARGENTINA

Office, mine and works: Chilecito, Rioja, Argentina. Property includes the Compañía and Mercedes mines. Has steam and water power and a smelter, known as the San Miguel, built 1876, for lead ores, at a cost of \$120,000, and altered, 1893, to treat copper ores of the Mexican district.

BEAUPARC COPPER MINES (1909), LTD.

IRELAND

Office: 36 College Green, Dublin, Ireland. Mine at Beuparc, County Meath, Ireland. Walter Hume, chairman; David Frame, managing director; R. Stokes and H. Grandy, directors; Stokes Bros. & Pim, secretaries. Organized in Dublin, Dec., 1909, capitalization £30,000, shares £1 par; issued 25,000, fully paid. Is a reconstruction of the Beuparc Copper Mines Co., Ltd. (See Vol. X.) Company owns copper mines at Beuparc and Dollardstown, County Meath, Ireland, with a lease of mining rights of 2,000 acres of the Lord Athlumney's estate.

Development at Beuparc by 240 shaft with levels at 80', 100', 140', 200' and 240', sunk on a vein 19½' wide. A concentrating mill was built, 1911, yielding 285 tons concentrate, sold for £2,109 to the Swansea smelter. Ore reserves estimated, July, 1912, at 16,785 tons. The Dollardstown property is idle.

Mine development for 1911-12 cost £12,516 and equipment £6,775.

BECHUANALAND COPPER CO., LTD.

RHODESIA

Office: Salisbury House, London, E. C., England. Operating office: Bulawayo, Rhodesia. Mine office: Bushman Mine, Francistown, Rhodesia. Cromwell Hockley, chairman; preceding officer, Thos. Joyce Seel and Geo. Wm. Staunton, directors; T. Donald, sec.; B. F. McDowell, mine mgr. Organized May 18, 1909, under laws of Great Britain, capitalization £135,000, shares 10s. par; issued, 150,488 shares. Shares are listed on the London Stock Exchange. Annual meeting, second Thursday in September.

Property promoted, 1909, by vendor, Bechuanaland Exploration Co., Ltd.; 120,000 shares offered public. L. Hirsch underwrote 100,000 shares for 5% commission and a 2-year option on 50,000 shares at par. Annual report to May 31, 1912, showed cash £13,805, debts £2,342 and credits £54.

Property, bought for £15,000 in fully paid shares and £10,000 cash, is held under license from the British South African Co., and is subject to a 50% royalty to that company as soon as profits are earned. Lands, 240 claims, including 180 copper claims, 120 miles south of Bulawayo, these being the Bushman group of 60 claims and the San Toy, Nondu, Kelly-Kenny and Outlaw groups of 30 claims each, with 60 claims adjoining the Bushman group that were pegged out (located). Company has right to locate 30 additional claims. These properties show ancient workings and have 3 lenticular fissure veins carrying chalcocite, along contact between dolomite and pegmatite dikes.

Development is on the Bushman group, which has shafts of 205', No. 2; 300', No. 5; 200', 176' and 203' with 9,585' of workings up to March, 1913. New development for year ending May 31, 1913, 2,458' at a cost of £4 7s. per foot. This includes 175' winze work, 317' shaft sinking and 1,966' drifting and crosscutting. Mine is developed to 300' level, the first level show-

ing 4 ore shoots with aggregate length of 608' and average width of $3\frac{1}{2}$ ', carrying 5 to 17% copper. On 2nd level there are 7 ore shoots developed, whose total length is 597', average width 50" and contents 9 to 23% copper. Third level shows orebodies irregular.

Equipment includes a 20-h. p. steam plant, with 3 small hoists and 6 buildings. Company plans development in depth by winze and erection of reduction plant after proper treatment has been decided upon.

Property good, but orebodies small and narrow, hence working costs must be high. Railroad freight rates are also high. Promises with present careful management to become self-supporting and eventually profitable.

BECHUANALAND EXPLORATION CO., LTD.

RHODESIA

Secretary and office: T. Donald, 365 Salisbury House, London, E. C., England. African office: H. U. Moffat, supt., Bulawayo, Rhodesia. E. Davis, chairman; T. J. Seel, G. Cahen, C. Hockley and Sir E. H. Dunning, directors. Organized April 1888, capitalization £200,000, shares 10s. par, fully paid and issued. Dividends paid since 1895, last being in Aug., 1913, of 4%. Is a financing, development and holding company which has floated and manages the Bechuanaland Copper, Northern Copper, Rhodesia Copper and Bwana M'Kubwa Copper companies.

BEDE METAL & CHEMICAL CO., LTD.

NORWAY & SPAIN

Office and works: Hebburn-on-Tyne, England. Spanish operating office: Manriques 9, Córdoba, Spain. Mine office: Puebla de Guzmán, Huelva, Spain. Sir Andrew Noble, Bart., K. C. B., chairman; W. D. Crudas, Sir Alfred M. Palmer, Bart., W. Hall and J. E. Tully, directors; Wm. M. Brown, sec.; Richard Eshott Carr, gen. mgr. in Spain; Chas. R. Sams, mine supt. Organized May 16, 1872, under laws of Great Britain, as successor of Bede Metal Co., capitalization £288,400, shares £25 par, reduced 1887, to £100,000 and 1,456 bonus shares, shares £10 par. Present capitalization £115,360, shares £1 par, fully paid. Debentures, formerly £125,000, have been fully paid. Dividends, 1879-1907, including payments of previous company, aggregated £108,464. Dividends were £14,320 in 1906; £20,048 in 1907; £14,320 in 1908; £17,184 in 1909. Statement issued March, 20, 1912, showed a credit balance of £11,127. Company is primarily a manufacturer of acid and chemical products, but also is a considerable producer of copper from Spanish and Norwegian cupriferous pyrite.

Spanish mining lands are 71 hectares, with about 50 acres miscellaneous lands, known as Las Herrerias mines, held under a small royalty, having 7 workings, in 2 groups. Property shows Devonian schists, with porphyry outcrops near the orebodies, which are irregular lenses of massive cupriferous pyrite, in schist, with dip from vertical to 40° north. There are 7 orebodies, of which 6, under development, range from 1 to 40 meters in width, the main orebody, of about 12 meters average width and 400 meters length, carrying chalcopyrite and chalcocite, finely disseminated through pyrite, estimated by management to average 1.4% copper and 45% sulphur, with very small quantities of zinc and lead, of no commercial value. Development is by the Extraction shaft of 302', and the San Mateo shaft of 250', each having a 15x20" hoist, the mine having about 150,000 tons of ore blocked out for stoping. The western part of the mine is worked opencast, all ore being stoped, and openings filled with waste. The property is served by the Guadiana railway.

Buildings include 4 engine houses, a laboratory, warehouse, stables, 4 dwellings for officials and 20 cottages for workmen.

The ore is piled in large flat-topped heaps, which are irrigated regularly, the resulting liquors passing over iron, for precipitation. There are

2 freshwater dams and 4 leaching dams, of masonry. Product is precipitate of 70 to 80% copper tenor, which is shipped to the company's smelters at Hebburn-on-Tyne for reduction and washed sulphur ore, which is shipped to the company's British works and also to France, Germany and Russia. Ore in leach heaps is charged to general production, the company's balance sheet depreciating rather than padding actual assets.

Ore treated, 1909 was 51,000 long tons, carrying an average of 1.48% copper, won at an average cost of 5s. per ton for mining, and the cost of fine copper, f. o. b., in the form of precipitate of 73% copper tenor, was £42 per long ton. Forces are about 300 men at Las Herrerias. Production of Las Herrerias mines to end of 1909 was about 6,800 long tons of fine copper and has been about 1¼ million pounds annually since then.

The Killingdál mine, in Aalen, north of Røros, Norway, is operating under lease from the Norwegian owners. Ore is cupriferous pyrite, averaging about 1.5% copper and 45% sulphur, production being about 20,000 metric tons of ore yearly. Production, 1905, was 512,960 lbs. fine copper, and 1909 was 850,000 lbs. fine copper from the Killingdál mine. Production about 110,000 tons of ore annually, of which amount 25,000 tons was export ore in 1912.

BEECHWORTH GOLD MINING SYN. NEW SOUTH WALES

Letters to mine at Cobar, Robinson Co., N. S. W., Australia, unanswered. Lands, 6 miles north of the Queen Bee mine, carry a promising gossan, containing gold, silver and copper values, opened by a 200' shaft showing auriferous and argentiferous copper and lead ores.

BELALIE COPPER MINING SYNDICATE. SOUTH AUSTRALIA

Owens the Belalie, originally known as the Wheal Sarah and later as Bundaleer mine near railway station of that name. Property has 2 veins, 30' apart and 20 to 30" thick, carrying 6 to 8" of high-grade ore on each wall with 18" low-grade ore between. Developed by 33' shaft below tunnel level. Reported on favorably by Government Inspectors. Idle, 1912.

BELGE POUR LA RECHERCHE ET L'EXPLORATION

DES MINERAIS; SOCIÉTÉ ANONYME.

ITALY

Office: Brussels, Belgium. Mine office: Massa Marittima, Grosseto, Tuscany, Italy. Organized under laws of Belgium. Property is the Poggio al Guardione mine, carrying slightly cupriferous iron pyrites. Idle, and letters unanswered, 1913.

BEOGRADCHIC EXPL. SYNDICATE, LTD.

BULGARIA

Office: 88 Bishopsgate, Within, London, E. C., England. J. T. Boyce, J. Kenarledski, H. S. Wescott, directors; A. Thorpe, sec. Capital £1,000, shares £1 par, fully paid. Organized May 23, 1907, to take option on La Chanse Copper Concession, near Belogradchik, Bulgaria, and rights were leased in June of same year to Widin Copper Syndicate, Ltd. (See that company.)

BELTANA RAPID ORE TREATMENT SYN. SOUTH AUSTRALIA

Office: 36 Royal Exchange, Adelaide, South Australia. Mine office: Beltana, South Australia. C. G. W. Pfitzner, pres. and gen. mgr.; A. Rehder, vice-pres.; D. R. Sanda, sec.; preceding officers, A. D. Pfitzner, directors. Capitalization £6,000, shares £20 par, fully paid. Annual meeting, November. Property was formerly known as the Copper Queen mine, 3 miles west of Beltana and 4½ miles from railroad. Shows wide zone of decomposed slate carrying nodules and seams of malachite and stains of vanadium; 2 claims, total area 80 acres, mineral lands 40 acres. A shaft 72' deep encountered a flow of 2,000 gals. water a day at a depth of 60' and a short east crosscut has been driven. Government Inspector of Mines sampled property for vanadic acid, assays showing 0.4 to 11.08% copper and all

but 1 sample carrying vanadium from trace to 0.6%. Has 8-h. p. boiler, 1 hoist good for 200'; concentrator has 3 steam stamps, 4 solution vats and 4 cement precipitation vats. Crushed ore treated by leaching process. Product shipped to Wallaroo smelter, Port Adelaide.

BEMBE MINE.**PORTUGUESE WEST AFRICA**

Mine office: Bembe, Angola, Portuguese West Africa. Situated about 110 miles inland from Atlantic coast and 75 miles south of Belgian Congo frontier. Only development done in 1910 was sinking of holes, by the natives, 3 to 4' in diameter, untimbered, to a depth of 24 to 30'. Is a community property owned by natives.

BENALACK COPPER MINE.**SOUTH AUSTRALIA**

Property is situated 1 mile east from Nicholl's Knob. Shows two veins of 3" and 10", respectively, 40' apart, converging southward, developed by shafts 32' and 70' deep.

Drifting at 60' in depth showed the vein to be from 12 to 18" wide, with high-grade ore in seams and bunches, chiefly malachite, bornite and copper pyrites in ferruginous calcite. Sample from bottom of shaft showed 2 dwt. gold, 14 oz. silver and 32.3% copper per ton. Veins small and former company (1907) unable to make property profitable.

BENCREE GOLD & COPPER MINES, N. L.**NEW SOUTH WALES**

Mine office: Forest Reefs, N. S. W., Australia. B. J. Harris, mine mgr., at last accounts. Property shows a number of veins, of which No. 4, up to 6' in width, is said to give average assays of 18 to 20 dwts. gold per long ton. Development is by a 200' shaft and values are in gold rather than copper. Presumably idle.

BENOWRIE COPPER MINE, LTD.**SOUTH AUSTRALIA**

Idle. Mine office: Olary, South Australia. Company succeeded the Benowrie Copper Co. Lands, 20 miles northeast of Olary, known as the Mary mine, worked occasionally since 1890, have what apparently is a stratified bed, between granite and clay-slate, carrying bunchy ore, mainly azurite and malachite, associated with hematite, with silicious gangue, of low average grade, slightly argentiferous and carrying from colors to 3 dwts. gold per long ton. Development is by a large open cut, 50' wide, 250' long, and 5 to 30' deep, with a number of shallow pits, and a 105' shaft, cutting an 18" vein of sulphide ore at 65' and a 30' vein at 75', latter giving assays of 13.5% copper. Was a small producer about 1910.

BENTÍN; RICARDO.**PERU**

Mine office: Huarochirí, Lima, Peru. Lands, 58 Pertenencias, in the Casapalca district, including the Aguas Calientes mine, developed mainly by the Unión tunnel, carrying argentiferous lead, copper and zinc sulphides, values being mainly in silver, with considerable copper and lead as by-products. Ore is mainly of concentrating grade. Mine is connected with the Casapalca smelter by a 3½-kilometer railway.

The Aguas Calientes mill, of 30 metric tons daily capacity, includes a laboratory, and has water power, developed by a Pelton wheel, employing about 20 men. Property employs about 120 men. Production, 1908, was 8,871 metric tons ore yielding 391,140 lbs. copper, 209 metric tons lead and 13,815 kgs. fine silver. Letters unanswered, 1913.

BERGFRIEDEN; GEWERKSCHAFT.**GERMANY**

Idle. Office: Langelaube 25, Hanover, Germany. Mine office: Friedrichsroda, Hanover, Germany. Graf M. von Bernstoff, Ernst Sollors and Th. Steegmans, executive committee; Heinrich Burghardt, supt., at last accounts. Property consists of copper lands near Friedrichsroda and oil fields near Steinförde.

BERTHIN; ANGEL.**BOLIVIA**

Property consists of 40 hectares in Province of Pacajes. No work done recently. Ore is copper with high gold values.

BERTHIN; NOEL.**BOLIVIA**

Property consists of 105 hectares in Province of Pacajes. Ore is primarily copper with high gold values.

BESSHI MINE.**JAPAN**

Owned by Sumitomo Copper Co., and described thereunder.

BILBAINA ASTURIANA; COMPANIA MINERA.**SPAIN**

Property in province of Asturias, Spain, sold to the Carrena Copper Mines, Ltd., and described under that title.

BIO-BIO (CHILI) COPPER SYNDICATE, LTD.**CHILE**

Presumably idle. Office: Finsbury House, Blomfield St., London, E. C., England. Mine office: Los Angeles, Magallanes, Chile. Organized July 27, 1906, under laws of Great Britain, capitalization £30,000, shares £1 par; issued £20,500, in 20,000 fully paid shares, which were given for the lands, and £500 shares, 1s. paid. Only exploratory work has been done. Mine shipped, 1909, to Valparaiso, 13,401 kgs. of 17% copper ore, and 2,278 kgs. fine copper, secured from exploratory work.

BIONAZ; SOCIETÀ MINIERE DI.**ITALY**

Presumably idle. Mine office: Aosta, Torimo, Piedmont, Italy. Property is the Bionaz mine, which was a small producer of copper ore, about 1907.

BIRTAVARRE KOBBERVAERK.**NORWAY**

The Birtavarre mine is situated in Lyngen, Norway. Began producing, 1910, but work was delayed owing to floods and a strike at the mine. Mine produced 282 tons of bessemer copper in spring of 1913.

BISMARCK; KUPFERERZ GEWERKSCHAFT.**GERMANY**

Probably closed down. Office and mine: Hanover, Braunschweig, Germany. Alex. Eichwald, A. Rambke and O. Wolfe, executive committee. Organized Nov. 20, 1899, under laws of Germany. Property, various copper and iron mines, including the Morgenrothe, in Brunswick, and the Rothbart, in Prussia, which carry malachite and other copper ores. The iron-ore mines are near Ruhla, Saxe-Weimar and company also has done a little exploratory work in Braunschweig-Gotha, and in the grand duchy of Gotha.

BLACK EAGLE COPPER MINE.**SOUTH AUSTRALIA**

Property situated 18 miles east of Beltana, South Australia, and 1 mile south of Ediacara mine. Shows a large outcrop of ironstone running north and south on the side of a hill, 75' above the plain. Eighty-three tons of 19% copper ore was shipped in 1910, and in 1912, 22 tons shipped averaged 9.6% copper, a later shipment of 116 tons yielding 9¼% copper. Developed by tunnels with drifts on the vein. Prospecting work is in progress on the West lode, showing a vein 3 to 5' wide of hematite and quartz carrying veins and nodules of copper carbonate. Promising.

BLANCA TORRE DE COLLAHUASI; COMPAÑIA MINERA.**CHILE**

Office: Valparaiso, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized June 23, 1906, under laws of Chile, capitalization £120,000, shares £1 par. No trace of operations secured. Company presumably dead.

BLANTON COPPER MG. SYND.**HAYTI & SANTO DOMINGO**

Office: The Bourse, Philadelphia, Pa. Mine office: Bucaro, San Cristobal, Santo Domingo. E. A. Blanton, Jr., pres. and gen. mgr.; Wm. Herbert Sickels, vice-pres.; Henry C. Martin, sec.; A. M. Masters, treas.; preceding officers and Ralph C. Lupton, directors; Otto A. Peterson, supt. Organized Feb. 16, 1910, under laws of Delaware, capitalization \$200,000, shares \$25

par, nonassessable, in \$25,000 of 7% preferred stock and \$175,000 common stock. Annual meeting, first Monday in January.

Lands, 700 acres, in a tract 5,000x6,000', held under government concession, including the Bucaro mine, on the Rio Nigua, 27 miles west of San Domingo, bought of San Cristobal Mining Co. Property shows orebodies in limestone, near a porphyry contact, one orebody in the Bucaro mine carrying chalcopryite, bornite and chalcocite, all auriferous and argentiferous, giving assays of 3 to 24% copper, and estimated to carry \$3 per ton in combined gold and silver values. Development is by tunnel, including a 250' crosscut tunnel and drift tunnels of 75', 80', 160' and 100', also by an open cut, estimated to show 50,000 tons of ore. A water power, 7,000' from the mine, is said to be capable of development. Company hopes to secure a 50-kilometer railway from San Domingo to San Cristobal. Company also owns mineral lands along the railway line from Gonaives, on the west coast of Haiti, where bunches of oxidized copper ores occur in limestone near igneous contacts. Company not regarded favorably and West Indian deposits are considered too spotty to permit profitable operation of mines.

BLAYNEY COPPER MINES & SM. CO., N. L. NEW SOUTH WALES

Secretary and office: E. H. Shackell, 360 Collins St., Melbourne, Australia. London sec., E. Habben, Palmerston House, London, E. C., England. Mine and works at Blayney, Bathurst county, N. S. W., Australia. H. F. C. Keats, J. A. Amschel, C. Ballieu, J. L. Wharton and C. B. Jessop, directors, London. Organized Jan. 31, 1907, under laws of Victoria, capitalization £150,000, shares £1 par; issued, \$100,000, 14s. paid in. Was a reconstruction of New South Wales Mines & Smelters Co., Ltd., which was a reconstruction of the Blayney Copper Mines & Smelters, Ltd. Company owns the Blayney copper mine, idle 1906-11, but unwatered 1912.

Water carries as high as 60 lbs. copper to 1,000 gals., or double that treated in 1906 in the cementation plant. Production, 6 tons fine copper per month from this plant.

Property shows a strong orebody, 40' wide at 100' depth, in andesite, near the contact with Silurian sedimentaries, which show considerable crushing and shearing. Ore is chalcopryite with andesitic gangue. Mine is opened to depth of 337' and for a horizontal length of 680'.

Equipment includes both steam and electric power and the mine has a branch railway siding. The reduction plant, formerly doing a general custom business, was built, 1882, and overhauled and renovated, 1907. Equipment includes a small sampling mill with 3,500-ton storage-bins for ore, fluxes and fuel. The smelter has two 120-ton 40x168" blast furnaces, a small blast furnace for matte smelting, a large reverberatory furnace and an Edwards calcining furnace. Converter plant has 6x8' shells of the Leghorn type and a 6' Chilean mill for linings.

BLUE CREEK MINE.

NEW SOUTH WALES

Letters unanswered, 1913. Mine office: Yarrangobilly, Buccleuch Co., N. S. W., Australia. Lands, about 3 miles from the Limestone caves, in a very rugged country, carry a vein of about 12' width, having a 2' paystreak of rich ore. Mine is opened by a tunnel having a back of about 250'. Was developing with a small force, 1910.

BOB'S MOUNT MINE.

NEW SOUTH WALES

Letters unanswered, 1913. Probably idle. Mine office: Springfield, Bathurst Co., N. S. W., Australia. W. Paterson, sec. Organized 1906. Lands are about 8 miles from Orange and 9 miles south of the Mount Bulga. Mine, on which about £3,000 has been expended, has a 79' vertical main shaft, planned to be deepened to 100', connecting with a 170' tunnel,

showing a vein of about 4' average and 9' maximum width, carrying an ore-shoot 92' long, and smaller shoots of 10 and 50' length.

BOCCHEGGIANO MINE.

ITALY

See Montecatini; Società Anonima delle Minière di.

BODELON i CIA.; FELIPE.

CHILE

Works office: Cajon de Los Angeles, Cabildo, Aconcagua, Chile. Owns 2 smelters, known as Los Angeles and Fundiciones Unidas, formerly owned by Sociedad Española de Fundición de Los Angeles. The Angeles smelter, 25 kilometers from Cabildo, has 3 small water-jacket blast furnaces, blower, 60-h. p. boiler, 40-h. p. Robey engine and Tangye pumps for water jackets. The Fundiciones Unidas have 2 cylindrical Harnecker water-jacket blast furnaces. About 60 men are employed at both plants. Coke costs 86 pesos per metric ton and freight on ore, 8 pesos per ton. Production, 1907, was 696,650 lbs. fine copper, of which Los Angeles smelter produced 370,372 lbs. and the Fundiciones Unidas smelted 3,433 metric tons of ore averaging 4.79% copper, yielding 295,998 kgs. of 50% matte carrying 326,278 lbs. fine copper.

BODENMAIS; KÖNIGL. BERG- UND HÜTTENAMT.

GERMANY

Office and mine: Bodenmais, Bavaria, Germany. Bergmeister A. Maurer, mgr. Property shows gneiss and granite, carrying 2 contact orebodies with northwest strike and dip of 30 to 50°. Ore is very lean, being slightly cupriferous pyrite, of only about 0.3% average copper tenor. Mine, 1 mile from Bodenmais, discovered A. D. 1463, has 2,000 meters of workings. Equipment includes a 450-h. p. electric power plant and a 40-metric ton mill having a crusher of the Pendelmühle type, 5 Humboldt jigs, 4 Humboldt tables and 1 slime table. Yearly production is about 2,000 tons of iron oxide, 150 metric tons of copperas and a smaller quantity of cupriferous copper sulphate.

BOGAN RIVER COPPER MG. CO., N. L.

NEW SOUTH WALES

Secretary, J. M. Rees, Castlereagh St., Coonamble, N. S. W., Australia. Mine office: Tottenham, via Dandaloo, N. S. W., Australia. Geo. Eason, chairman and managing director; C. Mooy, Jas. Wallace, Dr. Bertram and W. M. Keogh, directors; H. Ernest A. Miller, agt., Sydney, N. S. W.; J. Kennemore, supt.; J. Hudson, smelter supt. Organized Jan., 1906, under laws of New South Wales, capitalization £6,250, shares 2s. 6d. par, in 25,000 shares full-paid and 25,000 contributing shares paid up to 2s per share. Stock is listed on Sydney Stock Exchange.

Lands, 80 acres, leasehold from the crown, at annual rental of 5s. per acre, well timbered, formerly known as the Royal Sweep mine, opened Feb., 1906, on the Bogan river, about 20 miles from Dandaloo, in the Orange Plains district. Property is 45 miles west of Trangie, railway station on the Great Western line, and about 35 miles from Tullamore on the south. Property shows 1 lenticular orebody of 3 to 20' width, in epidote bearing mica-schist, outcropping for about 500', carrying ferruginous carbonate ore near surface and sulphides at depth, some of the carbonate stopes showing high-grade ore. The sulphide ore is too basic for successful reverberatory practice, although adapted to blast-furnace work, but latter cannot be used owing to present lack of transportation facilities and inability to secure coal or coke at a living price. Returns from upwards of 100 tons, shipped to the Waratah smelter, were 35% copper, 2.5 oz. silver and 3 dwts. gold per long ton, and 560 long tons smelted yielded 28 tons of blister copper, or exactly 5%.

Development is by shafts of No. 1, 260'; No. 2, 120'; No. 3, 80'. Mine is said to have about 320' of underground work, blocking out 2,000 tons of ore carrying 5 to 7% copper, 1 oz. silver and 72 cts. gold per ton.

Equipment includes a hoist good for 800' depth and storage tanks of 1,000 and 5,000 sq. yds. area. There is a 600' aerial tram from the main shaft to the smelter. Mining costs were \$3.60 per ton in 1910 and smelting \$8.35; about 80 men were employed.

The smelter, blown in Feb., 1908, has 2 reverberatory furnaces, each of 10-tons daily capacity, one 12x23' with a 60' stack. Sulphide ores are heap-roasted, rendering them practically self-fluxing. Fuel is wood, found in abundance nearby, costing 4s. 9d. per ton delivered, 40 tons being required to make 1 ton of blister copper. Freight charges, by wagon and rail, to Sydney, are about £4 per ton for copper. Cost, first half of 1911, was estimated at £35 per long ton for finished copper delivered in Sydney. Production, 1906, was 124,440 lbs. fine copper, and 1909 was 500,000 lbs. Option was held, 1911, on this property by Blayne Copper Mines & Smelting Co., N. L. Inactive since May, 1912.

BOGOSLOVSK; SOCIÉTÉ MINIÈRE DE.

RUSSIA

Office: Teatralnaya 18, St. Petersburg, Russia. Mine and works office: Bogoslovsk, Verkhotsorsky, Perm, Russia. A. Polow, pres.; B. Savitzky, gen. mgr.; N. Lessig, mine supt.; R. Davey, smelter supt.; C. Stutzer, asst. supt. Becoming embarrassed, the corporation was placed in the hands of trustees, Nov., 1905, to Dec., 1912. Company reorganized, 1912, with co-operation of the Azoff Don bank. Capitalization \$10,000,000; shares listed on St. Petersburg Bourse. Company's report for 1912 shows a gross revenue of 18,826,144 rubles and a net profit, including 309,615 rubles from operation of the Bogoslovsk railway, of 2,252,650 rubles, an increase over the profits estimated.

The property is one of the largest estates in the world, having an area of 3,600 sq. miles, with an extreme length of 144 miles north and south, and an extreme width of 63 miles east and west, the town of Bogoslovsk lying near the center. There also are a few hundred thousand acres of scattering lands, outside of the main estate, which has a population of about 35,000. The property includes immense forests. Mineral values include gold, platinum, copper, manganese, iron, chromium and some valuable lignite deposits. Placer gold deposits are worked by dredges and sluice work, the output, formerly 10,000 to 12,000 oz. of gold yearly, having decreased latterly.

The principal business of the company is the manufacture of iron, the output being about 75,000 tons of finished products yearly. The iron mines carry mainly magnetite, with some hematite near surface, and extraction is principally from open pits and surface cuts, at average cost of about \$1 per metric ton of ore. The property includes iron furnaces, iron and steel foundries, a steel rolling mill, coke ovens, quarries, chemical works and a flouring mill.

About one-half the company's profit is derived from copper mining, the copper mines lying in the lower rolling foothills of the Siberian slope of the Urals, the copper deposits apparently running parallel with the axis of the mountain range. The copper mines are in 4 groups, within a radius of 3 miles, the principal properties being the Bogoslovsky, Vasilevsky, Florovsky, Nikitinsky, Nikolopodgorny and Bashmakovsky mines, producers of importance in order named, and smaller mines. Country rock is limestone, of lower Devonian age, with eruptive granite and porphyry, mingled with tuffs, these being overlaid by tentaculite slate, followed by an eruption of augite-garnet rock. The copper ores occur along the contact of augite-garnet with other formations, being in lenticular shoots, mainly between diorite and wollastonite-limestone. There are some oxidized ores, but values are mainly in chalcopyrite and occasional chalcocite,

associated with ferruginous material, mainly pyrrhotite, with calcite, quartz and wollastonite gangue. The rock in the mines is extremely hard. The 4 principal copper mines have been worked for upwards of a century.

The Bogoslovsky mine, employing, 1912, an average of 844 hands, has a main lens about 1,500x600x14', and another lens about 1,575x300x10½', both worked out to a large extent. The mine is 630' deep with 1 main shaft. Ore is hand-sorted and during 1912, 40,978 metric tons were shipped averaging 5.86% copper, at a mining cost of \$4.96 per ton. Reserves estimated at 82,000 tons of similar grade and 73,770 tons low-grade ore, half of which is standing in the mine and averaging 2¼% copper, and half on the dump averaging 1%. A 25-ton Murex magnetic plant is being constructed for experimental purposes to treat the low-grade ore of this and other properties. Equipment, a 364-h. p. steam plant, including a 98-h. p. hoist and a 20-drill air compressor.

The Vasilevsky mine, employing, 1912, an average of 290 men, has numerous orebodies of varying and irregular dimensions. Main shaft, 791' deep. During 1912, 7,611 tons sorted ore were shipped, averaging 12.95% metric tons of about above grade. Equipment, a 272-h. p. electric plant, electricity generated by steam, includes 2 electrically-driven hoists of 88-h. p., compressor for 6 drills and centrifugal pumps of 160 h. p. combined.

The Florovsky mine, employing, 1912, an average of 453 hands, works 3 oreshoots, the first 105' long and 14' wide, second 119' long and 14' wide, third 140' long and 16' wide, all continuing to the present lowest level. Depth of main shaft, 917'. During 1912, 12,023 metric tons sorted ore was shipped averaging 7.75% copper, at a mining cost of \$10.60 per ton. Reserves estimated at 20,800 tons of above grade. Equipment, 335-h. p. steam plant, including a 100-h. p. hoist and a 16-drill compressor.

The Nikitinsky mine, employing, 1912, an average of 203 hands, has numerous orebodies of varying and irregular dimensions. Depth of main shaft, 644'. Shipped, 1912, 7,257 tons sorted ore averaging 11.38% copper, at a mining cost of \$9.28 per ton. Reserves, approximately 16,400 tons. Equipment, a 113-h. p. steam plant, including a 35-h. p. hoist and a 6-drill air compressor.

The Nikolopodgornyy mine, employing 79 hands, 1912, has an orebody of 245' length and 10' average width, opened by a shaft to depth of 280' and continuing below this level. Shipment, 1912, 5,410 metric tons of ore, averaging 2.04% copper and containing about \$30 gold per ton of copper, at a mining cost of \$2.70 per ton. Reserves estimated about 41,000 tons of same grade. After completion of the Murex plant production of this property will be increased. Equipment, a 32-h. p. steam plant for hoisting and pumping.

The Bashmakovsky mine, whose main shaft is 490' deep, employed 151 hands, 1912, and shipped 1,197 metric tons, averaging 5.57% copper at a mining cost of \$39.28 per ton. Main shaft, 490' deep. Equipment, a 187-h. p. steam plant, including a 37-h. p. hoist and a 12-drill compressor. This mine is now closed down.

The Auerbach mine has an average output of 1,500 tons a year of magnetite ore, carrying 3% copper.

The company is carrying on extensive development work in all mines except the last 2, also diamond drilling, and is prospecting its extensive mineral lands in order to locate new orebodies. About \$140,000 will be spent for this purpose during 1913. The mines were discovered about 1750 and have been worked since 1760, passing from government to private ownership in 1876.

The total production for 1912 was 77,000 long tons of ore averaging 6%

copper. Total power at copper mines of company, 1,300 h. p., with 7 hoists, aggregating 370 h. p., and 5 Rand and Flotman compressors of 430 aggregate h. p., operating 77 Flotman air drills.

The smelting plant, situated at Turinsky Rudnik, 8 miles from the mines, started in 1885, is now being remodeled. It has a daily capacity of 700 tons. The ore is received by rail in 10-ton side-tipping cars, dumping into a series of 500-ton stalls. The fines are sintered in pots together with flue dust.

The smelter is equipped with 2 Allis-Chalmers blast furnaces, of 200 and 500 tons per day capacity, and 4 refining furnaces of brick, handling 40 tons daily. Has 3 horizontal type Manhes converters, each 90x150". A modern plant is being built, 1913. Product is a matte of 35% copper tenor, slags averaging 0.28%. Matte is converted to blister copper of 98.5% copper, carrying 13 oz. silver and 0.30 oz. gold per ton. It is of exceptionally high quality and marketed as B. S. ingot copper. The slag is granulated and averages 0.28% copper.

The works include an acid plant, with a daily capacity of about 6,500 kgs. of chamber acid of 50° Beaumé. There also is a plant turning out about 750,000 kgs. yearly of potassium and sodium bichromate.

Fuel at the mines includes 37,000 tons of lignite, costing 72 cts. per ton; 4,200 cords wood at \$2.42. The smelter uses 16,400 tons lignite and 5,000 gal. gasoline. Coke from England costs \$13.31 per ton. An electric plant at the Florovsky mine supplies power for pumping and lighting.

Buildings include a large number of dwellings, with good structures for the chief officials, bunk houses at a number of the mines, and mainly log houses for workmen with families. The management spends money liberally, in a variety of ways, and for many purposes other than of a purely business nature, maintaining roads, schools, a mining college, geological museum and an old people's home, and furnishing free medicines, medical attendance and hospital service to the employees.

The company owns 130 versts, or about 100 miles, of narrow-gauge railway, and maintains a fleet of 10 steamers, of 21,000 tons capacity, and 54 barges and boats with an aggregate capacity of 41,000 tons.

Manual labor is done mainly by Tartars, from the province of Kazan, on the Volga, which labor is good, though poorly trained and somewhat erratic, the men usually staying a few months only. No women work underground, though employed in sorting ore, driving carts and working in the placer mines. Wages are the equivalent of 43 cts. per day for shaftmen; 38 cts. for miners, 30 cts. for mine helpers, 35 cts. per 12-hour day for day laborers, and 15 cts. per day for women day laborers.

For 1912, costs per short ton, averaged as follows: Mining, \$7.00; hand-sorting, 31 cts.; smelting, \$3.58; management, 35 cts., administration and miscellaneous, 95 cts.; a total of \$12.19 per ton of ore, equivalent to a cost of 8.6 cts., per pound of fine copper.

Present output of all copper mines is 77,000 metric tons of ore yearly. Production was 10,118,718 lbs. fine copper in 1908; 8,636,098 lbs. in 1909; 9,590,010 lbs. in 1911 and 10,251,390 lbs. in 1912. Estimated production for 1913 is 4,200 metric tons at an average cost of about \$174 per ton. Management has an experimental Murex magnetic plant, treating 25 tons per day and plans installing a new bessemer and electrolytic plants. Management capable, energetic and property has splendid future.

BOLIVIA; COMPANIA CUPRIFERA DE.

BOLIVIA

Sr. Manual Trual, owner. Mine, 268 hectares, located in the Cerro Cobrizas in San Cristobal Canton, province of Nor Lipez. Idle, Dec., 1912.

BONMAHON COPPER MINES DEV. SYND., LTD.**IRELAND**

Address; P. O., Bonmahon, County Waterford, Ireland. Sir Jas. Aloysius Power, late chairman, Tramore Co., Waterford, Ireland; H. J. Dixon, sec.; Arthur Llewellyn Pearce, cons. engr.; Herbert T. Marks, mine mgr. Organized Nov. 16, 1905, under laws of Great Britain, capitalization £30,000, shares £1 par. Letters to London office unclaimed.

Lands, 190 acres, on Bonmahon bay, 17 miles from Waterford, Ireland, include the Knockmahon and Tankardstown mines, which in 1827-65, under the ownership of the Mining Company of Ireland, made an authenticated production of £1,339,232, with claimed profits of £534,011. Ore extracted during this period is said to have averaged 10% but must have been secured by very careful hand-selection. After 1875, under a different management, mines are said to have produced about £900,000 worth of ore. The Bonmahon mines are very ancient, having been worked as early as the sixteenth century.

The Knockmahon orebody, said to be traceable 5 miles, to, Kilmackthomas, occurs in clay-slates. Annual production was about 1,000 tons fine copper, 1840. The Tankardstown mine, running under the sea for some distance, is said to show considerable bodies of ore of concentrating grade. The Bonivy mine, 300' deep, has been unwatered. Property as a whole shows large reserves of low to medium grade ores and is considered decidedly promising, but to be profitable must be operated on a large scale. At last accounts, 1908, company planned reorganization, on a basis of about £200,000 capitalization. Idle several years. Reported to have been taken up by a syndicate headed by John D. Ryan, of New York city and Butte, Mont., and to be reopened.

BONNIE DUNDEE MNG. CO., N. L.**NEW SOUTH WALES**

Office: Nyngan, N. S. W., Australia. Mine in Cobar mining district, Parish Trenton, Canbelego Co., N. S. W. J. A. Draper, chairman; A. J. L. Flashman, E. B. Treatt and R. A. Sorenson, directors. Organized 1907. In April, 1912, issued £5,000 first mortgage 10% debenture bonds, with 1 fully-paid share of stock for each £1 bond. The money is for the erection of a smelter. Mine is an old one with extensive workings. The ore has been stoped out above the 250' level. Reports by J. Polkinghorne and C. R. Mackenzie show 27,000 tons developed, carrying 3½% ore of very basic composition, adaptable to pyritic smelting. Vein on 500' level averages 6' in width and 4% copper.

BOOLBOONDA COPPER SYN., LTD.**QUEENSLAND**

Office: 13 Frederick St., Edinburgh, Scotland. Mine office: Boolboonda, Bowen Co., Mount Perry district, Queensland, Australia. A. J. H. Kenney, mgr. Organized July 19, 1909, under laws of Great Britain, capitalization £12,000, shares £1 par. In hands of liquidator, March, 1913, with a view to reconstruction. Property, 360 acres, known as the Madeleine mine, 1 mile from Boolboonda, also the Pansy mine, acquired July, 1909, and a 25-acre smelter site, 2 miles from the mine.

The Madeleine mine (M. L. 54) had 5 tunnels in 1910; No. 1, 287' on vein, crosscut at 224' driven 168' to another vein; No. 2, 312' on lode with 100' air shaft; No. 3, 250' and No. 4, 285' on vein, showing 18" of 10% copper ore; No. 5 tunnel, 195' to meet crosscut from No. 1.

BOPPY BROKEN HILL COPPER MINE, N. L. NEW SOUTH WALES

Mine office: Cobar, Bobinson Co., N. S. W., Australia. Organized, Dec., 1907, under laws of New South Wales, capitalization £22,500, shares £5 par. Mine has a 200' shaft, showing, at bottom, ore estimated to average 30% copper. Idle several years and apparently moribund, as company is unknown to postmaster at Cobar.

BOR: COMPAGNIE FRANCAISE DES MINES DE.**SERVIA**

Office: 60 Rue de la Victoire, Paris, France. Mine and work office: Bor, Arrond. de Zayetchar, Dept. du Timok, Servia. P. Mirabaud, pres.; L. Molineaux, vice-pres.; preceding officers, A. Mirabaud and G. Mirabaud, directors; A. Laurens, mgr. Organized June 24, 1904, under laws of France, capitalization f5,500,000, increased, 1908, to f7,000,000, shares f500 par. Annual meeting, Nov. 16.

Lands, a 50-year concession with privilege of renewal, known as the St. George, covering 2,400 hectares and a lease of 6,500 hectares additional lands in the communes of Bor, Krivelj and Ostrelj, lying 15 miles south of Majdenpek. The Bor deposits are on a volcanic plateau, about 1,500' above sea level, surrounded by hills 800 to 3,000' high, of Cretaceous limestone. The little villages of the plateau Bor, Zlot, Metovnica, etc., give their names to the deposits. Property shows prominent gossans carrying considerable limonite, ores occurring in a belt of 1 to 2 miles width by about 10 miles length, in fissure veins up to 50' and even 100' width, traversing andesite and volcanic tuffs and breccias. Ores include, chalcocite, covellite, bornite, chalcopyrite, enargite and chalcantite, latter in considerable quantities, associated with galena, sphalerite and pyrite, all slightly auriferous and argentiferous. At Krivelj, a vein of about 40' width gives average ores of 5.5% copper. The Tehoka Dhulkan mine, the principal producer of the company works a vein of 27 meters extreme width, which has given average assays of 6% copper. This mine produced 107,871 tons of ore in 1911 and 126,937 metric tons in 1912. At Crveno-Brdo there are 3 irregular chimneys averaging 80' in width, giving average returns of 7% copper. Property is served by a branch of the Budapest & Constantinople railway. Company is the principal copper producer of the Balkans.

The smelter has 4 water-jacket blast furnaces, two of 110 ton, and two of 210 ton daily capacity and a converter department with 1 stand and 4 shells. The steam plant has 360 h. p. Babcock & Wilcox boilers. The smelting works ran 1912, but the Servian army took nearly all the employees for the Balkan war, in the latter part of 1912 and only 1 small furnace is now operated.

Production was 2,689,612 lbs. fine copper in 1907; 4,188,740 lbs. in 1908; 12,795,498 lbs. in 1911 and 16,699,845 lbs. in 1912. The result of operations of company for 1911-12 was very satisfactory, the net profit being £208,324, an income of £90,185 over that of the preceding year.

BOSCASWELL UNITED TIN & COPPER MINES, LTD. ENGLAND

Office: 8 Old Jewry, London, E. C., England. Mine office: St. Just, Cornwall, England. A. H. Walter, sec.; Douglas S. S. Stuart, mgr. Organized June 4, 1907, under laws of Great Britain, capitalization £200,000, shares £1 par; all shares issued and fully paid, including 199,793 credited as fully paid. There are £24,000 debentures created May 9, 1912; £12,100 are issued. Of this amount £10,000 were issued at 50% discount and £2,100 at 15% discount. The company was promoted by the vendors of the mining lands, the Cornish Finance Syndicate, Ltd. Company has a lease of the mineral rights of 7 mineral setts, amounting to 600 acres, including the North Boscawell, Pendeen Consols, Boscawell Downs, Carlartha, Calartha Common and Bortherras mines, adjoining the Levant and near the Botallack, about 2 miles from St. Just. Some of these mines were worked profitably in olden days, but no work was done thereon for many years, until taken over, 1906, by Mr. Stuart. On the Pendeen Consols sett, the 135' level shows a vein carrying a 2' hanging wall paystreak of massive gray copper and chalcopyrite, the footwall showing native cop-

per, and assay of the entire vein, 1910, gave 14.3% copper and 40.6 lbs. of tin oxide per long ton.

BOSSMO; SOCIÉTÉ ANONYME PYRITES DE.

NORWAY

Office: 1 Rue d'Arenberg, Antwerp; Belgium. Mine office: Baasmoen, Mo, i Ranen, Tromsø, Norway. Oscar W. Rennert, pres.; Chr. Scheidt, G. Martens and H. Fasting, directors; J. H. Döhl and F. M. Munster, mine supts. Organized July 1, 1897, under laws of Belgium, capitalization f1,500,000, shares f500 par, reduced subsequently to f400 par; capital f1,200,000, divided into 3,000 shares, 1,000 preferred. Has paid 6% on preferred and 5% on common stock in 1911 and 1912. Annual meeting, first Tuesday in May.

Property is a mine of slightly cupriferous pyrite, assaying 0.5% and upwards in copper, and about 50% sulphur, latter element furnishing the principal ore values. Employs an average force of 220 men. Production since 1907 has been about 23,500 metric tons annually of cupriferous pyrite.

BOTALLACK, LIMITED.

ENGLAND

G. A. Scott, 5 Great Winchester St., London, England, sec.; J. Poore, chairman; Lieut.-Gen. Sir R. Pole-Carew, K. C. B. C. V. O.; R. A. Poore, D. S. O., and W. Towne, directors. Organized March 17, 1911, as a reconstruction of Botallack Mines, Ltd., capitalization £100,000, shares £1 par; 97,230 shares issued, including 39,759 credited fully paid; £23,250 (part of £30,000) 6% debentures. Is a tin-mining company, producing copper ore as a byproduct. Owns 4 tin setts, or leases, 650 acres in parish St. Just, 7 miles west of Penzance, Cornwall.

Mine workings comprise Old shaft, 1,047' deep, New main shaft 1,478', Crown shaft 648'. Has extensive workings on a network of veins that changed from predominant copper to tin when openings passed downward from slate into granite. Produced copper ore to value of £220,701 in years 1836 to 1895.

BOULDER BLOCK COPPER MINE.

SOUTH AUSTRALIA

Address: P. O. Mochatoona Springs, South Australia. Mine. 2 miles northeast of Mochatoona, shows 3 veins. Main vein has 4' average width, but is 10' wide in places and averages 4% copper in stope on 50' level, ore occurring as chalcopyrite in siderite and calcite, encased in slate. Developed by 50' shaft with 31' drift.

BOU-THALEB; SOCIÉTÉ DES MINES DU.

ALGERIA

Office: 27 Rue Lafitte, Paris, France. Mine office: Rovigo, Alger, Algeria. Jules de Catelin, mgr. Lands, 394 hectares, carrying copper, lead and zinc sulphides.

BOWER'S RANDFONTEIN, LTD.

TRANSSVAAL

Secretary, O. G. Browne, Alderman's House, Bishopgate, London, E. C., England. Mine office: care Hallett Bros., cons. engrs., P. O. Box 202, Johannesburg, Transvaal. A. G. Taylor-Hallett, managing director; S. A. Cobbett, director. Organized Feb. 7, 1905; capitalization £100,000, shares £1 par; 97,507 shares issued and fully paid. Paid £66,000 net for properties, vendors returning £24,000 for working capital out of purchase price of £90,000, in fully paid shares. Account submitted June 21, 1911, showed cash £2,364, investment £1,917.

Property consists of Gungunhana copper mine, Barberton district, Transvaal; 1,000 acres in Witfontein extension of Main Reef, West Rand, 42 claims adjoining Sheba mine, Lydenburg district, and shares in various companies.

BRADEN COPPER CO.

CHILE

G. F. Hilton, sec., 165 Broadway, New York. Mine office: La Junta, Rancagua, O'Higgins, Chile. Barton Sewell, pres.; Stephen Birch, vice-

pres.; C. K. Lipman, treas.; preceding officers, Murry Guggenheim, Wm. Braden, Eugene Meyer, Jr., Messmore Kendall, J. E. Ramberger, Pope Yeatman and Edgar Newhouse, directors; Pope Yeatman, cons. engr.; R. T. White, gen. mgr.; Robert Marsh, Jr., mine supt.; J. K. MacGowan, purch. agt.; E. T. Stannard, mill supt.; B. F. Colley, smelter supt. Organized June 18, 1904, under laws of Maine, and name changed to present title, Aug. 9, 1904, capitalization \$2,332,030, shares \$10 par, nonassessable; fully issued. Company is protocolized in Chile. Is controlled, through ownership of entire stock issue, by Braden Copper Mines Co. Has a \$4,000,000 issue of 6% first-mortgage convertible bonds. Annual meeting, 4th Tuesday in July.

Property, 101 claims, about 1,124 acres, including a 204-acre mill site at La Junta, in the province of O'Higgins, Chile. Mines are reached from Valparaiso by the Chilean State railroad, 158 miles to Rancagua and from that point by company's narrow-gauge railway, 43 miles, to the smelter and mill and 1½ miles farther to the mines. The elevation is 7,700 to 9,000', the mines being in a very rugged region on a part of the main range of the Andes. Holdings include the El Teniente mine, an antigua, La Fortuna and La Capitana mines, in the Cordillera de Graneras.

All the rocks are igneous and the rock at the mine is an andesite surrounding a body of tuff, which represents the old crater of a volcano. This light gray tuff is no longer loose and friable, but cemented into a hard concrete-like mass. The ore deposit is unique, being a volcanic vent of nearly circular section 4,000' across and filled by tuff and an agglomerate of rounded boulders of all sizes. The crater rim is surrounded by highly fractured and brecciated andesite, the fractures being mineralized around the circumference. The ore zone has been further fractured by porphyry dikes, which occasionally cut into the tuff.

The orebodies occur around, but outside the rim of the crater, in the andesite at, or near, its contact with the tuff. The ore consists of shattered andesite, often finely brecciated near the tuff contact, the copper minerals filling the cracks and openings. The orebodies are limited on one side by the tuff, but in the andesite the grade becomes lower, passing from breccia to fractured rock and fading out in the more, blocky country rock. The fractures in the rock range from a mere film of sulphide ore up to 3 to 4" of mixed bornite and chalcopryrite, mainly the latter. The orebodies dip at 70° toward the center of the crater. Three orebodies, the Fortuna, Teniente and Fortuna No. 4 are worked, with 5 others, not yet prospected. All are marked by strong outcrop stained with copper minerals. The zone of oxidation is shallow, ranging from a few feet to 150' in depth, and as the property carries mainly disseminated ore, the management holds to the belief, with strong reason, that values will carry to great depth.

The Fortuna orebody is typical of all the deposits. It is lens-shaped in horizontal section, is developed for 3,000' in length and has a maximum width of 260' and an unknown depth. The lowest tunnel, No. 4, is 1,425' below the outcrop. The copper occurs as bornite and chalcopryrite, associated with ankerite and quartz. The Fortuna mine is the principal property in point of development, this and the other mines of the company hav-

ing, according to Mr. Yeatman's report of June, 1913, fully developed reserves of 44,000,000 tons of ore averaging 2.65% copper with 60,000,000 tons probable ore of 2½% grade. Mine is opened by 5 tunnels, No. 4, the deepest, being 730' below No. 3, the former lowest working, and shows copper ore of good grade at this depth for a distance of 3,000'. The Fortuna was gophered extensively, by former owners, for high-grade ore, which was followed and extracted wherever found. Average grade of Fortuna ore is lower than in El Teniente mine. Workings show copper sulphides and occluded lower than in El Teniente mine. Workings show copper sulphides and occasional metallic copper throughout the brecciated material for depth of 2,000'.

The Teniente orebody whose outcrop is supposed to be in the crater of the old volcano, shows high-grade ore at the surface in bunches and stringers. The mine is explored by an old shaft and by the No. 1 Teniente adit, 460' below the outcrop. This is the most important development at the mine, being in ore for several thousand feet with the face of the tunnel 1,400' below the surface. The ore exposed by the new work of July and August, 1913, averaged 4.4% copper for 236'. It is planned to extend this and No. 2 Fortuna level along the tuft contact entirely around the crater, 2½ miles. The Teniente is the oldest mine of the district, having been worked by the Spaniards for the high-grade ore in the small veins.

La Capitana mine, in the Cañon Diablo, on the opposite side of the mountain from the Fortuna, is to be developed through the Fortuna tunnels, at considerable depth, and is practically a part of La Fortuna mine.

Electric power is used throughout. The old hydro-electric plant, near El Teniente mine, 72 kilometers from Rancagua, takes water from 2 small cordilleran rivers, La Coya and El Teniente, through a 20x36" wooden flume, of 2 kilometers length, leading to a power house having 3 turbines, 2 developing about 1,000 h. p., and the third actuating a 175-kw. 3-phase General Electric dynamo. The new hydro-electric plant takes water through the Cachapoal ditch from the same rivers, the first unit developing 6,000 kw., with an ultimate capacity estimated at 12,000 to 15,000 kw. Cost of hydro-electric power for first year of operation was under \$2 per h. p. year, not including the interest and depreciation. Power is delivered to smelter over a line about 18 miles long, at a voltage of 33,000.

Ore is transported from mines to mills by three Riblet aerial trams, of 2,630 meters length, with 550 meters drop. The main line, of 2,000 meters length, runs from the mill to the central transfer station, where connection is had with a 1,000-meter line to El Teniente mine and a 500-meter line to La Fortuna mine. Capacity of the aerial tram system is 1,000 tons daily. An electric tram line covered with snow sheds its entire length, owing to drifting snow and numerous snowslides, handles the balance of the tonnage.

There are two separate concentration plants. The old mill, built in 1906, of 250 tons capacity, was planned as the first unit of a 500-ton mill, and was remodeled and capacity increased, 1911, to 450 tons daily. Equipment includes Hartz jigs, Overstrom and Wilfley tables, Frue vanners, Wilfley slimers and the Sherman slime-settling system. The mill yields concentrates of about 25% average copper tenor.

The new concentrators, now complete, have 3 units of 533 tons each; the coarse ore goes from bins to gyratory crushers, to two 48" rolls and six 36" rolls, with 15" face and thence to 4,000-ton fine ore bins for delivery to mill itself. Concentration is effected by 2 sets of 2-compartment Woodbury jigs, five 2½ mm. Trommels, Wilfley tables, Hardinge mills, Yeatman classifiers, 8 conical settling tanks, 8 Wilfley tables, 16 conical settling tanks, 12 vanners, automatic samplers for concentrate and tails and storage bins.

The experimental Minerals Separation Co.'s flotation plant, with a daily capacity of 240 tons, has been in operation since the fall of 1912. It proved

so successful that a 3,000-ton plant, to treat the entire mine output, was ordered and is expected to be in operation by end of 1913. The average extraction in the flotation plant has been about: 74½% in February, 71½% in March, 69.8% in April, though the guaranteed recovery of 85% will be achieved when these trial runs are completed.

The leaching plant at the mine has not been enlarged, pending the solution of problems connected with the concentration of the ore, as the mine, concentrator and flotation plant have taxed the present capacity of the power plant. A new power unit being completed, a test run of the leaching plant will soon be made. The process consists of roasting the concentrate from milling plant in Wedge furnaces and utilizing the escaping sulphurous gases to manufacture sulphuric acid in lead chambers, the resulting acid being employed in leaching the calcine. The copper sulphate solution resulting from the leaching mill will then be electrolyzed.

A smelter is now in operation at Rancagua. This plant, with blast furnaces, converters and refinery, was completed during the latter half of 1911. The complete works, including the concentrators, leaching plant and smelter, are planned to treat 3,000 tons of ore daily, estimated to average 2.65% and to yield 40,000,000 lbs. fine copper yearly, at a cost, estimated by the management, of 7½ cts. per lb., laid down in New York, with the possibility of reducing the cost to 6½ cts. per lb., if the leaching process proves adapted to treating the bulk of ore produced. Production is estimated at 3,000,000 lbs. fine copper in 1908; 7,500,000 lbs. in 1909, and 9,000,000 lbs. in 1910. Mr. Yeatman states that when the smelter construction has caught up with the mine and mill, the cost of production of copper will be below his original estimate of 7½ cts. per lb.

Production for 1912 was 9,500,000 lbs., and for the first 11 months of 1913 was 15,976,000 lbs. fine copper, or at the rate of about 16,000,000 lbs. per year, at an average cost of 7½ cts. per lb., equal to 72 cts. a share earnings with 12 ct. copper. Estimated production, when plant is increased as planned, will be 75,000,000 lbs. per year. The property is one of exceptional promise and is being developed and equipped with the aid of the best technical skill.

BRADEN COPPER MINES CO.

CHILE

Office: 165 Broadway, New York. Barton Sewell, pres.; Stephen Birch, vice-pres.; Geo. F. Hilton, second vice-pres. and sec.; C. K. Lipman, treas.; preceding officers, Eugene Meyer, Jr., Murry Guggenheim, S. R. Guggenheim, Wm. Braden, Messmore Kendall, L. F. Crofoot, J. E. Bamberger and Wm. J. Maloney (Delaware), directors. Organized May 26, 1909, under laws of Delaware, capitalization \$10,000,000, shares \$5 par, increased 1911, to \$14,000,000, shares \$5 par, nonassessable; issued \$6,000,000. Bonds \$8,000,000 authorized, \$7,000,000 issued in a \$4,000,000 issue of 10-year 6% first collateral trust convertible bonds, and an issue of \$2,000,000 second collateral trust 7% convertible bonds, of which 1,000,000 are held in trust; also 2,000,000, 3-year 7% debentures. Upon the retirement of all convertible bonds, the full capitalization of \$14,000,000 will be issued.

Property consists solely of the entire capital stock and entire bond issue of the Braden Copper Co., the Braden Copper Mines Co. being purely a holding company, controlled by the Guggenheim interests. Farmers Loan & Trust Co., New York, registrar. Annual meeting, fourth Monday in June.

BREADALBANE MG. & SM. SYN., LTD.

NEW SOUTH WALES

Office: Sydney, N. S. W. Mine: Breadalbane, N. S. W. Incorporated about Sept., 1911, in N. S. W., capital £50,000, to acquire the Breadalbane, formerly called the Cullern mine. This property consists of an area of 63 acres held as private mineral leases in parish of Midban̄g, 3 miles west of

Breadalbane township, on main Southern railway, 150 miles from Sydney. The orebody outcrops as 2 masses of ironstone, the southerly one 400' long and 100' wide. The ore occurs at the contact between a felsite dike 20' thick and slate country rock. The deposit is developed by a vertical shaft 240' deep, with levels at 170' and 240'. This work showed the orebody to be 90' wide at 170' depth and 50' wide at 240'. The ironstone was shipped for flux and the 240' shaft showed 10' of iron ore carrying 3½% copper ore along the dike contact and a second ore shoot 25' west was drifted on for 80', averaging 3.45% copper ore.

A smelting plant was erected in 1910, with 132x42' blast furnace, in which some 1,170 tons of ore was treated, 1910, but scarcity of water stopped operations. Property valuable for its iron ores with which the silicious ores of the Kangiara and Kootra mines can be smelted.

BREBO COPPER, SILVER & LEAD

MG. CO., N. L.

NEW SOUTH WALES

Office: Goulburn, N. S. W., Australia. Mine office: Brebo, Argyle Co., N. S. W., Australia. W. H. Bladwell, chairman, J. N. Hay, legal mgr., at last accounts. Lands, sundry claims 4 miles from Brebo, the nearest railway station, opened by a 60' shaft. Was developing, with a small force, 1908. Idle.

BRITISH BORNEO EXPLORATION CO., LTD.

BORNEO

Secretary and offices: H. W. C. Dermer, 19 St. Swithin's Lane, London, E. C., Eng. E. Davis, chairman; K. Ettlinger, E. W. Janson, H. White and W. P. Rivett-Carnac, directors. Organized in England, Feb. 25, 1905, capitalization £500,000, in 425,000 ordinary and 75,000 founder's shares of £1 each; all issued and fully paid. The ordinary shares receive 80% of available profits, the founders taking the remainder. The company was organized to purchase from the British North Borneo Co. and the British Borneo Syndicate, Ltd., exclusive mining rights for 50 years in British North Borneo, for 100,000 fully paid founder's shares and 400,000 ordinary shares credited as 15s. paid. In April, 1908, 25,000 founder's shares were surrendered by the British North Borneo Co. and converted into ordinary shares. The accounts for year to Feb. 29, 1912, submitted July 17, 1912, showed sundry expenditures £54,751, mining expenditure £46,443, cash £22, debtors £266, creditors £3,443.

Property comprises a copper-bearing area at the Karang river, which was opened up and 80,000 tons of ore proved, but the quality was poor. A scheme of reconstruction was brought forward, Dec., 1911, but sufficient support not being received, the scheme was abandoned. Operations are now suspended.

BRITISH EXPL. OF AUSTRALASIA, LTD. WESTERN AUSTRALIA

Owned the Croydon Copper mines, 25 miles from the port of Balla-Balla. Company dissolved Sept. 27, 1912.

BRITISH PORPHYRY COPPER SYN., LTD.

NORWAY

Secretary and offices: F. F. Fuller, 638 Salisbury House, London, E. C., Eng. R. C. Richards, J. B. Whyte, T. S. Marshall, directors. Company organized Sept. 16, 1912, in England. Authorized capital £26,250 in 25,000 preferred shares of £1 each, and £25,000 ordinary shares of 1s. each; 2,502 preferred shares are issued and called up. Preference shares are entitled to a fixed cumulative dividend of 10%, and, after payment of dividends aggregating 100%, surplus profits are divided equally between both classes of shares.

Property comprises copper-mining lands at Kipperfjord, Norway, held under option by the Lawmot Syndicate, Ltd. This option was purchased for £2,250, payable £1,000 cash and £1,250 in fully-paid shares of 1s. each, also the right to March 1, 1914, to take up not exceeding 20,000 preference shares.

BRITISH SOUTH AFRICA CO.

RHODESIA

Office: 2 Lon'on Wall Bldgs., London, E. C., Eng. Information offices: 138 Strand, London, E. C., and 140 Buchanan St., Glasgow, Scotland. Duke of Abercorn, K. G., pres.; J. Rochfort-Maguire, vice-pres.; Otto Beit, P. Lytleton Gell, J. P., Sir L. S. Jameson, Bart., C. B., Hon. Sir Lewis L. Michell, C. V. O., J. Henry Birchenough, C. M. G., Marquess of Winchester, directors; Douglas E. Brodie, sec.; A. H. Ackermann, resident mg. engr. Company was incorporated Oct. 29, 1889. In Oct., 1911, the British South Africa Company's Mines Development Co., Ltd., was formed in order to develop the mining interests of the company. Present authorized capital is £9,000,000 in 9,000,000 shares of £1 each, having been increased at intervals from £1,100 in 1890; 8,056,907 shares are issued and fully paid. Bonds, £1,250 first 5% and £20,154 second-mortgage debentures.

Lands, about 400,000 sq. miles. The company acquired: (a) from the Central Search Association, Ltd., the Rudd-Rhodes Concession, consisting of the mining rights over the territory of the King of Matebeleland; the Central Search Association being entitled to one-moiety of the net receipts, which right was subsequently merged in the United Concession Co., Ltd., and capitalized in 1895 by the issue of 1,000,000 fully-paid shares of the company; (b) mining rights over the territory of the chiefs Khama and Gungunhana; (c) administrative power over the whole British sphere north of the Zambesi and west of Nyassaland; (d) rights of the African Lake Co. (acquired in 1894); (e) and also through the Victoria Power Falls Co., in which this company holds a large interest, the right to develop electrical energy at Victoria Falls.

The company adopted the name "Rhodesia" to describe all the territories under the company's administration; the portion south of the Zambesi being described as Southern Rhodesia. Company controls B'wana M'Kubwa and several other important South African copper properties by ownership of a large stock interest. Company is a gigantic corporation, which owned many copper fields and properties, some of which have been developed and floated as subsidiary corporations.

BRIXLEGG; K.K. BERG- UND HÜTTENVERWALTUNG. AUSTRIA

Mine and works office: Brixlegg, Tyrol, Austria. Gustav Kroupa, gen. mgr.; Vincens Svoboda, supt. and mg. engr.; Cayetan Hummel, smelter supt.; Josef Link, purch. agt., at last accounts. Mining lands are 22.5 hectares, carrying chalcopryite and sphalerite ores, with occasional tetrahedrite. The smelter has blast and reverberatory furnaces, argentiferous tetrahedrite and sphalerite ores being smelted separately. Matte is brought up to about 30% copper tenor, in Pilscher furnaces, there roasted in 2.1x9-meter reverberatories, in charges of 10 tons of roasted ore, 2 tons of roasted fines, 1 ton of raw fines and 1.9 tons quartz. Copper bottoms are leached with sulphuric acid, and works include a small bluestone plant. Smelter also has a refining furnace for casting anodes.

The electrolytic refinery, built 1885, was one of the earliest in existence. This has 60 tanks arranged in 6 series, electrolyte circulating in terraces and being pumped back for recirculation. Electrodes have multiple arrangement and current density is 240 amperes, or 20 amperes per square meter. The anode sludge carries about 10% copper, 10% silver, 15% zinc and 25% antimony. Product is electrolytic copper of 99.7% assay tenor.

Production is about 285,000 lbs. blister copper, 15,428 lbs. electrolytic copper and 125 tons bluestone, containing about 600,000 lbs. fine copper, 100 kgs. silver and 5 kgs. gold per year.

BRONCES; COMPAÑIA ESPLOTADORA LOS.

CHILE

Presumably dead. See Vol. X. Formerly at Los Condes, Chile.

BRONCES; SOCIEDAD MINERA DE LOS.

CHILE

Presumably dead. Letters unanswered. See Vol. X. Office and mine: La Serena, Coquimbo, Chile.

BROUGHTON COPPER CO., LTD.

ENGLAND

Works office: Widnes, Lancashire, England. Property is a small copper reduction plant.

BRUCE & CHESSOR MINING CO.

BOLIVIA

Mine office: Oruro, Bolivia. Has steam power and employs about 100 men when working, producing native copper concentrates (barilla) from conglomerate beds. Idle since the tin "boom," in 1911, led so many small operators to desert their copper claims for those of the higher priced metals.

BRUGER y CA.

BOLIVIA

Office and mine: Toledo, La Paz, Bolivia. Mine has steam power and the firm was a small producer of barilla copper. Idle in 1912, like many other producers of this region who have deserted copper for tin mining on account of the higher price and greater profit of that metal.

BRUSTAD MINES, LTD.

NORWAY

Letters unclaimed at former London office. Mine office: Eidsvold, Hedemarken, Trondhjem, Norway. G. T. Broadbridge, sec. Organized Feb. 11, 1905, under laws of Guernsey, as a second reconstruction of Golden Mint Mines, Ltd., capitalization £120,000, shares £1 par. Mine, 8 miles east of Lake Mjösen and 50 miles north of Christiania, was first worked very early in the nineteenth century. Development is by tunnel, showing a vein of 30' width, carrying copper and gold values. Has a mill with 15 stamps, 3 Frue vanners, Wilfley tables and an Elmore concentrating plant. Mine evidently has made some considerable production in the past, as evidenced by large slag piles.

BUCHANAN COPPER MINES, LTD.

QUEENSLAND

Mine office: Mungana, Lynd Co., Queensland, Australia. Lands, at Welcome creek, 15 miles west of Mungana, have but slight development. Idle several years and apparently moribund.

BUDGERY KING COPPER MG. CO.

NEW SOUTH WALES

Mine office: Hermidale, Canbelego Co., N. S. W., Australia. Organized Nov., 1907, under laws of New South Wales, capitalization £6,000, shares £5 par. No trace of operations secured and presumably idle.

BUDGERY MINES, N. L.

NEW SOUTH WALES

Office: 23 Equitable Bldgs., George St., Sydney, N. S. W., Australia. Mine office: Cobar, Robinson Co., N. S. W., Australia. M. J. Corbett, chairman; R. A. Sorensen, mgr. Organized 1906, under laws of New South Wales, capitalization £80,000, shares 10s. par. No returns secured.

Lands, leasehold, 3 miles from Hermidale, carry 6 volcanic vents, 1 under development, filled with tuff near surface, carrying, to depth of 200', cuprite in particles from pin-head to man-head size, succeeded by a large body of covellite, up to 86' width, with 45° pitch to the south, which in turn is succeeded on the bottom level, at 400', by chalcopyrite, carrying about 1.5 dwts. gold per ton in a broken formation. Company claimed, 1907, ore reserves of 40,000 tons on the 164' level. Ore produced, to end of 1906, shipped to Great Cobar works, averaged 11.5% copper. For 1907, production was 1,920 long tons of ore raised, 797 tons of dressed ore, sold for £3,695, yielding 200,000 lbs. fine copper.

In 1912 property was producing about 60 tons per week of 6 to 10% ore, a small part of which came from hand-sorting the dumps of low-grade ore, all shipped to the Cobar smelter.

BUDGERYGAR MINING CO., N. L.

NEW SOUTH WALES

Office: Nyngan, N. S. W., Australia. Mine office: Hermidale, Canbelego Co., N. S. W., Australia. Organized 1907, under laws of New South Wales, capitalization £5,000, shares 2s. par. For 1909, revenue was £2,066 4s. 4d. and expenditures were £2,055 18s. 11d., showing, according to Micawber, that the company must be prospering. Lands, on Wilga Downs, show a vein of 9 to 47' width, low-grade where widest, with kaolin gouge, carrying disseminated chalcocite, assaying 2 to 22% copper, with small gold values. Development is by 2 shafts, 200' apart, of 271' and 353'. Presumably idle. No returns secured.

BUDGERYGAR NORTH.

NEW SOUTH WALES

P./O.: Hermidale Canbelego, Division N. S. W. Property developed by 220' shaft, with workings on vein. Ninety-five tons shipped to Great Cobar smelter, 1911, yielded 12 to 24% copper, with low value in gold and silver.

BUERRERO DE VALLE HERMOSO; CIA. MINERA. ARGENTINA

Office: Santiago de Chile. Mine at Mendoza, Argentina. No trace of operations secured.

BUFFELS RIVER MINE.

NATAL

A syndicate was formed, 1905, to exploit copper deposits on the Buffels river, on the border of Natal and Zululand, S. A.

BUITRON; CIA. DEL FERROCARRIL y MINAS DEL.

SPAIN

Mine office: Zalamea la Real, Huelva, Spain. Property is operated by United Alkali Co., Ltd., under lease, and is described under title of that company.

BUNDARRA MINE.

NEW SOUTH WALES

Mine office: Bundarra, Hardinge Co., N. S. W., Australia. Max Gortler, owner; A. C. Julius, mgr., at last accounts. Lands, in the Tingha division of the Peel & Uralla mining district, show a 4 to 8' vein of sulphide ore, deepest workings being 350'. Has a smelter with a small reverberatory furnace, making 45% matte. Production, 1907, 250,000 lbs. fine copper. Employed about 50 men, 1910. No recent returns secured.

BURNIE MINES.

TASMANIA

Idle. Mine office: Cuprona, Wellington Co., Tasmania. Leigh J. Hancock, supt., at last accounts. Property formerly was owned by Burnie Copper Mines. Lands, 205 acres, partly freehold, including the town site of Cuprona, near the Blyth river. Mine, known as the Copper King, has a 155' shaft, sunk in the footwall. At 150' depth the north ore shoot had disappeared, and the south oreshoot showed decreased values. Has a fair power equipment, and employed 6 men at last accounts. A little ore shipped, 1906, to New South Wales smelters, returned 25% copper; production, 1906, was 236,880 lbs. fine copper.

BURRA BURRA COPPER MG. CO., N. L.

SOUTH AUSTRALIA

Office: Eagle Chambers, Adelaide, South Australia. Mine office: Burra Burra, Burra Co., South Australia. T. B. Gall, chairman; V. Lawrence, sec.-treas.; Wm. West, gen. mgr.; Jas. S. Pryor, supt., at last accounts. Organized 1901, under laws of South Australia, capitalization £120,000, shares £1 par, 10s. paid in; issued, £95,173.

Lands, 672 acres, freehold, with mineral rights to 11,065 acres adjoining. Mine was opened Sept., 1845, employed 1,170 men, 1859, and was closed 1877, operations, 1845-77, yielding 51,622 long tons fine copper, valued at £4,749,224. Former company paid £800,000 in dividends, on a paid-up capital of only £12,320. Ore produced in early days averaged

about 20% copper, after selection, with average output of 5,000,000 to 7,000,000 lbs. fine copper yearly.

Property shows 3 veins, with northwest trend, and dip of 70° northeast. Country rocks are limestone, argillaceous slates and argillaceous sandstones, with a footwall variously reported as serpentine and altered limestone. Property shows 3 veins, known as the Kingston, Sanders and Tinline. Development is by 5 tunnels, of 183', 300', 330', 420' and 600', and by several shafts, Morphet's, of 600', being the deepest. Ores in upper levels were cuprite, malachite, azurite and native copper, occurring in very rich but irregular bunches, the lower levels showing bornite and chalcopyrite.

The mine was reopened, 1901, by present company, but ore averaged only about 2% copper and a smelter was being built, 1907, at Kooringa, near the mines, to treat the slags from the old Burra Burra smelter, said to average 2 to 2.5% copper. Production, 1903, was about 225,000 lbs. fine copper. Has steam and electric power. Idle since 1904.

During the last copper boom the company was paid £7,250 for an option never exercised, owing to the sudden decline in the price of copper. There is now a likelihood of the old property being unwatered and an attempt made to develop the sulphide ores which old miners say exist beneath the rich bonanza ore.

BWANA M'KUBWA COPPER MINING CO., LTD.

RHODESIA

Secretary and office: T. Donald, Salisbury House, London, E. C. England. Mine office: Bwana M'Kubwa, Rhodesia. Col. C. H. Villiers, chairman; H. L. Stokes and A. Stewart, directors; Jas. Cook, gen. mgr.; T. B. McGhie, metallurgist. Organized March 16, 1910, under laws of Great Britain, capitalization £600,000, shares 10s. par; 921,847 issued; controlled by ownership of £250,000 of fully-paid vendor's stock by Rhodesia Copper Co., Ltd. March, 1910, 350,000 shares were sold for cash, of which amount British South African Co. owns 116,666 shares, and 233,334 were allotted to shareholders of Rhodesia copper & General Exploration Co., Ltd., at par, of which one-fourth was called March, 1912, and option on three quarters extended a year at 12s. 6d. per share, instead of par. In 1912, the company paid 30,000 shares and gave option until March 31, 1914, on 51,666 shares at par, for additional property. Expenses for year 1912 were £29,236. Treasury had assets £338,060, cash £90,896, June 30, 1912.

Property consists of the Bwana M'Kubwa mine, 450 claims; 6 farms in the vicinity of the mine, with total area 36,000 acres, 120 mining claims with iron deposits, the right to peg 200 mining claims in northern Rhodesia. Lands were taken over from the Rhodesia Copper Co., Ltd., which floated this company. The Bwana M'Kubwa mine is 7 miles south of the Congo border, 100 miles from Star of Congo mine. The railway crossing the property gives direct service to Beira, 1,450 miles away. The surface shows extensive remains of ancient workings extending over half a mile. Country rock is quartzite, schist and sandstone, carrying 2 parallel veins, about 15' apart, traced one-half mile, main vein being 30" to 5' in width, with average of 4', having copper impregnations for 40' in sandstone walls; such impregnations are claimed to average 4 to 5% copper. Property is developed by a 572' shaft with extensive workings on various levels, especially the 350' and 450', which show continuous ore for 2,000' along the vein. The lode is 50' wide, embracing the 2 veins noted and on the 450' level shows a central ore streak 5' wide and continuous through the workings, averaging 14% copper. Crosscuts at intervals along the drift show a total width of 50' of 5% ore. Sampling by the manager at 4 points gave 40' of 6.37% copper, 28' of 2.86% copper, 4' of 6% copper and 3½' of 5%

copper. The mine contains 50,000 tons of 12% ore proven above the 350' level and a considerable tonnage between this and the 450' level.

In 1912, shaft was deepened 23' and 1,175' drifting and 239' of winze work was done. The company has installed a 75-ton concentrating plant made by the Wilfley Machinery Co. and the first shipment of concentrates, 296 tons, was made in June, 1913. Experimental tests by the Siemens-Halske leaching treatment, with electrolytic precipitation, have proved successful and a 200-ton plant has been ordered.

An examination by S. J. Speak, July, 1913, showed that former estimates were excessive owing to porosity of ore, which is 27 cu. ft. instead of 16 cu. ft. per ton. His figures are given above. He recommended stopping water concentration, says direct smelting is impracticable, and advises development of low-grade orebodies below zone of oxidation, to prove up indicated ore.

Property considered valuable and management apparently good, but excessive railroad freights will prevent property from paying dividends until better rates are secured.

CABEZAS DEL PASTO; MINAS.

SPAIN

Owned by Sociedad Colectiva C. y J. Sundheim, at Valerde del Camino, Huelva, Spain, but leased to United Alkali Co., Ltd., and described under title of latter.

CABILDO; FUNDICIÓN DE.

See Basilio Caceres.

CADIA COPPER M. & SM. CO., LTD.

NEW SOUTH WALES

Office: Newcastle, N. S. W., Australia. Mine office: Cadia, Bathurst Co., N. S. W., Australia. Alexander Ross, chairman of board. Organized Sept., 1908, as a reconstruction of Cadia Copper Mining & Smelting Syndicate, with capitalization £120,000, shares £1 par.

Lands, held under lease from the Scottish-Australian Mining Co., Ltd., are on Cadiangulong creek, 15 miles south of Orange. Property has been a very small producer of selected ore, in the past, and had a smelter, 1888, which treated 4,000 to 5,000 tons of ore. Property carries 2 parallel veins, one, known as the Cadia or Iron Duke, of 12 to 9' width, carrying oxidized ore, with quartz gangue, up to 13% in copper tenor. Mine was estimated, 1912, to have reserves of 89,124 long tons of 7% copper ore. The 172' Chilcott shaft develops a vein of about 5' width, carrying sulphide ore, and was estimated, 1910, to have developed 1,650 long tons of 4.6% sulphide ore. Negative results were secured from 1,080' of diamond drilling, done 1910. Mine lacks rail connections, and wagonroads to Carcoar and Orange in poor condition for years, are to be rebuilt by the Canobolas Shire council. Mining development was resumed, 1912, with favorable results.

The smelter, built 1906-07, has 4 reverberatory furnaces and a second hand blast furnace bought from the Great Cobar. About 200 men are employed when working full force. Production, 1906, was 1,043,840 lbs. fine copper, and a little production was secured in 1908. The smelter resumed operations, 1913, turning out 2½ tons of 57% matte per shift. Company installed electric power, 1912.

CADIA EXTENDED MINE.

NEW SOUTH WALES

Idle. Office: Newcastle, N. S. W., Australia. Mine office: Cadia, Bathurst Co., N. S. W., Australia. Lands on Waterfall creek, about 1½ miles from Cadia, known formerly as the Little Canobolas mine, show a large outcrop of gossan. A number of shallow shafts show native copper, carbonate and sulphide ores and tetrahedrite. Formerly considerable cupri-

ferous iron ore was taken from this mine for fluxing the ores of the Cadia property. The smelter has a small water-jacket blast furnace, blown in Nov., 1909. Property considered promising.

CALA; SOCIEDAD ANONIMA MINAS DE.

SPAIN

Office: Bilbao, Spain. Mine office: Cala, Santa Olalla, Huelva, Spain. Conde de Rodas, pres.; Don Emilio Vallejo, sec. Organized Aug. 31, 1900, under laws of Spain, capitalization 15,000,000 pesetas. Property is a group of 8 mines, area 346 hectares, at Cala, carrying magnetic iron ore and cupriferous pyrite, orebodies apparently being extensive. Company is supposed to have built a 97-kilometer railroad, from the mines to San Juan del Aznalfarache, on the Guadalquivir river, in the adjoining province of Sevilla. Idle several years.

CALAMA; COMPAÑIA DE MINAS i FUNDICION DE.

CHILE

Office: L. E. Browne, Gerente, Casilla 1,155, Valparaíso, Chile. Mine office: San José del Abra, Calama, Antofagasta, Chile. Works office: Calama, Antofagasta, Chile. Organized April 16, 1903, capitalization 600,000 pesos, shares 100 pesos par, and reorganized April 31, 1903, under laws of Chile, with capitalization £250,000, shares £1 par.

Lands, 2 kilometers east of Calama and 238 kilometers from the port of Antofagasta, are in the Chilean desert, with hard living conditions and high costs for subsistence and transportation. Property includes the Rosario del Llano, San Manuel, San Gregorio and Ibacache mines, which show considerable quantities of 3% cupriferous pyrite, which can be considered as ore when a railroad is near. The Rosario del Llano mine, at Chuquicamata, is the principal producer of the district, and is opened to depth of 160 meters and for length of 200 meters.

Equipment includes a hydro-electric power installation, with a 260-h. p. turbine direct-connected to a 250-h. p. dynamo, taking water from the Rio Loa, 1 mile distant. It is planned to greatly enlarge this plant, and completely electrify the Chuquicamata properties and the smelter. There is a well-equipped machine shop, with a small iron cupola, employing about 60 men.

The mill has a crusher, No. 4 Ball mill, 2 Ferrari tables and 3 jigs, and works dry, this being considered preferable to wet concentration. Ore milled averaging about 5% copper and up to 85% silica is used for converter linings. Concentrates are briquetted.

The smelter, known as Los Chorrillos, built 1907, has 3 reverberatory calciners, a furnace for calcining limestone used for briquetting, and a new 100-ton 42x144" blast furnace having 2 series of jackets, with rectangular forehearth. Slags are hauled by mules. The converter department has no dust chamber, gases going direct to iron chimneys. There are 2 stands, with four 1.7x2.1-meter and four 1.7x2.4-meter shells, equipment including cylindrical pans and a pug mill for linings, operated electrically. Ores smelted average about 10% in copper tenor, but there is a shortage of sulphide ore, and ores smelted are both silicious and aluminous, necessitating heavy coke charges, 1 ton of coke being required for smelting 1.6 tons of charge, and the limestone used for fluxing carries much baryta. Losses are very high owing to lack of dust flues and chambers and there also are heavy losses in slags, which average about 0.5%, owing to the very refractory nature of both ores and fluxes. Smeltermen receive the high average wages of 4 pesos per day. The smelter power plant includes electric power and a producer-gas plant, with a 320-h. p. Fielding & Platt gas engine, the entire gas plant and engine costing 95,266.81 pesos. There also is a Riedler air compressor, and Nos. 6 and 7 Wilbraham-Green rotary blowers. Production was 1,717,035 lbs. fine copper in 1903; 3,480,085 lbs.

in 1907; 3,030,413 lbs. in 1908, and 3,000,000 lbs. in 1909. The property is well handled, despite a number of serious drawbacks. Employed 200 men, and was producing 1,000 long tons ore monthly, averaging about 13% copper, at last accounts, March, 1913. Mr. Browne writes in August that "we are just organizing the works on the mine and smelter and for this reason are not yet prepared to make any report on the properties."

CALCANTE MINES.

ITALY

Mine office: Traves, Torino, Italy, Giulio Elter, owner. Property, in the western Alps of Piedmont, formerly was a considerable producer of nickel, cobalt and copper, latter from chalcopryrite, found in stratified Archaean rocks. Idle several years, but is to be reopened by crosscut tunnel at last reports, June, 1913.

CALDERON; MANUEL.

BOLIVIA

Office and mine: Coro Coro, La Paz, Bolivia. Property is the San Agustin mine, worked in a primitive way, which was a small producer of native copper from conglomerate strata, some years ago.

CALVERT GOLD & COPPER CO.

NEW SOUTH WALES

Mine office: Millthorpe, Bathurst Co., N. S. W., Australia. John Mills, mine mgr., at last accounts. Lands, 100 acres, near the Cadia mine, in the Forest Reefs district, carrying a vein with northwest strike. Development is by 2 shafts, deepest 121', on a vein of about 15' width, carrying a 3' paystreak assaying up to 16% copper, 10 oz. silver and \$30 gold per long ton. A general sample of the ore at bottom of main shaft gave an assay of 12.1% copper, 5 oz. 4 dwts. silver, and 1 oz. 5 dwts. gold per long ton. Several parcels of ore shipped returned about £20 per ton net. Equipment includes a hoist. Suspended operations, early 1910, planning disposal of machinery plant and is presumably liquidated.

CAMBRIA COPPER & GOLD MINES CO.

QUEENSLAND

Office and mine: Booldoonda, Queensland, Australia. Property is a leasehold, owned by H. Saltrick, et al., showing highly auriferous copper ore. Development is by a 95' shaft. Mine was making regular, though small shipments to the Mount Perry smelter, late 1912, ore averaging about 25% copper, 15 oz. silver and \$25 gold per ton.

CAMPANARIO; SOCIÉTÉ DES MINES DE CUIVRE DE.

SPAIN

Address: Anatole Olivier, sec., 5 Rue du Helder, Paris, France. Mine office: Valverde del Camino, Huelva, Spain. Baron A. de Dietrich, chairman; Charles Chalupt, Henri Lemaitre, Max Lyon, Jules Strap, directors; Arthur Marshall, gen. mgr. Organized Dec. 20, 1906, under laws of France, capitalization f5,000,000, shares f500 par. Lands, 87 hectares, including 6 old mines, estimated by company to carry 13,000,000 metric tons of ore, and actually having about 250,000 tons of low-grade cupriferous pyrite in sight. Equipment includes an elaborate and extensive surface plant. The property produces about 30,000 tons of pyrites annually, ore being first treated by lixiviation and cementation to recover its copper content and residue sold for its sulphur.

CAMPIGLIA ESTATES, LTD.

ITALY

Secretary: J. F. Drake, 95 Cannon St., London, F. C. England. Mine office: Campiglia, Marittima, Tuscany, Italy. Sir F. J. Mirrieles, K. C. M. G. and W. B. Butler, directors. Organized July 26, 1911, capitalization £22,000, in 2,100 preferred shares and 19,900 common shares of £1 each; 1,604 shares of preferred and all common shares being issued and fully paid. Company succeeded the Etruscan Copper Estates, Ltd., of unsavory memory.

Lands, 1,500 acres, include the old Lanzi, Temporino and Rombola mines. These properties show numerous and extensive old workings, cer-

tainly as ancient as the Roman era, and probably dating back to Etruscan times. During the nineteenth century various Italian, French and English companies attempted, without success, to work these mines, which are honeycombed by ancient inclines, adits, drifts, winzes and stopes. The property was examined by C. Algernon Moreing, Edgar P. Rathbone, R. J. Frecheville, Alaxander Hill and J. H. Fawcett, all of whom reported unfavorably.

Development is by shafts, deepest being the Govett at 330'. This shaft shows extensive old workings, with little ore. The 250' Coquand shaft makes a similar showing. The Marchant shaft, about 100' deep, shows a little chalcopyrite, disseminated in pyrite, with amphibole gangue. While the property is called a copper mine, it seems the practically unanimous opinion of experienced engineers that the principal values, doubtful as these may be, are in lead and zinc, rather than in copper.

The reduction works, at Rombola, are connected by rail with the mines at Lanzi and Tempolino. The plant includes a concentrator and smelter, latter having a copper furnace of 100 tons nominal daily capacity.

CANBELEGO COPPER MINES, LTD.

NEW SOUTH WALES

Office: Cobar, N. S. W., Australia. Mine office: Hermidale, Canbelego Co., N. S. W., Australia. Organized March, 1909, capitalization £12,500, shares 5s par, as successor of Canbelego Copper Mining Co., Ltd.; issued, £5,000, fully paid. Lands carry considerable timber, available for fuel and mining use. Mine has 2 parallel veins, with aggregate reported width of about 40', showing occasional stretches of good ground, the principal vein apparently being of about 5' average width. Main shaft is 300', showing sulphide ore from which selected samples assayed 18% copper. Shipments to the Great Cobar smelter, 1910, averaged 12% copper.

Mine was shut down, July, 1911, but unwatered and reopened, June, 1912, and stoped from the 200' and 300' levels, 145 tons being shipped up to August of that year. New boilers and hoist were installed, 1912.

CANZA MINE.

PERU

Office and mine: Canza, Ica, Peru. A. Garland & Co., owners, at last accounts. Is an old property, once a considerable producer. Numerous cupriferous veins, in igneous rocks, carry bodies of ore that are oxides and carbonates above and sulphides below, 3 principal veins being opened to depths of 700' on the Adelaide, 1,000' on the Consolador, and 500' on the Tapadita, the latter mine having been the largest producer in the past. Idle several years.

CAPE COPPER CO., LTD.

CAPE PROVINCE

Secretary: P. J. Franks, 9 Queen St. Place, London, E. C., England. Mine office: O'okiep, Little Namaqualand, Cape Province; James Crozier, gen. supt. Works office: Briton Ferry, Glamorganshire, Wales. John E. Champney, chairman; John Taylor, J. M. V. Money-Kent, T. Blair Reynolds and Marcel Paisant, directors; John Taylor & Sons., mgrs; J. Crofts, chief engr.; N. E. Moffatt, traffic mgr.; H. Phillips, smelter supt.; Dr. A. de W. Allan, chief surgeon. Organized April 30, 1888, as a reconstruction of Cape Copper Mining Co., Ltd., under laws of Great Britain, capitalization £750,000, in £150,000 cumulative 6% preferred shares and £600,000 ordinary shares, par £2; issued, £690,000. Annual accounts are made up to April 30, at the Cape, and to August 31 in London, and are submitted in December. Separate accounts are kept for the Tilt Cove mine.

Profits have ranged from a net loss of £6,493 17s. 9d. in 1902, owing to interruption of business through the Boer war, this being the only year in which no profit was earned, up to the maximum profit of £379,910 in 1907, with profits of £144,366 15s. 8d. in 1908; £90,223 19s. 5d. in 1909;

£124,659 16s. 9d. in 1910; £60,862 7s. 4d. in 1911, and £180,494 in 1912, giving total net profits to Aug. 31, 1912, of £3,879,461 14s. 5d., in addition to which the Cape Copper Mining Co., Ltd., paid dividends, 1864-88, aggregating £1,324,375. The present company paid dividends to Jan. 1, 1913, of £2,868,750. Dividends, 1912, were 2s. 6d. each on preferred and ordinary shares.

The Tilt Cove mine has been abandoned by the company. This mine is the property of the Tilt Cove Copper Co., Ltd., and was held under 99-year lease of £4,400 per annum, terminated Aug. 31, 1913. Net profits of the Tilt Cove, divided equally, were £15,072 in 1911.

The company is entitled to one-half of the net profits of the Briton Ferry Chemical & Manure Co., Ltd., profits from this source being £4,340 9s. 9d. in 1911.

Principal mines of the company are in Little N maqualand, Cape Colony, lands including about 280 acres of freehold and a few leasehold tracts. The first mines were opened, 1856, by Phillips & King, and were taken over, 1860, by the predecessor of this company. Principal mines 1913, are the O'okiep, NababEEP and NababEEP North, with a number of idle mines and prospects. Ore contains chalcopyrite, with limited quantities of bornite and chalcocite, intimately associated with pyrite. These irregular deposits of massive pyritic ore are associated with basic igneous dikes, intrusive in granite and gneiss.

The O'okiep mine, long the principal mine, has dwindling ore reserves, estimated, 1912, at only 6,000 long tons, though production has remained practically unchanged for some years and was 16,986 long tons of 12.4% copper tenor in the fiscal year 1912. Production for 4 months, May to Aug., 1913, has been 2,637 tons of ore averaging 14% copper. The O'okiep East mine, showing a limited amount of low-grade ore, is idle.

The NababEEP mine, 5 to 6 miles west of O'okiep, opened 1890, includes the NababEEP South, now the principal producer, and has increasing reserves, estimated, April 30, 1912, at 130,000 tons of 5% ore, production for year ending that date being 55,970 long tons of ore assaying 5.27% copper, of which amount 10,475 tons was secured from the capping, mainly by quarrying. The mine is developed by tunnels and a shaft. Output for 1910-11, 55,202 tons, with reserves of 172,200 tons. Production for 4 months, May to Aug., 1913, was 11,458 tons of ore averaging 3.6% copper.

The NababEEP North mine, supposedly nearly worked out some years ago, for the fiscal year 1912 yielded 5,035 tons of 5.71% ore, obtained mainly from opencast workings.

The Narrap mine, about 1 mile east of the O'okiep East, with somewhat similar ore, has ore reserves estimated, 1912, at 24,000 tons of 4% copper tenor, and yielded 6,195 long tons of 4.03% ore in 1912. This property has an aerial tram, electric hoist and ore crusher. The Narrap South mine, opened to a depth of 120', is without important developments.

The Spektakel mine, 28 miles west of O'okiep, is an idle, old mine, having orebodies both in granite and basic intrusive rocks.

The Carolusberg mine, about 6 miles southeast of O'okiep, opened by tunnel, and the Carolusberg East mine, about 2 miles east of the Carolusberg, are both idle.

Other idle properties include the Flat mine, 4 miles north of NababEEP, which was reopened, 1907; the Kopperberg mine near the Carolusberg, about 5 miles southeast of O'okiep, and the Coetzee mine, which was abandoned and plant removed several years ago.

Electric power has been substituted for steam throughout the principal

works, the central power station at the O'okiep mine having 2 suction gas engines, with the old steam plant held in reserve for emergencies.

Reduction works at the mines include smelters at O'okiep and NababEEP, the former closed down 1912, the ore from both mines being treated in the enlarged NababEEP plant, 1913. Production of the smelter is matte of 48 to 50% copper tenor, shipped to the Briton Ferry works for resmelting and refining.

The company owns a 99-mile railway, with 16 miles of sidings, running from O'okiep to Port Nolloth, where there are docks, wharves, cranes, tugs and lighters for the receipt and dispatch of freight. The line is laid with 32, 37 and 50 lb. rails. Freight traffic for fiscal year ending 1912 was 92,343 long tons. The company also owns 4 tugs at Port Nolloth. A tram line connects the principal mines with the smelters.

In addition to its mines in South Africa, the company has an option on the Baie Verte mine, in Newfoundland. Properties in the United States, formerly held under option, were surrendered, 1910, but the company secured title to some claims in Alaska, on which no work is planned until a railway reaches the district.

The company has also taken a lease on the Rakha Hills, or Rajhoda property, at Surda, India, and spent £32,058 on its development. This mine shows an extensive belt of cupriferous schist, in blanket formation, with seams of copper ore of 2 to 6% tenor. Development is by several shafts, the Gladstone shaft showing a fair amount of ore of about 4% copper tenor. During 1910-12, a number of boreholes were drilled with a total of 9,700', proving the copper belt for nearly $1\frac{1}{4}$ miles. Development work to March, 1913, amounted to 10,952', blocking out ore reserves of about 190,000 tons. The main shaft 666' deep, the lower 422', an incline, shows an improvement in width and value on lowest, or 5th level, July, 1913. New work to the extent of 1,109' was done at the mine during the 3 months ending June 30. No. 4 shaft, three-fourths mile from the main workings, was sunk 87', showing 4' 3" of 5.12% copper ore; 350 tons were shipped. This property is considered promising.

The Briton Ferry smelter, which is the largest in Wales, in addition to treating the company's own ores, does a general custom business, smelting the ores of the Namaqua Copper Co., Ltd., under contract, treating 13,879 long tons of Namaqua ore and 883 tons of Namaqua matte of 54% copper tenor in 1906. The Briton Ferry works are located on the Great Western and Rhondda railways, also having canal connection with Swansea, receiving ores mainly by rail. The works have revolving cylindrical calciners up to 80' in length, heated by gas, and four 70-ton blast furnaces, making matte. Ores are smelted, without calcining, in reverberatories, to a 76% white metal, which is refined by the Nichols direct method, by which some of the white metal is calcined and mixed with uncalcined white metal, the consequent reaction eliminating the remaining sulphur. Tilt Cove sulphide ores are burned in kilns for their sulphur contents, fumes going to an acid plant, which makes 30,000 tons of chamber acid yearly. The works have a double concentric chimney of steel and concrete and a telpherage plant for handling material. In 1906 the Briton Ferry works produced the equivalent of 10,212 long tons of fine copper, of which 733 tons were turned out as bluestone, and output was increased, 1909-10. The works include an electrolytic refinery, constructed 1912.

Production of the African mines has been as follows: 8,960,000 lbs. fine copper in 1901; 6,061,000 lbs. in 1902; 10,371,200 lbs. in 1903; 12,264,000 lbs. in 1904; 11,256,000 lbs. in 1905; 8,825,600 lbs. in 1906; 9,475,200 lbs. in 1907; 10,035,200 lbs. in 1908; 10,404,800 lbs. in 1909; 9,867,200 lbs. in 1910. This output

represents about three-fourths of the company's total production, the balance coming from the Tilt Cove mine. The management has been criticized occasionally for not adopting the latest methods and machinery, but the circumstances of the case have precluded as rapid advances in this direction as would be warranted were the company mining enormous orebodies. The record of the Cape Copper Co., Ltd., as a steady dividend payer, for 40 years past, is perhaps the best answer to such criticisms, founded upon a partial misconception of the facts. The company issues full monthly reports to stockholders that are models and could be imitated by other companies to the advantage of the investor.

CAPILLITAS CONSOLIDATED MINES, LTD.

ARGENTINA

Secretary, G. Hillsdon, 579 Salisbury House, London, E. C., England. Mine office: Cerro de Capillitas, Tucuman, Argentina. Works office: Muschaca, Catamarca, Argentina. P. Viteau, gen. mgr.; B. Wolf, chairman; Jules Fribourg, E. d'Eon Jobert and Gaston Poulain, directors. Organized April 24, 1909, under laws of Great Britain, capitalization £600,000, shares £1 par; issued, £416,104, fully paid. Was a reconstruction of the Capillitas Copper Co., Ltd. Accounts to June 30, 1912, submitted Dec. 31, 1912, showed cash of £37,391, and debts of only £364, with £2,940 calls in arrears.

Property comprises the Capillitas and Atajo copper mines and the Pilciao and Constancia smelters, all in Catamarca province, Argentine Republic. The Capillitas group, of about 20 properties, in the Sierra Capillitas district of Andalgalá, shows 12 veins, principal development by original owners having been on the Restauradora, Rosalia, Carmelita, La Grande and Ortiz mines, reopened, under the former management, by 2 tunnels under the old workings of La Grande and by one tunnel in the Restauradora. The Atajo mines are 6 miles northwest of the Capillitas group. Former company claimed ore from development work averaged about 15% copper, with good gold and silver values, but the smelter returned an average of only 7% copper, 8 oz. silver and 0.7 oz. gold per long ton. These mines have been worked spasmodically by local capital since 1850. The Restauradora mine has upwards of 3 miles of workings on a vein of 18" to 6' width, ore occurring irregularly, in shoots, being mainly chalcopyrite, associated with pyrite, with considerable chalcocite and bornite.

The mines are located in an extremely rugged mountain country, necessitating former shipment of ore to smelters by pack mules, mines being 8,000' above sea level and more than 6,000' above and 33 miles from the smelting works at Pilciao. The nearest railroad station is Chumbicha, 165 kilometers distant, over exceedingly rough and dusty roads, on which a traction engine was tried, but stuck in the sand. The Argentine government promised, years ago, to extend the Córdoba Central railroad to Andalgalá, but the line failed to materialize. To cover the worst stretch between the mines and smelters, a single line aerial tram was built, 22 miles in length, with longest span of 2,765' and highest span of 625'. Plant weighs 2,000 tons and was designed to carry 40 tons of ore hourly, at a speed of 2.5 meters per second, with buckets of 500 kgs. capacity. The tramway was started April 1, 1907, but did not succeed in filling the 600-ton bins at the smelter until May, when one blast furnace was blown in, beginning semi-pyritic smelting, with 5% charcoal charges, but experiencing unusual difficulties. Much trouble was had with the tram line from buckets falling off, and, instead of a rated capacity of 150 tons daily, the maximum quantity of ore transported in 1 day was 50 tons, and the average for several months was about 15 tons daily. The tram line leaves a 20-mile gap between Pilciao and Muschaca, over which transportation is by carts.

The smelter has two 50-ton water-jacket blast furnaces, with dam, filter

and tanks, water being supplied through an 8½-kilometer pipe line. The old Constancia smelter has 2 reverberatory furnaces. The new smelter gave much trouble in operation, but was amply capable of caring for all ore the tramway could bring. First-fusion product was a 30% matte, resmelted to 50% copper tenor, which was packed and carted 120 miles over a desert to the nearest rail station.

The company was engaged in exploratory and development work, at last accounts, and was said, June, 1912, to have developed about 50,000 tons of 8% copper ore.

CAPPER PASS & SON, LTD.

ENGLAND

Office and works: Bristol, Somersetshire, England. Property is the Bedminster Smelting Works, treating ores imported from a great variety of sources.

CARAHYBA; MINAS DE COBRE DE.

BRAZIL

Mine office: Praba, Jaguarary, Bahia, Brazil. Don José Gonçalves da Silva, owner. Lands, 6,000 hectares, about 10 leagues from a railroad, on the São Francisco river. Mine was opened 1783, and is perhaps the most important copper property of Brazil, having been worked, to some extent, at intervals for many decades past and showing the ruins of an old smelter with 2 furnaces. Mine is developed to only shallow depth, pits and shafts of 3 to 90' depth showing copper oxides. Ores apparently are distributed over a large extent of territory, but depth reached has been inadequate to determine the depth of the oxidized zone, or the nature of the ores below. Property was last tested, 1902, by an English syndicate and has been idle since.

CARELLA COPPER CO.

QUEENSLAND

Owms the Rosebud mine, developed by 200' shaft, in which excessive water interfered with work in 1913.

CARIDAD COPPER MINING CO., LTD.

SPAIN

Idle. Office: 20 Lawrence Lane, Gresham St., London, E. C., England. Mine office: Lozoyuela, Madrid, Spain. Robert Summerside Simpson, chairman; preceding officer, Wm. Jeffreason Woods and Thos. Geddees, Jr., directors; Geo. Thompson, sec. Organized Feb. 15, 1899, under laws of Great Britain, capitalization increased, 1901, to £350,000, shares £1 par; issued, £75,492. Lands, 325 acres, including the Caridad, San Antonio and Descuido mines. Closed down many years and apparently moribund.

CARMEN; COMPAÑÍA MINERA DEL.

PERU

Mine office: Huarochiri, Lima, Peru. Lands, 61 pertenencias, known as El Carmen mine, developed through La Carolina and Santa Rita tunnels, working the Bella Unión vein, of about 1 meter average width, carrying argentiferous and auriferous tetrahedrite, chalcopyrite, galena and sphalerite, associated with pyrite, with quartz gangue. Property also has the Aracucana vein, of about 24" width, which is rich and is worked to some extent. Ore is shipped to the Casapalca smelter, and matte therefrom exported to Liverpool, via Callao.

CARMEN; MINAS DEL.

CHILE

Mine office: Pueblo Hundido, Chañaral, Atacama, Chile. Simon Baldieso, owner; Adriano Fernandez, mgr., at last accounts. Lands, 15 hectares, including El Carmen, Carmela, Cardúmen, Nuevo Araucana, Quíñazo, Locura, Lautaro and other mines. Property shows 2 main veins in syenite, the Veta Manto ranging 4 to 12 meters in width, with a minor vein of 2 to 3 meters width, both having north and south strike, with dip of 40°. Ore occurs in lenticular shoots, the oxidized zone, of 100 meters average depth, carrying oxides, carbonates and silicates and an abundance of native copper at approximately 200' depth in the Carmen mine, with secondary sulphides

at a vertical depth of about 110 meters, followed by chalcopyrite, associated with arsenopyrite, disseminated in a gangue of iron oxide, limestone and decomposed porphyry.

El Carmen, the principal mine, is opened by 2 shafts, 190 meters apart, sunk at an angle of 45°, to depths of 85 meters and 250 meters, the vein ranging 3 to 12 meters wide, with an average width of 5 meters. The other mines are opened by shafts. The properties, as a whole, show reserves of about 75,000 tons of ore, of 5 to 15% copper tenor. Dumps have about 7,000 metric tons of ore, of 6 to 12% copper tenor, and about 30,000 metric tons of 5% ore.

Equipment includes a good steam plant and forces are about 100 men.

CARMONA; GUILLERMO.

CHILE

Office and mine: Higuera, La Serena, Coquimbo, Chile. Property includes La Estrella de Maria, San Tomás and Santiago mines. Idle several years.

CARN BREA & TINCROFT MINES, LTD.

ENGLAND

Secretary, F. A. C. Starling, Carn Brea, R. S. O., Cornwall, England. J. Wickett, J. P., chairman; E. S. King, gen. mgr.; Nicholas Trestrail, engr. Organized May 24, 1900, under laws of Great Britain, capitalization £150,000, in 50,000 priority and 100,000 common shares, £1 par; issued, 38,607 priority shares and 96,953 common shares. Priority shares are entitled to all profits up to £1 per share, thereafter ranking as common shares. Paid dividends of 10% in 1907 and 5% in 1912.

Lands include the Carn Brea, Tincroft and Cook's Kitchen tin and copper mines, near Redruth and Illogan, production being mainly tin. Carn Brea was worked, 1832-1900, by cost-book companies, and paid a 10% dividend on preference shares, Sept., 1907. These mines, many years ago, made nearly 1,000 tons of copper yearly.

CARRENA COPPER MINES, LTD.

SPAIN

Office: 6 Broad Street Place, London, E. C., England. Mine office: Cabrales, Oviedo, Asturias, Spain. Organized Sept. 9, 1912; capitalization £20,000, shares 5s. par, for the purpose of securing control of the Compañia Minera Bilbaina. Owns 7 copper and 3 zinc mines, in an area of 284 acres, in Asturias, Spain.

CARRINGTON'S LION & 2 EAST GOLD & COPPER CO.

QUEENSLAND

Office: Charters Towers, Australia. Mine office: Liontown, Davenport Co., Queensland, Australia. Capitalization £25,000, shares 5s. par. Lands, 53 acres, near the Carrington United Mines Co., Ltd., developed by a 460' shaft, showing a 13" vein of ore carrying good average values in copper and gold, latter predominating. Stopes on the 4th level show 12 to 48" of heavy sulphide ore.

The smelter has 1 reverberatory furnace, for matting, and planned, 1907, sintering concentrates. In Nov., 1908, mine shipped 8 tons 13 cwts. of copper matte to the Port Kembla electrolytic works, assaying 57.8% copper, 10 oz. 15 dwts. silver and 9 dwts. 16 grains gold per long ton. Was a small producer at last accounts.

CARRINGTON UNITED MINES CO., LTD.

QUEENSLAND

Secretary, R. B. B. Clayton, 57 Bishopsgate, London, E. C., England. Mine office: Liontown, Davenport Co., Queensland, Australia. B. Thomas, mgr.; E. D. Miles, chairman; preceding officers, J. Marshland, W. F. Carrington, H. Pfeiffer and T. Webb, directors. Organized Oct. 18, 1906, as a merger of Carrington's Lion P. & C. Mining Co., Ltd., Carrington's Excess Ground Mining Co., Ltd., and various other companies, under laws of

Queensland, capitalization £60,000, shares 5s. par; issued 219,600 shares. Paid a 5% dividend Feb. 7, 1907, and a 10% dividend Feb. 3, 1910.

Lands, 125 acres, near Carrington's Lion & 2 East Gold & Copper Co., 30 miles south of Charters Towers. Mine has 4 shafts, deepest 630', showing strongly auriferous copper ore, with considerable bodies of copper sulphides in the bottom workings. Ore has been estimated to average about 10% copper, 1 oz. silver and 0.4 oz. gold per long ton, with an average value of £8 per ton.

The reduction works include a 20-ton concentrator having a Huntington mill and a smelter with 3 small reverberatory furnaces, producing blister copper when in blast, but now idle, smelting costs being very high. Employs about 100 men.

CARRIZAL SHARE TRUST, LTD.

CHILE

Secretary: H. J. Page, 21 Ironmonger Lane, London, E. C., England. T. P. P. Powell, chairman; G. R. H. Wilson and H. W. Kirby, directors. Organized Jan. 29, 1900, capitalization £110,000, shares of £1 par; issued 67,997 shares. Is a securities-holding corporation, holding 6,799 shares of the capital stock of the Soc. de Minas y Fundiciones de Carrizal out of a total of 21,000 shares issued. Paid total dividends of 7s. 4d. to end of 1907, and none since.

CARRIZAL; SOCIEDAD DE MINAS y FUNDICIÓN DE.

CHILE

Secretaries: H. J. Page, 21 Ironmonger Lane, London, E. C., England, and L. Tirapegui, Cathedral 2256, Santiago de Chile. Mine office: Chañaritos, Carrizo Bajo, Atacama, Chile. Works office: Canto de Agua, Freirina, Atacama, Chile. Samuel Gonzalez-Julio, chairman; C. Ferrara, vice-chairman; D. Gonzales-Julio, J. Izaga, M. Izaga, T. P. P. Powell, G. R. H. Wilson and H. W. Kirby, directors. Organized June 2, 1908, under laws of Chile, capitalization 2,100,000 pesos, shares 100 pesos par, fully paid and fully issued. Fiscal year ends Oct. 31. The Carrizal Share Trust owns about one-third of the stock. Dividends were 546,000 pesos in 1906; 210,000 pesos, in 1907 and none in 1908, with total dividends of 1,905,850 pesos to end of 1908.

Lands, 80 claims, area 555 acres, in 4 groups, and a 10-acre smelter site, with about 600 sq. miles of miscellaneous lands. Lands are in 4 groups, known as the Astillas, Carrizal Alto, Cerro Blanco and Jarillas, all in the Carrizal district, and include 14 different mines, many of which are idle. The Estancia de Jarillas is used for raising alfalfa, and the pasturage of animals. Ore of the different mines is mainly sulphide. Mines are heavily timbered, as a rule, at considerable expense. Ingersoll and Murphy rock drills are used, with dynamite and blasting gelatin for explosives.

The Amarilla or Agua Amarilla mine, at Cerro Blanco, opened 1867, has the Amarilla shaft of 1,617' depth, and La Estrella shaft of 1,765' depth, both vertical, and the mine is opened for a length of about 400 meters. Ores in upper workings carry considerable silver, decreasing with depth. Country rocks are porphyry and limestone. La Estrella shaft has its collar 90 meters from the outcrop, cutting the vein at 120 meters depth. The shaft is 2.7x4.2 meters in interior dimensions, framed with 12x12" timbers, and has a Tangye hoist. The Amarilla shaft has a hoist raising 1-meter cars with 1¼" cable, at hoisting speed of 150 meters per minute. About 300 men are employed in the Cerro Blanco mines.

The Astillas mine in the Frierina district, area 6 hectares, opened 1878, shows syenite, carrying a vein of about 10 meters average width of medium grade sulphide ore. Main shaft is 1,100' and mine is opened to length of 310 meters, with 15 levels. Equipment includes a 200-h. p. steam plant, and average force, 1909, was 45 men.

Los Bronces or Las Jarillas mine, opened 1881, has a 1,400' shaft and is practically a continuation of Las Astillas mine, with similar ore, but with vein somewhat broken at bottom. Recent explorations have shown strong indications of additional orebodies of promise.

The Coquimbana mine has an 820' shaft, with 9 levels opened, 1909, and is developed for length of 390 meters.

The famous Carrizal Alto group, now idle, includes the Armonia and Santa Margarita mines, the former, 1,200' deep, having been a notable producer for many years.

The Mina Socavón, at Carrizal Alto, has a vein with nearly N.-S. strike, and dip of 60 to 80°, in granite. Ores, to depth of 70 meters, are oxidized and associated with iron oxides, below which occurs chalcopryrite, disseminated in pyrite. Extreme depth is 281 meters, with horizontal workings of about 250 meters in length.

The Vizcachas mine, opened by a 103-meter shaft, has a vein of about 10" width, assaying 17.9% copper, and is somewhat wet.

The Larrahona mine has 3 levels opened with only a malacate for equipment. The Mina Mantos is an exploration only.

Equipment includes steam plant aggregating 144 h. p., with 5 hoists and an Ingersoll air compressor. A survey has been made for the Carrizal railway, planned to connect the mines and works.

The smelter, known as the Fundición de Chañarcitos, is an ancient establishment, on the Carrizal & Interior railway. There are six 13x20' reverberatory furnaces, idle since 1907, when a blast furnace was substituted, to great advantage. The cupola is a 42x84' Allis-Chalmers water-jacket blast furnace of 50 tons daily capacity, with rectangular forehearth and a 10-h. p. Connorsville blower. The dust chamber is of insufficient size, causing considerable loss of copper through volatilization. Formerly about two-thirds of ore treated was calcined, but semi-pyritic smelting was begun, 1908, reducing coke charges to 6.5%, with great reduction of cost, fuel being costly imported coke. Flux is cupriferous calcite carrying about 2.6% copper in the proportion of 18% to ore charges. Slags, hauled by mules, assayed 0.869% copper, 1907. The converter department has 5 shells. Matte is sent to the Guayacán smelter. Smelting costs were 20.64 pesos per metric ton in 1903, reduced, 1909, to about 16 pesos per ton.

CARRIZALILLO; MINAS DE COBRES DE.

CHILE

Mine office: Chañaral, Atacama, Chile. Property includes several old and deep mines, with one shaft of 2,122' depth. Idle some years, because of heavy inflow of water, the mine lacking adequate pumping equipment.

CARTER'S CONSOLIDATED, LTD.

NORTHERN TERRITORY

Mine near Mt. Diamond, Northern Territory, Aus. Idle. See Vol. X.

CARVALLO; GUILLERMO.

CHILE

Office, mine and works: Llaillai, Quillota, Valparaíso, Chile. Property includes the Santa Maria and Santa Elena mines, carrying a vein up to 2 meters in width, with approximately N.-S. strike and dip of about 45°, opened to 120 meters by a 600-meter tunnel. Mine shows oxidized ores and bornite, but has not reached the zone of primary sulphides. Ore as mined averages about 7% copper, with calcite gangue.

The smelter, 3 miles from the mine, known as the Fundición de Llaillai, has a 14x26' reverberatory furnace, burning Australian and English coke, costing 21 pesos per ton, 1 ton of coke being required to smelt 3 tons of ore. Matte is 50% or better in tenor and slags average about 0.5%. Production, 1903, was 3,000 metric tons of ore, of about 8% copper tenor, yielding 496,035 lbs. fine copper. Production 1910 was 100 to 150 metric tons monthly of 12% selected ore, sent to other smelters for re-

duction, yielding 400,000 lbs. fine copper, the smelter being idle, 1912, on account of the high price of fuel.

CASAPALCA SMELTER.

Owned by Backus & Johnston Co., at Casapalca, Peru.

PERU

CASTELLANOS y CA.

CHILE

Mine office: Combarbalá, Coquimbo, Chile. Production, when working, was about 75 tons fine copper yearly, shipped as matte. Idle.

CASTILLO DEL BUITRON; MINA.

SPAIN

Owned by Compañía del Ferrocarril y Minas del Buitron, and operated under lease, by United Alkali Co., Ltd., at Valverde del Camino, Huelva, Spain.

CASTILLO DE LAS GUARDAS; SOCIEDAD

ESPAÑOLA MINAS DEL.

SPAIN

Office: Apartado 162, Bilbao, Spain. Mine office: Castillo de las Guardas, Sevilla, Spain. José A. Jáuregui, chairman; Victoriano Galdiz, vice-chairman; Julio Astoreca, sec.; Cipriano R. Careaga, managing director; preceding officers, Anselmo R. de Rivas, Martín Aldama, Juan de Arteché, Alejandro Gandarias, Luis Nuñez, Agustín Iza, Enrique Díaz Rubín, Juan de Santisteban and Fernando Merino, directors; Francisco de Zarraga, supt.; Constancio Fernán, cons. engr.; Ceferino López Sánchez AVECILLA, engr. Organized July 12, 1901, under laws of Spain, capitalization 7,500,000 pesetas, increased later to 10,000,000 pesetas, shares 500 pesetas par; issued, 9,000,000 pesetas. Debentures, 1,500,000 pesetas authorized, at 5%; issued, 1,250,000 pesetas. Annual meeting in March.

Lands, 153 hectares, 23 kilometers from Zalamea La Real, having a 15½-kilometer private railway, known as the Ferrocarril de Minas Castillo y Empalme Ronquillo, connecting, at Estación Ronquillo, with the Ferrocarril Sevilla y Cala. Property shows granite-porphry and diabase, carrying 5 orebodies, 1 of which, under development, has a lens of 40 meters width and 220 meters length, proven for depth of 165 meters, carrying cupriferous pyrite averaging about 1.5% copper, 0.5% lead, 0.13% zinc and occasionally up to 2 oz. silver and 4 grams gold per metric ton. Mine was discovered 1843, and worked in a small way, until taken over by the present company, 1901. Development is by the following shafts. Meneses, 142 meters; Don Pablo, 142 m.; Todos Santos, 41 m.; Nueva Corta, 50 m.; Malacate, 46 m.; Colorado, 110 m.; Dos de Mayo, 40 m.; Remedios, 42 m.; San Felipe, 102 m.

Equipment includes a 683-h. p. steam and electric plant, with two 200-h. p. hoists, good for 140 meters each, a Duisburger 4-drill air compressor and Becker and Siemens & Schuckert electric drills.

The company owns 153 buildings, with stone shops, including an 8x10 meter machine shop; 8x20 m. smithy; 8x10 m. carpenter shop, engine houses, boiler houses, offices, and a large number of dwellings. The company maintains separate schools for boys and girls, a hospital for workmen and their families, and a town hall.

CATALANA-VALENCIANA; SOCIEDAD MINERA.

SPAIN

Office: 4 Calle de Gerona, Barcelona, Spain. Mine office: Azuebar, Castellón de la Plana, Spain. Domingo H. Santías, gen. mgr., at last accounts. Organized July, 1909, under laws of Spain, capitalization 250,000 pesetas, shares 500 pesetas par. Property, the Maria and Virginia mines, carry cinnabar and copper ores. Idle.

CATÉMOU; SOCIÉTÉ DES MINES DE CUIVRE DE.

CHILE

Office: 5 Rue du Helder, Paris, France. Operating and works office: Nilgue, Estación Chagres, Putaendo, Aconcagua, Chile. A. W. Lehmann, gen. mgr.; Achille Adam, chairman; Max Lyon, managing director; Eugene

Renevey, Georges Renevey and R. Franklin, directors; Guillaume Wouters, sec. Organized June 2, 1899, under laws of Belgium, capitalization f5,000,000, shares f500 par, divided into 10,000 preference shares at 8%, and 35,000 ordinary shares, nonassessable. Debentures, f2,500,000 5% bonds. Annual meeting, last Friday in June.

Dividends have been paid as follows: 4% in 1910, 5% in 1911, and 6% in 1912.

Lands, 155 claims, with sundry miscellaneous tracts held in fee and under government concessions, including the Finca de Ñilhue, of 7,500 hectares, giving total holdings of 30,000 acres, in the districts of Putaendo, Los Andes, Melipilla, La Ligua, Quillota and El Ñilhue. Property includes numerous mines in Catému, Melon and elsewhere, with quarries of fluxing material, and the Finca de Ñilhue carries a stock of 1,200 cattle, for transport and food, and is a valuable factor in reducing costs.

The local management reports that ores carry an average of 4% copper, and 2 oz. silver per ton. Veins carry the usual oxidized ores in a comparatively shallow surface zone, succeeded by chalcocite, bornite and chalcopyrite.

Los Mantos, or Mantos Rojos, mine, opened 1820, has country rocks of sandstone and limestone, with eruptive dikes traversing the sedimentaries, there being 2 blanket veins, of 5 to 7' thickness, composed of calcareous matter impregnated mainly with bornite, but having a little chalcopyrite and occasional gray copper, ore ranging 3 to 4.5% copper, 1% lead, 2% zinc and 30 grams silver per metric ton. The oxidation zone has been eroded, leaving only sulphide ores. These blanket veins have been worked on a considerable scale since 1835, and the ore, while low in grade, is especially suitable for fluxing purposes.

Mine is developed exclusively by tunnels, having a vertical depth of about 50 meters and length of about 1,200 meters, with ore reserves developed for 3 to 4 years extraction. The mine produces no water, and walls stand excellently without timbering. Owing to development by tunnel and lack of water, Los Mantos has no machinery plant. Work is exclusively by contract, according to tonnage produced, miners being paid 5 to 7 pesos per metric ton for ore won. Only about 8% of the ore broken is discarded as waste, and ore is concentrated or smelted direct. Ore is taken to the smelter by an 1,580-meter Bleichert aerial tram, with drop of 750 meters, having 500-kg. buckets. Cables last 2 years and guide cables last 5 years. In 1912 Los Mantos mine employed 350 men, producing monthly 2,000 to 2,500 tons of ore of 3% copper tenor.

El Soldado mine, one of the Nogales group, and the greatest distance from the smelter, being in the Commune of Melon, on the Calera é Cabildo railway, was opened 1841. This property has 15 known veins, of 5 to 7' average width, carrying mainly copper sulphides, with quartz gangue. Several veins carrying oxidized copper ores, with gangue of aluminous silicates, the series of veins having an approximately N. S. strike, with dip of 45° east, between trachyte and feldspar-porphry. The series of veins is faulted, frequently with throws of 1 to 2 meters, and there is another series of dikes and veins crossing at approximately right angles to the dip, but with parallel strike, the dikes being partly decomposed porphyry, carrying occasional oxidized ores and aluminous silicates. These veins have been worked extensively in the past, showing many antigua openings and ore averages 5 to 6% in copper tenor. Development is mainly by tunnels, greatest vertical depth obtained being 80 meters and old workings are about 150 meters in length. This mine shows some immense chambers, 1 being called the Cathedral, in recognition of its vast size. In 1912 production was about 600

metric tons of high-grade ore monthly, secured with an average force of 150 men. Transportation is by wagon at a cost of 3 to 4 pesos per ton. An aerial tram is planned.

La Unión group includes the Restauradora, San José and Vieja mines, producing about 40 metric tons daily of 3 to 4% copper ore, mainly used for fluxing, secured with an average force of 150 men.

Miscellaneous mines include El Ñilhue mine, in the department of Putaendo, opened 1886; Las Máquinas de Catemu mine, in the department of Putaendo, opened 1870; La Esmeralda mine, opened 1860; La Constancia and La Democracia mines, 10 kilometers from the smelter, carrying blanket veins, and La Marquesa, Malva, Tabourina, Caracoles, Almendro y Pleito and other properties, in various stages of development, some of considerable promise.

The mines and works have telegraph and telephone communication. Forces, 1912, averaged 800 men, with the high average wages of 5 pesos for underground workmen; and 4 pesos for surface labor.

Reduction works include 2 smelters, each with converter plants, with aggregate capacity of 400 to 500 metric tons of ore daily.

La Poza plant is at Chagres, 12 kilometers from Chagres station, on the Andes R. R. These works are equipped mainly with American machinery.

La Poza smelter, of 300 tons daily capacity, has 2 old 75-ton rectangular water-jacket blast furnaces, and new blast furnaces of 36x96" and 35x84" dimensions at the tuyeres, turning out 50% matte. The converter department has five 57x77" shells, with 12 tuyeres each, of the Copper Queen type, turning out cakes carrying 99.7% copper and 40 oz. silver per ton. There is a 40-ton briquetting plant and the converter department has a quartz mill. Power is furnished by a 165-h. p. Pelton water wheel and a 175-h. p. engine. Furnace blast is supplied by No. 6 Connorsville blowers and converter blast is furnished by a Riedler air compressor, with capacity to reduce 20,000 cu. ft. of free air per minute to 15 lbs. pressure. Fuel is coke, 1 ton of coke smelting 6 tons of ore, ores treated being highly silicious, with slags averaging 0.4 to 0.5% copper. In 1912 La Poza smelter treated 51,000 metric tons of ore, of 6% average tenor, obtaining therefrom 3,000 metric tons fine copper, employing 90 men at average wages of 3.5 pesos daily.

El Cobre del Melón smelter, 16 kilometers from Estación del Melon, on the Calera & Cabildo railway has a 36x84" and 36x120" Allis Chalmers cylindrical water-jacket blast furnace and converters. Ores smelted at this plant carry excess of silica and alumina and are deficient in sulphur, necessitating the free use of low-grade cupriferous pyrite and limestone, for fluxing. Fuel is very expensive, coke costing 70 pesos per metric ton, and English coal 60 pesos per ton, 1 ton of fuel smelting about 3.5 tons of ore. Equipment includes a Pelton water wheel, 60-h. p. locomotive and No. 6 Green blower. A 4-kilometer aerial tram is proposed to the Nogale group.

Production was 3,379,947 lbs. fine copper in 1907; 4,060,873 lbs. in 1908; 4,073,761 lbs. in 1909; 4,920,500 lbs. in 1910; 4,660,000 lbs. in 1911, and 6,960,000 lbs. in 1912. Property is estimated to have, with further improvements, a productive capacity of 10,000,000 lbs. fine copper yearly. Management is good.

CAUCASE; SOCIÉTÉ INDUSTRIELLE ET METALLURGIQUE DU.

RUSSIA

Office: 11 Rue Saint-Florentin, Paris, France. Mine office: Alverdschi, Bortschalo, Tiflis, Russia. Lands, about 5 miles south of Tiflis, include ancient mines of auriferous and argentiferous copper and lead ores. Production was approximately 5,000,000 lbs. fine copper in 1911 and 6,900,000 lbs. in 1912.

CAUCASUS COPPER CO., LTD.**RUSSIA**

Secretary, F. E. Palmer, 82 Palmerston House, London, E. C., England. Mine office: Dzansul, Kutais, Russia. W. R. Van Liew, gen. mgr.; J. Colquhoun, chairman; M. Grancini, E. B. Lockhart and J. N. Sparks, directors; E. Kneeland, supt. Organized Oct. 4, 1900, under laws of Great Britain, capitalization £500,000, increased June, 1912, to £1,000,000, shares £1 par; 507,700 shares issued and fully paid; £500,000 profit-sharing certificates of no nominal value, granted to bondholders, entitling them to one-half of profits, after meeting charges of bond debt together with £299,900 in options have been called in for conversion. Debentures, £45,280, 5% bonds redeemable by annual installments of not less than 10%, also £1,245,900, 5% second debentures redeemable at not less than 5% per annum after Sept. 30, 1913, series B, £500,000, being convertible into full paid shares at par. The value of the ordinary share has been much increased by the rearrangement of the finances in 1912. The issued capital of the company now consists of £500,000 ordinary shares and there are £45,280 of 5% first debentures, £500,000 convertible 5% second debentures and £745,000 non-convertible 5% second debentures. Statement for year ended June 13, 1912, showed net profit of £1,763. Shares are listed on the London Stock Exchange.

Lands are 6 groups, including the Dzansulske copper mines, in the Murgul valley, in the Artvin district of Kutais, in the Russian Caucasus, about 50 miles from Batum. Mine is developed extensively, management estimating 3,600,000 long tons of 3.1% copper ore practically in sight. Ore has chalcopyrite, minutely subdivided, in connection with pyrite, and is friable and slimes very easily, causing low recovery. Principal orebody is a mammoth lens of 164 to 328' width by 1,000' length. Other orebodies are believed to exist on the company's lands.

Mining methods were changed in 1912 and the loose surface soil, from 10 to 100' thick, is now removed by hydraulicking. The ore is now shot down into the great opencut and handled by the funnel, or milling system, doing away with shoveling.

A new aerial wire rope tramway, built in 1912, has a capacity of 2,000 tons per day.

The 1,000-ton mill has electric power, with automatic operation throughout. The ore slimes in concentration, is high in silica and fluxing ores are secured with difficulty. Magnetic separation plant, was abandoned, 1909, and wet concentration is now used. Ores are crushed to 4-mm. size by Blake crushers and Hadfield high-speed rolls, then sent by aerial tram to the concentrator, where ground by Chilean mills and jigged, coarse tailings then being ground to 1-mm. size in Chilean mills, and all tailings treated on Frue vanners.

The old smelter, taken over with the property, was first increased to 300 tons capacity, then rebuilt, 1907-08, to 500 tons daily capacity. Concentrates are dried, calcined and smelted in reverberatory furnaces fired with petroleum and matte is converted and copper refined.

A new 19x89' reverberatory furnace, built 1912, utilizes the waste gases for steam production.

Production, 1911-12, was 6,060,000 lbs. fine copper. After years of difficulty the company now appears to be emerging into a period of prosperity. It must be remembered that it has the advantage of the higher price of copper ruling in Russia, due to the heavy import duty.

CAUCASUS COPPER INDUSTRY CO.**RUSSIA**

Mine office: Armavir, Kutais, Russia. Production was 3,257,465 lbs.

fine copper in 1907; 4,195,825 lbs. in 1908; 6,608,426 lbs. in 1909, and 3,700,000 lbs. in 1910. No recent returns secured.

CAYLLOMA; SOCIEDAD ESPLOTADORA DE.

PERU

Office: Valparaíso, Chile. Mine office: Caylloma, Arequipa, Peru. Alfred Fox, supt. Organized May 23, 1906, under laws of Chile, capitalization £32,000, shares £1 par. The mines are 17,000' above sea level and the climate is very frigid. Company employs about 200 men and furnishes good dwellings for employees. Ore values are mainly in silver averaging 600 grams, about \$15 per ton. A steam tramline connects the mines and mill and at last accounts management planned replacing the old installation with a modern cyanide plant. Concentrate is packed on llamas to the railway.

CENTRAL CHILI COPPER CO., LTD.

CHILE

Secretary: H. L. Bromhead, 15 Angel Court, London, E. C., England. Mine and works office: Panulcillo, Ovalle, Coquimbo, Chile, B. Schiff, gen. mgr. Eugene A. J. Goldschmid, chairman; Bertrand C. Hinman, managing director; Thos. Higgins, smelter supt.; R. L. Lee, asst. smelter supt.; J. W. Maxwell, mine supt.; C. A. Gibbons, Jr., engr. Organized June, 1894, as a reconstruction of the Panulcillo Copper Co., Ltd., and reorganized, Jan., 1898, capitalization increased Nov., 1905, to £400,000, shares £1 par; issued, £312,468. Dividends were 6d. April 10, 1900; 6d. Jan. 22, 1901; 1s. May 31, 1907. Net earnings were £10,932 in 1905; £24,913 in 1906; £12,684 in 1907; 1908 gave a net loss of £12,616; 1909 a net profit of £6,712; 1910 a profit of £7,954, and 1911 a profit of £2,191.

Lands include mines at Panulcillo, 25 kilometers northeast of Ovalle, and mines in the vicinity of Nisñile. The Panulcillo group, area 56 hectares, 2 kilometers from the smelter, includes the Panulcillo Alto and San Gregorio mines, showing strong lenses of ore up to 150' in width, with generally N.-S. strike, and dip of about 45°, worked to depth of 200 meters and for length of 1,500 meters, principal development being by the 1,000-meter San Gregorio tunnel. Ore is mainly chalcopyrite, associated with pyrite, in limestone gangue, with some commercial production of malachite, azurite and chalcocite. Average assay of ore is 3.93% copper, with about 12 grams silver per metric ton, and ore is strongly aluminous. Production is about 100 metric tons daily. Power drills are used. Ore reserves were estimated, 1911, at 10,000 tons, with probable ore at about 14,000 tons.

La Condesa mine, 3 kilometers from Panulcillo, has a 5' vein, with nearly N.-S. strike, and is opened to depth of about 100'. This mine is in the hands of tributors.

The Cocina and Inagotable mines, at Ferro Negro, show lenses up to 70' in width, with dip of about 45°. Production, 1911, was only 600 metric tons of 5.3% ore, secured on tribute.

The Nisñile mine has a stockwerk, opened by 3 tunnels to depth of about 300 meters, carrying ore averaging 6.11% copper, 20 grams silver and 3 grams gold per metric ton.

Holdings were increased, 1911, by purchase of one-half interest in 2 claims, 10.48 acres, and by denouncement of 6 claims, total 49.42 acres.

The 400-ton smelter, connected with the Panulcillo Alto mine by tram, is 76 kilometers from Coquimbo, with freight rates of 3.1 pesos per metric ton on fuel, and 6.7 pesos on matte and copper exported. This plant does a considerable custom business, employing 175 to 250 men, at average wages of 2.8 pesos daily. Equipment includes 3 calciners, 2 reverberatory furnaces, and one 46x180" and three 42x84" blast furnaces. The plant lacks a converter. Slags are hauled in cars to the dump. The smelter has 2 Cornish and 2 Lancashire boilers, of 160-h. p. each, one 100-h. p. and three

60-h. p. engines, and 2 Connorsville blowers. There is also a crusher, and in connection are a machine shop and a good laboratory. The smelter treats silicate custom ores, company's sulphides furnishing flux. Matte is crushed and exported to New York for smelting. In 1911, company smelted 19,253 tons of its own ore, averaging 3½% copper and 16,664 tons of purchased ore, averaging 7.75% copper.

Production, 1911, was 2,265,440 lbs. fine copper.

CENTRAL DE COLLAHUASI; SOCIEDAD MINERA. CHILE

Office: Santiago de Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Feb. 14, 1906, under laws of Chile, capitalization 90,000 pesos, shares 15 pesos par. No trace of operations secured and presumably moribund.

CERRO BLANCO; COMPAÑÍA ESPLOTADORA DE MINAS DE. CHILE

Office: Valparaíso, Chile. Mine office: Copiapó, Atacama, Chile. Organized July 22, 1901, under laws of Chile, capitalization 195,000 pesos, shares 130 pesos par. No trace of operations secured and presumably idle.

CERRO DO GARALDO; MINA. BRAZIL

Mine office: Cacapava, Rio Grande do Sul, Brazil. Lands, 4 kilometers northeast of Cacapava, show ore outcropping at the summit of a steep hill, slightly developed by 6 very shallow shafts, bottomed in mica-schist impregnated with chalcocite. Idle.

CERRO DE LA GLORIA; COMPAÑÍA MINERA. CHILE

Office: Santiago de Chile. Mine office: Cachapoal, O'Higgins, Chile. Organized Nov. 28, 1906, under laws of Chile, capitalization 2,160,000 pesos, shares 25,000 pesos par. No trace of operations secured.

CERRO MARTINO; MINA. BRAZIL

Idle. Property in Rio Grande do Sul, is 130 kilometers from Cachoeira. Described Vol. X.

CERRO DE PASCO COPPER CO. PERU

Office: 15 Broad St., New York. Mine office: Cerro de Pasco, Junín, Peru. Organized 1908, under laws of New Jersey, capitalization \$60,000,000, shares \$1 par. Controls the Cerro de Pasco Mining Co., through ownership of entire stock issue, and is controlled, through stock ownership, by Cerro de Pasco Investment Co. A 5% stock interest in this company was given the Compañía Empresa Socavonera del Cerro de Pasco in exchange for rights acquired through the completion of the Rumiallana drainage tunnel, 1907.

CERRO DE PASCO; COMPAÑÍA EMPRESA SOCAVONERA DEL. PERU

Office: Calle San José No. 135, Lima, Peru. Mine office: Calle Bolognesi No. 40, Cerro de Pasco, Junín, Peru. José Payán, chairman; preceding officer, Baldomero Aspillaga, Américo Denegri, Octavio Besancon, Joaquin Godoy, J. A. Barrios and Ernesto Odriozola, directors; Pedro Larrañaga, sec.-treas.; Wm. C. Dawson, agt.; John B. Wilson, engr. Organized Nov., 1900, under laws of Peru, capitalization £750,000, shares £1 par, nonassessable; issued, £720,000. Debentures, £60,000, at 8%.

Company holds a concession from the Peruvian government to drain the Cerro de Pasco mines by means of tunnels and collect a royalty of 20% on ore extracted from mines so drained. Property is the 10,551' Rumiallana tunnel, completed 1907, and the Quinlacoche tunnel of about 6,000' length. Mine also has the 430' Mesapata shaft and the 432' Yauricocha shaft, both equipped with hoists. Machinery includes a 10-drill Rand air compressor and there are several stone buildings. This company can collect royalties from other operators, in the district drained, but has taken a 5% interest

in the shares of the Cerro de Pasco Mining Co. in exchange for its drainage rights against the Cerro de Pasco Mining Co. It is proposed driving laterals to the east and west and extracting ore from this company's property.

CERRO DE PASCO INVESTMENT CO.

PERU

Is a holding company, controlling the Cerro de Pasco Copper Co., through ownership of large share interest and through this company it controls the Cerro de Pasco Mining Co. and its Peruvian mines and holdings.

CERRO DE PASCO MINING CO.

PERU

Office: No. 15 Broad St., New York, H. Esk Maller, treas. Peruvian general office: Lima, Peru. Mine office: Cerro de Pasco, Junín, Peru. Works office: La Fundición, Tiñahuarca, Junín, Peru. W. J. Hamilton, gen. mgr.; F. W. MacLennan, mine supt. Organized June 6, 1902, under laws of New Jersey, capitalization \$10,000,000. Owns the entire stock issue of the Cerro de Pasco Railway Co., and entire stock issue of Sociedad Minera Copayacocha, and entire stock issue, excepting founders' shares, is owned by Cerro de Pasco Copper Co., which in turn is controlled, through stock ownership, by Cerro de Pasco Investment Co. Mr. J. B. Haggin is said to hold about 40% of the total investment.

Lands, 941 claims, and 70,000 acres miscellaneous lands, including copper claims in the Morococha and Yauli districts and about 400 acres of land that includes three-fourths of the rich Cerro de Pasco district, with a smelter site and extensive coal tracts north of Cerro de Pasco.

Cerro de Pasco lies 14,300' above sea level, rendering physical labor very fatiguing. The population of the town is about 6,000, of whom but 60 are white and only 10 of these are women. The region is bleak and all food and supplies must be brought in from considerable distances. The year has but 2 periods, the wet and dry, the former from November to April. Both are said to be bleak and exceedingly disagreeable. Snow and hail fall at any time, summer or winter, but rarely remain on the ground as long as 48 hours, even in winter. The fluctuation between mean summer and winter temperature is about 20° F. only, less than the daily variation.

Silver was discovered at Cerro de Pasco, A. D. 1630, and the mines produced, to the close of the nineteenth century, about 450,000,000 oz., from 40,000,000 tons of silver and copper ore, nearly all extracted by hand work and carried 3 to 6 miles on the backs of llamas, to primitive smelters, whence the silver bullion was transported by llamas 200 miles to Lima, until 1870, when a railroad was completed to Oroya. Formerly only the copper ores of 25 to 40% copper were shipped.

Authorities disagree as to the geology of the district, but over an area a mile wide and nearly 2 miles long, nearly every claim carries ore, proving Cerro de Pasco one of the richest mineral fields of the globe. The ore-bodies outcrop prominently, as crestones, or ridges, and carry gold, silver, copper, lead, zinc and cobalt. The oxidized zone carries considerable gold, running as high as 1 to 2 oz. per ton, occurring in rich but erratic shoots. The high silver values usually extend to about 100' depth only, occasionally running up to thousands of ounces per ton, followed by rich silver-copper ores, which in turn, at a little greater depth, are succeeded by ore low in silver but richer in copper, the copper ores being estimated to have averaged 15 to 35 oz. per ton in the old workings. Primary ores below the water level contain bornite and chalcopyrite, associated with pyrite, tetrahedrite, arsenopyrite and sphalerite, containing little silver and only traces of gold. There are occasional veins of high-grade silver-lead ores, with others carrying up to 8% zinc; practically all the copper ores are bismuthiferous, hence refractory in reduction. The ores carry about 35% silica and

14 to 30% iron, the excess of silica requiring considerable limestone for fluxing.

The property of the Cerro de Pasco Co. includes hundreds of old mine workings, some opened to 300' depth, though the majority are not over 100' deep. The surface of the property shows scores of tajos, big pits resulting from the caving in of old open cast workings, some of these being 300' deep. The property lies in a basin, and the mines are very wet, especially below a depth of 400'. The Rumiallana drainage tunnel, begun April, 1877, by Henry Meiggs, was completed 1907, by the Compañía Empresa Socavonera del Cerro de Pasco, with which a financial arrangement was made, through a 5% stock interest given in the Cerro de Pasco Copper Co., obviating the payment of the 20% royalty to which the former company was legally entitled.

The present company has disregarded old workings and opened a new mine, by 2 tunnels, of about 2 miles length each, and 5 new shafts. The Diamante, Peña Blanca, Carmen and Noruega 2-compartment shafts have 4 levels opened, and are bottomed at 410'. The new 4-compartment Esperanza shaft is planned to do the hoisting for the entire mine and the shops and power plant are near this shaft. Waste is used for filling, timber being very expensive, and used only for lining shafts and timbering important tunnels. The mines are equipped with powerful pumps. Estimates of ore in sight vary from 2,000,000 to 75,000,000 tons, the latter figure being excessive, and not countenanced by the management, but there unquestionably are large reserves of ore blocked out, these including first-grade ore of 8 to 10% copper tenor, with good silver values, and second grade ore, of uncertain copper tenor, though probably workable in the main.

The reduction works, at La Fundición, near Tiñahuarea, 9 miles from the mines, are connected therewith by rail. All buildings are of steel frames, covered with corrugated iron. The plant treats a small quantity of custom ores and has a sampling mill with crushers, rolls and chain-bucket elevators. The works are terraced throughout, permitting the handling of material by gravity, and are built on the unit plan, so that their capacity may be doubled or, if desired, quadrupled at later date.

The furnace building has twelve 2,000-ton flat-bottomed steel ore bins, with lining of double thickness of 2" plank, filled from railroad tracks above, and loading into charging cars run alongside, that are drawn by small locomotives on a narrow-gauge track running on either side of each furnace, 2 cars constituting a charge. There are four 56x180" water-jacket blast furnaces with brick-lined hearths and crucibles, discharging into five 16' settlers. The furnaces are of about 300 tons actual daily capacity each. Slag is granulated by running water. The smelter building has a steel stack, 220' high and 20' in diameter. There are 6 reverberatory furnaces, and ten 18' six-hearth McDougal calcining furnaces. A Dwight-Lloyd sintering plant was erected 1912.

The converter department, in a separate building, has 7 stands, with 84x180" shells. The converters, of the upright pattern, are tilted hydraulically and blister copper is poured into moulds on a low car under the stand, cars being shifted hydraulically. The converter slags pour into ladles and thence into iron moulds, slags being crushed in 2 slag mills and discharged into bucket elevators, going to a storage bin on the feed floor, for resmelting. The converter department has quartz mills for linings and 2 large storage bins for material. Product of the converter is 99% blister copper, in cakes, shipped to Baltimore for refining.

The power plant includes a boiler house with sixteen 250-h. p. Babcock & Wilcox boilers, and an engine house, latter having a 600-h. p. Nordberg

cross-compound engine, direct-connected to a 440-kw. Westinghouse generator; two 475-h. p. Nordberg engines, direct-connected to two 250-kw. generators; a 750-kw. Westinghouse alternator and dynamo and 2 smaller dynamos furnishing electric power and light. There are 3 No. 11 Connorsville blowers, driven by a Nordberg cross-compound engine, a large Nordberg air compressor for converter blast, and an air compressor for the pneumatic operation of furnace doors, etc. The power plant is practically duplicated, as a precaution against accidents.

A new 12,000-h. p. hydro-electric plant will be completed in 1913 and will greatly help the company's operations. The plant has a 10½-mile ditch and pipe line with a fall of 750' delivering 200 second-feet of water to 6 Pelton wheels connected in sets of 2 with three 3,000-kw. dynamos. The transmission line is 70 miles long and will serve both Cerro de Pasco and Morococha. The entire plant will cost \$1,000,000.

The adoption of electric power will greatly relieve the fuel situation and make the company practically independent of foreign coke.

The company furnishes its own fuel, owning extensive beds of bituminous coal, of rather indifferent average quality, though with some coal of coking grade. The principal coal mines are at Goyllarisquisca, Quishuarcancha and Vincuscancha. A 21-mile branch line of the railway terminates at Goyllarisquisca, the Vincuscancha coal mine being about midway and it has been proposed to install an aerial tram to connect with the Quishuarcancha, at present accessible only by wagons and pack animals. There are large reserves of coal of fair quality at Goyllarisquisca and Quishuarcancha. The coke plant, near the smelter, has seventy 75-ton beehive ovens, making a satisfactory coke for blast furnace use, no coke being imported. The coal contains 50 to 60% fixed carbon, 20% volatile matter and about 13% ash, with considerable sulphur.

The company's brick plant has proven an important success, as imported brick of all kinds are very costly, and the local plant turns out fire and silica brick of very fine quality, from clays found in the mines, and common building brick are made from a clay pit near the Vincuscancha mine. This plant also makes tile and tile pipe.

A limestone quarry, 12 miles from the works, furnishes flux, and the company has a silica quarry furnishing material for lining converter shells.

The Cerro de Pasco railway, owned by the company and operated under a government concession, has a main line of 83 miles, running from Cerro de Pasco to Oroya, where connection is made with the Central Railway of Perú, which runs thence 130 miles to Callao, the latter line being one of the most notable in the world, having cost \$43,000,000, and gaining nearly 3 miles vertical elevation, reaching the highest altitude of any railroad on the globe, after surmounting almost incredible obstacles, having an average grade of 2.5%, with no less than 57 tunnels, including the Galera tunnel of 1 kilometer length which cuts through a ridge of the Andes. The Cerro de Pasco railway has a 21-mile branch to the coal fields, and, with all spurs, sidings and yards, has about 125 miles of standard-gauge track. The main line has an average grade of 1.5%, with a maximum grade of 3%, and cost upward of \$2,000,000. Equipment includes 13 locomotives, in addition to 6 light switching engines at the smelter, and 59 steel ore and coal gondolas, with a total of 247 forty-ton cars, rolling stock being of the best American manufacture. The railroad is on a paying basis.

The company has 2 hotels, one for native and one for American labor, and maintains a clubhouse with bowling alley, swimming pool, gymnasium, etc., which is a social center and aids greatly in keeping the American workmen and their families contented. The company also furnishes facili-

ties for riding and hunting. Although the altitude is very high, people of normal good health find no difficulty in living comfortably in the rarified air of Cerro de Pasco. Wages range from \$2.50 to \$4 per day for white labor, and 60 to 75 cts. per day for native common labor, the latter being tractable, and, for some purposes, fairly efficient. Up to \$2, and even \$2.50 per day, is paid the native timbermen. In 1912 the company employed about 2,200 men at the copper mines, 1,500 men at the smelter, 1,000 at the Goyllarisquisca coal mine, 400 at the Vincuscancha coal mine, and 200 at the Quishuarcancha coal mine.

Recent production has been as follows: 3,389,787 lbs. fine copper in 1906; 20,258,689 lbs. in 1907; 23,646,921 lbs. in 1908; 30,327,423 lbs. in 1909; 34,713,012 lbs. in 1910; 48,600,926 lbs. in 1911, and about 4,000,000 lbs. monthly in 1912 and 1913.

The Cerro de Pasco is undoubtedly the most expensive copper proposition ever developed, the total investment to date being nearly \$25,000,000. Many serious discouragements were met in the earlier days, but overcome, and sufficient progress has been made to justify terming the property a success. The ores are refractory and the great altitude of the smelter, which is 14,300' above sea-level, coupled with inefficient native labor, have given rise to an exceedingly complex and tiresome problem in ore reduction. Statements in the press that the cost of copper is only 4 cts. per pound are not reflected by dividends, and other press reports giving a cost of 7 cts. per pound, laid down in New York, are considered a serious overestimate, though, in all likelihood, the production is now yielding the company a profit, with prospects of increased production and much lower costs ultimately. The property is considered to have a probable productive capacity of 50,000,000 lbs. yearly.

CERVERO SUCESIÓN.

CHILE

Mine offices: Los Marquis, La Ligua, Aconcagua, Chile, and Ñipa, La Ligua, Aconcagua, Chile. Works office: Cabildo, La Ligua, Aconcagua, Chile. The Padres and Fraguas mines adjoin the Maquis mine of Otto Harnecker, and the ores are similar in character. The greatest vertical depth is 130 meters, with extreme horizontal length of about 200 meters.

The Mina Maria, at Los Mercedes, 16 kilometers from Cabildo, has a vein in granite, ranging up to 15' in width, with strike of 50° W., and dip of 68°, carrying auriferous and cupriferous pyrite, with quartz gangue, ore averaging about 4% copper and 40 grams gold per ton.

The Mina Montoya, opened 1855, has a 900' tunnel opening a 15' vein in porphyry, carrying argentiferous sulphides with calcite gangue.

The Ñipa properties, 16 kilometers from Cabildo, include the Castillo, Quisco and Cuevas mines, having an extreme depth of 350 meters, with 800 meters extreme length of workings.

The mines at Los Marquis produce 6% ore and the Ñipa mines make a small production of selected ore averaging 25% copper, after discarding large quantities of ore of about 4% tenor, suitable for concentration later. Average of all ores treated is about 5% copper.

The Fundición de Cabildo, at the terminal of the Calera & La Ligua railway, formerly did a general custom business, but has been idle since 1907 and apparently is permanently out of blast. This was described Vol. VIII.

CHAGALI-HÉLIAR; SOCIÉTÉ D'INDUSTRIE MINIÈRE DE.

RUSSIA

Office: 19 Rue Godot-de-Mauroi, Paris, France. Mine office: Borchalinsk, Tiflis, Russia. Alfred Massenet, pres. Organized July 12, 1900, under laws of France, capitalization fl,600,000, shares fl00 par, increased, Oct. 19,

1909, to \$2,600,000, shares \$100 par. Mine has 2 shafts, and employed, 1909, an average of 133 men, of whom 72 were underground. Equipment includes a hydraulic power plant and a small smelter. Presumably idle.

CHAÑARAL; COMPAÑÍA ESPLORADORA DE.

CHILE

Mine office: Tres Puntas, Chañaral, Atacama, Chile. Capitalization 6,000,000 pesos. Lands, under development at last accounts, are in the Inca and Tres Puntas districts of Chañaral.

CHAÑARAL; SOCIÉTÉ DES MINES ET USINES

DE CUIVRE DE.

CHILE

Office: 94 Rue de la Victoire, Paris, France. Mine and works office: Chañaral, Atacama, Chile. Eugène Renevey, chairman; preceding officer, D. Bethmont, A. DuBois, A. Delattre, Georges Renevey and A. Lavagnino, directors. Organized July 17, 1906, under laws of France, capitalization \$6,000,000, increased, 1910, to \$7,000,000, shares \$500 par.

Lands, 661 hectares, including 216 mines and mining claims, the more important being Los Pozos, Las Animas, El Salado and Pueblo Hundido, at distances of 25 to 52 kilometers from the smelter at Chañaral, with which the mines are connected by rail. Property includes lands bought, 1906, of Besa y Ca., and of Las Animas Copper Mining & Smelting Co., Ltd., 1909. Lands are desert and water is scarce. The mine water carries salts and water for domestic uses is secured by condensation from the mine water.

Las Animas group includes the Fronton and Progreso mines, which are the principal properties, also La Fortunata mine, 430' deep, opened 1855, and La Elena mine. The Mina Fronton, worked for decades, carries large orebodies having 3 veins with parallel strike and dip of 70°, in syenite, traceable 3 kilometers. Average width of the 3 veins is about 5', with ore occurring mainly in vertical shoots, sometimes 100' in depth. Oxidized ores, to depth of 150 meters, are succeeded by sulphides, mainly with chalcopyrite, with a little chalcocite, of 6.6% average copper tenor. The mine is opened to a vertical depth of 1,837', and horizontally for about 1,000'. The hoist is old, raising 1,000-kg. cars.

El Progreso mine, opened to depth of about 300 meters, carries mainly chalcopyrite, of about 7% average copper tenor. El Progreso and El Fronton mines are separated by about 50 meters of porphyry, quartz and limestone, carrying orebodies, developed by a tunnel, started from the 6th level of El Progreso, toward El Fronton.

El Manto Verde mine at Los Pozos, 25 kilometers from Las Animas, has 2 parallel orebodies in porphyry and syenite, 1 carrying oxidized ores of about 6% average copper tenor, there being no sulphides, though chalcopyrite is found in the Laura mine, nearby. There are shafts of 80 meters and 195 meters depth, latter having its first 65 meters vertical and balance at 50°, and there also is a tunnel. The mine has extensive and erratic old workings and shows large bodies of low-grade ore, somewhat refractory.

In addition to the foregoing mines, which are the principal properties, there is La Descubridora mine, formerly an important producer, abandoned at depth of 650 meters; the Andacollo mine, with ore averaging about 12.6%; the San Agustín, with 3.5% ore, and the Manto Atacama, with 3% ore. With further development the properties of this company can furnish a sufficient variety of ores to permit proper furnace mixtures.

There is a small concentrator, with steam power, at the Fronton mine.

There are 2 smelters, at Chañaral, known as the old and new, the old smelter, of small capacity, having two 54" circular water-jacket blast furnaces, in poor condition, with Connersville and Böcker blowers, and 6 reverberatory furnaces, each 18' in length, with a trapiche.

The new smelter has 4 reverberatory furnaces and a 100-ton water-jacket blast furnace, with hot blast, and 2 Connerville blowers, three 52-h. p. engines, and an electric light plant. Distilled sea water is used for the water-jackets and boilers. Slags are granulated and hauled out in wooden cars by mules. Losses through fumes, dust and slag are very heavy, aggregating 1.2% copper. Fuel is Australian coke with charges averaging 13.06%, in 1908.

Product of the smelter is matte, averaging 52% copper, which is shipped to Guayaquén for conversion. The smelter has a complete converter department, to be used when production reaches 200 metric tons monthly. The converter department, taking crushed matte, has four 2x1.7-meter shells, with a Walker air compressor, Blake crusher and lining mill.

The property of Las Animas Copper, Mining & Smelting Co., Ltd., taken over July 1, 1910, included a shipping pier, at Chañaral, with railroad line.

Production about 5,000,000 lbs. fine copper annually. Property considered valuable and management good.

CHANAARCITOS; FUNDICIÓN DE.

CHILE

Owned by Sociedad de Minas i Fundiciones de Carrizal.

CHESHIRE COPPER MINES, LTD.

ENGLAND

Office: Timlings, 13 Finsbury Circus, London, E. C., England. Organized June 22, 1912, capitalization £60,000, shares £1 par. Company deals in mining properties.

CHILE COPPER CO.

CHILE

Office: 165 Broadway, New York. Daniel Guggenheim, pres.; Albert C. Burrage, vice-pres.; preceding officers, Murry Guggenheim, Isaac Guggenheim, S. R. Guggenheim, Simon Guggenheim, Pope Yeatman, William Loeb, Jr., John N. Steele, Albert C. Burrage, Jr., Russell Burrage and William J. Maloney, directors. C. K. Lipman, sec.; L. Friedrich, treas. Organized April 16, 1913, under laws of Delaware, capitalization \$110,000,000, shares \$25 par; issued, 3,800,000; 600,000 shares held in treasury for conversion of \$15,000,000 7% gold bonds. Company owns the entire issued capital stock of the Chile Exploration Co. of New Jersey and its Chilean properties are described under that title.

CHILE EXPLORATION CO.

CHILE

Office: 165 Broadway, New York. Daniel Guggenheim, pres.; Albert C. Burrage, vice-pres.; Pope Yeatman, managing director; preceding officers, Murry Guggenheim, S. R. Guggenheim, Simon Guggenheim, Isaac Guggenheim, William Loeb, Jr., John N. Steele, Albert C. Burrage, Jr., Russell Burrage and Clarence L. Myers, directors. L. Friedrich, treas.; C. K. Lipman, sec.; Fred Hellmann, mgr. Organized Jan. 11, 1912, under laws of New Jersey, capitalization \$1,000,000, shares \$100 par.

Property, at Chuquicamata, in the province of Antofagasta, Chile, about 1 mile from the terminus of a branch line of the Antofagasta railroad, is situated on the crest of a low ridge some distance from the main range of the Andes. The orebody is 8,000' long, has a 700' maximum width, and is as yet unproven in shape and extent. Small veins of rich ore cut through the mass, but the average of the entire deposit is estimated at 2.70% copper. The copper occurs in the form of brochantite, a mixture of copper sulphate and copper hydrate, known as a sub-sulphate of copper. There is also a small amount of atacamite and chalcantite, or natural blue vitriol.

Development is by a large number of churn drill holes, which average 404' in depth, most of them stopped in ore. The deepest hole is 1,013' deep. These drill holes show that the oxidized ore changes in depth to an altered

grano-diorite, carrying disseminated chalcocite, bornite and chalcopyrite. About three-fourths of the ore developed consists of brochantite and the balance of copper sulphides.

Ore developed to July, 1913, amounts to 95,657,000 tons of 2.70% copper, according to Pope Yeatman's report.

The reduction plant will treat 5,000 tons a day, being the first unit of a much larger plant to be built later. The copper will be recovered by a leaching process, the ore being peculiarly amenable to treatment by this method. Careful study of the problem by E. A. Cappelen Smith shows that the ore gives little or no slime, and is readily soluble in an 8 or 9% solution of sulphuric acid. As it contains no arsenic, antimony or bismuth, the solution will not be fouled by repeated use. Precipitation will be by electric current, making electrolytic copper direct from the solution.

The ore body will be mined by steam shovel, hauled to the reduction plant and subjected to crushing in gyratory crushers and rolls to one-fourth-inch size. It will then be distributed by Robins conveying belt to concrete vats, lined with acid-proof material and holding 9,000 tons each, a day's supply. The extraction process, which might be more accurately termed soaking, rather than leaching, will take from 2 to 3 days for acid treatment and washing, 1 day for filling and 1 day for discharging. The pregnant solution will be drawn off into solution tanks and the leached residue taken from the vats by clam-shell buckets, operated on a traveling bridge, transferred to conveyor belts and piled on the waste dump. The copper solution will be drawn into precipitation tanks and deposited electrolytically. A power station will be erected at the coast and the contract for the plant has already been let to Siemens & Schuckert, of Germany, for \$2,856,000. Power will be generated by steam at a central station, transmitted by 3-phase current of 100,000 volts, a distance of 120 miles to the mine. Four turbo-generators, each of 10,000-kw., will be installed at the station to be reinforced later by a water power plant on the Loa river, near the mine. The power line will consist of 2 parallel wires of 3x95 sq. mm. cross-section placed on steel turrets. The first unit of the plant for the sub-station at the mine will consist of 4 transformers, each of 10,000-kva. and 5,000-v. with 7 direct-current motor generators of 2,500-kw. each. It is estimated that the plant will be ready to ship copper early in 1915.

Estimated annual production of copper on a basis of 5,000 tons per day is 90,000,000 lbs. refined copper, but the plant will be increased to 10,000 tons capacity in the near future, which should produce 180,000,000 lbs. copper. The estimated cost of production per pound of refined copper is 6 cts., including delivery in Hamburg, Germany or England.

CHILENA DE FUNDICIONES; SOCIEDAD.

CHILE

Office: Valparaíso, Chile. Mine office: Tamaya, Ovalle, Coquimbo, Chile. Works offices: Guayacán, Coquimbo, Chile, and Tongoy, Ovalle, Coquimbo, Chile. Property includes the Tamaya mines, opened 1860, which were the principal producers, also mines at Punitaqui and La Laja, in the province of Coquimbo. La Teresa mine, at Mantos Blancos, produced 1,200 metric tons of 9% ore in 1909. Property also includes the Portozuelo mines. Mines as a whole are said to have an abundance of ore of 5 to 6% copper tenor, available for leaching.

Property includes 2 smelters, known as the Tongoy and Guayacán, also a leaching plant at Guayacán, with a capacity of 100 metric tons of ore daily.

The Fundición de Guayacán is one of the largest copper smelters in Chile, and formerly had 20 very small calcining furnaces and 14 very small reverberatory furnaces, 4 of latter being used for casting ejes, or matte, of

about 50% copper tenor, 8 for Chile bars of 97% average tenor, and 2 for ingots of 99.5% tenor, slags averaging only 0.4% copper. In 1909 this plant was improved by the building of a large reverberatory furnace. Fuel is domestic coal, from Lebu, and a limited amount of Australian coke.

The Fundición de Tongoy has 5 calcining furnaces and 2 reverberatory smelting furnaces, 16x22' in size, making matte of about 57% average tenor, and Chile bars of 97% tenor, sent to Guayacán for smelting. This plant has been idle since 1907.

CHILLAGOE, LTD.

QUEENSLAND

Secretary: C. L. Hewitt, 39 Queen St., Melbourne, Australia. English office: Palmerston House, London, E. C., England. Mine and works office: Chillagoe, Lynd Co., Queensland, Australia. Jas. Smith Reid, chairman; D. W. Harvey Patterson, vice-chairman; preceding officers, V. J. Saddler, H. F. C. Keats and Col. F. G. Hughes, directors; Edwin Habben, London, sec.; E. J. J. Rodda, mine supt.; Jos. Horsburgh, smelter supt.; P. M'Dermott, railway supt.; E. A. Weinberg, cons. engr.

Organized, 1913, under laws of Queensland, capitalization £600,000, shares 10s. par; fully issued, 7s. paid. The Chillagoe Proprietary, Ltd., organized June 16, 1898, was reorganized as the Chillagoe Railway & Mines, Ltd., again reorganized 1902 as New Chillagoe Railway & Mines, Ltd., reconstructed for the third time as Chillagoe Company, Ltd., and again reorganized, 1913, under present title.

The last reconstruction was for the purpose of raising funds to develop the company's coal properties at Mount Mulligan, 30 miles to the northeast of the mine. It involved an assessment of 3 shillings on each of the 1,175,000 shares of 10s. each.

Debentures: £573,300, first mortgage 5% bonds due April 1, 1919; £225,000 Etheridge Railway, 4½%, first mortgage bonds, redeemable at par March 1, 1921, and £20,000, second mortgage 6% bonds redeemable in 4 annual drawings.

Profits for fiscal years ending March 31, have been as follows: £64,900 in 1908; £94,507 7s. 2d. in 1909; £88,348 4s. 1d. in 1910; £99,826 1s. 11d. in 1911, and £18,202 3s. 1d. in 1912. Deficiency coupons for debenture interest are £9.

Lands, 5,540 acres, including the Einasleigh mine and 2,016 acres, 50-year leasehold from the crown, exempt from labor conditions under special act of the Queensland parliament, and an 80-acre smelter site, all in the Walsh & Tinaroo district, concessions including 9 groups of 70 leases, expiring Jan. 1, 1948, held at annual rental of £1 per acre, with exemption from labor conditions, and 6 original leases. Property also includes about 3,200 acres of coal land at Mount Mulligan.

The district shows Silurian limestone, sandstone and conglomerates, with various fissure veins and contact deposits, carrying auriferous copper ores giving average returns of 3.5% copper and 2 oz. silver per ton, with traces of gold and lead ores ranging in tenor about 20% lead, 8% zinc and 2 oz. silver per long ton. Principal mines are the Einasleigh, the Eclipse, Paisley, Ruddygore and Zillmantion, minor properties being the Penzance, Muldiva and Mount Lucy mines.

The Einasleigh mine shows quartzite, quartz-porphyry, schist, slate, syenite and metamorphosed acid granites, traversed by diorite dikes, overlaid by 40' of basalt, carrying 3 contact deposits that are essentially mineralized quartzites, adjoining the diorite rock. The orebody under development, estimated to average 35' in width, carries malachite, azurite, melaconite and spongy native copper, at and near surface, succeeded by chalcopyrite and chalcocite. The ores carry a trace of silver, but no gold.

The mine is opened beneath the Einasleigh river, with a 40' roof of ore remaining for safety. Development is by the Daintrees shaft of 30', South shaft of 120', and Main shaft of 390', with levels at 120', 170', 270', and 370', the lowest level showing a 23' vein. Mine is timbered on the "pigstye" system, using coarse waste and river sand for filling. Some diamond drilling has been done. Ore reserves were estimated, 1913, at 71,242 tons, carrying about 5% copper, with small silver and gold values.

Equipment at the mine includes a 200-h. p. steam plant, with a 4x6" single-drum hoist, and a 14x30 first-motion duplex hoist with two 6' drums. There is a 6-drill Riedler air compressor and a 15-kw. direct-connected engine and generator. There are 14 buildings, including an office, laboratory, store, sawmill and dwellings.

The Ruddygore mine apparently works an orebody best described as a stockwerk, worked largely open-cast, deepest shaft, 300', being bottomed in low-grade ore. Equipment includes an 8x12" hoist and a 6-drill air compressor. Idle.

The Zillmanton mine has a vein of 17 to 20' width, opened by old shafts of 250' and 360', and the new Reid shaft sunk 376'. Ore produced, 1912, returned 4% copper and 1.38 oz. silver per long ton. Mine was flooded, 1908, and reopened, 1910, but continues wet.

The Penzance or Red Cap mine, now idle, has a 200' shaft.

Miscellaneous mines include the Hensey, having a 200' shaft; the Dargalong mine, which shows auriferous copper and lead sulphides; the Otho, which has proven disappointing in development; the McIlwraith, having a 250' shaft, idle; the Victoria, having a 600' shaft, idle; the Harper, which has a 368' shaft, idle; also the Hobson and Ti Tree mines, both idle. Iron ore for flux is mined at the Boomerang and Mount Lucy mines, and limestone quarried at Mount Lucy.

Equipment includes steam plants at the principal mines, with 6 hoists, good for 500' each, and several air compressors. Buildings include a 50x70' wood and iron machine shop, 50x70' carpenter shop and smithy, a small iron foundry, 5 other mine structures and 11 dwellings.

The smelter, at an average distance of 4 miles from the different mines, receiving ore by rail, is a very complete plant, costing upwards of £60,000, and doing an extensive custom business. The plant has 3 Edwards calciners and eight 140-ton blast furnaces, 3 for lead and 5 for copper, also a reverberatory furnace. The lead smelter uses the Huntington-Heberlein sintering process, with 8 pots. The lead furnaces treat Mungana and other custom ores, the copper in the ores being matted and afterwards smelted in the copper furnaces. The complex sulphides are divided into 3 lots, as straight copper ore, copper-lead ore, where the copper is practically discarded, and silver-lead-copper ore, with recovery of all 3 values in latter. The converter department has 1 stand, with 6 shells, taking 35% copper matte from the blast furnaces, and turning out blister copper averaging 98% copper and about 100 oz. silver per long ton. The converter department has an electric crane, and pneumatic tamper for linings. Fuel is wood, coal and coke, and water is taken from a 1,500,000-gal. dam, across Chillagoe creek, which has a minimum flow of 4,000 gals. hourly. The smelter has electric power, a small sampling mill, with crusher and Ball mill, and a Dwight-Lloyd sintering plant, installed, 1911.

The Mareeba to Chillagoe railway, owned by the company, has 270 miles of track; apparently this railway is the only profitable branch of the business at present.

Production, including custom ore, which supplied the bulk of the product, for fiscal years ending March 31, has been as follows: 2,966 tons copper,

6,703 tons lead, 786,692 oz. silver and 159 oz. gold in 1909; 2,736 tons copper, 2,253 tons lead, 437,449 oz. silver and 1,798 oz. gold in 1910; 3,272 tons copper, 2,396 tons lead, 512,625 oz. silver and 11,646 oz. gold in 1911; 1,845 tons copper, 1,410 tons lead, 197,886 oz. silver and 2,286 oz. gold in 1912. The smelter treated an average of 1,800 tons per week during June and July, 1913, producing 1,234,240 lbs. fine copper, 675 tons pig lead, 68,448 oz. silver and 707 oz. gold.

CHOQUELIMPE; SOCIEDAD EMPRESA MINERA y FUNDICIÓN DEL MINERAL DE.

CHILE

Mine office: Choquelimpe, Tacna, Arica, Chile. Carlos Basadre Forero, mgr. Organized 1908, as successor of Compañía Beneficiadora de Metales. Mine has an irregular orebody in rhyolite, carrying cupriferous pyrite, with quartzose gangue, and the company apparently is operating mainly on extensive old dumps of low-grade copper ore.

The reduction works, 160 kilometers from the port of Arica, with the high freight charge of 50 pesos per metric ton, include a small mill and smelter. The mill, built 1909, has 2 Blake crushers; a 40" Huntington mill, 1 jig, 2 Wilfley tables and 1 Ferrari table. The smelter has 2 calciners and a 36" cylindrical water-jacket blast furnace, with 2 blowers and a 50-h. p. boiler. Fuel is English and domestic coke and yareta is burned under the boilers. Product is Chile bars carrying good gold and silver values.

CHORRILLOS SMELTER.

CHILE

Owned by Compañía de Minas i Fundición de Calama, at Calama, Antofagasta, Chile.

CHOTA NAGPUR MINES.

INDIA

Mine office: Chota Nagpur, Bengal, India. Ore occurs as chalcopryrite, disseminated in schistose rocks. Mines were worked in very ancient days, and a company did some development work in 1903. Negotiations for re-opening said to be in progress, 1913.

CHRISTIANIA NICKEL REFINING WORKS.

NORWAY

See Kristianssands Nickkelraffineringsverk.

CHUQUICAMATA; SOCIEDAD ESPLOTADORA DE.

CHILE

Office: Valparaiso, Chile. Mine office: Calama, Antofagasta, Chile. Organized Aug. 7, 1900, under laws of Chile, capitalization £40,000, and re-organized Jan. 18, 1904, capitalization £100,000, shares £2 par. Property is the San Luis mine, said to have produced about 6,000,000 pesos worth of rich ore. Is supposed to have sold its holdings to the Chile Exploration Co.

CINTILLA COPPER MINING CO., LTD.

BOLIVIA

Address: care H. Gibbs, sec., 21 Wall Exchange, London, E. C., England. J. J. C. Fernau and G. H. Fernau, directors. Organized Sept. 20, 1912, capitalization £2,500, shares 1s. par; issued, 37,500 shares. Debentures, £1,250 bonds bearing 10%; issued, £575. Property is a leasehold of 40 hectares, in Chui Chui, Viccboca, Norchicas, Potosi, Bolivia, known as the New Coro Coro. No trace of operations secured.

CLAUSTHAL; KÖNIGLICHE HÜTTENAMT.

GERMANY

Works office: Clausthal, Hanover, Germany. Herr Bergrat Boltze, mgr. Property is a silver-copper smelter operated under state auspices.

CLONCURRY COPPER & GOLD EXPL. CO., LTD.

QUEENSLAND

Office: Darragh's Bldgs., Queen St., Brisbane, Queensland, Australia. Letter returned unclaimed from former English office, 39 Lombard St., London, E. C., England. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. D. T. Seymour, J. Blanc, G. Whittington, F. G. Exell and W. R. Keith, directors; P. W. Crow, sec.; F. H. Hockings, mine mgr., at last accounts. Organized Jan. 22, 1906, under laws of Queensland, capitalization £50,000, shares 5s. par, fully issued and fully paid. Lands, ap-

parently are 160 acres, and property merely a prospect. Is regarded with suspicion as a mere stockjobbing scheme. No trace of operations secured.

CLONCURRY SYNDICATE, LTD.

QUEENSLAND

Office: 541 Salisbury House, London, E. C., England. Mine office: Cloncurry, Beaconsfield Co., Queensland, Australia. F. C. D. Haggard, chairman; A. B. Dealtry and F. B. Dunsford, J. P., directors; F. A. Labouchere, sec. Organized June 14, 1906, under laws of Great Britain, capitalization £50,000, shares £1 par; issued, £46,650, fully paid. Paid a 5s. dividend, Dec., 1907. Property is 49,967 shares in the Queensland Exploration Co., Ltd., and a loan of £24,086 due from that company, which was floated by this corporation.

COBAR COPPER, LTD.

NEW SOUTH WALES

Office: 308 Winchester House, Old Broad St., London, E. C., England. Mine office: Cobar, Robinson Co., N. S. W., Australia. A. E. Barton, chairman; preceding officers, C. J. McMahon and F. H. Aarons, directors; H. A. McMahon, sec. Organized Nov. 16, 1909, under laws of Great Britain, as a reconstruction of Cobar Copper Co., Ltd., with capitalization £30,000, shares £1 par.

Lands, 150 acres, including the Mount Pleasant and Young Australia mines, lying between the Cobar-Chesney and Oriental. A vein of about 4' width carries mainly manganiferous quartz, with patches of copper sulphides of fair grade. The middle vein is about 8' wide, and there is a belt up to 300' in width, of slate and quartz, carrying copper impregnations. The Mount Pleasant mine has a 520' shaft, with levels at 150', 215', 315' and 500'; and the Young Australia mine has a 370' shaft. Properties were first worked as gold mines, on the gossans, returning about 6 dwts. per long ton, but below the zone of oxidation copper increased gradually rendering the cyanide extraction of gold difficult. Idle for first 9 months of 1912, but unwatered mine in October and drove 500' level 115' further toward orebody now being worked in the Young Australia mine by leasers. Latter mine was developed on the 350' level and produced 730 tons of ore yielding £2,390.

COBAR FREEHOLD COPPER MG. CO., N. L. NEW SOUTH WALES

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized 1907, under laws of New South Wales, capitalization £15,500, shares 10s. par. Lands, about one-half mile from the Great Cobar, are slightly developed by a shallow shaft showing malachite and azurite. Idle and presumably moribund.

COBAR-GLADSTONE MINING CO.

NEW SOUTH WALES

Mine office: Wrightville, Robinson Co., N. S. W., Australia. Mine is opened by a 260' vertical shaft and makes occasional shipments to the Great Cobar smelter, first-grade selected ore assaying about 25% copper, second-grade ore assaying 10% copper, and third-grade ore assaying 5% copper. Property also carries gold.

COBRIZAS; MINA.

BOLIVIA

Office and mine: Lipez, Potosí, Bolivia. Is a small producer of native copper, making more or less silver as a by-product, both metals being found native and in association and for some years has been the largest Bolivian producer of native copper outside of the Coro Coro district.

COCKBURN MINING CO., N. L.

SOUTH AUSTRALIA

Idle. Mine office: Cockburn, South Australia. Mine, formerly known as the Mutooroo West, about 2 miles west of the Mutooroo mine, has a vein with nearly north-south strike, dipping sharply to the west, and 2 shafts, about 200' apart, the No. 1 or Engine shaft, 150' deep, showing a vein of about 22' width, carrying patches of rich chalcopyrite and large

quantities of pyrite, with scanty quartz gangue. No. 2 shaft, 157' deep, shows ore of only about 1% copper tenor. Equipment includes a good hoist.

COLEBROOK PROSPECTING ASSOCIATION, N. L. TASMANIA

Office: 60 Cameron St., Launceston, Tasmania. Mine and works office: Rosebery, Montagu Co., Tasmania. J. S. Clemons, M. P. P., chairman; preceding officer, E. M. King and A. Simson, directors; E. Sheargold, sec. Capitalization originally was £57,600, increased, 1908, to £67,200, shares 14s. par. Lands, 240 acres, 1 mile south of Rosebery, showing 3 orebodies, the Summit No. 3 lode, of 18' width, ore carrying chalcopryite very sparingly, associated with pyrite, in a schistose gangue. Mine was worked open cast, with 3 pits, and had a 1,000' gravity tram.

The 50x60' smelter, costing £7,000, has a 200-ton water-jacket blast furnace, which was in blast only 120 hours. Ore was claimed by management to average 3% copper, after careful sampling, but smelter returns were under 1% copper, and 800 long tons of ore smelted yielded only 6¾ tons of copper. Mr. Cecil Rae, the former smelter superintendent, condemned the mine as worthless, and was abused, by the directors, for telling the truth. Idle since May, 1908, company in debt, reputation gone and bankruptcy ended its existence.

COLLBRAN-BOSTWICK DEVELOPMENT CO. KOREA

Office: First National Bank Bldg., Denver, Colo. Mine office: Kapsan, Hani Kyung, Korea. A. R. Weigall, gen. mgr.; H. Collbran, pres.; H. R. Bostwick, vice-pres.; H. E. Collbran, sec.-treas.; preceding officers, H. Maki and S. L. Selden, directors. Organized April, 1906, in Connecticut, capitalization \$1,500,000; issued \$910,000. Annual meeting, 2nd Monday in July.

Property is a concession of about 4,000 sq. miles, including the old Kapsan mine, granted 1908, by the Korean government; the concession, to run for 100 years, dating from June 17, 1908, allows the company the free use of timber for all mining purposes upon payment of nominal rates, and among other rights includes free importation of all mining material and free export of the mine products, the government receiving a royalty of 1% of the value of the gross output, in addition to nominal taxes on the lands held.

The Kapsan mine, about 21 miles east of the walled city of Kapsan, and about 120 miles from the harbor of Peuq-Chhyang, was discovered and opened more than a thousand years ago by a Chinaman, eventually passing to the Korean throne, and, 1883, was worked by the crown, for 2 years, with a maximum force of about 20,000 men. Ore occurs as a metasomatic deposit, the district showing alternations of limestone and marl, with interbedded clay-slate and sandstone, frequently metamorphosed by intrusive granite and overlaid and intruded by basaltic dikes. Ore occurs as large irregular masses of sulphides, mainly chalcopryite, associated with arsenopyrite and pyrrhotite, but without gangue or contact minerals. The deposit now worked is the third that has been found and has an extreme width of 20' and known length of 80', with fairly defined walls.

Development work by the present company started July, 1909, has placed about 160,000 tons of ore in sight, said to average 10.5% copper, about 5,430' of new openings being made in 1910, at a cost of \$2.30 per foot. The mine has several shafts, deepest being 1,020' below the outcrop of the vein. Company, 1913, planned to erect a 100-ton smelter at an estimated cost of \$170,000.

COMBARBALÁ; COMPAÑÍA MINERA DE. CHILE

Mine and works office: Combarbalá, Coquimbo, Chile, and Illapel, Coquimbo, Chile. Organized Oct. 31, 1906, under laws of Chile, capitalization

400,000 pesos, shares 25 pesos par. Smelter, known as the Fundición de Valdivia, makes Chile bars, of about 98% average copper tenor. Idle and presumably moribund.

COMMERCIAL CORPORATION, LTD.

SPAIN

Office: 4 Union Court, London, E. C., England. Operating office: Pelayo 2, Barcelona, Spain. Mine office: Huercal-Overa, Almería, Spain. Albert F. Calvert, chairman; preceding officer and W. Stuart Lane, directors; Henry N. Gardiner, sec. Organized May 10, 1897, under laws of Great Britain, capitalization £500,000, shares £1 par, in £6,000 deferred shares and £494,000 ordinary shares; issued, £4,100 deferred and £302,000 ordinary shares. Property is the Huercal mine, carrying copper, cobalt and nickel ores, on which company apparently has done a little development. Presumably idle.

COMMODORE MINE.

QUEENSLAND

Mine office: Warroo, Bentinck Co., Queensland, Australia. Development is by a 74' shaft showing high-grade copper ore, selected material, shipped during last quarter of 1912, yielding 16% copper. Mine is leased by Messrs. Moet and Clarke.

COMPAÑIA DE MINAS DE COBRE DE GATICO.

CHILE

See description under Gatico; Cia de Mines de Cobre de.

COMSTOCK MINE.

TASMANIA

Mine office: Gormanston, Montagu Co., Tasmania. Chas. E. Coote, supt., at last accounts. Mine, on the western slope of Mt. Lyell, has 2 tunnels, in schist showing impregnations of chalcoppyrite. Was developing with a force of 10 men, late 1910. Presumably idle.

CONCORDIA DE COLLAHUASI; COMPAÑIA MINERA.

CHILE

Mine office: Collahuasi, Tarapacá, Chile. Organized March 17, 1906, under laws of Chile, capitalization 120,000 pesos, shares 100 pesos par. Property was the Concordia mine, undergoing development, 1910. Presumably idle.

CONDORIACO; COMPAÑIA MINERA DE.

CHILE

Idle. Mine office: La Serena, Coquimbo, Chile. Equipment includes a small steam plant, and the mine was a limited producer, 1903, when about 75 men were employed.

CONGO FRANCAIS; COMPAGNIE MINIERE DU. FRENCH CONGO

Office: 19 Rue de Bonnel, Lyons, France. Mine office: Mindouli, par Brazzaville, French Congo. Organized June 20, 1905, under laws of France, capitalization f770,000, increased 1909, to f4,000,000, shares f500 par, and 7,000 founder's shares carrying the right to 35% of profits. Property is 6 mineral permits, area 14,500 hectares, covering the Mindouli, M'Passa, Tchicumba, Pimbi and Asigunga mines and prospects, also the right to explore in the basin of the Niari river, between Brazzaville and the coast. Company owns in fee simple a strip 96 miles long and 6 miles wide.

Principal property is the Mindouli mine, in the Bouenza district of the upper Kiulu river, about 300 kilometers from Loango, on the coast. The ore deposit shows cupriferous sandstone overlying limestone, surface ores being mainly malachite, with some cuprite, both argentiferous, but at little depth ore changes to chalcocite. These deposits were worked by the natives, in a primitive way, for centuries, and a considerable trade once existed in copper and copper utensils, but this became extinct with French occupation. The ores shipped consist of almost solid copper glance and average 50% copper.

A 24" narrow-gauge railway, 96 miles long, completed Dec., 1910, from Brazzaville to the Mindouli mine, permits development and extraction of ore under favorable circumstances. Transportation of ore is by rail from the

mine to Brazzaville, thence in boats down the Congo river to Leopoldville, thence by railway to Matadi and the coast. The ore deposits are extensive and of good average value. Property considered promising.

CONGOLAISE; SOCIÉTÉ MINIERE.**FRENCH CONGO**

Address: care Nagelmackers & Co., Paris, France, and Brussels, Belgium. Organized 1911, under laws of Belgium, capitalization f1,000,000, subscribed by Jose Allard & Co., Nagelmackers & Co., and Cia. Comm. et Minière du Congo Belge, to acquire and work 2 blocks of mineralized land, amounting to 40,000 hectares, situated in the Upper Katanga River region, which had previously been prospected for the Nagelmackers Co. by a party under the leadership of M. Lefevre.

COOKSON & CO., LTD.**ENGLAND**

Address: F. Reid, sec., Milburn House, Newcastle-on-Tyne, England. Clive Cookson and Hugh Cookson, directors. Organized Dec., 1904, capitalization £250,000, shares £10 par; issued, 21,780 shares. Debentures, £91,700. Property comprises lead and copper smelters and refineries at Willington Quay and Howdon, Newcastle-on-Tyne.

COOSHEEN MINERALS, LTD.**IRELAND**

Probably dead. Office: 5 Great Winchester St., London, E. C., England. Mine office: Schull, County Cork, Ireland. Robt. Snare and Thos. Williams, directors; Thos. Williams, Jr., sec., at last accounts. Organized May 10, 1906, under laws of Great Britain, capitalization £25,000, shares 5s. par; issued, £20,000, fully paid. Property is a 60-year lease, from March, 1906, at yearly rental of £30 and 30% royalty on net profits, of the Coosheen mine, area 329 acres. Mine formerly a copper producer of merit, was reported upon favorably by J. Andrew Wauchope.

COOTAMUNDRA MINE.**NEW SOUTH WALES**

Mine office: Cootamundra, Bland Co., N. S. W., Australia. Property, formerly known as the Mount Felstead copper and silver mine, is 7 miles northwest of Cootamundra. Country rock is quartz-felsite, much crushed, carrying quartz veins with ferruginous jointings, with an orebody of 1 to 6' width, about a quarter of which is ore, including cuprite, melaconite, azurite, malachite and chalcopryrite, also lead carbonates and sulphides and sphalerite. Ore is decidedly argentiferous, selected ore ranging about 50 oz. silver per long ton, with traces of gold. Development is by shafts of 25', 52' and 145'. Production, 1907, was 85 long tons of ore, shipped to Swansea for reduction, giving an estimated yield of about 100,000 lbs. fine copper, with considerable silver values. Idle.

COPPER CREEK MINING CO., LTD.**TASMANIA**

Idle. Mine office: Ulverstone, Devon Co., Tasmania. Lands, 40 acres, freehold, 12 miles from Ulverstone, near Gunn's Plains. The property shows a series of parallel bands of gossan overlying cupriferous calcite, in slate. Development includes trenching, a small open cut and 2 tunnels, lower of 280'. The 62' upper tunnel cuts obliquely a vein of about 5' width, of brecciated silicious slate, carrying covellite and chalcopryrite, associated with pyrite, and reported to be associated with hematite also. Ore samples have assayed 25% copper and 9 oz. 6 dwts. silver per long ton.

COPPER ESTATES OF WESTERN AUSTRALIA, LTD. AUSTRALIA

Address: care J. Barrie, chairman and sec., 78 Lowther St., Carlisle, England. Preceding officers and W. F. Smith, directors. Organized March 4, 1903, under laws of Great Britain, as a reconstruction of a company of same name, which in turn succeeded the Derby Syndicate, Ltd., capitalization £15,000, shares 5s. par; issued, 25,974 shares, fully paid. Lands, 1,050 acres, freehold, opened by shafts, said to have a 30' vein with 10 to 12" pay streaks on both walls, carrying high-grade black copper, presumably

chalcocite. Mine was discovered 1882, and worked for several years. Idle since 1904.

COPPER HILL MINE.

SOUTH AUSTRALIA

Mine office: Kadina, Daly Co., South Australia. Mine, known as the Kulpapa, opened in early days, is about 12 miles from Kadina, showing a vein about 60' wide, carrying nodules of malachite, and ferruginous streaks, with a gritty friable kaolinized gangue. The 250' main shaft is sunk vertically for 90', and thereafter on the dip. There are a number of old pits and shafts. Equipment includes steam power and a hoist good for 400'. Idle several years.

COPPER MINES OF COPIAPO, LTD.

CHILE

Address: W. S. Bartlett, sec., 80 Bishopsgate, London, E. C., England. Mine and works office: Copiapo, Atacama, Chile. H. Loeffler and F. Merriks, directors. Organized June 18, 1912, as successor of Copiapo Mining Co., Ltd., capitalization £10,000, shares £1 par. Property consists of a tract 15 miles long in the valley of the Copiapo river, Atacama province, and of the Dulcinea and Ojancos copper mines.

The Dulcinea mine, 12 kilometers from Púquios, opened 1854, is the deepest mine in Chile. The mine has a fissure vein in diorite, occasionally faulted, of about 22' average width, with a footwall pay streak called the East vein, and a hanging-wall pay streak called the West vein, separated by 15 to 20' of barren rock. Gangue is quartz and calcite, with some iron oxide, and the vein is oxidized to about 1,000' and even to 1,500' in depth, the oxidized zone being succeeded by about 300' of secondary bornite and chalcocite, followed, below an average depth of about 1,350' by chalcopyrite. Ores carry both gold and silver values and the mine shows almost everything from native copper above to massive chalcopyrite at depth, the changes being gradual. Notwithstanding its great depth the mine produces only small quantities of water and water is brought to the mine by aerial tram from Llanos de Varas. The deeper workings are very warm. Electric light is used underground. The mine has met with many accidents and has suffered twice from incendiary fires. The Fletcher or main shaft is 2,880' in depth and has not been deepened since 1904. The Weir shaft is an incline 2,100' deep. A 1,070-meter drift tunnel has its portal 250 meters from the Weir and 410 meters from the Fletcher shaft. The Dulcinea employs an average of 120 men and produces about 1,000 metric tons of 8% ore monthly.

Equipment at the Dulcinea includes a Fraser & Chalmers hoist at the Weir shaft and a hoist at the Fletcher shaft raising 1,000-kg. cars. A 5,808-meter Ropeways aerial tram, from the Dulcinea mine to Llanos de Varas, connects with a light railway running to the smelter. The aerial tram has 42 triangular towers with longest span of 112 meters and capacity of 5 metric tons per hour. Tram requires only 12-kw. power for operation and cost of transport is about 3 pesos per metric ton.

The Descubridora mine, in the Checo district, opened 1825, has been idle since 1906.

The Ojancos group, at Ojancos, Atacama, includes the Carmen Alto, San Francisco and Antonia mines. As a whole, this group has proven disappointing and is now idle. The Carmen Alto has a 400' main shaft. The San Francisco has a 350' main shaft, and ore produced, 1905, averaged 16% copper. The Antonio is yet in the development stage. The Republicana, idle some years, was showing poorly when closed down.

The smelter, at Púquios, near the Mina Dulcinea, built 1907, apparently has been worked with interruptions, owing to lack of ore. The plant has a 90-ton 36x120" Fraser & Chalmers water-jacket blast furnace, a Samuelson

rotary blower, dust chamber and steel chimney. The works have electric light and make a limited use of electric power. Slags are hauled out in cars, by hand. Fluxes are limestone and iron ore, and coke charges are about 14%, including loss of coke in transit. Product is matte, exported to Europe. The smelter employs about 40 men.

COPPER QUEEN, LTD.

CAPE PROVINCE

Probably dead. Former mine office: Hay, Griqualand West, Cape Province. Is not listed in S. A. Mining Directory, 1913. See Vol. X, Copper Handbook.

COPPER QUEEN MINE.

SOUTH AUSTRALIA

Office: Beltana, South Australia. Beltana Rapid Ore Treatment Syndicate, owner. Lands, 4 miles west of Beltana, show decomposed slate, with seams of tetrahedrite and cuprite, the whole formation being strongly impregnated with copper carbonates. Development is by numerous open cuts and shallow shafts. Ores average 2 to 4% copper. Presumably idle.

COPPER WELL MINING CO., LTD.

NEW SOUTH WALES

Office: Cobar, N. S. W., Australia. Mine office: Wertago, Yungnulgra Co., N. S. W., Australia. Organized Sept., 1906. Lands, in the White Cliffs district, carry a vein of 24 to 30" width, with nearly vertical dip, having a 150' shaft, with levels at 60' and 100', showing good carbonate ore. About a quarter-mile north of the shaft there are 2 parallel veins of 8 to 12" width, 7' apart, presumably pay streaks of a single vein, carrying high-grade copper ore. Idle several years and apparently moribund.

CÓRDOBA COPPER CO., LTD.

SPAIN

Office: 5 Queen Street Place, London, E. C., England. Operating office: Manriques 9, Córdoba, Sevilla, Spain. Mine office: Estación de Cerro Muriano, Sevilla, Spain. Wm. Frecheville, chairman; Richard E. Carr, agt.; preceding officers, Lord Vaux of Harrowden, J. E. Champney, J. A. Dennison, Edgar Taylor and G. Cornwalls West, directors; F. H. Williams, sec.; John Taylor & Sons, mgrs.; J. Hocking, mine supt. Organized Aug. 5, 1908, under laws of Great Britain, capitalization £200,000, shares 5s. par; issued, 731,564 shares, fully paid. Company is a consolidation of the Cerro Muriano Mines, Ltd., and North Cerro Muriano Copper Mines, Ltd. For year ending Dec. 31, 1911, profits were £14,899, and for year 1912, £32,280; dividends 20%, or £36,578. In 1912, 40,000 additional shares were sold at par, giving £10,000 additional working capital.

Property, 469 hectares, 10 miles northeast of Cordoba, in the south of Spain, held under perpetual lease from the crown. Property is reached by the Andalusian railway. Mines show old workings, dating from the Roman era, extending to a depth of 400', notwithstanding a heavy flow of water. There are 6 large and several small veins in mica-schist, diorite and quartzite, carrying chalcopyrite and pyrite, with gangue of calcite, quartz and country rock, the ground being soft, requiring the filling of stopes with waste. Veins are reported to have widths of 12 to 40', with proven lengths as follows: Calavera, 1,635'; Excelsior, 635'; Lorenzo, 4,575'; Isabel, 5,550'; Cerro Muriano, 8,500'. Some ore taken from the old Roman workings assayed 28 to 34% copper.

Main shafts are the Santa Victoria, bottomed in the footwall at 726' and the San Rafael, 1,410', very wet, intersecting the vein at 870'. The San Rafael shaft, 300 meters from the Santa Victoria, shows a vein of 5 to 13 meters width with the better portions worked out by the Romans. The San Guillermo shaft, 300 meters from the San Rafael, was sunk only 42'. Ore reserves were estimated, Dec. 31, 1911, at 202,514 long tons, averaging 3.59% copper and on Dec. 31, 1912, at 200,025 tons of 3.35% copper. Development for 1912 was 10,236', but new ore opened up did not quite equal extraction.

The concentrator, costing £8,000, was remodeled, 1910. About half of the product is treated by the mill and half by the smelter. The mill has 6 units of the Murex magnetic separation process which treat the re-crushed jig middlings, other flotation processes being unsuitable owing to the presence of calcite. In 1912 Murex plant treated 8,536 tons of reground jig middlings and tailings averaging 1.73% copper and produced 817 tons concentrates averaging 12.8% copper, with a 70% recovery.

The smelter includes a calcining plant. The blast furnace blown in Aug., 1908, makes matte only and is in blast only alternate months, its capacity being double that of the mine. The smelter treated 24,477 tons of ore, concentrates, etc., and produced 4,595 tons of 51.3% matte in 1912.

In 1912 the mine output was 90,159 tons, which was in part hand-picked, with 55,013 tons sent to the concentrator and fines together with concentrate either sintered or briquetted. The production for 1912 was 2,377 tons of blister copper, but 2,439 tons was shipped in that year, yielding £175,914. Present production about 600,000 lbs. copper a month. This property is one of the largest and most interesting of the old Hispana-Roman mines and was famous before the Christian era for the high quality of copper and brass produced from its ore, but was entirely idle for 2,000 years, until reopened, 1903, by the predecessors of the present company.

CORELLA COPPER CO., N. L.

QUEENSLAND

Office: Brisbane, Queensland. Mine office: Cloncurry, Beaconsfield Co., Queensland. Organized 1912, as a reconstruction of the Willcocks-Cloncurry Copper Mines, Ltd. Lands, 85 acres, in the vicinity of Duck creek, including the Jessie, Rosebud, Secret and Melba mines. The Jessie mine has a 175' shaft, with bottom level at 163'; the Rosebud mine has a 200' shaft. Active development was prosecuted in 1912-13, sinking the Rosebud shaft 100' through hard, black schist, carrying disseminated chalcopryrite and also sinking 100' shaft in sandstone on the Secret lease.

A small smelter, with a reverberatory matting furnace only, was built 1907, and blown in 1908, treating a little ore averaging about 20% in copper tenor, after selection, making high-grade matte, but was idle, 1913.

CORIOLAN; GEWERKSCHAFT.

GERMANY

Mine office: Wissen-am-Sieg, Rheinprovinz, Prussia, Germany. Albert Vorländer, agt.; A. Schneider, supt., at last accounts. Capitalization 100,000 shares, without assigned value. Mine, developed by open cuts, tunnels and 1 shaft carries ores of lead, copper, cobalt and antimony, and was a very small producer of these metals, at last report.

COROCORO DE BOLIVIA; COMPAÑIA.

BOLIVIA

Office: Santiago de Chile. Mine office: Coro Coro, La Paz, Bolivia. Organized April 23, 1873, under laws of Bolivia, capitalization 1,025,000 bolivianos. Property, 354 hectares, is the second largest copper mine in Bolivia, employing about 500 men. Mine, 460 meters deep, is opened on conglomerate strata carrying native copper, with occasional cuprite and chalcocite. Silver, which occurs native, with copper, as in the Lake Superior mines, is an important byproduct. Mine has steam power and a mill, product being exported as copper mineral, production ranging 600 to 800 quintals monthly, of barillas de cobre of about 80% average copper tenor, estimated, by the Bolivian government to cost 7.8 bolivianos per quintal.

COROCORO UNITED COPPER MINES, LTD.

BOLIVIA

Registered office: 151 Finsbury Pavement House, London, E. C., England. Main office: 7 Rue des Italiens, Paris, France. Mine office: Coro Coro, La Paz, Bolivia. Baron René de Batz, chairman; G. T. Crane, E. F. Harrington, J. L. Barber, A. Berthín, Noël Berthín, H. M. Kersey, C. Portalis, L. Monnier, and L. Charbonnel, directors; G. B. Wolfe, sec. in

London; Roger Leo, sec. in Paris. Organized Aug. 6, 1909, under laws of Great Britain, capitalization £700,000, shares £1 par; issued, £673,607, fully paid. Company took over the properties of J. K. Child & Co., Ltd.; Sucesión Noël Berthín; Compañía Sud Americana de Cobre de Corocoro, and Carreras Hermanos.

Property comprises 515 hectares at 12,000' elevation, in the Coro Coro district in central Bolivia. The principal mines are the Vizcachani, Santa Rosa and the Guallatiri, the first named formerly owned by J. K. Child & Co., the second by Carreras Bros., and the third by the Noël Berthín estate. The copper is found native in several beds of sandstone interstratified with reddish and brownish shale. The ore-bearing beds occur in 2 series, separated by a strong fault; the beds to the east of this fault are known as ramos and dip east, the copper-bearing strata being succeeded by a considerable thickness of red slates capped by green slates and limestone overlaid in turn by red clay and brown sandstone. The beds west of the fault are known as vetas, or veins, and are much harder than the copper-bearing ramos. The mineralization is not uniform and the native copper occurs in particles scarcely visible to the naked eye, as well as in grains, plates, threads and sometimes flat masses weighing several hundred pounds. The main fault, known as Dorado vein, is also mineralized and is now the main producer of the company, yielding sulphides and arsenides of copper. It is supposed that this fault was the feeding fissure whose solutions spread into the sandstone and was precipitated by organic matter.

The mine workings have not yet crosscut very far into the series, but show at least 4 ramos and 6 vetas, the 4 ramos being divided into 7 cuerpas, or beds, and the 6 veins into 10 to 14 beds. Some of these beds have 7 to 8 meters of homogeneous ore, the White Ramos being 30 meters wide on the 10th level of the Vizcachani shaft, of which 8 meters are mined as ores. The beds average 10 meters workable thickness with an average content of 3½%.

The district is extremely arid, without timber, and almost without shrubs, and extensive use is made of local fuel, which is taquia. Taquia is used for firing boilers and also for drying and roasting ores and in the past even was used for smelting.

The mine openings in the conglomerate strata stand fairly well, though with some crushing, and levels average 25 meters apart. Winzes are inclined, with steps cut. Little timbering is used, except for shafts, owing to its great cost, timber being imported mainly from North America, and the workings are secured principally by the poteo or dry-walling system. Steel is used for arching lateral workings.

The property is divided into 4 operating units, principal and active sections being the Corocoro and the Guallatiri. The Corocoro has a vertical shaft 330 meters deep, equipped with a steam plant, and ore-sorting and crushing plant. The Guallatiri has shafts of 180 and 350 meters.

The ore is treated in 3 mills of 70 tons to 100 tons daily capacity, making a product known as barrilla, or crude copper mineral, of 80 to 88% copper tenor, which is shipped to Europe for refining. Production of the mines, 1912, was 4,100,000 lbs. fine copper. Owing to the remote and almost inaccessible location of these mines, past production has been small, compared with possibilities, but the company is making progress and output is steadily increasing. The property is considered decidedly promising.

CRADDOCK MOOR TIN & COPPER MINES, LTD. ENGLAND

Address: C. A. Lane, sec., 130 Moorgate Station Chambers, London, E. C., England. A. J. Bailly, L. Holmes and S. Fawns, directors. Organized

Aug. 19, 1912, capitalization £5,000, shares £1 par, to deal in copper and tin mining properties in Cornwall.

CRONNEBANNE MINES.

IRELAND

Owned by Ovoca Copper Syndicate, Ltd., at Ovoca, County Wicklow, Ireland.

CROWL CREEK SOUTH COPPER

MINING CO., N. L.

NEW SOUTH WALES

Office and mine: Shuttleton, Mouramba Co., N. S. W., Australia. Property, south of Shuttleton, has a 125' shaft, showing slight copper carbonate stains, but without appearance of commercial ore or a defined orebody. Idle.

C. S. A. MINES, LTD.

NEW SOUTH WALES

Office: 16 O'Connell St., Sydney, Australia. Mine office: Cobar, Robinson Co., N. S. W., Australia. G. H. Blakemore, chairman and managing director; J. O. Armstrong, A. T. Brown, J. T. Lemprière, Dr. Richard Read, Dr. W. H. Read and Peter Snelson, directors; J. N. Yarwood, sec. Organized Dec. 7, 1905, under laws of New South Wales, capitalization increased, 1907, to £60,000, shares £1 par; fully issued. Annual meeting in January. Absorbed, 1907, the C. S. A. Block 10 Mining Co., N. L., an adjoining property.

Report for year 1912 shows net proceeds from ore sold, £4,138, with net surplus £409, which deducted from debit of preceding year leaves debt of £1,808.

Property, 229 acres, leasehold, known as the Cornish, Scottish and Australian mine, 7 miles north of Cobar, in the Boganfield. Claims show sandstones and shales altered in places to slate. The outcrop is a large boat-shaped mass of gossan, oxidized for 400' and underlain by slates carrying bands with disseminated sulphides. A rich deposit of lead carbonate, 40' thick, was found at water level, 457', and this enrichment zone underlain by lean, cupriferous pyrite and pyrrhotite with some blende and galena of later age.

Development consists of a vertical main shaft of 660' and a 460' accessory shaft with extensive workings. New workings in 1911 disclosed a vein of silicious chalcopyrite ore at 450' and, in the nearby Tinto mine, the shaft from 450 to 550' passed through good basic copper ore. This solid basic ore averages about 2% copper, was 66' wide at last reports with considerable 8% ore in places.

Equipment includes a double-cylinder hoist, and 2 single and 2-stage air compressors, of 12 drills aggregate capacity, with boilers for condensing water, the district being arid. There are 8 buildings.

Production, 3,800 tons ore in 1906; 1,200 in 1907; idle 1908 to 1910, but produced 491 tons, valued at £1,259, in 1911.

The mine can be successfully worked for copper if a sufficient tonnage be developed, as the ore is basic.

CULGOA MINES.

QUEENSLAND

Mine office: Kilkivan, Lennox Co., Queensland, Australia. G. Turner, mgr., at last accounts. Lands, on Thunder creek, 15 miles north of Kilkivan, show several 8 to 15" veins, assaying 3 to 24% copper. Ore is shipped to the Waratah smelter. Presumably idle.

CUTTER COVE; SOCIEDAD DE MINAS DE COBRE DE. CHILE

Mine office: Cutter Cove, Magallanes, Chile. Ferdinand Dorion, mgr. Organized May 30, 1906, under laws of Chile, as a reconstruction of Compañía Minera de Cutter Cove, capitalization £400,000, shares £1 par.

Property, 265 hectares, on the west coast of the Brunswick Peninsula, near the northern entry to the Canal Geronimo, about 120 miles from Punta Arenas. Lands, fairly timbered, show prominent quartz gossans and carry

a mineralized zone 3 miles long in diorite and syenite. This zone has a system of lenses parallel, running northeast and dipping southwest. There are frequent fracture planes and displacements, but the lenses average 12 to 25' across and have a genetic connection with the fractures. The ore is a mixture of chalcopyrite and pyrite, occurring in occasional rich pay streaks, but mostly finely disseminated in a quartzose gangue and containing a little galena and sphalerite.

This is the southernmost copper mine of the world. Work begun, 1904, includes several 100' shafts, 1,500' of tunnels and 400' of drifts. The Mina Samuel has an open pit and shallow shaft, carrying 3.9% ore, with some ore assaying up to 18% copper and 0.02 to 7 oz. silver per long ton.

The Mina Alejandro, apparently the most important, has a shaft and 2 tunnels. The Mina Catalana, 800 meters south of the Alejandro, includes the workings of La Plomiza, Catalana and Creston de la Catalana, with 2 tunnels, one of 70 meters. The Mina Sara also has some slight workings. The Mina Vives, on the extreme northeast of the property, has a tunnel on a contact vein carrying chalcopyrite, associated with pyrite, said to assay 7.1% copper, with a rich paystreak. The mine made small test shipments of ore, 1905, returning 16 to 19% copper, with an average of about 7 oz. silver per metric ton, and secured assays up to 22% copper, from selected ore.

The mill, connected by a tram with the Samuel mine, is of 50 tons daily capacity, equipped with a No. 6 Krupp ball mill, of 1 metric ton hourly capacity, 7 Friederich Krupp Grusonwerk oscillating tables, a 6x16' crusher, feeding belt and elevators, operated with a force of 8 men, working 12-hour shifts.

DAIJI MINE.

JAPAN

Owned by Fujita Co.

DAINTREE COPPER MINE.

QUEENSLAND

Situated in Oaks Goldfield district, about 1 mile from the Einasleigh river and 18 miles from Kidston. Mine developed by several shafts showing high-grade ore, 150 tons shipped to the Chillagoe smelter averaging 27% copper, or approximately £20 per ton. Was being worked throughout 1912 by 3 men.

DALY COPPER MINING CO.

NORTHERN TERRITORY

Mine office: Leighs Creek, No. Territory, Australia. F. Sutherland, mgr., at last accounts. Lands, about 6 miles northeast of Yudnamutana, are very rough, having a fissure vein in quartzite, carrying mainly malachite and azurite, with patches and seams of cuprite. Has steam power. Idle several years.

DALY RIVER COPPER MINE.

NORTHERN TERRITORY

Property, situated in the Northern Territory, Aus. Lease expired in summer of 1913 and government resumed control of property, including smelter erected in 1907.

DANIA COPPER MINES.

NATAL

Mine at Undweni, Ngutu, Zululand, Natal. Property, 570 acres, near the Undweni river, about 30 miles from Vryheid, shows a shear zone in granite, 16 to 20' wide, traceable for 2 miles, carrying occasional bunches of fairly high-grade ore and opened by a 215' shaft. There is a small mill whose last production was in 1908. Property considered a promising prospect.

DANUBE COPPER MINING CO., LTD.

HUNGARY

Went into liquidation, Dec., 1912. Described Vol. X.

DANUBE MINING CONCESSION, LTD.

AUSTRIA & SERBIA

Secretary and office: J. R. Jones, 3 London Wall Bldgs., London, E. C., England. W. J. Barnett, Capt. S. Saunderson, J. P., Count C. von Wartensleben, F. von Pilis, H. Hefti, directors; W. J. Barnett, 3 London Wall

Bldgs., E. C., England, cons. engr. Company registered in England, July 20, 1910. Capitalization £240,000, shares £1 par; 93,607 shares issued; 90,000 vendors shares and 850 additional, fully paid; 2,750 with 10s. paid. Offered 99,143 shares public subscription Feb., 1911, payable 2½s. immediately, 2½ allotment, 5s., 1 month later and balance in 5s. installments on call at not less than 2 months interval.

Property includes (1) copper mines in Austrian Tyrol, in Zell am See district, and Mittersill, in Pintschgau, Austria, (2) concession for 500,000 areas copper-bearing ground and other metalliferous deposits in the Lutter district, Servia, on right bank of the Danube river, between Brnyzce, Zagubiza and Kladova, and (3) graphite deposits and works at Artstaeden on Danube and near Bruck on Muhr. Company is a parent corporation to prove mining property and float subsidiary companies.

The Servian rights are regarded as very valuable, being adjacent to the very profitable Bor copper mines and the Majdan copper mines and contain gold, silver, lead, zinc, iron and coal mines, besides copper. Mr. Arthur Hall and Dr. F. Radovanovitch, of the University of Belgrad, and Prof. Dr. Tannhauser, of Mining University of Berlin, have examined the property. The company has had the advice of the most prominent and experienced copper men of Europe.

DARWIN PROSPECTING SYNDICATE.

TASMANIA

James Souter, mgr., Darwin, Mt. Lyell district, Tasmania. Property, several copper claims near the Lyell Comstock mine, on which several small veins of chalcopyrite cut through argillaceous schist. The schist adjacent to the veins is impregnated with copper pyrite and amenable to concentration. Development by 3 tunnels on which work has been done for the past 5 years. No. 3 tunnel shows 12' and No. 4 tunnel 10' of commercial ore. Property is a small one, only 2 men being constantly employed.

DAY DREAM AND BRETONARTE

COPPER MG. CO.

NORTHERN TERRITORY

Leighs Creek, No. Territory, Aus. Idle and apparently moribund.

DEFENSO y TODOS SANTOS; SOCIEDAD MINERA.

CHILE

Mine office: Taltal, Antofagasta, Chile. The mine was a small producer of slightly auriferous copper ore at last accounts. Presumably idle.

DE KAAP COPPER MINES, LTD.

TRANSVAAL

Closed down. Mine at Barberton, Middleburg, Transvaal. Described Vol. VIII.

DEMIDOFF COPPER MINES & WORKS.

RUSSIA

Described under Nijni-Tagilsk.

DERWENT PROSPECTING ASSOCIATION.

TASMANIA

Idle. Office: Hobart, Tasmania. Mine office: Leina, Devon Co., Tasmania. E. H. Butler, chairman. Lands, 24 miles from Leina, in the Cradle mountains, include the Derwent, Cradle Mountain and Lake Windermere mines, showing large quantities of low-grade ore, occurring as stockworks in Archaean schist. Property is estimated by Dr. Fritz Noetling, to show 2,000,000 tons of ore on surface, which possibly may be the case. Company also had property at Heazelwood, on the Whyte river, which was forfeited as valueless.

DESCUBRIDORA MINE.

CHILE

Owned by Sociedad Industrial de Atacama.

DEVON UNITED MINES (1906), LTD.

ENGLAND

Office: 7 Arundel St. Strand, London, W. C., England. Mine office: Peter Tavy, Devonshire, England. G. Bargate, chairman; J. V. E. Taylor, S. H. Badock, W. Stevens and Col. H. Paget, directors; R. L. McLatchie,

sec. Organized Dec. 10, 1906, under laws of Great Britain, as successor of Devon United Mines Syndicate, Ltd., capitalization £25,000, shares £1 par; fully issued and fully paid, including £9,000 shares, together with £5,000 in 6 first debenture bonds paid for property. There are also £6,800 (part of £10,000) 6% second debentures. Paid 1 dividend of 6d. per share in 1907. Accounts for last report, submitted April 21, 1911, show sales of ore, etc., £6,262, with net profit of £481; credit balance, £535; cash, £166; stocks, £3,423; plant and mines, £27,534.

Property includes leases of tin, copper and arsenical pyrite mines, including the South and Central mines covering 100 acres in Cornwall on the Tavy river. Central mine was formerly regarded as most promising copper prospect opened in Cornwall in many years.

DEVONSHIRE SYNDICATE.

Major G. C. W. Crawford, mgr. Property in the Cajabamba district and the Huinac mines in the Huaraz district, the former containing several large copper veins now being developed. In the Huaraz district no further development will be prosecuted until a railroad can be built.

DIAZ; G. RUIZ.

PERU

Office and works: Cerro de Pasco, Junín, Peru. Mine, known as the Mina Grande, near Cerro de Pasco, carrying copper ore without gold or silver values, employed 30 men, 1908. There also are 2 extremely small and antiquated furnaces, El Rayo, of 8 metric tons daily capacity, idle, and San Miguel, of 6 to 8 metric tons daily capacity, employing 10 men, at last accounts.

DIVES; SOC. FRANÇAISE D'ELEC.-METALL. DE.

FRANCE

Office: 11 bis, Rue Roquëpine, Paris, France. Works office: Dives, Caivados, France. Plant is an electrolytic refinery, treating Chile bars, having four 170-kw. generators, with 216 tanks, electrodes being arranged on the Elmore plan, works having a capacity of 10 to 12 tons of copper daily.

DJEBEL CHOUICHIA MINE.

TUNIS

Mine office: Souk El Arba, Tunis. Property carries mainly malachite and azurite, with occasional chalcopyrite and tetrahedrite, in limestone, near a contact with hematite. The antimony and arsenic in the ore produce considerable speiss. The smelter has two 30-ton circular water-jacket blast furnaces, using coke, costing £65 per ton delivered, to the extent of 13.5% of the copper ore charge. Silicious flux is used generally, but occasionally the mixture of oxidized ores and pyrites is smelted without flux. Product is speiss and copper matte of 35 to 50% copper tenor, sold mainly in Italy, for the manufacture of copper sulphate.

DJEBEL OUENZA MINE.

ALGERIA

Owned by Société Concessionnaire des Mines d'Ouenza.

D'JELELE COPPER SYNDICATE.

TRANSVAAL

Mine near Pietersburg. Zoutpansberg, Transvaal. Organized July, 1907, but apparently not incorporated, capitalization £4,000, shares £10 par. Lands, 96 claims, near the D'Jelele river, in the northeastern part of the Zoutpansberg district, having a 44' shaft showing ore assaying up to 15% copper. Idle.

DOBBYN MINE.

QUEENSLAND

Owned by Queensland Copper Freeholds Co., Ltd. Mine near Cloncurry, Beaconsfield Co., Queensland, Australia.

DOGAMARU MINE.

JAPAN

Mine near the village of Ago, Ochi district, Iwami, Japan. Tojuro Hori, owner; J. Stajaki, mgr. Mine opened 1845, reopened 1873, carries chalcopyrite, argentiferous galena and sphalerite ore with iron pyrites, in a quartz gangue. Principal vein, of 10 to 25' width, traverses granite-porphry and

is thrown by frequent faults. Equipment includes steam and electric installations aggregating 744 h. p., and a small smelter. Production was 445,105 lbs. fine copper and 1,141,482 grams silver in 1906; 423,371 lbs. copper and 258,393 momme silver in 1907, and 125,695 lbs. copper and 79,200 momme silver in 1908. Later production refused.

DOLCOATH MINE, LTD.

ENGLAND

Secretary and office: F. W. Thomas, Dolcoath Mine, Camborne, Cornwall. F. Harvey, J. P., C. C., chairman; O. Wethered, vice-chairman; J. M. Holman, C. B. Pearce, H. C. Godfray and F. A. Robinson, directors; R. A. Thomas, mgr. Company registered July 15, 1895, capital £350,000, shares £1 par; all issued and fully paid.

Property consists of the Dolcoath mine, probably the most famous copper and tin mine in England. Present company holds a 60-year lease from 1895, paying a royalty on the output. In 1898 company increased its holdings by the acquisition of the Dolcoath West properties, comprising 3 sets. The mine was worked extensively in the 18th century for copper and in 1799, the Dolcoath Mining Co. commenced working, producing copper, tin, arsenic, silver and cobalt, until 1867, to the value of £3,234,693.

Present company has a new 3,000' circular shaft with extensive workings from which a large output of low-grade tin ore is being extracted, a small amount of copper being obtained as a byproduct. There are many hundred thousand tons of complex ore not being worked owing to lack of mill capacity, but believed will yield a fair profit with the Elmore process. Mill consists of 16 pneumatic stamps, driven by electric power, the product, when complex, being treated in an Elmore oil concentration plant.

Company paid 12½% dividend in 1912 and 7½%, Feb., 1913.

DOLGELLY COPPER MINES, LTD.

WALES

Office: Capel House, New Broad St., London, E. C., England. Mine office: Dolgelly, Merionethshire, Wales. Percy Ellis, chairman; H. R. Schmettau, H. S. Sugden, directors; George Kerr, sec.; J. Bevan, mine mgr. Organized March 7, 1907, under laws of Great Britain, capitalization £67,882; 42,882 shares £1 each, and 50,000 preferred at 10s. each; all the ordinary and 38,499 preferred issued and fully paid.

Property consists of several mining claims, including the Dolgelly mine, near Dolgelly, North Wales. The mine was operated several years before the present company acquired it, but the operations were unprofitable for the recovery was only 14.5% of the metal contents of the 50,000 tons treated. The mine was examined and reported on by Mr. Arthur Thomas, mgr. of the Dolcoath mine, and Mr. W. R. Gilman Brown.

The vein averages 20' wide and has yielded 100,000 tons of ore for each foot in depth. The ore is a hard quartz, containing extremely fine particles of copper sulphides, with gold and silver values. The average value of the ore milled up to 1912 was about \$4 per ton, but the ore in the lower levels of the mine is somewhat richer, samples at 5' intervals on the 280' level showing \$6.42, the vein averaging 21' wide.

Mine has a shaft 400' deep with workings on the vein at 180', 240', 280' and 380' levels, the orebody being continuous downward with unchanged width.

Equipment includes hoist, compressor and drills, with a 20-stamp concentration mill handling 100 tons per day, and a complete Elmore vacuum concentration plant which has given excellent results and raised the extraction from 50% in recent years to nearly 70% in 1912, the gross value of the ore being 16s. per ton and the net yield 11s. with copper at 12 cts. Production stopped in 1910, resumed Oct. 28, 1912, estimated at 37,500 tons for 1913. Monthly reports issued by company show 6,903 tons for the 5 months

ending March 31, 1913, with a recovery of 551 tons concentrate at a total cost for mining, development and milling, of £3,165. Development costs, \$6.56 per ft.

DORA COPPER MINES, LTD.

TRANSVAAL

Idle. Mine near Pretoria, Transvaal, South Africa. W. Vaughan-Williams, chairman. Organized May 10, 1905, under laws of Great Britain, capitalization £150,000, shares £1 par; issued £100,010. Property is mining rights to the northwestern half of the Farm Kamelpoort No. 278, area 4,027 morgen, near Pretoria.

DOROTEA; GEW. d. BLEI u. KUPFERERZBERGWERKE. GERMANY

Mine office: Jannowitz, Schlesien, Germany. Rev. John Kaufmann, sole owner, Kupferberg, Silesia, Germany. Organized 1886, capitalization M200,000, shares issued to owner, 200. Mine discovered 1857, opened 1902 and closed 1910 on account of illness of owner. Developed mainly by tunnels with 1 shaft.

DUCHESS MINE.

QUEENSLAND

Owned by Hampden-Cloncurry Copper Mines, Ltd.

DULUTH-HUSA COPPER MINES.

SWEDEN

Office: 218 Superior St., Duluth, Minn. Mine: Bjornange, Jemtland, Sweden. Andrew Bjorkman, pres.; Aaron Carlson, vice-pres.; John Boden, sec.; Albert Johnson, treas.; preceding officers, John F. Freeman, S. P. Carlson, A. W. Harper, A. J. Borgstrom, J. H. Nelson, Olof Berglund, Elmer G. Johnson and A. E. Rydlund, directors; Emil Nyberg, gen. mgr.; A. E. Lind, mine supt. and mg. engr. Organized Nov. 12, 1909, under laws of Arizona, capitalization \$1,000,000, shares \$5 par; issued, 116,229, non-assessable. Property is held through the Aktiebolaget Husa Froa Grufvor, a Swedish corporation. Annual meeting, first Tuesday in October.

Lands, 6,000 acres, with about 3,000 acres timbered, said to include Froa, Husa and 17 other old mines, lying on the slope of Mount Areskutan. Property, 3 miles from a railroad, shows granite, quartzite and schist, of various ages, with rather flat banding, pitching into the mountain, carrying seams, streaks and pockets of ore, more or less well defined, with outcrops traceable for miles, principal ore being chalcopyrite, with some bornite. These copper deposits were discovered 1740, and mining begun 1745, but mines were closed, 1881, because of primitive methods and low price of copper.

Property is equipped with electric power, has 2 hoists, a 20x30' machine shop, blacksmith shop, a 40x60' carpenter shop and a saw mill.

Company now has a 100-ton concentrator, equipped with 15 Deister tables and is working the mine as well as developing new ore reserves.

DURAZNO SMELTER.

CHILE

Owned by Francisco Greve G., at Combarbola, Chile.

DZHILTAV WORKS.

SIBERIA

Office: Karkuralinski, Semipalatinsk, Siberia. Owned by Warter & Co. Property is a reduction plant including smelter and electrolytic refinery.

EAST GRIQUALAND COPPER & NICKEL MNG. CAPE PROVINCE CO., LTD.

Office: P. O. Box 629, Johannesburg, Transvaal. Mine office: Mt. Ayliff, Griqualand East, Cape Province, S. Africa. Geo. Peel, chairman; Griff Evans, mgr.; preceding officers and Dr. Davie Thompson, directors. Organized Dec., 1908, under laws of Transvaal, capitalization £12,500, increased 1911, to £17,500; shares £1 par, of which £7,000 went to vendors and £1,500 remain unissued, for reserve, giving £4,000 for working capital.

Lands, 44 morgen, on the eastern side of the Insizwa range, near Mt.

Ayliff, held on a 99-year lease, which carries a royalty of 2s. 6d. per long ton on ore, payable to the government, plus a royalty of 1% on the gross amount realized from ore. Mine has a crosscut tunnel, cutting the vein 250' from portal, giving a back of 150'. Some ore has been found assaying up to 2.25 oz. platinum per long ton, with small silver and cobalt values.

EAST GWANDA MINES, LTD.

RHODESIA

On Jan. 11, 1912, Sir W. B. Peat, of 11 Ironmonger Lane, London, E. C., was appointed receiver and manager and on Nov. 19, 1912, an order was made that the company be wound up by the court. Company was at one time largest copper producer in Rhodesia. Fully described Vol. X.

EASTERN DEV. CORPORATION, LTD.

INDIA & CEYLON

Secretary and offices: Wallace Braley, 25 Victoria St., London, S. W., England. India offices: Ismail Bldg., Hornby Road, Bombay. Organized Dec., 1912, under laws of Great Britain, capitalization £250,000, shares £1 par. In Jan., 1913, 166,667 shares were offered at par in 5s. installments at 2 months intervals.

Company was promoted by the Eastern Syndicate, Ltd., the vendors. Mining interests acquired consisted of licenses, rights, leases and options on gold, diamond and other lands in the various states of India, including an exclusive right to prospect for copper in the state of Jhalawar, India, with the right to take up a 30-years' mining lease. The mining properties reported on by P. Bosworth Smith and L. H. Neave. Secretary writes in July that the properties are not in a sufficient forward condition for report.

ECHAVARRÍA; GUILLERMO.

CHILE

Office, mine and works: Illapel, Coquimbo, Chile. Property is a very small smelter, known as the Fundación de Quilomenco, at the Hacienda Chuchiñe, near Illapel. Production formerly was about 225,000 lbs. fine copper yearly, but was only 11,743 lbs. in 1907. Idle several years.

ECLIPSE MINE.

NEW SOUTH WALES

Mine in Albert mining district, White Cliffs division, parish Wertago, Yungnulgra Co., N. S. W., Australia. Lands, 80 acres, 60 miles from Wilcannia. Mine, discovered 1892, has a 4' vein in mica schist and slate, developed by a 140' shaft, showing, on the 108' level, a vein of 30" maximum width, carrying sulphide ore of good grade. Production, 1905-07, was 200 long tons of ore of 25 to 30% copper tenor. Property idle several years but reopened, 1912. Newly opened stope shows 8' vein with 4' ore. East shaft 71' deep, at east end of outcrop, cuts hanging wall.

ECLIPSE MINE.

QUEENSLAND

Owned by the Chillagoe Co. at Einasleigh, Queensland, Australia.

ECONOMOFF MINE.

BULGARIA

Described under Kara Bair.

EDISON MINE.

NEW CALEDONIA

Office: Noumea, N. C. Property has produced in a small way for years, ore shipped assaying 17.34% copper and 1.6 oz. gold per ton.

EDMUNDIAN COPPER MINE.

PORTUGUESE EAST AFRICA

Property in the Manica district is held by the South African Copper Trust, Ltd.

EDMUNDIAN COPPER MINING CO. PORTUGUESE EAST AFRICA

In liquidation. All property sold, 1911, to the South African Copper Trust, Ltd., 277 Salisbury House, London Wall, London, E. C. England. Described Vol. X.

EINASLEIGH FREEHOLD COPPER MINES, LTD.

QUEENSLAND

Succeeded by New Einasleigh Copper Mines, Ltd., also liquidated and property now worked by the Chillagoe, Ltd., at Einasleigh, Queensland, Australia.

EINASLEIGH MINE.**QUEENSLAND**

Purchased, 1911, by Chillagoe Co.

EISERNER UNION; GEWERKSCHAFT.**GERMANY**

Office: Siegen, Germany. Mine office: Eisern, Westfalen, Germany. Robt. Hilgenberg, R. Honigsheim, Paul Petzold, Dr. Loeb, Albert March and J. W. Piepmeyer, executive committee; Emil Frisch, gen. mgr.; Herr Kolb, supt. Capitalization 1,000 shares. Property, 3 mines, the Prinz Wilhelm, Eiserner Union and Thalsbach, the Alter Flussberg mine having been sold to the Gewerkschaft Werder for 150,000 marks. Mines having 3 shafts and 6 adit levels, produce iron ore and copper sulphides. Company plans installation of an aerial tram, and an ore washing and roasting plant. At last accounts, 1912, employed about 100 men, with annual production of 120,000 metric tons of iron ore.

EISFELDER KUPFERGEWERKSCHAFT.**GERMANY**

Mine office: Glücksbrunn, Saxe-Meiningen, Germany. E. J. Enners, J. W. Piepmeyer, Dr. O. Hecker, Jos. Schmidt-Jerome, Dr. Emil Müller and F. Wipperm, executive committee; Alex. Müller and Herr Wenzel, gen. mgrs., at last accounts. Capitalization 700,000 marks, shares 100 marks par.

Lands include the Marie Louise and Wilhelm August mines, having 2 shafts, and property has been a producer since 1904. A concentrator, built 1908, also treats custom ores. It was decided, 1910, to build a potash plant at the Wasungen mine.

ELEANORA COPPER MINE.**QUEENSLAND**

Property situated on the Langmorn Freehold, held under lease on a royalty basis. Syndicate started sinking, Jan., 1912, and 10 tons of ore sent to Port Kembla for treatment assayed 8% copper. A 115' shaft shows an orebody reported to average 3' in width and to carry high copper values. Production for 1912 was 135 tons of ore containing 19 tons 4 cwt. copper, of a value of £1,437, which was sold to the Mt. Morgan Co. In 1913, 52 tons of ore was shipped averaging from 9.47 to 12% copper.

ELECTROLYTIC REF. & SM. CO. OF AUS., LTD. NEW SO. WALES

Office: 118 Pitt St., Sydney, N. S. W., Australia. Works office: Port Kembla, Camden Co., N. S. W. Australia. Employs about 300 men. Richard Gardiner Casey, chairman; Kelso King, Francis H. Snow and Capt. G. A. Richard, directors; J. S. Spark, sec.; Benj. Magnus, gen. mgr. Organized Feb. 3, 1907, capitalization £150,000, shares £5 par, nonassessable; fully issued. Debentures, £150,000 authorized, at 5%; issued, £140,000. Annual meeting, Dec. 20 of each year. Company is the only refiner of copper in Australia and treats 80 to 90 tons of copper per day.

Lands, 54 acres, with deep water in front and direct rail connection at the rear. Coal is produced in the immediate vicinity, with annual consumption estimated by management, 1911, at 40,000 tons, averaging 9s. 6d. per ton in cost, and 4,000 long tons of coke, costing 15s. The plant, costing £197,000, stands at the foot of a gentle slope, buildings practically being on a level, with sampler and storage houses above. There is a tank for water storage. The sampling mill, in line with the storage house, is in two sections.

The smelter building is 105x216', having one 150-ton rectangular water-jacket blast furnace. There are four 18x35' reverberatory furnaces, with 2 openings on each side, formerly rated at 60 tons daily capacity each, but now rated by management at 30 tons only. The main flue is of steel pipe, 48" in diameter, and brick-lined, with dust chambers, and a flue from the converters, continued into a brick flue running up the hill to the stack. The converter department also has an 18x35' reverberatory furnace. The

charging floor supported by steel I-beams carries tracks for electric cars, with openings for the hoppers that supply the ore and fuel to the furnaces.

The converter department has 2 stands, with 80x120" shells, of barrel type, rotated electrically. Matte is run directly into converters and hot slag is poured back into the reverberatory. Sheet steel removable hoods connect with a dust flue of steel pipe, leading to the main flue. Blister copper from the converters is sent to the refining department, where cast into anodes. The lining department has a jaw crusher, Chilean mill and mixing pan, using barren quartz with a binder of clay, linings being tamped into shells by a rock drill fitted with a rammer.

Blister copper from the converters is sent to a building 50x60', having two 90-ton refining furnaces, with a casting machine for each, casting anodes that average 98.7% copper, 40 oz. silver and 15 oz. gold per ton. There is also a 150-ton wire bar furnace with mechanical charging.

The electrolytic refinery is 100x504' in size, treating blister copper of the Mount Morgan Co. and Mount Lyell mines, and refining about 85% of the Australian copper output. The works use the multiple system, with double tanks and an adaptation of the 3-wire system, a small triangle of copper being used as a center conductor. The plant began with 360 and now has 600 tanks, each 10' 2" long, 3' 6" deep and 3' 7" wide, lead-lined, and placed in sets of three, communicating by pipes. Each tank holds 5 tons of anodes. The electrolytic refinery has a silver and gold refinery, which uses a process whereby the slimes from the electrolytic plant are calcined before leaching. The enlargement of the refinery, in construction, 1913, was suspended as a result of the great disaster at Mt. Lyell and the consequent reduction of blister copper sent to these works for refining.

The 100x100' power house has a boiler plant with 6 Babcock & Willcox boilers, mechanical stokers, Green fuel economizer, superheater, and induced draft. The engine plant includes two 880-h. p. Bellis & Morcom triple-expansion engines, direct-connected to two 550-kw. Westinghouse generators, supplying a 125-volt current for the tank house. There are also two 150-h. p. Bellis & Morcom double-expansion engines, direct-connected to Westinghouse generators supplying current for power and light. A Parsons turbo-blower has a capacity to furnish 25,000 to 35,000 cu. ft. of free air per minute, at a pressure of 12 to 15 lbs. per inch.

The shop building, 50x120' in size, includes a machine shop, smithy and carpenter shop, all fully equipped with modern tools. In connection with the works is a fine laboratory and assay office.

A jetty, built by the government, with 40' of water alongside, is 300' in length, and is to be 500' when completed. There are 4 miles of private railway tracks, with 2 locomotives.

This plant began work Feb. 1, 1908, and has demonstrated its efficiency by reaching a point where it now refines about 85% of the entire Australian output of copper. The electrolytic copper produced is branded E. S. A. Production was 5,851 long tons of electrolytic copper, mainly from Mount Morgan matte, valued at £351,000, and doré bullion valued at £123,952, mainly from Mount Morgan matte, in 1909. Production, in 1910, was 112,485 oz. gold, 65,821 oz. silver, and 9,952 tons copper, the last named valued at £583,027. Production, 1912, was estimated at about 22,000 long tons copper, 200,000 oz. silver and 800,000 oz. gold. This plant fills a want long and seriously felt in Australia, and the design and management are highly creditable to Mr. Magnus.

Company was receiving premiums in France and Germany for its copper in 1911, which is delivered under guarantee of being 999 fine, slightly higher than American standard guarantees. Silver is shipped to India and

gold sold to Australian banks. A federal bonus, or an export duty on copper, was proposed, 1912, to encourage this industry.

ELGÜE; AGUSTO.**CHILE**

Mine: Peña Blanca, La Ligua, Aconcagua, Chile. Property is the San Pablo mine, 15 kilometers from Peña Blanca, showing a vein of about 1 meter average width, which has produced small quantities of 9% copper ore. Presumably idle.

ELIZA; KUPFERERZBERGWERK.**GERMANY**

Mine office: Mallau, Elsass, Germany. Property, said to be owned in London, is merely a prospect, which has been under leisurely development for some years.

ELSIE I; GEWERKSCHAFT.**GERMANY**

Idle. Mine near Dortmund, Westfalen, Germany. Wilhelm Samm-Wattermann, gen. mgr. Property carries lead and copper ores.

EMERALD MINE.**NEW SOUTH WALES**

At Trough gully, 15 miles from Tamworth. Owned by Trough Gully Copper Co., Ltd., New South Wales, Australia.

ENGLISH & AUSTRALIAN COPPER CO., LTD.**SO. AUSTRALIA**

Office: 17 Gracechurch St., London, E. C., England. Works office: Port Adelaide, Adelaide Co., South Australia and Waratah, Newcastle, N. S. W., Australia. W. Russell, chairman; W. S. Cuff, deputy chairman; preceding officers, T. Ganter and J. B. Caldecott, directors; G. E. Cecil Clarke, sec.; F. S. Chany, gen. mgr.; H. Schröder, smelting mgr., Waratah smelter; F. E. Wigmore, agt. Organized 1851, and reorganized March 15, 1864, under laws of Great Britain, capitalization reduced to £105,000, shares 30s. par; issued £102,988 10s. Debentures £30,250, at 6%, due Jan., 1917. Dividends have been as follows: 6d. in 1901; 1s. each in 1902, 1903, 1904, 1905, 1906, 1907 and 1908; 1909, 1910, nil, owing to litigation; 1911, 1s., paid May, 1912. Net profits were £1,458 in 1910 and £3,853 in 1911. Company controls through ownership of 3,904 shares, the new Clara St. Dora Mining Co., N. L.

Property includes custom smelting works at Waratah and Port Adelaide, employing about 100 men, this company having built the first custom smelter in the commonwealth of Australia.

ENTERPRISE COPPER MINING CO., N. L. **SOUTH AUSTRALIA**

Idle. Last address: Barossa, Adelaide Co., South Australia. Company had a £150 subsidy from the South Australian government; 1908. Lands, freehold, 2 miles from Williamstown, have a 4' quartz vein carrying a 6 to 8" footwall pay streak of melaconite, malachite and chalcopryite, all with good silver values. Mine has a 220' main shaft, with steam power and a hoist, and many years ago shipped a little ore of 28 to 40% copper tenor.

ERA MINING PROPERTIES DEV. SYND., LTD.**QUEENSLAND**

Secretary and offices: W. T. Gittens, 6 Broad St. Place, London, E. C., England. Col. F. B. Buist, Hon. M. Erskine, J. G. Malcolmson and R. G. Scott, directors. Organized June, 1910, under laws of England. Capitalization £20,000, in 19,750 ordinary shares at £1 each and 5,000 deferred at 1s. each; 4,787 ordinary shares issued and entitled to a preferential dividend of 7%; the deferred are entitled to one-half the surplus profits.

Property consists of the Jingalalla properties in Victoria, Australia and the property of the Mount Godkin Consolidated Copper Mines, N. L., 35 miles from Cloncurry, Queensland. The Mount Godkin mine is on Cameron creek above Corella river. According to Government reports the claims show metamorphosed sandstone and slate with a copper belt traceable by trenches for 2 miles, having an average width of 200'. A 48' shaft exposes a lens of ore 40' across from which a 20-ton shipment gave returns

of 20% copper and \$10 in gold. Development consists of many shallow shafts but is insufficient to determine future of property. An extension of the railway contemplated by the government will enable this property to be worked.

ESCURIAL COPPER MINES, LTD.

SPAIN

Idle. Office: 4 Union Court, London, E. C., England. Operating office: Pelayo 2, Barcelona, Spain. Mine office: Calmenarijos, Madrid, Spain. Albert F. Colbert, chairman, and W. Stewart Lane, directors; Joaquin Lorena, mine mgr.; Henry N. Gardiner, sec. Organized Oct. 17, 1901, under laws of Great Britain, capitalization £125,000, shares £1 par; issued, £109,177. Lands, 342 acres, held under perpetual lease from the Spanish Government, including the Gloria, Ramón, Jaime and Nuestra Señora del Pilar mines. Work is confined to the latter, which shows 8 orebodies and was worked by the ancients, either Romans or those who preceded them, to a depth of 135', by 3 shafts, with several drifts. Small shipments of selected ore from the Pilar mine have given returns of 7.73 to 20.36% copper. Property leased, on royalty, to a French syndicate in 1908.

ESMERALDA MINE.

NEW SOUTH WALES

Office: Rockley, Georgiana Co., N. S. W., Australia. Mine, in the Cow Flat district, has a 150' shaft, bottomed in a vein of 3' width, formerly said to be 10', with first level at 100', carrying ore of 8 to 10% copper tenor. Was developing on a small scale in 1910. Idle.

ESPERANZA COPPER & SULPHUR CO., LTD.

SPAIN

Office: 65 London Wall, London, E. C., England. Mine office: Zalamea la Real, Huelva, Spain. Sir Robert J. Price, M. P., chairman; T. D. Lawther, sec. and gen. mgr.; Stanlake Lee, Alex. McNab, G. Mure Ritchie, Rhys Williams, directors. Organized Feb. 14, 1906, under laws of Great Britain, as successor of Spanish Minerals Development Co., Ltd., capitalization £350,000, shares £1 par; fully issued, fully paid. Debentures outstanding, £65,270, at 5%, redeemable, not later than 1916, at £110, by annual drawings. Net earnings were £27,553 in 1908; £19,961 in 1909, £14,754 in 1910; £29,562 in 1911 and £32,730 in 1912. Dividends were 5% in 1908; 3% in 1909; 4% in 1910; 3% in 1911; 3% in 1912, and 2% June, 1913.

Lands, the Esperanza group, 1,833 acres, including 833 acres of mining rights, 5 miles from the port of Huelva. Holdings include the Esperanza, Nueva Esperanza, Angostura, Forzosa and Santo Tomás mines. Some of these properties were worked in very ancient times, mainly on a very small scale, showing characteristic narrow Roman shafts, with foot holes alternately, on either side, for ingress and egress of miners.

The Angostura mine is the largest of the group. Stripping was continued and levels No. 3 and No. 4 opened up in 1911-12, exposing 352,000 tons, or about 7 years' supply. The output was 48,494 tons in 1911 and 37,591 tons in 1912.

The Esperanza and Forzosa mines were opened up in 1912 and 1913 on the 6th and 7th levels, increasing the ore reserves to a total of 529,000 tons. The output is about 59,000 tons a year.

Neuva Esperanza yielded 1,029 tons in 1912. Development on level No. 2 showed the lode to pinch out and this lens is practically exhausted. Development by a 119' shaft and crosscut from the Santo Tomas failing to show ore, work was stopped. Total ore reserves at end of 1912 estimated at 881,000 tons.

There is a small leaching plant making 73 long tons of copper, 1907; 73 in 1908; 35 in 1909; 77 in 1910; 124 in 1911, and 137 tons in 1912.

Company has a private narrow-gauge electric line connecting with the

Buitron railroad. The power plant consists of 3 Premier gas engine units, each with a suitable gas producer plant, with electric generators, the plant giving economical and satisfactory service.

Production, begun July, 1906, has been as follows: 20,421 long tons of ore in 1906; 54,276 tons in 1907; 87,894 tons in 1908; 103,140 tons in 1909; 112,143 tons in 1910; 108,650 in 1911; 975,888 tons in 1912. The great reduction in the latter year was due to strikes in England. Company produces no metallic copper directly from its ore, but the copper contents of the pyrite shipped amounts to about 3,000,000 lbs. yearly. Production of refined copper is estimated at 1,000,000 lbs. fine copper in 1907; 1,500,000 lbs. in 1908; 1,750,000 lbs. in 1909, and 2,000,000 lbs. in 1910. Property considered excellent, management good and dividends assured for some years to come.

ESPERANZA FRANCESCA.

BOLIVIA

Area, 30 hectares, in the Cerros Escampa, Canton San Cristobal, Bolivia.

ESPINOZA; JOSÉ RAMÓN.

CHILE

Idle. Mine office: Las Palmas, Petorca, Aconcagua, Chile. Works office: Pedegua, Chile. Properties, about 75 miles northeast of Valparaiso and 35 miles from the sea coast, include Las Reices mine, 60 meters deep, which in 1903 produced 537 metric tons of ore of 13% copper tenor, and La Maria Luisa mine, 150 meters deep, which, 1903, produced 300 metric tons of 5% copper ore. Cement copper, made from mine waters, is produced in small quantities. Mines, slightly developed, show large quantities of low-grade ore, carrying considerable gold and silver values, occasionally ranging up to 700 grams silver and 25 grams gold per ton. No recent returns secured.

ESTRELLA; SOCIÉTÉ ANONYME LA.

SPAIN

Office: 161 Boulevard Haussmann, Paris, France. Mine office: Los Martires, Granada, Spain. Capitalization 200,000 francs. Lizardo González, vice-pres.; Louis Vardón, agt.; Huberto Meersmans, gen. mgr.; Antonio Melian, supt., at last accounts.

Lands, 1,222 acres, in 3 groups, formerly under option to La Estrella Copper Mines, Ltd. Lands include La Jerezana, El Ensueño and other copper mines, at Los Martires, which are of some promise, but development is hampered by lack of transportation facilities and very high freight rates on the Ferrocarriles del Sur de España. There also are argentiferous copper groups at Trevezal and Alpujara, Granada. The English company planned building a small concentrator and a 10-stamp mill, but apparently failed to do so. Presumably idle.

ETHERIDGE GOLD MINES.

QUEENSLAND

Secretary and head offices: C. L. Hewitt, 39 Queen St., Melbourne, Australia; London secretary and offices: E. Habben, Palmerston House, London, E. C., England. J. S. Reid, chairman; H. F. C. Keats, D. W. H. Patterson, V. J. Saddler, Col. F. G. Hughes, W. D. Reid and F. J. Gordon, directors. A. J. MacGeorge, mgr. Organized Dec., 1910, capitalization £60,000, shares 10s. par, fully paid. Owns 4 gold mining properties, Big Reef, Havelock, Nil Desperandum and Queenslander, 144 acres, on the Etheridge Goldfield, Queensland. The Havelock has gold-copper ore, the Queenslander gold-silver-lead-zinc ore. The concentrating and cyaniding mill yielded 9,402 tons from May, 1912, to Nov., 1912, carrying 5,377 oz. gold, 4,281 oz. silver and 27 tons copper. The combined ore reserves were estimated in 1912 at 50,350 tons. Copper production, 1913, 2 to 7 tons per month. Company not regarded favorably as veins are small, development inadequate to provide a profitable output and working capital too small.

EXPLORATION CO., LTD.**ENGLAND**

Office: 11 Cornhill, London, E. C., England. R. T. Bayliss, pres.; H. M. Shaw, managing director; preceding officers, J. R. Maquire, H. Mosenthal, J. E. Dudley Ryder, G. D. Smith, O. E. Warburg, directors. H. F. Wreford, sec. Organized March 21, 1904, under laws of Great Britain, capitalization £750,000, shares £1 par, fully paid, nonassessable; all issued. Dividends since 1905 have been 5%, or 1s. annually, except in 1907, and 1s. 6d. in 1912. Stock listed on London Stock Exchange. Annual meeting, February or March. Company succeeded and acquired all the assets, save those acquired by the Exploration Assets, Ltd., of a company of the same name organized in 1896.

Company carries on a general financial business and holds interests in real estate and buildings and also in gold mines in South Africa, the Tomboy Gold Mines Co., Ltd., El Oro Mining & Railway Co., Suchi Timber Co., Buenna Tierra Mining Co. and in the Exploration Co. of England and Mexico, sundry investments in the balance sheet being given as \$2,410,000. Owing to political trouble in Mexico, the Chihuahua smelter which deals with ore from the Buena Tierra Co., was only worked intermittently in 1912, consequently the mine production was curtailed, though a first dividend of 24 cts. per share was paid.

Metallurgical difficulties upset predictions concerning the profits from the Santa Rosa mine. Both the El Oro and Tomboy mines showed marked improvement during 1912. Company also owns Freehold property in Cornwall, England, worth \$720,000. Gross profits for the year 1912 totaled \$386,880, and general expenses, directors' fees and sundry investigations were \$114,240, leaving a balance of \$272,640. A dividend of 7½%, amounting to \$180,000, was paid and, adding the amount carried forward from 1911, there remains a balance of \$92,640.

FALCON MINES, LTD.**RHODESIA**

Secretary and offices: Gold Fields Rhodesian Development Co., 8 Old Jewry, London, E. C., England. Major F. Johnson, chairman; Hon. A. G. Brand, A. Suter, T. M. Thackthwaite, B. Vieira, R. G. Fricker and W. F. Andrews, directors; T. Kamp, M. I. M. E., metallurgist; A. Logan, mine mgr.; Gold Fields Rhodesian Development Co., cons. engrs. Company organized Feb. 26, 1910, capitalization £600,000, shares £1 par; 400,000 issued and fully paid. Capital originally £400,000, increased Aug., 1912, to provide for bond redemption. Bonds £300,000 authorized, 6%, £250,000 outstanding. Accounts June 30, 1912, showed development account, £56,964; cash, £13,512; short loans, £36,703.

Property acquired from the Falcon (Rhodesia) Development Co., Ltd., by Rhodesia Consolidated, Ltd. In Jan., 1911, the Athens mine was acquired from the Athens Development Co. Mining property comprises 380 claims, 578 acres, farm lands near the Falcon mine, 500 acres adjoining the mine and 19 acres for machinery and water sites. Report for year ending Dec. 31, 1912, shows 960,000 tons developed with 629,877 tons carrying \$5.40 gold and 2.4% copper.

The orebodies are large. On the 3rd level they aggregate 880' long, 17' wide, and carry 2.45% copper and \$3.68 gold per ton; on the 4th level, 900' long, 36' wide; on the 5th level, 580' long, 47' wide; on the 6th level, developed for length of 350' and 50' wide. Average contents are better than 3% copper and \$5 gold per ton.

A thoroughly modern mill, now in course of erection, will treat 500 tons per day. It will include 36 Nissen stamps, whose product will be concentrated on tables to remove coarse material and the concentrates sintered, briquetted, treated in a blast furnace and blown in a converter

to produce auriferous blister copper. The tailings will be slimed in tube mills and treated by the Minerals Separation process.

According to a recent official statement Mr. A. H. Ackermann, cons. engr. of the chartered company, has expressed grave doubts as to the correctness of the assay plans and consequently of the £2,100,000 value of the ore reserves. This estimate is based on the figures already given with working costs of \$8.50 and copper at 12½ cts. The correctness of the mine samples and assays has been confirmed by J. G. McDonald, by independent work and doubt cast upon the accuracy of Ackermann and Pickering's sampling and assaying, so that this "mystery of the Falcon mine" is still unsolved.

FALUN MINES.

SWEDEN

Owned by Stora Kopparbergs Berslags Aktiebolag, at Falun, Sweden.
FAMATINA CO., LTD.

ARGENTINA

Office: 638 Salisbury House, London, E. C., England. F. H. Hamilton, chairman; R. F. Bury, D. L., J. P. William Parker, A. C. A., and D. H. Bayldon, M. I. M. E., directors. F. F. Fuller, sec.; Llewellyn Parker, resident mgr., Santa Florentina, Chilecito, Province of Rioja, Argentina. Hooper, Speak & Co., cons. engr.; W. G. Perkins, metallurgist; W. A. Carlyle, smelter supt. This company is a reconstruction of the Famatina Development Corporation, Ltd. Organized June, 1912, capitalization £800,000, shares 10s. par; 1,523,489 issued and fully paid, of which 1,126,165 are credited 7s. paid. Bonds authorized £200,000, 6%, of which £151,500 are issued.

Owns 850 acres, in 4 groups, in the Mexicana district of the Sierra Famatina range, province of Rioja, Argentine Republic, including the 6 principal mines of the district, the Upulungos group, Mellizas group, Compania group and San Pedro group. These lands lie at an elevation of 15,000' and are very difficult of access and transport.

Property shows an intricate network of auriferous and argentiferous fissure veins traversing metamorphic slate. The Upulungos and San Pedro are the principal veins, being about 1,000' apart. Lode on the first named was estimated to show 90,000 tons of ore averaging 2.5% copper, 6 oz. silver and 9 dwts. gold, in an ore shoot 3 to 9' thick and 1,200' long.

The San Pedro vein has an ore shoot 1½ to 2' thick and 600' long. The ore is a dense massive pyrite. Principal minor veins are the Andueza, Esperanza, Placilla and Verdeona. The old mines of this property have been worked, spasmodically, since 1840.

Development is mainly by the Anita tunnel, but there are other tunnels, including the Restaudora, Pacifica and Forastera. Ore is mined from 3 levels at once and sent without sorting over an aerial tram to the company's smelter. Company estimated, March, 1913, that 150,000 long tons of ore was developed.

Transportation between the mine and mill is by a Bleichert aerial tram, built by the Argentine government, at a reputed cost of about £175,000, connecting with the railroad of the state line. This aerial tram, of 21 miles length, one of the longest in existence, has its upper terminal 4,400 meters and its lower terminal 1,060 meters above sea level. There are 7 intermediate stations, at which steam power is available, for control and assisting up-bound traffic, but, under normal conditions the line works by gravity, except 1 section, on which there is only up-bound traffic of wood, coke, lime and smelter supplies. Capacity is 40 long tons per hour on down freight and 20 tons on up-freight, and cost of transport is estimated at about 5s. per metric ton, as against a former cost of 50s. The highest

tower is 40 meters, and longest span is 870 meters, with 500-kg. buckets. The line is said to be working satisfactorily.

A 500-h. p. hydro-electric installation, near the works, completed in 1909, has been a success.

The 250-ton smelter, known as the Santa Florentina works, is at Chilcito, about 1 mile from the Rio Amarillo, with perpetual water rights. The smelter has been remodeled and brought up to date. Equipment includes calciners, a briquetting plant and converters.

About 300 men are employed normally. Native labor is expensive, for its efficiency, costing 75 cts. to \$1 gold per day for common labor, \$1.25 for miners and \$1.75 for carpenters and smelter men.

Production, 1908, was 2,704 long tons of very low-grade matte, yielding 875,480 lbs. fine copper, 103,087 oz. silver and 6,622 oz. gold. Production in 1910 from 11,237 tons of ore smelted was 392,454 kilos copper, 3,976 oz. gold and 72,221 oz. silver; in 1911, from 33,097 tons of ore smelted, 893 tons of copper, 13,733 oz. gold and 187,090 oz. of silver; in 1912, from 11,401 tons of ore smelted, 345 tons of copper, 4,095 oz. gold and 68,389 oz. silver. The smelter was closed during the last 7 months of 1912 for remodeling, including erection of a reverberatory furnace.

The new smelter is expected to reduce the cost of reduction materially.

The company has inherited a troublesome problem and a tendency to financial as well as mining troubles. Fresh capital was put into the company in 1912, with the understanding that the property would be profitable as soon as smelting was resumed. The new manager, Mr. Parker, stated, May, 1913, that the assay value of the ore had been overestimated and that the ore extracted is lower grade than previously reported. The smelter is not yet complete nor running smoothly, and the finances of the company are in a bad way, the £20,000 guaranteed by the big stockholders having been spent and the directors seeking further funds. Mines regarded as good but company overcapitalized.

FAMATINA DEV. CORPORATION, LTD.

Succeeded, 1912, by the Famatina Company, Ltd.

ARGENTINA

FARELLÓN DE TONGOY; SOCIEDAD MINERA.

CHILE

Office: Valparaiso, Chile. Mine office: Tongoi, Chile. Works office: Ovalle, Chile. Organized Jan. 21, 1901, under laws of Chile, capitalization 150,000 pesos, shares 1,500 pesos par. No trace of operations secured.

FEDERAL REWARD CLAIM.

QUEENSLAND

Recently purchased by William Orr for £5,300, 160 acres, situated about 22 miles west of Cloncurry, Queensland, and within 10 miles of the Mt. Cuthbert railroad. Under management of A. M. Hogarth, late manager of Hampden Consols. Developed by many shallow shafts, the principal one, sunk 150', showed 8' vein with 1' of 50% glance ore. Operations stopped by water at this depth. Is a promising prospect.

FERNANDINI; EUOLOGIO E.

PERU

Office: 410, Callela Riva. Mine at 13,300' elevation, at Cerro de Pasco, Peru. Owns the Chiripa Bismuth mine, the Colquijirca, copper-lead-silver mine, and is heavily interested in mines worked by the Cerro de Pasco Mining Co. Has concentrating mill and stamps, Huntington mill, jigs, Wilfley tables and vanners. The smelting works contain a 70-ton and a 130-ton blast furnace; 2 roasting furnaces, using llama dung for fuel, and 2 reverberatory furnaces. Concentrates are briquetted, mill tailings ground in tube mill and cyanided. Power, hydro-electric, 1,500 h. p., from Rio Blanco. One of the best managed properties in Peru.

FERROBAMBA, LTD.

PERU

Secretary and office: F. F. Fuller, 638 Salisbury House, London, E. C.,

England. Operating office: Arequipa, Peru. Mine office: Ferrobamba, Catobambos, Apurimac, Peru. M. F. Kindersley, chairman; Claude Vautin, managing director and cons. engr.; preceding officers, L. Ross, J. B. Hendry, A. C. Burrage, A. C. Adams and T. C. J. Burgess, directors; W. F. Stevens, mine mgr. Organized Nov. 5, 1909, under laws of Great Britain, capitalization £150,000; 60,000 priority shares, 10s. par; issued, 36,658; 120,000 ordinary shares, £1 par, fully issued. Is registered in Perú. The Ferrobamba property is one of the great copper deposits of the world. It is in central Perú at an elevation of 13,000' above the sea and about 45 miles west of Cusco, the terminus of the Southern railway, 500 miles from Mollendo the seaport. The 207 claims are in 10 groups, covering 2,255 acres, all in the Ferrobamba district, Cotobamba province, Apurimac department, Perú. The deposits show oxidized ores of copper at the surface, underlain by sulphides largely bornite and can be worked by steam shovels.

Property includes valuable water-right concessions, from which it is planned to develop hydro-electric power, the rivers being fed by the melting snows of the Andes. The concessions include water rights to the Rio Chalhuhahuacho and several affluents, and application has been made for similar rights on the Rio Apurimac, about 25 miles in an air line from Ferrobamba No. 1. Including the last named concession, the available water power is rated at 120,000 h. p.

For purposes of development the property has been divided into 5 zones, or groups, known as Ferrobamba No. 1, Ferrobamba No. 2, Katanga, Charcas and Bonanza. Conditions are much the same at these different properties and it is thought that all can be worked opencast.

Ferrobamba No. 1, which includes Ferrobamba Nos. 1, 4 and 5, with area of 900 acres, has been the site of the principal development. This property shows an enormous mass of garnet rock, apparently of contact metamorphic origin, rocks being hornblende-biotite-granite and limestone altered into wollastonite by contact metamorphism for a remarkable distance, in many places up to 3,000' from any recognized igneous contact. Ferrobamba No. 1 is stated to carry 34 hectares of known copper ground, this area having a combined east and west length of 2,300', and north and south length of 1,640'; is estimated by the management to carry ore of payable tenor to a depth of 200', the contents being calculated by the management at 27,635,700 cu. yds., or approximately 12,000,000 tons of ore. Development is by a 100' shaft in chalcoppyrite and bornite ore assaying 6% copper, 3 oz. silver and 9 grains gold per ton. There is also a tunnel, used for a powder magazine, showing ore assaying 4.5 to 9% copper, and samples, at 2-meter intervals, for 100 meters, averaged 5.8% copper, 3 oz. silver and 9 grains gold per ton. Copper values, so far as determined by prospecting, are quite uniform, the average values of 3 oz. silver and 9 grains gold per long ton being remarkably constant. Churn drilling with Keystone drills in progress, from 1910 to 1912, together with underground work in 15 tunnels and the shafts, has proved up 6,000,000 tons of ore averaging 3.7% copper and 1.3% sulphur.

Ferrobamba Nos. 2 and 3, 300 acres, constitute the Sulfbamba mine. Development to Jan., 1913, has proven 778,000 tons of ore carrying 2.25% copper, with 6.75% sulphur and 532,000 tons too low grade to work.

The Katanga or Reina de Cobre mine, area 300 acres, is estimated by Mr. Vautin as likely to rival Ferrobamba No. 1 in tonnage, though but little work has been done thereon. Surface ores, chalcoppyrite and bornite, have given assays of 2 to 7% copper, 2 to 4 oz. silver and 8 to 16 grains gold per long ton.

The Charcas, which is the fourth group, is small, having an area of only

about 35 acres. Mr. Vautin reports an orebody of 100 meters width and 800 meters length, carrying exclusively chalcopyrite, associated with pyrite, suitable for open cast workings, the whole visible face of a bluff of ore assaying up to 24% copper, with an average of 5% copper, 3 oz. silver and 9 grains gold per ton.

The Bonanza claims Nos. 1, 2 and 3, area 420 acres, lying 9 miles south of Ferrobamba No. 1, constitute the fifth group, known as the Bonanza mine. Surface conditions apparently are much the same as at the other properties, but no mining has been undertaken.

Development in 1912 comprised 8,300' of tunnel or adit work and continuous operation of 2 churn drills.

It is stated that the oxidized surface ores as well as the sulphides are amenable to concentration. Extensive testing is reported to have shown that the ore concentrates 11 into 1 with 74% recovery of the product being a mixture of sulphide and oxidized minerals with 30% copper. Considering recent work by Arizona companies, this seems reasonable and as the property can be worked by steam shovels, the deposit is workable. The discovery of iron-copper-sulphide ores in deposits 9 miles west of the mines, supplies a much needed source of sulphur. Property has been examined and reported on by Frank Klepetko and W. H. Wiley. In June, 1913, the property was closed down awaiting railway transportation and the company is exploring properties in the Chumbivilcas district, nearer the railway, held under option.

The company gave an option to Albert C. Burrage, of Boston, in 1911, providing for a new company, to be organized under the laws of New Jersey, capitalization of \$7,000,000, shares \$5 par, such new corporation to give to the Ferrobamba, Ltd., 420,000 shares, or \$2,100,000 in stock, and £250,000 cash, the balance of 730,000 shares, or \$3,650,000, to be subscribed, at par, for working capital, the cash part of the consideration, £250,000, to be payable in 4 equal annual installments, secured by mortgage debentures. This option was not exercised.

Making all due allowances for optimistic estimates, it is obvious that the Ferrobamba is a property of exceptional promise, with good prospects of making a very large low-grade mine, if adequately financed and skillfully managed.

FERROCOBRIZAS; COMPAÑÍA DE MINAS.

SPAIN

Office: San Isidro 16, Sevilla, Spain. Mine office: El Carpio, Cortegana, Huelva, Spain. D. Salvador Sánchez Castañer, agt. Lands, 139 hectares, 16 kilometers from Huelva, including El Carpio and Santa Maria de Gracias mines, latter worked in very ancient days.

El Carpio mines, area 73 hectares, were opened 1856, and have been worked irregularly since, with numerous interruptions. Property was owned, 1890, by Sociedad San Francisco de Paula, and later was held by Bede Metal Co., Ltd., finally coming into hands of this company, and being leased, until 1909, to Société Française de Etudios. Ore is cupriferous pyrite, in a lens 400 meters in length, apparently split, at depth, into 2 orebodies, separated by 40 meters of barren ground. Ores apparently average only 0.75 to 1% copper, but carry 47 to 49% sulphur, and the lower grade ores, of which there are large quantities, carry copper, lead, zinc and bismuth sulphides to the combined extent of 1 to 1.5%. There are also considerable arsenic and antimony, with alumina and magnesia in the gangue, rendering the ore most refractory for the recovery of metallic values. El Carpio mines have 11 old shafts. Equipment includes a small electric pump, and an electric hoist raising 600-kg. cages. Yearly produc-

tion is about 32,000 metric tons of cupriferous pyrite, estimated to contain 500,000 lbs. of fine copper.

FERROL; SOC. ANON. DES MINES DE CUIVRE DU. SPAIN

Office: 13 Rue Auber, Paris, France. Mine office: Ferrol, Coruña, Spain. M. Biver, J. de Catelin, L. A. Claudot, P. Dubois, L. Jumentier, E. Maranzana and G. de Montrichard, directors; H. Dufresne and R. de Thezillar, commissaires. Organized Jan. 25, 1907, under laws of France, capitalization \$5,000,000, shares \$100 par. At last accounts was said to plan reorganization to get out of debt.

Lands, in the vicinity of Cerdido and Moeche, are 28 kilometers from a railway, with carriage rate of 15 pesetas per metric ton. Mine, known as El Porvenir, is opened to depth of about 50 meters, on a 6' vein carrying slightly cupriferous pyrite, claimed by owners to average 50% sulphur. Equipment includes a 15-h. p. gas producer plant and a 16-h. p. electric light plant. Yearly production very small, averaging 300 metric tons of cupriferous pyrite carrying about 5% in copper tenor.

F. G. D. COPPER MINING CO. TASMANIA

Mine office: Heazlewood, Russell Co., Tasmania. Organized about Sept., 1909. Lands are near Heazlewood, about 14 miles northwest of Mt. Bischoff, and about 16 miles west of Waratah. Mine has a vein of about 5' estimated average width, from which a small test shipment, to the Mount Lyell smelter, gave returns of 26% copper, 14 oz. silver and 7 dwts. gold per ton. Was developing with a small force at last accounts.

FIJI COPPER CO. FIJI ISLANDS

Secretary and office: E. G. Masson, 2 Broad St. Place, London, E. C., England. J. Hamilton and P. Bright, directors. Organized Sept. 19, 1912, under laws of England. Capitalization £15,000, shares 2s. par. Property comprises copper-bearing mining areas in the Colony of Fiji, held under option from T. Rimmer.

FINNISH-AMERICAN MINING CO. FINLAND

Office: Calumet State Bank, Calumet, Mich. Operating office: Fennia Bldg., Helsingfors, Finland. Mine offices: Kisko, Abo, Finland and Joensuu, Kupio, Finland. Dr. Aartavara, pres.; Edw. Ulseth, first vice-pres.; Jacob E. Saari, second vice-pres.; Akseli Rauanheimo, sec.; Chas. O. Jackola, asst. sec.; J. H. Jasberg, treas.; Oscar J. Larson, counsel; preceding officers, John Saari and Chas. J. Wickstrom, directors.

Organized Dec., 1906, under laws of Minnesota, capitalization \$750,000, shares \$1 par, as successor of Sampo Mining & Development Co.

Lands, 4 groups, bought of the Fiskars Aktiebolag, including mineral rights, without royalty, to all ores and minerals except iron ore, for the entire estate of about 90 sq. miles and an additional tract, adjoining the Orijarvi mine, was bought, 1910, from the same company. Property has both water and rail transportation. Is now idle.

The Orijarvi mine, about 50 miles from Helsingfors, which is the principal property, was opened A. D., 1757, and mining was continued without interruption until 1875. The property is popularly credited with an output of \$5,000,000 in copper and silver. The Orijarvi shows slight surface indications of the large orebodies below, these lying in silicious limestone near an intrusive quartz-diorite contact, ore being chalcopyrite, sphalerite and occasional galena, all more or less auriferous and argentiferous, associated with pyrrhotite. The Orijarvi tract is a parallelogram of approximately 2 by 5 miles, and the old mine was opened very peculiarly, by a series of truncated conical caves, with apexes at surface, openings gradually increasing in diameter with depth, there being no drifting. The old workings show stopes up to 60' wide. Diamond-drill borings, with 8

holes, have shown the orebodies to continue beneath the bottom of the old workings. The mine has 9 shafts, deepest 500', with levels at 100' intervals. The old stockpile carried upwards of 30,000 tons of zinc and lead ores discarded from previous operations, but probably of present value, as a zinc smelter could be built at a reasonable cost if shipping were found impracticable. Equipment at the Orijarvi includes a steam plant with a good modern hoist and air compressor.

The Illijarvi mine, area 3 sq. miles, bought 1909, adjoins the Orijarvi. The old workings, about one-half mile from the Orijarvi mine, show a well mineralized vein, carrying silicious chalcopyrite, similar to that of the Orijarvi, but with higher gold values.

The Hokka and Kykka mines are included in the mineral claims taken up in 1909 near the Illijarvi. The Hokka mine, carrying a continuation of the Orijarvi orebody, was opened 1850, and has two 125' shafts, developing slightly argentiferous and auriferous chalcopyrite of good average tenor, with quartz gangue. The company has made 650' of new openings on this property. The Kykka shows conditions much similar to the Hokka.

The Brödthorp mine, 4 miles from the Orijarvi, in the parish of Johja, near Skuru, has an area of 20 sq. miles, with mineral rights to the entire tract, save for iron ore. The Brödthorp, carrying a contact deposit between diorite and quartzite, has a 100' shaft showing a complex mixture of copper, lead and zinc sulphides, zinc predominating. The Brödthorp shows numerous ancient pits and trenches, with 1 shaft of about 125' depth.

The Kerkela mine, in the parish of Enare, Finnish Lapland, about 100 miles from a railroad, has a fissure vein carrying free-milling gold ore, of good average assay tenor. The company also has options on iron properties, in northern Finland, carrying magnetic ore assaying up to 69.5% iron.

The Orijarvi mine is 10 miles from the state railroad at Turku, but the management plans building a private line, of either 5 or 10 miles, to a seaport, the longer route having a wharf at its terminus. The mill site is on Lake Orijarvi, 5 miles from the Orijarvi mine, and mill is now erected.

About 75 men were employed, at wages of 50 to 80 cts. per day, labor being abundant, good and cheap.

Local prejudice, taking the form of legal obstruction, increased and annoying taxation and innumerable petty interferences has hindered operations, discouraged the company's backers and caused a lack of confidence in the company's ability to carry out its plans. After having spent \$250,000 and demonstrated that the property could be made a success, the company has been forced to suspend operations and is now both idle and out of funds.

FINNISS RIVER COPPER MINE.

Owned by Doolette & Co., C. C. Gibson, mgr. Property at Rum Jungle, near Port Darwin, Northern Territory, Australia, is prospecting by Government aid. A 317' diamond-drill hole, made in 1913, showed a large but low-grade copper-bearing formation underlain by crystalline limestone. A second drill hole was being put down in August.

FITZROY MINE.

Owned by Great Fitzroy Mines, Ltd., which see.

FLAAD MINE.

Address and smelter office: Evje, Salters dal, Norway. Property is an old copper mine, now worked for both nickel and copper, being the only working nickel mine in Europe. Mine on steep hill, 500' above valley, 3 miles from Evje village. Ore, consisting of chalcopyrite and pyrrhotite, occurs as spots and dissemination in edge of a mass of novite intrusive in hornblende, gneiss penetrated by granite. The ore lens is 67' long at

NORTHERN TERRITORY

QUEENSLAND

NORWAY

surface and 330' long at 530' depth, dipping at 45°. It averages 1.2% copper and 2.3% nickel.

Development is by 530' shaft with 115 tons daily output sent by 3-mile wire rope tram to smelter. Smelter plant at Evje mattes the ore and refines the metal by Hybinette process.

FLAG GOLD & COPPER MG. CO., LTD. WESTERN AUSTRALIA

Office: Morgans St., Ravensthorpe, Western Australia. Mine office: Kundip, Phillips River Goldfield, Western Australia. Walter Dunn, chairman; Chas. Grant, mine mgr.; preceding officers and John T. Hassell, directors; Ralph Anderson, sec. Organized March 14, 1907, under laws of Western Australia, capitalization £25,000, shares 5s. par.

Property, a gold mine having copper ore, located in the Phillips River field, comprises 70 acres held under a gold mining lease, and options and leases on the Harbour View and Little Wonder mines. Mine has a 6' vein from which former owners shipped 1,222 long tons of ore yielding 39 long tons fine copper and 889 oz. gold. Copper ore carries 4 to 15 dwts. gold and a little silver per long ton. Mine has a 325' main shaft, with 2 other shallow shafts, poorly laid out, and is wet, having an 8" Cornish pump with 48" stroke, and pumping engines with two 14" cylinders. There is an old 5-stamp mill. Production, for April, 1910, was 613 long tons of ore raised, of which 136 tons was copper ore of smelting grade, shipped to the Phillips River smelter, and 477 tons milling ore, 300 tons milled returning 146 oz. gold from the plates. Copper production for 1911 was but 3,500 lbs., all from the Little Wonder mine. Total production to end of 1911 was 144.75 tons metallic copper valued at £8,494, besides 128.5 tons, valued at £7,191, from the various Harbor View leases. Idle in 1912.

FLINDERS COPPER MINE.

NORTHERN TERRITORY

Is 4 miles from Tumby bay. Shows 3 veins, northernmost being 1 to 3' thick, developed by 210' shaft and showing bunches of sulphide ore. Stopes and drifts at 60' and 100' gave 17% ore when sorted. Center vein, 1½' wide, is unproven. The south vein, developed by 60' shaft, gave shipment of 25% copper with gangue of iron-stained quartz. Mine was shipping 15 to 20 tons of rich ore weekly from Beltana, Farina and Parachilna to the Wallaroo smelter.

FLOR del BOQUETTE; MINA.

CHILE

Producing 60 tons of 15% copper ore monthly, March, 1913.

FLORODORA MINE.

QUEENSLAND

Mine situated about 30 miles west of Cloncurry and contains a sulphide lode which, though small, is very rich in copper contents.

FOLDAL COPPER & SULPHUR CO., LTD.

NORWAY

Office: 6 Old Jewry, London, E. C., England. Mine mgr. and office: W. H. Lund, Foldal, Lille-Elvedal, Norway. Alex. Davidson, chairman; Leigh Hoskyns, J. P.; Sidney St. J. Steadman, J. A. Stirling and E. Hooper, directors; Chas. Forbes, sec. Organized Jan. 27, 1906, under laws of Great Britain, capitalization £350,000, shares £1 par, in £150,000 preferred and £200,000 deferred stock. Company has invested £377,500 in its property, development and equipment. Accounts, for year ending Feb., 1911, showed £3,201 profit.

Lands, about 3,000 acres, at Foldal, Norway, carrying considerable timber, and including 5 old mines, known as the Juliana Marie, Knutshovd, Foldal, Grev Moltke and Grimsdal, worked for about 150 years, during which time 350,000 tons of ore was produced. Mine, opened mainly by tunnel, with 2,660 meters of workings, shows a vein of about 12' average width, carrying massive cupriferous pyrite, with only traces of arsenic, vein giving every indication of persistence and ore being estimated to

average 2% copper and 46% sulphur. Property also has some ore of high copper tenor that eventually may become of some importance. Ore produced is divided into 3 classes, first grade averaging 2.12% copper and 48.17% sulphur, the other grades carrying less copper and slightly less sulphur.

Equipment includes an excellent mining plant, installed at a cost of £105,000, and company has expended about £22,000 for substantial mine buildings. A large waterfall, on the Einuna river, held under a 25-year lease, subject to renewal, at annual rental of £25, has been improved with a hydro-electric power station. Good wagon roads have been built.

A 22-mile Pohlig aerial tram, which is one of the longest in the world, built at a cost of £38,412, runs from the mines to the Lille-Elvedal railway, and has a capacity of 40 metric tons per hour. Miscellaneous improvements include a telephone line, and a quay at Trondhjem, for ore shipments.

Production was 41,680 metric tons of cupriferous pyrite for year 1908, and 71,000 metric tons in 1909. In 1912 company produced 72,000 tons of ore, average value being 2.3% copper and 45% sulphur. Ore in sight, Feb., 1911, estimated at 650,000 tons. Equipment has been provided for an ore production of about 100,000 tons yearly. Copper production is estimated at 1,500,000 lbs., 1909. Property considered promising and management good.

FONDERIES ET LAMINOIRS; SOC. ANON. DES.

FRANCE

At Biache, St. Vaast, France. Property is an electrolytic copper reduction plant having five 6-kw. generators and 100 tanks, in multiple arrangement of electrodes, with an estimated daily capacity of 2 metric tons fine copper.

FORASTERA MINES, LTD.

ARGENTINA

At Chilecito, Rioja, Argentina. Is a subsidiary of the Famatina Development Corporation, Ltd.

FORT BOURKE COPPER MINING CO., N. L.

NEW SO. WALES

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized 1908, capitalization £5,250. Mine has a 104' shaft, developing complex ores, difficult of reduction, and a mill, erected 1908, has not given satisfactory results. A new 174' shaft and crosscut passed through zone containing copper lode with abundant quartz, but operations were suspended at this point because inflow of water was too great to handle.

FORTUNATAS MINE.

QUEENSLAND

Situated at Harpers Hill, Mt. Perry district, Queensland. Now idle but plans resumption of work, 1913.

FOSGRUBE KOBBERGRUBER.

NORWAY

H. & F. Bachke, owners, Trondhjem, Norway. Mine address: care H. & F. Bachke, Drontheim, Norway. Mine situated in Tolgen parish, about 20 miles southwest of Røros, carries non-zinciferous, cupreous pyrite of better than average grade, devoid of arsenic, etc.; is under development. A nearby waterfall furnishes hydro-electric power. The mine was selected for exploration out of a group of 25 old mines or claims of same ownership and in same district.

FRANCAISE DES MINES DE CUIVRE; SOCIÉTÉ.

CHILE

Owns Collahuasi mine. See Société Française d. Mines de Cuivre, this volume.

FRANCARDO; SOC. DES MINES ET FON. DE.

CORSICA (France)

Mine at Francardo, Ajaccio, Corsica. L. Bizouarne, mgr., at last accounts. Organized Oct. 30, 1905, under laws of France, capitalization

f 600,000, increased later to f 3,600,000, shares f 100 par. Paid, 1906, a 10% dividend.

Owens the Morosaglia, San Lorenzo and other old copper mines, whose veins are claimed to carry orebodies that average 7% copper. Apparently the production of cupriferos pyrite is sent to French smelters for smelting. Company employs about 600 men.

FRANKLIN COPPER & LEAD MINING SYND. SOUTH AUSTRALIA

In liquidation. A. G. Kimber, liquidator, 69 National Mutual Bldg., King William St., Adelaide, South Australia.

FREMANTLE TRADING CO., LTD.

WESTERN AUSTRALIA

Office: Salisbury House, London Wall, London, E. C., England. Mine office: Northampton, Western Australia. Works office: Fremantle, Western Australia. E. Protheroe Jones, A. E. Lund and J. A. Morris, directors; E. H. Woolcott, sec.; W. G. Sutherland, mgr. Organized July 28, 1909, under laws of Great Britain, capitalization £50,000, shares £1 par, in £20,000 preference and £30,000 ordinary shares; fully issued; ordinary shares fully paid, preference shares 12s. 6d. paid. Mines, at Northampton, were discovered, 1842, and have orebodies parallel with basic igneous dikes, carrying copper and lead sulphides, with occasional sphalerite. The smelter, at Robb's Anchorage, near Fremantle, does a limited custom business.

FROLOV (SKY) MINE.

RUSSIA

Turinsky, Ural district, Russia. Mine is one-half mile southeast of the village of Turinsky. Ore occurs at contact with dikes of augite-granite rocks and limestone, oxidized for 70' down, with sulphides in garnet gangue below. Values buncy and irregular.

FRONTON; MINA.

CHILE

Owned by Société des Mines et Usines de Cuivre de Chañaral.

FUJITA CO. (GOMEI KWAISHA FUJITA-GUMI).

JAPAN

Office: 180 Dojima-Kitamachi, Osaka, Japan. Mine office: Kosakamura, Kanzuno-gori, Rikuchu, Japan. Heitaro Fujita, chairman; Yoichi Katsura, gen. mgr.; Kennosuke Tsujimoto, cons. engr.; Yoji Kimura, mine mgr.; Saichi Saito, mine supt.; Manroku Yonezawa, smelter supt. Company was founded, at Osaka, 1869, by Baron Fujita, and was organized, 1875, under laws of Japan, and capitalization increased later to present figure of 6,000,000 yen. Profits, 1906, were estimated at 3,000,000 yen. Mining was begun in 1880. This is one of the largest private companies in Japan.

Lands are extensive, including the Kosaka, Omori, Tokito, Daiji, Towada, Matsuoka and Zuiho mines, with some 25 other mines that are idle, or in an exploratory stage. The company also is engaged extensively in forestry and agriculture. Company employed 8,295 mine workmen, of whom 1,377 were underground and 6,918 on surface, at last accounts.

The Kosaka mine, which supplies nearly 20% of the copper produced by Japan, is located at the extreme northern end of Hondo, the main island of Nippon. The mine, in a very rugged district, about 10 miles from the government railway, was worked until 1897 as a silver mine, passing, 1884, to the present ownership. The Kosaka employed 7,642 hands, 1908.

Country rock is brecciated porphyry tuff, ranging from a fine conglomerate to a coarse grit, of Tertiary age, with a covering of volcanic ash, and with intrusions of liparite and andesite, a narrow liparite dyke cutting the breccia and sedimentary rocks. The orebodies constitute a fine example of metasomatic replacement, occurring along the contact zone between the tuff and andesite, as impregnations of tuff near a dacite contact, occurring apparently as blanket veins, lying at an angle of about 45°, with a

diorite footwall and hanging of andesite tuff, latter well defined, but ore shading imperceptibly into the footwall. There are 5 of these orebodies, of immense size, ranging from 20 to 270' in thickness, and proven for a length of one-half mile, while drill borings have proven the formation to continue to a depth of 1,700'. The area of the deposit so far explored is 2,000' long, 800' wide and 500' deep. There are three kinds of ores, the complex sulphide, pyrite, both compact and loose, and silicious ore. They carry much barite. All ores are more or less argentiferous, and the product is divided into 3 grades. First-grade ore the complex sulphides, averages 2.43% copper, 2.28% lead, 9.8% zinc and 15.64% iron, with 0.02 oz. silver per ton, and from a trace to 65 cts. gold per ton, the gangue carrying 40 to 45% barium sulphate. The pyritic ore, which is the second grade, averages 2.34% copper, 0.47% lead, 3.15% zinc and 26.83% iron. The silicious ore, which is the third grade, averages 1.27% copper, 0.26% lead, 1.48% zinc and 19.44% iron.

The Kosaka is mined through tunnels. The slicing and filling system is used, but underground mining was practically abandoned, 1908, for open-cast workings, similar to those of the Rio Tinto. From 1,000 to 1,800 cu. yds. of overburden are removed daily, the entire overburden being estimated at about 4,000,000 cu. yds. Stripping is by manual labor, with electric trolleys to remove material.

The open pit is of funnel shape, about 1,000x2,000' in size, with the sides terraced. The Kosaka was estimated, 1908, to have fully \$30,000,000 in ore values developed. Owing to extraction of ore by tunnel and open-cast workings, only about 200-h. p. is required at the mine. Equipment includes two 8-drill Leyner air compressors and an electric pump on the 500' level.

The smelter, 1¼ miles from the mine, with electric rail connections, is of about 1,000 tons daily capacity and is thoroughly modern in design and equipment. There are 8 Herreshoff calcining furnaces, of which 6 are used on ore, 1 on matte and 1 on slags. There are 7 rectangular water-jacket blast furnaces, 6 of small size and 1 a monster of 3' 6" width and 60' length, 28' 6" in height, with water jackets 7' 5" high. Of the smaller blast furnaces, 2 are used for matte, 2 for casting anodes, 1 for casting blister copper and 1 for casting ingots and cakes. Semi-pyritic smelting is employed, fuel charges averaging only about 3%, with a cold blast, at pressure of 10 oz. per square inch. A judicious mixture of the 3 grades of ore produced affords a self-fluxing furnace charge, the average of all ores being only about 2% copper, with small gold and silver values. The ore being zinciferous, the copper slags contain considerable zinc values, now lost, on which experimental work is in progress.

The first-fusion product is a copper-lead matte of about 30% metallic tenor, carrying about 20% copper and 10% lead, which is resmelted for a second-fusion product of about 50% metallic tenor. The slag from the second matte contains quantities of lead and copper and is resmelted and the lead extracted as bottoms, which are taken to a liquation hearth and the lead desulphurized in a Parks sintering pot. The zinc scum, containing silver and gold values, is retreated, and the residue, together with the slimes from the electrolytic tanks, are treated in a cupel furnace, producing doré bullion. The second-fusion matte is crushed, calcined in Herreshoff roasters, and resmelted in reverberatory furnaces to blister copper, but a converter plant was installed, 1910, to replace the reverberatories. The slag from the final smelting is essentially an iron and barium silicate. Blister copper from the reverberatory furnaces is cast into anodes, and taken to the electrolytic refinery for treatment.

The converter plant has 2 stands, with 8 shells. There are 2 Brown-

Boverie-Rateau air compressors, a complete lining department, and a 140-ton electric crane. Power is furnished to the converter department by a 1,000-h. p. electric plant. Blister copper from the reverberatories is refined electrolytically, the product being copper of the exceptional purity of 99.95%.

Power is all electric, the Kosaka installations aggregating 12,450-h. p. for the mine, smelter, shops and rail lines. It is generated by 4 hydro-electric stations, on the river Oyu, near the mine.

The company owns and operates a private electric railway, with 8 miles of main line, equipped with 10 locomotives and 400 three-ton ore cars. Electric trolley lines reach all principal points at the mine, smelter and shops, and connect with the government railway at Odate. Fuel for the mine and smelter is brought by aerial tram.

Recent production of the Kosaka has been as follows: 13,984,768 lbs. fine copper in 1905; 14,811,152 lbs. in 1906; 16,397,061 lbs. in 1907; 15,720,153 lbs. copper, 835,174 lbs. lead, 1,127,000 oz. silver and 10,900 oz. gold in 1908; 13,702,000 lbs. copper, 1,024,000 lbs. lead, 1,048,632 oz. silver and 11,109 oz. gold in 1909; 13,594,000 lbs. copper, 1,428,000 lbs. lead, 1,282,290 oz. silver and 13,180 oz. gold in 1910; 13,162,742 lbs. copper in 1911 and 17,590,151 lbs. in 1912.

The Tokito mine is at Nanatini-mura, Kazuno-gori, Rikuchu, in the vicinity of the Kosaka. The mine has a 165-h. p. installation and, employing an average of 375 hands, produced 619,090 lbs. fine copper, without gold or silver values, in 1908; 653,219 lbs. copper in 1911, and 395,521 lbs. in 1912.

The Daiji mine, at Nanatini-mura, Kazuno-gori, Rikuchu, has only a 75-h. p. steam installation, employing an average of 234 hands in 1907 and 117 hands in 1908 and produces copper ore without gold or silver values. Production was 219,650 lbs. fine copper in 1907, and 165,158 lbs. in 1908.

The Towada mine, also near the Kosaka, was opened A. D. 1670, and has a vein of 30 to 100' width, carrying disseminated auriferous chalcopryrite and argentite.

The Omori mine is at Omori-mura, Nima-gori, Iwami, Japan. The mine was opened A. D. 1300, and reopened A. D. 1525. The mine once was highly productive but was closed, 1872, by an earthquake and reopened, 1884, by the present company. The Omori, in a rugged district, near the coast, has Tertiary tuffs and sandstone, with andesite dikes, carrying parallel fissure veins of 3 to 7' width, some traceable 2,000', and is divided into the Eikyu group, carrying mainly auriferous and argentiferous chalcopryrite, associated with galena and sphalerite, and the Hontani group, carrying malachite and argentite, with some native silver. Five veins are now being worked, ores therefrom giving an average assay of 7.75% copper, 0.8% lead, 0.056% silver and 0.0014% gold. Average forces, 1908, were 675 men, including 682 miners.

The reduction plant includes a mill with crushers, rolls, trommels and jigs, a smelter having stall furnaces for calcining and a cylindrical water-jacket blast furnace, employing semi-pyritic smelting, matte being resmelted to blister copper by the Mabuki process. Production, which was only 80,139 lbs. fine copper, 16,202 oz. silver and 381 oz. gold in 1900, has been increased steadily, and was 697,083 lbs. copper, 9,184 lbs. lead, 96,764 oz. silver and 1,694 oz. gold in 1908; 824,089 lbs. copper in 1911 and 847,746 lbs. in 1912.

The Matsuoka mine, at Nishitaka-mura Kita-Akita-gori, Uzen, is a small gold and silver mine, which was worked in the eighteenth century by Sato Shinyen, a famous miner and metallurgist, to whom modern

mining in Japan is greatly indebted. Production was 177,625 lbs. copper in 1911 and 226,266 lbs. in 1912.

The Zuiho mine is 8 miles east of Keelung, in the northern end of the island of Formosa. This mine, discovered in 1890, was bought by Fujita-Gumi & Co. in 1895, and has been developed into perhaps the most famous gold mine of the empire. Equipment includes a 320-h. p. steam plant, a 165-h. p. water-power plant, and a 30-h. p. electric-light plant. The mill has a Huntington mill and cyanide plant. In 1908, with an average force of 331 employes, production was 28,411 tons of ore, yielding 4,177 oz. silver and 9,047 oz. gold.

The Kosaka mine, notwithstanding the extremely low average tenor of its ores, is the second largest copper producer in Japan, and is one of the greatest copper properties of the world in potential production, owing to the enormous size of its orebodies. The Fujita Co., or Gomei Kwaisha Fujita-Gumi, includes some of the strongest financial and commercial interests of the empire and is exceptionally enterprising and capable in the management of its mines and works.

FUKADA MINE.

JAPAN

Mine at Fukada-mura, Kuma-gōri, east of Hitoyoshi, Higo, Japan. Country rocks are alternate strata of sandstone and clay-slate, of Paleozoic age, orebody having strike and dip corresponding to country rocks, and ranging 5 to 10' in thickness. Ore is chalcopyrite, associated with pyrite, averaging 5 to 6% copper. Production, about 15,000 lbs. copper, 1896-1910. No recent returns from mine.

FURUKURA MINE.

JAPAN

Owned by Furukawa Mining Co.

FURUKAWA MINING CO.

JAPAN

Office: 1, Yayasucho, Itchome, Kojimachi-ku, Tokio, Japan. Smelter office: Yama-moto-gori, Akita-ken, Shimotsuke, Japan. Work offices: Kamitsuga-gori, Tochigiken, Japan. Toranosuke Furukawa, pres.; Choschichi Kimura, managing director; preceding officers, Rokusaburo Kondo and Kunisuke, Obazaki, directors; Bunjiro Konda, sec.; Kametaro Iijima, treas.; Matsuki Otagawa, mgr. Baron Kumakichi Nakashima, chief of commercial dept.

Company owns the Ashio, the largest copper mine in Japan and 14 other large mines whose addresses are given in the description of each mine.

Company is a close corporation. Organized April, 1905, in Japan, capitalization 5,000,000 yen; fully issued and fully paid. The business was founded in 1876, by the late Ichibei Furukawa, succeeded, 1903, by Jun-kiche Furukawa, Mr. Toranosuke Furukawa succeeding, as head of the firm, in 1906. The company employs 1,400 officials and 22,000 men. Lands are about 26,500 acres, and yearly production, in addition to copper, is about 700,000 oz. of silver, with a little gold, 500,000 tons of coal, and 30,000 tons of coke. Properties include 8 copper mines, 1 silver mine, an extensive copper manufacturing plant, several collieries and a large and modern coke plant. The various copper mines and their works are described in detail, in the following pages.

The Ashio mine is at Kamitsuga-gori, Tochigi-ken, Shimotsuke, 11 miles west of Nikko and about 100 miles northwest of Tokio. Koji Inouye, gen. mgr.; Kazuye Kibe, mine supt.; Kosaku Asano, smelter supt.; Jintaro Kojima, engr. The Ashio mine was discovered A. D. 1609, and became a producer in 1611, reaching a productive capacity of about 1,500 tons of copper yearly, during the latter half of the seventeenth century, rendering it one of the largest, if not the largest copper mine, of the world, in that
